The United States Bureau of Foreign and Domestic Commerce reported in August, 1926, that German companies, which in the business year 1913-14 averaged net profits of 10.5 per cent on capital, earned only 4.4 per cent in the year ended June 30, 1925. Of the total number of companies, 69 per cent with 40 per cent of the total capitalization failed to pay any dividend, although 65 per cent showed profits. The greater number of companies failing to declare dividends, however, had a capitalization of less than 50,000 marks; the companies with a capitalization between 1,000,000 and 25,000,000 marks showed the highest percentage of dividend declarations. Another analysis of stocks quoted on the Berlin Bourse states that, measured according to the yield on the market value, the companies so measured and in existence both now and before the War, averaged 4.6 per cent in the first half of 1926, as compared with 5.8 per cent in the first half of 1914. This decline becomes more striking when it is considered that general interest rates have risen to about 10 per cent, from a pre-war average of about 4½ per cent. The necessity of building up operating funds wiped out by currency inflation had caused share companies to sacrifice a portion of possible dividends.

The rapid readjustment of German industry, which during the War and inflation periods was largely in the form of vertical trusts, had been necessitated by the pressure of business depression and financial stringency. This change is usually dated from June, 1925, at the commencement of the liquidation of the Stinnes group and has been characterized by horizontal fusions of principal producers into one or more groups, with the absorption of smaller firms or their elimination through bankruptcy. Such a shift has been evident in coal, iron and steel, chemical, machinery, and many finishing industries. The German statistical office published an analysis of the statements of 7666 companies, which comprise three-fourths of the total capitalization of German share companies. The analysis indicated that the earning capacity of Germany in 1926 was considerably less than before the War, in spite of the writing off of bonded indebtedness which occurred after currency inflation. On the other hand, considerable progress had been made since the beginning of the stabilization period. The gradual elimination of weak firms and the consolidation of those remaining apparently pointed to a general reorganization of German industry on a better profit-earning basis. The accompanying table, published by the Reichscreditgesellschaft, a semi-official institution, analyzes a much smaller number of companies than the survey of the

statistical office, and is restricted to the more important concerns, but it shows market valuations and other information not given by the statistical office:

this percentage rose slightly to 16.52. Of the American exports to Germany 43 commodities each exceeded \$100,000 in value and together totaled \$410,342,707. Of these commodities 28

COMPARISON OF GERMAN COMPANIES IN 1926 AND 1914  
[Values in thousand reichsmarks]

COMMERCE. Germany's export trade in 1925 totaled 8,838,000,000 gold marks and her import trade 13,146,300,000 gold marks, leaving an unfavorable balance of 4,308,300,000 gold marks, as compared with 2,749,987,000 gold marks in 1924. The import and export trade according to categories in 1925 was as follows: Live animals, imports, 122,000,000 marks, exports, 15,300,000; foods and beverages, imports, 4,032,200,000 marks, exports, 516,900,000; raw materials and semi-manufactured articles, imports, 6,269,000,000 marks, exports, 1,640,400,000; manufactured articles, imports, 2,005,000,000 marks, exports, 6,625,800,000; gold and silver, imports, 718,100,000 marks, exports, 39,600,000.

According to the United States Bureau of Foreign and Domestic Commerce, the total trade of the United States with Germany in 1925 amounted to \$634,595,756, or \$54,919,370 more than in 1924. The gain in exports was slightly greater than the gain in imports from that country, as shown by an increase in the first case of \$29,928,282 and in the second case of \$24,993,088. In 1924 the American trade with Germany represented 16.36 per cent of the American trade with all Europe, and in 1925

showed gains during 1925 while 15 registered losses. The most important gain was made by cotton, its export to Germany amounting to \$246,315,328 as compared with \$223,503,127 in 1924. These figures, however, are somewhat misleading, as a considerable portion of this cotton is merely shipped to German ports with an ultimate destination other than Germany. Copper, rye, lead, passenger automobiles, barley, sulphur, lubricating oils, calculating and adding machines, rosin and gasoline exports also showed gains.

Among the 15 articles of export which suffered losses in 1925, wheat showed the severest drop; exports of grain fell from \$10,217,906 in 1924 to \$4,302,148 in 1925, and flour declined from \$10,749,815 to \$8,573,873. This situation may be accounted for in large measure by a banner crop in Germany and successful competition on the part of Russia, Canada, and Argentina. Other important articles which lost ground were lard, tobacco, condensed and evaporated milk, prunes, and cottonseed cake.

Imports from Germany in 1925 totaled \$164,251,523, as compared with \$139,258,435 in 1924. These figures represent 12.7 per cent of the

total imports of the United States from Europe in 1924 and 13.26 per cent in 1925. During 1925 the most notable imports from Germany were colors and dyes, and these commodities showed at the same time the heaviest gain, rising from \$2,079,959 in 1924 to \$3,757,846 in 1925. Other goods supplied to the United States by Germany were sulphite, decorated china, leather gloves, machine-made laces, wools, and newsprint paper.

REPARATIONS. German deliveries of coal, coke, and briquets on reparations account to France, Italy, and Belgium in 1925 were almost 5,000,000 metric tons less than in 1924, the record year. Deliveries of 7,056,000 tons of coal and 2,056,000 of coke, however, were made during the first eight months of the year 1926, in comparison with 5,156,000 tons of coal and 2,413,000 of coke during the January-August period of 1925. Reparations deliveries to Belgium were discontinued in September, 1926. Coke deliveries to France on reparations account had been nearly as large as deliveries of coal to that country but no coke was included in the deliveries to Italy and the amounts sent to Belgium were insignificant. Monthly deliveries to these countries during the first eight months of 1925 and 1926 are shown in the accompanying table:

GERMAN REPARATIONS DELIVERIES OF COAL TO FRANCE, ITALY, AND BELGIUM  
[In thousands of metric tons]

Month	France (coal and coke)		Italy (coal)		Belgium (coal)	
	1925	1926	1925	1926	1925	1926
January	656	710	200	224	178	294
February	652	747	101	250	204	244

June	525	508	130	276	207	219
July	651	506	134	246	187	242
August	651	499	150	272	258	200
Total	4,821	5,048	1,087	2,124	1,661	1,940

Germany made small deliveries in 1919, but no important quantities were delivered until 1920. Annual quotas were originally fixed on an ascending scale—Italy, for example, was to receive 2,250,000 tons in 1919, 5,250,000 in 1920, 6,750,000 in 1921, 7,750,000 in 1922, and 8,250,000 in 1923. In the latter part of 1923 the Mission Interalliée de Contrôle des Usines et des Mines arranged a monthly programme of deliveries. During the early part of that year the Ruhr was occupied by the French, the occupation continuing into 1924. The Dawes Plan went into effect Sept. 1, 1924. The amounts or prices allowed Germany against reparations deliveries are based on the pithead price in Germany except when the British f. o. b. price is lower. The State-owned railways in France, Italy, and Belgium have received large quantities of reparations coal. The French railways in 1924, for instance, took 1,660,456 tons out of deliveries of 3,320,221. Their merchant trade accounted for over 1,000,000 tons of this total, and a certain tonnage was assigned to electric power stations, navigation, and other enterprises. The accompanying table shows approximately the reparations deliveries made annually prior to 1926:

GERMAN REPARATIONS DELIVERIES OF FUEL (COAL, COKE, AND BRIQUETS) TO FRANCE, ITALY, AND BELGIUM

Year	France Metric tons	Italy Metric tons	Belgium Metric tons	Total Metric tons
1919...		77,000		77,000
1920...	11,218,000	987,000	1,431,000	13,636,000
1921...	12,099,000	2,765,000	2,809,000	17,673,000
1922...	8,587,000	2,621,000	2,820,000	14,028,000
1923...	4,124,000	1,480,000	1,574,000	7,178,000
1924...	10,177,000	3,672,000	4,382,000	18,231,000
1925...	8,747,000	1,723,000	2,903,000	13,373,000

FINANCE. According to the United States Bureau of Foreign and Domestic Commerce, a noticeable change in both volume and character of German Federal revenues and expenditures occurred in the fiscal year ended Mar. 30, 1926 as compared with the previous fiscal year. The reduced rates for the principal taxes resulted in declining receipts as compared with 1924-25, when the pressure of taxation was approximately the same throughout the year and when increased business turnover caused a gradual rise in revenues. A comparative analysis of the monthly revenue and expenditure figures for the two years show that individual tax yields vary greatly from the earlier year.

The economic crisis had an irregular effect on revenues. As the money market and the bourse were the first to feel the effects of the depression at the beginning of the fiscal year, the bourse and capital transfer taxes were affected first. Depression had pervaded business at about the middle of the fiscal year, when the turnover and corporation taxes showed a corresponding decline. Domestic consumption, which remained active, was first checked at the beginning of 1926. Consumption taxes, therefore, show actual increases up through December, 1925, declining only through the quarter beginning January, 1926. Preliminary figures, based on the monthly reports of the central treasury, show total Federal receipts for the 1925-26 fiscal year of 6,856,100,000 marks—a drop of 455,600,000 marks from the 7,311,700,000 marks collected in 1924-25. In 1925-26 the quarterly receipts dropped from 1,825,100,000 in the first quarter to 1,573,100,000 marks in the last quarter. This decline in revenues as a result of reduced taxation contrasted with the returns of the fiscal year 1924-25 when, with an approximately stable taxation burden, quarterly revenues advanced from 1,514,800,000 marks to 2,018,700,000 marks, through increasing business activity.

The 1925-26 fiscal year marks the definite abandonment by the German Government of its policy of heavy taxation to attain a budget surplus, which had been followed since the stabilization of the currency in November, 1923. During that period, industry became the main object of fiscal pressure. This past policy was based not only on the necessity of supporting the newly stabilized currency, but also of obtaining by taxation the necessary operating capital formerly provided by the discounting of treasury bills at the reichsbank. Upon the inauguration of the Dawes Plan (q.v.), a discount of treasury bills at the reichsbank was limited to 100,000,000 marks. It was semi-officially estimated that the operating capital requirements for the German Government were approximately 600,000,000 marks.

On the first of June, 1925, the wage tax had

been reduced so that the limit for tax-free incomes was raised from 720 to 960 reichsmarks. Among other income taxes, the tax reduction ordinance of Nov. 10, 1924, had affected the entire fiscal year 1925-26. Further reductions were provided in a tax revision law. The turnover tax of Jan. 1, 1925, was reduced from 2 per cent to 1½ per cent and again on Oct. 1, 1925, to 1 per cent. Tax rate reductions as of Sept. 1, 1925, occurred in wine, capital transfer, real estate, and bills of exchange. Increases occurred only in tobacco tax rates and in customs tariffs.

The total income of the German Government in the fiscal year 1925-26, available for expenditures, was 341,800,000 marks less than in the previous fiscal year. This reduction was accompanied by an increase in expenditures of 650,300,000 marks and resulted in a deficit of 462,700,000 marks. From the previous fiscal year,

however, there remained a surplus of 659,000,000 marks, more than sufficient to cover the deficit of the fiscal year closed on March 30, 1926.

The preliminary estimates of the 1926-27 budget showed that it would be balanced at 7,700,000,000 reichsmarks and that in all likelihood the actual expenditures for 1925-26 would not be exceeded. In considering the receipts and expenditures for the ordinary and extraordinary budget as shown below, it should be remembered that the figures are purely tentative and therefore subject to certain changes when voted upon by the Reichstag. Amounts are stated in gold reichsmarks, for which the unit value is \$0.2382 in exchange.

**RAILWAYS.** The total mileage of German railways on Sept. 30, 1924, was 53,008.54 kilometers, of which 30,370.35 kilometers belonged to the main-line system, 21,670.27 kilometers to the secondary system, and 967.92 kilometers to the narrow-gauge system. The total mileage represents an increase of 88.8 kilometers in the six months following Mar. 31, 1924. On Sept. 30, 1924, the rolling stock of the state railways comprised 30,210 locomotives, 68,499 passenger cars, 23,025 baggage cars, and 707,306 freight, repair, and service cars, whereas on Mar. 31, 1924, there were 30,371 locomotives, 68,446 passenger cars, 22,966 baggage cars, and 708,279 freight, repair and service cars.

The year 1926 is the second one in which the German railroads under the management of the German State Railway Company, helped carry out the Dawes Plan. The first fiscal year of the company required the installation of numerous innovations, in order to handle the work more economically, and to attain greater income. The second fiscal year was devoted to the systematic continuation of these steps, which were to place the State Railway Company in the position to fulfill its duty of chief contributor to the reparations payments, and, at the same time, to manage the property in such a way as to serve the interests of German economic life. Toward the end of the year great improvement in the financial situation of the German Railroad Company was reported to be taking place. For the first half of 1926, revenue approximated 2,005,000,000 marks, while expenses totaled 2,105,000,000 marks. In July, however, the railroads showed the first monthly surplus for the year which amounted to 10,000,000 marks. August and September were expected to yield larger surpluses than that of July. The corporation was bearing up well under the burden of an increase since 1925, of 277,000,000 marks annually in the wage scale, and a yearly increase in pensions of 270,000,000 marks more than in 1913.

**SHIPPING.** On June 30, 1925, the German merchant marine amounted to 3,073,713 registered gross tons as compared with 5,459,296 in 1914. In 1924, 53,809 vessels (with freight) of 27,218,103 tonnage and 9473 vessels (in ballast) of 2,811,049 tons entered the ports of Germany, and 44,766 vessels (with freight) of 20,653,323 tonnage and 21,211 of 8,949,385 tons cleared.

**GOVERNMENT.** Under the constitution of the republic adopted July 31, 1919, and promulgated Aug. 11, 1919, executive power is vested in the president elected by the people for seven years, and in a ministry appointed by him and responsible to the parliament or Reichstag. Legislative power is vested in the Reichstag, which is elected by universal, equal, direct, secret franchise of male and female voters, on the principle of proportional representation; and in a federal council, the Reichsrat, consisting of 68 members (Prussia 27, Bavaria, 11, Saxony, 7, Württemberg, 4, Baden, 3, other states, 16. The consent of the Reichsrat is required to all bills before their introduction in the Reichstag. In the Reichstag elected Dec. 7, 1924, the seats were divided among the political parties as follows: Socialists, 131; Centre, 99; German National People's Party, 111; German People's Party, 51; German Democratic Party, 32; Bavarian People's Party, 19; Communists, 45; minor parties, 35; total, 493.

The president in 1926 was Paul von Hindenburg, elected Apr. 26, 1925; assumed office, May 12, 1925. The cabinet as appointed Jan. 19, 1926, was: Chancellor, Dr. Luther; Foreign Affairs, Dr. Stresemann; Home Affairs, Dr. Kütz; Finance, H. Reinhold; Defense, Dr. Otto Gessler; Labor, Dr. Heinrich Brauns; Food and Agriculture, Dr. Haslinde; Posts, H. Stingl; Transport, Dr. Krohne; Economic Affairs, Dr. Curtius; Justice and Occupied Territories, Dr. Marx.

### HISTORY

**SITUATION AT THE BEGINNING OF THE YEAR.** As noted in the preceding YEAR BOOK, Chancellor

Luther resigned his position during the first week of December but decided to remain in office until President Hindenburg could find a successor. After a month and a half of delay and squabbles, Luther was again asked to form a new cabinet which he did on January 19. The members of the new body are given above under the paragraph on *Government*. The chief delay in the formation of a new government was the contest over the position of Secretary of the Interior. The Democrats wanted the position for their leader Dr. Koch, who had been unable to form a cabinet in December. The German People's Party wanted the position for Herr Curtius. Hindenburg finally became so exasperated that he gave the quarreling politicians four hours to reach a decision in lieu of which, he hinted at some form of dictatorship. Stresemann, Gessler, Stingl, and Krohne were members of the former cabinet of Chancellor Luther. The Socialists, although the strongest party in the Reichstag, were not represented in the new government, although they were strong supporters of Luther in his foreign policies.

On January 26, Luther appeared before the Reichstag and stated the policies of the government. They included the need for private and public economy, the settlement of the unemployment situation, financial assistance for the farmers, and international regulation of tariff questions. "The command of the hour is to labor objectively and practically for the rehabilitation of German trade and the German people. The more resolutely and powerfully this works, supported by all sections of the people, the sooner will Germany recover that position in the world to which the greatness and capability of her people entitle her." On January 28 the Chancellor received a vote of confidence, 160 to 150, although the Socialists and Economic Union, which controlled 131 votes, refused to vote. The real reason, probably, why the vote of confidence was given was because the opposition realized that the Chancellor had the power to dissolve parliament and would have done so had the vote been adverse. The opposition parties did not care to go before the people just then.

On January 30, the British forces withdrew from the Cologne zone, and the administration of the district reverted to Germany. President Hindenburg completed the liberation of the Cologne district by a triumphant tour through the district on March 21. He said in a speech, "To all of us the Rhine symbolizes the eventful history of Germany. Here the German Emperors and Kings were chosen and crowned. The severe trials to which the German men and women have been subjected in the last few years have furnished proof that Germany's mission is not yet fulfilled and that it is not doomed to destruction."

**GERMANY AND THE LEAGUE.** On February 10, Germany presented her application for admission to the Secretary-General, Sir Eric Drummond, of the League of Nations. The failure of the League to act upon this immediately caused a two-day debate in the Reichstag. Foreign Minister Stresemann defended the position of Germany and her actions at Geneva (See LEAGUE OF NATIONS) and asserted that she had gained prestige in the eyes of the world by those actions. Chancellor Luther stated that Germany must gain membership in the League for the

sake of the Locarno Pact, which he declared was the fundamental backbone of German foreign policy. The only opponents of the government's policies were the Nationalists and the Communists who bitterly denounced Locarno and the League. A vote of confidence in the government was passed.

In the middle of April it was announced that the German government would participate in the special Council Reorganization Committee of the League of Nations to consider possible changes that might occur as a result of the failure to admit Germany to membership. Stresemann concluded his announcement with the following statement: "I take the liberty of pointing out that the German representative, in view of the fact that Germany is not a member of the League, will inevitably be in a different position in the proceedings of the commission from representatives of the other powers concerned. Not only must this special position of Germany be taken into account by the German representative, but it also makes it necessary to state expressly that participation by this representative in the deliberations of the committee cannot affect the freedom of decision of the German Government as regards Germany's entry into the League."

**GERMANY AND RUSSIA.** As if in answer to the failure to take Germany into the League, there was published the text of a treaty with Russia in Berlin on April 26. The provisions of this treaty as published in *Current History* for June are as follows:

Art. 1—The basis of relations between Germany and the Soviet Union remains the Treaty of Rapallo. The German Government and the Government of the Soviet Union will remain in friendly contact with one another in order to insure mutual understanding in all questions of a political and economic nature affecting their two countries.

Art. 2—Should one of the contracting parties, despite its peaceful demeanor, be attacked by a third power or by several other powers, the other contracting party shall preserve neutrality throughout the entire duration of the conflict.

Art. 3—Should a coalition among other powers in connection with a conflict such as is foreseen in Article 2, or at a time when neither of the contracting parties is engaged in warlike activities, be organized for the purpose of imposing an economic boycott against one of the contracting parties, the other contracting party will not participate in such coalition.

Art. 4—This treaty shall be ratified and ratification proclamations shall be exchanged in Berlin. The treaty thereupon goes into effect and is valid for a period of five years. The two contracting parties will reach an understanding over the further status of their political relations before the termination of this period.

An appendix to the treaty consisted of a letter from Foreign Minister Stresemann to M. Krestinsky and the Russian Ambassador's reply. It was declared categorically that these communications had equal force with the treaty proper. Dr. Stresemann's letter read in part:

1. Both Governments are agreed that the underlying principle of reciprocal understanding recorded in the first article of the treaty with regard to all political and economic questions jointly affecting the two nations will contribute materially to the preservation of universal peace. In any case, both Governments in their discussions will be guided by the necessity of maintaining peace.

2. In this sense both Governments have dealt with basic questions associated with Germany's entrance into the League of Nations. The German Government is convinced that Germany's membership in the League offers no obstacle to a friendly development of Russo-German relations. The League in its fundamental conceptions is designed for peaceful and just settlement of international disputes.

The German Government is resolved to devote its

energies to the realization of this conception. Should however, there arise within the League of Nations tendencies which, in contradiction with this basic idea of peace, would be directed solely against the Soviet Union—which the German Government does not suppose—Germany would oppose such tendencies with all her power.

3. The German Government assumes that this basic orientation of German policy toward the Soviet Union cannot be influenced through faithful observance of obligations which may be imposed on Germany after her entry into the League by Articles 16 and 17 of the League Covenant. Punitive undertakings against the Soviet Union could be contemplated only if the Soviet Union started an aggressive war against another State.

In this connection it must be recalled that the question as to whether the Soviet Union is the aggressor in an armed conflict with a third State can be decided with binding effect for Germany only with Germany's consent, and that thereby accusations raised by other States against the Soviet Union and not considered justified in German eyes would not oblige Germany to take part in any measures initiated under Article 16. As to the question whether and to what extent Germany in a concrete case would be obliged to participate in any punitive measures whatever, the German Government refers to its note of Dec. 1, 1925, regarding interpretation of Article 16 addressed to the German delegation on the occasion of the signing of the Locarno treaties.

4. In order to create a sure basis for the harmonious settlement of all questions arising between them, the two Governments deem it opportune to negotiate a general treaty for the peaceful solution of such disputes, in which connection special consideration shall be given to the possibilities of arbitral processes.

M. Krestinsky's answering note merely reaffirmed Dr. Stresemann's declaration that the two nations desired the promotion of world peace, recorded without comment his observations on Germany's ultimate relations with the Locarno progress, and reiterated in the same words Dr. Stresemann's declaration about the future conclusion of an arbitration treaty. The press of Europe was hostile to this arrangement with the possible exception of that of Great Britain, where public opinion regarded the treaty as bringing Russia nearer to the League.

**CABINET CHANGES.** On May 12, the Luther cabinet was forced to resign because of its inability to satisfy the Reichstag on the so-called flag question. The Luther cabinet had decreed that all foreign representatives of Germany abroad should place the old imperial colors of black, white, and red alongside the republican colors. On a resolution disapproving this measure the Nationalists refrained from voting and the Democratic Party, which belonged to Luther's coalition, approved it, with the result that the government's action was condemned by a vote of 176 to 146. The failure of the Nationalists to vote for a measure which they most certainly ought to approve gave rise to numerous rumors that they acted in that manner because they were planning a widespread monarchist revolution which would come into power as soon as Luther was forced out of office. Although there was some evidence of such a movement, it seems that it was grossly exaggerated.

On March 16, former Chancellor Marx accepted the Chancellorship and announced that he would keep the remainder of the Luther cabinet. The regulation of the Luther government concerning the use of the imperial flags was to be carried out until such time as a commission could find a compromise flag.

**QUESTION OF FORMER RULERS' PROPERTY.** Throughout the first half of the year there had been an insistent demand on the part of the Socialists and Communists for the confiscation of the property of former rulers of Germany. The Nationalists and the People's Party were

opposed to expropriation, as was the majority of the Centre. Those favoring confiscation began early in the year to circulate a petition to bring about expropriation. According to the German constitution if 10 per cent of the voters at the last national election demand a referendum on a subject that referendum must be held. Germany has approximately 40,000,000 voters so it was necessary to obtain the signature of only 4,000,000. On April 14, 12,523,939 persons had signed a petition for the expropriating of the property. Naturally, a referendum was necessary, particularly since the Reichstag had rejected the bill when placed before it. The Luther cabinet was unalterably opposed to it. The form of the referendum as given in *Current History* for August is as follows:

The German people, through popular initiative and referendum, decree the following law:

1. The entire fortune of the Princes who have ruled in any one of the German States until the revolution of 1918, as well as the entire fortune of the princely houses, their families and family members, are confiscated without compensation in the interest of the general welfare.

2. The confiscated property is to be used to aid:

- (a) The unemployed.
- (b) The war invalids and the war widows and orphans.
- (c) Those dependent upon the public.
- (d) The needy victims of the inflation.
- (e) The agricultural laborers, tenants and peasants, through the creation of free land in the confiscated estates.

The castles, residences and other buildings are to be used for general welfare, cultural and educational purposes, especially for convalescent hospitals and homes for war invalids, war widows and orphans, and for the socially dependent, as well as for children's homes and educational institutions.

The national referendum was held on June 30, after a bitter campaign into which President Hindenburg was dragged in the closing days as an opponent of confiscation. About 15,686,000 votes were cast of which only 500,000 were against confiscation. Although more than 15,000,000 voted for the measure, it failed to carry because the constitution provides that a majority of all the qualified voters must vote to make a referendum legal. The supporters of the measure failed by 5,000,000 to carry out their purpose, although it showed pretty well how the people were divided on the matter. Attempts on the part of the government to settle the matter later were frustrated by the spectre of a cabinet upheaval or the dissolution of parliament. All the states in the meantime with the exception of Prussia and Gotha had made settlements with their former rulers. Prussia settled her problem in October when she gave the Kaiser 250,000 acres of land and 15,000,000 gold marks for the property he formerly owned in the kingdom. Most observers believed that this would be the end of a very vexatious and dangerous problem. Needless to say, the Communists voted solidly against this measure, although it called for payment of a far less sum than was asked for.

**FALL OF THE MARX CABINET.** The Marx cabinet which, as noted above, was appointed in March, fell on December 17. The crisis was caused by the Socialists, who made a bitter attack on Defense Minister Gessler and Minister of the Interior Kütz. Gessler was accused of being a mere tool of the old military régime and of attempting to build up a huge army and hide it behind the Reichswehr. The Socialist leader, Scheidemann, claimed that the various

"athletic clubs" and other societies fostered by Gessler were mere cloaks to cover up the military training of thousands of German citizens, who were only awaiting the proper time to restore the monarchy and launch Germany on another war of conquest. Kütz was attacked because of the strict censorship law which was enforced. The cabinet fell after an adverse vote of 249 to 171 had been taken on December 17 on a question of confidence in the government. No successor to Marx had been appointed up to the close of the year. At the request of President Hindenburg he continued in office until a new cabinet could be formed. See LEAGUE OF NATIONS.

**GIBRALTAR.** A possession of Great Britain on a small peninsula, comprising the Rock of Gibraltar, on the southwest coast of Spain, commanding the entrance to the Mediterranean Sea. Area, 17½ square miles; population, at the census of 1921, 20,638, of whom 2932 were military and 546 naval. On Jan. 1, 1925, the fixed population was estimated at 16,177, and there were also about 1268 aliens. The inhabitants are chiefly descendants of Spanish and Italian settlers, and in religion are Roman Catholics. Education is compulsory between the ages of five and 14. In 1924-25 there were 14 government aided elementary schools with 2617 pupils. There are also five secondary schools. The revenue in 1924 was £166,115 and the expenditure, £160,362. Trade is mainly transit. Vessels entered in 1924, 5143 of 7,242,548 tons; cleared, 3420 of 6,818,633 tons. There is cable connection with the continent, with eastern Mediterranean ports, and with England. Gibraltar is under a governor who is also commander-in-chief. He is assisted by an executive council established in 1922. Governor, in 1926, General Sir Charles C. Monro.

**GIFTS AND BENEFACTIONS.** See UNIVERSITIES AND COLLEGES.

**GILCHRIST, ALBERT WALLER.** Former governor of Florida, died in New York, N. Y., May 16. He was born at Greenwood, S. C., Jan. 15, 1858. He graduated from the Carolina Military Institute at Charlotte, N. C., and was for three years a cadet at the United States Military Academy. In Florida he was a civil engineer, real estate dealer, and orange grower, serving as a member of the Florida House of Representatives in 1893, '95, 1903, and '05, in which year he was speaker. In 1909 he became Governor of Florida, serving until 1913. At the outbreak of the Spanish-American War he resigned as Brigadier-General of the Florida Militia and enlisted as a private in Company C, Third United States Volunteer Infantry, serving in Santiago, Cuba. In the following year he was mustered out with the rank of captain. He was a delegate to the Democratic National Convention held at New York in 1924. During his administration as Governor he secured the passage of laws regulating the practice of osteopathy and dentistry, established sanatoriums for tuberculosis patients, provided for the sanitary inspection of food, and suppression of contagious diseases among livestock, and the punishment of corrupt practices in elections.

**GILCHRIST, JOHN DOW FISHER.** Professor of zoölogy in the University of Cape Town, died at Cape Town, South Africa, October 22. He was born at Anstruther, Scotland in 1866, and was educated at Madras College, St.

Andrews, Scotland, and at the Universities of St. Andrews, Edinburgh, Munich, and Zurich. Specializing in biology, in 1893 he became assistant in the zoological department in Edinburgh, and two years later became marine biologist to the government of the Cape of Good Hope. From 1896-1904 he carried on a marine biological and fisheries survey of the Cape coasts, discovering the trawling ground on the Agulhas Bank in 1898. In 1902 he also made a marine biological and fisheries survey for the Natal government. In 1918 he became professor of zoology in the University of Cape Town, previously having held a similar chair in the South African College from 1905-17. He was president of the South African Philosophical Society of Cape Town, 1903-04, and honorary member of the Société Centrale d'Aquiculture, joint honorary secretary of the South African Association for the Advancement of Science, 1902-05, chairman of the Fishery Board of Cape Province, 1908, marine biological and fisheries adviser for Cape Province, 1912; president of the Royal Society of South Africa, 1918, honorary director of the South Africa fishing and marine biological survey, 1920, and president of the South Africa Association for the Advancement of Science, 1922. He was the author of many reports dealing with marine biology and fisheries in South Africa, and edited many reports and works on science and zoology in this region. He was the author of many papers chiefly on fishes, mollusca, crustacea, hemichordata, temperatures and currents of South African seas, and other scientific topics, published in journals of learned societies.

**GILL, LAURA DRAKE.** American educator, died February 3. She was born at Chesterville, Me., Aug. 24, 1860, and after graduating at Smith College in 1881 and taking a master's degree in 1885, studied mathematics at the Universities of Leipzig, Geneva, and at the Sorbonne, Paris. From 1881-98 she was a teacher of mathematics in Miss Capen's school, Northampton, Mass., and during the Spanish-American War she was active in connection with the placing of nurses, and in educational and relief work for Cuban orphans following the war. In 1901 she became dean of Barnard College, Columbia University, serving until 1908. She was active in the organization of college alumnae, being president of the Association of Collegiate Alumnae, and chairman of education for the General Federation of Women's Clubs, 1907-11. Miss Drake originated the first Vocation Bureau for College Women, and The Women's Educational and Industrial Union at Boston, 1909-11. From 1911-14 she was engaged in organization work at the University of the South, Sewanee, Tenn., and in 1914-15 in Trinity College, Durham, N. C. During the World War she was active at Washington in the training section of the United States Employment Service of the Department of Labor. In 1921 she was a worker in the Pine Mountain Settlement, Kentucky, and in 1922 went to Berea College at Berea, Ky.

**GIRL SCOUTS.** A non-sectarian organization for girls started in Savannah, Georgia, in 1912, and incorporated under the laws of the District of Columbia in June, 1915. The purpose of the organization is to help girls to realize the ideals of womanhood, as a preparation for their responsibilities in the home and

service of the community. It aims to give girls, through natural wholesome pleasures, those habits of mind and body which will make them useful, responsible women. Its programme emphasizes methods of training to develop initiative, self-control, self-reliance, service to others, and other worth-while characteristics. Girl Scouting is based on the principles developed by Sir Robert Baden-Powell which first took shape in the Boy Scout programme in England. This programme has become the inheritance of boys and girls throughout 27 countries of the world, under different names and with slight modifications. The plan for Girl Scouting is not a copy of the Boy Scout programme; it is a development of the Girl Guide programme also founded by Sir Robert Baden-Powell, changed and adapted to meet the needs of American girls. When a girl becomes a scout she makes the following promise: "On my honor, I will try: to do my duty to God and my country; to help other people at all times; to obey the Scout Laws." The unit of organization is the troop, which is composed of one or more patrols. There are eight scouts in each patrol. The activities of the troop are developed through the Patrol System. The girls appoint a Patrol Leader from their own group who is responsible for the activities of the group. They advance by a merit system similar to that of the Boy Scouts (q.v.) The total active paid membership of the organization in 1926 was 134,934. It maintains 12 summer training schools for scout leaders, at which, in 1925, the enrollment was 2105. Since 1922 courses in Girl Scout leadership had been given through the Laura Spelman Rockefeller Memorial to nearly 6000 leaders in colleges and institutions of learning in 39 States. These leaders are followed up after leaving college by a system of letters encouraging them to take up Girl Scout work in their home neighborhood. The organization maintains summer camps for its members. The official organ is *The American Girl*. The income for the year 1925 totaled \$329,536.43. The officers for 1926 were: Mrs. Calvin Coolidge, honorary president; Miss Sarah Louise Arnold, president; Mrs. Herbert Hoover, first vice-president and chairman of the Board of Directors; Mrs. Arthur O. Choate, Mrs. Julius Rosenwald, Mrs. William H. Hoffman, Mrs. Vance C. McCormick, Mrs. Charles C. Harrison, Jr., vice-presidents; Mrs. Nicholas F. Brady, treasurer; Mrs. Julius H. Barnes, corresponding secretary; Mr. Douglas Campbell, counsel. The national headquarters are at 670 Lexington Avenue, New York City.

**GLASS.** See CHEMISTRY, INDUSTRIAL.

**GLENN, EDWIN FORBES.** Brigadier-General, U. S. A., retired, died at Mentor, Ohio, Aug. 5. He was born near Greensboro, N. C., Jan. 10, 1857, and after studying at various private schools in North Carolina and New York entered the United States Military Academy from which he graduated in 1877, being commissioned second lieutenant in the Twenty-fifth United States Infantry. He was promoted through the various grades of the army to brigadier general, May 15, 1917, and on August 5 of that year became major general in the National Army. He instituted military training at the University of Minnesota where he was professor of mathematics in 1888, and while stationed there studied law, receiving the degree of LL.B in 1890, being admitted to the Minnesota bar.

In addition to service in the line he was judge advocate in the department of Dakota, and in the Department of the Columbia, and commanded an exploring and survey expedition to Alaska, 1898-99. General Glenn served in the Philippines and at various posts in the United States, studying at the War College, Washington, 1913-14, and serving as chief of staff of the Department of the East, 1914-16. He commanded the Eighteenth Infantry and the First Separate Brigade at Deming, N. M., 1916-17, and after the outbreak of the World War organized Camp Sherman, Ohio, and the 83d Division. From January to April, 1918, he was sent overseas for observation at various fronts, and in June of that year commanded the 83d Division of the A. E. F. He also organized and commanded the Second Replacement Depot and Training Centre at Le Mans, Sarthe, France, and the American Embarkation Centre there, and in February, 1919, was in command of demobilization at Camp Sherman, Ohio. He retired from the army in 1919. He was made a Commander of the Legion of Honor of the French Government for his services in the War. He was the author of *Glenn's International Law* (1895); and *Rules of Land Warfare*, published in 1914 under the auspices of the General Staff. He was active in the United States Infantry Association, serving as its president 1913-20.

**GLENNAN, ARTHUR HENRY.** Assistant Surgeon General United States Public Health Service, died at Washington D. C., September 22. He was born at Rochester, N. Y., July 28, 1853, the son of Patrick Glennan, a surgeon in the United States Army. After graduating with the degree of B.S. at St. John's College, District of Columbia, in 1872, he studied medicine at the University Medical College, N. Y., receiving the degree of M.D. in 1882. In the following year he was appointed assistant surgeon in the United States Marine Hospital Service, and advanced through successive ranks in that service, and in the public health service until June 10, 1903 when he was made assistant surgeon general. From 1883-97 he commanded various marine hospitals and quarantine stations, and during the yellow fever epidemic of 1897-98 he served in the South. He was sanitary inspector for the west coast of Florida during General Shafter's expedition to Cuba, and organized the quarantine service of Porto Rico in 1899, being appointed a member of the Superior Board of Health. He was Chief Quarantine Officer of Cuba during the yellow fever epidemic in Havana serving on the staff of Major General Wood, 1900-02. In 1902-03 he was detailed upon a sanitary mission to California which was carried on in cooperation with both government and state health officials.

**GOITRE.** In regard to the wholesale use of iodized salt as a preventive of the disease in goitrous regions Dr. Hartsock of Cleveland (*Journal of the American Medical Association*, May 1) is but one of many who warn the public against going to extremes in this direction. It is not denied that this remedy prevents the simple form of goitre, but it may also cause the development of the toxic or exophthalmic form of the disease. There is probably no danger if the iodized salt is limited to young children up to the age of puberty, for these are not much disposed to toxic goitre; but after that period it

should not be given save with the consent of a physician who can make an expert examination. If the adolescent presents what is known as fetal adenoma he should use the salt with great caution if at all, and be prepared to suspend its use if symptoms of hyperthyroidism appear. Adults had better not make use of the salt at all. Dr. Hartsock gives advice in regard to the use of the salt in the presence of certain conditions which may either permit or forbid it, which bring home the fact that the subject is too technical for the layman to decide. In the same number of the *Journal* Dr. Jarvis and two others of Seattle laud the use of salmon, whether fresh or canned, as a preventive of goitre. While some other substances contain more iodine none is so economically suited for a steady diet. See **FOOD AND NUTRITION**.

**GOLD.** In the United States the Bureau of the Mint, with the cooperation of the Bureau of Mines, issued the following statement of the preliminary estimate of refinery production of gold during the calendar year 1926:

States	Gold	
	Ounces	Value
Alaska . . . . .	312,856	\$6,467,800
Arizona . . . . .	230,227	4,759,200
California . . . . .	559,911	11,574,400
Colorado . . . . .	331,819	6,859,300
Georgia . . . . .	101	2,100
Idaho . . . . .	12,181	251,800
Montana . . . . .	60,411	1,248,800
Nevada . . . . .	169,598	3,505,900
New Mexico . . . . .	25,513	527,400
North Carolina . . . . .	97	2,000
Oregon . . . . .	12,631	261,100
Pennsylvania . . . . .	19	400
South Dakota . . . . .	286,960	5,932,000
South Carolina . . . . .	14	300
Tennessee . . . . .	421	8,700
Texas . . . . .	111	2,300
Utah . . . . .	178,078	3,681,200
Virginia . . . . .	10	200
Washington . . . . .	8,872	183,400
Philippine Islands . . . . .	98,259	2,031,200
Total . . . . .	2,288,089	47,299,000

The 1926 production of gold was less than that of 1925 by \$2,561,200; the year of greatest gold production was 1915, when \$101,035,700 was produced. The gold production of 1926 was the lowest of any year since 1895.

\* Estimate based on United States imports of ore and bullion.

† Last year's figures.

‡ Estimate based on other years' production.

§ Amount exported.

|| Estimate based on first eight months' output.

**WORLD'S PRODUCTION OF GOLD.** In 1926 the world's gold production was estimated at \$388,500,000, or, as will appear from the accompanying table, a small decrease from the estimates of 1925. The Transvaal gold field increased its production in 1926 owing to more

favorable labor conditions, the output being estimated at 9,900,000 ounces, valued at \$205,891,000, or an increase of 362,000 ounces, valued at \$7,483,000, making a new record. The decline of production in the United States amounted to \$2,561,200, as already considered, while in Mexico the production of gold declined from \$16,310,000 to \$12,821,000 in 1926, or a decline of \$3,489,000. The production of gold in Russia in 1926 was estimated at \$17,500,000, about the same as in 1925, with a possibility that more complete statistics would increase the total by \$500,000. In the Dominion of Canada the production of the Province of Ontario was estimated to be in excess of \$31,000,000, or an increase over 1925 of more than \$1,500,000. While declines were indicated from the Yukon and western Canada, nevertheless the production of the Dominion in 1926, approximately \$36,250,000, was an increase of approximately \$500,000 over 1925.

The figure of world's highest production was \$468,799,812, in 1915, of which the United States produced 21.5 per cent. The United States had since that time constantly decreased its percentage, until in 1926 it stood at 12.2 per cent. On the other hand Canada had increased its production and there was every indication that within a few years it would be greater than that of the United States. The purchasing power of the gold dollar in terms of the 1913 dollar was 66.1 cents, as compared with 63 cents in 1925, both figures being based on eleven months of the respective years.

**U. S. IMPORTS AND EXPORTS.** The movement of gold during 1926 resulted in a gain to the United States in the metal of \$97,764,408, the imports being \$213,472,223, against exports of \$115,707,815. In 1925 the country lost gold to a total of \$134,366,618, exports amounting to \$262,639,790 and imports to \$128,273,172. See FINANCIAL REVIEW.

**GOLD, TRANSMUTATION OF.** See CHEMISTRY, INDUSTRIAL, under *Gold*.

**GOLD COAST.** A colony on the Gulf of Guinea in Africa belonging to Great Britain; bounded by the French Ivory Coast on the west, the French Sudan on the north, Togoland on the east, and extending on the south for 334 miles along the Gulf of Guinea; comprising in addition to the colony, proper, Ashanti and the Northern Territories. The area of the three divisions is estimated at 80,000 square miles; population at the census of 1921, 2,078,043, of whom 2165 were Europeans. The capital and chief town is Accra, with a population of 38,000. Other large towns are Cape Coast (15,000), Sekondi (10,000), and Keta (10,000). In 1924-25 there were 21 government schools and 215 assisted schools, which are under the control of various missions. The average attendance during this year at the primary and secondary schools was 30,456. There were besides a large number of unassisted primary schools supported by the religious denominations.

The staple products and chief exports are: Cacao, palm oil, palm nuts, cola nuts, and India rubber; there has also been an increasing production of spice, coconuts, coffee, cotton, and a steady development of the trade in valuable native woods. The chief mineral is manganese, which constitutes an important export. The exports in 1924 were valued at £9,914,937 and the imports at £8,315,234. According to the United States Bureau of Foreign and Domestic Com-

merce, the foreign trade of the Gold Coast Colony for the first six months of 1925 showed a very appreciable increase over the same period in 1924. Total imports for the first half of 1925 (exclusive of specie) were valued at £3,891,558 as against £3,100,258 for the 1924 period, thus showing an increase of nearly 23 per cent. Imports from the United States which held second place following Great Britain, mounted from £470,834 to £532,487, or about 8 per cent. The total value of exports from the colony to all countries, exclusive of coin, reached £5,840,765 for the first half of 1925 as compared with £5,342,381 for the 1924 period, an increase of 9 per cent. Exports to the United States which again took second place, amounted to £1,346,726, or approximately 25 per cent over the six months' total of £1,073,277 in 1924, and consisted mainly of cacao. The revenue for 1924 was £3,971,187 and the expenditure, £4,632,633. The public debt on March 31, 1925, was £7,259,118. The shipping entered and cleared in the 1924 trade was 3,671,964 tons, of which 2,189,097 were British.

Ashanti, annexed by Great Britain in 1901, is under the governor of the Gold Coast, although it has its own local laws and ordinances. Population, 1921, 407,000, of whom 400 were Europeans. Kumasi, with 20,000 inhabitants, is the chief town. In 1924-25 there were 775 pupils in the government schools and 3049 pupils in the mission schools. The forests in the western part are rich in mahogany, cedar, and other valuable woods, and in trees that yield rubber, oil and gum copal, and fruits. Local receipts in 1924-25 were £60,018; local expenditures, £379,288.

The Northern Territories, constituted a British protectorate in 1910, are also under the governor of the Gold Coast but locally administered by a chief commissioner, with his headquarters at Tamale. Area, 31,000 square miles; population (1921), 527,914, of whom only 49 were Europeans. Navaro is the chief town with a population of 15,000. Local revenue in 1924-25, £8229; local expenditure, £84,795. Governor of the Gold Coast at the beginning of 1926, Brig.-Gen. Sir F. G. Guggisberg; Chief Commissioner of Ashanti, Sir J. Maxwell; Chief Commissioner of the Northern Territories, Major A. H. C. Walker-Leigh.

**GOLDSMITH, PETER H.** American editor and Americanist, died at New York City, April 8. He was born in Greenville, S. C., Nov. 23, 1865, and was educated at the Greenville Military Institute, Furman University, and the Southern Baptist Theological Seminary. Ordained in the Baptist ministry, he held various pastorates until 1891 when he went to Guadalajara, Mexico, as a Baptist missionary, remaining until 1894, when he accepted a call to the Temple Baptist Church of Philadelphia. In 1902 he was ordained in the Unitarian ministry becoming pastor of the First Congregational Society of Salem, Mass., and in 1910, accepted a call to the First Unitarian Congregational Church of Yonkers, N. Y. During his residence in Mexico his interest was aroused in the Spanish language and the Spanish-American people, and after returning to the north he continued his studies in the Spanish language, compiling a dictionary and preparing a method for teaching English to Spanish-speaking peoples. In 1906 on a trip to Mexico he made extensive collections including specimens of insect life which were given to

Harvard University and the Peabody Museum of Salem, Mass., and in 1912 he made a trip to Spain, visiting libraries and consulting various archives. In 1914 he became director of the Pan American Division of the American Association for International Conciliation, and in 1924, when this organization became incorporated with the Division of Intercourse and Education of the Carnegie Endowment for International Peace, Dr. Goldsmith became the director of the Inter-American Section of the Division of Intercourse and Education. He was also director and editor of *Inter-America*, a periodical "designed to establish community of ideas among the peoples of the New World." He was a member of the Hispanic Society of America, and of the Pan American Society of the United States, besides being a corresponding member of the Museo Social Argentino, of the Instituto Paraguayo and of the Sociedad Chilena de Historia y Geografía.

**GOLF.** Robert T. Jones, Jr., of Atlanta, Georgia, was the central figure of the 1926 golfing season. This amazing youngster first captured the British open championship from a field of notable players and less than two weeks later won the United States open tourney, a feat never before performed in the history of this sport. Jones topped off these achievements by a magnificent defense of his United States amateur crown, losing to George von Elm in the final round by the narrow margin of 2 and 1.

The veteran Walter Hagen also distinguished himself through his third successive triumph in the U. S. Professional Golfers' Association championship and his victories in both the Eastern and Western open tourneys. Jesse Sweetser scored the most dramatic success of the year when he carried off the British amateur championship.

United States players added still another international trophy to their collection by winning the Walker Amateur Cup series from a British team, the score being 6 1-2 to 5 1-2. A new champion resulted from the United States national women's amateur tournament, Mrs. G. Henry Stetson wresting the laurels from Miss Glenna Collett. The United States Intercollegiate Association championship went to Yale University for the third successive year with a score of 1295. Harvard finished second with 1297 and Princeton third with 1298. The individual honors were captured for the second consecutive year by G. F. Lamprecht of Tulane University.

The winners in the more important tournaments of 1926 were: U. S. National Open, R. T. Jones, Jr.; U. S. National Amateur, George von Elm; U. S. National Women's, Mrs. G. Henry Stetson; U. S. Professional, Walter Hagen; British Open, R. T. Jones, Jr.; British Amateur, Jesse Sweetser; British Women's, Miss Cecil Leitch; French Open, Aubrey Boomer; French Amateur, J. G. Anderson; French Women's, Mme. S. T. de la Chaume; Canadian Amateur, R. Somerville.

**GONZALES, AMBROSE ELLIOTT.** Author and editor, founder and editor of the *Columbia*, S. C., *The State*, died at Columbia, S. C., July 11. He was born at Adams Run, S. C., May 29, 1857, and was educated at private schools, becoming a telegraph operator in 1874, working in this field until 1878, when he took up farming. In 1881 he became a commercial telegraph operator in New

York City, working in that City and New Orleans until 1885, when he became a traveling agent and correspondent for the Charleston, S. C. *News and Courier*. In 1890 he was appointed secretary of the South Carolina Department of Agriculture, and February 18, 1891, with his brother, N. G. Gonzales, founded at Columbia, S. C. a daily paper known as *The State*. From 1893 he was the president, treasurer and manager of that paper which soon acquired considerable influence. During the Spanish-American War he served in Santiago, Cuba as captain of the United States Volunteers. In addition to his newspaper work Gonzales wrote many stories in the dialect of the Negroes of the South Carolina coastal islands employing what was known as the Gullah Dialect. This attracted considerable attention in literary circles. His literary work included: *The Black Border: Gullah Stories of the Carolina Coast* (1922); *With Asop Along the Black Border* (1924); *The Captain: Stories of the Black Border* (1924); and *Laguerre—A Gascon of the Black Border* (1924).

#### GORDON BENNETT CUP COMPETITION.

See AERONAUTICS.

**GOUCHER COLLEGE.** A non-sectarian college for women at Baltimore, Md.; founded in 1885. For the year 1926-27 there were 1050 students enrolled, distributed as follows: 329 first year students, 273 second year, 244 third year, 200 fourth year, and 4 unclassified. The faculty had 105 members, 5 of whom were added during the year. The endowment funds of the college amounted to \$2,351,673.99. The library contained 40,500 volumes. President, William Westley Guth, Ph.D., LL.D.

**GRAHAM'S LAND.** See FALKLAND ISLANDS.

**GRAIN.** See AGRICULTURE; RYE; WHEAT; ETC.

**GRANNISS, MRS. ELIZABETH BARTLETT.** American editor and humanitarian, died at New York City March 22. She was born at Hartford, Conn., March 27, 1840, and was educated at public and private schools, and at Lake Erie College, Painesville, O. She was a teacher in the public schools, and later became head of a private school. She was editor and proprietor of *The Church Union* (Evangelical) for 23 years, and was also editor of the *Children's Friend* and *Kindergarten Magazine*. In 1887 she founded and became president of the National Christian League for Promotion of Purity, and was active in many measures and agencies involving the betterment of moral and social conditions. She was a delegate and speaker many times before the National and International Council of Women, and in her later life was active in securing legislation for sterilization of habitual criminals and mental defectives, against infidelity in wedlock, and other similar moral undertakings.

**GRAPES.** See HORTICULTURE.

**GRAPHITE.** The U. S. Bureau of Mines reported for the year 1925 a production of 3536 short tons of amorphous graphite valued at \$39,640 and 2,257,250 pounds of crystalline graphite valued at \$56,721. In addition to this natural graphite there was manufactured at Niagara Falls, N. Y., by the Acheson Graphite Company artificial graphite to the amount of 12,135,655 pounds. In 1925 there were imported into the United States 17,768 short tons of graphite valued at \$826,410, and also 3100 crucibles valued at \$548. The exports of graphite from the United States in 1925 were 945 short tons unmanufactured graphite valued at \$142,-

122 and manufactured graphite valued at \$337,481.

**GRASSELLI MEDAL.** See CHEMISTRY, INDUSTRIAL, under *Medals*.

**GREAT BRITAIN.** UNITED KINGDOM OF GREAT BRITAIN AND IRELAND. A Constitutional monarchy comprising the British islands. Capital, London. Although the term literally applies only to the island including England, Scotland, and Wales, it is often used as above to include Ireland, the Isle of Man, and the Channel Islands. In view of the change in the status of Ireland (q.v.) usage in this respect will probably be altered. The term British Empire applies to the United Kingdom and all its possessions and dependencies, that is to say the dominions, colonies, protectorates, and other territories subject to the ultimate control of the British Parliament.

**AREA AND POPULATION.** The area of England, Scotland, Wales, the Isle of Man, and of the Channel Islands is 89,041 square miles; the area of Ireland, 32,586 square miles (see IRELAND, NORTHERN, and IRISH FREE STATE). The population of England, Scotland, and Wales in 1925 was 43,783,032. For details of the census of 1921 see 1923 and preceding YEAR BOOKS.

The accompanying table from the *Statesman's Year Book* for 1926 gives a comparison of the estimated population (exclusive of army, navy, and merchant seamen abroad):

Year (30 June)	England and Wales	Scotland	Total of Great Britain
1914	36,960,684	4,747,167	41,707,851
1921	37,865,242 <sup>a</sup>	4,882,288 <sup>a</sup>	42,767,530 <sup>a</sup>
1922	38,158,000	4,904,247	43,062,247
1923	38,403,000	4,901,100	43,304,100
1924	38,746,000	4,881,637	43,627,637
1925 <sup>b</sup>	38,890,000	4,893,032	43,783,032

<sup>a</sup> Census figures for June 19.

<sup>b</sup> Provisional figures.

The provisional figures for the movement of population in England and Wales for 1925 were: Births, 710,979; deaths, 473,006; marriages, 295,166. Similar figures for Scotland were: Births, 104,137; deaths, 65,505; marriages, 32,468. The number of persons taking advantage of "assisted emigration" (see preceding YEAR BOOK), under the terms of the Empire Settlement Act, during the first eight months of 1926 reached a total of 26,213, as compared with 129,127 during the years 1922 to 1925, inclusive, according to the Ministry of Labor *Gazette*. Assisted emigrants departed for various regions during the 1926 period, January 1 to August 31, inclusive, as follows: Australia, 22,424; Canada, 15,927; New Zealand, 7201; South Africa, 114; and other sections of the British Empire, 547.

Greater London, the largest city in the world, had a population in 1921 of 7,480,201 on the 443,449 acres covered by the Metropolitan and City Police Districts. Registration London, which coincides with the administrative county and nearly coincides with the London Parliamentary borough, had a population of 4,484,523, with an area of 74,850 acres. The estimated population of Greater London in 1924 was 7,665,883. Birmingham, the second city of England, had a population in 1921 of 919,444 (estimated, June, 1924, 946,980). Liverpool continued to stand third, with 802,940 in 1921 (estimated, June, 1924, 851,800); and Manchester fourth with 730,307 in 1921 (estimated, June, 1924, 755,000).

Other large cities with their populations are Sheffield, 490,639 in 1921 (estimated in 1924, 525,000); Leeds, 458,232 in 1921 (estimated in 1924, 471,600); Bristol, 376,975 in 1921 (estimated in 1924, 386,200). Glasgow is the largest city in Scotland with a population of 1,034,174 in 1921 (estimated in June, 1925, 1,057,100); Edinburgh is next with 420,264 in 1921 (estimated in June, 1925, 427,300). The chief city of Wales is Cardiff, which had an actual population in 1921 of 200,184 and an estimated population in 1924 of 226,200. The census of 1921 did not include Ireland. For the populations of Australia, Canada, India, and other British possessions, see those titles.

**EDUCATION.** Primary education is free and compulsory between the ages of five and 14. In 1924 the number of schools in England and Wales (public elementary, special, and certified) was 21,304, with accommodations for approximately 7,090,000 pupils. The average attendance at these schools was about 5,032,000 and the number of teachers, 161,049. There are also numerous schools for the blind and deaf and for mentally and physically defective children; poor schools, nursery schools; etc. There were 111 training colleges for teachers in England and Wales with 16,869 students, of whom 15,310 were being trained to teach in elementary schools. On Oct. 1, 1925, there were 1297 secondary schools on the grant list with 367,290 pupils and 19,069 full-time teachers. In Scotland in 1924 there were 2895 primary schools with an accommodation of 870,000 scholars and an average attendance of 587,000. There were 17,744 certificated teachers and 64 assistant teachers. In 1924-25 there were four training centres and three training colleges for teachers with 2496 senior students. In the same year there were 249 secondary schools, with a total accommodation of 179,814 scholars, and an average register of 156,272.

The accompanying table from the *Statesman's Year Book* for 1926, gives an estimate of the number of students and members of the teaching staffs in the universities in Great Britain in 1925-26:

<i>Universities</i>	<i>Number of professors, etc.</i>	<i>Number of students</i>
<b>England:</b>		
Oxford .....	144 <sup>f</sup>	5,811 <sup>b</sup>

<sup>a</sup> Comprising 243 University Professors and Readers, and 852 "Recognized Teachers."

<sup>b</sup> Undergraduates.

<sup>c</sup> Internal students. In addition there are external students, i.e., matriculated students who have not taken a degree nor been registered as internal students. The

number of these is not ascertainable but is probably greater than 9,000.

<sup>d</sup> Year 1921-22.

<sup>e</sup> Includes evening students.

<sup>f</sup> Excluding College Tutors.

Colleges exclusively for female students are: Bedford (62 teachers, etc., 610 students); Royal Holloway (33 teachers, 201 students); and Westfield Colleges (15 teachers, 139 students), in London; Newnham (15 teachers, 281 students) and Girton (13 teachers, 286 students), in Cambridge; Lady Margaret Hall (12 teachers and 132 students), Somerville College (14 teachers, 143 students), St. Hugh's College (9 tutors, 152 students), St. Hilda's College (9 teachers and 112 students), in Oxford.

**AGRICULTURE.** The accompanying table from the above mentioned source gives the general distribution of the surface of the island of Great Britain, the Isle of Man, and the Channel Islands:

<i>Divisions</i>	<i>Woods and plantations</i>	<i>Rough grazing land</i>	<i>Permanent pasture</i>	<i>Arable land</i>
<i>1925</i>	<i>1913</i>	<i>Acres</i>	<i>Acres</i>	<i>Acres</i>
England <sup>a</sup>	1,697,000	3,419,000	12,965,000	10,000,000
Wales <sup>a</sup>	187,000	1,606,000	2,108,000	602,000
Scotland	852,000 <sup>b</sup>	9,673,000 <sup>c</sup>	1,476,000	3,229,000
Isle of Man	1,400	39,000	20,000	60,000
Channel Islands (1923)	200	2,000	10,000	21,000
<sup>a</sup> England excludes, and Wales includes Monmouth.				
<sup>b</sup> Area in 1914.				
<sup>c</sup> Area in 1924.				

The accompanying tables show the distribution of the cultivated area and the livestock census of 1924 and 1925:

	<i>England and Wales</i>		<i>Scotland</i>	
<i>Cultivated area</i>	<i>1924</i>	<i>1925</i>	<i>1924</i>	<i>1925</i>
	<i>Acres</i>	<i>Acres</i>	<i>Acres</i>	<i>Acres</i>

<b>Total ..</b>	<b>25,876,797</b>	<b>25,756,486</b>	<b>4,715,299</b>	<b>4,705,197</b>

<sup>a</sup> Corn crops are wheat, barley or bere, oats, mixed corn, rye, beans, peas.

<sup>b</sup> Green crops are mainly potatoes, turnips, and swedes, mangold, cabbage, kohlrabi, rape, vetches or tares.

<sup>c</sup> In Scotland all orchard land is also included against the crop, grass or fallow beneath the trees. In England and Wales orchard land is only duplicated where small fruit is grown beneath the trees. The figures for small fruit in all cases, therefore, include small fruit in orchards.

**MINERAL PRODUCTION.** The total value of all minerals produced in 1924 was £273,801,914 at the mines and quarries, of which the value of coal alone was £251,664,873. According to the U. S. Bureau of Foreign and Domestic Commerce, the output of coal in Great Britain

in 1925 amounted to 244,420,000 long tons compared with 267,120,000 in 1924 and an average of 269,590,000 for the period 1909 to 1913, inclusive. Exports in 1925 totaled 68,970,000 tons declining from 81,750,000 in 1924 and an average of 88,370,000 in 1909-13. An analysis of the trade in countries which were Great Britain's principal coal markets before the War reveals reductions in most cases. The accompanying table, compiled from the report of the Royal Commission on the Coal Industry, 1925, shows the changes in both the 1924 and 1925 export trade, as compared with the pre-war average:

CHANGES IN BRITISH COAL EXPORT TRADE  
FROM PRE-WAR AVERAGE

Country	1909-1913 (annual average)		Difference in—	
	Long tons	Long tons	1924	1925
			Long tons	Long tons
France . . . . .	10,836,700	+ 3,890,000	-	411,100
Scandinavia and Denmark . . . . .	9,917,900	+ 1,672,800	-	1,111,600
Italy . . . . .	9,483,400	- 2,409,000	+	2,244,600
Germany . . . . .	9,039,400	- 1,864,500	+	4,615,800
South America * Russia, etc. . . . .	6,751,000	- 2,127,800	-	2,217,100
Egypt . . . . .	4,110,500	- 2,767,000	-	3,184,200
Spain . . . . .	2,952,100	- 1,088,700	-	952,400
Netherlands . . . . .	2,527,400	- 817,300	-	550,200
Belgium . . . . .	2,186,100	+ 608,800	-	638,100
	1,707,000	+ 1,719,400	+	917,500
Net loss on above markets . . . . .		- 3,183,300	-	15,207,600

\* Including Argentina, Uruguay, Brazil, and Chile.

The Royal British Coal Commission, appointed in 1925, to investigate the British coal industry, and to recommend means of improving the situation which culminated in the granting of a subsidy in August, 1925, made public its conclusions on Mar. 10, 1926. The main purpose of the report prepared by the commission was threefold: First, the application of more scientific coal mining and distribution methods; second, larger mining units; and third, fuller partnership between owners and employees. Among its main features were the following:

Abandonment of the subsidy on May 1, without continuation in any form.

Downward revision of the 1924 minimum percentage addition to basic wage.

The filling of the gap in the gross profits margin, now occupied by the subsidy, by a temporary wage reduction for particular classes of employees other than the lowest paid.

Acquisition of royalties by the State.

Continuation of present working hours.

Full rejection of the nationalization program proposed by the miners, although approval is given to many measures favoring cooperation between employers and employees through profit sharing and joint committees.

The State participation suggested involved:

Assumption of royalties (estimated value of properties on which royalties are paid, £100,000,000).

A coal commission under the Department of Mines, to administer the property.

Appointment of a national fuel and power commission to ally coal with other industries and study heat, light, and power needs.

Financial support to aid research and inquiry, especially regarding low temperature carbonization.

Amalgamation to be compelled by law, if necessary, through State control of leases.

Such legislation as needed for profit sharing.

Payment by the Government of the amount necessary in transferring labor from closed mines.

A standing joint committee of mines and transport to assist pooling and control of railway wagons.

An official system for sampling and analysis.

The mine owners' contributions to the reorganization, as suggested by the report, were:

Closing of unprofitable mines.

Amalgamation of smaller units.

Better ascertainment of costs and proceeds.

A fuller statement of prices at which coal is sold to allied industries.

Cooperative selling as a part correction of the present costly selling organization.

Readiness to cooperate with workers.

The employees' contributions included:

Acceptance of a revision of the 1924 minimum percentage addition to basic wages, involving lower wages for certain highly paid employees.

Abandonment of the nationalization program in return for the above material concessions.

See articles on COAL, STRIKES AND LOCKOUTS, IRON AND STEEL.

FISHERIES. The accompanying table shows the quantity and value of the British catch of fish in 1924 and 1925:

	1924 Tons	1925 Tons
England and Wales . . . . .	684,400	676,868
Scotland . . . . .	349,819	286,269
Great Britain (excluding shell-fish) . . . . .	1,034,219	963,137
	£	£
England and Wales . . . . .	15,150,221	14,228,282
Scotland . . . . .	4,647,858	4,457,446
Great Britain (excluding shell-fish) . . . . .	19,798,079	18,685,728
Value of shell-fish . . . . .	551,572	584,448

COMMERCE. The accompanying tables from the *Statesman's Year Book* for 1926 give the essential items of the trade of Great Britain for recent years:

VALUE OF THE IMPORTS AND EXPORTS OF MERCHANDISE (EXCLUDING BULLION AND SPECIE  
AND FOREIGN MERCHANDISE TRANSSHIPPED UNDER BOND) OF THE UNITED KINGDOM  
FOR FIVE YEARS

Year	Total imports £	Exports of British produce £	Exports of foreign and Colonial produce £	Total exports £
1913 . . . . .	768,734,739	525,253,595	109,566,781	634,820,326
1922 . . . . .	1,003,098,889	719,507,410	103,694,670	823,202,080
1923 . . . . .	1,096,226,214	767,257,771	118,543,805	885,801,576
1924 . . . . .	1,277,439,144	800,966,837	139,970,143	940,936,980
1925 <sup>b</sup> . . . . .	1,322,858,167	773,086,410	154,410,967	927,497,377

<sup>a</sup> From April 1, 1923, the figures relate to Great Britain and Northern Ireland, and include the trade between that area and the Irish Free State.

<sup>b</sup> Provisional figures.

## IMPORTS AND EXPORTS FOR 1918 (UNITED KINGDOM) AND 1925 (GREAT BRITAIN AND NORTHERN IRELAND) (LATER YEAR PROVISIONAL)

FINANCE. It cost the British government £826,099,778 to "carry on" during the 12 months ended Mar. 31, 1926. This sum was £27,000,000 more than was provided for in the estimates made in 1925 and £30,000,000 more than it cost to operate the government in 1924-25. Receipts were also heavier than anticipated (£812,061,658, as against an estimated £801,060,000), but were still not sufficient by £14,000,000 to meet expenses. It is not exactly correct to speak of this sum as a deficit, as expenditures included an item of £50,000,000 which went to the sinking fund for reduction of the national debt and was therefore not a real expenditure. Expenditures exceeded the original estimate because of the coal subsidy of £19,000,000, the Wembley Exhibition guaranty of £1,100,000, a grant-in-aid of £1,200,000 to Northern Ireland, and certain other supplementary allowances. Civil services were £17,000,000 more than in the previous year, and £20,000,000 more than first intended for the current year. The three fighting services were the exception on the expenditure side that did not run beyond estimates. In two years the cost

of government had advanced about £37,000,000.

Receipts present a happier picture, as the accompanying table indicates. Miscellaneous receipts, which include government war-stock liquidation, properly a capital entry, ran £10,000,000 beyond the estimate; motor vehicles brought more than £18,000,000, all for road building and road repair; supertax and corporations profits tax both ran ahead of the estimate, indicating that business had been doing better than it was disposed to admit the previous year. This did not involve any reduction under the above schedules for 1926-27, but it might mean that the motor-vehicle tax had outgrown the road building need for which it had hitherto been used and that the motor owner henceforth would have to share with estate owners and corporations the onus of expenditures made in behalf of others than himself. On the other hand, estate duty, income tax, and excess profits duty fell short of the sum expected from them. The payment of an installment on the Italian war debt was one of the innovations on the revenue side, and it was expected that a French

installment would be added in a year or two.

The British had been highly successful in establishing surpluses, and the aggregate over the previous seven years was £415,750,000. There is a general theory that debt charges must not exceed 50 per cent of the budget. Before the war these were £23,500,000 out of a total of £205,000,000, or 11 per cent; in 1925-26 they were £355,000,000 out of £800,000,000, or 44 per cent. Pensions were taking £121,000,000, as against £20,000,000 in 1914-15, when old-age pensions totaled £10,111,000 and there were little or no war pensions, in contrast to present payments on these items calling for £26,794,000 and £66,490,000.

colonies, £128,238,000; inter-Allied loans, £1,823,911,000; relief and reconstruction loans, £34,857,000; and other debts amounting to £4,832,000. The total gross debt of Great Britain at the end of March, 1925, was placed at £7,665,900,000.

**SHIPPING.** According to the United States Bureau of Foreign and Domestic Commerce, the net tonnage of vessels in foreign trade which entered British ports in 1925 with cargoes was 52,121,842 tons, an increase of 220,141 tons over the figure for 1924 and of 3,187,485 tons over 1923. Clearances with cargo totaled 58,026,943 tons, a decrease of 2,932,385 tons from the 1924 figure and of 9,892,822 tons from that of 1923.

## BRITISH BUDGET RETURNS FOR 1925-26

\* Deficit apparent rather than real, as explained heretofore.

At the end of the financial year, Mar. 31, 1926, the amount due the British Government from its Dominions and colonies and foreign governments reached a total of £1,991,838,000 (practically \$10,000,000,000). This amount was distributed as follows: Loans to Dominions and

In 1924 the net tonnage of American ships entering the ports of Great Britain and Ireland was 2,740,725, but only 1,360,895 tons cleared with cargoes. An improvement was shown in 1925 by the entrance of 2,539,297 tons and the clearance of 1,811,032 tons, with cargoes.

## ENTRANCES AND CLEARANCES WITH CARGOES AT BRITISH PORTS DURING 1924 AND 1925

Nationally	[Net tonnage]		1925

**RAILWAYS.** The total railway mileage open for traffic in Great Britain in 1925 was 52,231. The Southern Railroad had 5457 miles of line (reduced to single track), the Great Western had 8913 miles, the London, Midland & Scottish had 19,776 miles, and the London and North Eastern had 17,374 miles. The total expenditure of British railroads in 1925 was £1,198,600,000, as compared with £1,190,574,786 in 1924 and with £1,141,543,561 in 1913, according to statistics issued by the British Ministry of Transport. The capital expenditure in excess of capital receipts in 1925 was £46,900,000. The balance sheet for 1925 showed a balance available for dividends and reserves (less interim dividends paid) of £21,200,000, as compared with £22,179,135 in 1924. During 1925 passengers carried on all the railroads of Great Britain numbered 1,232,561,000 compared with 1,236,210,027 in 1924. Of the 1925 total, the London, Midland & Scottish handled 333,527,248, the London and North Eastern, 220,533,133, the Southern, 192,188,233, and the Great Western, 119,692,256. The total freight traffic (including minerals) amounted to 315,848,000 tons in 1925, as against 335,496,000 tons in 1924. It was anticipated at the beginning of 1926 that the total expenditures on maintenance of permanent way and railroad works throughout the country and on maintenance and renewal of locomotives for the year would approximate £50,000,000. Of this amount £20,000,000 was to go toward the purchase of iron and steel materials.

The expenditure on maintenance of permanent way and railroad works was expected to require 200,000 tons of rails, boilers, fish-plates, bolts, boiler tubes, and sundry similar materials. On the railroad services themselves, 700,000 men were to receive wages totaling £120,000,000. In addition to this regular staff, the work was to employ directly or indirectly almost as many again. On the Southern Railway, among the largest works sanctioned or in hand, was the reconstruction of the Southampton docks. The scheme, which included the reclamation of a considerable portion of the fore shore, the construction of several huge concrete piers, the dredging of the river to permit ships to approach the piers at any time, a miniature new railway, and the erection of several big sheds and factories, was to cost £13,000,000. An electrification programme also had been arranged by the same railway, to cost about £2,820,000. The London, Midland & Scottish Railway has approved schemes for the improvement of its services and has placed orders with works on the Clyde and elsewhere for 127,000 tons of rails. Heavy expenditures had been sanctioned also by the London & North Eastern Railway. Their plans included the construction of 148 new locomotives for passenger and freight trains, 63 suburban type locomotives, 28 new engines of the improved "Director" type, and 7400 new cars of varying types. The total cost was estimated at £2,000,000.

**ARMY AND NAVY.** The military system of the United Kingdom provides for a regular and territorial army and a reserve. Troops in the regular army serve both at home and abroad. Territorial troops serve only at home in peace times. The regular army in 1926-27 totaled 211,890, of whom 61,543 were in India and Aden. The strength of the territorial army in February, 1926, was 144,645. See **MILITARY PROGRESS.**

The accompanying table from the *Statesman's Year Book* of 1926 shows the number by classes of the more important units of the British fleet, including the ships and vessels of the Dominion:

Class	Completed by end of		
	1924	1925	1926
Battleships and battle cruisers	22	22	22
Cruisers and light cruisers	48	50	49
Aircraft carriers and tenders	6	7	7
Flotilla leaders and destroyers	207	207	175
Submarines	66	65	59

See also **NAVAL PROGRESS.**

**GOVERNMENT.** George V, born June 3, 1865, was the reigning monarch in 1926. He succeeded his father, Edward VII, on May 6, 1910. The cabinet at the beginning of 1926 was as follows: Prime Minister, First Lord of the Treasury, and Leader of the House of Commons, Stanley Baldwin (appointed in November, 1924); Foreign Affairs, Sir J. Austen Chamberlain; Privy Seal, Marquess of Salisbury; President of the Council, Earl of Balfour; Chancellor, Viscount Cave; Exchequer, Winston Churchill; Home Affairs, Sir William Joynson-Hicks; Colonies, Leopold Amery; War, Sir L. Worthington-Evans; India, Earl of Birkenhead; Air, Sir Samuel Hoare; Admiralty, W. C. Bridgeman; President of the Board of Trade, Sir Philip Cunliffe-Lister; Health, Arthur Chamberlain; Agriculture and Fisheries, Walter E. Guinness; Scotland, Sir John Gilmour; Education, Lord Eustace Percy; Labor, Sir Arthur Ramsay-Steel-Maitland; Chancellor of the Duchy of Lancaster, Viscount Cecil; Public Works, Viscount Peel; Attorney-General, Sir Douglas Hogg; Pensions, George C. Tryon; Transport, Wilfrid Ashley; Solicitor-General, Sir Thomas Inskip; Postmaster-General, Sir William Mitchell-Thomson; Lord Advocate; William Watson; and Solicitor-General for Scotland, A. M. MacRobert.

#### HISTORY

**SITUATION AT THE BEGINNING OF THE YEAR.** In the early months of the year there was a general feeling of unrest caused largely by the fact that on May 1 there was more than a possibility of a serious labor upheaval due to the situation in the coal mining industry. Parliament opened on February 2 and in the speech from the throne an appeal was made for industrial harmony in order to insure the return of good times and prosperity which were already on the way. The government also promised stringent economies in the running of the government and promised financial aid for the development of the African possessions, with an eye especially to the production of cotton on a much greater scale than ever before. The Labor opposition in its reply to this speech criticized the government for its Russian policy, favored a disarmament conference, but asked what the government had specifically to suggest concerning disarmament, and, in general, accused the Baldwin government of failure to live up to promises made in the past. Mr. Lloyd George, as leader of the Liberal opposition, stressed the coming situation in the coal industry and asked the government what it intended to do about it. On February 11 the House passed the government bill providing £200,000 for the construction of steel houses in Scotland to relieve the notoriously bad housing situation that

existed there. A short time previously the Baldwin government had proposed a subsidy to any one who would build new homes, but the project fell flat, causing the ministry to determine to build houses itself through a government-controlled corporation.

**THE COAL STRIKE.** As stated above in the section on *Mineral Production*, a Royal British Coal Commission was appointed in 1925 to study every angle of the coal industry. The results of its investigation and its recommendations which were published on March 10 will be found in the above mentioned section. On March 24 the Baldwin ministry announced that it accepted the provisions of the report of the Royal Commission and was ready to enact them into legislation if the miners and the operators were willing to carry on the industry in accordance with its provisions. Shortly afterwards the employees and operators opened up direct negotiations with the report as a basis, but such negotiations were virtually foredoomed because of the shortness of time before May 1 when the government subsidy (which was paying about 40 per cent of the miners' wages) would end. One rock which nearly split the conference was the question as to whether the pay rate should be basic for the entire industry or whether it should be different according to localities, conditions, etc. The operators finally agreed with the miners that it should be basic throughout the entire industry. The operators served notice on April 15 that the existing wage agreement would terminate on May 1. The miners complained that this virtually put an end to free negotiations because the possibility of maintaining the *status quo* was now lost.

On April 27 Prime Minister Baldwin called both groups together under his chairmanship but was unable to effect any sort of *modus vivendi* for the continuation of the agreement. The best terms he could secure from the owners was an increase in the working day from seven to eight hours and a basis reduction of 13½ per cent in the national minimum coal wage. The eight hour day was to be in effect until 1929 when a commission was to determine whether conditions in the industry warranted a return to the seven hour day. When Mr. Baldwin presented these terms to the workers they stated that they would not "accept a reduction in wages as a preliminary to the reorganization of the industry," but they reiterated that they "will be prepared to give full consideration to all the difficulties connected with the industry when a scheme for such reorganization shall have been initiated by the government."

The rejection of the owners' offer of course meant that the miners were going to strike on May 1. Needless to say, they did, but not alone. On this date the Prime Minister was told that "the Executive Committees of the trades unions affiliated with the Trades Union Congress, including the Miners' Federation of Great Britain, have decided to hand over to the General Council of the Trades Union Congress the conduct of the dispute, and negotiations in connection with it will be undertaken by the General Council." Here was the general strike which had been the bugbear of Great Britain ever since 1919. At about the same time the General Council issued a call for a strike of the transport workers in case the matter was not settled by May 3. The general strike began when

1,405,000 skilled workers were ordered out to join the 1,120,000 coal miners who were out on strike. The government met the situation by first issuing a proclamation by the King which ran as follows:

BY THE KING—A PROCLAMATION—GEORGE I. R.

*Whereas*, by the Emergency Powers act of 1920, it is enacted that if it appears to us that any action has been taken or is immediately threatened by any person or body of persons, of such nature and on so extensive a scale as to be calculated by interfering with the supply and distribution of food, water, fuel or light, or with the means of locomotion, to deprive the community of the essentials of life, we may by proclamation declare that such a state of emergency exists;

*And whereas*, the present, immediate threat of cessation of work in the coal mines does, in our opinion, constitute a state of emergency within the meaning of the said act;

*Now, therefore*, in pursuance of the said act, we do, by and with the advice of our Privy Council, hereby declare that a state of emergency exists.

Given at our Court at Buckingham Palace this thirtieth day of April, in the year of our Lord 1926, and in the sixteenth year of our reign.

God save the King.

The issue was now clearly joined between the Trades Union Congress on the one hand and the government and operators on the other. Mr. Baldwin spared no effort to bring about conciliation. "The Government," he said, "wanted to get to the position where the Trades Union Council, on behalf of the miners, would say that they felt confident that, given a fortnight, a settlement would be arrived at on the basis of the report. At the last moment I and my colleagues, if we could have got that complete assurance, would have risked it; we would have asked for another fortnight, and I think, if necessary, would have paid for another fortnight. But there was no good going on, with the experience we had had for the past fortnight, in any negotiations unless we could have some assurance that there was a reasonable hope of success."

On Sunday night, May 2, the general strike took an unexpected turn which probably altered the entire chain of events. Union printers refused to permit a copy of the *Daily Mail* to be published which contained an editorial entitled "For King and Country" and which stated that no civilized country could permit a general strike. On Monday night Premier Baldwin told the House of Commons that "such actions as that, coupled with the notice that we had had of instructions sent out by representative leaders of the unions—instructions which the men could only carry out in many cases by breaking their contracts—made me realize that I had got to the point where it would be impossible for the Government—or for me to persuade the Government—to pursue these negotiations any further." His speech continued:

Stripped of all accessories, what was the position in which the Government found itself? It found itself challenged with an alternative government and a government ignorant of the way in which its commands were being carried out and incapable of arresting disobedience to them. . . . The miners have a dispute with the mine owners and the owners offer terms of pay and work which are rejected. The men refuse to accept either a minute extra or a penny off. They attempt to throw on the state the burden of maintaining the industry at a loss. The Trades Unions executives, through their council, have put all their resources at the disposal of the miners. . . . When you extend an ordinary trade dispute in this way from one industry to a score of the most vital industries in the country, you are changing its character. . . . I do not think that all the leaders who assented to the order for a general strike fully realized that they were threatening the

basis of ordered government and coming nearer to proclaiming civil war than we have been for centuries past. . . . I tried to cooperate with Mr. Pugh and his colleagues in the search for an agreement to the last possible minute, but I became convinced last night that Mr. Pugh and those with him who sought for peace were not in control of the situation and that it would be wrong and dangerous for the Government to continue talking unless we got an immediate and unconditional withdrawal of instructions for the general strike.

Mr. Baldwin, after making denial that any general attack on wages was contemplated, went on to say:

It is not wages that are imperiled; it is the freedom of our very Constitution; but I have confidence in the character of our people that we will see these troubles through. I can call to mind the observation of the late Minister of Labor, only two years ago, when he was asked whether the Government would give full protection to the men who worked during these disputes, and he said: "Yes, undoubtedly the Government will do all it possibly can to maintain the public utility." I echo his words and I say no man who remains at work shall be prejudicially affected afterward.

In reply to this statement of the Premier, J. H. Thomas, Secretary of the Railwaymen's Union and an opponent of calling the general strike, said, "We believe this course was taken, not by anti-patriots, not by people who wanted revolution, not by people who do not love their country, not by people who desired an upheaval. There are people on both sides who do not weigh these consequences. I do not disfigure that on the Labor side there are people who would like and welcome this day, but they are an insignificant minority."

Immediately after the breakdown of negotiations the Government issued the following statement on May 2:

His Majesty's Government believe that no solution of the difficulties in the coal industry which is both practicable and honorable can be reached except by sincere acceptance of the Coal Commission's report.

In the expression "acceptance of the report" are included both reorganization of the coal industry, which should be put in hand immediately, and, pending the results of the reorganization being attained, such interim adjustment of wages or hours of work as will make it economically possible to carry on the industry in the meantime.

If the miners, or Trades Union Committee on their behalf, were prepared to say plainly that they accept this proposal the Government would be ready to resume negotiations and continue the subsidy for a fortnight.

But since the negotiations which have taken place between the Ministers and members of the Trades Union Congress, it has come to the knowledge of the Government not only that specific instructions have been sent (under the authority of the executive of the trade unions represented at the conference convened by the Council of the Trades Union Congress) directing their members in several of the most vital industries of the country to carry out a general strike on Tuesday next, but that overt acts have already taken place, including gross interference with the freedom of the press.

Such action involves a challenge to the constitutional rights and freedom of the nation.

His Majesty's Government, therefore, before they can continue the negotiations, must require from the Trades Union Committee both a repudiation of the actions referred to that have already taken place and immediate and unconditional withdrawal of the instructions for a general strike.

The negotiating committee of The Trades Union Council sent the following letter to Mr. Baldwin the following morning (May 3) as an answer to the foregoing statement of the government:

Your letter announcing the Government's decision to terminate the discussion was received by the General Council with surprise and regret. The negotiations which had taken place between the Industrial Com-

mittee of the General Council and its representatives had been adjourned for a brief period in order to allow the Industrial Committee to confer with the full General Council and representatives of the Miners' Federation who were on your premises in order to advance full efforts which the Industrial Committee had persistently been making to accomplish a speedy and honorable settlement of the mining dispute.

The trades union representatives were astounded to learn that, without any warning, renewed conversations, which it was hoped might pave the way to an opening up of full and unfettered negotiations, had been abruptly terminated by the Government for the reasons stated in your communication.

The first reason given is that specific instructions had been sent under the authority of the trades union representatives, directing these members in several industries and services to cease work. We are directed to remind you that it is nothing unusual for workmen to cease work in advance under the circumstances as wage earners. And the specific reason for the decision in this case is to secure for the workers the same right as the employers insist upon with their workers—namely, that negotiations shall be conducted free from an atmosphere of strike or lockout. This is the principle which the Government have held to be cardinal in the conduct of negotiations.

With regard to the second reason that overt acts had already taken place, including those in interference with the freedom of the press, it is regretted that no specific action is contained in your letter.

The General Council had no knowledge of such acts having occurred and the decisions taken by them definitely forbid any such independent and unauthorized action. The council is not aware of the circumstances under which the alleged acts have taken place. It cannot accept any responsibility and is taking prompt measures to prevent any acts of indiscipline.

The Council regrets it was not given an opportunity of investigating and dealing with the alleged incidents before the Government made them an excuse of breaking off peace discussions, which were proceeding.

The public will judge the nature of the Government's intention by its precipitate and calamitous decision in this matter and will deplore with the General Council that the sincere work which the General Council has been engaged in to obtain an honorable settlement has been wrecked by the Government's unprecedented ultimatum.

To meet the situations bound to be created by the general strike the government immediately began to enroll special constables and moved the army and navy to vantage points, provided for the distribution of the necessities of life, and guided the activities of thousands of volunteers who desired to keep the industrial and social life of the country running in the normal channels as far as possible. The Government published a small newspaper, called the *British Gazette*, which gave only the most meagre accounts of the strike and official announcements. All means of locomotion were used to prevent a complete breakdown of the transportation system, and the government refused the aid of the workers who would keep transportation open for foodstuffs and other essentials. On May 5 the premier issued the following statement to the British people:

Constitutional government is being attacked. Let all good citizens whose livelihood and labor have thus been put in peril bear with fortitude and patience the hardships with which they had been so suddenly confronted. Stand behind the Government, who are doing their part, confident that you will cooperate in the measures which they have undertaken to preserve the liberties and privileges of these islands. The laws of England are the people's birthright. The laws are in your keeping. You have made Parliament their guardian. The general strike is a challenge to Parliament, and is the road to anarchy and ruin.

In reply to this appeal Ramsay MacDonald said: "This strike is in no way aimed against the government or the constitution, and that has been repeated again and again by the men in control of it. It is purely an industrial dispute. I hope that the people in foreign countries

will not be misled and that the constitutional traditions of my country will not be damaged by Government propaganda." On the same day Premier Baldwin announced that "the moment it (the strike) is officially and unconditionally called off the Government are prepared to resume negotiations." On May 6 the Trades Union Council replied that while it was ready to resume negotiations for an honorable settlement, it could not comply with the government's request for the unconditional withdrawal of the strike notices. Despite these apparently irreconcilable statements there were unofficial moves on both sides to attempt to find a formula for calling off the strike. At a meeting of the Trades Union Council on May 11, it was decided to "explore the position with a view to leaving no door shut that could be opened."

At noon on the next day, the Council held an hour's conference with the Prime Minister. As a result of this conference, Arthur Pugh, the chairman of the Trades Union Council, announced that the general strike had been ended. "In order to resume negotiations, the General Council of the Trade Union Congress decided to terminate the general strike to-day and telegrams of instruction are being sent to all affiliated unions. Members before acting must await definite instructions from their own executive councils." Sir Herbert Samuel, chairman of the Royal Coal Commission, subsequently issued a memorandum, which was accepted as the basis for the calling off of the general strike, and resuming negotiations on the coal controversy. The memorandum contained the following points:

1. The coal subsidy is to be renewed for such reasonable time as may be required.
2. The creation of a national wages board, including representatives of the miners, mine owners and neutrals, with an independent chairman to revise the miners' wages.
3. It is understood that there shall be no revision of the previous wages without sufficient assurances that reorganization of the coal industry as proposed by the Royal Commission shall be executed.
4. A committee is to be named by the Government with representation for the miners, which shall prepare legislative and executive measures necessary to effect the reconstruction of the coal industry.

According to a review published in *Current History* "the memorandum suggested that the revised wage scale be on simpler lines, if possible, than the old ones, and that they shall not adversely affect the wages of the lowest paid men. It also suggested measures to prevent the recruitment of new workers over 18 years of age into the industry, if unemployed miners were available, and provided that workers displaced by the closing of the uneconomic collieries shall be transferred, with Government assistance, as recommended by the Royal Commission."

The execution of the plans for complete reorganization of the industry according to many estimates would involve the displacement of 250,000 men in the mining industry.

**THE POST-STRIKE PERIOD.** Great praise is due to both sides during the strike for the almost complete lack of violence. No serious disorders were reported and although thousands of idle men and women swarmed through the streets of the big cities the local police had scarcely any difficulty in maintaining order and keeping the crowds moving. After the general strike was abandoned it took a comparatively long time for conditions to return to normalcy. Those who

struck in sympathy with the miners filed many complaints of unfairness on the part of the employers when they again sought their positions, stating that attempts were being made to lengthen hours and reduce wages. The government stated very strongly that it was opposed to such methods and it must be said in fairness to the employing class that the complaints of the workers in nearly all the cases cited were unjustifiable.

The inherent weaknesses of a general strike were certainly obvious to all, workers and employers alike. When the government and public united and the army remained loyal, the strike was doomed from the outset. The question for the future was whether labor had lost during the general strike those things which it had undoubtedly gained after decades of struggle with the owner class. Many people took the attitude that the strike was unconstitutional, inasmuch as it was not a strike against the employers by the employees but was aimed primarily at the public and government to compel them to do something and not to compel the employers to settle a dispute with labor. A further breach was caused in the Liberal Party when Asquith bitterly criticized Lloyd George's support of the strike. On the other hand, Premier Baldwin stood out as the man of the hour. Formerly he was more or less colorless and not particularly popular but his masterful handling of a delicate situation made him the idol of the public.

The calling off of the general strike did nothing to settle the coal strike, however, and that continued with the usual result of paralyzing industry in general. A proposal made by the government in the middle of May was rejected by the miners and owners alike, although it was made along the lines of the report of the Royal British Coal Commission. The miners and their families were suffering considerably as a result of the strike and public sympathy seemed to be heartily in their favor. A public subscription was taken up to provide the common necessities for the children and wives of the workmen. On June 15 the government introduced a bill into Parliament providing for the eight hour day in the coal industry, over the strong protests of the Labor Party. It was rushed through the House of Commons and House of Lords and became a law early in July. This did not produce coal, however, and the government and private corporations was forced to import large supplies from the United States and Germany.

A break nearly occurred with Soviet Russia because of sums of money which had been sent to England, to support the general strike, by Russian workmen. The British government sent the following note: "His Majesty's Government regrets that it cannot maintain silence about the actions of the Soviet Government, especially in allowing the remittance to England of sums intended to support the general strike. The general strike was an illegal, unconstitutional act, being a menace to the established order of Great Britain. In particular, the activity of the Soviet Commissariat of Finance is not conducive to a friendly settlement of the questions outstanding between the two states, which settlement the Soviet Government professes to desire." Moscow replied that there was no law in Russia preventing workers sending money to Great Britain. While not satisfied with the Soviet reply, the Baldwin Government paid no

*Wude World Photos*

MEMBERS OF THE BRITISH IMPERIAL CONFERENCE

HELD AT LONDON, OCTOBER 19, 1926

heed to those who demanded a break in relations with the Soviet Government, and apparently let the matter drop.

**THE END OF THE COAL STRIKE.** Seven months after the beginning of the costly coal strike, it was virtually brought to a close on November 19 by the complete surrender of the mining unions. The victory of the operators was almost complete. The miners were compelled to give up the struggle chiefly because their resources were shattered and the men were rapidly returning to work despite the efforts of the leaders to hold them together. The chief thing that the miners lost was the demand for a national settlement. They were forced to accept district settlements which entailed a difference in the working day and basic pay. Some went back to the 7-hour day, some accepted the 7½-hour day, and some the 8-hour day. The owners' share of the distributable proceeds of the industry was to be not more than 15 per cent and not less than 13 per cent. This was the basis for settling the miners' pay. The settlement paid no attention to the report of the Royal Coal Commission and made no provision against the recurrence of trouble. Hunger and economic conditions forced the terms and as soon as they are appeared more disturbances will indubitably ensue.

**THE BRITISH IMPERIAL CONFERENCE.** On October 19, the Ninth Imperial Conference of the various members of the British Empire assembled in London to discuss defense, imperial trade and settlement, and foreign affairs. Each of the dominions was represented by its premier and India was also represented. Great Britain was represented by Stanley Baldwin; India, Earl of Birkenhead; Canada, Mackenzie King; Australia, S. M. Bruce; South Africa, General Hertzog; Ireland, W. T. Cosgrave; New Zealand, J. G. Coates; and Newfoundland, W. S. Monroe. Committees were shortly appointed under the headings of Economic Committee, a Committee of Premiers Investigating Inter-Imperial Relations and a Committee on Overseas Settlement. The important changes brought about as summarized in the January, 1927, issue of *Current History*, where the full text of the report will be found, were as follows:

(1) The title of the King was changed to bring it into accord with the present status of the Irish Free State. It now runs as follows: George V, by the Grace of God, of Great Britain, Ireland and the British Dominions Beyond the Seas, King, Defender of the Faith, Emperor of India.

(2) It was declared that the Governor-General of a Dominion "is a representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in a Dominion as is held by his Majesty the King in Great Britain, and he is not a representative or agent of His Majesty's Government in Great Britain, or of any department of that Government." In the future the recognized channel of communication between a Dominion and Great Britain was not to be the Governor-General, but from Government to Government, direct. The Dominions were defined as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by common allegiance to the crown and freely associated as

members of the British Commonwealth of Nations."

(3) General principles intended to establish the Dominion Legislatures upon an equality with the British Legislature were laid down, and it was recommended that an imperial expert committee be set up to recommend a detailed plan for putting these principles into effect.

(4) It was recommended that a subcommittee be set up to report on imperial merchant shipping regulation.

(5) It was set forth that, though it was no part of the policy of the King's government in Great Britain that cases should be appealed from the highest Dominion courts to the Judicial Committee of the Privy Council except in accordance with the wishes of the part of the Empire primarily affected, yet it was recognized that where constitutional or legal matters affected other parts of the empire appeals might be desirable. The purpose was evidently to leave the way open for the continued existence of the useful imperial supreme court upon which the Dominions were already represented.

(6) In connection with the relations of members of the British Empire with foreign nations, provision was made for the independent negotiations of treaties by each member. The propriety of Dominion diplomatic representation in foreign capitals was recognized.

(7) The report suggested the development of a permanent and regular system of communication between Great Britain and the Dominions, especially for the purpose of maintaining close personal contact between sessions of the Imperial Conference. In a special section, the conference approved the methods by which Great Britain became a party to the Treaty of Locarno, but decided that this pact should not be ratified by the Dominions.

**GRECIAN ARCHÆOLOGY.** See ARCHÆOLOGY.

**GREECE.** A republic in southeastern Europe, comprising the lower Balkan peninsula and many islands in the Aegean Sea; formerly a constitutional monarchy. King George II was forced to leave Greece Dec. 19, 1922 and the republic was established April 13, 1924 as the result of a plebiscite. In continental Greece are included Macedonia, Western Thrace, and Epirus; the chief island possession is Crete (q.v.). Capital, Athens.

**AREA AND POPULATION.** The total area of Greece before the Balkan Wars of 1912-13 was 25,223 square miles; as a result of these wars Greece added 20,730 square miles to her territory. According to the Treaty of Lausanne (1923) Greece obtained a further area of 3182 square miles; the total area of the present Greek republic is 49,135 square miles. According to the census of 1920 the population was 5,536,375. It was estimated that between August, 1922, and January, 1925, 1,350,000 Greek refugees returned to Greece from Asia Minor, and that the total population of the country might be put at 6,200,000.

**EDUCATION.** Education is compulsory for all children between the ages of seven and 12, although the law is not very well enforced in the rural districts. The latest school census showed 7200 primary schools with 13,996 teachers and 499,084 pupils. For the secondary education there were in 1924-25 650 high schools with 2523 teachers and 86,500 pupils. In the

same year there were 24 commercial schools with 188 teachers and 3607 pupils. There are two universities in Athens; the National University and the Capodistria University with 61 professors and 9790 students. A third university, founded at Saloniki, began work in the fall of 1925. There are also various technical and agricultural schools.

**PRODUCTION.** According to *Commerce Reports*, the increasing influence of the refugee population on Greece's agricultural population was shown in the estimates for 1925 crops, tobacco returning 55,770 metric tons, as compared with 41,000 in 1924, and production of fine cigarette tobacco in the Kavala district of Macedonia being stimulated. Cotton raising and silk cocoon culture, both largely new-line work by refugees, were reported to have reached unprecedented figures in 1925, raw cotton to 12,000 metric tons (about 4000 tons ginned) and silk cocoons to 3200 metric tons. Cultivated acreage was estimated to have doubled in 1925. The wheat crop, though totaling 11,440,000 bushels as against 9,661,000 bushels in 1924, met only half the domestic needs. Wheat and flour therefore continue to lead Greek imports, with the United States as the principal source for the flour. Rye, barley, oat, and corn crops were normal. Currants, an important export crop, dropped to 125,000 metric tons from 150,000 tons in 1924, with the severe crisis from the latter year's overproduction prolonged through 1925. Raisin production was reported larger, sultanas reaching 23,000 metric tons and rozakias (from Crete) 12,000 tons. The fig crop reached 13,500 metric tons in 1925, as against 12,976 tons in 1924. The olive crop was so poor in 1925 (44,834 metric tons, as against 112,210 in 1924) that the government prohibited exportation of olive oil. As lean and heavy crops alternate, the 1926 harvest was expected to equal that of 1924. The government was reported, therefore, to be planning to lift the export embargo.

The year 1925 was an excellent one for Greek industries; most of those already existing expanded their installations, and 216 new enterprises were established under the stimulus of government protection. The latter included 43 woodworking shops, 25 textile factories, 12 oil mills, 12 flour-products establishments, and nine ice plants. Under the conditions of drachma depreciation, shortage of ready money, and increasing prices of raw materials, many private industrial enterprises were converted into stock companies; their capital was enlarged accordingly. Industrial production as a whole did not show noticeable value increases during the year, though quantity increases were evident in some lines, particularly building materials, fertilizers, cotton and woolen manufactures, rugs, and silk goods. The foodstuffs industry (chiefly flour milling), with its production value of \$57,864,471, comprised half of the country's estimated industrial output for 1925.

Mineral production in 1925, with the exception of zinc, lead compounds, magnesite, and lignite, followed the general decline characterizing Greek output during the previous 10 or 12 years. Production figures for the leading Greek minerals in 1925, as estimated by the ministry of agriculture, commerce, and industry, were as follows (in metric tons and with 1924 figures in parentheses): Lignite, 136,104 (111,000); magnesite, 90,828 (58,213); iron ore, 88,216

(96,000); salt, 77,714 (75,000); lead compounds, 76,716 (53,600); iron pyrites, 65,000 (76,051); calcined magnesite, 28,425. Nickel ore production, negligible since 1918, will be resumed in 1926 or 1927, according to a contract concluded in November, 1925, between the government and a British firm.

**COMMERCE.** Greek foreign trade for 1925 showed large increases over 1924, the imports totaling \$153,411,165 as compared with \$144,162,381 in 1924, and exports amounting to \$67,237,022 as compared with \$58,971,603 in 1924. Although the relation between imports and exports improved, the imports being 128 per cent greater as against 139 per cent in 1924, the import surplus still showed an increase of \$669,544 in gold values. The excess of imports was to a certain extent counterbalanced by such invisible items as emigrants' remittances, tourist expenditures, merchant marine earnings, and income from foreign investments. Emigrants' remittances, however, showed a decided decrease in 1925, recorded receipts totaling only \$31,615,000 as compared with \$37,544,000 in 1924—a result that was attributable in part to drachma fluctuations and the attendant lack of confidence abroad and in part to American immigration restrictions. Because of the abolition of certain Greek statistical services, no detailed trade figures for 1925 were available in 1926. Statistics for 1924 show that wheat and flour led all other imports, followed by cotton cloth, sugar, wool cloth, machinery and tools, lumber, and fuel, including coal and oil. Export items were less widely distributed. Tobacco and cigarettes, with currants, accounted for nearly 70 per cent of the total export values; other exports were raisins, wines, and olives.

The increase in 1925 imports was accounted for by three major factors: The local demand for grain, following the comparatively short domestic cereal crop of 1924; the large orders placed by importers preparatory to the application of the new tariff code of Jan. 1, 1926; and the expansion in Greek industries and a resultant demand for machinery and raw materials. The increase in the 1925 exports resulted chiefly from the heavier exports of staple agricultural products, such as tobacco, olives, skins, soap, etc., and from price increases through legislation in favor of export products, such as the establishment of the office for the protection of tobacco, and the central currant office. The development of Greek total trade values during the last six years as compared with pre-war trade, is shown in the accompanying table, as well as the rapid increase in the import surplus.

The figures of exports to the United States, as declared through the American consulates in Greece, showed a total value for 1925 of \$28,082,700 as compared with \$32,553,400 in 1924. This decline resulted from a reduction in the value of shipments of leaf tobacco to \$22,765,600 from \$27,687,200 in the earlier year, but with an accompanying increase in quantity to 25,498,400 pounds from 24,550,700 pounds. Other important items in this declared export trade were currants, hides and skins, olives and olive oil. About three-fourths of the total value was accounted for by shipments from Saloniki, the leading port for tobacco exports.

**FINANCE.** A considerable economic advance was made in Greece during the fiscal year ended

VALUE OF GREEK FOREIGN TRADE  
[000 omitted]

Calendar year	Imports		Exports		Import surplus	
	Drachmas	Dollars *	Drachmas	Dollars *	Drachmas	Dollars *
1918.....	177,938	84,341	119,001	22,967	58,932	11,374
1920.....	2,181,038	285,480	664,113	73,385	1,466,925	162,095

\* Exchange rates used in conversion are: 1913 (par), \$0.193; 1920, \$0.1105; 1921, \$0.0584; 1922, \$0.0329; 1923, \$0.017; 1924, \$0.0179; 1925, \$0.0156.

Mar. 31, 1926. The acute financial problem was then the only important obstacle to economic recovery; but that dominated all other phases of the situation and made the business outlook uncertain. There was during 1926 a serious shortage of ready money, both for government and business purposes, and the drachma continued to depreciate steadily in spite of the temporary relief resulting from the forced loan of January, 1926. Interest rates were very high (the legal rate in September, 1926, being 12 per cent), and the cost of living reached a record high point in July of the same year. If this financial stringency and the resultant uncertainty can be resolved, Greece will be able to profit from its still only partially developed mineral wealth, its expanding industries, and its growing agricultural production.

In an effort to relieve the financial situation, the government imposed a number of new taxes, particularly new tobacco consumption taxes, new import duties, and a land tax of 5 per cent on crops. Efforts toward administrative economies included the abolition of the ministries of national economy, hygiene, and public assistance and the discharge of more than 5000 government employees. Military expenditures, however, have correspondingly increased. The 1925-26 budget estimate showed a theoretical surplus of 200,000,000 drachmas, but toward the close of the fiscal year there appeared to be an actual deficit, estimated at nearly 1,000,000,000 drachmas. The 1926-27 budget estimates were balanced at 8,821,619,843 drachmas; in addition, a theoretical reserve fund of 350,000,000 drachmas had been established to provide for possible excess expenditures. The general opinion was that the new taxation would yield less than estimated, and that the obligations to be assumed would exceed the expenditures foreseen in the budget.

The total public debt of Greece, as of May 31, 1926, according to the ministry of finance, amounted to 10,803,371,841 drachmas. Of this total, 2,249,881,063 drachmas represents internal indebtedness. Bank-note circulation has shown a sharp decrease during the year, the official total for Mar. 31, 1926, being 4,893,507,790 drachmas as compared with the high point of 6,049,488,415 drachmas reached in the autumn of 1925. This reduction has been accomplished by the repayment of some of the government's debts to the national bank, against which the latter had issued bank notes.

COMMUNICATIONS. Greek shipping on Mar. 31, 1926, according to official figures, accounted for 468 steamers and 755 sailing vessels aggregating 977,839 gross tons, or approximately the same as in 1925. The crisis which affected the Greek merchant marine during 1924 had not yet ended in 1926; passenger steamers particularly were handicapped by high operating costs and relatively small freights. Railway traffic had in-

creased greatly, but in spite of cooperative efforts by the government and the local companies to improve and extend communications, the railroads were still inadequate to satisfy the country's needs with its 30 per cent increase in population (refugees). Freight and fare rates had been considerably increased. The length of railways in 1923 was about 1700 miles, of which three-fourths were of standard gauge.

GOVERNMENT. Until December, 1923, executive power was vested in the king, acting through a responsible ministry. On Dec. 18, 1922, George II, who had reigned since Sept. 27, 1922, was compelled to leave Greece until the people had an opportunity to decide for themselves whether they wanted a monarchy or a republic. In the meantime Admiral Koundouriotis acted as provisional president. The people, in April, 1924, voted more than two to one for a republic, and a National Assembly was elected to draw up the constitution. In September, 1925, this body was dissolved by General Pangalos, who announced that new elections would be held in 1926. He virtually made himself dictator and at the beginning of 1926 was in absolute control of the government. President Koundouriotis resigned from the provisional presidency on Mar. 19, 1926.

#### HISTORY

DICTATORSHIP OF GENERAL PANGALOS. As noted in the preceding YEAR BOOK, General Pangalos took over the reins of the government of Greece in July, 1925, upon the downfall of the Michalakopoulos government. On Jan. 3, 1926, he announced what was practically a military dictatorship. He declared that the republican constitution of Greece was null and void and that the woes of the country were due to the inherent weaknesses of the parliamentary form of government as established by Venizelos and his followers. He outlined great plans for the return of Greece to her former ancient prestige, and many critics could not but help compare his rather bombastic remarks with those uttered by Mussolini from time to time. He did say, however, that his rule was only temporary and would be abolished as soon as the evils infesting the country were eradicated. One of his first acts was the putting through of a forced loan by reducing the value of the Greek currency in circulation. During February, by a series of arrests and free use of the exile power, he practically drove every one of his political enemies out of the country or put them in prison. The Greek people showed no particular enthusiasm for the new "strong man" but neither did they show any resentment. General apathy and stagnation prevailed everywhere.

As noted above under *Government*, Admiral Koundouriotis, who became the president of the republic after the forced exile of King George

II, resigned in the middle of March. The position he held was of no value considering the fact that General Pangalos was completely in the saddle. One result of his resignation was the precipitation of an election for his successor. General Pangalos entered the field and was opposed by Constantine Dimertji, a former Minister of Marine. Inasmuch as the election was completely in the hands of the dictator there was not much chance of Dimertji's winning. The General divided the voting into two parts, in some provinces on April 4 and in some others on April 11. In the first election General Pangalos received about nine-tenths of the votes, chiefly because his opponents dissatisfied with the arrangements for the election, refrained from voting. Between the 4th and the 11th Dimertji, the opposition candidate, retired, with the result that Pangalos was the sole candidate on the 11th. General Pangalos interpreted the election as an indorsement of his actions and when he was inaugurated on April 18, he stated that he would possibly give up his dictatorial powers. Early in May he repudiated this statement and announced that he would continue to act as President-Dictator. Although General Paraskevopoulos was the possessor of the title of premier, it was a very empty honor.

**OVERTHROW OF PANGALOS.** During the early summer there had been continued rumors of a movement to overthrow the Pangalos régime. The event finally came about on August 22 under the leadership of General Condylis, with the entire support of the army and navy. The revolution was aimed to bring about "the sound reorganization of the armed forces and the administrative machinery of the country." General Pangalos was accused of issuing unlawful decrees, nullifying the constitution and personal liberty, and various other illegal acts. The plans of the conspirators worked without a hitch: Pangalos was arrested and put aboard a steamer bound for Athens; the army and navy took possession of public buildings; Admiral Koundouriotis was again proclaimed president; and General Condylis announced a temporary ministry and promised regular constitutional elections in the autumn. One important result was immediately accomplished by the new government when it signed five treaties with Jugo-Slavia, four commercial agreements and a treaty of friendship and mutual amity. Similar treaties were immediately gotten under way with Albania, Bulgaria, and Turkey. In early September General Condylis was almost overthrown by a counter revolution carried out by a military organization, independent of the army and the navy, which had been organized by General Pangalos to strengthen his position. The Republican Guard, as this military organization was called, was completely suppressed by the new government. On September 24, Condylis announced that elections to the new Chamber of Deputies would be held on October 24, and that this body would meet on November 11, and would have full power to change the constitution in any way it saw fit. He offered to resign so as not to interfere with freedom of election, but the President asked him to remain in office until after the elections were over.

**THE ELECTIONS.** Although the elections did not take place on the date promised by General Condylis, they did occur on November 7. Although there were several small parties in the

race as well as several "personal candidates," the contest was chiefly between the republicans and the royalists. Nearly 1,000,000 votes were cast and the republicans won a majority of the seats (155 to 125). On November 29, General Condylis, who had previously announced that he would retire in the event of a republican victory, did so, and was succeeded as Premier by M. Kafandarlis, the leader of the largest republican group, on December 2. General Metaxas, one of the chief leaders of the royalist groups, stated that he would support the new government if the army was completely kept out of politics. The new Parliament met on November 26 and in the first week was expected to restore the constitution of 1925 with certain modifications that would make it acceptable to all parties. The leaders of Greek political life all seemed to believe that the rule of "military dictators" was over.

**GREEK ARCHÆOLOGY.** See ARCHÆOLOGY.

**GREENLAND.** The largest island in the world next to Australia; the only colonial possession of Denmark. The area is variously estimated from 826,000 to 849,000 square miles. The settled portion, the only part included in Denmark's colony, has an area of 46,740 square miles, with a population at the census of 1921, of 14,355, of whom 274 were Danes. The largest settlement is Sydproven, with a population of 901, and the smallest, Skansen, with a population of 49. The interior remains unknown in detail, but the main geographical features are understood. Nearly the whole country consists of a plateau from 2000 to 3000 meters above the level of the sea, which means that it is covered by a thick, permanent coat of snow and ice, only about one-twenty-fifth of the surface being free from it and suitable for cultivation. Most of the inhabitants are located on the coast or on adjacent islands. In 1923 the exports to Denmark were valued at 4,410,000 kroner and the imports from Denmark were valued at 2,388,000 kroner. The trade, chiefly in seals, sealskins, fox skins, and oil is a monopoly of the Danish government. At the head of the government is a director who resides in Copenhagen.

The Government of Denmark continued its labors for the benefit of its Arctic colony. For science, it was building at Godhavn an observatory for meteorological and other physical observations. Its archaeological and geological expedition to southern Greenland, under Noerlund, discovered this year the foundations of a bishop's palace and a cathedral, at Ivigo where a Norse colony lived about 1000 A.D. These structures, built of red sandstone, probably in the 12th century, covered over five acres; the remains of other near-by buildings indicated a large settlement. More important were the growth and success of the Eskimo colony, from the west coast, planted on the East Greenland shore, to offset the exploitation of the local game by the Norwegian fishermen. The original colony, established on the shores of Scoresby Sound in 1924, consisted of about 40 Eskimos, who were supplied with food for over three years. Houses and other conveniences were constructed, while six Danish officials remained with them under Governor Petersen. During the summer of 1925, the East-coast Eskimo of the Angmassalik district, to the number of 90, were added to the colony, with ample supplies. The vegetation on the shores of Scoresby Sound was excellent, and am-

ple for large herds. On land were numerous musk-oxen, polar bears, foxes and hares. At sea were many seals, walruses and fish.

In 1926 the Greenland explorer, Lauge Koch, joined the colony for scientific research,—geological and otherwise. During the winter he was to work in that district. In 1927 he planned to determine the coast resources as far north as Danmark Haven, and later cross the inland ice to the west coast. The question of fuel supply, always difficult within the arctic regions, was settled by an abundance of coal veins, easy to mine. See POLAR RESEARCHES.

**GREENWAY, JOHN CAMPBELL.** American mining engineer and soldier, died at New York City January 19. He was born at Huntsville, Ala., July 6, 1872, and after studying at the University of Virginia graduated from Yale University in 1895. Beginning as a helper at the Duquesne, Pa. furnaces of the Carnegie Steel Company, he worked in the steel industry until 1898, when he enlisted as a private in the First United States Volunteer Cavalry ("Rough Riders") in the Spanish-American War. He was commissioned second lieutenant, promoted to first lieutenant for gallantry in action at the Battle of San Juan Hill, and was recommended to Congress by his commander, Col. Theodore Roosevelt, for the brevet of captain. In 1899 he became assistant superintendent of mines for the United States Steel Corporation at Ishpeming, Mich., serving in this capacity until 1906, when he became general superintendent of the Oliver Mining Company at Mesaba Range, Minn. In 1910 he became general manager of the Calumet & Arizona Mining Company, and for a time was identified with copper mining in the southwest, being general manager of the New Cornelia Copper Company at Tucson, and vice-president of the Cornelia & Gila Bend Railway. At the outbreak of the World War he was commissioned major of engineers serving in France with the first and twenty-sixth divisions of the A.E.F., and later commissioned lieutenant colonel of the One-hundred and first Infantry. He was in action on the Cantigny, Château Thierry, St. Mihiel, Argonne, and Meuse fronts. From the United States government he received the D.S.C., and from France, the Croix de Guerre with two palms, the Order of the Legion of Honor, and Croix de l'Étoile Noire. He at one time was a member of the Board of Regents of the University of Arizona, and chairman of the defense committee of the Council of Defense of that state.

**GRENADA,** grē-nā'dà. An insular possession of Great Britain in the Windward group of the West Indies. Area, 133 square miles; population at the census of 1921, 66,302; estimated in December, 1924, 68,957. Grenada includes half of the Grenadine Islands, the other half being administered from St. Vincent. The capital is St. George with a population of about 5000. In 1926, a movement was started to develop a hydroelectric power plant in the centre of the island to supply electric power for lighting purposes to St. George. In 1924 the movement of population was: Births, 2197; deaths, 1156. In 1924 there were 58 government and government-aided schools for elementary education with 10,704 pupils and one secondary school. The chief products which are also the chief exports are: Cacao, spices, lime juice, cotton, and cotton seed. The production of sugar was rapidly increasing; in

1924, the local production of rum was 25,077 proof gallons. In the same year the revenue was £117,453 and the expenditure, £106,003. The exports were £344,879 and the imports, £272,291. The total shipping entered in 1924 was 392,638 tons, nearly all British. The colony is under the governor of the Windward group, but has its own institutions. Governor and Commander-in-Chief of the Windward Islands, including Grenada, Sir Frederick Seton James; Colonial Secretary for Grenada, H. Ferguson.

**GRENFELL, BERNARD PYNE.** Honorary professor of papyrology at Oxford University, died at Eley, Perth, May 17. He was born at Birmingham, Dec. 16, 1869, the eldest son of John Granville Grenfell, Master at Clifton College. He was educated at Clifton College, and at Queen's College, Oxford, where he became a fellow in 1894, and was also Craven fellow in the University of Oxford, 1894-95. From 1894 he was active in the discovering and editing of Greek papyri, translating and editing a long Greek roll placed in his hands by Flinders Petrie. This was found to contain revenue enactments of Ptolemy Philadelphus I, and two years later Grenfell acquired a companion roll which was translated and edited for publication with an introduction by Professor Mahaffy. He spent several seasons at Oxyrhynchus in the first of which he discovered the tattered leaf bearing the famous "Sayings of Jesus." His work at Oxyrhynchus was developed in a number of volumes which brought to Grenfell and his collaborator, Hunt, many honors from universities and scholars generally. Grenfell received the honorary degrees of Ph.D. from Königsberg, Hon. Litt. D. from Dublin, Hon. D. Jur. from Graz, and was a member of important learned societies in Europe. He was Drexel medallist of the University of Pennsylvania in 1903, and in 1916 was made professor of papyrology at Oxford. His publications include: *The Revenue Laws of Ptolemy Philadelphus*; *An Alexandrian Erotic Fragment and other Greek Papyri*; and, in collaboration with A. S. Hunt, *New Classical Fragments and other Greek and Latin Papyri*; *Sayings of Our Lord from an Early Greek Papyrus*; *New Sayings of Jesus and Fragment of a Lost Gospel*; *The Geneva Fragment of Menander*; *The Oxyrhynchus Papyri*; *The Amherst Papyri*; *Fayûm Towns and their Papyri*; *The Tebtunis Papyri*; *Greek Papyri in the Cairo Museum*; *Hellenica Oxyrhynchica*; and *The Ithaca Papyri*.

**GROSSMANN, LOUIS.** American rabbi, educator, and leader of Hebrew organizations in Cincinnati, died at Detroit, Mich., September 21. He was born in Vienna, Austria, February 24, 1863, the son of a rabbi, and was educated in that city until 1874. Coming to America he studied at the University of Cincinnati, receiving the degree of B.A. in 1884, and graduating in the same year from the Hebrew Union College as a rabbi. He went to Temple Beth El, Detroit, as rabbi in the same year, remaining until 1898, when he was called to the Congregation B'nai Yeshurun in Cincinnati, serving until 1922, when he became rabbi emeritus. From 1898-1922 he held the chair of ethics, theology, and pedagogy in the Hebrew Union College from which he received his degree of D.D. in 1889, and that of Doctor of Hebrew Law in 1922. He was a founder and principal of the Teachers College, Cincinnati, for the training of Jewish teachers, and

an editorial writer on the *The American Israelite*. He was a member of many learned societies in America and Europe, and was one of the International Committee which organized the First Universal Congress of Races at London, July 26-29, 1911, as well as president of the Jewish Religious Educational Association of Ohio, and of the Rabbinical Association of Ohio. He was also president of the Central Conference of American Rabbis, and was founder of the Western Association of Jewish Ministers and honorary president in 1924. He was Lewissohn lecturer in 1918 on ethics of Judaism. An active student and author, his writings including: *Judaism and the Science of Religion* (1888); *Maimonides* (1890); *Responses, Psalms and Hymns*, (Detroit, 1895); *The Jewish Pulpit* (1895); *Biography of Isaac M. Wise, 1854-1900*, in *Collected Writings of Isaac M. Wise*, (Cincinnati, 1900); *Order of Service of Sabbath Schools* (1909); *The Real Life* (1914); *Glimpses into Life*, (New York, 1922); *Hanukkah Festival*; *The Aims of Teaching in Jewish Schools*; *Work for Teachers in Jewish Schools*; *Order of Service for the Day of the New Year and the Day of Atonement* (1918); *The Jewish Pulpit* (1919-21); and *Glimpses into Life* (1922). He contributed to *The American Jewish Pulpit*, published by the Central Conference of American Rabbis, and *Judaism and the Science of Comparative Religions*. In *Judaism and the World's Parliament of Religions*, Cincinnati, O., 1894.

**GUADELOUPE**, ga'dà-lôôp'. A French insular possession in the Lesser Antilles in the West Indies, consisting of two islands separated by a narrow channel, the one on the west being Guadeloupe proper or Basse-Terre, and the one on the east Grand-Terre. Combined area, 532 square miles; total area, including five small dependent islands, 688 square miles; population in 1922, 229,839. Basse-Terre is the capital, with a population of 8318; chief town, Pointe-à-Pitre, with 27,679 inhabitants. In 1924-25 there were 107 public and private elementary schools, with 139 teachers and 15,241 pupils in the public schools and 29 teachers and 650 pupils in the private schools. For higher education there is one *lycée* with 448 pupils. The chief products for export are: Cacao, coffee, sugar, and rum. For local consumption, bananas, sweet potatoes, maize, tobacco, manioc, and various vegetables are produced. In 1924 the imports were valued at 107,675,177 francs and the exports at 185,100,599 francs. The revenue and expenditure for 1925 balanced at 19,761,701 francs; the public debt on Dec. 1, 1924, was 812,622 francs. There is communication with France by means of two steamship companies, and there is a wireless station at Destrellan. At the head of the government are a governor and an elected council and the colony sends to the French parliament at Paris one senator and two deputies.

**GUAM**, gwâm. An insular possession of the United States, situated at the southern end of the Marianne or Mariana Islands, of which it is the largest and most populous, in the Pacific Ocean at a distance of about 1500 miles from Manila and 5053 from San Francisco. Area, about 225 square miles; population, exclusive of the military and naval establishments, 15,789 on June 30, 1925, of whom 15,246 were classed as natives. Capital, Agaña, with about 8500 inhabitants. In 1925, the school registration was

2813 pupils. Spanish and English are spoken in addition to the native Chamorro. The products of the island include cacao, coffee, copra, corn, rice, sugar, sweet potatoes and timber. The exports in 1925 amounted to \$109,178 and the imports to \$634,340. The island constitutes an American naval station, of which its governor, appointed by the President, is commander of the naval station and military governor of the island. He is virtually the entire government. Governor at the beginning of 1926, Capt. H. B. Price, U.S.N.

**GUATEMALA**, ga'te-milä. A republic of Central America lying between the Caribbean Sea and the Pacific Ocean and south and south-east of Mexico. Capital, Guatemala City.

**AREA AND POPULATION.** The area is estimated at 48,290 square miles, but the limits have been uncertain on account of boundary disputes and the area has been figured as low as 42,353 square miles; population, according to the census of 1920, 2,004,900; estimated in 1926, 2,454,000. The population of the chief cities at the last census was: Guatemala City, 99,009; Totonicapan, 30,888; Coban, 30,321; Chiquimula, 25,191; Escuintla, 20,574; and Quezaltenango, 20,565.

**EDUCATION.** In a message to the legislature early in 1926 the President stated that the number of primary schools open during 1925 was 2761, and that in addition there were 48 institutions of other types—professional schools, normal and secondary institutes and special schools. The total number of students enrolled was 103,314, and the average attendance, 77,838. During the year 973 students were supported by scholarships, seven of these being granted for study abroad. In concluding his message the President stated, "As indicating a new and wholesome trend in our educational methods, special reference should be made to the efforts already under way in order to vocationalize the primary schools. When this important change has been carried out, a decided advance, I trust and believe, will have been made toward the regeneration of Guatemala. The necessary steps are now being taken to provide the schools with plots of ground, and industrial studies and monographs of the departments are being made in order that in all places pupils may be taught the raising of crops and the industries peculiar to the region where they live and in order to develop such other new ones as can be introduced."

**PRODUCTION.** Agriculture is the chief occupation, and coffee is the staple crop. Other important crops are sugar, bananas, corn, beans, wheat, rice, tobacco and potatoes. Mahogany and dye woods are exported to the United States. Silver, gold, iron, lead and copper mines exist, but are of little commercial value because of inadequate means of transport.

**COMMERCE.** The year 1925 was one of general prosperity for Guatemala, resulting largely from an abundant yield of coffee which was disposed of at high prices. The value of the foreign trade movement exceeded that of the preceding year by \$9,000,000 and that of 1923 by \$23,000,000. There were no political disturbances and the national currency was stabilized throughout the year with the rate of exchange at 60 pesos for one dollar. The national prosperity was manifested in country-wide improvements, particularly in highways, public buildings, and parks. The general condition was reflected in the railway

and dock improvements, in the importation of luxuries, such as automobiles and fine woven fabrics, and in better highway transportation, such as motor buses and, in the city of Guatemala, in change from horse-drawn to motor-driven street cars.

Guatemala exported products to the value of \$29,654,000 in 1925 as compared with \$24,457,000 in 1924, and imported products to the value of \$18,557,000 as against \$14,548,000. The total foreign commerce, according to the national import and export statistics, amounted to \$48,221,000 compared with \$39,006,000 in 1924. Moreover the favorable trade balance was increased from \$9,900,000 in 1924 to \$11,100,000 in 1925. The most important advance in the value of exports was in coffee which increased from \$19,368,000 in 1924 to \$24,033,000 in 1925. Other increases were in chicle and lumber, while decreases were noted in sugar, hides, and bananas. Products supplied by the United States to Guatemala exceeded in value those supplied by all other countries combined. Although the percentage of the total imports dropped from 63 to 60 per cent in 1925, the increase in value was very satisfactory. The trade of Guatemala in 1925, by countries, is given in the accompanying table.

#### TRADE OF GUATEMALA, BY COUNTRIES, IN 1925

Country of origin or destination	Kilos	Value Total	Per cent of total
<i>Imports</i>			
United States . . .	83,395,096	\$11,158,011	60.0
Germany . . . . .	8,004,424	2,046,377	11.0
England " . . . .	7,607,986	2,234,663	13.8
France . . . . .	783,528	571,427	1.2

Miscellaneous . . . . .	431,967

**COMMUNICATIONS.** The latest figures for shipping are those for 1923 when 1,081,425 tons entered and 1,079,760 cleared. The International Railway of Central America controls a mileage of approximately 440 miles in Guatemala, exclusive of 55 miles of siding. In August, 1926, the Pan-American Union reported that a contract had been signed with the Guatemala and Salvador Railway Co., for the construction of a railroad branch from Santa María on the southern line to the Guatemalan-Salvadoran frontier, there to join the Salvadoran line being constructed from Santa Ana via Ahuachapán to the boundary with Guatemala, where a large bridge will be built across the Paz River. It was calculated that the work on the Guatemalan side should be completed in three years, thus giving another rail communication with Salvador on the southeastern border, in addition to the Zacapa route on the northeast.

**GOVERNMENT.** The executive power is vested in a president elected for six years and legislative power in a national assembly, consisting of representatives elected for four years, and a council of state, consisting of 13 members, part of whom are elected by the national assembly and part appointed by the president. President, at the beginning of 1926, Gen José María Orellana (q.v.) who died Sept. 26, 1926.

**HISTORY.** On December 3, 4, and 5 the presidential elections of Guatemala were carried out without any signs of disorder. The successful candidate was Lazaro Chacon, the Liberal candidate, who defeated his Progressive opponent, Gen. Jorge Ubico, by a large majority. Chacon had been acting as president since the death of President Orellana.

**GUGGENHEIM FOUNDATION.** See AERONAUTICS.

**GUPPY, HENRY BROUGHAM.** English botanist and geologist, died May 21. He was born at Falmouth, December, 1854, and was educated at King's School, Sherborne, Queen's College, Birmingham, St. Bartholomew's Hospital, London, and at Edinburgh University where he was made M.B. and C.M. in 1876. He entered the medical service of the Royal Navy in 1876, being surgeon of H.M.S. *Hornet* on the China and Japan station, 1877-80, and on H.M.S. *Lark*, a surveying schooner in the Western Pacific, 1881-84. Resigning from the navy in 1885 he investigated the coral-reef formation and the plant-dispersal in the Keeling Islands and West Java, 1887-88, and made botanical and geological exploration in the Hawaiian and Fijian Islands in 1896-1900. He also investigated the littoral flora of the Pacific side of South America from the Straits of Magellan to Panama, 1903-04, and carried on subsequently botanical work in the West Indies and the Azores. In 1917 he was selected as gold medallist of the Linnæan Society of which he became a fellow, and in 1918 was made a fellow of the Royal Society. His publications include two volumes on the Solomon Islands (1887); one volume on the Homes of Family Names (1890); two volumes on his observations in the Pacific in Hawaii and Fiji

(1903-06): one volume on Studies in Seeds and Fruits (1912): and one volume dealing with results obtained in the West Indies and Azores (1917).

**GUPTA, SIR KRISHNA GOVINDA.** An Indian official, died in Calcutta, India, March 26. He was born in Bhatpara, Dacca, India, Feb. 28, 1851, and was educated at the Mymensing Government School, at Dacca College, and at the Calcutta University. He was among the few early Indian native students in England to compete for the Indian Civil Service. After studying at London University College he was successful in the examination in 1873, and was sent to his native province as an official. He passed through all the grades of the Indian Civil Service of Bengal, as secretary of the Board of Revenue in 1887, Commissioner of Excise in 1893, and Divisional Commissioner in 1901. In 1904 he received one of the two memberships of the Provincial Board of Revenue, at that time the highest post to which an Indian had risen in the sphere of civil administration. In 1907 he was made a member of the India Council, being the first member of the Hindu race to share with Englishmen the responsibility of assisting the Secretary of State in the control of Indian policy. Sir Krishna Gupta retained his seat for the full statutory term of seven years, and acquired the confidence of his colleagues and the esteem of all associated with him. His appointment came as the result of his visit to Europe in connection with the development of the fisheries and his association at that time with Lord Morley, who took a liking to him. Gupta was a member of the eclectic school of deistic religious thought known as the Brahmo Samaj, and, with his wife, renounced caste restrictions and was keen for social reform. In 1911 Sir Krishna was made a Knight Commander of the Star of India, and after his retirement from the India Council in 1915 divided his time between India and Great Britain, where he was earnest in advancing Indian social and political conditions, though not participating in the recent advance movements which seemed to outstrip his sober judgment. In 1920 he was a member of Lord Esher's Army in India Committee. He was considered an able man of reasonable outlook, friendliness of disposition, and sincerity of purpose.

**GUYER, WILLIAM HARRIS.** American clergyman and president of Findlay College, Ohio, died at Findlay, O., July 22. He was born at Water-side, Bedford County, Pa., Sept. 2, 1870. He was for several years a teacher in the public schools and academies, and was ordained to the ministry of the Church of God in 1895. In 1898-1902 he was pastor in Beaver County, Pa., and from 1902-08 at Barkeyville. He was at Alverton 1908-12 and in charge of the College Church at Findlay, Ohio, after 1913, having become professor of theology in 1912. In 1914 he was elected president of the college. He was the author of: *Life of James Arminius*; *Our Mothers*; *Memories of Our Old Homes*; *Victors of the Faith*; and *Messages of Comfort*.

**GYMNASTICS.** The national Amateur Athletic Union Gymnastic championships of 1926 were held in the Sesquicentennial Stadium, Philadelphia, the individual winners in the several events being: horizontal bar, Alfred Jochim, Swiss Turn Verein; parallel bars, Alfred Jochim; side horse, Alfred Jochim; flying rings, Paul

W. Krempel, Los Angeles A. C.; rope climb, Manfred Krümer, Newark, A. C.; calisthenics, Paul W. Krempel; long horse, Adolph Zink, New York Turn Verein; Indian clubs, Ray Dutcher, New York A. C.; tumbling, David H. Sharpe, Los Angeles A. C.; all-around, Paul W. Krempel. The United States Naval Academy for the seventh consecutive year captured the United States intercollegiate championship.

**GYPSUM.** In 1925 according to the record of the U. S. Bureau of Mines, there were produced and sold in the United States, 5,675,000 short tons of crude gypsum, while crude and calcined products were sold with a total value of \$47,849,000. In the same year there were imported for consumption into the United States 634,423 short tons of crude gypsum valued at \$915,888; ground or calcined gypsum to the amount of 10,759 short tons valued at \$140,941; manufactured plaster of Paris valued at \$56,724; and 449 short tons of Keenes cement valued at \$11,294. This made a total value of all gypsum for the year of \$1,124,847. In 1925 the exports of gypsum aggregated 16,798 short tons valued at \$498,616.

**GYPSY MOTH.** See ENTOMOLOGY, ECONOMIC.

**HACKETT, FRANK WARREN.** American lawyer, author and assistant secretary of the navy, died at Portsmouth, N. H., August 10. He was born at Portsmouth, on April 11, 1841, and graduating from Harvard College in 1861, studied law at Portsmouth, N. H., Philadelphia, Pa., and at the Harvard Law School. In the Civil War he served as acting assistant paymaster from 1862-64, and was paymaster on the U.S.S. *Miami*, North Atlantic Squadron, being on board when that vessel was engaged with the Confederate ram *Albatross* at Plymouth, N. C. In 1866 he was admitted to the Massachusetts bar and began practice in Boston. In 1872 he served as private secretary to Caleb Cushing, the senior counsel for the United States in the Geneva Arbitration. From 1873-1920 he engaged in the practice of law at Washington, D. C., serving as assistant secretary of the navy, April, 1900-December, 1901, when he resigned. He was president of the New Hampshire Historical Society, 1912-13, and wrote reminiscences, biographies, and other works, including: *Memoir of William H. Y. Hackett* (1878); *The Geneva Award Acts, with notes and references to Decisions of the Court of Commissioners of Alabama Claims* (1882); *A Transcript of the First Thirty-five Pages of the Earliest Town Book, Portsmouth, New Hampshire, with notes* (1886); *A Sketch of the Life and Public Services of William Adams Richards* (1898); *The Gavel and the Mace* (1900); *Deck and Field* (1909); *Reminiscences of the Geneva Tribunal of Arbitration* (1872) of the *Alabama Claims* (1911).

**HACKETT, JAMES KETELTAS.** American actor, died in Paris, November 8. He was born at Wolfe Island, Ontario, Sept. 6, 1869, the son of James Henry and Clara Cynthia Morgan Hackett, the former one of the acknowledged leaders of the American stage, having created the rôle of Rip Van Winkle, though he was popularly known for his Falstaff. The son was graduated from the College of the City of New York in 1891, and then studied at the New York Law School, but having made a success in amateur theatricals, he went on the professional stage making his début with A. M. Palmer's

stock company in Philadelphia on Mar. 28, 1892, as François in *The Broken Seal*. In the autumn of the same year Haggard joined Daly's company, appearing in Shakespearean and other rôles, and in 1895 became leading man at the Lyceum Theatre, then under the management of Daniel Frohman. He was at that time the youngest leading man on the New York stage and here created such parts as Rudolph Rassendyl in *The Prisoner of Zenda*, and its sequel, *Rupert of Hentzau*. Later he acted in many plays such as *Romeo and Juliet*, and played the leading rôle in *The Pride of Jennico*. He also became a manager and actor-manager producing modern comedies and romantic plays, and in 1902 was associated with Harrison Grey Fiske, Mrs. Fiske and Henrietta Crosman in organizing the Independent Booking Agency to oppose the theatrical trust. He was lessee and manager of the Haggard Theatre in New York, and of theatres in Boston and Chicago.

In 1916 at the Criterion Theatre in New York Haggard produced Shakespeare's *Macbeth*, and during the War played in the all-star cast of *Out There* for the American Red Cross, netting for this organization \$700,000 in three weeks. At this time he also played the part of Old Bill in *The Better 'Ole*, and in 1919 he created the rôle of Silas Lapham in *The Rise of Silas Lapham* which was produced at the Garrick Theatre in New York. In 1920 he took his *Macbeth* production to London giving a series of performances at the Aldwych Theatre with an English company, and accepted an invitation of the French Government to give this play in Paris in a state-subsidized theatre in which English actors were invited to participate. He was decorated by the French Government with the cross of the Legion of Honor. He appeared in *Othello* in Paris and London and was the guest of honor in the same play, when produced at Stratford-on-Avon in 1922. He was at various times the guest of the King and Queen of England at Buckingham Palace, and in the tercentenary celebration in honor of Molière he appeared as Shakespeare in the Grand Opera House at Paris, representing Shakespeare and his works. At this time he was decorated by the Authors and Composers of France in recognition of his "profound mastery of his great art." In January, 1924, he returned to New York City and was tendered a public reception at the City Hall and granted the freedom of the city. In this year he produced *Macbeth*, playing the title rôle with Clare Ames as Lady Macbeth.

**HAGGARD, SIR WILLIAM HENRY DOVETON**, K.C.M.G. British diplomat, died at Mentone, France, January 23. He was born in Norfolk, June 25, 1846, and was educated at Tonbridge School, at Winchester, and at Magdalen College, Oxford. In 1869, he entered the British diplomatic service, and his first important position was as Secretary of Legation at Rio de Janeiro in 1885. After serving in a similar capacity at Athens in 1887, he became Minister Resident at Quito in 1890, Consul-General at Tunis in 1894, and Minister Resident at Caracas in 1897-1902. He was made Ambassador to Argentina in 1902, and in 1906 was appointed Ambassador to Brazil, serving until Jan. 1, 1914, when he retired on a pension. In 1903 he was made a Companion of the Bath, and in 1908 a Knight Commander of St. Michael and St. George. In

addition to his own work he was also known as brother of the late Sir Rider Haggard, novelist and sociologist, and of Maj. A. C. P. Haggard, the writer on sport, fiction, and French history. He prepared in coöperation with Guy Le Strange an edition of *The Vazir of Lenkuran*, a standard book for the study of modern Persian. He was a fellow of the Royal Geographical and Royal Asiatic Societies.

**HAITI**, hä'té. A West Indian republic comprising the western part of the island of Haiti or Santo Domingo, the other part comprising the Dominican Republic (q.v.). Capital, Port-au-Prince.

**AREA AND POPULATION.** The area has been variously estimated at from 10,204 to 11,072 square miles; population, estimated, Jan. 1, 1924, 2,028,000, excluding 3000 foreign white residents and the military and naval forces of the United States stationed there in conformance with the treaty of 1915. The majority of the inhabitants are negroes, but there is a large number of mulattoes, who are descended from the former French settlers. The language is a dialect of French known as Creole French. The capital, Port-au-Prince, has a population of approximately 125,000; Cape Haïtien, about 20,000; Cayes, 15,000; Gonaïves, 7500; and Port-des-Paix, 7500.

**EDUCATION.** Public education is free and has been compulsory since 1910. In 1925 there were 932 schools of all types with an enrollment of 75,278. The rural schools have been much improved in recent years. At the suggestion of the Chamber of Commerce of Haiti, a school of commerce has been established. Secondary education is provided by national *lycées* and by private schools. The University of Haiti was established in 1921.

**PRODUCTION.** Agriculture is the principal occupation and the chief product is coffee. Cacao, tobacco, and cotton are also extensively cultivated, the last being exported in considerable quantities. Other products include sugar, rum and other spirits, logwood and other valuable timber. Mineral resources are considerable although undeveloped. They include copper, coal, and iron, for the working of which some concessions have been granted; also gold, silver, antimony, tin, sulphur, kaolin, limestone, porphyry, nickel, and gypsum. The manufactures are practically negligible.

**COMMERCE.** The total foreign commerce during 1924-25 reached the value of 198,207,000 gourdes, an increase of 53,844,000 over the 144,362,000 gourdes at which the commerce of 1923-24 was valued. This increase amounted to 37.30 per cent. The nearly 200,000,000 gourdes of foreign trade was exceeded only in the years 1918-19 and 1919-20, both of which were entirely abnormal. Imports were 101,188,000 gourdes, as compared with 73,481,000 gourdes in the preceding year, an increase of 27,707,000 gourdes, or 37.72 per cent. Exports were 97,019,000 gourdes, as compared with 70,882,000 gourdes, an increase of 26,237,000 gourdes, or 37.02 per cent. Thus the expansion of imports and exports was almost identical. Exports from Haiti to the United States in 1925 were almost \$1,000,000 greater than in 1924, the increase amounting to 76 per cent. In 1925 imports to Haiti from the United States increased more than \$2,000,000 over the figures of the previous year, a gain of 19 per cent. The accompanying

table shows the value of exports in dollars for 1924 and 1925, according to the ports of Haiti:

EXPORTS, BY PORTS, FISCAL YEARS ENDING  
SEPTEMBER 30

Ports	1924	1925
Port au Prince .....	\$3,492,815	\$4,211,158
Petit Goave .....	1,590,125	2,611,876
Jacmel .....	1,685,291	2,497,474
Cape Haitien .....	1,390,658	2,852,942
Aux Cayes .....	1,449,867	1,836,571
Gonaives .....	1,289,740	1,765,011
St. Marc .....	1,359,195	1,649,557
Port de Paix .....	805,333	951,339
Jeremie .....	460,701	703,163
Miragoane .....	342,923	494,292
Aquin .....	303,322	326,691
Other ports .....	6,352	3,688
Total ..	14,176,322	19,403,762

FINANCE. The accompanying table gives government receipts and expenditures for the fiscal years 1923-24 and 1924-25. The fiscal year is from October 1 to September 30.

Receipts	1924-25 Gourdes	1923-24 Gourdes
Customhouses .....	35,750,018.34	29,950,907.14
Internal taxes .....	4,089,926.19	2,795,870.53
Miscellaneous .....	647,722.47	155,543.66
Total fiscal receipts ..	40,487,667.00	32,902,321.33
Expenditures	1924-25 Gourdes	1923-24 Gourdes
Receiver general .....	1,849,537.49	1,118,917.28
General administration of taxes .....	342,928.16	73,478.88
Public debt .....	11,614,549.45	9,462,098.47
Guarantee on debt interest ..	626,388.20	1,516,174.95
Gendarmerie .....	5,579,242.54	5,322,449.22
Foreign relations .....	619,953.31	734,199.47
Treasury .....	1,197,945.96	1,520,366.84
Commerce .....	230,051.46	
Interior .....	1,208,067.76	1,363,403.06
Hygiene .....	2,223,059.14	1,529,057.91
Public works .....	703,416.57	961,336.20
General administration of public works .....	7,533,943.51	5,895,159.05
Justice .....	1,338,838.31	1,372,533.28
Agriculture .....	44,258.88	148,288.24
Agricultural technical service ..	1,526,891.70	434,445.89
Technical service of pro- fessional instruction ..	274,393.63	
Public instruction .....	1,942,599.20	2,306,194.25
Church .....	367,136.75	457,393.00
Total .....	39,218,202.02	34,215,495.94

Pronounced changes occurred in the position of the public debt during the month of October, 1925. Practically all ordinary amortization purchases on series A and series C bonds had been completed, and considerable purchases were also made on series B bonds. Thus the outstanding series A bonds declined from 75,183,000 gourdes to 73,921,000 gourdes, series B from 21,747,000 gourdes to 21,078,000, and series C from 12,640,000 to 12,453,000. The gross debt therefore, declined from 115,231,000 gourdes to 113,112,000 gourdes, and constitutes the lowest point reached in the public debt since the present method of presentation was adopted.

COMMUNICATIONS. In 1926 the total length of railways in Haiti was 258.2 kilometers, operated by two companies. The traffic was comparatively small.

GOVERNMENT. Executive power is vested in a president elected for four years, who acts through a ministry of five. The constitution as adopted by the people on June 12, 1918, provides for a National Assembly to consist of a

Senate and House of Representatives. This body has never been elected. Instead the legislative functions are carried out by the Council of State, consisting of 21 members apportioned among the different departments, who were supposed to act until the president fixed a date for the election of the assembly. As he has never done so this body still functioned at the end of 1926. The President in 1926 was Louis Borno, who was elected Apr. 10, 1922.

HISTORY. According to the report of Brig.-Gen. John H. Russell, American High Commissioner in Haiti, the republic continued to make progress along economic and industrial lines. At the end of the fiscal year a cash balance of \$1,273,568 remained. In commenting upon the relations between the Haitian government and the press of the country, General Russell said that they "showed no improvement over those existing in the preceding year, with no decrease in the attacks indulged in by certain of the local newspapers against the Haitian Government and the American officials. These newspapers are such in name only. They carry little or no news and devote their columns to petty criticisms of governmental acts, usually accompanied by some ill-meant but futile attack."

On April 12, Louis Borno was elected for a second four-year term as President of Haiti by the Council of State which he himself appointed. This council contains 21 members and the vote was announced as unanimous despite the fact that one member was absent and another refrained from voting. Needless to say the newspapers referred to above bitterly attacked this election as unconstitutional, and claimed that he had acted contrary to the constitution in many cases, but each time with the aid and support of the American treaty officials. In commenting on his election President Borno said, "My reelection guarantees four more years of close cooperation between the Haitian and American governments, and a continuation of the harmonious relations which have so effectively contributed to the present prosperity of the country." During the summer he made a month's tour of the United States and in one of his speeches asserted that "the great mass of the people of Haiti are grateful to the United States for the improved conditions in their country. Only a handful of malcontents now oppose the present régime of peace. They are composed entirely of discredited military leaders and their lieutenants."

HAMILTON COLLEGE. A non-sectarian institution of higher education at Clinton, N. Y.; founded in 1812. A total of 449 students were registered for the 1926 fall session, divided as follows: seniors, 81; juniors, 85; sophomores, 115; freshmen, 168. There were 36 members on the faculty for the year 1926-27. During 1925-26, the exterior of Knox Hall was restored to its original appearance, and the interior adapted for housing the administrative offices of the college. The name was changed to Buttrick Hall in memory of the original occupants, who were the grandparents of Senator Elihu Root, Chairman of the Board of Trustees of the college. The productive funds of the institution were approximately \$3,511,900, and the income for the year 1925-26 was \$310,490. The library contained 114,989 volumes and 28,500 pamphlets. President, Frederick C. Ferry, Ph.D., Sc.D., LL.D.

**HAMLIN, ALFRED DWIGHT FOSTER.** An American architect, and head of the School of Architecture at Columbia University, died in New York, March 21. He was born at Constantinople, Turkey, Sept. 5, 1855, the son of Dr. Cyrus Hamlin, a Congregational missionary and educator, and after studying at private schools and at Robert College, Constantinople, graduated at Amherst in 1875. He studied architecture at the Massachusetts Institute of Technology, 1876-77, and at the École des Beaux Arts, Paris, 1878-81. In 1883 he came to Columbia University as special assistant in the School of Architecture under Prof. William R. Ware, and in 1889 became assistant professor of architecture, and in 1904 professor of the history of architecture, serving in this chair until his death. Professor Hamlin was a fellow of the American Institute of Architects, and a member of the Archaeological Institute of America. He was active as a public spirited citizen in various movements for civic improvements, and also in the efforts for betterment in the Near East, especially in Armenia and Greece. He was active not only as a teacher, but as an author on the history of architecture, and contributed articles on architecture to the first and second editions of THE NEW INTERNATIONAL ENCYCLOPEDIA, and to earlier volumes in this series of YEAR BOOKS. His professional and educational work was recognized by the degree of M.A. from Amherst in 1885, and that of LL.D. from St. John's College in 1912. He was also decorated with the Cross of the Order of George I of Greece for his interest in archaeological studies in that country. In addition to frequent contributions to archaeological periodicals, dictionaries and encyclopedias he was the author of: *A History of Architecture* (1896); *European and Japanese Gardens* (in collaboration) (1902); *History of Ornament, Ancient and Medieval* (1916); and *History of Ornament, Renaissance and Modern* (1923).

**HAMPTON NORMAL AND AGRICULTURAL INSTITUTE.** An institution founded in 1868 at Hampton, Va., for the education of negroes and Indians. Enrollment for the year 1926-27, exclusive of training and summer schools, was 1006, of whom 964 were boarding students, and the faculty numbered 120. The enrollment for the two summer sessions of 1926 was 1188. The productive funds of the Institute amounted on June 30, 1926, to \$7,958,763.73, and the income was \$399,733.77. There were 60,532 volumes in the library. Principal, James Edgar Gregg, D.D.

**HANDBALL.** This sport experienced a pronounced gain in popularity during 1926. Maynard Laswell of the Los Angeles Athletic Club retained his singles title in the national Amateur Athletic Union tournament held at St. Paul, Minn., defeating Jack Donovan in the final round by 21-18, 21-17. The doubles championship was won by Donovan and Lane McMillan who triumphed over Herman Dworman and William Kammann, 21-17, 21-14. Eddie Butler of the Crescent Athletic Club captured the one-wall singles title while the doubles honors went to Walter Schwartz and John Seaman of the Trinity Club. Tyge Tholfsen won the four-wall hard ball championship.

**HANFORD, CHARLES BARNUM.** American actor, died at Washington, D. C., October 17. He was born at Sutter Creek, Amador County,

Calif., May 5, 1859. After graduating from the Washington D. C. High School, 1881, he studied in the collegiate and law departments of Columbian University. He relinquished the practice of law for employment in the U. S. Pension Office and was private secretary to Congressman H. F. Page of California. In 1882 he began his first season's work as an actor in New London, Conn., playing with William Stafford in Shakespearean plays. From 1883-85 he was with Thomas W. Keene, and from 1885-86 with Robson and Crane as Egeon in *The Comedy of Errors*. In 1885 he joined Edwin Booth's company and from that time was identified with Shakespearean productions, playing Marc Antony to Booth's Brutus and Barrett's Cassius from 1887-89. He was also with Booth, Modjeska and Julia Marlowe. In 1892 he went on his first starring tour, playing Marc Antony in *Julius Caesar*, and acting in *Ingomar*. In 1896-98 Hanford was sub-star and manager with Thomas W. Keene, and joint star with Louis James and Kathryn Kidder in the James, Kidder and Hanford company. In 1889-1900 he starred with his own company, and in 1910-11 was engaged for the part of Appius in Maeterlinck's *Mary Magdalene* in the New Theatre, New York City, and with Miss Olga Nethersole.

He was on lecture tours with Captain Scott of the South Pole Expedition, and acted in moving pictures in 1913-14-15. He was engaged by James K. Hackett for the part of King Duncan in his famous production of *Macbeth* in 1915-16. In the following season he was joint star with John E. Kellard in Shakespearean plays. During the World War he enlisted as chief yeoman, U.S.N.R.F. and was assigned to the office of Naval Intelligence being detailed to duty with Thomas A. Edison. Later he was an editorial writer in the historical section of the U. S. Navy.

**HARBORS.** See PORTS AND HARBORS.

**HARRIS, JOHN ROYALL.** American clergyman and educator, president of Cumberland University, died at Lebanon, Tenn., September 12. He was born near Murfreesboro, Tenn., Mar. 7, 1869, and was educated at the Clark-Bledsoe School, Winchester, Tenn., and later studied theology at Cumberland University receiving the degree of B.D. in 1894, in which year he was ordained to the Presbyterian ministry. His first pastorate was at Lewisburg, Tenn., which he held from 1894-1903, when he went to Pittsburgh, Pa. as pastor of the Shady Avenue Church. In 1917 he became superintendent of the Dry Federation of Pa., and was director of the industrial department of the National Reform Association, and founder of its southern headquarters at Nashville, Tenn., in 1920. He had been president of Cumberland University since June 7, 1922. He was active as a temperance worker and as superintendent of the Tennessee Anti-Saloon League, 1900-03, and a member of the Board of Temperance of the Presbyterian Church. He also was interested in the National Guard, serving as private and as color sergeant in the Pennsylvania National Guard. He was chaplain general of the Department of the Gulf of the Society of Confederate Veterans.

**HARRIS, ADMIRAL SIR ROBERT HASTINGS,** K.C.M.G. British naval officer, died at Yelverton near Plymouth, England, August 25. He was born Oct. 12, 1843, the son of Capt. Robert

Harris, R.N., and at ten years of age was sent to the Royal Naval School at New Cross where he studied for two years. Instead of serving on the *Victory* as a naval cadet, for which he had received the nomination, he was on the *Illustrious* training ship for young seamen then commanded by his father. He served on the 70-gun sailing ship *Cumberland*, and on the 91-gun screw ship *Cæsar*, and also on the 51-gun frigate *Euryalus* where he was a shipmate with Prince Alfred, later Duke of Edinburgh. He was promoted to lieutenant in 1863, captain in 1879, and rear-admiral on Jan. 1, 1895, in which rank he hoisted his flag as second in command of the Mediterranean Fleet in May, 1896. He represented Great Britain on the Council of Admirals in the pacification of Crete, and participated in the conferences which extended from February, 1897 to February, 1898. For his services in this work he was awarded the K.C.M.G. Appointed to command the Cape of Good Hope and West Africa Station, he hoisted his flag on the *Doris* in 1898, and at the time of the Boer War was ordered to devote his chief attention to the protection of the seaport towns of Cape Colony and Natal. While Admiral Harris held that it was undesirable to weaken his ships to land men and guns to assist the British land forces, in response to the request from the general at Cape Town, he dispatched the naval field guns with their seamen crews and 100 marines as escort to Stormberg. His action was approved by the Admiralty, and after this at various times numerous naval guns and seamen were sent to the front. After Paardeberg, Admiral Harris had charge of General Cronje, who was placed on a warship for safe custody until he was removed to St. Helena. In October, 1900, Admiral Harris received the K.C.B. for recognition of his services during the Boer War and was promoted to vice-admiral. In October, 1903, after two years spent on half pay, he was made president of the Royal Naval College at Greenwich where he served for three years, being promoted to full admiral in the meantime. On Oct. 12, 1908 he was retired on reaching the age limit. He was the author of an interesting volume of memoirs entitled: *From Naval Cadet to Admiral* (1913).

**HARRISON, FREDERICK.** British actor and manager, died at London, June 13. He was the son of Frederick Burgoyne Harrison and Ellen Maria Norton, and was educated at King's College School; and Trinity College, Cambridge. He became a private tutor and lecturer, traveling extensively for several years, and in 1886 went on the stage, becoming in the following year a member of Sir Herbert Tree's company when that actor-manager opened the Haymarket Theatre in 1887. He was joint manager of the Lyceum with Forbes-Robertson from 1895-96, and after the latter year became sole lessee of the Haymarket Theatre. From 1896-1905 he was joint manager of the Haymarket Theatre with Cyril Maude, a partnership which lasted until Mr. Maude migrated to the Playhouse in 1905. He was not only one of the most distinguished theatrical managers, but also one of the most successful in London, and the Haymarket Theatre, under his control, was well appointed and admirably conducted, the presentations being marked by taste and art.

**HART, WILLIAM H.** American soldier, quartermaster general, United States Army, died

January 2. He was born at Winona, Minn., Mar. 20, 1864, and graduating from the United States Military Academy in 1888, he was commissioned second lieutenant of the Twentieth Infantry. He was promoted through successive grades to colonel of the Quartermaster Corps, May 2, 1917, and was made quartermaster general, Aug. 28, 1922. He served with the Seventh Cavalry in Arizona, and in Cuba, and was depot commissary at Manila, P. I., 1901-02. From 1903-09 he was assistant commissary general at Washington, D. C., and in 1909-11 he was depot commissioner at Honolulu. He served at San Francisco in 1911-16, being superintendent of the Army Transport Service from 1913-16. In the World War he was base quartermaster at Base Section 1, St. Nazaire, France, and at New York he was depot quartermaster from 1920-22. He was awarded the Distinguished Service Medal of the United States government, and was made an Officer of the Legion of Honor by France.

**HARVARD UNIVERSITY.** A non-sectarian institution of higher education at Cambridge, Mass.; founded in 1636. The number of students enrolled for the year 1926-27 was 7993, distributed as follows: college, 3278, divided into seniors, 597; juniors, 740; sophomores, 894, freshmen, 950, special students, 97; graduate school of arts and sciences, 896; engineering, 265; theological, 98; law, 1440; medical, 500; dental, 150, school of public health, 36; graduate school of business administration, 727; school of architecture, 74; landscape architecture, 42; graduate school of education, 399; special students, 61; Bussey Institution, 21. For the summer school of 1926, 2470 students were enrolled. The officers of instruction numbered 1171, of whom 197 were professors, 39 associate professors, and 98 assistant professors. The total productive funds of the University in June, 1926, were \$76,022,426.62, and the total income for the year, including gifts for immediate expenditure, was \$9,484,492.02. The number of books and pamphlets in the library was 2,497,200. This included the 81,459 additions made during the year. Two dormitories were completed; one in the Yard, the gift of Jesse Isidor, Percy Selden, and Herbert Nathan Straus, in memory of their father, Isidor Straus, and the other McKinlock Hall, a freshman dormitory on the bank of the Charles River, given by Mr. and Mrs. George Alexander McKinlock in memory of their son, George Alexander McKinlock, Jr., of the Class of 1916, killed in action in France. The new Fogg Art Museum, facing Sever Hall, was nearing completion, and the dormitories of the School of Business Administration, the gift of George F. Baker, were occupied at the opening of the academic year. The footbridge across the Charles River, to supply a convenient access to the business school, was also under construction. Plans for the projected chemical laboratories were almost completed, and work on a Medical School dormitory was begun. The University created the office of Director of Athletics, to be a member of the faculty, and selected William J. Bingham to fill it.

In 1925-26 Prof. Étienne Gilson of the University of Paris lectured as Exchange Professor in Philosophy from France, and Albert Bushnell Hart, Professor Emeritus, was sent to France during the second half year as Exchange Professor. During the second half year, also, Prof.

Robert DeC. Wart and Professor Ralph B. Perry went as Exchange Professors to Western colleges (Beloit, Knox, Colorado, Carleton, Grinnell and Pomona). The following were visiting lecturers at Harvard during the year: Prof. John D. Black, economics, from the University of Minnesota; Prof. Edward S. Robinson, psychology, from the University of Chicago; Prof. Charles K. Webster, history, from the University of Wales; Prof. Michel C. Diehl, fine arts and history, from the University of Paris; Prof. Robert S. Conway, Greek and Latin, from Victoria University, Manchester, Eng.; Edward E. Sikes, Greek and Latin, President St. John's College, Cambridge.

**HAUPT, PAUL.** Semitic scholar, one of the pioneers of Assyriology in America, died December 15, Baltimore, Md. He was born at Görlitz, Germany, Nov. 25, 1858, received the degree of Doctor of Philosophy at the University of Leipzig in 1878, and carried on post-graduate work at the Universities of Leipzig and Berlin. In 1880 he became privatdozent in the University of Göttingen and from 1883 to 1889 was assistant professor of Assyriology. In 1883 he came to the United States and became Spence professor of Semitic languages and director of the Oriental Seminary at Johns Hopkins University, but continued until 1889 to lecture in the summer at Göttingen. He also was associated with the United States National Museum, being honorary curator of Oriental antiquities, 1888-98, honorary curator of the division of historic archaeology, 1898-1905, and associate in historic archaeology since 1905. The honorary degree of Doctor of Laws was conferred on Dr. Haupt by the University of Glasgow in 1902, and he was honorary associate of the Society of Oriental Research, and a Knight of the Royal Prussian Order of the Red Eagle. He was American member of the International Commission on Oriental Congresses; first United States delegate to the International Congress of Orientalists at Rome in 1899, at Algiers, in 1905, at Copenhagen in 1908, at Athens in 1912; first United States delegate to the International Congress on the History of Religions at Paris, Basel, and Oxford; and United States delegate to the International Congress of Americanists. He wrote more than 400 papers on Biblical and Assyrian philology, history and archaeology, comparative Semitic grammar, Sumerian, etc., in addition to being projector and editor of the *Polychrome Bible*, a critical and annotated edition of the Hebrew text of the Old Testament with a new English translation. A unique feature of this edition was the use of different colors to distinguish the various sources and component parts in the Old Testament books.

**HAVERFORD COLLEGE.** An institution of higher education under the control of the Society of Friends, at Haverford, Pa.; founded in 1833. Registration for the fall term of 1926

totalled 252 students, distributed as follows: graduates, 4; exchange students, 1; seniors, 39; juniors, 56; sophomores, 74; freshmen, 78. There were 30 members on the faculty. The par value of the productive funds amounted to \$4,025,-653.72, and the total income for 1925-26 was \$1,107,728.06. The library contained 101,500 volumes. President, William Wistar Comfort, Ph.D., Litt.D., J.L.D.

**HAWAII.** A territory of the United States, consisting of a group of islands in the north central Pacific Ocean; formally annexed, Aug. 12, 1898. The nine inhabited islands with their respective areas in square miles are as follows: Hawaii, 4015; Maui, 728; Oahu, 598; Kauai, 547; Molokai, 261; Lanai, 139; Niihau, 97; Kahoolawe, 69; Midway, 2.7. Capital, Honolulu, on the island of Oahu. The population according to the census of 1920 was 255,912 as compared with 191,909 in 1910. The population of the territory was estimated by the board of health to be 328,444 on June 30, 1926; of this number 210,562 were American citizens. The total number of steerage arrivals during the year ending June 30, 1926, was 7925 as against 13,954 for the prior year, divided as follows: Chinese, 336; Japanese, 2150; Filipinos, 5053; Koreans, 12; Porto Ricans, 1; Portuguese, 61; all others, 312. The departures aggregated 11,603 as against 8408 for the previous year. The general death rate was the lowest in the history of the territory, the death rate for the year being 12.44 per 1000 as against 12.74 for the previous year. The number of deaths of infants under one year of age showed a decrease of 64 for the year, there being 1294 deaths, or a rate of 104.21 per 1000 births. The races showing the highest and lowest infant mortality were respectively, the Filipino, 237.19 and Korean, 42.73. There were 12,417 births reported during the year, a decrease of 692 from 1925. The birth rate was 38.08 per 1000 population and the increase of births over deaths of 206.14.

**EDUCATION.** Education is compulsory from the ages of 6 to 14, the maximum having been lower in 1923. During the year there were maintained 182 public schools, with 1977 teachers, and 58,860 pupils, as against 1719 teachers and 55,044 pupils in 1925. There were 63 private schools, with 400 teachers and 9651 pupils, as against 462 teachers and 9872 pupils in 1925, making a grand total for the year of 245 schools, 2377 teachers, and 68,511 pupils.

**COMMERCE.** The accompanying tables from the report of the governor of Hawaii for the fiscal year ended June 30, 1926, give the main statistics concerning commerce. The chief exports are sugar and pineapples. The sugar crop in 1926 was placed at 787,000 tons, more than 11,000 tons larger than that of 1925. An interesting record is that of the constantly increasing acre production—6.39 tons in 1926 compared with 4.47 tons in 1906.

**FINANCES.** The income of the various counties aggregated \$8,875,744.01, as against \$8,814,282.42 for the previous year. The assessment of property, real and personal, aggregated \$392,782,143, as against \$360,832,895 for the prior year. The total income of the territory was \$9,814,387.80; and the total current expenses and fixed charges amounted to \$7,849,120.77, or an excess of income over operating expenses of \$1,965,267.03. The total capital outlay was \$2,152,196.74; the excess of income over expenditures for the fiscal year being \$186,929.71. The total bonded indebtedness on June 30, 1926, was \$22,070,000 as compared with \$17,990,000 on June 30, 1925. Bank deposits at the end of the year amounted to \$67,851,393.05.

**COMMUNICATIONS.** There are steam railways on all islands operating on regular schedules and most of them carrying passengers. In addition plantations have their private railway equipment for transporting cane and laborers. The total mileage in 1925, 371.55, mostly narrow gauge. Regular steamship communication is maintained with the mainland by the Matson Steamship Company, operating between San Francisco and Hawaii; by the Alaska Steamship Company, connecting with Seattle; by the Isthmian Steamship Lines, with headquarters in New York; by the Los Angeles Steamship Company, operating between Los Angeles and Hawaii; and other companies. During 1925-26, 1052 vessels of 8,070,185 tons entered and cleared.

**GOVERNMENT.** The territorial elections are held regularly in November of each even year, to elect the delegate to Congress for two years, one-half of the Hawaiian Senate for four years, and all the members of the Hawaiian House of Representatives for two years. The sessions of the legislature are held biennially in odd-numbered years. Governor during 1926, Wallace R. Farrington.

**HAY.** The hay crop of the United States in 1926, according to estimates published by the Department of Agriculture Dec. 20, 1926,

\$13.67 per ton, and at this rate the crop represented a total value of \$1,317,191,000. In 1925 the production was greater by 2,080,000 tons, the area by 445,000 acres, and the total value smaller by \$13,573,000. Of the total production in 1926, 86,377,000 tons was tame hay and 9,984,000 tons wild hay. The area producing the wild hay comprised 13,506,000 acres as compared with 58,840,000 acres producing the tame hay. The average yield of the wild hay was only .74 of a ton per acre while the tame hay yielded at the rate of 1.47 tons per acre. The leading States in tame hay production and their yields in 1926 were as follows: New York, 6,393,000 tons, Wisconsin 5,742,000 tons, California 4,984,000 tons, Michigan 4,097,000 tons, Ohio 4,007,000 tons and Iowa 3,845,000 tons. Nebraska led in wild hay production with 1,895,000 tons, followed by Minnesota with 1,492,000 tons, South Dakota with 926,000 tons and North Dakota with 818,000 tons. Wild hay, either marsh, salt or prairie hay, was produced in all the States but in some the production amounted to only a few thousand tons.

The tame hay crop of 1926 comprised 26,496,000 tons of alfalfa (see ALFALFA), 10,273,000 tons of timothy hay, 10,185,000 tons of clover hay, 20,511,000 tons of mixed clover and timothy hay, 3,796,000 tons of annual legume hay (soy beans, cowpeas, etc.), 9,174,000 tons of millet, sudan grass, and other miscellaneous hay and 4,942,000 tons of hay from grains cut green. Of the timothy hay 1,497,000 tons were produced in New York, 1,286,000 tons in Ohio and 1,139,000 tons in Pennsylvania, these three States producing over one third of the total crop of the country. In clover hay production Wisconsin stood first with 1,472,000 tons, followed by Michigan and Missouri each with 777,000 tons and Iowa with 731,000 tons. Over 20 per cent of the total hay crop of 1926 was mixed clover and timothy hay and more than half of this quantity was produced in the States of New York, Wisconsin, Pennsylvania, Michi-

gan, Iowa and Ohio, mentioned in decreasing order of production. The larger crops of annual legume hay were produced in Illinois, Tennessee, North Carolina, Virginia and Alabama, given in decreasing order of importance. Millet, sudan grass and other miscellaneous hay was extensively grown in Texas, New York, Illinois, Kentucky, Tennessee and Maine, while grains were cut green for hay to the largest extent in the Pacific Coast States, North Dakota, South Dakota and Montana. The United States Army uses between 7000 and 8000 cars of hay annually and is one of the largest buyers of hay in the country. The Army purchases all its hay on the basis of the official hay standards. At the close of the year seventeen important hay producing or consuming States had adopted United States hay standards as the official State standards.

**HAYAMI, SEIJI.** Finance Minister for Japan, and member of Parliament, died September 13 at Kamakura. He was born in 1868 in Hiroshima-ken, and after graduating at Waseda University in 1887 became chief instructor of the Saitama English School for two years. He then entered the Hakubunkan Publishing House, and later started a daily newspaper at Hiroshima. Elected to Parliament in 1915, he became Parliamentary Secretary of the Navy, and in December of the same year, Vice-President of the House. In 1924 he was Parliamentary Vice-Minister of Railways, and in the following year he became Minister of Agriculture and Forestry. In June, 1926, with the formation of a new ministry (see Japan) he became Finance Minister succeeding Yuko Hamaguchi. His health, however, failed and for some weeks previous to Hayami's death Premier Reijio Wakatsuke temporarily exercised the function of Finance Minister.

**HEART DISEASE.** By reason of the enormous toll of death from chronic heart disease and from the steady increase in such deaths it has become realized that a special campaign should be conducted with the object of detecting these affections in their incipency. By the time the average patient comes to the physician his heart lesion is in a relatively advanced stage and an arrest is out of the question. What have usually been regarded as relatively early symptoms, because the compensation of the organ is still maintained and may not give way for some years, are best looked upon as late symptoms. In an article in the *Journal of the American Medical Association* for June 19, Dr. S. Calvin Smith seems inclined to the belief that even the slight functional derangements of the heart must be recognized as indicating organic disease in embryo even if such cases may never develop anything serious. Any sort of irregular action, short breath on slight exertion—even flatulence of the stomach—should be followed up as a possible first stage of progressive cardiac inefficiency. This view would meet with the approval of the insurance companies and in theory is sound. But at the same time it is a regression to a remote period of the past, when a man with functional anomalies of the heart was commonly regarded by practitioners and insurance examiners as already a developed case of heart disease. In one of Poe's biographies we read that Dr. Francis, the leading practitioner of New York, while taking the poet's pulse noted a missed beat and told the hostess, Mrs. Shelton, that Poe "had heart disease and would not live long."

Long after this period the insurance companies rejected unconditionally for functional irregularities. It took the profession and insurance companies many years to learn that not only such irregularities but even actual valvular lesions were not incompatible with long life; so that finally each case was properly individualized. If the plan suggested by Dr. Smith were followed out it is true that many lives would be prolonged, but thousands whose longevity was not menaced would be made hypochondriacs and would be driven to seek counsel from irregular practitioners and cultists who for business reasons would be optimistic. Since most people are insurable and the majority carry insurance it ought to be sufficient to leave the subject of functional irregularities to the examiners, who commonly postpone such cases until a second examination, when more often than not the irregular action will be shown to have been only temporary.

**HELIUM.** See CHEMISTRY, under *General Chemistry*; PHYSICS.

**HERDT, LOUIS A.** Professor of electrical engineering at McGill University, Montreal, Canada, died at Montreal, April 11. He was born at Trouville, France, in 1872, and, moving to Canada, graduated from McGill University, later studying at the École Supérieure d'Électricité at Paris, and the Institut Electrotechnique, Montefiore, Liège, Belgium. In 1899, he became a member of the staff of the electrical department of McGill University, and also carried on a consulting practice, representing the City of Winnipeg in a large hydro-electric development, and serving as technical expert for the Ottawa Electric Company, Ottawa, Canada, City of Montreal, Montreal, Canada, the Dominion Government of Canada, and other corporations, and governing bodies. He was chairman of the Canadian National Committee of the International Electrotechnical Commission, and also of the Montreal Electric Service Commission. He was vice-chairman of the Montreal Tramways Commission. In 1909 he was made Macdonald professor of electrical engineering at McGill University. During the World War he served in France and received the decoration of the Legion of Honor. He was honorary secretary of the American Institute of Electrical Engineers, and a member of the Institution of Electrical Engineers, as well as a fellow of the Royal Society of Canada. He was the author of many technical papers.

**HEREDITY.** See ZOOLOGY.

**HERING, CARL.** American electrical engineer, died at Philadelphia, Pa., May 10. He was born at Philadelphia, Pa., Mar. 29, 1860, and studied at the University of Pennsylvania, taking the degree of B.S. in 1880 and that of M.E. in 1887. In the interval he carried on post graduate studies at Darmstadt, Germany, and on his return to the United States practiced electrical engineering in Philadelphia, devoting himself specially to electric furnaces, electrochemistry, physical research, and patent litigation. He was for several years instructor at the University of Pennsylvania, and also at the Polytechnikum, Darmstadt, Germany. He was a delegate and juror of awards at 12 expositions, including the Paris Expositions of 1889 and 1900, the International Electrical Congress in Paris, 1900, and several international conferences on elec-

tricity and engineering. He was decorated with the Legion of Honor in 1901, and appointed an *Officier de l'Instruction Publique* in 1889. He was president of the American Institute of Electrical Engineers, 1900-01, and president of the American Electrochemical Society in 1906-07. He was a member of many learned societies in Philadelphia and New York. His published works included: *Digest of Electrical Literature*; *Conversion Tables* (1904); *Tables of Electrochemical Equivalents* (1917); and other books. In 1912 the University of Pennsylvania conferred on him the honorary degree of D.Sc.

**HERMANN, BINGER.** American lawyer and politician, died at Roseburg, Oregon, April 15. He was born at Lonaconing, Allegheny County, Maryland, Feb. 19, 1843, and was educated in district schools and at the Independent Academy near Baltimore. With his father he moved to Oregon in 1859, and after teaching school in Canyonville, Oregon, was admitted to the Oregon bar in 1866, practicing at Roseburg. He was elected a member of the Oregon House of Representatives in 1866, and served in the State Senate from 1868-71. In 1885 he became a member of the Forty-ninth United States Congress, and served in the Fifty-first and intermediate Congresses through the Fifty-fourth, when in 1897 he resigned to become commissioner of the United States General Land Office at Washington, D. C., by appointment of President McKinley. During his tenure of this office he became involved in the inquiry ordered by Secretary of the Interior Hitchcock in 1902 concerning the land entries. This developed into a political fight involving the United States Senators and Congressmen of Oregon and other western states, and in 1903 Hermann resigned, and being tried in Washington on the charge of destroying government records, was acquitted. He was a candidate for Congress, and was elected to the Fifty-eighth Congress to fill a vacancy, being reelected to the Fifty-ninth Congress, and serving until 1907. He was judge advocate with the rank of colonel in the Oregon militia, 1882-84, and was a member of the National Committee to establish the University of the United States.

**HERBING, AUGUSTUS M.** American airplane designer, died at Brooklyn, N. Y., July 17. He was born in Conyers, Ga., in 1867, and at an early age became interested in problems of artificial flight. He studied at the Stevens Institute of Technology in the class of 1888, and in the following year developed the aerofoll or the curved surface used in the airplane. He joined the staff of Professor Langley at the Smithsonian Institution, Washington, and while there he did considerable experimental work, developing model machines and in 1896 filed an application for a patent on the curved wing flying machine which was rejected. In 1898 he constructed a machine which was said to have flown 36 feet at an altitude of about 10 feet, being operated by compressed air. In 1903 he exhibited great interest in the work of the Wright brothers and afforded them access to data developed by him in his research experiments. In 1908 after constructing a plane that was wrecked in the preliminary flight, he organized with Glenn Curtiss the Herring-Curtiss Company, and their machine sent to France for the air races in 1909 proved victorious. In the following year he became connected with the

Starling-Burgess Company of Marblehead, Mass., and personally flew a plane made by that organization. In the latter part of his life he did not participate actively in aviation as he was discouraged by various experiences with his patents and unfortunate relations with some of his associates, in addition to ill health.

**HESSE, hēs.** Since November, 1918, a republican state of the German Republic, situated in the western part of Germany; formerly a grand duchy of the German Empire. Area, 2968 square miles; population, at the census of 1925, 1,347,279. The capital is Darmstadt with a population of 89,465. Other important cities are: Mayence, or Mainz, with 108,557 (with suburbs); Offenbach, 79,362; Worms, 47,015; and Giessen, 33,600. In 1925 there were 958 public elementary schools with 4088 teachers and 142,451 pupils. The areas and yields of the chief crops in 1925 were: Wheat, 63,535 acres, 53,302 tons; rye, 141,595 acres, 103,378 tons; barley, 104,937 acres, 84,127 tons; oats, 117,490 acres, 80,035 tons; potatoes, 150,417 acres, 992,149 tons; 34,022 acres under vines, yielding 8,783,888 gallons of wine. On Dec. 1, 1925, there were 288,198 cattle, 53,005 sheep, 289,712 swine, and 147,879 goats. The ordinary revenue and expenditure for the year 1925 were estimated to balance at 139,876,709 marks. The government has a uni-cameral legislature and a responsible ministry. As a result of the elections of Dec. 7, 1924, the Landtag was composed as follows: Majority Socialists, 26; Democrats, 9; German People's Party, 8; Centre (Catholics), 11; German Nationalists, 5; Hessian Peasants' Union, 6; Communists, 4; other parties, 6. The Landtag is composed of 70 members elected for three years. The cabinet was headed by Herr Ulrich, premier and minister of foreign affairs. Other members were H. Henrich, Finance; H. von Brentano, Interior and Justice; H. Raab, Labor and Economic Affairs.

**HEWINS, CAROLINE MARIA.** American librarian, died at Hartford, Conn., November 4. She was born at Roxbury, Mass., Oct. 10, 1846, and after attending High Schools in Boston, was trained in library work at the Boston Athenæum. She taught in private schools for many years, took a special course in Boston University, and in 1875 became librarian of the Hartford Library Association, and in 1892 of the Hartford Public Library. She had been secretary of the Connecticut Public Library Commission since 1893, and as a member of the American Library Association, she served as counselor, 1885-88 and 1893-02, and 1909-12, and as vice president of the League of Library Commissioners, 1907-08. Miss Hewins was a member of the American Library Institute and of the Connecticut Library Association, having been its secretary 1891-93, and president 1912-13. She was also known for her juvenile writings as well as for her contributions to magazines on library subjects, being the author of: *Books for the Young*; *Books for Boys and Girls*; and *A Traveler's Letters to Boys and Girls* (1923). She was a lecturer on various library subjects in library schools.

**HIDES.** See LEATHER.

**HIGH BLOOD PRESSURE.** The general tendency in the past has been to make several different varieties of this affection according to the causal factors, one of the leading types being associated with cardiorenal disease. One type

in which the causes are not apparent has been known as essential hypertension. Quite recently this tendency has been radically modified so that some authorities are inclined to regard the condition in question as a disease per se and not a mere symptom. For example it has been found that in the cardiorenal type death seldom is due to the state of the kidneys, the patient being carried off by heart disease, cerebral hemorrhage or some chance affection which has nothing to do with the high blood pressure.

In the *Journal of the American Medical Association* for September 18, there were two papers on the subject of high blood pressure by Andrews and Paullin respectively with the accompanying discussion. The patients do not seem to relish the information that high pressure is a symptom and that it is a natural defense of the organism against some hostile agency. They prefer to think of it as a disease and demand that it be brought down. Andrews is not sure that these patients always need circulatory sedatives for in some cases at least they respond better to heart stimulants. This is true especially of a type in which the patients show marked diurnal fluctuation, increasing with exertion and coming down again with rest. Exertion also causes fatigue, short breath and general incapacity for work. These patients may have formed the habit of taking nitrites daily when it is evident that the heart muscle is weak and requires the administration of digitalis in tonic doses.

Paullin's paper was an analysis of 76 cases of essential hypertension which he had supervised from 5 to 17 years. During this period half of the men patients and less than 10 per cent of the women died, but there was very little mortality from kidney disease, cardiac failure and cerebral hemorrhage being the chief causes of death. Study of the blood pressure is of no prognostic value. In the discussion Christian of Boston was not sure that the blood pressure apparatus does not do more harm than good by making hypochondriacs. Few high pressure patients die by the kidneys. Barker of Johns Hopkins said that digitalis will sometimes actually bring down the blood pressure and Nichols praises sodium sulphocyanate as a drug for lowering the blood pressure.

**HIGH SCHOOLS.** See EDUCATION IN THE UNITED STATES.

**HIOKI, EKI.** Japanese statesman, member of the House of Peers, and former Ambassador to Germany, died at Tokio, Japan, October 19. He was born in Miyi-ken, Japan, in 1863, and after graduating in law at the Imperial University in Tokio in 1888, he entered the diplomatic service, being Attaché at New York in 1889, and Secretary of the Japanese Legation at Washington in 1891. He served at Petrograd in 1892, and at Seoul in 1894. He was at Peking in 1900, and again at Washington in 1903. He was with the Japanese Embassy in Germany in 1906, and in 1908 became Japanese Minister to Chile, serving until 1914, when he spent two years as Japanese Minister to China. He was Minister to Sweden, Norway, and Denmark, 1918-20, and in the latter year became Ambassador to Germany, serving until 1924. In 1925 he was a delegate to the Chinese Customs Tariff Conference at Peking. He was active in promoting friendship between Japan and the

United States, and maintained cordial relations with many Americans.

**HISPANIC SOCIETY OF AMERICA.** An international organization founded in 1904, in New York City to establish a public library and museum designed to be a link between the English-, Spanish-, and Portuguese-speaking peoples, and to advance the study of the Spanish and Portuguese languages, literature, and history, and the study of the countries wherein Spanish and Portuguese are or have been spoken languages. In 1904 there was placed in the charge of the Society a collection of paintings, manuscripts, maps, and coins, and a library of about forty thousand books. These collections had been greatly increased and in 1926 there were on exhibition in the building opened in 1908 permanent collections of paintings, sculpture, metalwork, pottery, textiles, and other art objects, in addition to the largest and best collection of the paintings of Ignacio Sorolla in the world. The Society has held several notable temporary exhibitions of paintings, sculpture, photographs, prints, etc., among them those of the works of Sorolla, Zuloaga, Cervantes, and Lope de Vega. Membership in the Society, limited to 100, is honorary, and includes specialists and scholars of all nationalities distinguished in the Hispanic field. Publications of the Society number more than 175 and include catalogues, reprints of old manuscripts, and monographs. The *Revue Hispanique* is published every two months in Paris. The museum and headquarters of the Society are at 156th Street, West of Broadway, New York City. The president is Archer M. Huntington and the secretary, George Bird Grinnell.

**HISTORICAL ASSOCIATION, AMERICAN.** A society for the promotion of historical studies and writing, formed in 1884 by a group of American scholars and chartered by Congress in 1889. Under provision made by the United States Government, it publishes annual reports, and is charged with the office of communicating its proceedings and its information on the state of historical study and writing to the secretary of the Smithsonian Institution, for transmission to Congress.

In 1926 the Association had some 3100 members who represented not only every State of the Union, but also Canada and many European and South American countries. It invites to membership not only those engaged in historical work and teaching, but also all feeling a sufficient interest in historical science to prompt them to join. Meetings of the Association are annual. That of the year 1926 was held December 28-30, at Rochester, N. Y. Among the topics discussed at the various conferences were "Suggestions for an Agricultural Who's Who in the Ante-Bellum Period"; "The College and Research"; "The Far East"; "Some Phases of Medieval Intellectual History"; "The Promotion of 'American History and of History in America'"; "The Influence of Europe in the Development of American Civilization"; "The Near East"; "Intersectional Relations"; "Modern European History"; "American History"; "Hispanic-American History"; "Modern European History." Pres. Dana C. Munro spoke on "War and History," and joint sessions were held with the Mississippi Valley Historical Association and the Agricultural History Society.

For the encouragement of historical research

the Association offers two biennial prizes of two hundred dollars each, for the best monograph, printed or manuscript, in the English language, submitted by a writer who has not achieved an established reputation. The Herbert Baxter Adams prize is awarded in odd years for an essay in the history of the eastern hemisphere. In even years the Justin Winsor prize is awarded for an essay in the history of the western hemisphere, including the insular possessions of the United States. In 1926, this was awarded to Prof. L. J. Ragatz of George Washington University, his topic being "Decline of the British West Indies, 1763-1833." A third prize, bearing the name of its founder, the late George Louis Beer, amounting to \$250 is offered annually for the best work upon any phase of European international history since 1895; while a medal struck in honor of Jean Jules Jusserand, former Ambassador of the French Republic to the United States and a former president of the Association, is offered annually for the best work on intellectual relations between America and one or more European countries.

The official organ of the Association is *The American Historical Review* (quarterly). The *Annual Report* is also published, containing proceedings, important papers read at the annual meetings, texts of significant documents, reports on American archives, reports on history teaching, and papers on agricultural history. Publications issued during 1926 were: *Annual Report 1921*; *Annual Report 1923*; *Supplement* (Writings on American History, 1923). Officers in 1926 were: president, Dana C. Munro; first vice-president, Henry Osborn Taylor; second vice-president, James H. Breasted; secretary, John S. Bassett; treasurer, Charles Moore; assistant secretary-treasurer, Patty W. Washington; editor, Allen R. Boyd. New officers for 1927, elected at the annual meeting in December, 1926, were: president, Henry Osborn Taylor; first vice-president, James H. Breasted; second vice-president, James Harvey Robinson. The other officers remained the same as in 1926.

**HISTORY.** See LITERATURE, ENGLISH AND AMERICAN, FRENCH LITERATURE, GERMAN LITERATURE, SCANDINAVIAN LITERATURE, SPANISH LITERATURE, ETC.

**HOBAN**, THE RT. REV. MICHAEL JOHN. Roman Catholic bishop of Scranton, Pa., died November 13. He was born on June 6, 1853, at Waterloo, N. J.; and from 1867-8 he attended St. Francis Xavier College, N. Y., from which he went to Holy Cross College, Worcester, Mass. In 1874-5, he studied at St. Charles Seminary, Philadelphia; and from 1875-80, at the American College, Rome, Italy. He was ordained priest May 22, 1880, and on Mar. 22, 1896, was consecrated titular bishop of Alalis, and appointed coadjutor bishop of Scranton, with right of succession, succeeding Bishop O'Hara on Feb. 3, 1899. He was a director of the Public Charities Association of Pennsylvania.

**HOBART**, GEORGE VERE. American author and playwright, died at Cumberland, Md., January 31. Born at Cape Breton, N. S., Jan. 16, 1867, and educated in Nova Scotia, he entered on newspaper work, and in 1895 was managing editor of the *Sunday Scimitar*, Cumberland, Md. In the following year he went to Baltimore, Md., serving on various papers, writing special humorous articles for the *Baltimore American*. He originated the "Dinkelspiel"

papers in the *Baltimore News*, writing these articles for 16 years. He wrote or rewrote a large number of comic operas and musical comedies, and was co-author of the play, *Wild-fire*, and of the comedy *Our Mrs. McChesney* which was written for Ethel Barrymore. He also wrote *Buddies*, *Sonny*, and the morality play entitled *Experience*. In addition to the *John Henry* books, a series of comic stories in 15 volumes, and 6 other books of comedy, and a volume of children's poems, *Li'l Verses for Li'l Fellers*, he wrote, *Idle Moments, in Florida* (1921).

**HOCKEY.** Hockey established itself more firmly than ever as a popular winter sport in 1926. According to estimates, the games of the National Hockey League played in Madison Square Garden, New York, attracted more than 470,000 spectators, whereas the contests of the Eastern Amateur Hockey League decided in the same place drew a total attendance of more than 100,000. The Montreal Maroons were crowned as world champions as the result of the long season's campaign. The Maroons first gained the National Hockey League title and then defeated the Victoria Cougars, also of Canada, in the Stanley Cup series, three games to one. Seven teams constituted the National League, four in Canada and three in the United States. The Canadian sextettes were the Ottawas, the Maroons and Canadians of Montreal and the Torontos. New York, Pittsburgh and Boston furnished the American entries. The Eastern Amateur League comprised three New York teams and two Boston clubs, the championship going to the Boston Athletic Association. Among the college sextettes Harvard made the best showing, winning the "Big Three" title and also defeating some of the leading Canadian college aggregations.

**HOLLAND**, SIR (THOMAS) ERSKINE. English jurist and authority on international law, died at Oxford, England, May 24. He was born in Sussex, July 17, 1835, and was educated at Brighton College, and at Balliol and Magdalen Colleges, Oxford, taking classical honors at the latter college. He was a fellow of Exeter College from 1859-71, and in 1860 was Chancellor's prizeman. He was a barrister of Lincoln's Inn in 1863, and in 1874 became Vinerian reader in English law at Oxford, being almost immediately made professor of international law and diplomacy, a chair he held until 1910. He was a fellow of All Souls College, Oxford from 1875, and he was assessor (sole judge) of the Chancellor's Court, 1876-1910. He received the honorary degree of D.C.L. from Oxford, and that of LL.D. from Bologna, Glasgow, Dublin, and Brussels, besides being an honorary member of the University of Petrograd, and of various legal and international law institutes and societies. In 1913, he was president of the Institut de Droit International. He was a Commander of the Order of the Crown of Italy, a Grand Commander of the Rising Sun of Japan, and a member of the Royal Commission on the Supply of Food, etc., in Time of War, 1903-05. He was British Plenipotentiary at the Geneva Conference in 1906, and in 1907 was chosen a

bencher of Lincoln's Inn. His extensive publications in the field of international law include: *An Essay on Composition Deeds* (1864, 1865); *Essays on the Form of the Law* (1870); *The Institutes of Justinian, as a Recension of the Institutes of Gaius* (1873, 1881); *Albericus Gentilis* (a lecture) (1874); *Tradotto da Aurelio Saffi* (1884); *Alberici Gentilis De Jure Belli* (1877); *The Elements of Jurisprudence* (1880) (which gained the Swiney Prize, 1894), (thirteenth English edition, 1924); *The European Concert in the Eastern Question* (1885); *The Admiralty Manual of Naval Prize Law* (1888); *Studies in International Law* (1898); *The War Office Manual of the Laws and Customs of War on Land* (1904); *Neutral Duties in a Maritime War* (1905); *The Laws of War on Land* (1908); *A Valedictory Retrospect* (1910); *Proposed Changes in the Law of Prize* (1911); *R. Zouch Jus Feciale* (1911); *Io. de ligmano De Bello* (1917, etc.); and *Letters to the "Times" on War and Neutrality*, (Ed. iii., containing the letters of 40 years, 1881-1920).

**HOLLEY, MARIETTA.** American author, died at Pierrepont Manor, N. Y., March 1. She was born at Ellipsisburg, Jefferson County, N. Y., and at the age of 16 began writing poetry for the country press. This was followed by prose contributions to various periodicals, in which the adventures of Samantha, and the savings and doings of Josiah Allen's Wife were related, and which had a wide vogue. Her books included: *My Opinions and Betsy Bobbett's* (1873); *Samantha at the Centennial* (1877); *My Wayward Partner* (1880); *The Mormon Wife* (illus. poem) (1880); *Miss Richard's Boy* (1883); *Sweet Cicely* (1885); *Poems* (1886); *Samantha at Saratoga* (1887); *Samantha Amongst the Brethren* (1890); *Samantha Amongst the Colored Folks* (1892); *Samantha at the World's Fair* (1893); *Samantha in Europe* (1895); *Around the World with Josiah Allen's Wife* (1899); *Samantha at the St. Louis Exposition* (1904); *The Borrowed Automobile* (1906); *Samantha on Children's Rights* (1909); *Who Was to Blame?* (booklet) (1910); *Samantha at Concy Island and One Thousand More Islands* (1911); *Samantha on Women's Rights* (1913); and *Josiah Allen on Women's Rights* (1914).

**HOLT, HENRY.** American author and publisher, died in New York City, February 13. He was born in Baltimore, Md., Jan. 3, 1840, and, graduating from Yale in 1862, studied law at Columbia Law School, receiving the degree of LL.B. in 1864. He entered the publishing business in 1863 with G. P. Putnam, but later started on his own account, and in 1873 became president of the firm of Henry Holt and Company, a publishing house that soon became identified with the preparation of substantial and worthy literature, and educational texts. Mr. Holt was not only a good business man whose organization flourished under his direction, but with a wide range of culture, and an appreciation and taste for literature, he was able to exercise an intelligent judgment as to the nature and quality of the books turned out. He was also an author, writing various works on social and literary subjects, as well as on philosophy and psychical research. To express his own taste and feelings he established the *Unpopular Review*, which later became known as *The Unpartizan Review*, and a few years be-

fore his death, published a volume of reminiscences entitled *Garrulities of an Octogenarian Editor* (1923) which were interesting observations of one who was the dean of American publishers.

Mr. Holt's activity covered many fields and he was interested in various undertakings. He was a trustee and councilor of the American Society for Psychical Research, and was active in promoting simplified spelling, being a member of the first executive committee of the Simplified Spelling Board. He was chairman of the University Settlement Society of New York City, and a trustee of the American Geographical Society of New York, 1891-1910. In 1915 he was a member of the Harvard University Overseers Visiting Committee on philosophy and psychology. He lectured on various occasions at Yale, Columbia, and the University of Vermont, and from 1908-12 was president of the Authors Club of New York. His writings, which as stated covered a wide range of affairs of human interest, included: *Calmire—Man and Nature* (1892); *Talks on Civics* (1901); *Sturmsee—Man and Man* (1905); *On the Civic Relations* (1907); *On the Cosmic Relations* (1914), and (second edition) *The Cosmic Relations and Immortality* (1919).

**HOLY CROSS, COLLEGE OF THE.** A Roman Catholic college under the Society of Jesus, at Worcester, Mass.; founded in 1843. The enrollment for the autumn of 1926 totaled 1110 in the regular course, with a distribution as follows: seniors, 215; juniors, 248; sophomores, 327; freshmen, 320. There were 64 in the B.S. course, as follows: 19 juniors; 21 sophomores; and 24 freshmen. The faculty had 75 members. The library contained 100,000 volumes. President, Rev. Joseph N. Dinand, S.J.

**HOME DEMONSTRATION WORK.** See AGRICULTURAL EXTENSION WORK.

**HOME ECONOMICS.** See AGRICULTURAL EXTENSION WORK, and FOOD AND NUTRITION.

**HONDURAS, hōn-dōō'rās.** A Central American republic, bounded on the north and northeast by the Caribbean Sea, on the southeast by Nicaragua, on the southwest by Salvador and the Pacific Ocean, and on the west by Guatemala. Capital, Tegucigalpa.

**AREA AND POPULATION.** The estimated area is 44,275 square miles; Population, Jan. 1, 1923, according to official figures, 673,408, mostly Indians with a strain of Spanish blood. The chief towns with their populations according to the latest available statistics are: Tegucigalpa, 38,950; Santa Rosa, 13,000; Santa Barbara, 6000; San Pedro, 8000; and Juticalpa, 8000. The chief ports are: Amapala on the Pacific, and Porto Cortez and Omoa on the Atlantic.

**EDUCATION.** Education is free and compulsory between the ages of seven and 15. The president in his message read before congress on Jan. 1, 1926, gave the following facts on public instruction in 1925: "In spite of the disturbed conditions of the country 987 schools were open, of which 577 were city and 410 rural schools. The school census showed 78,857 children, of whom 43,296 were boys and 35,561 girls. The practical and scientific teaching of agriculture has been entrusted by the government to Señor M. García, who has accepted in the Birichiche School 17 young Indians of the department of Gracias, the complement of 40 to be made up

from candidates from the departments of Intibucá and La Paz." At Tegucigalpa there are a national university and military and aviation schools.

**PRODUCTION.** The principal industry is agriculture and the chief product, bananas. They are grown mostly along the Atlantic coast, and constitute the main export. For the year ending July 31, 1925, 15,988,631 bunches of bananas were exported, all but 2,000,000 of them going to the United States. Coconuts are grown extensively on the Pacific coast, and fine grades of coffee and tobacco are produced. The cultivation of sugar is of increasing importance; 27,963,700 pounds were exported in 1924. The mineral resources include gold, silver, copper, lead, iron, zinc, and antimony. Straw hats and cigars are manufactured for the local market.

**COMMERCE.** According to the Pan American Union the value of the imports of Honduras in 1924 was \$11,534,843, representing a decrease of 14.28 per cent as compared with 1923. The share of the United Kingdom in this trade was \$402,586; of France, \$259,886; of Germany, \$198,792; and of the United States, \$10,123,231. The imports from the United Kingdom, Germany, and the United States showed percentage decreases as compared with 1923 of 35.62, 75.61, and 15.74, respectively, while imports from France registered a gain over the previous year of 5.71 per cent. The exports in the same year, chiefly bananas, were valued at \$7,897,047, a decrease of 21.15 per cent as compared with the preceding year. The estimated share of the United Kingdom in this trade was \$600,000; of France, \$3000; of Germany, \$40,000; and of the United States, \$6,800,000. Exports to the United Kingdom were 18.14 per cent less than in 1923; to France, 40 per cent; to Germany, 18.14 per cent; and to the United States, 24.19 per cent.

**FINANCE.** The budget for 1925-26 balanced at 10,832,440 pesos. The Congress of Honduras in its session of Apr. 3, 1926, adopted a law establishing the gold standard for the currency of the republic, which hitherto had been on a silver basis. The new currency unit, having a value of \$0.50, U. S. gold, will be called "lempira" after a native chief renowned in the early history of Honduras. By the same law the circulation of foreign silver currencies in the country is forbidden, the only legal tender being the currencies of Honduras and the United States. In March, 1926, the debt of Honduras to Great Britain was settled on the basis of funding all claims in the sum of £1,200,000, which is to be paid back in 30 annual installments of £40,000 each. The revenue to meet this debt was to be collected by the National City Bank as a result of a three per cent consular service tax on the imports into Honduras.

**COMMUNICATIONS.** The total length of railway mileage in 1924 was 934 miles, most of it being used in the cartage of bananas from the interior to the seacoast.

**GOVERNMENT.** According to the constitution of Oct. 3, 1924, the executive power is vested in a president nominated and elected by popular vote, and holding office for four years; legislative power is in a chamber of deputies consisting of 43 members chosen for four years directly by popular vote. President at the beginning of 1926, Dr. Miguel Paz Barahona.

**HISTORY.** On March 8 the Honduras legis-

lature ratified an agreement signed at Washington on Oct. 29, 1925, for the settlement of the British debt. According to the terms of the settlement a long standing debt, totaling with accrued interest, approximately \$150,000,000, was to be cancelled by the payment on the part of Honduras of a total of approximately \$6,000,000, in semi-annual installments without interest, over a period of 30 years.

**HONDURAS, BRITISH.** See **BRITISH HONDURAS**.

**HONGKONG.** A possession of Great Britain at the mouth of the Canton River, about 80 miles to the south of Canton; comprising an irregularly shaped island, 11 miles long from east to west, varying from 2 to 5 miles in breadth, with an area of 32 square miles; also the opposite peninsula of Kowloon, separated from it by a strait about a half mile wide. Total area, 391 square miles. In 1916 a scheme was begun for the reclamation of 9,500,000 square feet of land from the sea in Kowloon Bay; this project was still in progress in 1926. The population, according to the census of 1921, was 625,166, of whom 612,310 were Chinese; estimated in the middle of 1924 at 799,550. The movement of population in 1924 was: Births, 4143; deaths, 15,553. In the same year the number of Chinese immigrants was 130,194 and the number of emigrants, 129,850. While education is not compulsory, the schools are under government inspection and required to keep certain standards. The total number of pupils in all schools in 1924 was 58,930 and the total expenditure on education, \$932,924. For higher education there is the British University of Hongkong which is attended mostly by Chinese students.

The chief industries are sugar refining, ship-building, rope-making, the manufacture of tobacco, cement, knit goods, and tin refining. The latest available statistics for trade are those of 1924 when the imports were valued at £75,055,085 and the exports, £70,671,992. The revenue for 1924 was £2,874,895 and the expenditure, £3,173,763. In the same year, 28,716 vessels, including 13,661 junks and 3856 steam-launches, representing altogether 19,202,333 tons entered the port and 29,049 vessels, including 13,864 junks and 3975 steam-launches, representing 19,568,166 tons cleared. Besides these it was estimated that 13,500 fishing boats put into the bays and harbors of Hongkong in the course of the year. The colony is under a governor aided by executive and legislative councils. Governor at the beginning of 1926, Sir Cecil Clementi (appointed in 1925).

**HOPS.** The world's hop production in 1926, based on trade reports, was estimated at somewhat below the 124,000,000 pounds produced in 1925. The total production of Belgium, Great Britain, Czecho-Slovakia and the United States, as reported by the International Institute of Agriculture, Rome, was about the same for the two years. According to these estimates the 1926 yield of Belgium was 4,998,000 pounds, of Great Britain 37,184,000 pounds and of Czecho-Slovakia 18,686,700 pounds. Germany, which produced about 10,646,000 pounds in 1925, had a much smaller production in 1926, variously estimated at less than 5,000,000 pounds. The crop of the United States, as estimated by the Department of Agriculture, was 29,428,000 pounds against 28,573,000 pounds produced in 1925. The

area devoted to the crop in 1926 comprised 20,800 acres, an increase of 450 acres over the acreage in 1924 and 1925. The average yield per acre of 1415 pounds was 11 pounds above the average acre yield of the preceding year. The average farm price Dec. 1, 1926, was 23 cents per pound and on this basis the total value of the crop was \$6,778,000 as compared with \$6,232,000 in 1925. Washington, Oregon and California continued to be the leading hop growing States and the estimates of acreage and production issued by the Department of Agriculture were based only on these States. According to these estimates for 1926 Oregon produced 14,950,000 pounds on 13,000 acres, California 8,910,000 pounds on 5400 acres and Washington 5,568,000 pounds on 2400 acres. The average farm price Dec. 1, 1926, was 25 cents per pound in Oregon and 21 cents per pound in California and Washington. In 1924 the corresponding price in these States was only 10.3 cents per pound.

**HORNER, RALPH JOSEPH.** A Canadian composer and conductor, died at Winnipeg, April 7. He was born at Newport, England, Apr. 28, 1848, and received his musical education at the Leipzig Conservatory. On his return to England he settled at Camberwell as a teacher. From 1873-75 he was conductor of the Peckham Choral Society and organist at St. Mary's. The next twelve years he traveled as conductor of various operatic companies. From 1889-1905 he lived in Nottingham as lecturer at the University and conductor of the Orchestral Society (1889-95) and the Operatic Society (1893-1900). After a three years' stay in New York he settled permanently in Winnipeg, in 1909, where he was director of the Imperial Academy of Music and Arts and conductor of the Oratorio Society until 1912. He then organized the Ralph Horner Opera Company, which had several successful seasons. His compositions include two operas, *Amy Robsart* and *The Belles of Barcelona*, six operettas, two oratorios, several cantatas, orchestral works and chamber-music.

**HORTICULTURE.** In the annals of the horticultural industry 1926 will go down as an overproduction year. This situation was especially true in regard to deciduous fruits. Practically every important growing section of the United States and Canada yielded abundant crops of fruit. As a result, apples, pears, peaches and grapes sold at lower prices than for many years. In fact, in certain of the northern States the demand for fruit was insufficient at times to create a market. To make matters worse, the growing season in the northeastern States was cold and wet, a condition which engendered poor quality and delayed ripening and added to the general distress. The apple growers in the Pacific Northwest suffered severe losses from an untimely September freeze, which caught late-maturing varieties while still attached to the tree and injured the fruit so severely that vast quantities dropped prematurely. That portion which remained attached ripened too early and was mostly unfit for shipment. The losses are roughly estimated to approach 30,000 carloads of fruit. From the northern fruit growers' viewpoint 1926 was a decidedly disastrous year. On the other hand, Florida and California growers were successful in marketing large crops of oranges, raisins and nuts at satisfactory prices and a greater part of the large Georgia peach

crop was disposed of to advantage. The value of cooperative selling was clearly demonstrated; southern and western fruit growers operating under its beneficial system had a good year, while northern fruit growers, operating without its aid, had a distinctly bad year.

**THE FOREIGN SITUATION.** The apple crop in Great Britain, Germany, and other parts of Europe was much below the average in quality and quantity, a condition which would normally favor North American export trade, except that the purchasing power in most of the European countries was still below prewar levels. The almond crop in France, Spain and Italy was very satisfactory. In Roumania the walnut yields were above the average in size and quality, but in France unfavorable weather seriously reduced this crop. Evidence that European growers are beginning to adopt modern methods was shown in a steady increase in the use of chemical fertilizers to supplement animal manures.

In the southern hemisphere fruit growing continued to make great forward strides, but suffered severe financial losses from the handicap of being distant from the world's important markets. The Australian apple crop reached Great Britain just following the arsenic scare and in the midst of the general labor strike. As a result, much of the fruit was sold below the cost of production and shipping. Australian fruit growers vainly sought a Government guarantee for the minimum price. The South African orange crop was handled with much less loss than in 1925, due to the creation of an effective Government export agency. Italian colonists in Paraguay planted extensive citrus orchards, one community alone setting 127,000 trees in 1926. In Brazil the State of Bahia encouraged citrus production by making easy loans to the growers and supplying insecticides and other necessary materials at cost. The truck growing industry upon the west coast of Mexico expanded rapidly in 1926, greatly increasing the shipments of green peas, peppers, tomatoes, cucumbers and other vegetables to the United States. Bermuda supplied the New York market with over 74,000 bu. of celery. For the first time in history Georgia peaches were shipped in carload lots to England, and when arriving in good condition sold at a profit.

**FOREIGN TRADE.** According to statistical information obtained from the U. S. Department of Commerce, (U. S. Department of Commerce, Bureau Foreign and Domestic Commerce, Monthly Summary Foreign Commerce of the United States, December, 1926, pt. 1) for the full 12 months of 1926, there was a significant gain in the total value of exports for 1926 as compared with those of 1925. On the other hand, in the case of imports there was a remarkable similarity in total values. The total value of imported fruits, vegetables, nuts and nursery stock through Dec. 31, 1926, was \$133,215,030 as compared with \$134,685,401 for the corresponding period of 1925. The total value of exported fruits, vegetables, nuts and nursery stock for the 12 months of 1926 was \$133,139,285 as compared with \$121,514,603 for the corresponding period of 1925. A significant improvement in the general trade situation in respect to horticultural products is indicated in the greatly reduced margin between total value of imports and exports.

**PRODUCTION DATA.** Figures released Dec. 20,

1926, by the Bureau of Agricultural Economics of the U. S. Department of Agriculture show sharp yield gains as compared with 1925 in practically all horticultural crops, especially fruits. The total apple crop of 1926 was 246,460,000 bu. as compared with 172,389,000 bu. in 1925. The commercial apple crop was 39,095,000 bbls. as compared with 33,246,000 bbls. in 1925. Pears showed an advance from 20,720,000 bu. in 1925 to 25,644,000 bu. in 1926. Peaches gained almost 50 per cent, from 46,562,000 bu. in 1925 to 68,425,000 bu. in 1926. Grapes yielded 2,349,117 tons in 1926 as compared with 2,064,085 tons in 1925. Strawberries, estimated at 256,411,000 qt. in 1926 showed a sharp gain above the 1925 figure of 211,396,000 qt. The cranberry crop of 1926 was 720,000 bbls. as compared with 569,000 bbls. in 1925. Citrus fruits varied much less, the yields of 1926 and 1925 being remarkably similar. Orange estimates showed 33,900,000 boxes in 1926 and 33,300,000 boxes in 1925. The California lemon crop was 7,200,000 boxes in 1926 and 7,136,000 boxes in 1925. Florida grapefruit showed a slight decline in 1926, being 6,900,000 boxes as compared with 7,300,000 in 1925.

In truck crops the situation was by no means so one-sided. Tomato production in 1926 showed a big decline from the preceding year—1,388,784 tons as compared with 2,321,588 tons. The canning crop of sweet corn fell off from 1,014,000 tons in 1925 to 803,000 tons in 1926. Cucumbers declined from 12,217,000 bu. in 1925 to 8,801,000 bu. in 1926. Eggplants dropped from 904,000 bu. in 1925 to 786,000 bu. in 1926. Peanuts declined from 698,475,000 lbs. to 626,866,000 lbs., dried beans from 19,928,000 bu. to 17,139,000 bu., snap beans from 137,960 tons to 104,256 tons. For several of the truck crops the 1926 and 1925 production estimates were very similar, the figures for green peas being 253,604 and 242,428 tons, cantaloupes 14,038,000 and 14,258,000 crates, carrots 4,355,000 and 4,158,000 bu., celery 6,523,000 and 6,685,000 crates, cabbage 981,700 and 946,200 tons, respectively. Notable gains for 1926 were shown in the case of cauliflower, rising from 3,393,000 crates in 1925 to 5,550,000 crates in 1926; asparagus, from 5,323,000 to 7,645,000 crates; white potatoes, from 323,465,000 to 357,800,000 bu., sweet potatoes, from 62,319,000 bu. to 83,658,000 bu.; onions, from 19,423,000 bu. to 20,625,000 bu.; lettuce, from 16,076,000 to 17,236,000 crates; peppers, from 3,455,000 bu. to 3,933,000 bu.; spinach, from 106,608 tons to 119,200 tons; watermelons, from 56,498 cars to 69,551 cars; maple products, from 27,948,000 lbs. to 34,776,000 lbs.

**PROTECTIVE MEASURES.** American agriculture was being protected, according to the annual report of the Federal Horticultural Board, by 22 quarantines restricting the entry of plants and plant products known to be carriers of plant pests. In addition, the spread of pests within the United States and between the insular possessions and the mainland is covered by some 17 domestic quarantines. The entry of narcissus bulbs was placed under restriction on Jan. 1, 1926, despite strenuous objections on the part of the flower trade and amateur gardeners. Indications pointed to the fact that within one or two years domestic supplies equal to if not greater than those formerly imported would become available. Because of the continued danger

of the Mediterranean fruit fly, the embargo on the Almeria or Malaga grape was reaffirmed. Sufficient progress was made during the year in the eradication of the *Parlatoria* date scale to lead to the confident assertion that in a few years this dangerous insect will be entirely eradicated from the United States.

**COÖPERATIVE MARKETING.** As a year of heavy production, 1926 proved a very severe test for coöperative marketing agencies. Yet as a rule the coöperatives made good, especially those that were well organized and managed. During the year ended October 31, the California Fruit Growers' Exchange handled 34,083 cars of oranges and grapefruits and 12,510 cars of lemons, a total of 46,593 cars of citrous fruits, 73.2 per cent of the total California shipments. By careful distribution, the exchange was able to secure satisfactory prices despite the generally overloaded fruit market, returning to the growers over \$70,000,000, a greater sum than in any previous year. Valencia oranges, ripening as they do in the summer season and not competing with the Florida crop, are becoming increasingly important in California, while navels are practically at a standstill. The exchange exported 74 carloads of grapefruit to Europe with profitable results. In addition to shipped lemons, 3452 carloads were converted into byproducts.

A relatively large California almond crop and a short walnut crop were promptly marketed through growers' associations at satisfactory figures. In the East the American Cranberry Growers' Exchange succeeded in handling an unusually large crop through the use of effective advertising and well-planned distribution. The reorganization of the Florida Citrus Exchange aided greatly in the orderly and profitable disposal of a large Florida citrous crop. A number of apple growers and dealers, realizing the handicap of marketing an oversized crop without coöperation, attempted to set up an advertising agency to push the sales of this fruit. A nonprofit-making corporation entitled "Apples for Health" was formed, with headquarters in Chicago, but in the face of the large surplus and a demoralized market could do but little to improve the generally unsatisfactory situation.

**RESEARCH ACTIVITIES.** Industrial horticulture continued during 1926 to receive effective support from scientific investigators. The pedigreed fruit plant theory received another severe setback as a result of studies completed at the California Experiment Station, where grapevines grown from cuttings of high-yielding parents failed to yield more fruit after the second year than did those taken from less productive parents (*Hilgardia* [California Sta.], 2 (1926), No. 1). In plum breeding studies at the Minnesota Experiment Station (*Minnesota Sta. Tech. Bul.* 32, (1925), it was shown that hardness is heritable, at least to the extent that where both parents are hardy the progeny are generally all hardy, and where parents are both tender the progeny are tender. A combination of hardy and tender parents yielded various intergradations. A close correlation between growth and fruiting in the grape was shown in studies at Cornell University, where the removal of blossoms from unpruned Concord vines increased the green weight of top and roots by approximately 36-39 per cent (*Amer. Soc. Hort. Sci.*

*Proc.*, 22 [1925], pp. 74-80). Investigations at the Iowa State College (*Plant Physiol.*, 1 [1926], No. 2, pp. 165-178) show a definite association between the amount of various dyes absorbed from solution by ground tissue of apple trees and the hardness of the variety, an increase being recorded with increased hardness. Cornell University investigators (*Amer. Soc. Hort. Sci. Proc.*, 22 [1925], pp. 201-204) found that tying down the erect growing limbs of young nonbearing apple trees induced earlier bearing of fruit, thus verifying practical results obtained in California. Evidence was secured at the New Jersey Experiment Stations that asparagus can assimilate nitrates even when grown in full darkness. An abundance of nitrates was found in the fibrous absorbing roots of plants growing in complete nutrient solution in continuous darkness (*Science*, 64 [1926], No. 1655, p. 282).

**MISCELLANEOUS.** No clearer proof of the great progress in horticultural knowledge in recent years is needed than the largely increased number of graduate horticultural students enrolled in American colleges in 1926. Furthermore, as material evidence of progress, there were opened during the year, one at Purdue University and one at Michigan State College, two modern horticultural buildings thoroughly equipped with apparatus and laboratories in which to conduct the highest grade of teaching and research. The International Conference on Fruit and Flower Sterility held in New York City August 12-14, under the auspices of the Horticultural Society of New York, was a memorable event, plant breeders being present from throughout the world. Estimates in the *Florida Grower* following the disastrous Florida hurricane in September, placed the damage to the citrus crop at approximately \$10,000,000. These figures, compiled without detailed survey, were probably somewhat excessive, but nevertheless indicated serious losses.

A pilgrimage of eastern fruit growers to the Pacific Northwest, conducted under the auspices of the American Pomological Society, did much to promote better understanding between the two sections and may ultimately lead to removing the present competition between these two important fruit sections. Although it is generally conceded that Alaska will never become a great apple producing region, it is interesting to note that Alaska-grown Yellow Transparent apples were produced in sufficient quantity to be shipped from orchard to market. A Radio Fruit Growers' School, conducted from February 15 to 27 by the University of Illinois through Station WLS of Chicago, was an entirely new and successful departure in extension horticultural teaching.

**ARSENIC SCARE.** The fanning in England in the spring of 1926 of several fruit venders for selling apples with arsenical spray residues greatly embarrassed the American export trade in apples in the late winter and early spring. For a time a sharp downward reaction in price was noticeable, especially in boxed fruit from the Northwestern States, where the lack of rainfall allows the sprays to accumulate on the fruits. The justice of the matter was not entirely clear, some English and many American dealers feeling that the whole affair was started as an embargo measure against American fruits in retaliation for the shutting out of bulbs and

other European products. The reaction was felt even in the United States; a considerable quantity of New Jersey fruit was prohibited from sale in American markets until thoroughly washed. The evil effects of the arsenic scare were not without benefit to American growers, for investigators are now busily engaged in seeking less poisonous but equally effective spray materials and also means of freeing sprayed fruits from poisons. As a temporary expedient, certain large Northwestern apple packers devised and installed automatic wiping machines.

**NECROLOGY.** Luther Burbank\* (q.v.), the well-known nurseryman and plant breeder, died at his home in Santa Rosa, Calif., on April 11. Plans are under way for continuing his work with adequate financial support under the auspices of Leland Stanford University. William Bateson (q.v.), famous English geneticist and past president of the British Association for the Advancement of Science, died on February 8.

**BIBLIOGRAPHY.** U. P. Hedrick et al., *The Small Fruits of New York* (Albany, N. Y., 1925); A. C. Hottes, *1001 Garden Questions Answered* (New York, 1926); E. H. Wilson, *Aristocrats of the Garden* (Boston, Mass., 1926); P. de Vilmorin, *Manuel de Floriculture* (Paris, 1926); C. F. Saunders, *Trees and Shrubs of California Gardens* (New York, 1926); M. C. Alwood, *Carnations for Every Garden and Greenhouse* (London, 1926).

**HOUDINI, HARRY.** American magician, died in Detroit, Mich., October 31, as the indirect result of an accident previously received. He was born in Appleton, Wis., Apr. 6, 1874, the son of the Rev. Dr. Mayer Samuel Weiss, but later legally changed his name to Houdini. He was educated in the public schools, and in 1882, as a youth of nine, began as a trapeze performer traveling with a circus in Wisconsin. The success of the Davenport Brothers then engaged in spiritualistic work, ringing bells, and freeing themselves while bound inside a cabinet, led Houdini to develop a somewhat similar performance and he soon acquired unusual proficiency in this line, escaping from the usual handcuffs and other manacles, and developing various acts involving danger and originality. From 1885-1900 he traveled all over the United States showing with museums, music halls, circuses and medicine shows. He gradually gave up his work as a contortionist and acrobat to develop a special technique of escape from various forms of confinement. In 1900 he went abroad, and, escaping from handcuffs at Scotland Yard, won for himself a six months' engagement at the Alhambra Music Hall, which was followed by a protracted tour of Europe, in the course of which he escaped from many famous prisons.

On his return to America with considerable fame he was featured in vaudeville and continued his prison escapes, making a notable and successful attempt from the Federal Prison at Washington in January, 1902, escaping from the cell in which Guiteau, the assassin of President Garfield, had been confined. In 1908, Houdini developed a new act, where enclosed in an iron-bound chest, he would escape while it was suspended in a tank of water. He would even hang from the roof of a skyscraper, bound in a strait-jacket, from which he would make his way to the street below. Also, when bound hand and foot and locked and nailed in a box

thrown from a boat or bridge into the water, he would free himself and emerge in safety. Houdini made many long tours not only in America, but playing in nearly every important city in Europe, Asia, Africa and Australia, and often was in great danger in the various demonstrations that he gave. He was the inventor of a diving suit, and when in Australia in 1910, was awarded a prize by the Australian Aeronautic League as being the first successful flier in Australia.

He was president of the Society of American Magicians, and president of the Magicians Club of London. He was also a life member of the Authors Club of London, and wrote a number of interesting books dealing with his achievements and with spiritualism, and kindred subjects. He was a member of the *Scientific American* committee that investigated Margery, the Boston spiritualistic medium, and had collected an extraordinary library of works on the theatre, magic, and the black arts. His writings included: *The Right Way to Do Wrong* (1908); *Handcuff Secrets* (1907); *Unmasking of Robert Houdin* (1908); *Miracle Mongers, Paper Prestidigitation; Spooks and Spiritualism; Rope Ties and Escapes; A Magician Among the Spirits* (1924); *The Exposé of Margery*; and *The Zanetti Mystery*.

**HOWARD, JOHN RAYMOND.** American publisher and author, died at Stafford Springs, Conn., December 20. He was born in Brooklyn, N. Y., May 25, 1837, and studied at the University of Rochester, receiving the degree of A.B. in 1857 and that of A.M. in 1860, after serving as instructor at the Polytechnic Institute, Brooklyn. During the Civil War he was a captain and aid-de-camp in the Union Army, and was on court martial duty in 1863; serving as division judge advocate to Feb. 1, 1865. From 1865 to 1867 he was editorial writer on the *New York Times*, *Examiner*, and *Chronicle*; and member of the publishing firms of J. B. Ford & Co., 1867-77, and of Ford, Howard & Hulbert, 1877-1905. He edited several of the works of Henry Ward Beecher and a number of collections of American literature, and was managing editor of *The World's Best Poetry*, a 10-volume anthology. From 1908-9 he was on the editorial staff of Webster's New International Dictionary. He was the author of *Henry Ward Beecher—A Study*, 1888, *Remembrances of Things Past*, 1925, and many articles in *The Christian Union* and *The Outlook*.

**HOWARD UNIVERSITY.** A non-sectarian coeducational institution of higher education at Washington, D. C., incorporated by the Act of Congress, Mar. 2, 1867, "for the education of youth in liberal arts and sciences," open to students without regard to race but principally for the education of negroes. It includes a medical school, school of law, and schools of liberal arts, education, commerce and science, applied science, music, and a department of physical education. Since 1879 Congress has made appropriations for the university, expendable under the supervision of the Secretary of the Interior, who is a patron ex officio of the Board of Trustees. The total enrollment for the autumn of 1926 was 2000, and for the summer session 226. There were 149 members on the faculty, as follows: academic, 51; medical, dental, and pharmaceutical colleges, 63; law, 12; religion, 6; music, 8; applied science,

9. The productive funds amounted to \$592,532.90, and the income for the year to \$30,060.43. The library contained 43,299 volumes. Gifts received during the year were as follows: from the U. S. Government, for maintenance, \$221,000; from the U. S. Government, for a new gymnasium and medical building, \$171,131.37; medical endowment fund, \$95,545.06; miscellaneous, \$19,998.95. The contract was let for the construction of a new medical building. President, Mordecai W. Johnson, S.T.M., D.D.

**HOWE, HERBERT ALONZO.** American astronomer and educator, died at Denver, Colo., November 2. He was born at Brockport, N. Y., Nov. 22, 1858, and graduated from the University of Chicago in 1875 with the degree of A.B., later studying at the University of Cincinnati while a student and assistant at the Cincinnati Observatory, 1875-80. In the latter year he became professor in astronomy in the University of Denver, and in 1891 was made dean of the College of Liberal Arts and director of the Chamberlin Observatory at University Park, Denver. He was a member of many astronomical and other learned societies, and had designed an impersonal micrometer for equatorial telescopes. In addition to contributions to various scientific magazines he wrote: *A Study of the Sky* (1896); and *Elements of Descriptive Astronomy*, (revised 1909).

**HOWLAND, JOHN.** American physician and professor of pediatrics in the Johns Hopkins Medical School, died at London, England, June 20. He was born at New York City, Feb. 3, 1873, and after graduating from Yale in the class of 1894, and from the Medical School of New York University in 1897, he began practice in New York. He was physician at the Willard Parker, Riverside, and St. Vincent's Hospitals, and pathologist for the Foundling Hospital and in 1911 went to Washington University, St. Louis, Mo., as professor of pediatrics. In the following year he was appointed to a similar chair at Johns Hopkins University and became pediatrician in chief at the Johns Hopkins Hospital. He was a member of the American Medical Association, serving on its council of pharmacy and chemistry, and of the American Pediatric Society, and other medical organizations.

**HOWZE, ROBERT LEE.** American army officer, died at Columbus, O., September 19. He was born in Rusk County, Texas, Aug. 22, 1864, and after graduating from Hubbard College in that State in 1883, attended the United States Military Academy, graduating in 1888, and being commissioned second lieutenant in the Sixth Cavalry. He was promoted through the various grades, being made brigadier-general of volunteers June 20, 1901, and brigadier-general, National Army, December, 1917, and major-general in the regular army in December, 1922. He served as major in the Porto Rico provisional regiment of infantry from Oct. 9, 1901 to June 30, 1904, and was commandant of cadets at the United States Military Academy from 1905-09. From 1909-12 he was lieutenant-colonel commanding the Porto Rico Regiment and the Military District of Porto Rico, and transferring to the Eleventh Cavalry he served with that organization until September, 1916, when he was detailed to the General Staff. May 15, 1917, he was made colonel of cavalry, chief of staff of the Tenth Provisional Division and of Cavalry Division, and in June, 1917, he was

assigned as chief of staff to the Northeastern Department. In December, 1917, he was assigned to the command of the Second Cavalry Brigade on the Mexican border, and Aug. 8, 1918, as major-general U. S. A. he was in command of the Thirty-eighth Division and served in the Meuse-Argonne offensive. He commanded the Third Division in the march to the Rhine, and the Army of Occupation in Germany until Aug. 14, 1919, when he returned to the United States. Previously he had been active in the Philippines, and in 1891 was awarded a Congressional Medal of Honor "for gallantry in repulsing attacks of Sioux Indians in South Dakota." For his services in the World War he was awarded the Distinguished Service Medal of the United States Government, and the Croix de Guerre with palm by the French Government, which also made him an Officer of the Legion of Honor.

**HOZUMI, BARON CHINCHO (NOBUSHIGE).** Japanese statesman, jurist and educator, died at Tokio, Japan, April 7. He was born in Uwajima, July 11, 1855, and studied law at the Imperial University at Tokio, also at the Middle Temple, London, England, and at the University of Berlin from 1879-81. He returned to Japan to become professor at the University of Tokio in the reorganization of which he was influential, and shortly afterwards was appointed dean. He was a member of the Japanese House of Peers from 1890-92, helping to draft the Japanese Civil Code. In 1902 he attended the International Conference held in Rome, and in 1915 was raised to the peerage. In 1916 he was made a Privy Councillor. At various times he was president of the Imperial Academy, judge of the Permanent Court of Arbitration at the Hague, and chairman of the Council for the Reform of Laws and Institutions. Besides his legal writing in Japanese on codification and other subjects he wrote in English: *Ancestor Worship and Japanese Law*; and *The New Japanese Civil Codes as Material for the Study of Comparative Jurisprudence*.

**HUNGARY.** A state of Central Europe; formerly a kingdom constituting with Austria the Dual Monarchy of Austria-Hungary. Capital, Budapest.

**AREA AND POPULATION.** Before the war Hungary had an area of 125,009 square miles; area at the time of the census of 1920, 35,875 square miles. Population before the war, according to the census of Dec. 21, 1910, 20,886,487; population at the census of Dec. 31, 1920, 7,980,143; estimated Dec. 31, 1924, 8,274,940. After the census of 1920 was taken an additional area of 36 square miles, with a population of 7000, was awarded to Hungary. Budapest, the capital of the country, had a population at the 1920 census of 928,990.

Other cities with a population of more than 100,000 at the same census were: Szeged, 119,109; and Debrecen, 103,186. The movement of population in 1924 was: Births, 221,462; deaths, 107,671; marriages, 75,060. The population of 1920 was distributed according to religion as follows: Roman Catholics, 5,096,729, or 63.9 per cent; Helvetican Evangelicals, 1,670,144, or 21 per cent; Augsburg Evangelicals, 497,012, or 6.2 per cent; and smaller numbers of Greek Catholics, Greek Orientals, and Unitarians. The Jews numbered 473,310, or 5.9 per cent of the population.

**EDUCATION.** Elementary education is compulsory between the ages of six and 12. In the school year, 1923-24, there were 924 infant schools and permanent foster-homes, with 87,097 infants, and three training colleges for female teachers of infant schools. In the same year there were 6390 elementary schools with 770,234 pupils and 17,415 teachers; 348 primary schools, with 88,176 pupils and 3773 teachers; and six training colleges for teachers in primary schools. For secondary education there were 97 gymnasia, with 1820 teachers and 38,822 pupils; 22 realschulen, with 491 teachers, and 8967 pupils; and 32 secondary schools for girls, with 664 teachers and 9980 pupils. For higher education there are four universities as follows: Budapest, with 321 professors and 5908 students in 1923-24; Szeged, 80 professors and 1032 students; Pécs, 60 professors and 1289 students; and Debrecen, 55 professors and 801 students. There are also many theological schools and a number of technical institutions for higher learning, such as technical high schools, etc.

**PRODUCTION.** Agriculture is the principal industry of Hungary and about two-thirds of the people are engaged in or dependent upon it, and even in average years the crops are sufficient for the home supplies and leave surpluses for export.

The accompanying table from the *Statesman's Year Book* for 1926, shows the acreage and yield of the principal crops of Hungary for 1923-24:

Crop	Area acres	Yield quintals
Wheat .....	3,620,148	14,034,771
Rye .....	1,695,646	5,614,498
Barley .....	1,047,907	3,203,123
Oats .....	734,320	2,280,718
Maize .....	2,479,396	18,828,066
Potatoes .....	620,492	15,351,479
Sugar-beet .....	170,177	12,742,032
Grapes .....	549,225	29,992,783 *

\* Gallons of wine.

For 1925 the maize crop was estimated at 2,412,000 metric tons, potatoes at 1,535,000 tons, and sugar beet, at 1,274,000 tons. In 1925 there were 875,768 horses, 1,920,026 cattle, 1,890,511 sheep, and 2,632,966 pigs. In 1924 the production of coal was 7,169,057 tons. The industries of Hungary are mainly based on agriculture and include milling, distilling, the manufacture of sugar, hemp, flax, etc. The number of manufacturing plants is placed at 2338 and the hands employed at 722,892.

**COMMERCE.** According to the United States Bureau of Foreign and Domestic Commerce, Hungarian foreign trade in the year 1925, showed a distinct improvement over the preceding five years. Although the trade balance was still unfavorable, it was considerably smaller than in the preceding year, amounting to only \$8,000,000 as compared with \$26,000,000 in 1924, and \$17,000,000 in 1923. The earlier years (1920-1922) each showed an unfavorable balance of more than \$40,000,000. The entire deficit in 1925 occurred during the first half of the year, during which period it amounted to \$12,000,000. The last half of the year, however, showed such continued improvements that the deficit was reduced by \$4,000,000. Imports in 1924 were valued at \$143,000,000, and in 1925 at

\$150,000,000; exports were valued at \$117,000,000, and in 1925 at \$142,000,000. The accompanying table shows the value of Hungary's principal imports in 1924 and 1925:

VALUE OF HUNGARY'S PRINCIPAL IMPORTS,  
1924-25  
[In thousand gold crowns\*]

Commodity	1924	1925
Cotton textiles	98,885.6	89,015.9
Lumber	71,046.1	72,084.6
Wool textiles	62,557.1	48,889.4
Coal	49,233.8	46,375.2
Cotton yarns and threads	33,729.3	29,190.9
Machines and apparatus	31,915.4	29,004.8
Paper and paper goods	16,677.5	24,777.9
Crude metals	12,478.8	18,124.7
Ironware	8,589.7	15,870.5
Leather, prepared	23,067.8	14,657.6
Wool yarns	19,241.4	13,622.5
Mineral oils	13,444.0	13,139.1
Cotton, raw	7,704.4	12,640.9
Knit goods, cotton	8,203.4	10,078.5
Glass and glassware	6,251.7	9,787.9

\* The exchange rate of the Hungarian crown averaged \$0.000017 for 1924 and \$0.000014 for 1925.

Hungarian trade during the first six months of 1926 showed continued expansion, but was accompanied by a trade balance that was still more unfavorable than for the first half of the year 1925.

VALUE OF HUNGARY'S FOREIGN TRADE, BY  
LEADING COMMODITIES  
[In thousands dollars, converted from the gold crown at  
the rate of \$0.2026]

Commodity	1925 (January-June)	1926 (January-June)
<i>Imports</i>		
Lumber	6,202	7,552
Cotton cloth	9,417	7,494
Coal	3,542	4,477
Wool goods	4,967	3,952
Tobacco	1,441	3,464
Cotton thread and yarn	3,750	3,265
Paper	1,849	2,786
Machinery	2,491	2,532
Metals	1,288	2,243
Mineral oil	744	1,490
Leather	1,298	1,445
Hardware	1,455	1,330
Silk and half-silk goods	876	1,029
Wool yarn	1,034	1,005
Cotton, raw	1,082	950
Electrical equipment	466	869
Cotton knit goods	1,097	852
Glass and glassware	797	758
Coffee, green	626	699
All others	23,903	26,149
Total	67,325	74,341
<i>Exports</i>		
Livestock	8,153	8,583
Wheat	2,259	6,765
Flour	9,654	5,376
Eggs	2,661	3,766
Lard and bacon	995	3,224
Corn	2,285	2,961
Rye	1,753	2,088
Meat, fresh and prepared	876	1,814
Sugar	2,255	1,721
Electrical equipment	1,163	1,548
Machinery and apparatus	2,104	1,415
Wool	1,408	1,312
Coal	820	1,209
Poultry, live	979	1,086
Feathers	1,259	1,081
Hardware	914	905
Oats	53	795
Iron, semimanufactured	713	750
Poultry, dressed	362	697
Railway cars	610	649
Cotton cloth	810	585
All others	13,115	12,300
Total	55,201	60,580

Imports during the first half of 1926 were valued at \$74,334,000 and exports at \$60,598,000, whereas imports for the corresponding period of 1925 were valued at \$67,325,000 and exports at \$55,201,000. The unfavorable balance in the 1926 period was thus approximately \$2,610,000 greater than in the 1925 period; but there was a chance that this might be lowered by the last half year's trade, as it was in 1925, by increase in the amount of exports following the harvests.

The condition of the Hungarian milling industry is shown by the export figures for grain and flour. During the first half of 1925 wheat exports aggregated 25,300 tons and flour 113,100 tons; in the 1926 period these exports totaled 108,900 tons for wheat, 52,800 tons for rye, and 70,700 tons for flour. In 1925 flour made up 67 per cent of the total quantity trade in these products, but in the 1926 period flour exports represented only 30.4 per cent of the total. Much of this shift is accounted for by the fact that Hungarian flour lost its market in Poland entirely and was severely restricted in the Czecho-Slovak market by the tariff rates on grain. New export markets, however, were created in Italy and Greece. This curtailment of sales in the near-by flour markets reacted to increase grain exports. The increase in lumber imports is accounted for largely by the renewed building operations of the year, though the importation of firewood also increased, while railway ties fell off considerably. Exceptionally heavy purchases of woolen and cotton cloth in 1925, following the abolition of the import restrictions in that year, caused a decline in the earlier part of 1926. Importations of silk products were accelerated by reduced rates given to France in the agreement concluded during 1925.

**FINANCE.** The budget for the fiscal year 1926-27 as presented by the government to parliament provided for a small surplus. In the administrative section of the budget, revenues are estimated at \$126,768,000 and expenditures at \$126,663,000, leaving a surplus of \$105,000; included in this section are capital expenditures for improvements and new construction, amounting to \$2,499,000. In the section devoted to government enterprises and monopolies, receipts and expenditures are made to balance at \$73,344,000 by including capital expenditures to the amount of \$2,930,000. The expenses of administration show a considerable increase in practically all the ministries; that for service of the public debt is proposed in order to carry out an agreement with the British clearing house to pay £500,000 per annum in place of £200,000 as in the past. There has also been an increase in payments to war invalids, widows, and orphans. The public debt as of Dec. 31, 1924, was \$388,000,000. According to *Commerce Reports*, the Hungarian parliament passed an act on Nov. 21, 1925, creating a new monetary unit of gold to be known as the "pengo." The new currency was expected to go into circulation about November, 1926, and the complete transition from the present system was to be accomplished by Jan. 1, 1927. The strange name of the new unit was selected to prevent its translation into foreign languages and at the same time to increase confidence in it locally. "Pengo" means, literally, "jingler," denoting the return of Hungarian currency to ringing

metal. A brief description of the new currency follows:

One kilo of pure gold will represent 3800 pengo. In minting gold coins, an alloy of nine-tenths gold and one-tenth copper will be used, one kilo of alloy, therefore, being coined into 3420 pengo. The 20-pengo gold coins, 20 millimeters in diameter, will weigh 5.8479531 grams gross, and 5.2631578 grams net. The 10-pengo gold coins, 18 millimeters in diameter, will weigh exactly one-half as much. One pengo will be equal to \$0.1748985, or 0.8631578 Hungarian gold crowns of the old coinage, or to 12,500 paper crowns of the present currency. Since Jan. 1, 1926, the pengo has been quoted in foreign markets as 12,500 paper crowns. The pengo will be divided into 100 "fillers." Silver coins of 1-pengo denomination will be minted in an amount not exceeding 45,000,000 pengo; and 50, 20, 10, 2, and 1 filler pieces in an amount not exceeding 30,000,000 pengos. The silver coin will be an alloy containing 840 parts of silver to 360 parts of copper; for the 50, 20, and 10-filler coins an alloy of 25 parts nickel to 75 parts copper will be used; and for the 2 and 1-filler pieces, an alloy of 95 parts copper, 4 parts tin, and 1 part zinc. Bank notes will be printed in denominations of 1000, 100, 50, 20, and 10 pengos. In accordance with the conditions of the reconstruction loan for Hungary, the Hungarian National Bank enjoys a monopoly of note issue within the State. It already has purchased the entire stock of the Magyar Pénzforgalmazó Rt. (Hungarian Bank Note Printing Corp.), formerly held by the Swiss Orell-Fussli Corp. and the Hungarian Government jointly. The plant is now operated by the bank and is being prepared for the printing of the new pengo notes.

**COMMUNICATIONS.** The length of railways in Hungary on Jan. 1, 1925, was 8569 kilometers, or 5321 miles, of which 1879 miles were owned by the state. It was reported in December, 1926, that a proposal by an English financial group to undertake the electrification of that part of the Hungarian State Railways running from Budapest to Esztergom on the Vienna route, 46 kilometers from Budapest, has been given favorable consideration by the government. It was estimated that 55 electric locomotives would be required for the new service at a cost of 300,000 gold crowns each, or a total of 16,500,000 gold crowns. The additional equipment and generating plant were to cost 260,000,000,000 paper crowns. (The paper crown in 1925 had an average exchange value of \$0.0014.) The terms of the proposed contract provide that preference shall be given to Hungarian industrial products in installing the new equipment. Should the plans be carried to a successful conclusion, it was expected that the work would be begun early in 1927, and that after the completion, work would be undertaken on the electrification of the railway line from Budapest to Hatvan, 69 kilometers.

**GOVERNMENT.** Technically Hungary is a constitutional monarchy with the throne vacant. When the present Horthy rule came into power it was decided to keep the old constitution and let the question of who was to be monarch wait until the people were freed from external pressure. In the meantime Admiral Nicholas Horthy acted as regent. The ministry in 1926, remained virtually the same as when created in June, 1922, and was made up as follows: Premier, Stephen Bethlen; Foreign Affairs, Dr. Louis Walko; Interior, Ivan Rakovsky; Finance, John Bud; Agriculture, John Mayer; Commerce, Dr. Louis Walko; Public Instruction, Kuno Klebelsberg; Justice, Paul de Pesty; National Defense, Charles Csáky; Social Welfare, Joseph Vass.

#### HISTORY

**THE COUNTERFEITING PLOT.** Probably the outstanding event of the year as far as Hungary was concerned was the unearthing of a huge

counterfeiting plot in the country. The main purpose of the scheme was to manufacture a large number of French francs to support the Fascist and anti-Semitic movements which were rampant throughout the country. At the end of 1925 there were several well defined rumors that such a plan was on foot, and when a new French Minister arrived in the country on the 29th of December of that year, he was accompanied by detectives who were charged with clearing up the scandal. On January 3, it was stated that the plates used in the plot were manufactured in the Government Geographical and Geological Institute, the president of which was former Prime Minister Count Paul Teleki. On the next day Prince Ludwig Windisch-Grätz was arrested in connection with the case as was Dr. E. Von Nadossy, Supreme Chief of the State Police. By the first of February, the entire plot was bared and Prince Windisch-Grätz was shown up as the leader and Dr. Nadossy as one of the chief conspirators. The confession of the former stated that he was actuated by desire for revenge against France for the Treaty of Trianon, as well as to restore his personal fortune. More than 25 men were involved and the fact that they were all connected in some way or other with the Royalist movement led to a serious upheaval in Hungarian politics.

Members of the opposition parties in parliament used the scandal as a source of bitter attacks on Premier Bethlen, who, they charged, was cognizant of the plot and very lax in bringing it to light. Strong demands that he resign were met not only with refusal but with veiled threats of military intervention and the establishment of a dictatorship. On February 24 the results of a parliamentary investigation into the affair were published. The majority report absolved the Premier of any wrongdoing, but the minority report accused Bethlen of knowing of the plot as early as 1923 and stated that he was therefore chiefly responsible for it because he did nothing to frustrate it. Similar charges were made against the Ministers of War, Justice, and the Interior. This report gained the more favor with the public, all the more so because of the superficial efforts made by the government investigators in their efforts to get at the bottom of the trouble.

The trial of the 24 conspirators who had been arrested began on May 8. The two leading figures, Windisch-Grätz and Nadossy, admitted their part in the affair and said that they were actuated solely by patriotic motives, that is, by a desire for revenge on France. Even Premier Bethlen was compelled to take the stand and testify. He staunchly denied that he or his government was in any way implicated and stuck to his story despite the earnest efforts of counsel for the defense to break down his testimony. He put in a plea for the defendants on the ground that they were acting from patriotic motives, however wrong these motives and the means taken to gratify them were. The trial ended on May 26, when sentences were imposed. Two defendants were acquitted and some given light terms in prison. Windisch-Grätz and Nadossy were fined 10,000 gold crowns each and were sentenced to four years imprisonment and barred from public office for three years. The counsel for the Prince filed notice of appeal from the verdict, and the

Hungarian press seemed to be perfectly satisfied with the outcome of the trial. Needless to say, in French quarters the decision of the court was roundly condemned because of the comparatively light sentences given to the principal conspirators. Under the decision handed down by the Appellate Court the original sentences were ordered to stand (August 24). An appeal was taken to the Supreme Court, where the final decision of the case was to be made.

In October the Supreme Court rendered a decision upholding the decisions of the lower courts but reducing the punishment of Windisch-Grätz and Nadossy, in the case of the former the court decided on four years imprisonment without hard labor, and in the case of the latter six months was taken from his sentence. Premier Bethlen immediately handed in his resignation to Admiral Horthy in case the Regent was not satisfied with the government because of the manner in which it handled the counterfeiting affair. The Regent almost immediately requested Bethlen to form another cabinet to carry on the government. Bethlen consented and there was in reality no surcease in his control of affairs, the resignation being in the nature of a pure gesture.

**CHANGES IN THE LEGISLATURE.** Early in November a bill was passed by the legislature for the establishment of an upper house of the legislature to take the place of the old Chamber of Magnates which had not been in existence since 1918. On November 16, parliament was dissolved in order to hold elections for the new bicameral legislature. The new upper house was to contain 240 members distributed as follows: About 38 elected representatives of the former nobility; 80 elected for five years by rural and municipal councils; 30 representatives of Catholic, Protestant, and Jewish churches; six ex-officio members; 40 members chosen for 10-year terms by Chambers of Agriculture, Chambers of Commerce, Stock Exchanges, etc.; and a maximum of 40 to be named for life by the head of the government upon recommendation of the ministry. The power of this upper house was curtailed by a provision which made it possible to pass a law even though it withheld its consent.

The new elections were held from December 8 to December 18. Premier Bethlen won an overwhelming though expected victory. The Party of National Union received 169 representatives; Christian Socialists, 35; Party of Racial Defense, 3; Agrarians, 3; Legitimists, 2; Liberals, 11; Social Democrats, 14; and Independents, 8. When summed up it was found that Bethlen controlled all the 245 members with the exception of about 32 members, distributed among the various opposition parties. Charges of intimidation and corruption were made against the government both before and during the elections. Opposition papers interpreted the election as meaning the setting of the star of Horthy and the driving out of power of the peasants, who had originally been the backbone of the Bethlen régime, and the coming into power of the aristocrats and landed gentry, who really ruled through Bethlen with the aid of a supine parliament. For a discussion of the Countess Karolyi case see *UNITED STATES, History*.

**HURRICANES.** See *FLORIDA*; **METEOROLOGY**  
**HUSSEY, WILLIAM JOSEPH.** American astronomer, died suddenly in London, England,

October 28. He was born at Mendon, O., Aug. 10, 1862, and after graduating from the University of Michigan in 1889 with the degree of B.S., served at that institution as instructor in mathematics until 1891 when he became acting director of the Detroit Observatory. In 1892 he became assistant professor of astronomy in Leland Stanford Jr. University, becoming full professor in 1894, and serving until 1896, when he was made astronomer in the Lick Observatory. He served in this capacity until 1905, when he went with the University of Michigan as professor of astronomy and director of the observatory. From 1911-17 he was also professor of astronomy and geodesy at the University of La Plata, Argentina, and director of the National Observatory at La Plata. He served as an expert adviser on observatory sites in Southern California, Arizona, and Australia, to the committee on observatories of the Carnegie Institution in 1903, and in 1905 was in charge of the Lick Observatory eclipse expedition to Egypt.

In 1912 Hussey was head of the La Plata eclipse expedition to Brazil. At the time of his death he was on his way to Bloemfontein, South Africa, to establish a University of Michigan Observatory Station, where he was to remain for a year setting up the Lamont telescope and other equipment. He was the discoverer of 1650 double stars and was awarded the Lalande prize of the French Academy in 1906. He was a foreign associate of the Royal Astronomical Society, honorary member of the Sociedad Astronómica de Mexico, and a member of various American and foreign learned societies. He was the author of: *Logarithmic and Other Mathematical Tables* (1891, 1895); *Mathematical Theories of Planetary Motions* (1892); *Micro-metrical Observations of the Double Stars Discovered at Pulkowa* (vol. V. Lick Observatory publ.) (1901); also many minor contributions to astronomical journals.

**HYDRO-ELECTRIC DEVELOPMENTS.**  
See **WATER POWER**.

**HYDROPHOBIA.** There had been a notable increase of hydrophobia in Europe since the years of the War owing to the impossibility of carrying out preventive measures during the actual period of the War and the reconstructive period. There was a great lack of consensus of opinion and practice among health officers in the various countries and preventive vaccination of dogs had as yet been tested on a large scale only in parts of the United States and in Japan despite the fact that the results appear to be excellent. In the *Weekly Bulletin* of the City of New York Department of Health for December 4 is an article on the prevention of human rabies through treatment of all persons bitten by rabid animals along the customary lines. There had been a marked local increase in the number of rabid dogs reported and only about one-half of those bitten are taking the antirabic cure. Thus in 1926 up to October 31 the number of people bitten was 449, number treated with vaccine 253. In 1925 for the full year but 79 were bitten while 57 took treatment, leaving but 22 unprotected as against 196 during 1926, with two months still to go. The number who develop rabies when unprotected may reach 10 per cent, much depending on the location and other conditions of the bites. European figures give a mortality among the treated which ranges from  $\frac{1}{4}$  to 1 per cent

to between 1 and 2 per cent. Among Americans the figure is usually given as  $\frac{1}{2}$  of 1 per cent.

#### HYDROZOA. See ZOOLOGY.

**ICELAND.** An island state united with Denmark in the person of the king by the act of union of Nov. 30, 1918. Area, variously estimated at from 39,707 to 40,456 square miles; population according to the census of 1920, 94,690; estimated at the end of 1924, 98,370. The capital, Reykjavik, had a population of 20,657 in 1924. All the other towns had populations of less than 3000. The number of foreign-born inhabitants is very small and consists chiefly of Danes and Norwegians. The movement of population in 1924 was: Births, 2473; deaths, 1443; marriages, 552. Although religious freedom is complete, and to be a non-conformist entails no civil disability, there were only 463 dissenters at the census of 1920. Primary instruction is compulsory between the ages of 10 and 14, children up to the age of 10 being privately educated as a rule. According to the latest available statistics there were 209 elementary schools, with 318 teachers and 6485 pupils; several continuation schools; and a university at Reykjavik. Only about one-fourth of one per cent of the area of the island is under cultivation, producing chiefly, hay, potatoes, and turnips. The crops in 1924 were: Hay, 2,570,000 cwt.; potatoes, 50,000 cwt.; and turnips, 17,000 cwt. Livestock figures in the same year were: Horses, 50,800; cattle, 26,000; sheep, 583,000; and goats, 2600. The fisheries were valued at 28,338,000 crowns in 1922, of which the value of codfish was 25,117,000 crowns and herring, 2,443,000 crowns.

The fisheries made possible a favorable balance of trade for the year 1924, when the exports were about 80,000,000 crowns and the imports about 50,000,000 crowns. Government receipts for 1925, which had been estimated at 8,280,100 crowns, actually returned 16,281,000 crowns, with practically every source of revenue showing a yield in excess of estimates. Expenditures, estimated at 8,274,400 crowns, rose to a total of 11,012,000 crowns as a result of higher price levels and larger appropriations to public utilities than originally planned. The net surplus, therefore, actually reached 5,269,000 crowns, as compared with an estimated surplus of 14,700 crowns. The national debt also showed a favorable surplus as of Jan. 1, 1926, totaling 11,800,000 crowns as compared with 18,200,000 crowns on Jan. 1, 1924. The mercantile marine in 1924 consisted of 149 vessels of 24,582 gross tons. There are no railways on the island. Executive power is vested in the king who acts through responsible ministers; and legislative power in the king and Althing or parliament, which consists of 42 members, of whom six are elected for eight years, by proportional representation for the whole country and 36 for four years by universal suffrage. The Althing is divided into two houses, of which the upper has 14 members and the lower 28. The right to vote is possessed by both men and women over the age of 25. King in 1926, Christian X; President of the Council, Minister of Justice and Ecclesiastical Affairs, Jon Magnusson; Minister of Trade and Communications, Magnus Gudmundsson; Minister of Finance, Jon Thorlaksson.

**IDAHO.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 431,866. The estimated popu-

lation on July 1, 1926, was 522,000. The capital is Boise.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Wheat, spring	1926	598,000	14,352,000	\$15,010,000
	1925	520,000	15,080,000	18,850,000
Wheat, winter	1926	447,000	10,281,000	11,103,000
	1925	406,000	10,962,000	13,702,000
Hay, tame	1926	1,025,000	2,768,000 *	24,912,000
	1925	1,032,000	3,385,000 *	28,772,000
Potatoes	1926	91,000	16,198,000	17,038,000
	1925	73,000	14,308,000	20,747,000
Oats	1926	119,000	4,760,000	2,142,000
	1925	170,000	8,330,000	3,582,000
Barley	1926	112,000	4,144,000	2,486,000
	1925	124,000	5,456,000	3,055,000
Corn	1926	66,000	2,706,000	2,435,000
	1925	78,000	3,198,000	2,398,000
Sugar beets	1926	16,000	109,000 *	.....
	1925	36,000	456,000 *	2,858,000
Dry beans	1926	54,000	999,000	2,597,000
	1925	72,000	1,584,000	4,277,000

\* tons.

**MINERAL PRODUCTION.** The chief mineral products of the State in order of their value are lead, silver, zinc, gold and copper. The total value of the product of these five metals for 1925 rose to \$30,662,621, from \$27,049,877 in 1924. The increase was due chiefly to a rise of .7 cents a pound in the estimated value of lead mined in 1925 and to increased total quantity of lead produced for the year. Lead production in 1925 was 253,041,790 pounds; in 1924, 248,950,292 pounds. Silver production in 1925 was 7,743,439 fine ounces; in 1924, 7,793,154 fine ounces. Zinc production rose to 31,237,240 pounds in 1925, from 15,340,498 pounds in 1924. Of gold there were produced 20,886 fine ounces in 1925, as against 26,921 fine ounces in 1924. Copper production totaled 3,297,443 pounds in 1925 and 2,738,824 pounds in 1924. As reckoned in the preliminary estimate of the Bureau of Mines, the State's silver production in 1925 had a value of \$5,318,425. Lead production, the leading contributor to the total value of the State's mineral output, was \$19,916,023 in 1924, and in 1925, reckoned at 8.7 cents per pound, was approximately \$22,015,000. Stone, clay products and phosphate rock were the chief mineral products of the State, outside of the metallic group. The State's entire mineral production in 1924 was valued at \$27,831,623; in 1923, at \$27,105,344.

The value of the gold, silver, copper, lead, and zinc produced from ore mined in 1926 was estimated at about \$30,781,000, as compared with \$30,662,621 in 1925. There was a large increase in lead and zinc, but a decrease in gold, silver, and copper. The mine output of gold was valued at \$254,000. The output of silver decreased to about 7,262,000 ounces in 1926, and the value to \$4,531,000. There was an increase in silver produced from lead-zinc ores. The output of copper decreased to 830,000 pounds in 1926, and the value to \$116,000. The output of lead increased to 265,310,000 pounds in 1926. The value was \$2,021,000. The zinc recovered from ore and concentrate increased to 52,500,000 pounds in 1926, and the value to \$3,859,000. Most of the output was recovered by leaching at Great Falls, Mont.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the

maintenance and operation of the general departments of the State in the fiscal year ending Sept. 30, 1925 were \$4,463,749. Their rate per capita was \$9.12, as against \$8.24 in 1924 and \$5.30 in 1917. Their total included \$683,709 for education, apportioned to minor State divisions. Expenses totaling \$321,234 for interest on debt and \$2,643,938 for permanent improvements, added to payments for maintenance and operation of the State departments, made the total of State payments \$7,428,921. For highways was expended the sum of \$2,847,272, of which \$783,134 was for maintenance and \$2,064,138 for construction.

Revenue receipts of the State were \$7,070,296, or \$14.45 per capita. They exceeded by \$2,285,313 the total payments except those for permanent improvements, and were \$358,625 less than the total with these included. Property and special taxes formed 33.9 per cent of the revenue in 1925, as against 38.1 per cent in 1924 and 37.8 per cent in 1917. Their per capita rate was \$4.90 in 1925, \$5.21 in 1924 and \$2.14 in 1917. Earnings of the general departments and compensation for officials' services furnished 5.6 per cent of the 1925 revenue; business and non-business licenses, 20 per cent. License receipts were derived chiefly from taxes on incorporated companies and on sales of gasoline, and from the licensing of motor vehicles.

The net indebtedness of the State on Sept. 30, 1925, was \$5,052,441, or \$10.33 per capita, as against \$10.46 in 1924 and \$5.39 in 1917. The assessed valuation of property subject to State tax was \$478,686,747. The State tax levy was \$2,376,751, or \$4.86 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 2915. There were constructed in 1926 21 miles of new first track.

**EDUCATION.** The improvement of the rural schools was a dominant feature in the year's educational activities. There were drafted laws providing additional rural school supervision, and raising the standard of requirements governing the issue of teachers' certificates. It was the intent that the bills to accomplish these ends, as shaped in conformity with the ideas of the State educational authorities, should come before the Legislature for enactment in 1927. The school population in 1925, the latest year for which figures were available, was 138,969. The enrollment totaled 117,904, of which 95,668 was in common schools and 22,236 in high schools. Expenditure for education in the year 1925 amounted to \$10,047,920. The salaries of teachers averaged \$1072.

**CHARITIES.** The Department of Public Welfare controls divers institutions, the State board of health, vital statistics, dairy and food inspection. Under it are the Northern Idaho Sanatorium for the insane, 125 inmates; the Southern Idaho Mental Hospital, at Blackfoot, not under the Department, has some 200 inmates. The Idaho State Sanitarium at Nampa, a home for the old and feeble minded, is directed by the Department, and had in 1926 some 275 inmates.

**POLITICAL AND OTHER EVENTS.** H. C. Baldridge, the nominee of the Republican party to succeed C. C. Moore as Governor of the State, was elected at the general election of November 2 by a large plurality. Senator Frank R. Gooding, Republican candidate for the U. S.

Senate, was elected for the term beginning Mar. 4, 1927, to succeed himself, defeating H. F. Samuels, Progressive, and former Senator John F. Nugent, Democrat. Other State officers elected in November to take office in January, 1927, were: Lieutenant Governor, Oscar E. Hailey; Secretary of State, Fred E. Lukens; State Auditor, E. G. Gallet; State Treasurer, Byron Deffenbach; Attorney General, Frank L. Stephen; Superintendent of Public Instruction, Mabelle McConnel Lyman; Inspector of Mines, Stewart Campbell. On the Supreme Court bench, Raymond Givens and Herman H. Taylor were to replace Judges McCarthy and Dunn.

**OFFICERS.** Governor, C. C. Moore; Lieutenant-Governor, H. C. Baldridge; Secretary of State, F. A. Jeter; Auditor, Edward G. Gallet; Treasurer, D. F. Banks; Attorney-General, A. H. Conner; Superintendent of Public Instruction, Elizabeth Russum; Inspector of Mines, Stewart Campbell.

**JUDICIARY.** Supreme Court: Chief Justice, Alfred Budge; Associate Judges: Charles P. McCarthy, Robert N. Dunn, T. Bailey Lee, William E. Lee.

**IDAHO, UNIVERSITY OF.** A State institution of higher learning at Moscow, Idaho; founded in 1889. For the fall session of 1926 there was an enrollment of 2109, of whom 1296 were men and 813 women. These, both graduates and undergraduates, were distributed as follows: college of letters and science, 656; college of agriculture, 100; college of engineering, 169; college of law, 33; school of mines, 42; school of forestry, 89; school of education, 352; school of business, 335; special courses, 66; non-resident, 141. In the 1926 summer session the registration totaled 306, of whom 132 were men and 174 women. The income for 1926 amounted to approximately \$1,000,000. The library contained 90,000 volumes. President, Alfred H. Upham, Ph.D.

**IDO.** See INTERNATIONAL LANGUAGE.

**ILLINIUM.** See CHEMISTRY.

**ILLINOIS. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 6,485,280. The estimated population on July 1, 1926, was 7,203,000. The capital is Springfield.

Chicago's population, late in 1926, was estimated on the basis of birth rates and school assessor's statistics as being 3,151,989, an increase of 16.7 per cent over the 1920 official census. The population of the metropolitan area of the city was estimated at 4,100,000.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1926	9,205,000	312,970,000	\$175,263,000
	1925	9,393,000	394,506,000	228,813,000
Hay, tame	1926	3,206,000	3,865,000	58,640,000
	1925	3,099,000	3,378,000	53,710,000
Wheat, winter	1926	2,163,000	38,934,000	47,499,000
	1925	2,230,000	35,680,000	53,580,000
Wheat, spring	1926	120,000	2,100,000	2,562,000
	1925	60,000	1,200,000	1,740,000
Oats	1926	4,661,000	123,516,000	43,231,000
	1925	4,855,000	157,788,000	55,226,000
Potatoes	1926	68,000	5,440,000	9,520,000
	1925	72,000	4,320,000	10,152,000
Barley	1926	410,000	12,710,000	7,372,000
	1925	315,000	10,895,000	6,549,000
Rye	1926	83,000	1,245,000	1,071,000
	1925	80,000	1,104,000	994,000

\* tons.

**MINERAL PRODUCTION.** The State ranked seventh in respect to the total value of minerals produced in 1924. Its chief mineral product is coal, in which it held the third rank as a producer. Coal production attained a quantity in 1925 of 66,909,359 net tons, as compared with 68,323,281 tons in 1924; and a value in 1925 of \$146,492,000 and in 1924 of \$155,260,000. The blast furnaces of the State produced pig iron to the quantity of 3,600,484 long tons (preliminary summary of the Bureau of Mines) in 1925 and of 2,695,961 tons in 1924; and to the value of \$74,937,781 in 1925 and \$59,299,519 in 1924. The value of clay products, for 1924, was \$33,591,368 and for 1923, \$34,218,987. Coke produced was \$20,187,619 in 1924 and \$30,373,038 in 1923; as to quantity, 2,355,474 short tons in 1924 and 3,187,168 tons in 1923. Petroleum production in 1925, attained 7,856,000 barrels, and in 1924, 8,081,000 barrels; in value, \$15,500,000 in 1925, and \$14,220,000 in 1924. Production of cement was 7,208,000 barrels in 1925, and 6,994,323 barrels in 1924; in value, cement shipments attained \$11,737,000 in 1925, and \$12,026,310 in 1924. There were produced in 1924, 8,640,960 short tons of stone and in 1923, 9,111,830 short tons; in value, \$7,959,934 in 1924 and \$8,358,556 in 1923. Other products each exceeding \$1,000,000 in the value of production in 1924, were oil asphalt, fluorspar, mineral paints and pigments, and sand and gravel. The year's total mineral production attained \$235,796,027 in 1924, as against \$282,760,623 in 1923, with duplications eliminated.

**FINANCE.** As summarized by the United States Department of Commerce, payments for maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$48,053,496. Their rate per capita was \$6.94, as against \$11.84 in 1924 and \$3.62 in 1917. This decrease for 1925 resulted from lower payments for compensation of soldiers and sailors of the War. The payments in the above named total included \$7,697,368 for education, apportioned to minor State divisions. Expenses totaling \$38,107 for public service enterprises, \$3,704,187 for interest on debt and \$42,045,190 for permanent improvements, added to payments for maintenance and operation of State departments, made the total of State payments \$93,840,980. For highways was expended the sum of \$39,103,831, of which \$2,114,063 was for maintenance and \$36,989,768 for construction.

Revenue receipts of the State were \$57,441,996, or \$8.30 per capita. They exceeded by \$5,646,206 the total payments except those for permanent improvements, and were \$36,389,984 less than the total with these included. Property and special taxes formed 45.2 per cent of the revenue in 1925, as against 36.1 per cent in 1924 and 74.9 per cent in 1917. Their per capita rate was \$3.75 in 1925, \$2.77 in 1924 and \$3.49 in 1917. Earnings of the general departments and compensation for officials' services furnished 4.9 per cent of the 1925 revenue; business and non-business licenses, 39.2 per cent. License receipts were derived chiefly from taxes on incorporated companies and from the licensing of motor vehicles.

The net indebtedness of the State on June 30, 1925, was \$127,437,103, or \$18.41 per capita, as against \$14.91 per capita in 1924 and 33 cents in 1917. The assessed valuation of prop-

erty subject to State tax was \$4,081,848,140. The State tax levy was \$26,532,013, or \$3.83 per capita. Net debt rose in 1925 owing to bond issues of \$23,000,000 for road construction and \$4,500,000 for soldiers' compensation.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 11,994. New construction in 1926 was limited to some 7 miles of first and 6 miles of second track. Six miles of line of the Rock Island system between Preemption and Cable was abandoned.

**EDUCATION.** The State Teachers' Association through its research department formulated findings on the condition of the State's educational system, based on an extensive study. The views expressed in these findings were widely quoted and discussed. The general policy of cultivating public understanding of educational problems was pursued by means of systematic campaigning in the dissemination of publicity on the part of the teachers' organization.

In the school year 1924-1925, the latest for which State statistics were available, Illinois had 5 normal schools with 304 teachers and a total pupil enrollment of 18,176. Counties to the number of 47 reported the existence of 123 consolidated school districts, formed from 450 previous small districts. The consolidated high schools had 214 teachers and 3945 pupils; consolidated elementary schools, 1033 teachers and 32,740 pupils. The average daily attendance in the schools of the State was 1,122,101. Enrollment was 1,343,430; of this total, 233,682 was in high schools and 1,109,748 in elementary grades. High schools in the State numbered 941, of which 673 conducted the full four-year course. In the high schools were engaged 9531 teachers, of whom 3695 were men and 5836 were women. The teachers in all schools numbered 43,865. School expenditure in the State was computed at \$97,133,206 for current expenses and \$25,001,264 for capital outlay. The average salary per annum for all teachers was \$1525.

**CHARITIES AND CORRECTIONS.** An examination of the housing situation in Chicago among the numerous negro and Mexican workers having recently become domiciled in the city was made by Elizabeth A. Hughes, who reported overcrowding to the degree of 28 per cent, as compared with the standard of one and one-half persons to a room. The report declared it to be impossible to build to this standard at a profit to private undertaking and proposed city acquisition of land and state credits to limited dividend companies, coupled with a policy of systematic condemnation and demolition of unfit houses.

The State Department of Public Welfare. Director C. H. Jenkins, had in 1926 the following institutions under its care: In the charitable group were, Elgin State Hospital, Elgin, 2885 inmates at the end of 1926; Kankakee State Hospital, Kankakee, 3986 inmates; Jacksonville State Hospital, Jacksonville, 2905; Anna State Hospital, Anna, 1841; Watertown State Hospital, Watertown, 1934; Peoria State Hospital, Peoria, 2562; Chester State Hospital, Chester, 276; Chicago State Hospital, Chicago, 3367; Alton State Hospital, Alton, 1318; Lincoln State School and Colony, Lincoln, 2991 feeble minded; Dixon State Hospital, Dixon, 2052 epileptics and feeble minded; Illinois Industrial Home for the Blind, Chicago; Illinois Soldiers' and Sailors' Home,

Quincy, 882; Illinois Soldiers' Widows' Home, Wilmington, 105; Illinois Soldiers' Orphans' Home, Normal, 917; Illinois Eye and Ear Infirmary, Chicago, 78; State Training School for Girls, Geneva, 813; St. Charles School for Boys, St. Charles, 1320; and Research and Educational Hospitals, Chicago, 101. In the educational group were the Illinois School for the Deaf, Jacksonville, 436; and Illinois School for the Blind, Jacksonville. In the penal group were the Illinois State Penitentiary, Joliet, 4724; Southern Illinois Penitentiary, Menard, 2135; Women's Prison, Joliet, 136; Illinois State Reformatory, Pontiac, 2401; and Illinois State Farm, Vandalia, 387.

**POLITICAL AND OTHER EVENTS.** At the general election of November 2, a referendum proposal to the effect that the U. S. Congress be requested to pass legislation placing in the hands of the several States the power to define intoxicating liquor and to restrict its use by such State statutes as they saw fit, and removing from the Federal authorities the control vested in them by the Volstead law, was submitted to the voters. This proposal was approved by a majority of about 285,000, largely resulting from the favorable vote in the city of Chicago. Frank L. Smith, Republican candidate, was elected to the United States Senate, defeating George S. Brennan, Democrat, and H. S. Magill, independent. State officers elected November 2 were: Treasurer, Garrett D. Kinney; Superintendent of Public Instruction, Francis G. Blair.

Expenditures of candidates in the Senatorial primary and election campaigns formed a salient feature of State political activities. The primaries were held on April 13, and shortly afterward it was reported that the expenditures for Smith, the winning Republican candidate, and for Senator William B. McKinley, defeated for renomination, had run to unusual amounts. The U. S. Senatorial Campaign Fund Committee visited Chicago and opened hearings on July 26. It was soon brought out that there had been spent in the Smith primary campaign \$253,547; in that of Senator McKinley, \$260,000; and in the Brennan campaign \$20,000. The McKinley campaign manager later put his candidate's expenses at \$481,760. Large gifts to the Smith campaign fund from Samuel Insull and other public utility capitalists were testified to, the amount of the Insull contribution being put at \$125,000. It was later asserted that this contribution was of especial significance because of Smith's service as Illinois Public Service Commissioner. Senator McKinley died on December 7.

The State Supreme Court denied Governor Small a rehearing, February 9, on its opinion holding him accountable for interest withheld on State deposits during his tenure of the office of State Treasurer. He was later sued for payment in civil suits. The escape of seven penitentiary convicts on May 5, who killed a deputy warden and wounded several pursuers, was followed by an investigation of prison conditions leading to the removal from office of J. L. Whitman, Warden of the Joliet prison, followed by the resignation of the head of the State parole board. The transit system of the city of Chicago was affected by the approaching termination of 20-year street car franchises, coming to an end early in 1927. A committee

headed by F. J. Lisman and Co., bankers, proposed in August to take the lines over and reorganize them without receivership, under a new company to receive 20-year franchises and to create a \$350,000,000 first mortgage and provide for construction of subways and for unified transfers. Difficulties over the sharing of net proceeds hindered negotiations, the city having received 55 per cent of net proceeds under old franchises, and the opposed parties each seeking revision of the old rate in its own favor. Difficulties arose between the State authorities and those of Cook County over highway expenditure. Financing of highway improvement in Cook County by State aid was limited to a relatively small total and the county eventually in November assumed the necessary expense, issuing \$15,000,000 in bonds. A proposal of Governor Small's to impose a State gasoline tax to defray highway improvement costs was opposed in December by the Cook County authorities as resting unduly on their portion of the State. The alleged failure of the State Tax Commission and the Cook County Board of Review to impose fully the State capital stock tax led in December to suit on the part of the Chicago Teachers' Federation in the Supreme Court of the State for a writ of mandamus to compel the imposition of this tax. The court denied leave to file this suit, on December 8.

The dispute over the diversion of water from Lake Michigan through the Chicago Drainage Canal led to the filing of briefs in the U. S. Supreme Court by a considerable number of States concerned in the maintenance of the Great Lakes water level or in the Niagara and St. Lawrence water power supply. The court appointed Charles Evans Hughes to take testimony in the action between Wisconsin, Ohio, Pennsylvania and Minnesota on the one side and the Chicago Sanitary District and the State of Illinois on the other. The main points at issue in the testimony were whether the Great Lakes water level had been lowered and whether Chicago diversion had lowered it.

As a move to provide against voting under fictitious names, the election commissioners in Chicago sent out early in the year great numbers of "suspect" notices, mailed to the addresses of registered names. Over 100,000 of the notices were returned for failure of the post to find the addressees. In all, it was reported on March 25, 218,217 names were struck from the voting lists for failure of their bearers to respond. The State law imposing a tax on foreign fire and marine insurance companies, under which Cook County laid claim to some \$25,000,000 of back taxes, was carried before the U. S. Supreme Court from the Illinois Supreme Court by the Hanover Insurance Co. Arguments were presented in October.

Feud violence among lawless elements and attacks on public officials continued throughout the year, at intervals, in Franklin, Williamson and Saline counties, in the southern part of the State. Joseph Adams, mayor of West City, was murdered in December, and subsequently authorities in Williamson and adjoining counties formed a plan of general cooperation against the lawless element. See **CRIME**.

**OFFICERS.** Governor, Len Small; Lieutenant-Governor, Fred E. Sterling; Secretary of State, Louis L. Emmerson; Treasurer, O. N. Custer,

Auditor, Oscar Nelson; Superintendent of Public Instruction, Francis G. Blair; Attorney-General, O. E. Carlstrom.

**JUDICIARY.** Supreme Court: Chief Justice, Clyde E. Stone; Associate Justices: Floyd E. Thompson, Warren W. Duncan, Frank K. Dunn, William M. Farmer, Oscar E. Heard and Frederic R. DeYoung.

**ILLINOIS, UNIVERSITY OF.** A coeducational State institution of higher education at Urbana-Champaign, Ill.; founded in 1867. The enrollment in the autumn of 1926 was 11,810, of whom 8624 were men and 3186 were women, distributed among the several colleges as follows: liberal arts and sciences, 4212; commerce and business administration, 1983; education, 894; engineering, 1656; agriculture, 649; music, 143; law, 315; library, 55; graduate school, 777; medicine, 489; dentistry, 156; pharmacy, 458, 2116 students enrolled for the summer session of 1926, of whom 1228 were men and 888 women. The number of those on the teaching staff above the rank of assistant was 758. In that grade or lower there were 433. The administrative officers totaled 25. The library contained 687,345 volumes and 94,716 pamphlets. The productive funds from Federal endowment were \$649,013, and from private gifts \$103,957. The income for the year was \$6,137,593. The principal buildings under construction in 1926-27 were one for architecture and one for pharmacy, besides additions to the library, gymnasium, and armory. President, David Kinley, Ph.D., LL.D.

**ILLINOIS WATERWAY.** See CANALS.

**ILSLEY, MOST REVEREND EDWARD.** Retired Roman Catholic Archbishop of Birmingham, England, died at Birmingham, December 1. He was born at Stafford, May 11, 1838, and was educated at Sedgley Park and Oscott College, Birmingham. He was ordained in 1861 and after serving for 12 years as assistant priest at Longton became rector of Olton Seminary in 1873, where he served for 10 years. In 1876 he was made canon of the Birmingham Roman Catholic Cathedral, and in 1879-88 he was Bishop of Fesse. In 1888 he became Bishop of Birmingham and in 1911 was made Archbishop of Birmingham, retiring in 1921. He was a governor of the Birmingham University, and president of the Birmingham Catholic Diocesan Schools Association.

**IMMIGRATION.** The second year of the operation of the 1924 Immigration Act in the United States passed with remarkable smoothness. Officials expressed themselves as well satisfied with the restrictive features and confined their suggestions for reform to provisions which would enable immigrants to unite their families on America's side of the water, without however altering materially the annual number of admissions. Progress was reported in getting European countries to agree to American supervision of prospective immigrants, and at the end of 1926, about 90 per cent of the quota immigration was arranged for on the other side under American technical advisers. This reduced very materially the number of rejections at Ellis Island and similar stations. During the year ending June 30, 1926, about 4 in 1000 (or a total of 20,000 persons) were turned back at Ellis Island. Previously 40 or 50 per 1000 was the average in rejected entries.

The Secretary of Labor recommended in his

annual report that not only wives but husbands and dependent fathers and mothers of American citizens be classed as non-quota immigrants, and that the age limit for their children be raised so as to cover all minors, instead of being limited to those 18 years of age or under. He also asked that within the quota limits special preference be given to children and other immediate relatives of aliens resident in the United States; that unused quotas be carried into the subsequent year; and that 5000 be allowed to take care of exceptional instances.

As regards the admission of husbands of American citizens, there was pending in Congress at the close of the year an amendment giving a non-quota status to such persons, this to balance the present provision of the law giving a non-quota status to alien wives of American citizens. With this amendment there was pending a legislative "rider" admitting wives and children of resident aliens to the total number of 35,000. Thanks to the intervention of Senator Wadsworth of New York, the Senate had passed this motion by a vote of 39 to 37, and there seemed every likelihood that the rider and the original amendment would pass the House.

If this rider were passed, it would correct a feature of the Immigration Act which in the opinion of most students of the subject had proved to be needlessly inhumane. When the 1924 law went into effect many thousands of alien husbands found themselves separated from their families, with the quota provision effectively barring any reunion in the United States. Agitation for the softening of the provisions of the quota law was widespread in the East—it was even a factor in the New York gubernatorial election of 1926—but it failed to move Congress. Perhaps the reason for this was the fear that under the guise of humane revision, the restrictive features of the Immigration Act would be nullified. Senator Wadsworth's amendment, by limiting the number of admissible cases to 35,000 and apportioning these among aliens who have declared their intention to become American citizens, was designed to take away the force of the usual objections.

An additional reform recommended by the Secretary of Labor called for the granting of a visa to an entire family, entitling the members not sailing with the father to follow him within a specified time. This reform would make it easier for entire families to establish themselves in the United States, since for economic reasons it is customary for the father to seek to establish himself first before trying to bring over the rest of his family. Under the existing law, he had to take his chances with securing visas for the rest of his family.

The effects of restricted immigration were noticeable in many ways. Commissioner Curran of Ellis Island declared in a speech before the New York State Conference of Charities and Correction that there was a great decrease in the amount of money spent on charities for immigrants and their children. He cited cases of day nurseries which were closing up. Before the Immigration Act he said that about \$50,000,000 a year, or \$1,000,000 a week, were spent on immigrant charities. Now the sum was much less, according to the Commissioner. He did not, however, give any figures showing the decreased expenditures.

The shortage of immigrant labor was reflected in the greater use of Negroes, Mexicans, and Porto Ricans for construction work and other unskilled occupations. It was also reflected in rising construction costs in Eastern cities.

TABLE 1

ALIENS ADMITTED TO THE UNITED STATES DURING THE FISCAL YEARS ENDED JUNE 30, 1925 AND 1926, BY SPECIFIED CLASSES

<i>Classes</i>	<i>Fiscal year, 1925</i>	<i>Fiscal year, 1926</i>
Grand total admitted .....	458,435	496,106
Total admitted under the immigration act of 1924 .....	457,086	496,106
Total nonimmigrants .....	60,203	88,758
Government officials, their families, attendants, servants, and employees .....	1,950	5,666
Temporary visitors for:		
Business .....	14,161	19,951
Pleasure .....	20,865	36,663
In continuous transit through the United States .....	22,697	25,574
To carry on trade under existing treaty .....	230	904
Total nonquota immigrants ....	250,912	249,916
Wives of United States citizens ..	4,171	6,810
Children of United States citizens ..	3,046	4,344
Residents of the United States returning from a visit abroad ..	64,632	83,754
Natives of Canada, Newfoundland, Mexico, Cuba, Haiti, Dominican Republic, Canal Zone, or an independent country of Central or South America ..	175,069	150,299
Their wives .....	623	965
Their children .....	173	190
Ministers of religious denominations ..	694	664
Wives of ministers .....	295	235
Children of ministers .....	486	436
Professors of colleges, academies, seminaries, or universities ..	187	151
Wives of professors .....	49	39
Children of professors .....	25	26
Students .....	1,462	1,020
Veterans of the World War .....	72	72
Wives of veterans .....	3	3
Children of veterans .....	8	8
Total quota immigrants (charged to quota) .....	145,971	157,432

\* Does not include aliens born in nonquota countries who were admitted as Government officials, visitors, transients, returning residents, etc

For the year ending July 30, 1926 a net total of 95,000 quota immigrants from Europe were added to the labor supply. Seven European countries (as compared with nine the previous year) received more emigrants than they sent immigrants into the United States. These countries are Greece, from which 1121 persons were admitted to the United States, and 5164 returned; Italy, 8253 admitted, 19,980 returned; Rumania, 1211 admitted, 1404 returned; Spain, 326 admitted, 2465 returned; Yugoslavia, 1059 admitted, 2342 returned; Finland, 491 admitted, 519 returned; and Portugal, 666 admitted, 2926 returned.

For figures of other countries, see the Statistical Abstract and the accompanying tables.

QUOTA. An interesting and illuminating commentary on the "gerrymander" purpose behind the Immigration Act was provided by the semi-official announcement at the very close of the year that the "national origins" plan would not be put into operation on the date, July 1, 1927, as scheduled in the law. The reason given was that the application of this provision (Section

11, subdivision B) of the 1924 law would have the effect of reducing immigration from the countries of Northern Europe and increasing immigration from Russia and Italy, and that this was contrary to the purposes sought by some of the framers of the Immigration Act.

\* Includes aliens to whom visas were issued during the latter part of the fiscal year ended June 30, 1925, and charged to the quota for that year. (Nationality for quota purposes does not always coincide with actual nationality. See sec. 12 of the immigration act of 1924.)

\* Annual quota for colonies, dependencies, or protectorates in Other Europe, Other Asia, Other Africa, Other Pacific, and in America, is included with the annual quota for the European country to which they belong. Quota for Turkey in Asia is included with that for Turkey in Europe.

The system in operation in 1926 (Section 11, subdivision A, of the 1924 law) provided that the annual quota of any nationality should be 2 per cent of the number of foreign born individuals of such nationality resident in Continental United States, as determined by the census of 1890. An added stipulation makes the minimum quota 100. Under this system 164,000 "quota immigrants" are eligible for admission each year.

The "national origins" plan, which was to have superseded the 2 per cent quota, provides for the division of the world into geographical areas and for the basing of admissions on the number of inhabitants in Continental United States in 1920 whose origin by birth or ancestry is attributable to such geographical areas. The total number of quota immigrants, under this plan, was to be 150,000, each nationality or geographical area being entitled to a pro rata share of this total.

Under the law the determination of "national origins" is to be made by the Secretaries of State, Commerce and Labor, and these officers are to report their conclusions to the President. Thereupon the President is to proclaim the quotas so reported.

There was much speculation as to the possibility of compiling accurate statistics of national origins. Certain officers of the Census Bureau declared that there were no figures in existence upon which to base such statistics. But later it appeared that the cabinet officers were able to make a preliminary report of national origins quotas, and that these quotas showed a reduction for such countries as Ireland, Germany, the Scandinavian countries, Holland and Switzerland, and an increase for such countries as Russia, Italy, and England. Thereupon, according to the semi-official statement, President Coolidge asked the secretaries to suspend their labors for the present.

Some doubt was expressed as to whether the President had discretionary power as to the putting into operation of the national origins plan. It was said that he might seek the repeal of this provision of the law.

STATISTICS. The fiscal year 1926 was the second full year covered by the Immigration Act

of 1924, described in the 1924 YEAR BOOK. Comparative figures showing the operation of the Act during the years 1925 and 1926 are therefore available. While the eligible quota figure of 164,667 remained unchanged, it is interesting to note that in 1926 95 per cent of this total, or 157,432, was the number actually admitted under the quota provision. This compares with 145,971, or 89 per cent of the quota total, admitted under this head in the fiscal year 1925.

The total number of alien admissions, both in 1925 and in 1926, was far in excess of the quota total. In 1926, 496,106 persons were admitted to the United States under the immigration laws, as against 457,086 admitted in 1925. Table 1 shows the status of these admitted persons under the law and the comparative figures by classes for the years 1925 and 1926. It will be seen that of the 1926 total of nearly half a million admissions, 88,758 were non-immigrant visitors, and 249,916 were non-quota immigrants. Of this latter total about 60 per cent or over 150,000 were immigrants from the Western Hemisphere, against which no quota restrictions apply, and less than 100,000 were immigrants from quota countries who were specially exempted from the quota restrictions. But as this exempt class included 83,754 former residents of the United States, it will be seen that only 14,000 net exemptions were granted to quota countries, this 14,000 being made up for the most part of wives and children of American citizens.

The operation of the quota law by countries is indicated in Table 2. It will be seen that 155,118 quota immigrants came from European countries and slightly over 2000 quota immigrants were admitted from Asia and from the countries of the Pacific.

As the principal purposes of the quota law were, first, to limit the total of immigration from Europe and Asia, and, second, to restrict, within this total, the immigration from Southern and Eastern Europe, it is interesting to see how these purposes have been realized by the law. Table 3 shows the figures for immigration by specified areas over a number of years. In 1914, 894,258 immigrants were admitted from the countries of Southern and Eastern Europe, and in 1926 only 29,125 were admitted from these countries! From Northern and Western Europe 164,133 immi-

TABLE 3  
IMMIGRANT ALIENS ADMITTED, IN FISCAL  
YEARS SPECIFIED, FROM CERTAIN AREAS

Fiscal year (ended June 30)	Total admitted	Northern and western Europe	Southern and eastern Europe	Per cent of total

1923....	522,919	156,429	151,491	29.9	29.0
1924....	706,896	203,346	160,993	28.8	22.8
1925....	294,314	125,248	23,118	42.6	7.9
1926....	804,488	126,437	29,125	41.5	9.6

grants were admitted in 1914, and 126,497 in 1926. The 1926 figures do not include quota-exempt immigrants; but, as we have seen, this class is comparatively small, and its inclusion within the 1926 totals would not materially alter the showing.

TABLE 4  
ALIENS DEBARRED FROM ENTERING THE  
UNITED STATES DURING THE FISCAL  
YEAR 1926, BY CAUSES

<i>Causes</i>	
Insanity, epilepsy .....	61
Other physical conditions .....	207
Loathsome or dangerous contagious disease .....	507
Other physical conditions .....	207
Likely to become a public charge .....	3,596
Professional beggars and vagrants .....	10
Assisted aliens .....	55
Accompanying aliens .....	77
Under 16 years of age (unaccompanied by parent) .....	94
Unable to read (over 16 years of age) .....	682
Contract laborers .....	724
Criminals .....	273
Immoral classes .....	95
Had been deported within one year .....	17
Under section 17 of immigration act of 1924 ..	39
Without proper visa under immigration act of 1924:	
At land border ports .....	11,579
At seaports .....	2,354
All other causes .....	2
Total .....	20,550

Besides the success in limiting immigration numbers, the new Immigration Act has to its credit the decrease in the percentage of rejections at the ports of arrival. In the year 1926 only nine-tenths of 1 per cent of the total applicants at the seaports were rejected. This is against 1.6 per cent in 1925 and 1.7 per cent in 1924. The major part of the rejections, or 79 per cent of the total rejections at the seaports, were on account of lack of proper visa and represented largely stowaways and seamen seeking permanent admissions. Of the applicants for admission who had secured proper visas from American consuls, less than two out of every thousand, or two-tenths of 1 per cent were rejected. Table 4 gives the causes of the rejections.

REGISTRATION OF ALIENS. Table 5 gives the number and the causes of deportations of aliens during the year 1926. The total number of

Total .....	10,904

deportations was 10,904, an increase of 1409. It is the greatest number deported in any year since the establishment of the Immigration Service. Of this total 4582 were charged with having entered the United States without proper visa under the Immigration Act and 902 were charged with having entered without inspection.

Agitation for the registration of all aliens now resident in the United States continued during the year. The Secretary of Labor in his annual report renewed the recommendation for registration which he had made in the previous report. The Commissioner of Immigration, however, was firm in his belief that registration was a necessity. "As a protection to those who are legally here and to discourage attempts to gain admission in violation of our statutes," said the Commissioner, "authority and funds should be given to the department to make a country-wide survey and registration of our alien population, and to institute a registration system for newcomers. We can not more than estimate the number who are here unlawfully and who are daily effecting entry surreptitiously by means of false and misleading statements: but with the result of such a survey and registration we could approach Congress with the proper recommendations for the legislative control of the alien problem."

The Commissioner coupled his recommendation for registration with a proposal for legalizing the residence of those aliens who have entered the United States illegally but who are otherwise law-abiding. He proposed examinations before immigrant inspectors and officers

of the Public Health Service, thus dispensing with the present legal necessity of departure and reapplication under existing quotas. The Commissioner's proposal was intended for those who entered the country illegally before the Quota Law. Those who have entered the country illegally since the Quota Laws could not meet the legal qualifications for entry except by passing through the quota system. The effect of the two proposals would be to establish complete control over aliens by the Department of Labor, and many publicists and students opposed the plan on just that ground.

HEALTH INSPECTION. During the year 1926, immigration officers and public health surgeons were assigned to the American consulates in

<sup>a</sup> Comprises Andorra, Gibraltar, Iceland, Liechtenstein, Malta, Monaco, and San Marino.

<sup>b</sup> Includes Afghanistan, Arabia, Bhutan, Iraq (Mesopotamia), Muscat, Nepal, Siam, Siberia, and "Asia, not specified."

<sup>c</sup> "United States" under nonimmigrants covers aliens returning to this country to resume residence therein after a temporary stay abroad; and under nonimmigrants covers aliens departing for a visit abroad with the intention of returning within one year to renew permanent residence in this country.

<sup>d</sup> Comprises Greenland and the islands of St. Pierre and Miquelon.

<sup>e</sup> Comprises Nauru, New Guinea, Samoa, Yap, and "Pacific islands, not specified."

Belgium, the Netherlands, Poland, Germany, Norway, Denmark and Sweden. Previously this service was available only in the United Kingdom of Great Britain and Ireland. The new assignments were made possible by agreement with the countries involved. They succeeded in cutting down the rejections of immigrants at the ports of entry, as was stated above.

**ORIENTAL IMMIGRATION.** Tables 6 and 7 give the figures for Chinese and Japanese immigration and emigration. In the case of the Chinese it should be borne in mind that a large number are admitted on the grounds of American citizenship. Two thousand three hundred and ninety-six such persons were admitted during the fiscal year 1926. Most of them had their citizenship as children of Chinese who were born in the United States.

**POPULATION INCREASE.** Table 8 gives the net increase or decrease of population by admission and departure of aliens for the fiscal year 1926. It is to be noted that the increase in population due to European immigration was to immigration from the Western Hemisphere only 97,296. The net increase in population due was 169,901, or nearly twice as much.

**IMPORTS.** See articles on various countries.

**IMPORTS. AGRICULTURAL.** See AGRICULTURE.

**INCINERATION.** See GARBAGE AND REFUSE DISPOSAL.

**INCOME TAX.** See TAXATION.

**INDEPENDENT METHODIST CHURCH.** See METHODISTS, WESLEYAN.

**INDIA.** A dominion of Great Britain, consisting of the peninsula of Hindustan and the region to the north, and including in addition to the territory directly governed by British officials, Indian states which are indirectly governed, that is to say, subject to British law. Capital, Delhi.

**AREA AND POPULATION.** The total area, including the Indian states and agencies which are in political relations with the government, according to the census of 1921, was 1,802,629 square miles, of which 1,094,300 square miles were in the British provinces. The total population in 1921 was 318,942,480 as compared with 315,156,396 in 1911. The population of the British provinces in 1921, was 247,003,293 as compared with 243,933,178 in 1911. In 1923 the census commissioner for India estimated the population at about 319,000,000 or a gain of 1.2 per cent over 1911; average density, 177 to the square mile; maximum provincial density, 608 to the square mile in the province of Bengal. Over 90 per cent of the population were classed as rural, only 9½ per cent living in towns of 5000 or more.

The religious enumeration of the total population in 1921 was: Hindus, 216,734,586; Moslems, 68,735,233; Buddhists, 11,571,268; Animistic, 9,774,611; Christians, 4,754,064; Sikhs, 3,238,803; Jains, 1,178,596; Parsis, 101,778; Jews, 21,778. The preponderating languages are Hindi, Bengali, and Telugu. Cities of over 250,000, with their populations in 1921 are: Calcutta (with suburbs), 1,327,547; Bombay, 1,175,914; Madras, 526,911; Hyderabad, 404,187; Rangoon, 341,962; Delhi, 304,420; Lahore, 281,781; and Ahmedabad, 274,007.

**EDUCATION.** According to the latest report of the Bureau of Education of the Indian government, there was an increase of 9113 recognized

institutions of learning and 482,060 students in the fiscal year 1924-25 over the figures for the preceding year. This increase in registration, however, is not as encouraging as it may seem at first glance, since 400,000 of the 482,060 additional students are of primary school status. Allowance must also be made for the normal growth in population. About 15 per cent of the country's total population is of school-going age. The Indian government's expenditures for education in 1924-25, when school and college attendance totaled 9,797,344 students, amounted to \$31,936,610, a sum representing less than \$0.10 for each person of the population. In the United States the annual expenditure is \$16.25 per capita for public education. Notwithstanding sincere and earnest effort, little real advancement has been made in the education of the masses, according to the statistics of the bureau of education. Of the country's vast population it is stated that 90 per cent is illiterate.

**PRODUCTION.** Notwithstanding the great progress made along industrial lines in India during recent years the country's economic structure is still based on agriculture. In all probability this condition will continue for many generations. According to recent estimates, two-thirds of the Indian Empire's 319,000,000 population is directly dependent upon agriculture, and, adding those indirectly supported by the products of the soil, the proportion, no doubt, would be much higher—perhaps nine-tenths. In India the economic status of the farmer has remained stationary for centuries.

Although the great purchasing power of India is centred in its agricultural population, only a small proportion has the means to buy more than the merest necessities. After feeding himself and his family and paying taxes, the average farmer has just enough left to barter at the village for a few tools and a few yards of cloth. According to recent estimates the net per capita annual income of the farmer and members of his family is about \$25, as compared with \$33.33 for the urban worker. The Indian government and the enlightened princes, are seeking to raise the status of the farmer; and the farmer himself, as evidenced by the coöperative movement, is not slow to take advantage of the assistance offered.

According to the United States Bureau of Foreign and Domestic Commerce, India, which is among the largest agricultural producing areas of the world, has shown no marked expansion in its agricultural output during the last 15 years. The area under cultivation of rice increased by approximately 10,000,000 acres. Tea fields increased by 120,000 acres. The areas of several other crops have shown expansion during some years, but taking the average over periods of five years each, there have been no other expansions than the exceptions cited. In yield, rice, tea, cotton, coffee, and rubber show marked increases, owing in most instances to improved methods of agriculture. During 1924-25, both the area under cultivation and the yield of the principal crops show up well in comparison with the preceding five-year period. In virtually all instances there is an increase in the area under cultivation—rice, wheat, and cotton showing the largest gains, while the yields of rice, tea, jute, rubber, and coffee were also considerably larger. The area under culti-

vation in India during recent years is given in the accompanying table:

#### AREA UNDER CULTIVATION IN INDIA [In acres]

Crop	Five-year average		
	1915-16 to 1919-20	1919-20 to 1923-24	Year 1924-25
Rice	79,519,000	80,311,000	81,388,000
Wheat	80,499,000	29,194,600	31,788,000
Sugar cane	2,656,000	2,663,000	2,580,000
Tea	664,000	704,860	716,200
Cotton	21,861,000	21,722,000	26,465,000
Jute	2,631,000	2,290,780	2,770,000
Linseed	3,157,000	3,097,800	3,695,000
Rape and mustard	6,169,000	5,939,800	6,376,000
Sesamum	4,450,000	4,913,800	5,167,000
Groundnut	1,785,000	2,258,200	2,838,000
Indigo	475,000	258,620	111,900
Coffee		124,760	135,600
Rubber		124,260	129,500

The accompanying table gives the yields of crops under cultivation in India:

#### YIELD OF CROPS IN INDIA

Crop	Five-year average		Year 1924-25
	1915-16 to 1919-20	1919-20 to 1923-24	
Rice	32,017,000	30,944,800	31,097,000
Wheat	9,288,000	9,258,400	8,702,000
Sugar cane	2,864,000	2,907,400	2,537,000
Tea	374,265,000	336,730,120	375,255,900
Cotton	4,412,000	4,823,600	6,070,000
Jute	7,992,000	6,488,060	8,062,000
Linseed	434,000	424,200	541,000
Rape and mustard	1,072,000	1,087,600	1,172,000
Sesamum	421,000	454,000	504,000
Groundnut	952,000	1,024,600	1,450,000
Indigo	74,000	48,240	21,700
Coffee		22,688,500	29,318,600
Rubber		12,567,120	15,601,800

A steady increase of the area under irrigation in India is indicated by reports of the Indian Department of Labor and Industries. Comparative figures for the individual provinces are given in the accompanying table:

#### AVERAGE AREA IRRIGATED ANNUALLY IN BRITISH INDIA

Province	Average	
	1918-1921 Acres	1921-1924 Acres
Madras	7,276,257	7,151,988
Bombay Deccan	398,575	428,750
Sind	3,040,020	3,436,321
Bengal	108,618	100,482
United Provinces	3,501,848	2,433,585
Punjab	9,273,009	10,465,404
Burma	1,461,465	1,630,794
Bihar and Orissa	988,368	960,505
Central Provinces	331,551	431,579
Frontier	341,809	390,849
Rajputana	20,947	19,422
Baluchistan	24,833	23,685
Total	26,767,300	27,473,334

An interesting comparison of the acreage of crops matured during 1923-24 by means of government irrigation systems with the total area under cultivation shows that nearly 12 per cent was irrigated. The figures province by province, are as follows:

#### AREA IRRIGATED AND TOTAL AREA UNDER CULTIVATION IN 1923-24

Province	Net area cropped Acres	Area irrigated Acres
Madras	36,424,000	6,891,000
Deccan	39,000,000	418,000
Sind	4,134,000	3,427,000
Bengal	22,806,000	93,000

#### AREA IRRIGATED AND TOTAL AREA UNDER CULTIVATION IN 1923-1924—Continued

Province	Net area cropped Acres	Area irrigated Acres
United Provinces	35,011,000	1,979,000
Punjab	26,731,000	10,207,000
Burma	13,857,000	1,730,000
Bihar and Orissa	24,665,000	954,000
Central Provinces	17,427,000	438,000
Frontier	2,593,000	359,000
Rajputana	281,000	16,000
Baluchistan	286,000	26,000
Total	223,215,000	26,538,000

The raising of livestock is of some importance, the animals raised including sheep, goats, donkeys, horses, mules, oxen, camels, and buffaloes. There is a large production of skins and hides. The forests of India cover 249,504 square miles of which 103,780 are under the direct control of the State Forest Department. The chief in-

dustries are the tea industry, and the weaving of cotton cloth. India is finding it hard, however, to compete with Japan in the latter industry. Others are silk weaving, carpet weaving, metal working, and wood carving. About 12 per cent of the population are engaged in industry.

Mineral resources are rich and varied and include gold, coal, petroleum, lead, mica, manganese, saltpetre, salt, tungsten ore, silver ore, and precious stones. The principal petroleum fields are in Burma and Assam.

COMMERCE. India's overseas trade in 1925 reached the highest value ever attained, notwithstanding a decline in imports from the preceding year. Exports of Indian merchandise increased from 3,690,466,000 rupees in 1924 to 3,959,537,000 in 1925, or about 7 per cent, while imports of private merchandise declined from 2,437,602,000 to 2,261,805,000 rupees, a loss of 7 per cent. Trade in treasure was also of record proportions. Imports and exports of gold and silver, coins, currency notes, and similar items, aggregated 860,000,000 rupees as compared with the next highest figures—680,000,000 during 1923. Imports into Burma, the rice and teak province, increased in value as did its exports, but imports into Bombay, Bengal, and Madras declined, notwithstanding larger shipments by each to overseas markets.

FINANCE. Preliminary figures of the Indian budget for the fiscal year 1926-27 indicated an estimated surplus of 30,500,000 rupees. Important features of the new budget were the absence of new taxes, further reductions in provincial contributions to the central government, and the proposed abolition of the cotton excise duty. Of the estimated surplus of 30,500,000

rupees, 12,500,000 were to be devoted to reducing the provincial contributions as follows:

**INDIAN PROVINCIAL CONTRIBUTIONS BASED UPON ESTIMATED SURPLUS FOR 1926-27\***

Provinces	Contribution	
	1925-26 Rupees	1926-27 Rupees
Madras .....	22,200,000	16,500,000
United Provinces .....	18,400,000	15,100,000
Punjab .....	11,400,000	8,600,000
Burma .....	5,700,000	5,000,000
* Contributions from Provinces not mentioned remain unchanged.		

The balance of the estimated surplus will, perhaps, be extinguished by the permanent abolition of the cotton excise duty recommended by the finance member. Total expenditures budgeted for 1926-27 amounted to 1,303,800,000 rupees, against expected revenues of 1,334,300,000. These figures compare with a revised estimate for the previous fiscal year of 1,300,500,000 for expenditures and 1,313,500,000 for revenues. Although the budget indicated a slight increase in expenditures, military expenses were expected to show a reduction of 13,700,000 rupees, while interest charges were to be reduced by 10,000,000 rupees. No external loans were to be raised during the year, but a domestic issue of 220,000,000 rupees, including 200,000,000 for conversion purposes, was to be ordered. The Indian public debt on Mar. 31, 1925, was 10,137,100,000 rupees, as compared with 9,688,300,000 rupees on Mar. 31, 1924, and 5,512,900,000 rupees on Mar. 31, 1914.

The Indian Currency Commission, appointed in August, 1925, to investigate the monetary system of India and to make recommendations for proposed changes, announced its results on Aug. 6, 1926, simultaneously in London and India. The outstanding features of the report were the advocacy of a gold standard for India and the creation of a distinct central reserve bank and bank of issue. The commission recommended the immediate stabilization of the rupee at the rate of 1s. 6d., and the creation, not later than January, 1929, of a central reserve bank with separate note issue and banking departments, the banking department to hold the reserves of the Bank of India. The proposed reserve bank would have for 25 years the sole right of note issue throughout India, the notes being guaranteed by the state. The present note issue of the Indian government would cease to be legal tender within five years after the inauguration of the new bank. In regard to the gold standard, the commission did not contemplate the minting and circulation of gold coin but the redemption of notes and silver rupees in gold bullion at the fixed rate. The date recommended for the institution of the gold standard was set at not later than January, 1931, two years after the creation of the new bank of issue; but meanwhile the stabilization of the rupee was recommended for immediate adoption. The government postponed legislative action on the suggestions of the commission until February, 1927.

**COMMUNICATIONS.** The total number of vessels entered and cleared in the foreign trade of India in 1924-25 was 8022 of 17,656,072 tons. The railway lines open on Mar. 31, 1925, totaled 38,270 miles, of which 27,325 were Imperial State lines and 4703 Indian State lines. The gross revenue of Indian state-owned railways,

comprising nearly three-fourths of the total mileage of all Indian railways, amounted to \$361,818,182 during the fiscal year 1925-26 and the net revenue to \$131,818,182. On all railways 599,000,000 passengers were carried, an increase of 23,000,000 over the figures for the previous year; and, as a result, passenger earnings increased \$2,545,455. The statistics also show that there was a satisfactory increase (nearly 2,000,000 tons) in freight traffic, but in spite of this, earnings from this source decreased by approximately \$7,272,727. In accordance with the policy of railway extension in the Punjab, the construction of two lines had been sanctioned by the Railway Board. The first was between Lyallpur and Jaranwala, a distance of 22 miles, passing through a rich tract irrigated by the lower Chenab Canal. The other was to connect Rohtak, Gohana, and Patipat, a distance of about 45 miles, forming a direct connection with the Delhi-Ambala line of the North-Western Railway.

**GOVERNMENT.** Executive and legislative power, in India, rests with the governor-general in council. The council consists of no fixed number of members, but at least three of them must have had 10 years service in India and one must be a lawyer of at least 10 years standing. The administration of India in England is under a secretary of state for India, aided by a council appointed by him, of which at least half the members must have been residents of India for 10 years and must not have left India more than five years previous to their appointment. A high commissioner for India in the United Kingdom acts as agent of the governor-general in council, and conducts business assigned by the secretary of state. There is also in India a legislature consisting of the governor-general and two chambers, namely the council of state and the legislative assembly, both constituted under the Montagu-Chelmsford programme. See preceding YEAR BOOKS. The viceroy and governor-general during 1926, was Baron Irwin of Kirby Underdale (appointed in April, 1926). The secretary of state for India was the Earl of Birkenhead (appointed November, 1924). The High Commissioner for India in the United Kingdom was Sir A. C. Chatterjee (appointed in 1925).

**HISTORY.** The year in India was a comparatively quiet one, although the usual dissensions between the Hindus and the Moslems cropped up from time to time and the Swarajist movement was kept alive although Gandhi announced at the beginning of the year that he decided to take a rest for at least a year. This was interpreted as meaning that he was going to retire from politics and permit the movement to go its own way. Lord Reading, who retired during the year as Viceroy and Governor-General, opened the last session of the Legislative Assembly during his term of office on January 17. He complained mildly of the activities of the Nationalists and hoped for a better understanding between them and the British Government in the future. Throughout the meeting of the assembly the government generally was backed up by the Moslems and voted against by the Swarajists and Independents. On March 8 the Swarajist members of the Assembly left that group in a body as a protest against the government's refusal to consider further constitutional reforms at that time. On April 3, Lord Reading

retired and was succeeded by Lord Irwin, who as E. F. L. Wood, was Minister of Agriculture in the British Cabinet.

As noted above more or less serious riots occurred during the year between the Hindus and Moslems. These riots were particularly severe in May and the latter part of the summer and caused considerable damage and some loss of life. The property damage ordinarily took the form of the destruction of temples and mosques, and other places with religious significance.

In the month of December, elections were held throughout India for seats in the National Assembly. The results were rather striking because they foreshadowed the break-up of the Swarajist movement. The members of this group had their representation reduced from 46 to 37, which meant that they lost control of the body, and if they were to continue their opposition to the government they would have to form a coalition with some other group. The results of the election led to the belief that the existing government of India would continue until 1929, when a new survey was to be made to determine whether India was ready for more self-government. On December 29, the Indian National Congress decided to return to the principles of Gandhi and use the boycott and non-coöperation with the British government which were his favorite weapons.

**INDIANA. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,930,390. The estimated population on July 1, 1926, was 3,124,000. The capital is Indianapolis.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1926	4,672,000	170,528,000	\$85,264,000
	1925	4,672,000	203,232,000	111,778,000
Wheat winter	1926	1,697,000	33,940,000	42,086,000
	1925	1,768,000	25,636,000	39,736,000
Wheat, spring	1926	6,000	108,000	130,000
	1925	4,000	64,000	97,000
Hay, tame	1926	2,015,000	2,536,000 *	35,504,000
	1925	2,005,000	1,982,000 *	30,721,000
Oats	1926	2,234,000	67,020,000	23,457,000
	1925	2,138,000	59,864,000	22,150,000
Potatoes	1926	48,000	3,840,000	6,336,000
	1925	50,000	4,150,000	8,964,000
Tobacco	1926	16,700	14,913,000 *	1,491,000
	1925	21,000	18,291,000 *	3,292,000
Rye	1926	145,000	2,102,000	1,787,000
	1925	145,000	1,653,000	1,405,000

\* tons, \* pounds.

**MINERAL PRODUCTION.** The total value of the mineral production of the State in 1924, with duplications eliminated, was \$112,209,075; in 1923, \$130,885,954. The chief products are in the order of their value coal and coke, pig iron, stone and clay products. The coal produced totaled 21,224,066 net tons in 1925 and in 1924, 21,480,213 tons; its value was in 1925, \$42,884,000 and in 1924, \$40,453,000. Coke production was, in 1924, 4,272,435 short tons and in 1923, 5,042,614 tons; it was valued in 1924 at \$30,394,497 and in 1923 at \$46,765,264. Of pig iron there was produced 3,350,747 long tons in 1925 and 2,571,411 long tons in 1924; in value, \$64,807,575 in 1925 and \$52,507,720 in 1924. Production of stone totaled 3,824,440 short tons in 1924 and 3,650,110 short tons in 1923; valued

at \$17,269,407 in 1924 and in 1923 at \$17,692,112. Clay products attained in 1924 a value of \$16,368,139, as against \$15,643,128 in 1923. Petroleum production declined in amount to 825,000 barrels in 1925, from 935,000 barrels in 1924; in value it totaled \$1,700,000 in 1925 and \$1,720,000 in 1924. Sand and gravel, lime, natural gas and oil asphalt were also produced.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending Sept. 30, 1925, were \$22,260,591. Their rate per capita was \$7.29, as against \$7.57 in 1924 and \$4.28 in 1917. Their total included \$5,056,716 for education, apportioned to minor State divisions. Expenses totaling \$159,641 for interest on debt and \$13,389,085 for permanent improvements, added to payments for maintenance and operation of State departments, made the total of State payments \$35,818,917. For highways was expended the sum of \$14,591,445, of which \$4,045,587 was for maintenance and \$10,545,858 for construction.

Revenue receipts of the State were \$40,513,739, or \$13.26 per capita. They exceeded by \$18,093,507 the total payments except those for permanent improvements, and furthermore exceeded by \$4,694,822 the total with these included. This excess was reflected in purchase of investments, payment of debt and cash balances. Property and special taxes formed 40.7 per cent of the revenue in 1925, as against 43.2 per cent in 1924 and 61.1 per cent in 1917. Their per capita rate was \$5.40 in 1925, \$5.34 in 1924 and \$3.10 in 1917. Earnings of the general departments and compensation for officials' services furnished 8.7 per cent of the 1925 revenue; business and non-business licenses, 32.5 per cent. License receipts were derived chiefly from taxes on incorporated companies and on sales of gasoline, and from the licensing of motor vehicles.

The net indebtedness of the State on Sept. 30, 1925, was \$1,674,615, or 55 cents per capita, as against 56 cents in 1924 and 6 cents in 1917. The assessed valuation of property subject to State tax was \$5,271,576,485. The State tax levy was \$14,760,414, or \$4.83 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 7187. No new construction of moment in 1926 was reported.

**EDUCATION.** Efforts of the teaching organizations were concentrated chiefly on the object of procuring the early enactment of a statute giving firmer assurance of tenure of positions to both teachers and superintendents of schools. It was the purpose of the advocates of such a measure to render the teaching organization freer of outside influences liable to interpose in the functioning of the teaching system and to keep the personnel subservient to locally prevalent views and interests. Both the State Teachers' Association and the State Federation of Public School Teachers took part in the endeavor to secure the passage of a tenure law.

The higher State-supported institutions of learning in Indiana underwent an investigation at the hands of a special committee of educational experts from other States, consisting of Floyd W. Reeves, Charles H. Judd, John A. H. Keith, Frank L. McVey and George A. Works. The report of this body, rendered in December, recommended establishment of more

normal schools, centralization of the professional schools now distributed among the two State universities, at Indianapolis, placing the three agricultural schools under one head and, combining their farm lands. Financial support given the State colleges was not found comparable to that rendered elsewhere in the Middle West. Much of the material equipment was judged inadequate. Salaries paid were deemed inadequate to assure retention of staffs of the required standard. Absence of adequate retirement provisions was blamed for a heavy turnover.

The school population of the State in May, 1926, was estimated at 830,611 between the ages of 6 and 21. Enrollment in the public schools of the State in the year 1925-26 was 635,227, kindergartens included; that in public common schools, grades one to eight, was 501,745; that in high schools, 120,204. Current operating expenses of public education for the year amounted to \$49,488,230. Teachers' salaries ran from an average of \$1824 for city high schools to \$927 for rural elementary schools.

**CHARITIES AND CORRECTIONS.** There were on Sept. 30, 1926, 15,769 inmates in the State institutions; in addition, there were 3535 in county poor asylums, 1285 in county jails and 1915 in orphans' homes. The institutional total for State and counties was 22,504. The Board of State Charities, created in 1889, has supervision of prisons, public hospitals and asylums. There were under its supervision in 1925, 20 State charitable and correctional institutions, 92 county poor asylums, 90 county jails, 21 county general hospitals, 100 maternity homes and maternity wards, 62 children's homes and 2700 dependent neglected children placed in private homes. Eight State institutions for mental cases had a population of 8420.

**POLITICAL AND OTHER EVENTS.** At the general election on November 2, two United States Senators were chosen. Senator James E. Watson, Republican, whose six-year term was to expire with the close of the 69th congress, was re-elected, for the term beginning Mar. 4, 1927, defeating Albert Stump, the Democratic candidate, by a majority of about 11,500. Senator Arthur R. Robinson, Republican, who went to the Senate when nominated to succeed Samuel M. Ralston, deceased, was elected to succeed himself, for the unexpired balance of the six-year term ending in 1929. Of the Indiana delegation in the existing House of Representatives, consisting of 10 Republicans and three Democrats, all were re-elected to the 70th Congress.

Atty.-Gen. A. L. Gillion of the State opened on October 10, an investigation of the political activities of the Ku Klux Klan (q.v.) His action followed a long sustained effort, conducted by Thomas H. Adams, editor of the *Vincennes Commercial*, acting as chairman of a committee of Republican editors, to effect an investigation of political corruption and of the connections between the Republican State organization and the Ku Klux Klan. It was reported that the committee of the Republican Editorial association had obtained important evidence indicating political control of the State by the former Grand Dragon of the Ku Klux Klan in Indiana, D. C. Stephenson. Stephenson had subsequently to these political activities been found guilty of the murder of a woman in a bomb assassination in 1925 connected with a political feud,

and had been sentenced to life imprisonment. A delegation of citizens visited Stephenson in the State penitentiary at Michigan City, October 23, and sought to obtain from him admissions as to his acts of control over State politicians and office holders. Stephenson refused to answer their questions.

An ordinance passed in March by the council of the city of Indianapolis provided in effect for the segregation of persons of negro race in areas set apart for their residence. Colored persons were forbidden to occupy premises in what were denominated as white neighborhoods, even in cases where the intending colored occupants were the owners of the premises. A reciprocal regulation applied to the presence of whites in colored neighborhoods. Judge Chamberlin of the Marion circuit court held in December, rendering judgment for a negro litigant, that the ordinance deprived property owners of rights conferred by the U. S. Constitution, and was void.

The Marion County grand jury conducted an extended investigation of political conditions, based on the allegations of Thomas H. Adams, above mentioned, as to Ku Klux Klan control. It found no indictments but, December 27, recommended further investigation. Similar Grand jury proceedings were held at Evansville. A merger of Indianapolis electric utilities, the Indianapolis Light and Heat Co. and Merchants' Light and Heat Co., on the basis of a \$55,000,000 valuation was contemplated, but was opposed by the city corporation counsel, who sought an injunction to prevent the necessary hearing by the State public service commission, and named Stephenson (see above) as a defendant, upon the theory that the latter had had a part in the selection of public service commissioners.

**OFFICERS.** Governor, Ed Jackson; Lieutenant-Governor, F. H. Van Orman; Secretary of State, F. E. Schortemeier; Treasurer, B. H. Wibahn; Auditor, L. S. Bowman; Attorney-General, A. L. Gilliom; Superintendent of Public Instruction, Benjamin J. Burris.

**JUDICIARY.** Supreme Court: Julius C. Travis, David A. Meyers, Louis B. Ewbank, B. M. Willoughby, and Fred C. Gause.

**INDIANA, UNIVERSITY OF.** A coeducational institution of higher education at Bloomington, Ind.; founded in 1820. For the first semester of the academic year 1926-27 the registration aggregated 4162 students, of whom 2472 were men and 1690 were women. These were distributed as follows: arts and sciences, 2478; graduate school, 176; law, 96; commerce and finance, 155; music, 91; education, 265; medicine, 403; dentistry, 307; nurses training, 154; social service, 37. The faculty had 305 members. The endowment funds amounted to \$774,778.67, and the total income for the year, from state and private sources, was \$2,880,775.71. On June 1, 1925, Indiana Dental College was purchased by the university and in 1926 the four-year course as given at that time was changed to a five-year course. Construction of a wing to the Library Building, costing \$225,000, was completed in 1926. An additional appropriation of \$100,000 was given for library equipment. The library contained 183,500 volumes. President, William Lowe Bryan, Ph.D.

**INDIANS.** In the annual report of the U. S. Commissioner of the Bureau of Indian Affairs for the fiscal year 1925-6 attention was called

to a wide reorganization of the health, educational, and industrial activities and general field administration of Indian affairs as the principal accomplishment of the year. In this reorganization the field was divided into nine districts, each under the immediate supervision of a district superintendent. There was also a general superintendent with headquarters at Washington, and to this position H. B. Peairs was assigned.

**HEALTH.** During the year the medical service of the Indian Bureau was placed in charge of a United States Public Health Service officer, Dr. Marshall C. Guthrie, and the field service divided into districts with a Public Health Service medical officer at the head of each district. The district medical directors were to make inspections of Indian schools, hospitals, sanatoriums, and health features, study and report upon standardized methods of procedure and facilities, coordinate medical and sanitary activities by means of conferences, investigate and adjust controversies, report on matters affecting the Indian medical service, promote cordial relations with State and local public health organizations, and maintain offices as centres for Indian medical service activities. Provision was made for the services of an epidemiologist and of a physician specially qualified in tuberculosis and trachoma. It was also planned to increase the number of physicians and nurses engaged in the eradication of trachoma, the number of field dentists for reservation and school work, and the number of nurses who are specially trained for public-health work.

In 1926 the Bureau of Indian Affairs maintained health activities in 24 States, special attention being given to the prevention of disease. There were no unusually severe epidemics, and a successful campaign was waged during the early part of the year for more thorough vaccination against small pox. During 1926 extensive campaigns were conducted to combat trachoma and tuberculosis existing on the reservations, traveling specialists visiting the various reservations, where clinics were held for the benefit of the Indians.

Progress in combating tuberculosis included: successful operation of the new sanatorium school with a capacity of 100 beds at Shawnee, Okla.; the addition of a new dormitory at the Fort Lapwai Sanatorium, and the appropriation of funds by Congress for an additional dormitory and hospital building to be erected in 1927; the conversion of the boarding-school at Pyramid Lake, Nev., into a sanatorium school with a capacity for 80 patients. Trachoma work was expanded especially in the Southwest, two physicians and two nurses having been added in this district. Of 14,756 Indians examined for trachoma 4479 cases were found, 1938 of which were operated upon and 2541 treated without operation. During the year the construction of a hospital at the Klamath Agency, Ore., was begun, and a hospital on the Fort Peck Reservation at Poplar, Mont., was nearing completion. Health education was stressed in the Indian schools, the children being given courses of instruction in sanitation and preventive health measures.

**EDUCATION.** Nearly all the schools conducted by the Federal Government for the Indians were filled to capacity with 24,591 Indian children

in attendance. In accordance with the Bureau's policy favoring attendance of Indian children in State public schools, there were received in public schools 37,830. In addition to those enrolled in mission or private schools, the total enrollment in all schools for the year was 71,284, the Indian population of school age being 84,553. Tuition payments for Indian children in the public schools amounted to over \$311,000 for the year. Extension of the grades throughout the various Indian schools continued, senior high school grades being added to the Government schools at Albuquerque, New Mexico; Chillico, Oklahoma; and Salem, Oregon. Elementary grades at many of the reservation and day schools were also increased.

**LAND INTERESTS.** During the year 2592 allotments of land were made to individual Indians, embracing 13,177 acres within various reservations and 71 allotments to Indians on the public domain comprising 9783 acres. There were 205,953 acres of Indian lands leased for oil and gas mining purposes, being an increase of about 40 per cent over the acreage leased during the prior year. Within the Osage Reservation, Oklahoma, 45,874 acres were leased, making a total of 556,662 acres under lease for oil within that reservation. Indians other than the Osage and Five Civilized Tribes received an income from oil and gas leases of more than \$1,000,000. The Osage Tribe received from rentals and royalties a revenue of \$10,487,943. Leases of the Five Civilized Tribes, Oklahoma, produced an income of approximately \$4,425,213. The gross oil production on Indian lands for the year was 41,907,021 barrels.

**PROPERTY.** The value of Indian property, individual and tribal, was reported on June 30, 1926 as \$1,693,844,806. This total included \$1,033,947,224, the value of oil, gas, and other mineral resources within the Indian lands. Individual Indians owned land, exclusive of minerals and timber, to the amount of \$345,834,214, and land in tribal possession amounted to \$79,911,556.

**INDUSTRIAL AND SOCIAL PROGRESS.** The gradual improvement during the year in the livestock industry throughout the country redounded to the benefit of the Indians as well as others. The sheep industry was growing in many sections of the Indian country and was found to be an important factor in establishing home ties. Unusual interest shown by the Indians in increasing their cultivated acreage and developing better conditions generally was attributed largely to the assistance derived from the use of reimbursable funds, which are to the Indians what farm and bank loans are to the whites. There was a demand for Indian labor with adequate wages in land reclamation, railroading, agriculture, logging, nutting, fishing, driving taxicabs, as automobile mechanics, and in other fields. Graduates of the Indian schools secured employment in the mechanical trades, and as teachers, nurses, clerks, and home makers. These opportunities were accepted by the Indians in 1926 in larger measure than ever before. Annuity and per capita payments were made to Indians during the year to the amount of \$33,175,000.

**POPULATION.** On June 30, 1926, the number of Indians in the United States, not counting those of Alaska, was estimated from agency reports to be 349,876, an increase of 281 over

1925. There were 120,487 Indians in Oklahoma, or more than one-third of the entire number in the country. Arizona, with 44,729, ranked second. The five civilized tribes, the Choctaws, Cherokees, Creeks, Seminoles, and Chickasaws, whose tribal affairs were being closed, numbered 101,506.

**INDO-CHINA**, also known as **FARTHER INDIA**. The southeastern peninsula of Asia including the following divisions: Burma, politically attached to British India; Siam, a self-governing monarchy; French Indo-China, comprising Cambodia, Annam, Cochinchina, Laos, and Tongking; the Federated Malay States, a British protectorate; the Straits Settlements, a British colony; and the Malay States of Johore, Kedah, Kelantan, Perlis, and Trengganu. See the articles on **BURMA**, **FRENCH INDU-CHINA**, **SIAM**, and the other principal states previously mentioned.

**INFANT FEEDING**. See **FOOD AND NUTRITION**.

**INFANTILE PARALYSIS**. In the great majority of cases this disease has spread without the least inkling as to the nature of the mechanism, and in the average outbreak it is possible to exclude most of the ordinary modes of contagion, such as water or insect transmission. On the other hand the mode of spreading is now and then palpably evident although this leads to nothing definite, for it at once becomes evident that this kind of transmission is not the rule. In a small outbreak at Cortland, N. Y., described in detail by Knapp and two associates in the *Journal of the American Medical Association* for August 28, eight patients, who made up the great majority of the victims, had all drunk milk from the same dairy and it was established that a boy who worked at the latter had also developed the disease. To offset this, however, we find that most of the patrons of this dairy escaped the disease, not only before and after this episode but after having drunk of the supposedly infectious milk. An analysis of the situation appears to show that a certain small lot of the milk became accidentally infected somewhere between milking and distribution and that of the children and young people who drank this milk some were infected, older individuals having a natural immunity from the disease. One of the victims had taken but one drink of this milk.

About two months before this outbreak there had been a similar episode in Cortland in which the milk supply could not be accused nor was it possible to trace any connection between the two outbreaks. The city has a population of 15,000, so that it is quite possible for outbreaks to occur independently of one another.

Nothing is more well attested than the independence of the great majority of outbreaks of infantile paralysis of the milk and water supplies. As far as known but one other outbreak which suggests a contaminated milk supply is on record, observed by Dr. Dingman in 1916. It is almost certain, nevertheless, that the virus of the disease may be transmitted by dairy milk under certain unknown conditions.

**INFANTRY**. See **MILITARY PROGRESS**.

**INFLUENZA**. Of recent years health officers and epidemiologists have become addicted to forecasting the recurrences of outbreaks of this disease—whether it will recur at all, the prob-

able months of its reappearance, the severity of the type, etc. It has been learned that the so-called seasonal influenza—as distinguished from the pandemics—cannot well be dissociated from the other seasonal diseases of the respiratory apparatus and especially acute bronchitis. In 1919, Brownlee demonstrated the existence of a law which works out for limited observation periods and according to which influenza will reappear at intervals of 33 weeks, provided that the 33rd week does not fall between June and December; in which case reappearance is delayed to the 66th or 99th week. In the *Boston Medical and Surgical Journal* for August 26, Drs. Lombard and Doering make many computations as to the likelihood of the next outbreak. They have discussed another law according to which an outbreak in the late spring might mean a second and more severe epidemic early in the autumn; this held good in the pandemic year 1918, but they would modify this by making the second epidemic anywhere during the autumn and winter and leave out the question of severity. This law is more in harmony with that of Brownlee mentioned above.

**INJUNCTION PROCEEDINGS**. See **LABOR**, **AMERICAN FEDERATION OF**.

**INNESS**, GEORGE, JR. American animal and landscape painter, died at Cragmoor, N. Y., July 27. He was born in Paris, France, Jan. 5, 1854, the son of George Inness who was one of the greatest of the early American landscape painters, and studied with his father in Rome, 1870-74, and for a few months with Bonnat in Paris. He later shared his father's studio in New York, but from 1895-99 he had a studio in Paris, and exhibited annually at the Salon, where he received honorable mention in 1896, and a gold medal in 1900. He was elected a member of the National Academy in 1899, and in 1902 an officer of the Académie des Beaux Arts in Paris. In 1913 he became connected with the *Century Magazine* in which his work frequently appeared. Among his paintings, his "Shepherd and Sheep" and "The First Snow at Cragmoor" hang in the Metropolitan Museum of Art, New York City. Among his animal pictures, the "Monarch of the Farm," "Surf Horse," and the "Mother of the Herd" are notable, while such landscapes as "The Coming Storm," and "Morning on the River" are considered to resemble his father's work. An allegorical painting, "The Only Hope," shown before the Chamber of Commerce in New York City provoked considerable discussion on account of its religious feeling, and was one of a series of spiritual landscapes which were painted subsequent to the World War. He was the author of: *Art, Life, and Letters of George Inness* (1917).

**INSANITY**. Dr. G. M. Robertson's Maudsley Lecture on the Prevention of Insanity appeared in the *British Medical Journal* for July 24. Despite the title there is relatively little to be said under prevention, but the lecturer gave a concise up-to-date summary of the general subject of insanity. In childhood years or up to the age of 15, insanity is negligible in amount. Psychoses follow closely the developmental periods after that age and we may divide them into hereditary, acquired and involutional forms. The first named element is of the

greatest significance although instead of hereditary the term endogenous is preferable as less confusing. This form flourishes in adolescence and up to middle life in two quite distinct expressions. Dementia precox, as the name implies, is a psychosis of adolescence and early adult life of a decidedly malignant type, for but 15 per cent recover and the balance must have custodial care. Manic-depressive insanity occurs relatively later in life and is on the whole benign, most victims recovering although prone to recurrence. Acquired insanity is restricted largely to the alcoholic and syphilitic psychoses, the latter summed up chiefly as paralytic dementia or paresis. It must not be forgotten that many cases of alcoholic insanity are symptomatic, the patients in reality suffering from one of the endogenous forms.

The involutional psychoses are seen in old age and comprise the ordinary senile mental break-down, other cases being due to degeneration of the cerebral arteries. Here we may see cases supervene precociously at times. Concerning the problem of prophylaxis we can only make use of formula. To prevent hereditary forms the remedy is eugenics. The ancestry in many cases may show no taint, although there should be a latent strain of insanity somewhere. Eugenics need not be so drastic as to forbid parenthood to sound members of tainted families but it ought to be made possible for such strains to intermarry only with the untainted and experience shows that in time the taint can be bred out of the stock. Another formula is proper mental hygiene of childhood and adolescence which is a wide and comprehensive subject. It is possible in theory to reduce the amount of alcoholic and syphilitic insanity while as for the involutional psychoses a proper hygiene of middle life must be associated with prevention. The lecturer was an optimist on the subject of increase of insanity and states that as far as Scotland is concerned a slight reduction in the total commitments is apparent.

In recent years, especially through the development of psychoanalysis, the view has gained ground that insanity is essentially a regression to an archaic stage of mental development, which is also evident in dreams, in early childhood and in the mind of the most primitive savages. Since a drug debauch has been visualized as "insanity in miniature" a new subject has arisen under the designation "pharmacopsychology." Two Germans, Jöel and Frankel, (*Klinische Wochenschrift*, September 10) announce that they are in the midst of a study of five intoxicants—ether, cocaine, mescalin, hashish and kava kava—in the course of which one takes the drug and keeps track of his subjective experience while the other checks up objectively. They report first on experiments with hashish. The ego and consciousness are swamped with a succession of ideas, images, sensations and emotions, all essentially foreign to the personality, with great disturbance of time and space relations and the reality sense. Abstract-logical thinking vanishes and gives place to a mere series of mental pictures. The subject may believe himself dominated by alien forces and the complex ego or personality is built down to a primitive stage. The relationship of this mental state to the insanities is obvious while it throws light on primitive mentality, myths, magic, etc.

**INSURANCE.** Generally speaking, insurance again enjoyed a good year in 1926. In almost every branch the volume of business transacted was larger than ever before. In several branches of the business the rates were too low and the losses high, with the result that little, if any, underwriting profit was made. However, there was reason to believe that this condition would improve gradually. The rise in market value of securities again added millions to the assets and surpluses of insurance companies, enabling them to make a fine showing in annual statements even though their operations resulted in only a small underwriting profit or in an actual loss.

The year witnessed the organization of a number of new insurance companies. Some of them were small concerns which probably would not last long. Several were launched with large resources and fair prospects of becoming great institutions. In this latter class were four or five casualty and surety companies, which were subsidiaries or "running mates" of strong, established fire insurance companies.

Stockholders of many companies paid in additional capital and surplus during the year. In one notable instance this was imperative to save a company which had become financially weakened through errors in management. In a few cases the growth of the business made it wise to increase the capital and surplus to maintain a proper relation to the liability assumed or to enable them to extend still further. In a number of instances, however, addition to capital was merely a means of making better returns to stockholders. With the book and market values of a company's stock several times the par value because of the very large surplus which had been accumulated, stockholders were permitted to subscribe for new stock at par or twice par. The number of companies which declared stock dividends was somewhat larger than usual.

It is generally considered unwise for insurance companies to pay a very high rate of dividends, as this invites attack from that part of the public which insists that insurance rates are too high, and also gives promoters more material with which to induce the public to buy stock in new concerns without strong backing or capable management. Hence a company which has husbanded its resources and conducted its business with more than ordinary ability and accumulated large assets on which the interest earnings alone would pay a very high rate of dividend on the capital, increases capital occasionally so that larger distributions of surplus may be made to stockholders without unduly increasing the dividend rate.

The stock of a number of leading companies declined on various markets during the year. This was due in most instances to their having risen so high in 1925 that returns from in-

vestment in them at such prices were very low. Stocks of other companies of similar standing, which had not been bid up too high at an earlier date, advanced in price.

The work of fire and accident prevention continued and a larger portion of the public showed a marked interest in these activities. The contest in fire waste reduction being conducted every year by local chambers of commerce under the auspices of the Chamber of Commerce of the United States had created interest among influential business men. Various civic, business and social organizations and the public schools are exerting much influence in the same direction. Efforts were to be directed in 1927 to secure the enactment of more effective arson laws. (See FIRE PROTECTION.) Employers' organizations, the National Safety Council, automobile manufacturers and others are making strong efforts to reduce the number of accidents in shops, on the streets and elsewhere.

While the increase in the amount of life insurance written was not so spectacular as in several previous years, there still was a substantial increase. The amount of new insurance written by legal reserve companies has been estimated at \$16,300,000,000, and the total insurance in force in such companies at \$80,000,000,000. This does not include fraternal and assessment insurance. A very material factor in this tremendous growth was group insurance, which had increased by leaps and bounds. First sold almost entirely on a plan whereby employers paid the entire cost, group life insurance was being sold largely on plans under which employers and employees contributed jointly to the cost. A large amount also was being purchased by employees, already insured under group policies, who desired to add to their protection at their own expense.

A considerable factor in the growth of life insurance is its increased use for purposes other than the protection of the assured's family. Some of these additional uses are insurance of "key men" in corporations for the protection of the corporations, insurance of partners for the protection of the firm, life insurance to pay inheritance taxes, to endow colleges, to leave bequests to charitable and religious institutions and endowment insurance to protect issues of bonds and eventually to liquidate them. Although the mortality experience was not quite so favorable in 1926 as in 1925, it still was very good. By reason of this fact and the excellent earnings on their investments, mutual life insurance companies were able to maintain their scales of dividends to policy-holders and in some cases to increase them.

The activities of the various agencies giving instruction in life insurance increased rather than diminished during the year. Courses in colleges and in company and agency schools have removed the excuse for men and women entering the life insurance business unprepared. This influenced the amount of life insurance sold and also its persistency after it had been sold. A development of importance was the growing coöperation between banks and trust companies on the one hand and life insurance companies on the other. To assist the small buyer of life insurance a number of banks now accept stipulated deposits to create a fund from which the bank pays the assured's life insurance premiums and accumulates an amount the interest on

which will eventually pay these premiums. A large amount of life insurance was being sold, payable to trust companies to be distributed by them to beneficiaries as directed in the deed of trust, thus preventing beneficiaries by poor investments or extravagance from dissipating the proceeds of life insurance within a short time.

The growing practice among life insurance companies of providing in their policies that in event of the permanent total disability of the assured payment of premiums shall cease and the insurance company shall pay the assured a fixed monthly income, and also providing for payment of twice the amount of the policy in event of the accidental death of the assured, was raising some problems the seriousness of which cannot be accurately foretold.

The premium income derived from fire insurance in 1926 increased somewhat over that of 1925. The expenses of the business continued high. Losses continued heavy in the first part of the year, then decreased to a marked degree but rose again in November and were very heavy in December. While the companies generally received more in premiums than they paid out in losses and expenses, the increase in their liability for premiums still unearned at the end of the year made it doubtful whether they actually made any underwriting profit. This point was not likely to be definitely settled until annual statements had been filed and tabulated. The increased interest earnings and the rise in values of securities gave the companies a large investment profit, however.

In constructive work 1926 was the best year fire insurance has seen in a long period. The bad underwriting results in 1925 and other years since 1920 forced reforms. Companies became much more careful in their selection of risks, reduced excessive lines, made a closer inquiry into the moral and financial standing of assured, had risks more carefully inspected, reduced their acceptances of risks in unprofitable classes, adjusted losses more closely and became more insistent upon the prompt payment of premiums.

In the Middle States and New England, companies writing over 90 per cent of the fire insurance formed the Eastern Underwriters' Association to take general control of practices and rates, put a stop to payment of excessive commissions to agents at certain points and otherwise improve conditions. It began to function Jan. 1, 1927. Fire underwriters early in 1926 became almost unanimously of the opinion that rates are too low. Some increases in rates were made in Massachusetts, the Southern States and a few other sections. Fire rates, however, are so largely under State control that advances cannot be made offhand. An attempt to advance rates in Kentucky, where companies have lost millions in the past few years, led to a suit in the federal courts, as the State authorities refused to sanction an increase.

The fire insurance companies were engaged in considerable litigation in 1926. In the United States Supreme Court they won the very important Illinois tax case, in which municipalities sought to collect from the companies additional taxes for periods running back in some instances over a half a century. The companies of other States and countries operating in Illinois had paid taxes on the same basis as

Illinois companies, but it was discovered that an old law provided for their taxation on a higher basis. That law was declared unconstitutional. The decision saved the companies many millions of dollars. Insurance companies also won two important suits arising in New Mexico, growing out of laws restricting the number of agents they might appoint in one locality and attempting to prevent their paying commissions to non-resident brokers on insurance on risks located in New Mexico.

Two very important decisions were given against the fire insurance companies, the Supreme Courts of Missouri and Kansas holding that fire insurance rates in their respective States must be reduced as ordered by the Superintendents of Insurance of the States several years ago. In Missouri the companies claimed to have lost money rather than made an undue profit. The holding of the Supreme Court of that State as to the proper methods of computing underwriting profit was so unfavorable to the companies that it would affect their interests very seriously elsewhere in future if allowed to stand. The Missouri case was before the Supreme Court of the United States, and at the end of the year the Kansas Supreme Court had granted a motion for a reargument of the case before it.

One of the most important branches of the business of fire insurance companies was automobile fire and theft insurance. Owing to some reductions in rates it was a question whether the premium income from this source equaled that of 1925 although many more cars were insured. Companies are believed to have made some profit on automobile fire insurance, but the increase in the number of thefts in some sections, especially in certain Middle Western cities, was serious, and thefts of equipment from cars have been so serious a source of loss that equipment is being excluded from the coverage of the policies.

Insurance of the entire output of some automobile factories under "wholesale" plans created less consternation among insurance agents than in 1925, as the most important plan of this sort came to an end July 1. The conditions prevailing in the automobile market, the overloading of the used car market and the extension of the financing of sales of automobiles to persons who could not afford them were all raising serious problems for the underwriters.

Tornado insurance, which has been most largely written by fire insurance companies in the States of the upper Mississippi Valley, was profitable in that territory, but in September a tropical hurricane which struck Miami, Florida, and some other points caused losses to the companies estimated at from \$12,000,000 to \$16,000,000. This was a severe setback and forced many underwriters to revise their views. It became evident that while tornadoes in the West cause hundreds of small losses every year, the Gulf Coast may be virtually immune from loss for a number of years and then suffer one devastating storm which will cause insurers to lose in one day more than their premium income from windstorm insurance in that territory for a number of years. Effects of the hurricane on various classes of structures at Miami were carefully studied by engineers and architects with a view to designing buildings which will better withstand such winds and by

underwriters to determine what classes of structures they may insure with reasonable safety.

Rain insurance, which is written by a number of fire insurance companies, was smaller in volume in 1926 than in several previous years. The companies had lost heavily on this class of business and accordingly revised and restricted their policies. The result was a lower loss ratio.

Marine insurance, though still far from satisfactory, improved during 1926. Rates were too low, but the American underwriters were in competition with European markets and had the alternative of accepting inadequate rates or losing the business. Too frequently they chose the former course. The London market on cargo insurance was stiffening for it also has lost money. Rates on hulls had really improved. A well informed underwriter concluded that a few American offices made a small profit or broke even and the remainder sustained a loss.

Casualty companies generally made a good gain from investments but not much underwriting profit. The business again grew materially in volume. One authority estimates the increase in premium income at approximately \$60,000,000, bringing the total up to nearly or quite \$700,000,000.

Workmen's compensation insurance continued unsatisfactory from an underwriting standpoint, and many companies were writing the class sparingly. As rates are based on experience and experience constantly changes it is impossible to make rates accurately meet the conditions at any specified time. When both experience and the fact that compensation laws are being liberalized indicate that rates should be advanced, opposition results in delay and meanwhile companies are securing inadequate rates. The general experience on this class has been improving, but as legislatures constantly increase the compensation benefits to be paid or include incapacity due to occupational disease as well as to accident, it is difficult immediately to provide in the rates for these additional loss factors, and an industrial depression when pay rolls and the companies' premium incomes would go down and malingering increase might within a few months make the business very unprofitable. Hence underwriters feel obliged to deal with this class cautiously.

In the field of automobile liability insurance the experience on commercial cars was so bad that rates had to be advanced 7.6 per cent on the average. The experience on private cars was favorable except in certain localities, and in these the rates were advanced. The general policy had been adopted of raising or lowering rates in individual cities or districts according to experience, thus enabling car owners in any locality to secure lower rates if the number of accidents was reduced either by careful driving or by strict enforcement of public regulations and making them pay the penalty for carelessness and laxity.

The outstanding event in automobile insurance was the fact that Massachusetts had enacted a law, effective Jan. 1, 1927, requiring every owner of an automobile to carry liability insurance or furnish a bond or other security to guarantee his ability to meet judgments for personal injuries to others resulting from the operation of his car. As this law empowered the Commissioner of Insurance to make the rates for the insurance and companies were re-

quired to furnish insurance to those demanding it unless a public board relieved them from so doing, underwriters were at sea as to what effect the law would have on their business. It vastly increased the volume of premiums by compelling previously uninsured car owners to insure, but it would require experience to show whether losses would increase even more than the premiums do.

The volume of personal accident insurance increased, but the companies had so much trouble with health insurance that many of them restricted their policies and reduced the volume of this class of business on their books. The loss ratio on accident insurance increased somewhat, due chiefly to the larger number of accidental deaths, largely attributable to the automobile. A number of insurance companies in 1920, decided to cover under their accident policies, without additional premium, injury or death of policyholders while riding as passengers in licensed airplanes operated by licensed pilots over established routes.

The experience with burglary and robbery insurance improved in the latter part of the year, largely due to the public's awakening and determining to stamp out crimes of violence. This was manifested in New York State by the enactment of the Baumes Laws, requiring courts to impose sentences of imprisonment for life on criminals who had a record of three previous convictions. In the West the formation of vigilance committees and organization of guards by bankers' associations helped to reduce the number of burglaries and robberies.

Plate glass insurance had a good year and experience warranted a reduction in rates, which was made. As a result it is believed premium income in this branch was somewhat reduced.

The volume of steam boiler insurance grew very little, if any, and possibly decreased. This was attributed to the increase in the number of central plants where a few large boilers did the work previously done by many smaller ones; to the increased substitution of internal combustion engines for steam engines, and to the increased development of hydro-electric plants.

Surety companies generally reported the largest premium incomes they had ever had with an excellent experience, resulting in large profits. See also FIRE PROTECTION, FIRES.

**INTERCOLLEGIATE ATHLETICS.** See ATHLETICS, TRACK AND FIELD.

#### **INTERNAL COMBUSTION ENGINES.**

The most significant event in this field in 1920 in the United States was the award of contracts for and the construction of Diesel engines, on order of the United States Shipping Board, in an attempt to recondition a number of vessels by discarding the steam equipment. The board called for bids on 3000 h.p., 90 r.p.m., double-acting engines. Practically all the builders who offered bids were awarded contracts, so that there would be an opportunity to judge the relative merits of various types of engines in such service. At the end of the year engines had been delivered by the Worthington Pump & Machinery Corporation, the Mackintosh & Seymour Corporation, and the Busch-Sulzer Bros. Diesel Engine Co., while other makers were completing their contracts by the end of the year so that they would be in a condition to conduct acceptance tests. Aside

from their importance to American shipping, these contracts were of interest as encouraging American manufacturers in the construction of large units which were of sufficient size for use in ordinary single or multiple installations.

During the year there were shipped to the Panama Canal three 3750 h.p. units of a two-stroke-cycle type; while four 2000 h.p. Nordberg Diesels were under construction for the Commerce Royalty and Mining Co. to be used in its mines and mills in the lead fields of Oklahoma. In the smaller-size Diesel engines, a number were manufactured for export to South America, and at a number of central stations, as in Florida, these machines were in demand. At the municipal plant at Freeport, N. Y., an 1160 h.p. two-stroke-cycle engine was added during the year to three smaller units, making this the largest Diesel central station in the North Atlantic States. During the year there was turned out a V-type Diesel engine for the New York Central Railroad, to use with a locomotive. It was reported at the end of the year that an 800-h.p. V-engine for the Pennsylvania Railroad was being designed, and it was stated that there were about 20 Diesel locomotives in use or in process of construction. The success of the Diesel engine has led to its more extended use for power shovels and industrial locomotives. American manufacturers had secured the rights of German builders to manufacture units of the light-weight, high-speed type during the year, and there seemed to be a demand for such machines. The Foos high-speed Diesel engine, developed to run at speeds up to 900 r.p.m. and rated at 25 to 40 h.p. per cylinder, was a purely American design developed during the year. This weighed about 40 lb. per h.p. and employed direct pump injection without a precombustion chamber. High-speed engines direct-connected to gas compressors were used during the year to increase the flow of Oklahoma oil wells; these engines for the most part were from German designs, but were manufactured in the United States and modified to use natural gas until oil fuel was available. *Power* (New York), in a review of the Diesel engine industry, stated that there were in use in the United States 1,175,765 h.p. of Diesel, or cold-starting oil engines. Of this 815,000 h.p. had been built since 1921, and over 130,000 h.p. had been placed in central-station service. At the end of the year there were practically 250,000 h.p. Diesel engines used for the pumping plants of the oil pipe lines, these units being employed to the exclusion of other engines.

**INTERNATIONAL ARBITRATION.** See ARBITRATION, INTERNATIONAL.

**INTERNATIONAL ASSOCIATION FOR SOCIAL PROGRESS.** See SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR.

**INTERNATIONALISM.** At the Sesqui-Centennial Exposition an invitation was extended to organizations interested in the promotion of international goodwill to coöperate in making a general exhibit at the Sesqui-Centennial Exposition in Philadelphia. The whole subject of greater coöperation between nations was essentially one of the main objectives of this Exposition; 1200 square feet were devoted to this purpose in The Palace of Education and Social Economy without cost. One of the main themes of the exhibit was the interdependence of nations. There were mechanical

features showing the reasons for independence in 1776 and for interdependence in 1928. Important steps in the development of the principle of friendship between nations were shown by models. In addition there were shown in the Auditorium, a series of illustrative motion pictures.

The *Southern California Council on International Relations* held its second Annual Conference in June, with 80 representatives from 28 different organizations. Some of these co-operating bodies were the Bureau of Roman Catholic Charities, the Council of Jewish Women, Young Women's Christian Association, Woman's Christian Temperance Union, the League of Women Voters, General Federation of Women's Clubs, Japanese Federated Churches, California State Church Federation, English-Speaking Union, Masaryk Society (Czecho-Slovakian), the German Club and the High School Teachers' Association. There were 46 organizations actually co-operating, with headquarters in the Chamber of Commerce Building, Los Angeles.

*John Simon Guggenheim Memorial Foundation*, to improve the quality of education and the practice of the arts and professions in the United States, to foster research, and to provide for the cause of better international understanding. This Foundation was established by former United States Senator and Mrs. Simon Guggenheim as a memorial to a son who died Apr. 26, 1922. It offers a limited number of fellowships, tenable abroad under the freest possible conditions, for research in any field of knowledge and for creative work in any of the fine arts, including music. President Frank Aydelotte of Swarthmore was Chairman of the Committee on Awards.

An *Institute of International Relations* was held at the Mission Inn, Riverside, Cal., December 5 to 12. Since 1921, an Institute of Politics has been held at Williamstown, Massachusetts, under the auspices of Williams College, but comparatively few have been able to attend from western States. The Institute at Riverside had for its purpose the promotion of serious study of the problems involved in international relations, in the belief that there are many within its reach who can make valuable contributions toward that understanding of such problems as will lead to universal goodwill and world peace. The Institute will meet annually. The program laid special emphasis upon the problems of the Pacific Basin. The Institute was held under the auspices of the University of Southern California.

The *Geneva Institute of International Relations* met for the third time in Geneva, Switzerland, during the week of August 15 to 21, under the auspices of the League of Nations Non-Partisan Association, and the League of Nations Union of Great Britain. Well known lecturers on various phases of international thought and activity were secured and the week was one of interest and value to all who attended.

The *International Federation of League of Nations Societies*. Composed of national groups of more than 50 countries, this organization was engaged in exploiting the work of the League of Nations and the International Labor Organization, and in influencing governments to use the methods and auspices of the League of Nations in their international affairs. The International Federation is organized as follows:

The *Representative Council* consisting of representatives of all the Societies and meeting at least twice a year decides in the main what subjects shall be treated by the Federation. Four Standing Committees prepare proposals on the following subjects: I. Education and Propaganda. II. National Minorities of language, race and religion. III. The International Labor Organization and Social Legislation (Sub-Committee on the International Economic Conference). IV. Political, Juridical and Mandates Questions. The Annual Plenary Congress, (which has met latterly in Prague, Vienna, Lyons, Warsaw and Aberystwyth and will meet in 1927 in Germany) considers these proposals and in its resolutions upon them lays down the general policy of the Societies and the Federation. (See PEACE AND PEACE MOVEMENTS.)

INTERNATIONAL CONCILIATION. Dr. Henry S. Pritchett, a Trustee of the Carnegie Endowment for International Peace, visited Egypt, Palestine and Greece at the request of the President of the Endowment with a view to explaining to leading personalities of those parts of the world the organization and work of the Endowment and to acquire by personal contact, information as to what activities the Endowment might attempt or aid there with reasonable prospect of helpfulness and success. In the winter and spring of 1926, Dr. Pritchett studied the wide-spread unrest in the Mohammedan world, as well as the general political situation in the countries above mentioned and their educational problems and needs, and prepared a formal report. He brought with him an English translation of the Constitution of the new Kingdom of Egypt which, so far as can be learned, had never before appeared in English. It was translated from Arabic into French and from French into English.

INTERNATIONAL LANGUAGE. There was nothing particularly new or stirring to report in the programme of the movement for the adoption of an International Language. Events followed their natural course; and they are noted faithfully—and impartially—by the offices established in New York, by the International A (uxiliary) L(anguage) A(ssociation), at Columbia University; their free "bureau of information" has developed to such an extent that the time of one person is taken up entirely by correspondence and sale business. (See YEAR BOOK for 1925.) One may mention however, among the more interesting developments, the report of Research Assistant Henry D. Gideonse who visited Berlin in 1925, and who announced the formation of a joint committee of the German Chamber of Commerce and the German National Association of Manufacturers, to study the question of the International Language. The I.A.L.A. also announced the undertaking of a fundamental work *Grammar of Thought*, which, however, would require several years for completion. There was an inquiry under way into the conditions of the International Language in England and especially in schools. The University of Edinburgh in connection with the World Esperanto Congress, in the summer, of 1926 announced a course in Esperanto. The (6th) International Ido Congress was held at Prague in the first days of August.

Esperanto, Ido, Nov-Esperanto and all the other varieties of International Language were doing their regular work of propaganda, by

articles, books, lectures, and in trying to get hold of radio activities so that their respective language might perhaps ultimately become, through this medium, the International auxiliary language. The outside observer notices that while so far Esperanto had tried more than the others to get the support of the proletariat, the Idists have ceased to ignore that road to progress, and have now a seemingly strong Socialist paper (*Revo Internacia, Organo de la Laborista Ido-Unio*), published in Leipzig). But what strikes the outside observer too is the recent opposite tendency in America, to look to Society for support. Quite a number of fashionable schools in New York and in New England have taken up the study of some International Language. Radio talks and "Ten-minute lessons in Esperanto" are delivered by women also. Some of the women's colleges, like Hunter College, Vassar, and Mount Holyoke, have followed in these steps. We must mention also as having taken a favorable stand, the International Federation of University Women, the American Association of University Women, and the New York City Federation of Women's Clubs. There has been also some work done at the Children's University; and the International Parents' League of New York City has taken up the question.

Although some interesting work has developed among scholars (see above, and previous YEAR BOOKS), one must admit that as a class, they continue to turn a cold shoulder to the idea of an International Language, at least of one that is artificial. Prof. H. Collitz of Johns Hopkins, President of the Modern Language Association in 1925 published early in the year (*Publ. Mod. Lang. Assn.*, March, 1926) a speech delivered in Chicago, *World Languages*. From this very scholarly discourse we learn that the idea of an International Language was a very ancient one; for if Collitz is right there was something back of the Babel Tower legend, and Babylonian at one time enjoyed the distinction of being an International Language, as did Greek and later Latin. With regard to modern artificial languages, Collitz considers Volapük as gone forever and Ido as distinctly superior to Esperanto. However, he discards the idea of an artificial tongue altogether; it could exist only at the expense of the wealth of language and of life; to adopt an artificial language "would amount to nothing less than to moving from a palace to a poorhouse." And to prove this the grave, orthodox Professor makes a fine plea for slang, which keeps a language alive. Again, the Linguistic Association—which has so far proved less antagonistic to an artificial tongue—listened in December, in Cambridge, Mass. to a paper by Professor Nykl of Marquette University, *Why Esperanto?* Scientific tests have proved to the satisfaction of the author the "superiority of English and French for brevity, accuracy, clearness and ease of enunciation; English in particular being backed by the use of 150,000,000 people. In this test Esperanto fails in brevity and in its accumulative vocabulary. As an International Language it is a clumsy instrument because of its rigid principles of word-building, rigidity not being admissible in a 'living language.'"

**INTERNATIONAL LAW.** The committee of experts for the progressive codification of International Law appointed by the League of

Nations (see YEAR BOOK, 1925) held its second session at Geneva in January, 1926, and worked intensively for three weeks accomplishing the following results:

The Committee on Diplomatic Privilege and Immunities recommended an examination of this subject to the Governments and transmitted at the same time a list of individual questions which in their opinion appear suitable for solution by codification.

On the subject of extradition nothing will be recommended for codification at this time as the points upon which the Committee believe that an agreement could be reached, as for instance specialty or priority of extradition, are too insignificant as compared with the more important problems of the law of extradition with regard to which there is little hope of agreement. Provisionally the report of Professor Brierly (Oxford) and de Visscher (Ghent) will be transmitted to the Governments with this opinion of the Committee.

The Committee decided not to recommend the question of the criminal competence of states in regard to offenses committed outside their territories for codification, but the Brierly-de Visscher report was sent to the Governments.

As to territorial seas, this question was recommended to the Governments for codification and the report of Professor Schücking (Germany) with the supplementary remarks of M. Magalhães (Portugal) and Mr. Wickersham (United States) was transmitted to the Governments. The Committee however preserved a non-committal attitude with regard to the question, although Professor Schücking struck out of the conclusions presented the proposition for an international water-board and decreasing the proposed limits for territorial waters from 6 to 3 sea miles.

With regard to the liability of states, this question will be recommended to the Governments for codification, with the report of M. Guerrero (Envoy for San Salvador) and M. Wang (China). The Committee does not however take any stand with regard to the question nor with regard to the conclusions of the rapporteur, M. Guerrero.

A procedure for international conferences and the conclusion and drafting of treaties was recommended for codification in the shape of a valid convention. The report of M. Mastny and M. Rundstein (Poland) was sent to the Governments.

As to exploitation of the products of the sea, the Committee was of opinion that the problems contained in the report of M. Suarez (Argentina) could only be solved by a special conference of experts. It insists on the necessity of immediate measures against the extinction of the fauna of the sea, and accordingly the report of M. Suarez was forwarded to the Governments.

Nationality, on the basis of the Rundstein report, which however only relates to a few cases of double citizenship and of no citizenship, was recommended to the governments for codification. For this purpose the Rundstein report with the remarks of Professor Schücking and M. Magalhães was transmitted to the Governments, the Committee not adopting any standpoint with regard to the details of the proposals.

The report of M. Magalhães on the legal status of government ships employed in commerce hav-

ing been examined by the Committee, was transmitted to the League of Nations with the proposal that either the Belgian Government or the Council of the League shall forthwith call an official conference. But no opinion was expressed with regard to the details of the Magalhães report.

Piracy is also recommended to the Governments for codification. The report of Mr. Matsuda (Japan) and M. Wang was sent to the Governments, the Committee expressing no opinion as to the report itself and the conclusions reached by Mr. Matsuda.

As to prescription the Committee refrained from adopting any conclusions in view of the absence, through illness, of the rapporteur.

This survey shows that the Governments have been asked for an opinion with regard to the suitability and the desirability of a codification of a whole series of questions of varying importance. The Governments thus have the opportunity of going into the details of those questions by means of the reports communicated to them and of making their point of view known to the Committee for its next sitting, through the machinery of the League. The chief idea in the Committee was that the Governments might usefully take the opportunity of hearing the advice more particularly of expert societies of a scientific nature on the questions involved. The Inter Parliamentary Union (q.v.) which has concerned itself with the problem of the codification of International Law for some 30 years will confine itself to taking cognizance of the proceedings.

In an address before the American Society of International Law, Mr. Wickersham, American representative on the Committee of Experts, said that in addition to adopting the reports above mentioned, the Committee, in order to employ as usefully as possible the time which necessarily must elapse before answers to these communications may reasonably be expected, agreed upon a list of additional subjects to be studied by various subcommittees appointed for the purpose, namely, whether it is possible to establish by way of international convention (1) dispositions concerning the communication of judicial and extra-judicial proceedings in penal matters, as well as letters rogatory in criminal proceedings; (2) dispositions concerning the juridical status of private international associations not for profit, as well as private international foundations; (3) the judicial situation and the functions of consuls; (4) the determinations, in the absence of special provisions, of the effects of the most favored nations clause in treaties; (5) international rules concerning the competence of courts regarding foreign states and especially regarding states engaged in commercial transactions; (6) recognition of the juridical personality of foreign commercial associations; (7) international rules of conflict of laws concerning contracts for the sale of merchandise. The Committee also constituted subcommittees to consider (8) whether or not there are questions relative to the conflict of laws relating to domicile, the conventional solution of which might be considered without conflict with obstacles of a political nature; what those questions are, and what solutions they might receive; (9) whether it is desirable to revise the classification of diplomatic agent as established by the Congresses of Vienna and

Aix-la-Chapelle, and if so, in what manner such revision should be stated, and (10) whether it is possible without conflict with obstacles of a political or economic nature to formulate by way of convention international rules concerning the nationality of commercial associations, as well as the determination of the state which should have the right to extend diplomatic protection to them.

AN AMERICAN ATTEMPT AT CODIFICATION. On May 3, U. S. Representative George Holden Tinkham (of Mass.) introduced a resolution to propose, on behalf of the Government of the United States, to the nations of the world the calling of a third Hague conference, or to accept an invitation to participate on behalf of the United States in such a conference upon the proposal of some other government which had itself taken part in the second Hague conference, and to recommend to such conference the codification of international law for the following purposes: (1), To restate the established rules of international law; (2), to formulate and agree upon the amendments and additions, if any, to the rules of international law shown to be necessary or useful; (3), to endeavor to reconcile divergent views and to secure general agreement upon the rules which have been in dispute heretofore; and (4), to consider the subjects not now adequately regulated by international law, but as to which the interest of international justice requires that rules of law shall be declared and accepted.

Chairman Porter, of the Committee on Foreign Affairs, reported the resolution favorably and it was passed by the House of Representatives. A similar resolution introduced in the Senate by Senator Means, was pending at the end of the year. Concerning this proposition the Foreign Policy Association said such action by President Coolidge would be a duplication of effort, since preparatory work for such conferences is already in progress. The Committee of Experts (see above) appointed by the Council of the League of Nations, and of which George W. Wickersham, former Attorney General of the United States, is a member, has prepared reports on seven subjects considered ready for codification: Nationality; territorial waters; diplomatic privileges and immunities; responsibility of states for damage done in their territories to the person or property of foreigners; procedure of international conferences and procedure for the conclusion and drafting of treaties; piracy; exploitation of the products of the sea. These reports, some of which contain projects for international conventions were submitted to the various governments with the request that they send replies before Oct. 15, 1926. The next step will be an examination of the replies by the Committee of Experts, which will then report to the Council "on the questions which are sufficiently ripe and on the procedure which might be followed with a view to preparing eventually for conferences for their solution."

INTERNATIONAL LAW ORGANIZATIONS. Neither the American Institute of International Law nor the Institute of International Law held a meeting in 1926 as they do not hold meetings every year, although it was the practice for some years of the European Institute to do so. That Institute will hold its next session in Washington in the fall of 1927. The American

Institute of International Law is to meet at Montevideo in March, 1927. The 1926 instructional period of the Hague Academy of International Law lasted from July 6 to August 27. The main subject was public international law in relation to peace. Private international law also found a place in the syllabus. During each of the two periods, fundamental courses were given on the historical development and general principles of international law, both public and private, while a certain number of special lectures were devoted to carefully defined subjects, selected according to the special competence of professors and as far as possible amongst the juridical problems at the present time of international interest. The teaching is given in French. Conceived in a spirit that aims at being both practical and highly scientific, it differs essentially from the similar teaching given in universities. It seeks greater variety, more definite specialization and above all greater thoroughness. Each subject is studied in all its bearings, and with all desirable objectivity, to avoid giving offense to the natural susceptibilities of any nation.

The Third International Conference of American States which met at Rio de Janeiro in 1906, provided for an International Commission of Jurists, to be entrusted with the codification of private and public international law. This Commission prepared preliminary material, and later on the American Institute of International Law prepared projects of codification. These projects of codification are to be submitted to the International Commission of Jurists, which was to assemble at Rio de Janeiro, on Apr. 16, 1927. The results of the work of this Commission will then be submitted to the Sixth International Conference of American States, which was to meet at Havana, in January, 1928.

THE PERMANENT INTERNATIONAL CRIMINAL COURT. Since the Spring of 1916, when Hugh H. L. Bellot, D.C.L. suggested the creation of an International Tribunal for the trial and punishment of war criminals upon the conclusion of peace, public opinion has steadily supported the idea. Such a Court was recommended by the British Committee of Enquiry into Breaches of the Laws of War, and this recommendation was endorsed by the International Commission on War Crimes appointed by the Peace Conference. Unfortunately, this recommendation was rejected by "the Supreme Four," but it was subsequently recommended by the Hague jurists, who drafted the statute for the Permanent Court of International Justice. In his address to the Grotius Society in 1922 on War Crimes, Lord Cave said the time had come to confer criminal jurisdiction on the Permanent Court at The Hague. At the Buenos Aires Conference of the International Law Association in the same year the proposal was advocated by Lord Phillimore and Mr. Bellot, and both suggested that the jurisdiction of the Court should extend to non-military offenses as well as to military. In approving the creation of the Court, however, the Conference decided to confine it to war crimes and invited Mr. Bellot to draft a Statute for the Court. This he prepared and presented to the Stockholm Conference of the Institute of International Law in 1924, which, without expressing any opinion upon the merits of the proposal, referred the draft to a Committee, which reported in April,

1926, in favor of the scheme, and presented the Statute as revised to the Conference which met at Vienna on August 5. In the meantime the Conference of the Inter-Parliamentary Union which met at Washington in 1925, approved the proposal and appointed a Committee to draft a Statute and at the Congress of the International Penal Law Association, held at Brussels, on July 26 under the presidency of Count Carton de Wiart, the principles underlying the scheme were unanimously adopted and a Committee was appointed to draft a statute.

At Vienna the only serious difference of opinion arose upon the question whether a criminal code should precede the establishment of the Court, or whether the Court should be established forthwith, and apply the substantive law already in existence. Eventually a compromise was effected and the following resolution adopted: "The Conference approves the creation of a criminal division of the Permanent Court of International Justice, the original jurisdiction of which shall be limited to the offenses specified in the Statute or in special conventions."

This resolution necessitated the addition of a proviso to Art. 23 of the Statute, which defines the law to be applied by the Court. By this Article

"The Court shall apply—

1. International treaties, conventions and declarations, whether general or particular, recognized by the States before the Court;
2. International custom, as evidence of a general practice accepted as law;
3. The general principles of Public or International Law recognized by civilized nations;
4. Judicial decisions, as a subsidiary means for the determination of rules of law;
5. Doctrines of highly qualified jurists may also be referred to.

"Provided that no act may be tried as an offense unless it is specified as a criminal offense either in the Statute of the Court or in the municipal law of the defendant, or in the case of a *heimatlos* in the law of his residence at the time of the commission of the offense or, failing such residence, the law of the State where the crime is committed."

The Statute is based upon the assumption that an International Convention will be adopted by the Powers agreeing to the institution of the Court, and granting to it the necessary jurisdiction. This Convention would also provide, *inter alia*, for the surrender of persons charged with offenses found in the territory of any of the Contracting Parties, and for the disclosure and production of all relevant documents by the defendant State, or by the State of the persons so charged.

The Statute provides that the Court shall be a Division of the Permanent International Court of Justice, but that it shall exercise a separate jurisdiction in the cases of States and individuals charged with international offenses as therein defined. It is generally agreed that the personnel of the present Permanent Court is not suitable for the trial of criminal offenses. Consequently, the Court is to be composed of 15 members—10 Judges and five Deputy Judges—who possess the qualifications in their respective countries for appointment to high judicial office, being, or having been, either Judges of Courts administering penal law, or, being lawyers, are specially qualified by ex-

perience in the practice of such courts. They are to be elected by the same process as the Judges of the present Permanent Court, from a list of persons nominated by the national groups in the Permanent Court of Arbitration at The Hague. The duration of their service, their diplomatic immunities, their disabilities, the filling of vacancies and their dismissal for misconduct, are similar to those of the Judges of the Permanent Court. The Court will elect its President and Vice-President and appoint its Registrar: its seat will be at The Hague. The President, or failing him, the Vice-President, will form the Court, which may sit *in banco* or in one or more sections, consisting of five judges, one of whom may be a deputy Judge. In certain cases there is a right of appeal from a Sectional Court to the full court, for the trial of minor offenses committed by individuals and for interlocutory proceedings. Courts of Summary Jurisdiction may be constituted. From these Courts there is also a right of appeal to the full court.

The jurisdiction of the court extends to all charged with (a) Violations of international obligations of a penal character committed by the subjects or citizens of one State, or by a *heimatlos* against another State, or its subjects or citizens.

b. Violations of any treaty, convention, or declaration binding on the States parties to the Convention of . . . which regulates the methods and conduct of warfare;

c. Violations of the laws and customs of war generally accepted as binding by civilized nations.

Further, the court may deal with cases of a penal character referred to it by the Council of the League of Nations for trial or for inquiry and report.

Any question as to the jurisdiction of the court will be determined by the court.

According to Mr. Bellot great importance was attached by the Conference to the power of the Court to pronounce a declaratory judgment upon any case before the Court without imposing any penalty, but the Conference declined to give power to the Court to give a declaratory judgment in circumstances which were only in contemplation, after the method of the British Chancery injunction.

The following penalties may be imposed: The defendant State may be ordered to pay to the complaining State (a) a pecuniary penalty; (b) indemnity for any damage done; (c) a sum by way of indemnity to any subject or citizen of the complaining State. In the case of an individual the punishment lies in the discretion of the Court, provided that the death penalty may only be imposed if it may be inflicted for a similar offense by the law of his State. In no case may flogging be decreed. The court may determine the character of imprisonment or penal detention directed and may impose pecuniary penalties and indemnities in addition to, or substitution for, any punishment.

The law to be applied has already been described. Like the Permanent Court, the court will frame rules for regulating its procedure, including summary procedure, but certain rules of procedure of prime importance are prescribed by the Statute. The most important is that which confines to States the right to lodge a charge. Individuals have no *locus standi*. States will

lodge charges on behalf of their subjects at their discretion. If the charge is against an individual only, the State of the defendant must be added. The reasons for this provision are (1) that the State is properly to be identified with its nationals when they commit international wrongs; (2) that the presence of the State enables it to secure a full defense to be made on behalf of the individual. In order to prevent trivial charges, leave to serve a charge must first be obtained by an *ex parte* application of the court, which has power to dismiss any charge which in its opinion is of an unsubstantial character or frivolous or vexatious, or an abuse of the process of the court. With this process we are familiar in this country.

Mr. Bellot, the author of the Statute, thus supports the proposition: The main purpose is twofold; first, to preserve peace; and secondly, if war unhappily breaks out, to prevent atrocities, and to punish such as are committed and not punished by the belligerent military courts. Thus, the jurisdiction of the court extends to penal offenses of an international character committed in time of peace, and which are likely to lead to international complications. Had the court been in existence in 1914, the Serajevo murder might have been referred to it without loss of dignity on the part of Austria or Serbia with more satisfactory results than a world war. The Janina murders in 1923 might also have been more satisfactorily determined by such a court than by the Conference of Ambassadors which took charge of the incident. The Hungarian Banknote Forgery Case constitutes another instance of an inquiry which would probably have been more satisfactorily tried by an International court than by the Hungarian Court.

War crimes must, as a rule, be dealt with on the spot by the military courts of the belligerents. But there are exceptions. For instance, the *Baralong* affair in which grave charges were made against a British naval officer, was eminently suitable for inquiry by an impartial international tribunal. But it is upon the conclusion of war that the court is so essential, since military courts cease to have any jurisdiction, and the civil courts have none unless the crime has been committed within their jurisdiction. Moreover, few war criminals are captured in the field. Many of the worst offenders are those behind the lines, and those at headquarters who give unlawful orders. In many cases even their names are unknown until after the war. The mere possibility of trial and punishment would prove some check to individual atrocities, and the high command would hesitate to give unlawful orders for which it might be called to account after the war. The Statute provides for the execution of the sentence to be carried out by the State of the defendant. Lord Darling fears that a State might evade this duty. Mr. Bellot does not share this fear. No State which had agreed to be bound by the Statute could refuse to obey the order of the Court and retain its self-respect in the eyes of the world. No modern State can afford to flout public opinion. No less than 80 disputes between States in the American Union, and between such States and the United States, have been tried by the Supreme Court of the United States. In few cases the defendants refused to appear. In not a single case has a State re-

fused to obey the order of the court, although the court has no means of enforcing its judgment.

Finally, an International Court is imperative. Experience has shown that the trial of war crimes by national courts whether of the vanquished or victor, has almost invariably proved unsatisfactory. However fair and impartial in fact such a trial may be, it is generally viewed with suspicion. Such trials are naturally open to the suspicion of national bias; they would result in conflicting decisions and varying penalties. It is International, not National, Law, which is broken, and violations of International Law are more fittingly tried by an International than by a national court. If the rule of law is to be established in the family of nations, it can only be satisfactorily established by the co-operation of all nations expressed through an International Court endowed with penal as well as with civil jurisdiction.

**INTERNATIONAL UNION OF PURE AND APPLIED CHEMISTRY.** See CHEMISTRY, INDUSTRIAL.

**INTER-PARLIAMENTARY UNION.** Instead of the regular conference in 1926 there was a joint session of the six permanent committees and of the council. They examined a large number of questions, adopting in some cases draft resolutions or more frequently fixing the procedure and programme of future work. Once again the adaptability of the organization has been proved. Whereas at the full conferences which had been held in the course of recent years the Union had shown itself a useful instrument for propaganda and for the spread of ideas of peace and international coöperation, at Geneva the organization assumed its rôle of a study centre at which the representatives of the various parliaments of the world could come together. The delegates of 21 National Groups met at the Palais Eynard. Aware that no festivity or reception had been provided to distract them from their work, they devoted themselves to the task in hand with seriousness and enthusiasm.

The work of the Committee for Political and Organization Questions was prepared by two subcommittees which met on Thursday, August 26. One of these studied what is termed the "crisis in the parliamentary system" and the other examined various proposals for the development of the Union. The Committee adopted a resolution setting forth that in view of the fact that the 23rd Inter-Parliamentary Conference which met at Washington and Ottawa in 1925 entrusted it with the task of studying the parliamentary systems in the different States and considering that the Union is by its very nature the international institution best adapted to obtain useful results with regard to the defense and the improvements of the parliamentary régime, it requested its subcommittee to invite a certain number of specialists on the subject of Public and Constitutional Law to give their opinion as to the present state of the representative system; and the Inter-Parliamentary Bureau to invite all the National Groups of the Union to nominate one or two of their members who will be asked to give answers to the following questions: (a) Is there a crisis in the parliamentary system?; (b) What are the symptoms of that crisis?; (c) What are the causes of the crisis?; (d)

What remedies do you suggest? The Union considered but did not determine the question of more active propaganda and the upkeep of a permanent Secretariat for a Group which would devote itself in particular to similar objects.

The extensive agenda of the Committee for Juridical Questions gave rise to highly interesting debates on the present state of the evolution of International Law (q.v.) and the rôle which the Union can and should play in that evolution. In connection with the Codification of International Law, Professor Schlegel (Germany) submitted the following principles which were adopted by the Committee:

1. In view of the fact that the Committee for the Codification of International Law instituted by the League of Nations has not up till now attempted to lay down a comprehensive plan for the codification of International Law, it will be the duty of the Inter-Parliamentary Union not to relax its efforts in favor of a total codification of International Law.

2. For this purpose it appears appropriate that the Inter-Parliamentary Union itself should, after suitable preparation by means of its Juridical Committee, come forward on its own initiative with a systematic plan for the complete codification of International Law. This plan should not, as has hitherto been the tradition in International Law, deal separately with the Law of Peace and the Law of War, but should, in accordance with the modern, though still unformulated trend of development, regard war only as an international offense (crime). Thus the rules for the peaceful settlement of conflicts (mediation, conciliation, arbitration) and the rules for international penalties would follow after the basic rules of the Law of Peace. This work should be taken in hand at once by the Committee.

3. Further, it is the duty of the Inter-Parliamentary Union to examine within its Committee for Juridical Questions the work of the League Committee for the Codification of International Law, in so far as it has been made public, relating to individual problems in this branch of science, with a view to ascertaining whether and to what extent it meets the requirements of present-day international life, and whether it appears best adapted to further the aims pursued by the Inter-Parliamentary Union, i.e., the avoidance of conflicts between states and the maintenance of international peace on the basis of law and justice.

Criticisms in this direction should be made public through the Conferences of the Inter-Parliamentary Union on the basis of appropriate proposals from the Juridical Committee, and should be transmitted to the League of Nations.

4. It should further be the task of the Inter-Parliamentary Union publicly to direct its efforts towards inducing the League Committee for the Codification of International Law to include within its scheme of work questions which, by reason of their political character, appear more particularly to demand early juridical regulation for the avoidance of international conflicts and for the safeguarding of international peace based on justice.

The Committee for Economic and Financial Questions declared that the creation of a European Customs Understanding must at present be considered as a somewhat distant end which can only be reached by gradual degrees. On the other hand, the Committee realized that certain preliminary conditions will be indispensable if the end aimed at is to be attained; these include a. Consciousness of economic solidarity between the countries of Europe; b. the stabilization of monetary values.

The Conference called special attention to the serious dangers attendant upon the abuse of opium and other drugs of addiction for the health and morality of the peoples, especially with regard to the younger generation.

The American Group held its annual meeting in Washington February 24. The old officers were reelected. The results of the 23d Conference gave rise to a very interesting discussion on the activities of the Union and more especially of the American Group. The numerous

speakers unanimously recognized that the representatives of the American people had a useful part to play in the Conferences of the Inter-Parliamentary Union, although most of the resolutions passed by the Union concerned problems having nothing to do with the United States. The fact that the American delegation usually played the rôle of observer rendered methodical action by Government and Congress more difficult. Nevertheless, the American Group has rendered important services, not only to the international cause, but also to the American people themselves. The last Conference was a proof of this, as was shown by the reports presented to the General Assembly. These reports insist upon the unique occasion offered to the American public to enter into relations with eminent foreign politicians and to inform themselves upon the great questions agitating the old world. The discussion closed on an optimistic note, after several speakers had insisted on the usefulness of giving effective support to the cause of the codification of international law.

An Inter-Parliamentary Group was created within the Congress of the United States of Venezuela by a decree of that Assembly of July 6, due to the initiative of Señora Carlos Grisanti and Luis Churion, who submitted to the Congress a report of great interest on the Washington-Ottawa Conference. A grant of 2000 francs will be paid to the central funds of the Union, in accordance with the existing scale of contributions.

The 24th Conference of the Union will be held in Paris in 1927.

IONS. See PHYSICS.

**IOWA. POPULATION.** According to the Fourteenth Census of the United States, the population of the State on Jan. 1, 1920, was 2,404,021. According to the State census taken in 1925, the population was 2,419,927. The estimated population on July 1, 1926, was 2,423,000. The capital is Des Moines.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1926	11,178,000	413,586,000	\$231,608,000
	1925	11,234,000	492,648,000	275,883,000
Oats	1926	6,221,000	195,962,000	68,587,000
	1925	6,221,000	248,863,000	78,036,000
Hay, tame	1926	3,158,000	3,845,000 *	59,598,000
	1925	3,034,000	4,142,000 *	55,917,000
Wheat, winter	1926	340,000	7,310,000	8,772,000
	1925	358,000	5,871,000	7,985,000
Wheat, spring	1926	36,000	554,000	659,000
	1925	30,000	432,000	562,000
Potatoes	1926	77,000	6,083,000	10,341,000
	1925	83,000	5,229,000	12,288,000
Barley	1926	219,000	6,680,000	3,741,000
	1925	175,000	5,478,000	3,122,000

\* tons.

**MINERAL PRODUCTION.** The production of coal, which of recent years has contributed nearly one-half of the value of the State's mineral product, fell off somewhat in 1925. There were mined in 1925, 4,714,843 net tons of coal, as against 5,468,450 tons in 1924; the value of coal produced in 1925 was \$14,807,000, and in 1924, \$18,097,000. Cement, the second mineral product in total value, attained a production of 4,048,000

barrels in 1925, as against 5,624,466 barrels in 1924; the total value of cement shipments was \$8,895,000 in 1925, however, and exceeded shipments in 1924, valued at \$8,811,587, shipments having been heavier in 1925. Clay products attained a value of \$5,069,810 in 1924, as against \$6,920,336 in 1923. Gypsum production rose to the quantity of 727,385 short tons in 1924, from 685,041 short tons in 1923; and to a value of \$5,657,339 in 1924, as against \$5,638,532 in 1923. Sand and gravel production was 2,427,626 short tons in 1924, and 3,597,160 short tons in 1923. The value of all mineral products was \$40,459,869 in 1924, and in 1923, \$46,174,897.

**FINANCE.** As summarized by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$18,349,120. Their rate per capita was \$7.58, as against \$9.74 in 1924 and \$4.53 in 1918. Their total included \$639,478 for education, apportioned to minor State divisions. Expenses totaling \$899,674 for interest on debt and \$14,241,637 for permanent improvements, added to the payments for maintenance and operation of State departments, made the total of State payments \$33,490,431. For highways was expended the sum of \$11,676,546, of which \$210,592 was for maintenance and \$11,465,954 for construction. A decline in department payments for maintenance and operation for the year resulted from a decrease of over \$6,000,000 in war compensation payments to veterans.

Revenue receipts of the State were \$33,377,541, or \$13.79 per capita. They exceeded by \$14,128,747 the total payments except those for permanent improvements, and were \$112,890 less than the total with these included. Property and special taxes formed 39 per cent of the total revenue in 1925, as against 33.4 per cent in 1924 and 51.7 per cent in 1918. Their per capita rate was \$5.39 in 1925, \$4.34 in 1924 and \$2.85 in 1918. Earnings of the general departments and compensation for officials' services furnished 15.9 per cent of the 1925 revenue; business and non-business licenses, 36.4 per cent. License receipts were derived chiefly from taxes on corporations and from the licensing of motor vehicles.

The net indebtedness of the State on June 30, 1925, was \$19,061,079, or \$7.88 per capita, as against \$8.06 per capita in 1924 and 5 cents per capita in 1918. The assessed valuation of property subject to State tax was \$1,710,783,546. The State tax levy was \$13,446,579, or \$5.56.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 9814. No new construction was reported. Five miles of line near Colfax was abandoned.

**EDUCATION.** The chief feature of educational progress in the State during the year as analyzed in the *Journal of the National Educational Association* was the election by the people of the State of school officials possessing the confidence and support of the educational body. The tendency toward greater uniformity in teaching in various portions of the State, in regard to matter, made headway; 39 counties agreed on a uniform set of school textbooks, for use during the ensuing period of five years.

**CHARITIES AND CORRECTIONS.** The chief charitable and correctional institutions under the

supervision of the State Board of Control in 1926 were the State prisons and reformatories, homes for orphans and for soldiers, training schools for boys and girls, hospitals for the insane, and a hospital and colony for epileptics.

**POLITICAL AND OTHER EVENTS.** At the general election of November 2, John Hammill, the Governor in office, running as Republican candidate to succeed himself, was elected Governor for the term beginning Jan. 1, 1927. Likewise were elected the entire Republican State ticket and an entirely Republican delegation of 11 U. S. Representatives. Smith W. Brookhart, Republican candidate, was likewise elected to the U. S. Senate, for the six-year term commencing Mar. 4, 1927. He obtained the Republican candidacy by virtue of his victory over Senator Albert B. Cummins at the Republican Senatorial primary on June 7. This primary victory followed his exclusion from the Senate, which had declared against him, April 12, in the contest over election returns brought by his previous opponent, Steck. He was opposed in the November election by Claude R. Porter, Democrat. For the remainder of the unexpired term of the late Senator Cummins, who died after the primaries, another Republican candidate, David W. Stewart, was elected.

At the November election new incumbents were also chosen, to take office in 1927, for the following State offices: for Auditor, J. W. Long; Attorney-General, John Fletcher; Superintendent of Public Instruction, Agnes Samuelson; Secretary of Agriculture, Mark G. Thornburg. Lieutenant Governor, Secretary of State and Treasurer remained the same.

The Iowa bank stock tax was held unconstitutional by the United States Supreme Court in a decision rendered January 4. A party known as the Commonwealth Land Party entered the State political campaign by filing on September 8, a list of candidates. Banking difficulties declared by the State Banking Commissioner, L. A. Andrew, to be purely local, the suspension of some 19 small country banks in Clay county, were followed November 26 by the closing of 19 other banks, in Palo Alto and Kossuth counties. Local appeals obtained waivers of right to immediate payment from hundreds of depositors, and some of the banks soon were able to resume. Increasing attention was given during the year to the advance of the infestation by the corn borer. This pest, according to observations, was advancing at the slow rate of about 35 miles a year and no efficacious method of checking it had yet been found.

**OFFICERS.** Governor, John Hammill; Lieutenant-Governor, Clem F. Kimball; Secretary of State, W. C. Ramsay; Treasurer, R. E. Johnson; Auditor, Glenn C. Haynes; Attorney-General, Ben J. Gibson; Superintendent of Public Instruction, Mae E. Francis; Secretary of Agriculture, R. W. Cassady.

**JUDICIARY.** Supreme Court Justices: Truman S. Stevens; Charles W. Vermillion; Frederick F. Faville; Lawrence DeGraff; William D. Evans; E. G. Albert; E. W. Morling.

**IOWA, UNIVERSITY OF.** A coeducational State institution of higher education at Iowa City, Iowa; founded in 1847. The enrollment for 1925-26 was 8300, of whom 4420 were men and 3880 women. There were 3640 enrolled in the 1926 summer session. The faculty had 600 members during 1925-26. The general library contained

250,363 volumes, and the law library 43,362. The income for 1925-26, including revolving funds, was \$5,416,951.53. During the year there were completed: a men's dormitory on the quadrangle; the first unit of Memorial Union; an observational schools building; and an addition to the chemistry building. The following were under construction in the autumn of 1926: a medical laboratories building; a new hospital; a field house; and the second unit of Memorial Union. President, Walter Albert Jessup, Ph.D., LL.D.

**IRAQ or IRAQ.** See MESOPOTAMIA.

**IRELAND.** The smaller of the two main British Isles, with an area of 32,586 square miles; politically divided into northern and southern Ireland, the former consisting of the parliamentary counties of Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the parliamentary boroughs of Londonderry and Belfast; and the latter of the remaining 26 counties. The northern counties are known as Northern Ireland and are under a separate parliament and executive, by the Government of Ireland Act of 1920 (See IRELAND, NORTHERN.) The southern counties constitute a self-governing dominion, known as the Irish Free State, under the treaty of Dec. 6, 1921. (See article, IRISH FREE STATE.) The total population of the island June 13, 1921, was estimated at 4,485,000 as compared with 4,390,219 at the census of 1911. No census for all Ireland was taken in 1921. Statistics for Ireland as a whole are no longer available, but for the two divisions they will be found under their respective titles, IRELAND, NORTHERN, and IRISH FREE STATE.

**IRELAND, NORTHERN.** The northeastern part of Ireland, comprising six of the nine counties of Ulster: Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the two parliamentary boroughs of Belfast and Londonderry. Capital, Belfast.

**AREA, POPULATION, ETC.** The area of Northern Ireland, exclusive of water, is 3,351,970 statute acres (also given as 5238 square miles). According to the census taken in 1926, the population was 1,256,322, as compared with 1,250,531 in 1911, the date of the previous census. The population of the capital, Belfast, was estimated at 434,000 in 1924. The following are the latest statistics with respect to education: Elementary education, 2041 public elementary schools with 198,593 pupils on roll; secondary education, 72 schools with 9011 pupils; technical education, 39 technical schools and 66 other centres with nearly 20,000 pupils; higher education, Queen's University at Belfast, with 66 professors and lecturers and 1136 students in 1925.

**PRODUCTION.** Agriculture is the most important industry in Northern Ireland from the point of view of numbers employed and the value of products. Approximately 212,000 persons are regularly employed in this one pursuit, as compared with 206,000 persons employed in all other industries. The principal products are potatoes, cattle, bacon and hams, eggs and butter, the exportable surplus being shipped to Great Britain. Generally speaking the farmers realized good prices for their products in 1925, thus resulting in a greater purchasing power, which has helped to sustain general trade during the depression in other industries and in the face of increasing industrial unemployment. Of the major industries in Northern Ireland,

shipbuilding holds third place, agriculture being first and the linen industry second. When the shipyards are working at full capacity, over 30,000 men find employment therein, but only about 12,000 were working during 1926. The total output for the Belfast yards—which means Northern Ireland—during 1925 totaled 57,899 gross tons, compared with 105,747 tons in 1924. No separate figures for commerce of Northern Ireland are available. They are included in the general figures for the United Kingdom.

**FINANCE.** The bulk of the taxation is imposed and gathered by the Imperial government. After the deduction of certain specified sums the balance is remitted to the Northern Ireland Exchequer. The amounts deducted by the Imperial Treasury represent: The net cost to the Imperial Treasury of those Northern Irish services which have been "reserved" to the Imperial Parliament; and a contribution (fixed at £7,920,000 annually, but subject to revision) towards Imperial liabilities and expenditures. The share of Northern Ireland in the taxation controlled by the Imperial authorities is determined by the joint exchequer board, comprising a representative of the Imperial Treasury, a representative of the Northern Irish treasury, and a chairman appointed by the King. The revenue accruing to the exchequer of Northern Ireland in 1924-25 amounted to £11,437,000 and the expenditure amounted to £11,286,000. For the year 1925-26 the revenue was expected to amount to £10,946,000 and the expenditure to approximately an equal sum.

**COMMUNICATIONS.** In addition to the railway mileage of 765, the country is served by various inland waterways, supplemented by 180 miles of canals.

**GOVERNMENT.** Northern Ireland has a local parliament with restricted jurisdiction; forms an integral part of Great Britain; is represented in the British parliament by 13 members; and is subject to the same taxation as that of Great Britain. The governor in 1926 was the Duke of Abercorn. The ministry was as follows: Prime Minister, Sir James Craig; Finance, H. M. Pollock; Home Affairs, Sir R. Dawson Bates; Labor, J. M. Andrews; Education, The Marquis of Londonderry; Agriculture, E. M. Archdale; Commerce, J. M. Barbour.

**IRISH FREE STATE.** A self-governing dominion of Great Britain, constituted under the Irish Free State government act of December, 1922, which embodied the terms of the treaty of Dec. 6, 1921. Capital, Dublin.

**AREA AND POPULATION.** The Irish Free State comprises about five-sixths of the total area of all Ireland. According to the census of 1926 the total area was 17,019,155 statute acres or 26,592 square miles. The population, according to this same census was 2,972,802, as compared with 3,139,688 in 1911. The loss in population is almost entirely due to emigration caused by unsatisfactory economic conditions in the dominion. Dublin, the capital, had a population (with its registration area) in 1911 of 397,957. In the middle of 1925 the population was estimated at 438,000.

**EDUCATION.** According to the latest available statistics there were 5696 schools in operation with accommodations for 550,000 pupils. The number of pupils enrolled in the schools was 488,902 with a daily average attendance of 71.8 per cent; the number of teachers of all

classes was approximately 11,500. The number of recognized secondary schools in 1924 was 284 with 23,031 students between the ages of 12 and 20 years. Technical schools are established in all the cities and principal towns. Higher education is supplied by the University of Dublin and the National University of Ireland, the latter having three constituent colleges at Cork, Galway, and Dublin. The statistics for the teaching staff attendance at the universities in 1923-24 were: Professors and lecturers, 249; students, 3325. Since the establishment of the Free State, the Irish language has been made an essential part of the school curriculum and it is rapidly spreading as a medium of instruction.

**PRODUCTION.** About one-fourth of the total land area of the Free State is under crops. More than three-fourths of this area is under hay and oats, while one-tenth is sown in potatoes. Historical causes, including free trade in Great Britain and the opening up of large wheat areas in America, drove the Irish farmer into the livestock business which is now the most important in value of the agricultural exports of the country. This development, combined with the failure of Great Britain to encourage industries in Ireland, is responsible in large part for the heavy emigration from Ireland and the reduction in population. The accompanying tables from the *Statesman's Year Book* for 1926 show the area of the various crops and the yield in 1923 and 1924:

<i>Crops</i>	<i>Extent in statute acres</i>	
	1923	1924
Wheat .....	31,764	27,465
Oats .....	785,989	756,813
Barley and bere .....	151,309	163,642
Rye .....	6,414	6,424
Potatoes .....	391,399	383,392
Turnips .....	198,218	201,971
Mangels .....	76,343	74,666
Cabbage .....	32,535	29,616
Flax .....	8,066	10,499
Hay .....	2,026,841	2,099,639

<i>Crops</i>	<i>Total produce</i>	
	1923	1924
Wheat .....	27,861	23,396
Oats .....	502,192	527,982
Barley and bere .....	119,313	129,659
Rye .....	3,922	.....
Potatoes .....	1,446,773	1,457,449
Turnips .....	2,809,412	2,676,882
Mangels .....	1,103,130	885,580
Cabbage .....	375,972	.....
Flax .....	1,300	1,367
Hay .....	3,573,436	4,175,685

The number of livestock in the year 1924 was: Cattle, 4,194,189; sheep, 3,127,921; pigs, 937,814; goats and kids, 193,484; horses in agriculture, 308,552; unbroken horses, 79,988; mules and jennets, 23,160; asses, 218,439.

The mineral resources include: Coal, clay, copper ore, gravel and sand, igneous rocks, limestone, ochre, umber, sandstone and slate. The mineral resources have not been developed to any great extent. The government of the Free State was expending \$30,000,000 on the development of hydroelectric power of the Shannon River. This development will provide 96,000 horse power by the year 1928, and will be one of the largest undertakings of its kind in Europe. When completed, it will aid considerably in adjusting the economic balance of the country, now preponderantly agricultural.

**COMMERCE.** According to the United States Bureau of Foreign and Domestic Commerce, the

foreign trade of the Irish Free State is unique in four important particulars: First, it consists very largely of the import and export of foodstuffs; second, as the yield and the requirement of foodstuffs are fairly constant, there is very little variation in the total values of imports and exports year by year; third, in the case of many commodities there is almost the same amount of trade inward as outward; and, fourth, a very large share of the foreign trade is within the island or with England, just across the way, so that it is not foreign trade at all in many respects.

The stability of the Irish Free State trade becomes evident when the trade figures are scanned, by the eight successive yearly periods that end, respectively, with the months from December, 1925, to July, 1926, inclusive. In each of these eight 12-month periods the total imports have remained steady at approximately £60,500,000, with the exception of the yearly periods ended May, June, and July, respectively, when they decreased by about £1,000,000. The same steadiness is true of exports, which at the end of each 12-month period showed a total of about £42,500,000, until the period ended respectively in May, June, and July, when the total fell to £41,500,000. When there is any noticeable deviation from these figures, upward or downward, it should serve as an indication, respectively, that the country is oversold or, on the other hand, that there is some latent purchasing power waiting to be tapped. This stability of inward and outward trade naturally leaves an equally stable net deficit, amounting each year to about £18,000,000, to be offset by invisible items.

Most countries are not in the market for those commodities of which an excess is produced at home sufficient for export. This is not the case with the Irish Free State, as the accompanying table shows:

BOTH-WAY MOVEMENT OF SIMILAR GOODS IN  
IRISH FREE STATE FOREIGN TRADE,  
JANUARY-JUNE, 1926

Commodity	Quantity	Imports	
		Value per unit	£. s. d.
Bacon ..... hundredweight	213,747	5 4	0
Butter ..... do.....	50,267	8 13	7
Margarine ..... do.....	25,998	3 7	5
Lard ..... do.....	10,005	3 5	0
Oats ..... do.....	200,037	10	9
Potatoes ..... do.....	370,143	8	0
Spirits ..... proof gallons.	128,666	14	5

Commodity	Quantity	Exports	
		Value per unit	£. s. d.
Bacon ..... hundredweight	193,262	6 12	7
Butter ..... do.....	133,990	8 2	7
Margarine ..... do.....	24,756	3 3	2
Lard ..... do.....	18,816	4 8	5
Oats ..... do.....	227,120	7	10
Potatoes ..... do.....	242,665	2	4
Spirits ..... proof gallons.	117,561	15	2

Since April, 1923, the Irish Free State has had its own status as a trading country, separate from Great Britain; that is, the Free State's trade with Northern Ireland and its cross channel trade with Great Britain have now become "foreign" trade instead of "domestic." This makes the United Kingdom foreign trade figures larger by the amount of its trade with the Free State. Of the £30,000,000 of Free

State imports during the first half of 1925, about 83 per cent came from Great Britain and Northern Ireland, but for the first half of 1926 the percentage dropped to 78. Of the exports, 97.4 per cent went to Great Britain and Northern Ireland in 1925, and 96.9 in 1926. This indicates a trend toward more direct trade with countries that always have been "foreign," as illustrated in the accompanying table:

DIRECT TRADE OF THE IRISH FREE STATE  
[In thousand pounds sterling]

Country	Imports		Exports	
	1925	1926	1925	1926
United States .....	1,541	1,831	134	124
Argentina .....	581	559	5	4
Canada .....	661	624	13	19
Germany .....	342	1,084	25	74
Netherlands .....	333	365	8	15
Belgium .....	236	395	64	48
India .....	141	2	27	86
France .....	174	261	46	20
Australia .....	459	155	11	8
South Africa .....	37	124	5	14

An inconsistency appears between direct imports and direct exports in that they rarely increase together. In other words, the natural condition appears still to be to send and receive shipments via the United Kingdom. To-day all classes in the Free State recognize the economic importance of the United Kingdom. The people are now much more concerned with economic than political questions. The new Irish problem is one of capital and economic adjustment. Just now there is a drain of capital away from Ireland, and British rather than Irish industry is deriving the benefit. Money with which to stock the land is increasingly hard to obtain, arable land has declined heavily in value, farms are changing hands, and there is a heavy increase in the area under hay. This trend is of vital importance to the future of the country.

FINANCE. The budget of the Irish Free State for 1925-26 carried a deficit. Upon submitting the budget to the Dail, the Minister of Finance announced that the policy of the government was to provide for non-recurrent items by borrowing, and to reduce taxes to the level of ordinary expenditures in the hope that industry and commerce may be so stimulated as to permit still further reductions in taxes, with concurrent increases in revenue. The budget indicated a tendency toward indirect taxation. New customs duties, of a protective nature, were imposed. The personal income tax and corporation profits tax were reduced, and the grant to farmers in relief of local taxes was doubled. Approximately one-fifth of the estimated expenditure was considered as nonrecurrent, and was to be covered by borrowing. If this non-recurrent item is eliminated from the consideration of receipts and expenditures, the budget should show a surplus of revenue over expenditure. The estimated revenue for the year was £25,980,110 and the estimated expenditure, £30,128,000. Official figures of the Irish Free State place the public debt, as of April 1, 1925, at £13,360,353; this compares with £13,918,000 on April 1, 1924.

COMMUNICATIONS. The principal ports are Cork and Dublin. The latest figures for shipping are those for 1924 when 14,382 vessels of 8,164,677 tons entered the ports of the Irish Free State and 14,343 vessels of 8,162,001 tons cleared. The total route mileage of railways opened for

traffic at the end of 1924 was 3023, including the mileage situated partly within and partly without the Free State. The length of first track actually within the Free State was 2668 miles.

**GOVERNMENT.** The Irish Free State has a written constitution which provides that her status shall be similar to that of the Dominion of Canada. It has a co-equal status with the other dominions of the United Kingdom, has complete control of its economic life, with a customs boundary against all countries, including Northern Ireland and Great Britain. (For details see *YEAR BOOK* for 1922.) The Governor-General in 1926 was Michael Healy, appointed Dec. 6, 1922. The executive council as organized in June, 1925, was as follows: President, William T. Cosgrave; Justice, Kevin O'Higgins; Finance, Ernest Blythe; Defense, Peter Hughes; Industry and Commerce, Patrick MacGilligan; External Affairs, Desmond Fitzgerald; Education, J. Marcus O'Sullivan. Other ministers not members of the council were: Lands and Agriculture, Patrick Hogan; Local Government and Public Health, James Burke; Fisheries, Finian Lynch; Posts and Telegraphs, James J. Walsh.

**HISTORY.** The Irish Free State passed a comparatively quiet year. With the settlement of the boundary dispute with Northern Ireland, as noted in the preceding *YEAR BOOK*, the country entered upon a period of calm and more or less uneventful peace. Eamon de Valera, the outstanding leader of the Sinn Fein movement, resigned from his position of president of the Republican Party early in March because of disagreement with the more radical members. On April 18 both the Free State and Northern Ireland began a census of their respective countries for the first time since 1911. Internal strife had prevented the taking of a census in 1921. The results of the census have been noted in the paragraphs on Area and Population, above, and in the articles on IRELAND, *NORTHERN*.

In November there were serious riots and outbreaks in many districts of Ireland, which necessitated the passing of a public safety act and the establishment of a virtual state of siege in the affected districts. After a few days quiet was resumed. The belief was prevalent that the disorders were caused by the strengthening of the Irish-British bonds during the meetings of the British Imperial Conference. See *GREAT BRITAIN, History*.

**IRON AND STEEL.** The iron ore mined in the United States in 1926, exclusive of ore that contained 5 per cent or more of manganese in the natural state, was estimated by the U. S. Bureau of Mines, Department of Commerce, at 67,693,000 gross tons, an increase of 9 per cent as compared with that mined in 1925. The ore shipped from the mines in 1926 was estimated at 69,141,000 gross tons, valued at \$175,307,000, an increase of 8 per cent in quantity and of 9 per cent in total value as compared with the figures for 1925. The average value of the ore per gross ton at the mines in 1926 was estimated at \$2.54; in 1925 it was \$2.52. The stocks of iron ore at the mines, mainly in Michigan and Minnesota, apparently decreased from 10,795,630 gross tons in 1925 to 9,496,000 tons in 1926, or 12 per cent.

About 85 per cent of the iron ore shipped in 1926 came from the Lake Superior district, in which approximately 57,314,000 gross tons were

mined and 58,759,000 tons shipped, increases of 10 and 8 per cent, respectively, as compared with the quantities mined and shipped in 1925. The ore shipped in 1926 was valued at \$151,484,000, an increase of 9 per cent. These totals include the ore from mines in southern Wisconsin and ore shipped by rail as well as by water from all mines, but exclude manganiferous ores that contained 5 per cent or more of manganese in the natural state. The ore is chiefly hematite. The stocks of iron ore in this district apparently decreased from 9,468,624 gross tons in 1925 to 8,104,000 tons in 1926, or 14 per cent. The stocks at the end of 1926 were about 2,260,000 tons less than the average for the preceding five years. The shipments of iron ore by water from the Lake Superior district in 1926 (including manganiferous iron ores), according to the Lake Superior Iron Ore Association, amounted to 58,537,855 gross tons, an increase of 8 per cent as compared with these shipments in 1925. The average value of the ore at the mines in the Lake Superior district in 1926 was \$2.58; in 1925 it was \$2.57.

The mines in Minnesota furnished 69 per cent of the total iron ore shipped from the Lake Superior district in 1926 and 59 per cent of the total of the United States. The mines in Michigan furnished 28 per cent of the Lake shipments and 24 per cent of the grand total.

The Southeastern States, which constitute the second largest iron-ore producing area, including the Birmingham and Chattanooga districts, mined approximately 7,253,000 gross tons of iron ore in 1926, a decrease of 3 per cent as compared with 1925. The shipments of iron ore from these States to blast furnaces in 1926 amounted to 7,249,000 gross tons, valued at \$15,720,000, a decrease of 0.3 per cent in quantity but an increase of 4 per cent in value as compared with the quantity and value of the shipments in the previous year. The ore consists mainly of hematite; brown ore and magnetite come next in order. The average value of the ore produced in these States in 1926 per gross ton was \$2.17; in 1925 it was \$2.08. Conditions in Alabama and Missouri seem to have been more favorable during the year than in other parts of the South. The stocks of iron ore at the mines in this group of States, mainly in the Birmingham district, increased from 971,550 gross tons in 1925, to 975,000 gross tons in 1926. These stocks are about 349,000 tons more than the average for the preceding five years.

The Northeastern States, which include the Adirondack district, New York, and the Cornwall district, Pennsylvania, in 1926 mined 1,954,000 gross tons of iron ore and shipped 1,959,000 tons, valued at \$6,398,000, increases of 50 per cent in the quantity mined, 31 per cent in the quantity shipped, and 33 per cent in value of shipments as compared with 1925. Production in the Adirondack and Cornwall districts and at Fort Montgomery, N. Y., and Mt. Hope, N. J. was on an enlarged scale during 1926. The stocks of iron ore in this group of States increased from 341,357 gross tons in 1925 to 405,000 tons in 1926. These stocks were considerably less than usually carried over at these mines, being about 213,000 tons below the average for the preceding five years. The average value of the ore in these States in 1926 per gross ton was \$3.27; in 1925 it was \$3.22. Most of this ore is magnetite.

The Western States that ordinarily produce iron ore, named in order of their importance, are Wyoming, Utah, New Mexico, Colorado, Montana, and California. Occasionally Idaho, Nevada, and Washington contribute small quantities. All the ore from Wyoming, New Mexico, and Colorado and most of that from Utah is used for the manufacture of pig iron. Much of the remainder is used as a flux in smelting copper and the precious metals. It was estimated that the Western States mined in 1926 approximately 1,172,000 gross tons of iron ore, and shipped 1,174,000 tons, valued at \$1,705,000, increases of 24 per cent in the quantities mined and shipped and 7 per cent in value of shipments as compared with 1925. The ore comprises hematite, magnetite, and brown ore. The increase in output in this group of States in 1926 reflected the more active operations at mines in the Hartville district, Wyoming, in the Fierro district, New Mexico, and near Orient, Colorado.

**IMPORTS AND EXPORTS OF ORE.** The imports of iron ore reported for 1926 amounted to 2,555,441 tons, valued at \$5,876,319, or \$2.30 a ton. The imports for the year 1925 were 2,190,697 gross tons, valued at \$6,895,220, or \$3.15 a ton. The reported exports of iron ore for the eleven months ended Nov. 30, 1926, amounted to 868,710 gross tons, valued at \$3,380,701, or \$3.89 a ton, as compared with exports for the entire year 1925 of 630,521 tons, valued at \$2,411,093, or \$3.82 a ton.

The accompanying table shows the quantity and value of the iron ore mined and shipped in the United States by the principal producing States.

**PIG IRON.** The production of pig iron in the United States in 1926 was thought to be next to the highest on record, which was 40,361,146 gross tons in 1923. *The Iron Age* (New York) estimated the 1926 production (including charcoal iron) at 39,500,000 tons, or slightly above

of the year was the completion of two new merchant blast furnaces, one at Troy, N. Y., and the other at Everett, Mass., which made available nearly 1000 tons additional iron daily for the Eastern market, particularly New England, and made competition between these furnaces and producers in Eastern Pennsylvania and in New York.

For purposes of comparison, the outputs of pig iron and steel ingots, with total steel ingots and castings in 1926 and the preceding years covering the high production War years and those following, are given in the accompanying table from the *Iron Age*.

	Pig iron Gross tons	Steel ingots Gross tons	Steel ingots and castings Gross tons
1916.....	39,434,797	41,401,917	42,773,680
1917.....	38,621,216	43,619,200	45,060,607
1918.....	39,054,644	43,051,022	44,462,482
1919.....	31,015,364	33,694,795	34,671,232

1926.....	39,500,000	47,000,000	48,250,000

**STEEL.** The 1926 steel ingot production, according to the American Iron and Steel Institute, eclipsed all records, being a gain of nearly 7 per cent over 1925, and was placed at 47,133,517 tons, these figures being based on actual returns from 94¼ per cent of the industry. They compare with the 1925 production of 44,140,738 tons. The average rate of operations in 1926 was 84½ per cent capacity, which was considered remarkably high in view of the expansion of capacity of the United States during the War. The theoretical capacity as of Dec. 31, 1925, was 55,844,033 gross tons. The accompanying table shows the steel ingot output for the years 1926 and 1925, by months.

## STEEL INGOT OUTPUT IN 1925 AND 1926

[Gross tons]

the 39,434,797 tons of 1916. The output in 1925 was 36,700,566 tons. The pig iron prices were the lowest since 1916 and the composite price for the year averaged \$20.42, against \$20.58 in 1925 and \$20.90 in 1924. A five-year average, 1922-26 inclusive, was \$22.45, or \$2.03 above that for 1926. On Dec. 1, 1926, 213 blast furnaces, with a daily capacity of 105,860 gross tons, were in blast. The largest number was 237 furnaces, with a daily capacity of 115,150 tons, on May 1 and the smallest, 213 furnaces, was on December 1 and September 1. One of the events

The production of finished steel in American plants in 1926 was estimated at 34,782,000 gross tons, as against 32,660,000 tons in 1925. This is shown more definitely in the accompanying table from the *Iron Age*.

## ESTIMATED STEEL PRODUCTION IN 1926

	Gross tons
Heavy rails.....	2,949,000
Light rails.....	180,000
Track accessories.....	1,076,000
Plates.....	3,833,000
Structural shapes.....	8,872,000

ESTIMATED STEEL PRODUCTION IN  
1926—Continued

Steel bars .....	6,721,000
Strip, hoops, bands .....	1,836,000
Tin plate .....	1,874,000
Sheets .....	4,683,000
Pipe and tubes .....	4,129,000
Wire products .....	2,678,000
All other products .....	1,251,000
<b>Total .....</b>	<b>34,782,000</b>

The significant features of the year's production were the large amount of rails and pipes manufactured and the expansion in the demand from the oil industry. The production of heavy rails was greater than any time since 1913 and a new record was made in the output of pipes. The oil industry and mining apparently required 25 per cent more steel than in 1925.

**WORLD PRODUCTION.** In 1926 the world's steel production was estimated by *The Iron Age* at 89,500,000 tons, which was stated as a new record. Of this the United States produced approximately 48,250,000 tons, or about 54 per cent. In 1926, according to these estimates, the six leading countries—namely, the United States, Great Britain, Germany, France, Belgium, and Luxemburg—had a steel production of 77,515,000 tons, or about 1,000,000 tons greater than in 1925 and about 12,800,000 tons larger than in 1913, when the production was 64,700,000 tons. The output of pig iron, however, was less in 1926 than in 1913; the production of the six leading nations was estimated at 66,313,600 gross tons, as compared with 67,796,400 tons in 1913. France, Belgium, and Luxemburg produced more pig iron than steel.

As indicating the general condition of the iron and steel industry in 1926, it may be said that all countries except Great Britain made new records in both production and exports. In the case of Great Britain, naturally, the great coal strike was responsible for the smallest pig iron production since the World War, even less than in 1921 when there was world-wide depression. For Great Britain the output of pig iron was estimated at 2,418,500 tons, as compared with 2,616,000 tons in 1921, and 3,391,000 tons of steel were made, as compared with 3,705,200 tons in 1921. In fact, the British pig-iron production of 1926 was the smallest since 1886, when it amounted to 2,203,880 tons, and the steel production was the smallest since 1895, when the total was 3,259,900 tons.

As a result of this British decline in production, Germany took second place, making new post-war records, in steel production, with 12,117,400 gross tons, estimated, and exports of 4,823,500 tons, but not in pig iron, 9,394,700 gross tons, which was less than the 10,018,800 tons of 1925, but otherwise the largest since the War. In France the industry continued to expand in 1926, and the pig-iron production scored a record with 9,206,700 tons, as compared with 8,361,600 in 1925, 5,124,000 in 1913, and 3,380,400 in 1920. Of course, before the War there was no contribution by Alsace-Lorraine to the French total, and in 1926 it accounted for possibly 35 to 40 per cent. In steel, as well as in pig iron, all previous records were eclipsed, with an estimated output of 8,250,700 tons, which was nearly 80 per cent larger than in 1913, when 4,620,000 was the record. There was also an improvement over 1925, when the steel production was 7,299,600 tons. In the export field, also,

France increased the iron and steel sent abroad, 3,921,000 tons, and had become a factor to be reckoned with in world competition, standing next after Germany in the world's export markets. Belgium also scored new records with a pig-iron output in 1926 of 3,337,900 tons, or about one-third larger than that of 1925 and considerably in excess of any previous year. The steel production likewise was the largest recorded, being 3,313,400 tons, or about one-third larger than 1913, when it amounted to 2,427,600 tons. Luxemburg also in 1926 excelled any post-war year, with an output of 2,455,800 tons of pig iron (less, however, than in 1913), but with an increased output of steel; namely, 2,192,200 tons in 1926, as compared with 1,308,000 tons in 1913.

**IRON, ELECTROLYTIC, FROM SCRAP.** See **CHEMISTRY, INDUSTRIAL.**

**IRRIGATION.** See **RECLAMATION.**

**ISLAND UNIVERSES.** See **ASTRONOMY.**

**ISTRIA.** A former crownland of Austria, but since the war a part of Italy. This region includes the peninsula extending from Trieste to Carniola into the Adriatic together with a few islands. Area, 2035 square miles; population, according to the census of 1921, 342,979. Capital, Capodistria, with a population of about 9000.

**ITALIAN ARCHÆOLOGY.** See **ARCHÆOLOGY.**

**ITALIAN LANGUAGE.** See **PHILOLOGY, MODERN.**

**ITALIAN SOMALILAND,** sō-mh'lelānd. A colony and three protectorates of Italy, making up the territory that extends along the east coast of Africa from British Somaliland and Kenya Colony to the Juba River. Area, approximately 154,000 square miles; population, about 650,000 (750 Italians). The colony was formerly known as Benadir, but the official title is now Italian Somaliland. It extends from 4°40'N. latitude to the mouth of the Juba River and is divided into three administrative districts. Mogadiscio is the capital with a population of about 20,700. The three protectorates are: The Sultanate of the Mijertins, under an Italian commissioner who resides at Alula; the territory of the Nogal between Cape Gabbee and Cape Garad; the Sultanate of Obbia, extending from the northern boundary of the colony of Benadir to Cape Garad, under an Italian commissioner, resident at the capital, Obbia. The chief occupations are agriculture and stock raising, the latter engaging about half the population. The principal exports are cotton, amber, iron, myrrh, copper, tobacco, and grains. The principal imports are cotton and cotton yarn, textiles, coffee, petroleum, rice, tobacco, sugar, fats, soap, cereals, flour, and preserved products. The governor in 1926 was Count Cesare de Vecchi (appointed in 1923).

**ITALY.** A constitutional monarchy of southern Europe, comprising besides Italy proper, the islands of Sardinia, Sicily, Elba, and some 70 other small islands, together with the territory on the eastern shore of the Adriatic acquired as a result of the Treaty of St. Germain, and arrangement with Jugo-Slavia in 1920. Capital, Rome.

**AREA AND POPULATION.** The area of Italy before the war was 110,632 square miles, with a total population on Jan. 1, 1915, of 36,120,118. The area as a result of the survey made at the time of the census of 1921 is 119,624 square miles and the population according to that

census, 38,755,576; estimated in 1926 at 42,115,606. The movement of population in 1924 was: Births, 1,123,260; deaths, 661,020; marriages, 307,145. The total number of emigrants in 1924 was 304,614, of whom 230,332 went to other European countries or those bordering on the Mediterranean, and 125,282 to countries overseas. The emigrants in 1925 totaled 312,038. In 1924, 61,832 Italians returned to Italy, 40,305 coming from the United States and Canada. In 1925 182,542 Italians returned to the mother country. The cities with a population of more than 175,000 as estimated on Jan. 1, 1924, were as follows: Bologna, 218,481; Catania, 258,030; Florence, 260,651; Genoa, 322,774; Messina, 181,732; Milan, 852,922; Naples, 784,464; Palermo, 405,236; Rome, 720,494; Turin, 503,075; Trieste, 238,655; and Venice, 200,239.

**EDUCATION.** Under the law of 1923 elementary instruction is given in three grades, namely, preparatory (three years), secondary (three years), and higher (two years). In the elementary grade, all classes above the fifth are regarded as special classes of professional training. The secondary schools are divided into two grades. No recent figures were available for elementary and secondary schools, particularly under the new system. In 1926 there were 24 universities, including four that were free, besides university courses given in certain lyceums. There were, in addition, certain institutions of university rank, namely, the Institute of Higher Education at Florence, the Royal Scientific and Literary Academy in Milan, and the Higher Technical Institute of Milan. There are higher institutions for commercial education at Rome and other cities; also higher schools for agriculture, engineering, and various schools for technical education.

**PRODUCTION.** Italy is a densely populated country and has scanty natural resources. Comparatively few staple foodstuffs needed for popular consumption and an exceptionally small proportion of the raw or semifinished materials required by the country's developing industries are produced within its borders. Consequently there is a dependence on imports from abroad to keep the people fed and the industrial plants supplied with needed materials. The accompanying table from the *Statesman's Year Book* for 1926 gives the acreage and yield of the principal crops for 1924 and 1925:

	Acreage	
	1924	1925
Wheat . . . . .	11,415,750	11,767,539
Barley . . . . .	579,000	575,510
Oats . . . . .	1,194,250	1,200,361
Rye . . . . .	313,500	301,220
Maize . . . . .	3,765,500	3,853,200
Rice . . . . .	343,750	355,433
Beans . . . . .	1,191,750	1,196,221
Potatoes . . . . .	870,250	854,867
Sugar beet-root . . . . .	306,280	
Vines . . . . .		
Olives . . . . .		
	Produce in cwt.s.	
	1924	1925
Wheat . . . . .	46,306,000	65,548,000

<sup>a</sup> Produce in thousand gallons.

<sup>b</sup> Provisional figures.

In 1924 there were 677 productive mines, employing 45,353 workers and producing metals valued at 540,889,252 lire. The more important minerals, according to value were, sulphur ore, zinc, mineral fuel, lead, iron and cuprous pyrites, and mercury.

**COMMERCE.** According to the United States Bureau of Foreign and Domestic Commerce, Italian industry's growing necessity for larger foreign sales has suggested the creation of a new export bureau, which, although under government supervision is largely directed by representatives of the larger export industries. Italian production is peculiar in that it comprises innumerable small establishments which are not in position to maintain direct contact with foreign markets. The important part which these small producers play in the national output has shown that successful marketing of characteristically Italian products in foreign fields is scarcely possible save through the establishment of an agency which includes a personnel intimately cognizant of trade trends, and at the same time under completely nonpartisan control such as only state supervision could give.

Modern needs of commerce have influenced the government to establish an organization which would have greater legal, administrative, and financial autonomy so as to preserve the freedom of action deemed necessary to an organization of this type. The new institution which was authorized to begin operations of July 1, 1926, is called the National Institute for Export. Its general policies will be determined by a council consisting of a president who is appointed by the King at the suggestion of the Minister of National Economy, and 39 members. Of the latter, 11 are government officials representing the various ministries interested in export problems, 9 are representatives chosen by trade associations, and the remaining 19 are appointed directly by the Minister of National Economy. For the execution of the policies dictated by this council a technical or executive committee, consisting of eight members selected from the membership of the council, is to be appointed. The actual administration of the institute is in the hands of the director general, Dr. Raffaele Pilotti. The scientific study of foreign markets is the main object of the National Institute for Export.

The Italian export trade, with the exception of the year 1921 when there was a slight recession, has shown a steady growth. On the import side the larger totals are a result of the growing needs of the home market for domestic consumption and for raw materials for export products. The unfavorable trade balance is considerably greater than before the war, although the percentage of exports to imports tends to approximate the pre-war figures, as shown in the accompanying table:

VALUE OF ITALY'S FOREIGN TRADE  
[In thousands of dollars <sup>a</sup>]

Year	Imports	Exports	Exports in percentage of imports
1913 . . . . .	703,608	484,746	69
1923 . . . . .	790,977	510,456	64.5
1924 . . . . .	844,566	626,283	74
1925 . . . . .	1,041,066	726,964	69.8

<sup>a</sup> Conversions made at the following rates of exchange for the lira: 1913 at par, or \$0.193; 1923 at annual average, or \$0.046; 1924 at \$0.0436; 1925 at \$0.0398.

**FINANCE.** Revenues and expenditures in the Italian budget for the fiscal year 1926-27 showed increases over the budget for 1925-26. The accompanying table gives a comparison of the two budgets, excluding the changes introduced in the 1925-26 budget since its adoption, in order to give a better basis for comparison:

**SUMMARY OF THE ITALIAN BUDGET, 1926-27**  
[In million lire, paper; and as originally presented]

Classification	1925-26	1926-27
Effective revenues:		
Ordinary .....	16,969.5	18,067.2
Extraordinary .....	425.1	691.0
Total .....	17,394.6	18,758.2
Effective expenditures:		
Ordinary .....	13,487.5	14,099.9
Extraordinary .....	3,729.2	4,349.4
Total .....	17,216.7	18,449.3
Surplus .....	177.9	314.9

The principal changes in items included in the budget consist in (a) the exclusion of receipts and expenditures for the postal, telegraph, and telephone services, merely inserting the surplus among receipts; and (b) the inclusion among effective expenditures of the regular appropriation for railroad construction, which has hitherto been placed in a separate category together with revenues to meet the expense.

As compared with the previous budget, the 1926-27 revenues show an advance of 1,363,600,000 lire; but even this figure does not represent the full extent of the increase, since gross revenues from posts, telegraphs, and telephones (amounting to 904,000,000 lire in the 1925-26 budget) are no longer included, and this is offset in part by the inclusion of receipts to meet railroad construction which usually are fixed at 250,000,000 lire. As no new important sources of revenue have been opened, it is evident that considerably less conservatism has been shown in estimating income for the 1926-27 budget than has been exercised in the past. The trend of the returns for the first eight months of the 1925-26 fiscal year justified the increase; revenues were not only 1,617,400,000 lire higher than the budget quota for the period, but also showed an advance of 896,700,000 lire over the corresponding months of 1924-25. A similar tendency is shown in the case of expenditures, which have advanced by 1,226,600,000 in spite of the exclusion of the posts, telegraphs, and telephone expenditure. Credits for numerous supplementary operations have been continually allowed during the course of past fiscal years, so that actual payments have always considerably exceeded budget estimates. This may be illustrated by developments during the 1925-26 fiscal year, when effective expenditures exclusive of the postal budget, amounted to 16,404,700,000 lire at the opening of the fiscal year. By Feb. 28, 1926 an increase of 2,199,400,000 lire in expenditures had been allowed, making a total estimate for the year 18,604,200,000 lire.

Whereas the surplus indicated in budget estimates for 1925-26 was 178,000,000 lire in amount, returns for the first eight months of the year showed a surplus of 338,000,000 lire. The experience of past years makes it seem certain that this surplus will be increased by the end of the fiscal year. At the end of February, 1925, a deficit of 487,000,000 lire was registered; but at the end of the year this had been eliminated

and a surplus of 417,000,000 lire accumulated. It was expected that the surplus for 1925-26 would surpass 500,000,000 lire; and in spite of the more liberal estimates of receipts for 1926-27, no reversion to a deficit was anticipated.

**COMMUNICATIONS.** In 1924 211,770 vessels of 54,054,762 tons entered at Italian ports and 211,522 vessels of 53,896,931 tons cleared. The total mileage of state railways on June 30, 1925, was 10,237 miles; receipts in 1924-25, 4,302,055,691 lire; expenditure, 4,126,264,652 lire. The government proposes to electrify its entire system. By the middle of 1924, 858 miles had already been electrified. By royal decree law of April 1, 1926, the government of Italy granted a concession to the Societa Italiana di Navigazione Interna, having offices at Venice and a capital of 20,000,000 lire, for carrying out the work of opening and completing the following navigable lines in the Po valley; (a) Trunk line Oriago-Padua from the Venice-Padua waterway, and terminal port; (b) completion of the Ferrara network and relative access from the Po to Pontelagoscuro; (c) trunk connecting the (Inocca Po with the Goro Po; (d) completion of the fluvial port of Mantua; (e) completion of the fluvial port of Cremona; (f) settlement of the minor landing stages along the Po. The cost of the above works is estimated at about 60,000,000 lire, of which 36,000,000 lire will be contributed by the state from the budget of the ministry of public works and 24,000,000 lire by interested local bodies, the latter sum to be advanced by the state against future payments. Payment for the work will be divided over a period of ten years.

According to the report of the Administration of the Italian State Railways for the fiscal year 1925-26, the movement of passengers showed an increase of about 6 per cent and goods traffic of 2.71 per cent in the tonnage loaded. The distance covered daily by passenger trains, thanks to the opening of new lines, rose from 203,000 to 221,000 kilometers, thus reaching pre-war density. Despite the increase of traffic and services rendered, the average number of persons employed decreased, compared with the previous year, from 174,600 to 171,900. In 1925-26 the net surplus reached 378,000,000 lire, representing the difference between receipts totaling 5,067,000,000 lire and expenses of 4,689,000,000 lire. Receipts have increased by 765,000,000 lire; expenses have increased by 563,000,000 lire, that is, in smaller proportion than receipts. Important electrification work has been completed, together with improvements of lines, stations, workshops, and warehouses.

**ARMY AND NAVY.** Liability to military service beginning at the age of 20 and lasting 19 years is compulsory and universal. The strength of the active army in 1925 was 18,000 officers and 308,000 men. See **MILITARY PROGRESS.**

The accompanying table taken from the *Statesman's Year Book* for 1926 shows the classification of the navy in 1924 and 1925:

	Completed at end of 1924	1925
Battleships .....	5	5
Battleships for Coast Defense .....	2	2
Armored cruisers .....	3	3
Light cruisers .....	10	10
Flotilla leaders and destroyers .....	61	61
Torpedo boats .....	65	64
Submarines .....	41	42

**GOVERNMENT.** Executive power is vested in the king, who acts through a responsible ministry, and legislative power in the king and parliament, the latter consisting of two chambers; a senate, which on Jan. 1, 1924, had 387 senators and nine members of the royal family; and a chamber of deputies, with 535 members, elected on the basis of universal suffrage, male and female, and proportional representation. By the electoral law of Feb. 15, 1925, Italy reverted to the single member constituency system, which it was intended to put in force at the next election. The Chamber of Deputies, elected in April, 1924, was divided among the political groups as follows: Fascisti, 375; Catholics, 39; other constitutionalists, 45; Socialists, 46; Communists, 19; Republicans, 7; Slavs and Germans, 4. The King during 1926 was Victor Emmanuel III, born Nov. 11, 1869, who succeeded his father, King Humbert I, July 29, 1900. The cabinet as reorganized on Aug. 30, 1925, was constituted as follows in 1926: Actual Head of the Government, Prime Minister, Secretary of State, Minister of Foreign Affairs, Minister of Aeronautics (ad interim), Benito Mussolini; Interior, Luigi Federzoni; Colonies, Pietro Lanza Di Scalea; Justice, Alfredo Rocco; Finance, Giuseppe Volpi; War and Marine (ad interim) Benito Mussolini; Public Instruction, Pietro Fedele; Public Works, Giovanni Giuriati; National Economy, Giuseppe Belluzzo; Communications, Costanzo Ciano.

#### HISTORY

**RÉSUMÉ OF THE YEAR.** The following brief résumé of the year appeared in the *New York Sun* on December 21. The year 1926 may be defined in Italy as the year establishing the complete internal domination of Fascism by Premier Mussolini. Having consolidated the revolution of 1922, and reduced all political opposition to a minimum, Mussolini was in a position to turn his attention to the numerous problems facing his country. He was at the head of six ministries, namely those of War, the Marine, Aviation, Foreign Affairs, the newly created ministry of the "Corporazioni" and the Interior. Under his guidance immense activity has been displayed in all these state departments.

From the point of view of legislation, the most important and revolutionary measure of the year was the creation of the Fascist "sindicati" of trades unions. This measure has been described by the Fascist press as being the cornerstone of the régime. It carries the authority of a highly centralized government into every form of the nation's activities. By it, the State regulates the condition of labor, the rate of pay, abolishes strikes, and brings its control into even the smallest details of industrial and commercial enterprise. Every one in the country must belong to a union of "corporations" which in turn, depends on a "supercorporazione" itself depending again on one of the six great national "corporazioni." Not only are workmen and operatives obliged to belong to their proper union, but professional men, merchants and shopkeepers must be enrolled in their respective syndicates. Theoretically no worker can find employment unless he belongs to a regular Fascist union, and practically it is extremely difficult for him to do so. Neither can he claim wages due or compensation of any kind if he is not properly inscribed. The strike is abolished. In cases of disputes concerning wages or

salaries, special courts have been established to settle the matter. The new syndicalist law of 1926 ordained that rates of pay and conditions of labor were to be fixed by the Fascist unions, and masters and men must abide by them. The ministry governing this complete organization is that of the "Corporazioni," and is directed by Mussolini himself.

The "Duce" had three unsuccessful attempts made on his life in 1926. These took place respectively in April, September and October. The first was made by an Englishwoman, the Hon. Violet Gibson, who shot at Mussolini on the steps of the capital, and wounded him slightly in the nostrils. The second attempt was carried out by the anarchist Gino Lucetti, who threw a bomb at the premier's automobile when he was on the way to the Chigi Palace. On this occasion Mussolini escaped without any injury. The third attempt was that of the fifteen-year-old boy, Anteo Zamboni, at Bologna. Zamboni shot at Mussolini in his car but the bullet merely grazed his tunic and did him no injury. As a result of these frequent attempts on the Premier's life, the death penalty was reintroduced into Italian legislation. Under the new law voted by the Chamber in November, anyone attempting the life or security of the King, Queen, Crown Prince, or Premier, will in future be tried by Fascist military tribunals, and sentenced to death. The tribunals will be composed of officers of the black shirt militia presided over by a superior officer of the army or navy.

Another important piece of legislation introduced during 1926 was that of the revival of the office of "podesta." This is really a revival, with modifications, of a medieval Italian office. Under the modern law, the podesta takes the place of the municipally elected mayor or "sindaco" and is appointed by the central government and is responsible to it alone. The office of podesta is, at present, confined to communes having less than 5000 inhabitants, but it will gradually be extended to all the communes of Italy.

Reforms of the state bureaucracy and the juridical system were also inaugurated in 1926. Numbers of small tribunals, including many sub-prefectures were abolished. The courts of appeal, or courts of "cassation" were reduced in number, and the payroll of the State's employees was cut down considerably. The right to vote at municipal elections was extended to women possessing certain age and property qualifications, but the measure has become partially inoperative, and will later become entirely so through the creation of the office of podesta and the consequent abolition of municipal elections.

Two great well-advertised campaigns were initiated by the government in 1926: "The battle of the lira" and "the battle of the grain." A determined effort to improve the value of the lire was made in the autumn of 1926, and the results proved very successful. Finance Minister Volpi deposited almost the entire Morgan loan of \$100,000,000 with the Bank of Italy, and the paper circulation was fixed at seven billion lire, increasable to eight. The three note issuing banks were reduced to one, the Banca d'Italia; the banks of Sicily and Naples had their authority to issue notes withdrawn. Silver coinage of 5 and 10 lire pieces was reintroduced. Restrictions on imports were put into effect. A national type of bread was ordered to be made

all over the country, containing a percentage of other cereals than wheat. One of the largest financial operations of the year was the issue of the "Lictorial Loan," by which short term treasury bonds were converted into consolidated stock, redeemable in 1926.

In the realm of foreign affairs the year 1926 was a very busy one for Italy. Treaties, political, commercial, or both were signed with Spain, Rumania, Albania (q.v.), Czecho-Slovakia, Jugoslavia, Switzerland, Bulgaria, Lithuania, Finland, and the Yemen, besides a number of minor Oriental states. One of the most important political treaties of the year was the pact of friendship with Spain. Italy consolidated her debt with Great Britain.

Regarding aviation, Italy's important share in the success of the Amundsen-Ellsworth-Nobile north pole expedition must be noted. Much progress was made both in military and civil aviation. Civil air lines were inaugurated between Brindisi and Constantinople, Venice and Vienna, Palermo and Genoa, Turin and Trieste, and Trieste and Zara in Dalmatia. Further railway electrification was accomplished in North Italy, opening the section between Genoa and Leghorn. From Leghorn to Modane, on the frontier, the whole line had been electrified, and is the longest stretch in Europe. Hydro-electric plants were built in north Italy. A number of important land reclaiming schemes, especially in northern and central Italy, were completed. Some of these tracts of recovered land had already been sown with grain and will form useful adjuncts in Italy's "battle of the grain."

The relations between the State and Church continued to be excellent, and the reintroduction of the crucifix into the national schools was tactful and was appreciated by the Vatican.

**THE SOUTHERN TYROL QUESTION.** At the beginning of the year there was tremendous discussion throughout Italian and German speaking countries over the obvious attempt on the part of Mussolini to Italianize the Southern Tyrol, which had been turned over to Italy by the Peace Conference. Shortly after the Italian parliament opened in January, Mussolini made a spread-eagle speech concerning the Upper Trentina, as it is called in Italy, or Southern Tyrol, as the Germans and Austrians call it. He declared: "We will apply, rigorously, methodically, obstinately, with a system of cool tenacity which is typical of *Fascismo*, all our laws to the inhabitants of the Upper Adige. I refer both to those this Chamber has voted and those it will vote in the future. We will render that region Italian because it is Italian, both historically and geographically. The boundary of the Brenner Pass is a frontier traced by the infallible hand of God." In other parts of his speech he bitterly assailed Germany for her interest in the affair and delicately suggested forcible means to keep her interest away from Southern Tyrol.

Dr. Stresemann, the German Foreign Minister, replied to Mussolini in a speech in the Reichstag on February 9, in which he recalled the promises of Italy to respect the rights of minorities in the Tyrol district when the Treaty of Versailles was signed, and showed how these rights were being denied under Italy's policy of degermanizing the district and Italianizing it. In replying to Stresemann on February 10 Mussolini stated: "The alien population of the Upper Adige is

outside of those minorities who were the object of special accord in the peace treaties. Italy will not engage in any discussion of that matter by any Assembly or Council, and because of that the action of the Tyrol Diet (for intervention by the League of Nations) is useless. The Fascist government will react with the greatest energy against all plans of such a nature, because it would consider itself guilty of the crime of treason if for 100,000 Germans who made a descent on Italian soil it should compromise the peace and security of 42,000,000 Italians, who surely form a national bloc, the most homogeneous and compact existing in Europe." As time went on the friction between Germany and Austria on the one hand and Italy on the other gradually quieted down but the Italianizing of Southern Tyrol was carried out thoroughly. All the shopkeepers had to place signs outside their stores in the Italian language, the Italian flag had to be shown everywhere, and all other such manifestations as were common in Poland before the War were exhibited in the Tyrol region.

**THE MATTEOTTI AFFAIR.** The trial of the murderers of Giacomo Matteotti, a strong anti-Fascist leader, was held on March 16. (For the details of this case and the serious political upheavals which it caused consult the two preceding YEAR BOOKS.) As was expected the affair turned out to be more or less of a farce. The five men who were charged with the murder were all more or less prominent Fascists, and were defended by Farinacci, the Secretary-General of the Fascist Party. He brought into the trial a long tirade to the effect that Matteotti was a dangerous enemy of the country because of his advocacy of Socialism and that he was not murdered but had been merely kidnapped and had died as a result of bruises sustained in the struggle with his kidnapers. Two of the accused men were acquitted and the other three were sentenced to approximately six years in prison, but inasmuch as an amnesty law had been passed and they had already spent some time in prison, the sentence virtually meant two and a half months incarceration.

**THE VISIT TO TRIPOLI.** In April Mussolini made a trip to Italy aboard the Italian battleship, *Conte de Cavour*. This occurred the day after his attempted assassination by Violet Gibson and after his narrow escape had been widely acclaimed throughout Italy. The press in foreign countries attributed this colonial voyage of the "Duce" to a desire to emphasize Italy's colonial empire and possibly her desire to obtain a predominant position in northern Africa. He continually referred on his visit to the glories of the Roman Empire of the past and the possibilities of the future. Mussolini made several public attempts to allay the fears of foreign nations that he was thinking of making the Mediterranean an Italian Sea.

**MEASURES TO AID TRADE BALANCE.** According to *Current History* (New York) for August, the following restrictions and regulations were made by the Italian government to remedy Italy's heavy adverse trade balance. The decrees were announced on January 29.

1. The increase of the working day from eight to nine hours.
2. Restriction of daily newspapers to six pages and the prohibition of all special supplements, excepting technical ones.

8. Prohibition of the opening of new bars, cafés, hotels, cabarets, pastry shops and all-night dancing resorts.

4. Prohibition of the construction of private houses and villas of a luxurious type. The only new construction permitted is of cheap houses for workers, farm laborers and small-salaried employees, farmhouses or cooperative apartments representing the direct investment of small private savings. Special governmental aid is given for the building of cheap houses for employees of large industrial establishments.

5. Announcement that agreements have been reached for the reduction in price, without affecting the quality, of iron, cement, bricks and plaster.

6. Announcement that steps had been taken to help large employers open canteens in order to sell food to their employees at minimum prices.

7. Announcement that agreements had been reached with industrialists to help in the production of domestic metals.

8. The appointment of a special committee to help in the utilization of domestic fuels and minerals and to stimulate their production.

9. Authorization of the mixing of gasoline with alcohol, effective November 1.

10. The indefinite suspension of all provincial, communal and municipal elections.

**TREATY WITH RUMANIA.** On September 18 there appeared a copy of the treaty signed between Rumania and Italy. The two countries agreed to work together for the maintenance of international order and agreed to lend police and diplomatic support to carry out this idea. Arbitration was provided for and provision made for the completion of a commercial treaty. Rumanian public opinion was somewhat opposed to the treaty because no mention was made of the Italian recognition of Rumania's claim to Bessarabia. It was thought that Mussolini purposely omitted this so as not to antagonize Soviet Russia.

**FOURTH ANNIVERSARY OF FASCISM.** According to *Current History*, the anniversary of the advent of Fascism was commemorated throughout Italy with a four-day celebration from October 28 to October 31. Schools were closed, leading members of the party were delegated to speak at the more important cities and great stress was laid on youth as the hope of the future. On October 28, in the presence of a huge throng in the Coliseum, Mussolini reviewed the achievements of Fascism as follows:

The fourth celebration of the "March on Rome" finds the Fascist Government in a formidable position of power in the interior and prestige throughout the entire world.

All the forces of the party and the Government, the militia, the labor unions, the youthful and the cultured elements, all have contributed in a period of splendor to make the Fascist system strong as a granite mountain against which falls flat the rancor of the dispossessed, the plots of criminals, impotent calumnies.

The Fascist régime has established itself during the past years as an impenetrable structure. In present times the life of individuals and of peoples is a little too fast, and it is necessary to-day to arrest it briefly, like a halt during a march, just long enough to review the work accomplished in the course of one year.

This work is imposing. In the political realm fundamental changes have been realized, conforming to our own doctrine, notably, the creation of a Governorship of Rome, which has given the capital the place of priority due her, historically and nationally.

Here is a group of laws which have changed the physiognomy of the State: A law defining the attributions of the Prime Minister; laws against bureaucracy and secret societies; a law on the faculty of the executive power; juridical rules governing the periodical press; laws relating to the conduct of the commission for the reform of the legal code for the protection of motherhood and infants.

The *coup de grâce* was dealt to semi-suffrage by extending the power of the Provincial Prefects and the establishment of Podestats in villages and towns.

The first civilian air forces are grooving through Italian skies and will increase. I do not exaggerate if I say that to-day the whole armed forces of the na-

tion are at their highest point of efficiency with regard to morale, discipline and preparedness.

In the domain of social and economic activities, the work of Fascism has been redeeming. The Fascist system gave to Italy in three months a law on the rights of authorship to literary men and artists, after they had vainly tried to obtain it for thirty years. We have created provincial and national economic councils and the National Institute for Exports and bureaus and scientific bodies for the development of our national resources.

Now, after thirty years of debate, we have accomplished unification of banks of emission into one bank, an essential reform.

We are enlarging and utilizing the ports of Genoa, Leghorn, Civitavecchia, Naples, Palermo, Catania, Cagliari, Bari, Ancona, Ravenna, Venice, Trieste and Fiume. The Italian merchant marine by pure pluck has won second place in Europe's mercantile fleet and fourth rank in the world's tonnage.

We have created a syndicalist-corporative State of thirteen federations, uniting millions of producers, something never done in history before, and that State has a vast base. The creation of the Ministry of Corporations, of which I am the head, is a new feat in the constitutional life of Italy.

We have also organized systematic exploration of our soil to determine the existence of iron and petroleum. The work of reclamation continues actively. The Pontine marshes, which for 2000 years awaited reclamation, are soon to be a salubrious and fertile zone, traversed by a direct Rome-to-Naples railway, which will be opened to traffic next year.

In the field, the farmers enlisted by Fascism with enthusiasm have won the battle of grain, producing 60,000,000 quintals, which demonstrates that victory is possible and will be attained.

The Fascist Government, after having settled the debts with the United States and Great Britain, concluded a treaty of commerce, amity and navigation with Yugoslavia, and a pact with Great Britain concerning common interests in Abyssinia, a treaty of commerce with Siam, an arbitration pact with Spain and one with Rumania, a treaty of commerce with Guatemala, a treaty of friendship with the Yemen (Arabia).

I ask if there ever was in Italian history such an amount of work achieved in one year? Black Shirts, the work accomplished in four years is truly great. But that is not enough. We have only started, and much remains to be done. All this requires more time, more efforts, more sacrifices to change in its entirety the physical and moral aspects of our country. The battle-cry must always be: "Discipline, concord, political and moral intransigence."

Having changed the laws we must reform our morale—those traits which remain from the old and petty-democratic liberal Italy. These must be eliminated without compassion from our minds and destroyed forever. They manifest themselves yet under the guise of selfishness, profiteering, opportunism and other useless things. Fascists, on the other hand, must be the sanctuary of loyalty, disinterestedness, probity, courage and tenacity.

All those affected by this old malady must be banished from our army; they must be weeded out before the grain is harvested; they must perish so that our new aristocracy may live for the greater task of the morrow.

Black Shirts! These tasks will find you ready. To-day you are in arms in hundreds of thousands. Your bayonets not only represent the Government, but the whole Italian people.

We announce to the world this truth: The Fascist revolution comes from the moral patrimony of the Italian people and will make Italy great.

For an account of the Garibaldi affair see *FRANCE, History*. See also, LEAGUE OF NATIONS; ALBANIA; ABYSSINIA; PEACE and PEACE MOVEMENTS.

**IVORY COAST.** A French colony, forming a constituent part of the government-general of French West Africa, situated between Liberia and the British Gold Coast. Area, about 121,976 square miles; population, estimated in 1924 at 1,301,832, of whom 1053 were Europeans. Bingerville is the capital and has an European population of about 90. The principal commercial products are mahogany, palm oil and kernels, cacao, dried and smoked fish, cotton, and rubber. Some gold has been found. In 1924 the imports amounted to 77,223,950 francs and the exports to 111,768,596 francs. The budget of the colony

for 1924 was fixed at 16,778,280 francs. The ports of the colony are visited by several British, French, and Belgian steamship companies.

**JALCASE.** See CHEMISTRY, INDUSTRIAL, under Iron.

**JAMAICA.** A colony of Great Britain, consisting of the island of Jamaica, which is the largest in the British West Indies, and the following dependencies: Turks and Caicos Islands, Cayman Islands; Morant Cays; and Pedro Cays. Area of Jamaica, 4450 square miles; of the dependencies, 224 square miles. Population of Jamaica, according to the census of 1921, 858,188, including 660,420 blacks, 157,223 colored; 14,476 whites; 18,610 East Indians; and 3696 Chinese; estimated population at the end of 1924, 904,405. The movement of population in 1924 was: Births, 33,132; deaths, 19,592; marriages, 3168. Kingston, the capital, had a population of 62,707 at the census of 1921. In 1924 there were 684 public elementary schools, with 113,293 pupils enrolled and an average attendance of 68,408. In 1924-25 the acreage under cultivation was 1,110,448 acres, apportioned as follows: under tillage, 276,224; pasture, 834,224; sugar-cane, 46,767; coffee, 17,800; bananas, 79,145; coconuts, 39,510; cocoa, 7877; ground provisions, 57,525; mixed cultivation, 21,657; guinea grass, 106,390; commons, 666,993. The livestock included 114,436 cattle and 4416 sheep. In 1924-25 the imports were valued at £5,085,350 and the exports at £3,145,610. Chief among the exports were bananas, sugar, rum, coconuts, coffee, logwood extracts, cocoa, and logwood; among the imports, flour, cotton goods, and fish. Aside from an electric railway in Kingston, the only rail transportation on the island is the Jamaica government railway, with a length of 210 miles. Revenue in 1924-25, £1,922,963; expenditure, £2,022,746; public debt, £4,445,194. Governor, Sir R. E. Stubbs (appointed in 1925 and assumed office April 27, 1926).

On November 16, the legislature of Jamaica rejected the new constitution which had been prepared for the island by the British Colonial office. The reason for rejection was given as objection to a clause which gave the Governor an absolute veto in any matter of paramount importance. This clause was considered to be more important by the legislature than the extension of powers of the Jamaicans over their own government by the creation of an Executive Committee, upon which five elective members should have seats.

**JAPAN.** A Far Eastern empire, consisting of the five main islands of Honshiu (mainland), Shikoko, Hokkaido (Yezo), and Formosa or Taiwan; also a number of smaller islands and island groups (approximately 4000 islands), and the peninsula of Korea or Chosen, and Karafuto, i.e., the southern half of the island of Sakhalin. Capital, Tokyo.

**AREA AND POPULATION.** The total area of the Japanese Empire is given at 260,707 square miles, made up chiefly as follows: Honshiu, 86,775; Korea, 85,228; Hokkaido, 30,275; Kiuashiu, 15,588; Formosa, 13,840; Karafuto, 13,934; Shikoko, 7031; Curile or Chisima Islands, 6024. In 1920 the total population of the Japanese Empire according to the census of that year was 76,988,379, distributed chiefly as follows: Honshiu (Japan proper), 55,961,140; Korea, 17,264,119; Formosa, 3,655,308; Karafuto, 105,

899. The population of Japan proper, according to the census of 1925 was placed at 59,730,704. The movement of population in 1924 was: Births, 1,998,520; deaths, 1,254,946; marriages, 513,130; divorces, 51,770. The population of the principal cities at the census of 1920 was: Tokyo, 2,173,201; Osaka, 1,252,983; Kobe, 608,644; Kyoto, 591,323; Nagoya, 429,997; Yokohama, the port of Tokyo, 422,942; Nagasaki, 176,534; and Hiroshima, 160,510.

**EDUCATION.** The latest statistics available on education are those found in the *Japan Year Book* for 1926 and cover the school year 1921-22, when there were 44,302 schools of all types, with 237,189 instructors, 10,737,957 pupils, and 2,040,300 graduates. There are five imperial universities, four public universities, and 16 private universities.

**PRODUCTION.** About three-fifths of the arable land is worked by peasant proprietors, the remainder by tenants. The accompanying table from the *Statesman's Year Book* for 1926 gives the latest data on the acreage and production of the principal crops:

Crop	Acreage		
	1922	1923	1924
Rice . . . . .	7,852,867	7,868,435	7,855,785

" Produce in cwts.

Concerning the mining industries of Japan, the United States *Commerce Reports* in August, 1926, stated that Japan, as compared with the United States or the leading industrial nations of western Europe, is poor in minerals. While deposits of gold and silver have been known to the Japanese and worked by them for centuries, the only mineral substances of material importance at the present time are coal and copper. Lately some petroleum has been found in the northern portion of the main island but the supply is limited and does not meet the requirements of the country. Recent explorations indicate that fairly extensive petroleum and perhaps coal deposits exist in Sakhalin; these are to be exploited in cooperation with the Soviet government, but were not a factor in 1926. There are only 13 mines in Japan whose output of metal in 1924 had a value in excess of 1,000,000 yen. The aggregate output of these mines in 1924 (the latest figures available) constituted 81.3 per cent of the year's total output of metals and metallic ores in Japan. The principal nonmetallic minerals produced in Japan, other than coal and petroleum, are sulphur, phosphate rock, arsenic, and graphite.

**COMMERCE.** A review of the foreign trade of Japan for the first six months of 1926 showed that exports totaled 993,887,000 yen, an increase of 9,499,000 over the 1925 figures, while imports declined from 1,505,290,000 yen in 1925 to 1,339,294,000 at the end of June, 1926. Japan's unfavorable balance of trade, consequently, was

\* The figures cover only Japan proper; later figures than 1924 are not available in exact form.

<sup>b</sup> The pound has been converted from the kwan at the rate of 8.267 pounds to the kwan; the troy ounce has been converted from the momme at the rate of 0.12057 momme to the troy ounce; the gallon has been converted from the koku at the rate of 47.65389 gallons to the koku.

reduced to 405,407,000 yen in the first half of 1926, a decline of 115,507,000 from the 1925 figure. (1 yen averaged \$0.4096 in the first six months of 1925 and \$0.4504 in the 1926 period.)

Japan's trade with the Far Eastern countries has shown a steady upward trend in the last few years and reveals a still further advance in the period under review. China—its most potential Asiatic market—is mainly responsible for this advance, having increased its purchases from Japan at the end of June, 1926, to the extent of 28,596,000 yen over 1925 purchases for the corresponding period. This increase is partly explained by the larger export of cotton fabrics to China, whose cotton mills had been crippled by a strike. The decline of exports to Hong-kong and the Dutch East Indies are more than offset by the increases to other Far Eastern countries. The value of exports to the United States, on the other hand, registered a slight decline, probably due to reduced prices of raw silk and higher exchange. Renewed buying of silk by France tended to increase exports to Europe. Import trade during the first half of 1926 was generally dull and affected by the high rate of exchange. Lower prices for raw cotton resulted in a decline in the value of imports from both the United States and India. The value of the trade by leading countries, is given for the first half of 1925 and 1926 in the accompanying table.

Although imports as a whole declined, there were notable increases in purchases of wheat, iron and steel, and lumber from the United States. Imports of wheat alone showed an increase of 32,981,000 yen over the first half of 1925. The drop of 113,398,000 yen, or 18 per cent, in raw cotton imports more than offset these increases. The valuation of 24,440,000 yen for rice and paddy imports represented a decrease of 64 per cent from the 1925 period. Owing to Japan's large rice crop in the latter part of 1925 there were considerable stocks on hand the first part of 1926, so that it was not necessary to

make additional purchases from foreign countries. Heavier shipments of cotton and silk textiles account for the bulk of the increase in exports during the 1926 period. Declines are shown in exports of raw silk, cotton yarns, knit goods, waste silk, and iron and steel products.

A new tariff law was promulgated and made effective on Mar. 29, 1926 and goods arriving in Japan on and after that date were subject to the rates provided under the new tariff schedules. In introducing the bill into the Diet, the Japanese Minister of Finance stated that the principal objects of the measure were: First, to adjust existing specific rates of duty so as to bring them into conformity with current prices; second, to reduce or abolish the duties on raw materials needed by Japanese industries; and, third, to afford protection to important industries which are developing in Japan or which show promise of development. The first of these purposes was by general accord considered to be the most urgent. The previous tariff had been in operation since 1911, and except for partial revisions at different times on selected articles, mainly iron and steel products, copper, dyes, and articles considered as luxuries, the rates of duty had remained practically unchanged. In the interim, and particularly since the war, the prices of commodities had increased considerably, with the result that the old specific duties amounted to a smaller percentage of the value of the goods than when originally established. Moreover, there had been growing an insistent demand on the part of the industrial and financial interests of the country for protection to domestic industries, especially those born or expanded during the abnormal war and post-war period, against the importation of rival foreign products.

The new tariff schedules, as evidenced by the increased rates on chemicals, textiles, machinery, and other manufactured products, reflected the declared desire of the government to protect local industries from foreign competition, as

well as an attempt to further the governmental programme of self-sufficiency in commodities essential to national defense. On the other hand, in order to aid manufacturing, raw materials remain duty free or carry lower rates of import duty, while in the case of partially manufactured products and articles not produced successfully in Japan, the former rates on the whole have been maintained or only slightly increased.

**FINANCE.** The principal items of revenues and expenditures for the fiscal years 1924-25 and 1925-26 are shown in the accompanying table:

JAPANESE BUDGET ESTIMATES, 1924-25 AND 1925-26

\* The Department of Agriculture and Commerce was separated into the Department of Agriculture and Forestry and the Department of Commerce and Industry on Apr. 1, 1925.

The Japanese national debt on March 31, 1926 amounted to 4,999,176,360 yen, which compares with 4,901,109,202 on Mar. 31, 1925. Although the debt increased 98,067,158 yen during the

12 months, the amount outstanding represents a decline from the high point on Dec. 31, 1925, when the national debt amounted to 5,026,124,686 yen. The accompanying table gives the position of the Japanese public debt on Mar. 31, 1925 and 1926:

POSITION OF JAPANESE PUBLIC DEBT

**COMMUNICATIONS.** The number of vessels entered in 1924 was 14,846 of 42,476,502 tons and the number of vessels cleared 14,996 of 43,290,039 tons. According to the *Japan Year Book* for 1926 there were 9977.53 miles of railway open for traffic at the end of March, 1924, of which 7344.21 was owned by the state and 2633.32 privately owned. In December, 1926, the United States Bureau of Foreign and Domestic Commerce reported that definite plans had been adopted for the construction of the Japanese Government railway tunnel under the Moji-Shimonoseki Straits. Work was to have been commenced during 1924 or 1925, but the funds authorized for the purpose had to be diverted to other uses in consequence of the earthquake of 1923. Under the present plan work is to begin in 1928, and the tunnel is to be finished by 1933. The total cost was estimated at 20,000,000 yen. Under the present conditions, goods from Kyushu consigned to points in Honshiu must be ferried across the strait on freight-car ferries which leave from Komorio in the southern part of the city of Moji and run to Shimonoseki. As the shore front is very narrow at Moji, there is no room for expansion of facilities. Congestion is occasioned by storms, which cause dangerous currents and tide races in the straits, so that the freight-car ferries cannot be operated for

24 hours or more at a time. The chief gain from the tunnel will be felt in the inland trade between Kyushu and Honshu. During the construction of the tunnel, the two cities of Moji and Shimonoseki will profit to the extent of about 2,000,000 yen a year from the 3500 workmen engaged in the work.

At the very end of the year the chief of the electrical bureau of the Railway Office announced that it was planned to electrify certain sections of the railways in Japan, namely, between Kozu, in Kanagawa prefecture, and Numadzu, in Shizuoka prefecture; between Kokubunji, in Tokio prefecture, and Kofu, in Yamanashi prefecture; and between Otsu, in Shiga prefecture, and Akashi, in Iyogo prefecture. The electrification of the Otsu-Akashi line was to be started in 1929 and completed in 1932. The total expenditure on this line will be 13,000,000 yen. The Kozu-Numadzu electrification will also be started in 1929. In order to meet the requirements for electrification in the Kwanto section of the country, five electric power stations will be established. Although ultimately it was planned to use electric locomotives for both passenger and freight service, until the general financial conditions improve considerably electric locomotives will be used only for passenger traffic. Owing to the unsatisfactory general financial condition, it was reported the work will be spread out over a period of about nine years instead of two years, as originally planned. It was planned to build a great power station at Shinanogawa, in Niigata prefecture, the estimate for the construction of which was increased from 36,218,000 to 58,545,000 yen.

**ARMY AND NAVY.** Military service is universal and compulsory. Liability commences at 17, but actual service begins at 20 years and lasts for 20 more. The peace strength of the active army in 1925 was 16,879 officers and 216,114 men, of whom 195,861 were quartered in the home territory. The ordinary expenditure for the army in the 1925-26 budget was 170,875,390 yen. See **MILITARY PROGRESS; NAVAL PROGRESS.**

The accompanying table from the *Statesman's Year Book* for 1926, shows the classification of the Japanese fleet for the three years ending with 1925:

	Completed at end of		
	1923	1924	1925
Battleships and battle cruisers	10	10	10
Armored cruisers	8	7	7
Aircraft carriers	1	1	1
Light cruisers	15	18	22
First-class gunboats	4	4	4
Destroyers	85	81	89
Submarines	45	54	69

\* The destroyers are 38 first-class, 51 second-class.

**GOVERNMENT.** Executive power is in the emperor who acts with the advice and aid of a ministry appointed by and responsible to himself; legislative power in the emperor and an Imperial Diet of two chambers, namely the Upper House or House of Peers, composed of membership based on rank, wealth, and other qualifications, and numbering at the beginning of the year, 420; and the Lower House or House of Representatives, elected for four years and numbering at the beginning of the year, 464. Emperor at the beginning of the year, Yoshihito (q.v.), born Aug. 31, 1879; died in December,

1926; succeeded his father, Mutsuhito, on the throne on July 30, 1912. Owing to the Emperor's ill health, his son, Crown Prince Hirohito, acted as regent from November, 1921, until December, 1926, when he became Emperor. The cabinet at the beginning of the year was composed as follows: Prime Minister and Home Affairs, Reijiro Wakatsuki (January, 1926); Foreign Affairs, Baron Kijuro Shidehara; Finance, Yuko Hamaguchi; War, Gen. Issei Ugaki; Navy, Admiral Takeshi Takerabe; Justice, Yoku Egi; Education, Ryohei Okada; Agriculture, Seiji Hayami; Commerce, Chokuon Kataoka; Communications, Kenzo Adachi; Railways, Mitsugu Sengoku.

**HISTORY.** The outstanding events during the year were the death of the Emperor Yoshihito on December 25 and the death of Baron Kato, the Prime Minister on January 28. (Consult the biographies on both of these men under their own titles.) The death of Baron Kato left the cabinet in a very weakened position. He had been the head of the Kenseikai Party as well as Prime Minister and was succeeded in both positions by R. Wakatsuki. The House of Peers preferred to hold a new election but were dissuaded because of the electoral law passed in 1925 (see preceding YEAR BOOK) which increased the number of voters by 11,000,000 chiefly among the laboring classes. The Diet finally closed its sessions on March 26, after a session that was very heated, in which there were riots, and charges of graft were hurled at each other by the government and opposition parties.

The most important measures passed during the session were the doubling of the duty on wheat; an increase of 50 per cent on flour; a law against reactionary laws such as the one in force when the American flag was stolen from the old Embassy grounds at the time of the immigration trouble; a law imposing penalties for the giving or accepting of blackmail; the taking over of the Nishihara loans to the Chinese by the government from the banks which made them; a subsidy for domestic pig iron and steel; greatly increased educational subsidies; an appropriation of funds to replace a few auxiliary war craft; and taxes on soft drinks. The Cabinet failed to secure the reduction on the land taxes which it had promised, and saved its position only by compromising with the Seiyuhonto Party, which held the balance of power between the Kenseikai Government and Seiyukai Opposition Parties. After the Diet closed Premier Wakatsuki began the formation of plans to reorganize the cabinet. On June 2 he appointed Viscount Kyoshiro Inouye to the post of Minister of Railways and Dr. Kuratomi, President of the Privy Council. These two appointments were considered very wise because the former was the leader of the government party in the House of Peers and the latter was very popular because of his espousal of the Suffrage Extension Bill of 1925. Other new members of the cabinet were Hamazuchi, Interior, Hayami, Finance, and Machida, Agriculture. Hayami (q.v.) died on September 13 and was succeeded by Naoharu Kataoka, Minister of Commerce, who, in turn, was succeeded by Ikunosuke Fujisawa.

On November 10 the new Japanese Land Law went into effect. Foreigners are permitted to acquire land except in certain defensive areas where the consent of the Army and Navy ministerial heads must be first secured. *Current*

*History* reported that the following articles relating to discriminations against nationals of countries which forbid Japanese land ownership did not come into effect until proclaimed by imperial ordinance:

Art. 1—Any foreigner or any foreign juridical person belonging to a country which imposes prohibitions, conditions or restrictions on the enjoyment by Japanese subjects or Japanese juridical persons of rights pertaining to land may be placed by imperial ordinance, regarding the enjoyment or rights pertaining to land in Japan, under such prohibitions, conditions or restrictions as are identical with, or analogous to, the said prohibitions, conditions or restrictions respectively.

#### A LIST OF THE COUNTRIES OF THE WORLD AND THEIR JEWISH POPULATION

Art. 2—A Japanese juridical person or a foreign juridical person shall in case not less than one-half in number of its members, shareholders or executive officers, or in case not less than one-half in amount of its capital, or in case a majority of its votes are or belong to foreigners or foreign juridical persons, such as are mentioned in the preceding article, be regarded in accordance with provisions made in that behalf by imperial ordinance as belonging to the country or countries to which the said foreigners or foreign juridical persons belong, and the preceding article shall apply to the said Japanese juridical person or the said foreign juridical person.

The amount of capital and the number of votes referred to respectively in the preceding paragraph shall be computed in manner provided for by imperial ordinance.

Art. 3—Any part of a foreign country which enjoys separate legislative power in regard to land shall, in the application of the present law, be regarded as a separate foreign country.

**JAPANESE BEETLE.** See ENTOMOLOGY, ECONOMIC.

**JEBEL SHAMMAR.** See ARABIA.

**JEWS.** The statistical tables prepared by Dr. H. S. Linfield for the *American Jewish Year Book* continue to be of increasing value. The 1926 YEAR BOOK estimates the Jewish world population to be 14,600,000 of whom two-thirds live in Europe and about 27 per cent in North and South America. Asia is estimated to have 3.24 per cent; Africa 3.92 per cent and Australasia .17 per cent. The following table presents the latest estimates.

**IMMIGRATION.** In view of the immigration restrictions it may be of interest to recapitulate the size of Jewish immigration. During 1908-24, 1,008,586 Jews were admitted to the United States. During the same period 52,294 Jews departed. The net increase was thus 956,292 or 13.4 per cent of the total net increase. In the year ending June 30, 1925 only 10,292 Jews entered, departures were 291, leaving an increase of 10,001 or 4.9 per cent of the total increase.

**ANTI-SEMITISM.** Generally, the excesses launched against the Jews during the year were less serious in character than those of previous years. Hungary, Rumania, Poland, Lithuania continued the scene of disturbance, students in

particular feeling the weight of Anti-Semitic feeling. The *numerus clausus* continued to prevail in Hungary and was practically in force in Rumania because of the hostility of non-Jewish students. In the United States there was little evidence of any anti-Jewish sentiment, the contrary, rather, being the rule. Non-Jews organized to support the United Jewish Campaign's \$25,000,000 campaign and in New York City John D. Rockefeller, Jr., gave \$500,000 toward the Jewish Federation's annual campaign. The end of the year, however, saw another of Henry Ford's intemperate attacks on a familiar theme, i.e., the control of the financial centres by the "international Jew." Mr. Ford's statements were sufficiently vague to make them quite harmless, but when he included the Federal Reserve System among the financial centres controlled by Jews he left himself vulnerable. There was talk of a Congressional investigation, but it soon appeared evident that Mr. Ford's remarks were being paid slight heed. There follows some brief accounts of the progress of affairs in other countries.

GERMANY. Proof of the fact that Anti-Semitism had not entirely subsided was evidenced by the moves in Germany to put an end to the Jewish method of slaughtering animals for food. In Bavaria, the diet requested the government to proceed against the method (called *Shehitah*) and bills toward the same end were introduced in the Prussian and Thuringian diets. In the last named, the National Socialist Party introduced a group of bills providing that Jews be prohibited from engaging as judges, notaries, traders in grain and cattle, physicians in public institutions and teachers. It is interesting to note that one of these bills defined the word Jew as applying to "any person whose grandfather had blood relatives of the Mosaic persuasion."

RUMANIA. In this country excesses seemed to continue undiminished. There were attacks on Jews in Bucharest, Arbora, Bukowina and Radanti. (Summer.) The Jews were moved against in Bessarabia; Jewish students were denied the privilege of dissecting cadavers; banks and other credit agencies were reported hostile to Jews; while Anti-Semitic students indulged in numerous excesses. There was a general demand for *numerus clausus*.

TURKEY. In August a group of notables of the Sephardic Community of Constantinople petitioned the government to accept the Jewish renunciation of minority rights, to regulate the administration of the Jewish Community, the schools, and cultural and charitable institutions, and in short to consider the Jews again as an integral part of the Nation. Louis Marshall hotly attacked the petition of the Turkish Jewish notables, characterizing it as a dastardly act. The Sephardic Jews, in defending themselves, declared that the minority rights guaranteed them by the Treaty of Lausanne no longer had any legal standing in Turkey in view of the country's acceptance of the Swiss Code "which recognizes the equality of all Turkish citizens irrespective of race or creed." Other groups aligned themselves with Mr. Marshall, notably the National Minorities Congress (Geneva) which denounced as null and void the renunciation of the Turkish notables and accused the Turkish Government of acting in bad faith.

HUNGARY. The *numerus clausus* appeared still

to prevail. The Minister of Education issued a decree in September fixing the Jewish quota for 1926-27 at 190 Jewish students. This order seemed to act as a signal for Anti-Semitic riots, for Jewish students were attacked at Budapest several times during October.

RUSSIA. Russian evidences of good-will continued. As part of a definite policy to gain the adherence of non-Russian minorities, the government permitted the creation of Yiddish Soviets in those localities where Jews were in the majority. The year saw some 20 such Soviets organized in the Ukraine and White Russia. Repeatedly during the year, too, there were expressions of friendliness toward the Jews on the part of high officials.

POLAND. There were evidences of a return to reason in Poland. In July, the new premier M. Bartel stated before the Sejm that "starting from the point of view that economic Anti-Semitism is harmful to the country, the government considers it necessary to maintain in the realm of its activity the principles of impartiality and justice. The government will especially see to it that in the realm of taxation and credit attention should be given solely to relevant facts and not to matters of religion or nationality. The government will close no secret agreements with the Jewish population. It will, however, insist on the principle that the provisions of the Constitution must be carried out. The Government reiterates that all the limitations of the rights of Jews which were issued by the power of occupation (Russia) and remain in operation are abolished and they will not be applied any more to the Jewish population."

ZIONISM. The Zionist Organization of America held its twenty-ninth annual convention at Buffalo, New York, June 27-29. Reports presented indicated an enrolled membership of 71,226 of whom 29,492 were members of the Hadasah Women's Zionist Organization. The Hadasah at its Convention adopted a budget of \$745,000, and voted to launch a campaign for the raising of one million dollars for the purpose of erecting a medical centre and a chain of hospitals in Palestine. The power of the movement was indicated by the fact that during the period Oct. 1, 1925-June 28, 1926, the United Palestine Appeal secured \$4,361,101 in pledges and \$2,540,976 in cash. At the Zionist Organization Convention a number of things occurred. Louis Lipsky, Chairman, attacked the Russian Colonization project of the Anti-Zionists and accused them of acts subversive of Zionism. The Revisionist programme, frankly Anti-Arab and Anti-British, was openly condemned and a vote of censure was carried by 193 to 7. Other resolutions attacked the British Administration of the Palestine Mandate as failing to coöperate with Zionists and demanded the settlement of Jews on the Crownlands, adequate distribution of the Educational Budget between Jews and Non-Jews, expediting projects of primary importance in the development of the homeland and repealing the "burdensome" immigration restrictions promulgated by Great Britain. It was voted to push the creation of the Jewish Agency in Palestine upon which Non-Zionists had promised to coöperate. The Convention generally expressed its confidence in its leaders, Dr. Chaim Weizmann, President of the World Zionist Organization and Louis Lipsky, Chairman of the Zionist Organization of America.

A curious, in that it is hard to find its replica, attack was launched against Zionism in America late in the year. In December, Dr. Henry S. Pritchett, President of the Carnegie Foundation for the Advancement of Teaching, released the results of a survey he had made of Egypt, Palestine and Greece. With regard to the Palestinian experiment, Dr. Pritchett, examining its history since 1918 was able to say on the grounds of political and economic fact that it was "unfortunate and visionary." Politically, it represented a movement whose purpose was the wresting of control from seven-eighths (the Arabs) of the present inhabitants of the land. Economically, the whole was doomed to failure because of the sterility of the land, the lack of natural resources and the failure to find sources of power-energy. He deplored the nationalism of the Zionists and saw in their romantic ardor a source of danger to the peace of the Near East. This last point is interesting enough to cite in full: "The segregation of any national group by itself has seldom failed to develop a type of personality and national character that was aggressive, egotistic and without capacity for cooperation with the rest of the world. No greater misfortune can come to a people or to a nation than to cherish the illusion that it is a chosen people and enjoys the favor of the Almighty beyond all other peoples."

To this Dr. Chaim Weizmann and Dr. Stephen S. Wise replied in notable statements. They pointed out that Dr. Pritchett's arguments were the customary stock-in-trade of Anti-Zionists; that American agricultural experts saw great possibilities for reclamation projects in the land; and that a project was already under way for the electrification of power derived from the Jordan River which would serve both Palestine and Transjordan. Too, Zionism had brought to the Arabs distinct advantages in higher standards of life, modern hospitalization, etc., with the result that the two groups were living in considerable amity. Dr. Weizmann pointed to the situation in Palestine as compared to the state of affairs in the neighboring French Mandate of Syria and went on to say: "The relations between the Jews and the Arabs are fast approaching relations of mutual cooperation."

The fear that Dr. Pritchett expressed that the incoming Jewish immigration was displacing the native Arabs was entirely groundless. Palestine is admittedly capable of holding a considerably larger population than it had. The Jewish Colonization policy was being carefully conducted, with a view to safeguarding to the utmost every right of the native Arab population, and not a single instance of injustice resulting to an Arab from Jewish Colonization could be cited to bear out the fear entertained by Dr. Pritchett. The debate had very little repercussions on American opinion. It was doubtful if Zionism was harmed to any extent. See PALESTINE.

EUROPEAN RELIEF. In October the leaders of the United Jewish Campaign met in Chicago to hear reports from their leading agents directing relief activity in Europe. So impressed were they by the seriousness of the situation that they endorsed the action of their Chairman, David A. Brown, in raising their goal from \$15,000,000, to \$25,000,000. Dr. Bernhard Kahn, European director of the Joint Distribution Committee, outlined particularly the work in Poland. He

declared that before his organization came upon the scene, one-third of the total Jewish population in Poland was on the verge of starvation. From January to December his office helped with small loans 165,000 persons; spent \$35,000 for feeding unemployed working men; spent \$52,000 for feeding school children; distributed milk to some 151,000 nursing babies; established summer colonies, etc. The Joint Distribution Committee cooperated especially with the cooperatives, lending them some \$600,000 for the purpose of helping restore their credit. Dr. Joseph A. Rosen reported on the Organization's work in Russia. He declared that already 50,000 Jews had been aided to avail themselves of the Soviet Government's offer of free land.

It was reported at the Convention that the United Jewish Campaign had already been pledged \$15,541,310 and that of this \$4,500,000 had already been paid in on account of the pledges. At the Convention a message was read from Non-Jews indicating their sympathy in the purpose of the campaign and a willingness to help financially. The message was signed by Dr. S. Parkes Cadman and Judge Victor T. Dowling. It should be said that the United Jewish Campaign group is Anti-Zionist, and has been accused by the Zionist Organization of pushing their Russian colonization project to win Jews away from support of Palestine.

JOHNS HOPKINS UNIVERSITY. A non-sectarian institution of higher education for men (women are admitted to certain courses) at Baltimore, Md.; founded in 1876. The enrollment for the autumn of 1926 was 4584, distributed as follows: graduate school of arts and sciences, 448; school of medicine, 275; school of hygiene and public health, 98; college of arts and science, 481; institute for biological research, established in 1925, 1; school of engineering, 295; school of business economics, 74; college for teachers, 1500; night courses for technical workers, 432; evening courses in business economics, 955; courses in social economics, 19. For the 1926 summer school 1008 were registered. The faculty numbered 529. The productive funds amounted to \$22,940,417.87, and the income for 1925-26 to \$1,790,561.97. The library contained 283,242 volumes. Beginning with the academic year 1926-27, a new plan of graduate instruction was instituted. The new building of the School of Hygiene and Public Health, valued at approximately \$1,000,000, was completed and occupied in September, 1925. The University received from the General Education Board \$175,000 for the Institute for Biological Research and \$200,000 to establish a professorship in the history of medicine. President, Frank Johnson Goodnow, LL.D.

JOHNSTON, RIENZI MELVILLE. American editor and politician, died at Houston, Tex., February 28. He was born at Sandersville, Ga., Sept. 9, 1850, and after receiving an education at the common schools of Bainbridge, Ga., served for two years in the Confederate Army. After engaging in newspaper work in Georgia, he moved to Texas in 1878 where he was for many years president and editor of the *Daily Post* of Houston. Interested in politics he declined the nomination for lieutenant-governor of Texas in 1898, but was appointed United States Senator, on Jan. 4, 1913, succeeding Joseph W. Bailey who had resigned, and served until a successor was selected by the legislature on Jan. 29, 1913. From

1900-12 he was a member of the Democratic National Committee from Texas; he was a member of the Texas Senate. He also was first vice-president of the Associated Press, and later a director in that organization.

**YUGO-SLAVIA.** A Balkan state, formed after the war, comprising under a federal form of government the following territories: The formerly independent kingdoms of Serbia and Montenegro; Bosnia and Herzegovina; Croatia and Slavonia, former autonomous states of Hungary, portions of the Banat, Bačka, and Baranja, integral parts of Hungary proper; Dalmatia, a former province of the Austrian Empire; and Slovenia, composed of portions of former Austrian provinces. Capital, Belgrade.

**AREA AND POPULATION.** According to the census of Jan. 31, 1921, the area of Yugo-Slavia was 96,134 square miles and the population 12,017,323, representing a density of 125 to the square mile. The majority of the inhabitants speak Serbian and Croatian. Other important linguistic groups are the Slovene and other Slavic languages, German, Rumanian, Hungarian, and Albanian. The principal cities, according to the 1921 census, are: Belgrade, 111,740; Zagreb (Agram), 108,338; Subotica, 101,857; and Sarajevo, 66,317.

**EDUCATION.** Primary education is compulsory, and in all schools under the Ministry of Instruction, is free. According to the latest available statistics the elementary schools numbered 5974, with 12,758 teachers and 800,868 pupils; the secondary schools, 139, with 2794 teachers and 55,636 pupils. There were also 32 training schools for elementary school teachers with 433 instructors and 5603 students. There are also three universities, namely, Belgrade, with 127 teachers and 7608 students; Agram, 133 teachers, 3249 students; and Ljubljana, 73 teachers, 769 students.

**PRODUCTION.** Yugo-Slavia is almost exclusively an agricultural country. During 1926 the most serious factor in the economic situation was the threatened destruction of portions of the crops by excessive rains in the early part of the summer. However, the damage caused by the floods and subsequent rains, though serious enough, did not prove to be as bad as was first expected, and in many cases the water receded without any great injury to the crops and fields. On the whole the crops were good in spite of these adverse factors but harvesting and threshing were delayed from three to four weeks. What damage was done seemed to have been offset by the additional acreage sown during the year. The grain yield in 1923 amounted to 4,630,736 metric tons, in 1924 to 6,150,000 metric tons, and in 1925 to 6,783,360 metric tons. The timber output, which in 1921 was 411,728 metric tons and in 1922 was 767,666 metric tons, by 1923 had increased to 1,276,551 tons, and by 1924 to 1,564,109 tons. The production of sugar, which formerly was largely imported, is now more than the amount required for home consumption. From 20,170 tons in 1921, production rose to 122,800 tons in 1924-25. Tobacco production rose from 4,900,000 kilos in 1919 to 33,600,000 kilos in 1924. About one-third of the whole capital invested in the country's industries is estimated to be devoted to the manufacture of forest products, and approximately 100,000 workers are employed in the lumber and wood-working mills. Mineral resources are of some importance and include:

Coal and lignite, copper ore, iron, lead, gold, chrome, antimony, and cement.

**COMMERCE.** During 1925, according to the United States Bureau of Foreign and Domestic Commerce, Yugo-Slavia, for the second consecutive year, achieved a favorable trade balance. The excess of exports over imports amounted to 13,300,000 gold dinars, as compared with 92,700,000 dinars for 1924. Exports for 1925 exceeded those of the preceding year in both quantity and value, amounting to 4,398,466 metric tons, valued at 783,349,517 gold dinars, as compared with 3,915,700 tons, valued at 671,271,941 gold dinars in 1924. The gold dinar has a value of 19.3 cents. The increase in quantity was about 12.3 per cent, and the increase in value was about 17 per cent. The increase in exports over the previous year is attributable to the heavy shipments of 1924 corn during the year 1925. The importance of this grain in raising the total value of exports may be seen from the fact that it constituted 23.8 per cent of the products shipped abroad, whereas in 1924 it constituted only 6.13 per cent. However, as the high exportation of corn in 1925 resulted from a number of exceptional circumstances, it is not a satisfactory index of the growth of exports; in fact, most of the other leading items show a decrease as compared with 1924. For example, exports of wood, wheat, and flour have fallen off greatly; exports of live hogs decreased 50 per cent from 1924, and other livestock in about the same proportion.

Imports during 1925 also exceeded those of 1924 in value as well as in quantity, amounting to 1,513,862 metric tons, valued at 769,145,759 gold dinars, as compared with 1,127,686 tons valued at 578,588,568 dinars in 1924. The quantity increase was 34 per cent, the value increase 33 per cent. The 33 per cent advance in imports was not reassuring as there was nothing to prove that it represented increased purchasing power on the part of the population. The explanation of the increased imports is to be found, rather, in the higher customs tariff that went into effect on June 20, 1925, causing many importers to increase their orders greatly prior to that date so that they might secure goods at the lower rates.

**FINANCE.** There was no annual budget for the year 1925-26 but total monthly receipts were reported to have exceeded expenditures. The budget bill for 1926-27 as finally voted by parliament on Mar. 31, 1926, provided for an exact balance of expenditures and revenues at 12,504,000,000 paper dinars. The new budget included for the first time the expenditures and receipts of the Südbahn railways, which have previously been carried separately. On the other hand, the receipts and expenditures of the State domains of Belje and Topolovatz were omitted from the 1926-27 budget. Allowing for these additions and omissions, this budget shows a reduction of 317,000,000 dinars from the monthly budget of 1925-26 and is indicative of the very serious efforts at economy that have been made. No difficulties were anticipated by the government in obtaining the receipts estimated, but there may be some difficulty in restricting the expenditures to the budget level.

**COMMUNICATIONS.** According to the latest available statistics the merchant marine of Yugo-Slavia consisted of 271 steamers with a total tonnage of 89,105, and 259 sailing vessels of 18,

022 tons. Shipping entered and cleared in 1921 comprised 4021 sailing vessels of 177,038 tons, and 12,727 steamships of 3,058,661 tons.

In 1925 there were 6118 miles of railway, all of which belonged to the state with the exception of 581 miles belonging to a private company.

GROSS EARNINGS OF JUGO-SLAV STATE  
RAILWAYS, 1920-1924

Year	Dinars (paper)*	Per cent annual increase
1920.....	371,000,000	...
1921.....	884,000,000	138
1922.....	1,267,000,000	43
1923.....	1,879,000,000	48
1924.....	2,487,000,000	32

\* The exchange value of the dinar for the respective years averaged, as follows: \$0.02604 in 1920, \$0.02367 in 1921, \$0.01355 in 1922, \$0.0107 in 1923, and \$0.01285 in 1924.

GOVERNMENT. Under the constitution adopted June 28, 1921, executive power is vested in a king and legislative power in a single chamber or National Assembly, which consists of 313 members. As a result of the election of Feb. 8, 1925, the party grouping in the national assembly was as follows: Radicals, 140; Independent Democrats, 22; Democrats, 37; Croatian Agrarians, 67; Serb Agrarians, 5; Mohammedans, 15; Catholic People's Party, 20; others, 4. The king was Alexander I, born Dec. 17, 1888, who succeeded to the throne with full rights on Nov. 6, 1921. The cabinet as formed on Apr. 8, 1926, was as follows: Prime Minister, N. Uzunovitch; Foreign Affairs, Dr. Marko Nintchitch; Interior, B. Maximovitch; Unification of Laws, Dr. M. Srekhitch; Justice, M. Djuritchitch; Posts and Telegraphs, Benjamin Superina; Agriculture, Vasa Yoyenovitch; Agrarian Reform, Pavle Raditch; Finance, the Prime Minister; Education, V. Voukitchevitch; Social Affairs, Milan Simonovitch; Mines and Forests, Dr. Nikola Nikitch; Public Health, Dr. S. Miletitch; War and Marine, Gen. D. Trifounovitch; Public Works, Milorad Vuitchitch; Commerce, Dr. Ivan Krayatch; Transport, K. Miletitch; Public Worship, M. Trifunovitch.

HISTORY. At the beginning of the year the position of Premier Pashitch was anything but secure. In the first place he was very old (80) and in failing health, and in the second place the opposition of the Croatian People's Party and followers of Dr. Raditch were becoming more powerful, having formed the Federal Peasant Party in the second week of January. On January 21 several arrests occurred because of the unearthing of a Communist plot to overthrow the government. On April 5, the Pashitch ministry fell after a definite split had occurred between the government and the Croatian People's Party which resulted in the resignation of Dr. Raditch from the education post and four other Croatian ministers. For the attempt on the part of Pashitch to preserve harmony by inviting Raditch and his fellow Croatians to serve in the cabinet, consult the preceding YEAR BOOK. Nikola Uzunovitch was requested to form a cabinet and he did so on April 8, requesting all of the members of the Pashitch cabinet to hold their posts with the exception of Pashitch, himself, of course. This was a very temporary move, however, because the entire ministry resigned a week later when Raditch attacked the Minister of the Interior, M. Miletitch, on the ground

of corruption in his department. On April 15 Uzunovitch reorganized the cabinet and did not include Raditch and two of the other Croatian ministers.

The Uzunovitch cabinet resigned on December 7, as a result of the publishing of the Italian-Albanian treaty. See ALBANIA, *History*. King Alexander requested Uzunovitch to form another cabinet, but he was unable to do so. Then the king called upon Pashitch to form a ministry, although he was nearly 81 years of age and in very poor health. He called a meeting of his party leaders on the evening of December 9, and during the discussion complained of feeling ill. He retired from the meeting and in a very short time sank into a coma from which he did not emerge. He died at four o'clock in the morning of December 10. His death was sincerely mourned throughout the country and the press paid him a measure of praise which was often deserved but never received during his lifetime. King Alexander appeared to be visibly affected and sincerely sorry because of the passing of the "grand old man of Serbia." The death of Pashitch (q.v.) left the political situation in a turmoil. After several attempts to form a cabinet, Uzunovitch gave up the task temporarily and Prof. Ijuba Davidovitch attempted to form one. As the year closed he also had failed and the King had again turned to Uzunovitch.

JURISTS, INTERNATIONAL COMMISSION OF. See INTERNATIONAL LAW.

KAHN, MAX D. American biologist and physician, director of laboratories and chief of the department of metabolism, Beth Israel Hospital, New York, died in New York, April 9. He was born in Russia in 1887. Coming to the United States he received the degree of Doctor of Medicine from the Medical School of Cornell University. Taking up post-graduate work at Columbia he received the degree of Doctor of Philosophy in 1912. Dr. Kahn's greatest achievement was his development of intarvin, an artificial fat for use in treating diabetes. This was a product of his researches in the laboratories of the Beth Israel Hospital and Columbia University, and became frequently used in place of insulin in special cases. He was appointed associate professor of biological chemistry at Columbia and chief of the metabolic department of the United Israel-Zion Hospital in Brooklyn. Among his many scientific papers his most important publication was the *History of Medicine*.

KAISER WILHELMSLAND, kí'zér-víl'-hélmslánt'. A mandated territory under the control of Australia. It was a colony of Germany at the outbreak of the war in 1914, but was shortly captured by Australian forces. It occupies the northern part of S. E. New Guinea. On Dec. 17, 1920, the League of Nations assigned it to Australia under a mandate. See GERMAN NEW GUINEA.

KAMERUN, káme-rōn', CAMEROON or CAMEROONS. The name applied to the territory between British Nigeria and French Equatorial Africa, extending from the Gulf of Guinea to the south shore of Lake Chad; formerly a German protectorate, but occupied by the British and French during the war and divided in 1919 between France and Great Britain, the former getting by far the greater part. Area (exclusive of the tract transferred to Germany from the French Congo in 1911), 191,130 square miles; population, 2,540,000.

**FRENCH KAMERUN.** At the time of the division of the former German protectorate in 1919, France received an area of 166,489 square miles (also exclusive of the area ceded to Germany in 1911, which, after the war, was annexed to French Equatorial Africa); population, about 1,500,000. The seat of the government is at Yaoundé, and the chief port is Donala. In 1924 there were 31 government schools with a total attendance of 8000. The principal products are cacao, coffee, ivory, tobacco, palm oil, and palm nuts. In 1924 the imports amounted to 73,947,426 francs, and the exports to 66,215,124 francs. In the same year 257 vessels entered at the port of Donala. The general budget for 1925 balanced at 18,600,000 francs and there was a special railway budget of 4,843,000 francs. There are 363 miles of railway. The colony was created an autonomous territory by decree of Mar. 28, 1921, and is under the administration of a French Commissioner. Commissioner at the beginning of 1926, M. Marchand.

**BRITISH CAMEROONS.** Great Britain received about 31,000 square miles of Kamerun in the division of 1919. The population is estimated at about 660,000. Cacao, palm kernels, rubber, hard-wood, and ivory are the principal products. In 1924 the imports were £45,945 and the exports £112,195. In the same year 78 vessels of 157,920 tons entered the port of Victoria. The revenue in 1924 was £45,573 and the expenditure, £112,002. The governor of Nigeria is the administrator of the British Cameroons.

**KAMMERER, DR. PAUL.** Austrian biologist, shot himself on the Schneeberg, near Vienna, September 24. He was born in Vienna, and soon drew attention to himself on account of the unorthodox nature of his scientific researches. In his work he identified himself absolutely with the school of which his friend, Prof. Eugene Steinach, was one of the leaders. One of the great troubles of his life and, it was believed the one directly responsible for his death at his own hand, was his non-acceptance in orthodox scientific circles. He was accused of violent Socialism, of outraging the sensibilities of true science, and in some quarters, of charlatanism, and this proved too much for him to bear. He wished to become a professor in his home city, but circumstances warring against him he twice tried to stir up interest in his studies abroad by making a lecture tour in America. In 1925, he was appointed to the chair of biology in the University of Moscow, and he returned to Vienna to buy equipment for his post. Just before he was due to depart for Moscow to take up his duties, he ascended the Schneeberg and shot himself. His main studies were concerned with the problems of evolution and the development of his Law of Series, which endeavored to explain why one great disaster is almost invariably followed by another or several others, a law which the main body of scientists found it impossible to accept. After his death the press of Vienna paid warm tribute to the dead scientist and lamented his end. His greatest work was his volume entitled *The Law of Series*.

**KANESH, EXCAVATIONS AT.** See **ARCHAEOLOGY**.

**KANSAS. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,769,257. According to the State census taken in 1925 the population was 1,812,986. The estimated population on July 1, 1926, was 1,821,000. The capital is Topeka.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926.

Crop	Year	Acreage	Prod. bu.	Value
Wheat, winter	1926	10,139,000	150,057,000	\$178,568,000
	1925	8,592,000	77,328,000	114,445,000
Wheat, spring	1926	8,000	27,000	31,000
	1925	9,000	60,000	78,000
Corn	1926	5,568,000	57,299,000	40,109,000
	1925	6,623,000	109,942,000	72,562,000
Hay, tame	1926	1,565,000	2,707,000 <sup>a</sup>	35,191,000
	1925	1,715,000	3,420,000 <sup>a</sup>	41,382,000
Oats	1926	1,626,000	35,122,000	15,454,000
	1925	1,712,000	39,376,000	17,925,000
Potatoes	1926	43,000	3,913,000	6,652,000
	1925	54,000	3,618,000	8,502,000
Barley	1926	266,000	3,032,000	1,850,000
	1925	380,000	6,080,000	3,526,000
Sorghum (grain)	1926	1,078,000	19,404,000	11,642,000
	1925	1,100,000	22,770,000	16,167,000

<sup>a</sup> tons.

**MINERAL PRODUCTION.** Petroleum, the chief mineral product of the State in total value of annual production, was produced on an increasing scale in 1925, attaining for the year's production the quantity of 38,284,000 barrels, as against 28,836,000 barrels in 1924; the 1925 product was valued at \$73,200,000, that of 1924 at \$44,400,000. Zinc production totaled 105,392 short tons in 1924 and 100,969 short tons in 1923; in value, \$13,700,960 in 1924 and \$13,731,784 in 1923. Coal production, generally reckoned the State's third most important mineral industry, attained 4,092,000 tons in 1925, and in 1924 4,247,733 tons; production was valued \$13,013,000 in 1925, and in 1924 at \$12,854,000. Natural gas, produced in the quantity of 25,580,000 M cubic feet in 1924 and 30,913,000 M cubic feet in 1923, attained a value of \$10,087,000 in 1924 and in 1923 of \$11,249,000. The totals of natural gas gasoline production were in 1925 13,000,000 gallons and in 1924, 11,658,000 gallons; their value, in 1925 \$1,400,000 (estimated) and in 1924 \$913,000. The State produced in 1925 6,515,000 barrels of cement and in 1924 5,894,236 barrels. Cement shipments had in 1925 a total value of \$11,718,000 and in 1924 of \$9,900,547. Lead production was, in quantity, 18,560 short tons in 1924 and 17,598 short tons in 1923; in value, \$2,969,600 in 1924 and \$2,463,720 in 1923. The State produced also important quantities of salt, sand and gravel, stone and gypsum. The total value of mineral products in 1924 was \$105,005,476; in 1923 it was \$110,630,255.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$12,511,566. Their rate per capita was \$6.91, as against \$22.17 per capita in 1924 and \$3.65 in 1918. The high per capita rate in 1924 was due to war compensation payments to veterans. The 1925 payments above named included the sum of \$646,044 for education, apportioned to the minor State divisions. Expenses totaling \$302,968 for public service enterprises, \$1,257,324 for interest on debt and \$791,140 for permanent improvements, added to the payments for maintenance and operation of State departments, made the total of State payments \$14,802,998. For highways was expended the sum of \$123,359, of which \$23,488 was for maintenance and \$99,971 for construction.

Revenue receipts of the State were \$14,943,728, or \$8.25 per capita. They exceeded by \$871,870 the total payments except those for permanent improvements, and also exceeded, by \$80,730, the total with these included. Property and special taxes formed 64.5 per cent of the total revenue in 1925, as against 64.5 per cent in 1924 and 56.1 per cent in 1918. Earnings of the general departments and compensation for officials' services furnished 18.3 per cent of the 1925 revenue; business and non-business licenses, 8.4 per cent. State license receipts were derived chiefly from taxes on corporations and from the licensing of motor vehicles. Proceeds of gasoline sales taxation on the other hand were credited to the counties.

The net indebtedness of the State on June 30, 1925, was \$26,704,544, or \$14.74 per capita, as against \$14.95 per capita in 1924. The assessed valuation of property subject to State tax was \$3,559,425,948. The State tax levy was \$8,348,934, or \$4.61 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 9493. New construction in 1926 totaled about 11 miles of track.

**EDUCATION.** The State law requiring that each school district make a minimum expenditure of \$5 a year for library books acted to promote the growth of a system of school libraries. The tendency of the law was to cause the introduction of books into the schools at the aggregate rate, for the entire State, of some scores of thousands of volumes each year. A map of the State, showing position and number of the consolidated schools in the State, prepared by the Kansas State Teachers' College and revised to May, 1926, showed 159 consolidated schools, situated in 58 counties of the State, or approximately half of the counties. The consolidated schools were most numerous in the south-central portion of the State, where Sedgwick County alone had 11.

According to figures of the State department of education, supplied at the close of the calendar year, the school population of the State was 543,746. The pupils enrolled numbered 461,934. Of these there were enrolled in common schools 320,175; in junior high schools, 27,424; in senior high schools, 77,235. Expenditure for education in 1926 amounted to \$35,753,141. Salaries of teachers averaged, in rural schools, \$100 a month; in high schools, \$125 a month.

**CHARITIES AND CORRECTIONS.** The State Board of Administration has full control of charitable, penal and certain of the public educational institutions. The chief of these institutions with the numbers of their respective inmates were reported at the close of 1926 as follows. Charitable institutions: Topeka State Hospital, 1655 inmates; Osawatimie State Hospital, 1362; Larned State Hospital, 601; State Hospital for epileptics, Parsons, Kan., 638; State Training School, Winfield, 831; State Sanatorium for Tuberculosis, Norton, 97; State Orphans' Home, Atchison, 163. Correctional institutions were: Kansas State Penitentiary, Lansing, 1768; State Industrial Reformatory, Hutchinson, 824; Women's Industrial Farm, 193; Boys' Industrial School, Topeka, 355; Girls' Industrial School, Beloit, 157. Educational institutions under the charge of the Board were: School for the Blind, Kansas City, 103 pupils; School for the Deaf, Olathe, 200; Western University, Kansas City,

220; Kansas Vocational School, Topeka, 150.

**POLITICAL AND OTHER EVENTS.** At the general election of November 2, Governor Ben S. Paulen, running as Republican candidate to succeed himself, was reelected, defeating former Governor Jonathan M. Davis, Democrat. Senator Charles Curtis, Republican, was reelected to the United States Senate, for the six year term beginning March 4, 1927, over his Democratic opponent Charles S. Stephens. The chief State officers were reelected, with the exceptions following: for Auditor of State, Will J. French was chosen; for Attorney-General, William A. Smith.

The trial of former Governor Jonathan M. Davis and of Russell Davis, his son, on a charge of having taken a bribe for the issuance of a pardon, ended April 3, in an acquittal. Mayor W. W. Gordon of Kansas City, Kas., was suspended from exercise of his functions, September 16, to await the result of ouster proceedings against him on charges of having given protection to vicious persons. Litigation was carried on in the State courts over the validity of drainage districts organized for flood protection under a statute of 1903. It was asserted in quo warranto proceedings against the Lyon County drainage district that the statutory permission to organize districts by petition and election was an unconstitutional delegation of power. The decision of the Lyon County court was adverse to the district. The State Supreme Court, treating the Lyon County action as a test case, ordered argument in the February, 1927, session of the court, so that a determination of the issues involved might be reached during the legislative session.

**OFFICERS.** Governor, Ben S. Paulen; Lieutenant-Governor, D. A. N. Chase; Secretary of State, F. J. Ryan; Treasurer, Carl White; Auditor, Norton A. Turner; Attorney-General, C. B. Griffith.

**JUDICIARY.** Chief Justice: William A. Johnston; Justices: Rousseau A. Burch, Henry F. Mason, John Marshall, John S. Dawson, W. W. Harvey, and Richard J. Hopkins.

**KANSAS, UNIVERSITY OF.** A State institution of higher education at Lawrence, Kan.; founded in 1864. The 1926 fall registration was 4189, 128 of whom were registered in more than one school, making a total enrollment of 4061, 1539 women and 2522 men, distributed as follows: graduate school, 220; college of liberal arts and sciences, 2487; engineering, 514; fine arts, 322; law, 106; pharmacy, 97; medicine, 248; education, 89; business, 106. The 1926 summer session had an enrollment of 1604, of whom 723 were men and 881 were women. The faculty numbered 376. The endowment fund amounted to \$214,000, and the income for the year, including the balance carried over from 1925, was \$2,302,270.81. There were 175,687 volumes in the library. Chancellor, Ernest Hiram Lindley, LL.D.

**KANSAS CITY, MISSOURI.** See MUNICIPAL GOVERNMENT.

**KANSAS WESLEYAN UNIVERSITY.** A co-educational institution of college rank, under the auspices of the Methodist Episcopal Church, at Salina, Kan.; founded in 1885. The enrollment for the year 1925-26 was 1029. The faculty numbered 36. The income for the year was \$158,000. The endowment was \$264,000. A new Administration Building, to cost \$275,000, was under construction. There were 16,000 volumes in the library. President, L. B. Bowers, D.D.

**KARAFUTO.** The name applied to the Japanese half of the island of Sakhalin (q.v.), which comprises that portion south of the 50th parallel of N. latitude. Area, approximately 13,934 square miles; population, according to the census of 1920, 105,899; estimated Dec. 31, 1924, 169,300. The chief industry is the herring fisheries, although the colony is suitable for agriculture and pasturage. The Japanese government supplies Japanese settlers with seed and domestic animals. There are also valuable forest lands and mines, the chief minerals being coal and alluvial gold. The budget for 1925 balanced at 17,124,303 yen.

**KATO, VISCOUNT TAKAAKIRA.** Japanese statesman, and member of the House of Peers, and one time Prime Minister, died January 29, in Tokyo, Japan. He was born in 1859 at Nagoya and graduated in law from the Imperial University of Tokyo in 1881. He then served with the Mitsubishi Company for a few years after which he entered the Foreign Office. He was at one time Permanent Secretary to Count Okuma, who was Foreign Minister. Later, Kato became director of the banking bureau of the Finance Department, which office he relinquished to take charge of the taxation bureau. From 1894 to 1899 he was Japanese Minister to England, and in 1900-01 he was Minister for Foreign Affairs. He sat twice in the Lower House of the Diet and became Foreign Minister in the Saionji Cabinet, resigning when the split came on the question of the nationalization of the railways, to which measure he was opposed. He was created baron in 1911 and was made ambassador to London 1912-13. He was again Foreign Minister in the Okuma Cabinet 1914-15, and was made Viscount in 1916. His later public activities were curbed somewhat by gradually failing health but up to the time of his death his influence was a potent factor in the political life of his country. Kato was one of the giants of modern Japan; he opposed many of the ill-considered schemes hurriedly brought before the House and regretted the headlong modernistic rush which seemed to sweep his colleagues away from the more stable native tradition. He was instrumental in setting on a happier basis relations between Japan and foreign nations, but much of his work was brought to naught by corruption at home. During his period of office as cabinet minister several major cases of corruption in high places were tried, and this fact acted as a depressant on Kato and his few faithful colleagues. He was bold in declaring his convictions and in abiding by his avowed intentions, even against great opposition by his political antagonists.

**KAWAMURA, VISCOUNT KAGEAKI.** Japanese soldier, died April 28. He was born, 1859, in Satsuma and early in life showed a disposition toward military matters. In the China-Japan War he commanded a brigade, and later a division. In the Russo-Japanese War he was a division commander and displayed such strategic ability that he led the army which formed the extreme right in the Battle of Mukden. His accumulated experiences led him to attempt the formulation of a strategic code, but his great strength lay in his personality and leadership. In 1905 he was a member of the Supreme Military Council, and in 1907 he was created viscount for his services to the Armies of his country. He was decorated by the Emperor with the First

Class Order of the Golden Kite and was made field marshal in January, 1915. From that time until his death he lived in retirement.

**KEMP, JAMES FURMAN.** American geologist and professor of geology at Columbia University, died at Great Neck, N. Y., on November 17. He was born in New York City, in 1859, and graduated from Amherst College in 1881, later studying in the School of Mines, at Columbia University and receiving the degree of F.M. in 1884. He studied in Germany at Munich and Leipsic, and from 1886-91 was instructor, and assistant professor of geology at Cornell University. In 1891 he came to Columbia as adjunct professor of geology, and in the following year was made professor of geology, a chair he occupied at the time of his death. He also lectured on geology at Johns Hopkins University, Massachusetts Institute of Technology, and McGill University. Professor Kemp received from Amherst the honorary degree of D.S. in 1906, and that of LL.D. from McGill in 1913. In addition to his teaching he was actively connected with the New York Geological Survey and the U. S. Geological Survey. He was an authority on geology, especially on ore deposits.

Kemp's work in economic geology was also recognized by his election as president of the American Institute of Mining and Metallurgical Engineers, 1912-13, and of the Mining and Metallurgical Society of America of which he was a gold medalist. In 1921 he was president of the Geological Society of America, and in 1894 he was president of the Society of Economic Geology. In 1926 he was the official delegate of the United States by appointment of the President to the International Geological Congress in Madrid. He was a member of the National Academy of Sciences, of the American Academy of Arts and Sciences, of the American Philosophical Society, of the New York Academy of Sciences of which he served as president for several years, of the American Association of Petroleum Geologists, and other learned bodies. He was a corresponding member of the Geological Society of Stockholm, of the Christiania Academy of Science, the Academy of Sciences of Oslo, the Geological Society of Belgium, and the Geological Society of London. He was an acknowledged leader in geological research, and acted in an advisory capacity for many large practical undertakings. He wrote extensively in the field of structural and economic geology and, in addition to his many papers, reports, and monographs, published by government surveys and learned societies, he wrote *Ore Deposits of the United States and Canada* (1893; 3d ed., rewritten, 1900); and *Handbook of Rocks* (1896; 5th ed., 1911).

**KENTUCKY.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,416,630. The estimated population on July 1, 1926, was 2,524,000. The capital is Frankfort.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926.

Crop	Year	Acreage	Prod. bu.	Value
Corn	1926	3,069,000	101,277,000	\$65,830,000
	1925	3,231,000	85,622,000	69,354,000
Tobacco	1926	428,000	374,880,000	42,736,000
	1925	479,000	387,990,000	62,078,000
Hay, tame	1926	1,156,000	1,528,000	25,484,000
	1925	1,009,000	1,155,000	21,598,000

Crop	Year	Acresage	Pred. bu.	Value
Potatoes	1926	47,000	4,512,000	7,129,000
	1925	46,000	2,760,000	5,520,000
Sweet potatoes	1926	17,000	2,040,000	2,203,000
	1925	14,000	1,260,000	1,928,000
Wheat, winter	1926	258,000	4,773,000	6,348,000
	1925	230,000	3,220,000	5,152,000
Oats	1926	259,000	6,346,000	3,868,000
	1925	247,000	5,187,000	3,060,000
Sorghum (syrup)	1926	51,000	4,845,000 °	2,995,000
	1925	39,000	3,120,000 °	2,876,000

° pounds, ° tons, ° gals.

**MINERAL PRODUCTION.** Primarily a coal producer in the mineral field, the State ranked fourth in 1925 in respect to quantity of coal mined in the year. There were produced 42,882,113 net tons of coal in 1925, as against 45,147,204 tons in 1924; in value, \$77,328,000 in 1925 and \$84,733,000 in 1924. Petroleum production declined somewhat in quantity to 6,764,000 barrels in 1925 from 7,407,000 barrels in 1924, but the value of the total product was slightly higher, being \$15,250,000 (estimated) in 1925 and \$14,592,000 in 1924. Clay products had a total value of \$7,519,239 in 1924 and \$7,610,179 in 1923. Natural gas production was 12,875,000 M cubic feet in 1924 and 11,953,000 M cubic feet in 1923; in value, \$3,432,000 in 1924 and \$3,156,000 in 1923. Gasoline produced from natural gas amounted in 1925 to 10,000,000 gallons, and in 1924 to 7,274,000 gallons; in value, \$1,060,000 (estimated) in 1925 and \$769,000 in 1924. The production of native asphalt made an important gain in 1924, the quantity produced being 274,743 short tons, as against 184,300 short tons in 1923; having a value, in 1924 of \$2,386,557 and in 1923 of \$1,468,396. Stone, sand and gravel and fluorspar were produced in important quantities. The total value of the State's mineral products in 1924 was \$120,510,775; in 1923, \$148,853,786.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$16,289,763. Their rate per capita was \$6.56, as against \$6.46 in 1924 and \$4.34 in 1918. Their total included \$4,758,244 for education, apportioned to the minor civil divisions. Expenses totaling \$631,811 for interest on debt and \$10,518,011 for permanent improvements, added to payments for the maintenance and operation of State departments, made the total of State payments \$27,439,585. For highways was expended the sum of \$12,424,103, of which \$2,984,635 was for maintenance and \$9,439,468 for construction.

Revenue receipts of the State were \$26,288,528, or \$10.59 per capita. They exceeded by \$9,366,954 the total payments except for permanent improvements, and were \$1,151,057 less than the total with these included. Payments in excess of revenue were met from proceeds of debt obligations. Property and special taxes formed 38.9 per cent of the total revenue in 1925, as against 40.8 per cent in 1924 and 64.5 per cent in 1918. Their per capita rate was \$4.12 in 1925, \$3.73 in 1924 and \$2.93 in 1918. Earnings of the general departments and compensation for officials' services furnished 7.9 per cent of the 1925 revenue; business and non-business licenses, 31.7 per cent. State license receipts were derived chiefly from taxes on corporations and on sales

of gasoline, and from the licensing of motor vehicles.

The net indebtedness of the State on June 30, 1925, was \$2,456,886, or 99 cents per capita, as against 93 cents in 1924 and \$1.08 in 1918. The assessed valuation of property subject to State tax was \$2,852,011,457. The State tax levy was \$10,037,101, or \$4.04 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 4005. There were constructed in 1926 some 21 miles of first track and 26 miles of second track.

**EDUCATION.** Under State law it became possible for county boards of education to levy at the rate of 75 cents on each hundred dollars of taxable valuation, for school purposes. The previously allowed maximum rate had been 50 cents. There was established a standard of educational qualification for school superintendents. They were required to have performed seventy semester hours of standard college work. Those requiring additional college work in order to qualify, and holding certificates under the old standard that did not call for college credits, might have certificates renewed on presenting evidence of having taken the qualifying college work. A measure passed by the State Legislature, and known as the Jones bill, was vetoed by the Governor. This measure, if it had become a law would have reinstated the abandoned method of selecting the county superintendents by popular vote. The selection of the county superintendents by appointment of the county boards of education, established in 1920, while generally welcomed by the educational authorities, had been opposed by those unfriendly to the dissociation of educational activity from politics.

In the school year ending June 30, 1926, there were 699 high schools, with a total enrollment of 47,649, of which 34,566 was white and 1837 colored and 6246 in private secondary schools. The total operating expense for the high schools was \$2,994,636. Salaries of the teachers averaged, for the white high schools, \$1399, and for the colored, \$933. Enrollment in vocational education courses attained 4941, of which a total of 3126 was in agricultural training. The State had in 1926 5913 one-teacher rural schools, 718 with two teachers and 155 with 3 teachers, while 88 had 4 teachers and 177 more than four. Public transportation to and from school was furnished in 42 counties at county expense.

**CHARITIES AND CORRECTIONS.** A system of State hospitals, homes, reformatories and a penitentiary is administered by a nonpartisan State Board of Charities and Corrections, established in 1920, having as its chief executive an appointed Commissioner of Public Institutions. There are among these institutions three insane hospitals: the Eastern State Hospital, Lexington, 1431 inmates (average for year ending June 30); Central State Hospital, Lakeland; 1837; Western State Hospital, Hopkinsville, 1576. The Feeble Minded Institute, Frankfort, had 447. The State Houses of Reform, for boys and girls, at Greendale, had 532; State Reformatory, Frankfort, 1578; and State Penitentiary, Eddyville, 685.

**LEGISLATION.** The State Legislature met, January 4, in regular biennial session. A textbook law was passed, governing the system of purchase of text books for the public schools. It was later attacked by B. W. Hartley, superintendent of the Louisville public school system,

as requiring publishers to render bid prices to stand for a term of years so long as to be impracticable. A bill was introduced in the lower chamber by G. C. Johnson to forbid teaching of evolution in tax-supported schools.

**POLITICAL AND OTHER EVENTS.** In the general election of November 2, Alben W. Barkley, Democratic candidate, was elected to the U. S. Senate for the regular six year term, defeating the incumbent, Senator Richard P. Ernst, who was the Republican convention's nominee. The proposed issuance of a permit by the Federal Power Commission to a private company for a hydroelectric development at the site of Cumberland Falls aroused opposition within the State. It was asserted that the scenic value of the falls constituted a resource of the State, which the commission ought not to alienate. Governor W. J. Fields took an active part in the opposition. John W. Langley, U. S. Representative from the 10th Kentucky district, was sentenced January 11 on conviction under the Federal prohibition law, to serve two years in the Atlanta Federal Prison. He resigned his seat on the date of his sentence. His wife ran for his place in a special election held to pick an incumbent for the remainder of the 69th Congress. She was defeated by J. A. Kirk in the Republican primaries January 29. Mrs. Langley was, however, elected from her husband's district to the 70th Congress, at the regular election on November 2.

**OFFICERS.** Governor, W. J. Fields; Lieutenant-Governor, H. H. Denhardt, Secretary of State, Emma G. Cromwell; Treasurer, E. B. Dishman; Auditor, W. H. Shanks; Attorney-General, F. E. Daugherty; Superintendent of Public Instruction, McHenry Rhoades.

**JUDICIARY.** Chief Justice: William Rogers Clay; Justices: Flem D. Sampson, Gus Thomas, D. A. McCandless, R. P. Deitzman, M. M. Logan and William H. Reese.

**KENTUCKY, UNIVERSITY OF.** A State institution of higher education at Lexington, Ky.; founded in 1868. Enrollment in the autumn of 1926 was 2241, distributed as follows: seniors 332; juniors 390; sophomores 596; freshmen 720; specials 68; graduates 135. There were 1138 students registered in the 1926 summer session. The faculty numbered 201. The University consists of seven colleges: Arts and Sciences, Agriculture, Engineering, Law, Education, Commerce, and Graduate School. During the year a new stock judging pavilion, a new theatre, and an engineering shop have been constructed. Productive funds amounted to \$184,075, and the income for the year to \$852,535.50. The library contains 72,000 volumes. President, Frank Leonard McVey, Ph.D., LL.D.

**KENYA COLONY AND PROTECTORATE** (formerly the EAST AFRICA PROTECTORATE). A British colony and protectorate in East Africa lying on the Indian Ocean between the Umba and Juba rivers and extending inland as far as Uganda; a crown colony and protectorate since 1920. Area, 209,248 square miles, excluding Jubaland (35,812 square miles); population in 1924 estimated at 2,475,059, including 11,002 Europeans, 24,771 Asiatics, and 9753 Arabs; Jubaland has about 16,000 inhabitants. Jubaland was acquired from Italy by the treaty signed between Italy and Great Britain July 15, 1924, and cession took place on June 29, 1925). Nairobi is the capital and has a population of 23,660 in-

habitants, of whom 3298 are European. The largest town is Mombasa, with a population of about 39,727 of whom 822 are Europeans. In 1924 there were nine government schools in operation including three European, and over 900 mission and native schools. The agricultural products include rice, coconuts, cotton, simsim, groundnuts, cassava, and sugar cane in the low lying areas. In the highlands where the temperature is moderate and the rainfall good, maize, wheat, sisal, and other crops of lesser importance are grown. The merchantable forest covers an area of more than 3600 square miles, of which 316 miles are tropical. The mineral resources are considered rich but are not fully explored as yet. Kenya and Uganda (q.v.) are united under one customs tariff and hence the exports and imports of both are not separated. The chief imports are rice, other grain and pulse, liquors, salt, tobacco, coal, timber, building materials, cotton and woolen goods; the chief exports are cotton, coffee, maize, chillies, fibres, hides and skins, carbonate of soda, seeds, ivory, groundnuts, copra, and rubber. In 1924 the imports were valued at £6,178,547 and the exports £6,137,009. The budget estimates for 1925 were: Revenue, £2,093,460; expenditures, £2,091,697. The main railway line is the Mombasa-Victoria railway, owned by the state, with a length of 618 miles. The colony is governed under the constitution of January, 1924, which provides for an executive and legislative council. Governor and Commander-in-Chief at the beginning of the year, Lt.-Col. Sir Edward W. M. Grigg.

**KENYON COLLEGE.** A college of arts and sciences for young men at Gambier, O., established in 1824 by the Protestant Episcopal Church, and connected with it. The enrollment is limited to 250 young men. The number registered for the autumn of 1926 was 261. The faculty numbered 21 members and during the year three new appointments were made as follows: Philip W. Timberlake, Ph.D., assistant professor of English; John Coulson, Ph.D., assistant professor of physics; Bruce H. Redditt, M.A. assistant professor of mathematics. The endowment funds amounted to \$1,570,400 and the income for the year \$183,500. The library contained about 35,000 volumes. The Samuel Mather Science Hall, the gift of Henry G. Dalton of Cleveland, and costing \$350,000 was dedicated during the year. President, William F. Peirce, L.H.D., D.D., LL.D.

**KERLMER, OTTO.** Dutch painter, died at Groningen October 5. He was born in Holland in 1837 and early in life gave evidence of great skill in the painting of animals. His pictures have the atmosphere of the outdoors and the wild life of the open spaces, and they are particularly esteemed for the strong suggestion of movement of the animal subjects. A collection of his paintings is in the possession of the Dutch Royal Family and a number of them are to be found in the Chicago Museum.

**KEY, ELLEN.** Swedish author and feminist, died at her country home near Lake Vattern, Middle Sweden, April 25. She was born at Sundholm, Smaland, in 1849, her parentage being Swedish mixed with Scotch and English blood. Her family was aristocratic and had supplied statesmen to the Swedish government for several generations. She was educated at home and at the age of twenty she became secretary to her father who was a member of the Riksdag. By 1870 she

was making a name for herself as a literary, historical and sociological essayist. She took up teaching as a means of spreading her ideas and taught at the People's Institute, Stockholm, from 1880 to 1899. For the next eleven years, Miss Key was mostly away from Sweden, engaged in lecturing and gaining experience of social conditions abroad; in her lectures she was forceful to a degree and aroused a great deal of criticism both by her writings and her platform utterances. As a feminist she represented a very advanced school of thought and brought on herself the bitter hostility of many of her contemporaries. She was particularly interested in the development of the United States and certain American writers drew her fervent admiration. Her influence on American sociologists was a weighty one and traces of this influence can be found in the writings of some of America's foremost students. Among foreigners who greatly admired Miss Key may be named Maeterlinck, George Brandes, George Bernard Shaw and Havelock Ellis. She had very advanced views on sex questions, on love and marriage and aimed to destroy many of the hitherto accepted standards of moral conduct. It was the loss of her father's fortune which made her go out as a teacher among her own people, and so successful did she become that she was frequently called the "Pallas of Sweden." Naturally, her writings have influenced the development of Swedish literature more than that of any other nation; in her own and foreign languages she published more than thirty volumes. One of the most useful of them is her *Century of Childhood*, which is a survey, in philosophico-historical vein of the progress of elementary education through the course of the nineteenth century.

Other important works are: *Love and Marriage*; *The Morality of Women*; *Love and Ethics*; *The Woman Movement*; *The Renaissance of Motherhood*; *War, Peace and the Future*.

**KIAOCHOW**, *Kyü'g-chou'*. A former German possession now in the hands of China. It comprises a city, harbor, and district on the eastern coast of the province of Shantung; seized by Germany in November, 1897; captured by Japan in November, 1914; administered by Japan, under a mandate in accordance with the Treaty of Versailles, but returned to China by Japan, Dec. 1, 1922, in accordance with the Washington agreement, Japanese troops evacuating it two weeks later. The land area is about 200 square miles; population about 227,000, but, including a neutral zone around the bay with an area of some 2500 square miles, the population is estimated at 1,427,000. The chief city and port is Tsingtao.

**KINDERGARTEN ASSOCIATION**. See NATIONAL KINDERGARTEN ASSOCIATION.

**KIWANIS CLUBS**. Clubs made up of two of the leaders in each business and profession in each community, united for the rendering of civil and social service to the community. Each club is a separate entity, but functions in direct connection with the Kiwanis International headquarters at Chicago. The name "Kiwani" is a word coined to express the constructive unselfish work of Kiwanians. The motto of the organization, "We Build" is also an expression of its spirit. The first club was organized at Detroit, Mich., in January, 1915. The first national president was George F. Hixson, elected in May, 1916, and elected International President in

1917, the organization having spread into Canada. The aims of the organization are to crystallize community sentiment for municipal improvements, to cultivate public opinion for purer politics, and to promote community coöperation in all good things. John H. Moss, Milwaukee, Wis., was the president for 1925-6, and for 1926-7 Ralph A. Amerman, Scranton, Pa., other officers being Fred C. W. Parker, secretary; Henry C. Heinz, treasurer. The headquarters are in the Federal Reserve Bank Building, 164 West Jackson Boulevard, Chicago, Ill.

**KLEIN, FRANZ**. International jurist and former Austrian Minister of Justice, died in Vienna, April 6. He was born in Austria in 1855. During his university days he was attracted to the study of law by appreciating the obvious deficiencies of the existing code, and he determined to rectify this situation. At the age of thirty he was appointed Director of the Chancery of Vienna University, a post he held until 1891. He framed the process of civil law which was adopted by the Austrian Government in 1893. From this time he began to take a deeper interest in International Law and to propose alterations for the common good of the nations. On account of his great experience and international standing, he was the leading Austrian delegate to the Peace Conference at St. Germain in 1919.

**KNEELAND, STILLMAN FOSTER**. American soldier, lawyer, author, and artist, died at his home in New York City, August 30. He was born in Quebec, May 17, 1845, and was educated at McGill University, Montreal. Before he was twenty years old he went to the United States and joined the Union Army in the Civil War. Entering the army as a private, his first action was at the Battle of the Wilderness and later he fought in the Shenandoah Valley and was wounded severely in the Battle of Petersburg. After the War he was very active in National Guard affairs in Vermont and later in New York. Admitted to the bar in 1869 he began practice in New York City in 1872 and experienced unusual success as a lawyer adding to his fame by the publication of several law treatises.

Elected to the Assembly in 1894, he framed the law abolishing perpetual imprisonment for debt and also that limiting imprisonment for civil contempt to six months. For two years from 1896 General Kneeland was Judge Advocate General on the staff of Governor Black. He was Vice President of the Department of Painting of the Brooklyn Museum of Arts and Sciences, and a Fellow of the Royal Geographical Society of London. His best known works are: *A Treatise on Commercial Law*; *Random Rhymes of a Busy Barrister*; *Kneeland on Mechanic's Liens*; *Law, Lawyers and Lambs*; *Seven Centuries in the Kneeland Family*; and *Kneeland on Attachments*.

**KNEISEL, FRANZ**. An eminent American violinist died in New York, March 26. He was born, of German parents, at Bucharest, Jan. 26, 1865. A very precocious pupil of Grün and Hellmesberger at Vienna, he made his début there on Dec. 31, 1882, became concert-master at the Hofburg Theatre and, a year later, of the Bilse Orchestra in Berlin. In 1885 Gericke engaged him in the same capacity for the Boston Symphony Orchestra, with which organization he made his American début, playing the

Beethoven Concerto (Oct. 30). The following year he founded the Kneisel Quartet, associating with himself E. Fiedler, Louis Svecenski (q.v.) and Fritz Giese. Very soon this organization won international reputation and for many years it was unrivaled in America, and equaled, but never surpassed, by only a few of the most famous quartets of Europe.

What Theodore Thomas did for orchestral music in America the Kneisel Quartet did for the cause of chamber-music. After a most distinguished career of 32 regular subscription seasons in Boston and 25 in New York, besides tours of the United States, Canada and Europe, the organization was disbanded in 1917, the final concert taking place in New York, on April 3. Throughout all those years Kneisel and Svecenski retained their respective places as first violin and viola, while the desk of the second violin was occupied at different times by Otto Roth, J. von Theodorowicz, Julius Roentgen and Hans Letz, Alwin Schroeder and Willem Willeke playing the cello.

In recognition of his distinguished service for the cultivation of chamber-music Yale (1911) and Princeton (1915) conferred upon Kneisel the degree of Mus. Doc. In 1903 he resigned as concert-master of the Boston Symphony Orchestra and in 1905 he accepted the appointment as head of the violin department at the Institute of Musical Art in New York, a position which he filled till his death. At the World's Fair in Chicago (1893) he conducted the concerts of the Boston Symphony Orchestra and in 1902 and 1903 he was associate conductor of the Worcester Festival. He published *Advanced Exercises for the Violin*, a collection of pieces for violin and, with Harold Bauer, Brahms' sonatas for violin.

**KNIGHTS OF COLUMBUS.** A fraternal society for Catholic men, organized under a special charter granted by the General Assembly of the State of Connecticut, Mar. 29, 1882. It seeks to promote charity, unity, fraternity, and patriotism among men of the Roman Catholic faith throughout the United States and Canada. The Order is composed of a Supreme Council, a Board of Directors, and State and subordinate councils. On June 20, 1926, there were 61 State councils and two territorial jurisdictions. The 2463 subordinate councils had a membership of 722,172. Of these, 237,217 were insurance members and 484,455 were associate members. These two classes developed through deviation from one of the chief purposes of the organization, to urge Catholic men to insure provision after death for those dependent upon them, but expansion in membership permitted others to join the associate class with certain restrictions as to their rights. By the step-rate plan of insurance adopted in 1902, every insured member pays the cost of his own insurance at his own age. The four principles of the Order are charity, unity, fraternity, and patriotism, emphasizing to members the necessity of rendering service in time of illness, death, or distress; the gathering together of men for better citizenship; the value of mutual assistance; and loyalty to duly authorized civil government.

The society offered to ex-service men evening courses in academic, commercial, and trade or technical subjects free of charge, and up to 1926 nearly 300,000 men had attended the schools throughout the country. It also carries on a

correspondence study department for ex-service men and for members of the order.

In 1922, after carefully surveying the field, the Knights of Columbus determined to throw the resources and support of the Order into a programme of Boy Work. A year was devoted to study and analysis of the situation. Numerous authorities on work with boys were consulted and at the Supreme Convention at Montreal in 1923 the tentative programme was adopted. Probably the most significant part of this programme is the two-year Boy Guidance course at Notre Dame University, in which the first class graduated in June, 1926. This course is open to college graduates only and leads to the degree of Master of Arts. This phase of the programme was made possible by a number of scholarships awarded by the Supreme Council and by several State Councils and by the provision of a Chair in Boy Guidance at the University by the Order. The first completed draft of the ritual and programme of the Columbian Squires, as the Junior Order is called, was ready in January, 1925. This was tested, revised, and, together with the initiation ceremony, presented to the Supreme Convention in Duluth in 1925. In 1926 the programme was further developed and the number of Circles of Squires increased.

At the Supreme Convention in Philadelphia, August, 1926, the Directors were authorized to assess the membership to the extent of \$1,000,000, for a campaign of education "to the end that politics of Soviet Russia shall be eliminated from the philosophy of American life and the ideals of liberty of conscience and democratic freedom may extend to our afflicted fellow human beings below the Rio Grande." In accordance with this programme more than 4,000,000 pamphlets containing information on Mexico were distributed, and lecturers were working throughout the United States, informing the public on the Bolshevistic policies and activities of the Mexican régime.

The Order publishes monthly *Columbia*, a magazine containing up-to-date fiction, verse, editorials, articles on business, sport, arts, literature, sociology, religion, and the ordinary interests of the ordinary man. In 1926 it had a circulation of almost 800,000. The headquarters of the Supreme Council are located at New Haven, Conn., and the officers in 1926 were: James A. Flaherty, supreme knight; Martin H. Carmody, deputy supreme knight; William J. McGinley, secretary; D. J. Callahan, treasurer; Edward W. Fahey, M.D., physician; Luke E. Hart, advocate; Rt. Rev. Mgr. P. J. McGivney, chaplain; David F. Supple, warden.

**KNOX, WILLIAM JOHN.** American Chemist and inventor, died at his home in New York City, November 28. He was born in Michigan and was educated in the University of Michigan. He was, for fourteen years, chief chemist for the late George Westinghouse. He was the inventor of the Knox process for cracking petroleum, and he also discovered a germicidal vapor of great value in the treatment of tuberculosis. He was a director of the Petroleum Conversion Corporation, and was a member of the American Chemical Society and of several similar bodies in Europe.

**KOHLER, REV. DR. KAUFMANN,** Jewish reform Rabbi and scholar, died at Cincinnati, Ohio, on January 28. He was born at Fürth, Germany, May 10, 1843. He was educated at the Universi-

ties of Munich, Berlin, Leipzig and Erlangen and came to the United States, becoming Rabbi of the Beth El Congregation, Detroit in 1869. From 1871 to 1879 he was minister of the Sinai Temple at Chicago. In 1879 he left Chicago to take charge of the Temple Beth El in New York, a ministry he held until 1903. His whole career was marked by his determination to introduce reforms into Jewish congregations. To further this end he convened the Pittsburgh Conference in 1885, and during his ministry in Chicago he introduced his greatest innovation, Sunday services in addition to the regular Saturday meetings. In 1903 he was relieved of all rabbinical duties in order that he might become President of the Hebrew Union College at Cincinnati, Ohio, and devote his energies to the expounding of his important theses and to the development of Jewish interests in the U. S. In 1921 he was made president emeritus and during his long tenure of this presidency he wrote many of the works which have made his name internationally famous. He was editor in charge of the departments of theology and philosophy in the *Jewish Encyclopedia*, as well as editor of two weeklies, the *Sabbath Visitor*, (1881-82), and the *Jewish Reformer*, (1886). Chief among his many publications are: *Der Segen Jacobs*, (1869); *On the Song of Songs*, (1878); *The Ethical Basis of Judaism*, (1887); and *Jewish Ethics*.

**KOREA or CHOSEN.** A peninsula of eastern Asia, belonging to the Japanese Empire since the treaty between Japan and Korea, Aug. 22, 1910. Capital, Seoul.

**AREA AND POPULATION.** The area is given at 85,223 square miles; population, according to the census figures of Jan. 1, 1925, 19,519,927, as compared with 17,288,989 in 1920. The foreigners number slightly more than 25,000, the vast majority of whom are Chinese. At the end of 1924 the largest cities with their populations were: Seoul, 297,465 (77,587 Japanese); Pusan, 82,393 (35,926 Japanese); and Pyong-Yang, 102,674 (21,672 Japanese).

**EDUCATION.** For the education of the Japanese there were in 1923 438 elementary schools with 52,309 pupils, 8 middle schools with 3321 pupils, and various technical and special schools for boys and girls. For the education of the Koreans there were 1099 common schools with 306,358 pupils, 44 private common schools with 10,284 pupils, and 17 higher common schools with 4928 pupils, as well as several industrial and technical schools. There are besides a number of Christian mission schools for boys and girls and there has latterly been an increase in technical and commercial schools.

**PRODUCTION.** Although there had been a remarkable increase in industrial production in three years, the country remained predominantly agricultural. The main crops are rice, barley, wheat, beans, grains of all varieties, tobacco and cotton. Fruit raising, silk worm culture, and stock raising are also important occupations. The cattle are celebrated for their size and quality. During 1925 all the principal crops registered increases of 6 to 20 per cent except millet, which barely held its own. The area under rice crops is approximately 3,900,000 acres, and the production in 1925 was estimated at 75,000,000 bushels, about one-third of which was exported to Japan. The wheat yield was 11,000,000 bushels; barley, 40,000,000; soya beans, 22,000,000 bushels; and millet, 25,000,000 bushels. The cotton crop, 75

per cent of which is of the American upland variety, was estimated at 210,000,000 pounds of seed cotton, an increase of 15 per cent over the preceding year. Stimulated by the government programme for increasing the production of silk cocoons to 1,000,000 koku in the next ten years, the yield for 1925 reached 285,000 koku, or about 1,450,000 bushels, a gain of 17 per cent. The total value of Korea's principal agricultural products approximated 600,000,000 yen in 1925.

Mineral resources include gold, copper, iron, and coal, which, though abundant, have not been fully developed on account of inadequate means of transport. The mining industry revived somewhat during 1925. An increase in the price paid for gold bullion gave a fresh impetus to gold mining. The output of coal, which is next to gold in importance, increased by 17 per cent to a total of 630,000 tons. The total value of manufactured goods in 1924 was 298,200,000 yen which represented an increase of 26,000,000 yen over the previous year and of 135,000,000 yen over 1922.

**COMMERCE.** According to the United States Bureau of Foreign and Domestic Commerce, Korea's trade with foreign countries showed moderate advances in 1925 in most respects. The total foreign trade amounted to 681,400,000 yen, as compared with 638,700,000 yen in 1924. Increases in both imports and exports were noted, the advance of 12,300,000 yen in exports being mainly due to large shipments of native rice and tussah silk to Japan, while the gain of 30,400,000 yen in imports is attributable to increased imports of cheaper foreign rice and millet for local food consumption, and of tussah silk brought in from China for reexport to Japan. The trade showed a net export balance of 14,000,000 yen, as against 19,400,000 in 1924.

Trade with Japan represented 81 per cent of the total trade, amounting to 551,600,000 yen, an increase of 33,200,000 over the preceding year. Both exports and imports increased, with a balance of 82,400,000 yen in favor of exports, approximately 12,400,000 less than in 1924. Gains in exports to Japan were noted for rice—the result of higher prices, since the quantity was less by over half a million bushels—tussah silk, cocoons, raw silk, and wood pulp. Decreases occurred in exports of soya beans, fish, lumber, ginned cotton, gold ore, and fertilizers. Increased imports from Japan were recorded for rice, silk tissues, wheat flour, ginned cotton, cotton yarn, and textiles. Decreases in imports, though relatively small, were spread over a large number of items, the most important of which were sugar, lumber, and woolen tissues.

Trade with other countries than Japan amounted to 129,700,000 yen, representing but 19 per cent of the foreign trade as a whole, but registering an increase of 9,500,000 yen in which both exports and imports shared. Total imports from other foreign countries than Japan amounted to 105,300,000 yen, while exports, practically all of which went to China, amounted to 24,300,000 yen; leaving an import balance in trade with foreign countries other than Japan of 81,000,000 yen, about 5,600,000 in excess of the previous year, and practically an offset to the export balance of 82,400,000 in the trade with Japan. Among the imports, millet for food and tussah silk for reexport to Japan were the most important, followed by lumber, coal, Chinese grass cloth, petroleum, beans and bean cake, rice,

cotton textiles, salt, woollens, tobacco leaf, gasoline and machinery, in order of value.

**FINANCE.** The budget for 1925-26 provided for an ordinary revenue of 143,464,889 yen and an extraordinary revenue of 29,927,749 yen. The ordinary expenditure for the same year amounted to 136,456,826 yen and the extraordinary to 36,935,812 yen. The main sources of revenue are taxes and public undertakings. The public debt on Mar. 31, 1924, amounted to 227,104,000 yen.

**COMMUNICATIONS.** The foreign-going shipping that entered at the open ports in 1924 had a tonnage of 861,866, and those that cleared a tonnage of 817,226. No later statistics on railways were available than those given in the preceding YEAR BOOK, when the total mileage open for traffic was 1189.

**GOVERNMENT.** Korea is considered an integral part of Japanese territory. The governor-general in 1926 was Baron Minoru Saito (appointed September, 1919).

**KOWEIT, SULTANATE OF.** See ARABIA.

**KU KLUX KLAN.** The year 1926 saw a number of setbacks for the Klan. It lost several political battles, it was shaken in its stronghold, Indiana, by a grand jury investigation, and its membership strength as visibly symbolized by the parade at Washington showed a large falling off. According to some observers, the Klan was no longer to be feared in politics or by its foes, and it was only its secret mode of operation which made its opponents credit it with great strength. That this was one of the reasons for the Klan's policy of secrecy was indeed admitted by Imperial Wizard Hiram Wesley Evans in his defense of the organization published in the *North American Review*.

The political correspondent of the *New York Times*, basing himself on the results of the September primaries, predicted the impending collapse of the Klan as a political factor. The principal political defeat of the Klan was the failure of the Klan-endorsed Senator Rice W. Means of Colorado to receive the nomination for reelection. Senator Means was one of the brightest stars in the Klan organization and was being considered for national command. He was defeated, however, on a straight Klan issue. In Indiana the legislature elected in November was free of Klan influence, according to Thomas H. Adams, chairman of the committee of the Indiana Republican Editorial Association which investigated the Klan.

The Klan also sustained a defeat in the Kansas primaries. In Texas, where it was defeated in 1924 through the efforts of Dan Moody, it was completely silent. In Alabama, however, it gained new strength politically when it was able to dictate the selection of Black to succeed Senator Underwood, who had been one of the staunchest opponents of the Klan in the country. Black was chosen at the Democratic primaries and elected Senator in November. In Maine Governor Brewer was stated to be of definite Klan leanings. Both he and the Klan opposed Arthur F. Gould, the successful candidate for the U. S. Senatorship. The issues of that election, however, were quite mixed.

The Klan was reported to be thriving in the states of Illinois, Wisconsin, Missouri, Nebraska, and Iowa. Activity was reported also in Northern New York, where the Klan was instrumental in polling a sufficiently large vote for Cristman to defeat U. S. Senator Wadsworth in his cam-

paign for reelection. The candidate elected was R. F. Wagner, a Democrat and a Roman Catholic.

**INDIANA.** The workings of the Ku Klux Klan in Indiana were officially investigated for three months by the Grand Jury of Marion County. The jury examined over 250 witnesses. The investigation was handicapped by political difficulties, and at the end of the year it seemed likely that these difficulties would prevent the jury from returning definite indictments. Agitation for the investigation developed during the late summer, when a number of Republican editors, aided by 50 former lieutenants of D. C. Stephenson, ex-Grand Dragon serving a sentence for murder, delved into the operations of the secret organization. The exposé which they published forced the Grand Jury to act. Immediately, however, the political officials who had been put into power by Stephenson and his lieutenants did all in their power to keep the truth from coming out. Governor Jackson and his administration were accused of trying to keep Stephenson in prison in order to prevent him from testifying. Habeas corpus proceedings designed to remove Stephenson from prison were opposed by Attorney General Gillom. See INDIANA.

When at the height of his power Stephenson was said to have dictated legislation, controlled the Governor, and harassed industry by threats to exercise his power in councils of the State. According to Mr. Adams (whom we have already cited), Stephenson controlled 21 States and had mayors of cities acting at his bidding. As a result of the exposé and the Grand Jury investigation the Klan membership in Indiana was cut down from 169,000 to 50,000.

**KLAN PARADE.** As in 1925, President Coolidge declined to answer the Klan invitation that he participate in the national parade. The parade was held in Washington on Sept. 13. Klan officials claimed that 200,000 marched, but newspaper despatches gave the number at 12,000 to 13,000. These figures contrast with the 160,000 claimed for last year's parade and the newspaper estimates of 40,000 to 50,000 as actually marching. According to the *New York Times* there were only 2000 marchers from New York, but there was an increase in the number of marchers from New Jersey and Virginia. The Klan was barred from participation at the Sesqui-Centennial Exposition in Philadelphia, after protests against the "Invisible Empire" were sent to Mayor Kendrick.

Last year the YEAR BOOK discussed the defense of the Klan that appeared in the *Forum*. This year a more elaborate and eloquently phrased defense (also from the pen of Imperial Wizard Hiram Wesley Evans) appeared in the columns of the *North American Review*. Dr. Evans accepted the charge of emotionalism leveled at the Klan and seemed to glory in it. He also insisted that it was a movement of the uncultured people and tried to give it a religious and democratic tinge at the very time that he preached the doctrine of racial superiority and religious intolerance.

"The Klan," he said, "speaks for the great mass of Americans of the old pioneer stock." The old-stock Americans are then defined as a "blend of the so-called Nordic race, the race which, with all its faults, has given the world almost the whole of modern civilization." Elsewhere in the article Dr. Evans takes his stand

on the supremacy of the Bible, and makes the mission of the Klan not so much the anthropological expression of the Nordic race as a crusade for the restoration of the sacredness of the Sabbath. The 'foreigner' is blamed by Dr. Evans for the prevalence of birth control, not because he practices it, but because he dominates the cities and thus makes the Nordic American fear to bring many children into the world. The Roman Catholic is attacked for his international affiliation, and in the case of the Jew, who has no international organization, the argument is shifted to pseudo-anthropological grounds. The Jew, Dr. Evans repeats with Madison Grant and Burton J. Hendrick, is not the lineal descendant of the Jews who crucified Christ: he is worse than that, he is a mongrel Asiatic converted to Judaism in the eighth century. And of course, as regards the Negroes, the Klan is according to Dr. Evans their best friend, that is to say, the friend who knows best what is good for them.

**KURDISTAN**, kôor'dê-stân'. A more or less vague term applied to a region in eastern Asia Minor, comprising a portion of Turkey and the northern section of the vilayet of Mosul in the new independent state of Irak. (See MESOPOTAMIA.) The inhabitants are Kurds, a seminomadic people related to the Persians in race and language. The population is estimated at 2,500,000. Shortly after the World War there was an attempt to create an independent Kurdistan. The movement was completely crushed by the failure of the Treaty of Sèvres, after which the Kurds remained divided in political allegiance to the Turkish, Persian, and Mesopotamian governments.

**KWANGCHOW-WAN**, kwîng'chô'wân. A small territory on the coast of the Chinese province of Kwangtung, leased to France in 1898, and two small islands commanding the bay leased to her in the following year. Area, about 190 square miles; population estimated at 208,044. In 1924 the imports were valued at 5,722,035 piastres and the exports at 6,495,379 piastres. The chief imports are cotton yarns, opium, and petroleum; the chief exports, straw sacks, swine, and mats. The port is free and is regularly visited by two French steamship companies. In 1924, 204 vessels of 122,809 tons entered. The local budget for 1925 balanced at 540,000 piastres. The administration is under the governor-general of French Indo-China.

**KWANTUNG**, kwân'tung', or KWANTAO. A territory at the southern part of the Liaotung peninsula, leased by China to Japan, as a successor to Russia after the Russo-Japanese War. Area, about 538 square miles; population, Oct. 1, 1924, 1,056,076, of whom 856,385 were Chinese, 186,045 Japanese, 10,850 Koreans, and 2796 Americans and Europeans. The latest statistics on education showed 42 elementary schools with 10,246 pupils for the instruction of Japanese, and 141 schools with 23,250 pupils for the instruction of natives. The agricultural products include rice, tobacco, hemp, and various grains and vegetables. The fishing industry is of importance. There is an abundance of salt which is the chief manufacturing product. Trade is mainly with Japan and China. Imports in 1923 were valued at 96,088,053 haikwan taels and exports at 133,438,067 haikwan taels. The seat of the administration and the chief port is Dairen, formerly Dalny. The territory is under a Japanese governor-general.

**LABOR**. Discussions of various aspects of the economics of labor will be found under the following heads: CHILD LABOR; COÖPERATION; LABOR ARBITRATION AND CONCILIATION; LABOR CONFERENCE, INTERNATIONAL; LABOR LEGISLATION; MINIMUM WAGE; OLD-AGE PENSIONS; STRIKES AND LOCKOUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WOMEN'S COMPENSATION. The work of American labor unions is treated in the article LABOR, AMERICAN FEDERATION OF; while the history of European organized labor will be found under the head of TRADE UNIONS.

The outstanding phases of American Labor history for the year were the settlement of the coal strike early in the year, the establishment of a Federal board to handle railway labor disputes (see LABOR LEGISLATION), the continuance of high wages in the skilled trades, the spread of the five-day week and its endorsement by the American Federation of Labor, and the general maintenance of conservative policies despite the Communist challenge in the East. The continuance of economic prosperity in America made the year a fairly comfortable one for labor. There was some unemployment in a number of industries, particularly in textiles and in the automobile industry, but organized labor was not greatly affected. The depression in the automobile industry led Henry Ford to organize his plants on a five-day week. This five-day week plan was eagerly taken up by the American Federation of Labor and championed as the best method of preventing overproduction and consequent unemployment. (See LABOR, AMERICAN FEDERATION OF.)

High wages and good working conditions were responsible for the continuance of conservative policies by American labor officials. An indication of the conservative temper of American labor was furnished by the lack of interest in the Supreme Court decision of October 25, which declared that the legislature of any State may forbid strikes for certain purposes. The tone of this decision is in line with a whole series of decisions in the last few years which have gone against Labor. Neither the unions nor the general public have been inclined to protest, so long as high wages were dominant. (See STRIKES.) The conservative leadership of American labor was also manifested in the cold reception given in this country to the British General Strike. President Green of the American Federation of Labor in a public statement expressed his sympathy with the cause of the British miners, but condemned the method of the general strike. American labor, he pointed out, used the strike weapon purely for economic purposes, and not for political or revolutionary aims.

Only in the East was there any serious attempt to challenge the conservative unionism of the American Federation of Labor. In the needle-trade unions in and around New York the left wing or Communist element gained control and precipitated strikes in the fur trade and in the ladies' garment trade. The furriers' strike was successful, the workers gaining the 40-hour week in those months when there is little work. But its success was won at the price of strong-arm methods, which were bitterly denounced by the American Federation of Labor officials. A fight within the union was in prospect. The cloak-makers' strike, on the other hand, was probably the greatest disaster in the history of that union. The strength of the organization was

shattered, and it was with great difficulty that the conservative element was able to regain control at the end of the year of the remnant of the union organization. In the New Jersey textile trade a strike was organized by Albert Weisbord, a professed Communist, but the management of the strike and of the union was voluntarily turned over to the American Federation of Labor in order to allow a settlement to be negotiated with the mill owners. Charges of a Communist conspiracy to capture the United Mine Workers of America were made at the American Federation of Labor convention in Detroit. However, the December elections, which resulted in the overwhelming victory of the conservative party among the miners, proved that the alarm was premature.

The miners' union emerged none the weaker after their five and a half months' strike. In the soft coal industry an improvement was noticeable on account of the British strike, and wages were increased even in non-union territory. Less than six months after coming into existence under the Watson-Parker Act, the United States Board of Mediation awarded a 7½ per cent wage increase to trainmen and conductors on the Eastern railroads. The award was followed by the granting of a smaller increase to railway expressmen. These official awards led union labor generally to hope for higher wages in 1927.

The *Monthly Labor Review* gives the following figures on trade union membership in the United States in 1926: total number affiliated with unions in the United States and Canada, 4,443,523; total number in A. F. of L., 3,383,997; independent unions, 1,059,526 (including 30,000 affiliated with the I. W. W.). For Canada it cites the 1924 figures compiled by the Department of Labor of Canada, and these show that in that year 134,454 Canadians were affiliated with the A. F. of L., and 67,527 with the independent international unions. Included in this last number were 11,500 members of the I. W. W. The same review also cites the figures compiled by a German authority on the working population of all countries.

**LABOR, AMERICAN FEDERATION OF.** The forty-sixth annual convention of the Federation was held at Detroit October 5 to 13. The fact of holding the convention at Detroit precipitated two incidents. One was a clash between the Federation and the Young Men's Christian Association and church bodies, and the second was a debate with Henry Ford on the merits of quantity production.

**THE CHURCHES.** It had been the custom of many years standing for the churches in the city in which the American Federation of Labor held its convention, to ask delegates to speak in their pulpit on the Sunday falling within the convention period. Such arrangements were made for Detroit this year prior to the convention. The Detroit Young Men's Christian Association, in addition, had arranged an afternoon meeting at which President Green was scheduled to speak. Suddenly and at the last minute, the Association and many churches cancelled their invitations at the instigation of the Board of Commerce. No explanations were given for this action aside from the manifesto of the Board of Commerce, but according to newspaper reports one of the Association officials declared that a \$5,000,000 endowment campaign was being planned, and that it was feared that

any cordiality shown to the American Federation of Labor would alienate open-shop manufacturers from contributing to the endowment fund.

The incident occasioned a great deal of comment throughout the country, with the press on the whole siding with labor. In Detroit a mass meeting of protest was held at the First Congregational Church. Dr. W. M. Tippy, executive secretary of the Federal Council of Churches, in his address at that meeting pointed out that not only had the Federal Council indorsed the cause of labor, but that all but a half dozen of its 28 affiliated denominations have issued formal statements affirming Labor's right to collective action through representatives of their own choosing. The Catholic Churches sided with labor. The Rev. John A. Ryan delivered a special sermon to the delegates of the convention and insisted that the Church could not consider the problems of economic justice foreign to its spiritual calling.

**FORD.** The skirmish with Henry Ford also grew out of the open-shop situation. In holding the American Federation of Labor convention at Detroit, it had been the intention of the Federation to begin a drive for the unionization of the automobile industry which has its centre in that city. Whether the Federation had any hopes of unionizing the Ford plants, it is difficult to say. But after a visit to the Ford shops a Federation delegation came out very much depressed. What they had seen of the methods of quantity production in use by the Ford organization struck them as very menacing to the intellectual dignity, and even to the health of the workers. While the working men received good wages, the mechanical monotony of the work and the speeding-up processes were appalling, the delegation reported. After a few years of work in such an organization, the laborer, so it was said, was fit for nothing but the scrap heap. Henry Ford's point of view was explained and defended in the course of newspaper interviews given out by the automobile manufacturer. Mr. Ford held that quantity production was something more than a progressive phase of the industrial revolution that represented factory organization and mechanical power; he held that it was a permanent thing, and that it yielded high wages, shorter hours and distributed prosperity. In an interview written by Samuel Crowther, Mr. Ford also said that the way to keep boys from crime and vice was to give them work at independence wages.

To all this the *American Federationist* replied editorially that Mr. Ford was evaluating work too much in material terms. "Mr. Ford," it went on to say, "has received such joy out of his own creative activities that he ought to appreciate what it would mean to others to have a creative quality in each day's work. If he would turn his genius to the development of production that would salyge the intellectual power of his men now wasted in purely repetitive work, he would initiate an adventure in production far surpassing all he has thus far accomplished."

**THE CONVENTION.** The Detroit convention was officially characterized as having "marked a high level in constructive deliberation." Translated in objective terms, this was to say that the administration had little opposition and that the traditional conservative labor policies of the American Federation of Labor were again

endorsed. To begin with, the Executive Council reported, and the convention endorsed, proposals to prevent the abuse of injunctions by the Federal courts. It was proposed to limit the jurisdiction of Federal equity courts to exclude personal rights. No proposals were made in the case of State courts since not all State legislatures have the right to regulate by legislative enactment the jurisdiction of equity courts. The discussions at the convention made it clear, however, that Labor would always oppose what it regards as the assumption of legislative powers by State courts of equity in issuing injunctions and otherwise interfering with collective bargaining.

The resolution for the curbing of Federal injunctions, curiously enough, came at the very time when the U. S. Supreme Court had decided that the right to strike was not absolute. If the right to strike is not accepted as an absolute one, it is evident that the exclusion of personal rights from injunction proceedings, will not mean the abolition of the injunction in all strikes. See under **LABOR** and under **STRIKES**.

In the field of political action, the convention discussed the direct primary and Soviet Russia. The convention reaffirmed its advocacy of the direct primary and declared that to repeal the direct primary laws under pressure from reactionary sources would mean to revert to definitely known evils of huge proportions. In the case of Russia, the proposal to endorse the Soviet government came not from the Executive Council, but as usual from the floor. The convention refused such endorsement on the ground that the Soviet Government could not be divorced from the Communist Internationale with its constant interference with the labor movements of the world.

It is interesting to note that the American Federation of Labor not only would not have anything to do with Russia—even declining to send a delegation of inquiry to observe the workings of Soviet rule—but that thus far it had refused to affiliate with the International Federation of Trade Unions (a branch of the Second Internationale). Such affiliation seemed about to be consummated in 1915, when the Federation was invited to meet at San Francisco. But the coming of the War and the anti-communist scare after the War destroyed the solidarity which had been built up between American Labor and the trade unions of Europe.

In the field of economic action, the most significant resolution passed by the convention was that which instructed the Executive Council to begin a campaign of education for the shorter work day and the five-day week. The demand for the five-day week was justified, curiously enough, upon economic grounds even more than on the grounds of the human value of leisure. It may be taken as American Labor's answer to the economic problem of quantity production. As the *American Federationist* explains the resolution, "the tendency of modern industry to produce goods in larger and larger quantities calls for a continuing increase in power to buy on the part of the public. When the balance between these two economic forces, the power to produce and the power to buy, is not kept, and producing power gains over buying power, the wheels of industry must stand still until buying power again catches up. This results in unemployment, which in turn makes

consuming power still less because persons not earning have no money with which to buy . . .

"The American Federation of Labor firmly believes that introducing the five-day week is a definite step toward an adjustment that will distribute the spare time over the whole year instead of lumping it in seasonal slumps and unemployment." This is not to neglect the human values of leisure, which, in the opinion of the Federation, are even greater than the economic significance of the five-day week. The extreme specialization of present day industrial work is held to require a longer period of rest in order that the workingman may recover his physical energy and develop his intellectual and spiritual qualities. To be sure, as very little attention has been paid up till now to the problem of the use of leisure, the economic argument for the five-day week must be regarded by students as the strongest reason cited.

Child labor came in for the usual consideration in the report of the Executive Council and the convention went again on record as supporting the ratification of the proposed amendment to the Federal Constitution. (See **CHILD LABOR**.) The convention also commended the permanent Committee on Education for its work in collecting the data upon which a model compulsory school attendance bill can be based.

In the problems of union organization, the convention took up such topics as the South, women workers, the automobile, labor and the Negroes, etc. Each of these heads indicated unused opportunities for further organizing work. It is significant that the organization of Pullman porters was recently undertaken under American Federation of Labor, and that the Federation also took a hand in the organization of women textile operators in New Jersey mills. The organization of the automobile industry was seen to involve new problems for the Federation because of the intermingling of skilled and unskilled workers in that trade, but confidence was expressed that these problems would be worked out. In the case of the South, the labor Chautauqua was suggested as a possible method of educating workmen of that section in regard to trade union principles.

The convention passed a resolution against company unions, which were linked with the open shop as a denial of workers' rights. The convention directed the assembling of data as to the number and strength of company unions and authorized the Executive Council to levy a special assessment to finance an aggressive campaign against this type of organization.

Statistics given out at the convention showed that the average paid-up and reported membership for 1926 was 2,813,910, a decrease of 64,000 from 1925. The loss was explained as due to the suspension of the Railway Mail Clerks Union and to the decrease in the membership of the railway unions.

William Green was reelected president for the new year, and the other national officers were similarly reelected.

**LABOR ARBITRATION AND CONCILIATION.** U. S. BOARD OF MEDIATION. During the year 1926 the U. S. Board of Mediation was created by Congress under the Watson-Parker act to handle railway labor disputes. The principles laid down by Congress for this board are identical with those that have guided the work

of the Conciliation Service of the Department of Labor. It is to be observed, however, that the Federal control of the railways through the Interstate Commerce Commission gives the Board of Mediation a greater power to enforce its recommendations than is enjoyed by the Conciliation Service in its efforts to adjust private disputes.

The first decision made by the Board of Mediation was an award on December 2 of a  $7\frac{1}{2}$  per cent increase in wages to 89,000 conductors and trainmen on the Eastern railroads. The total wage increase is approximately \$15,000,000 a year. The brotherhoods had asked for wage increases of 19 per cent, or \$1 a day, which would have meant a total annual increase of \$38,000,000. As awarded, the wage increase averages about 42 cents a day for each worker. Fifty railroads were affected by the award. At the close of December the same board took up the grievances of the railway express baggage men, and it seemed probable that an increase would be granted to this class of men also.

**CONCILIATION SERVICE.** For the fiscal year 1926 the Department of Labor reported the handling of 551 trade disputes, strikes, lock-outs, and threatened strikes with a view to peaceful adjustment. The conciliation commissioners succeeded in settling 377 disputes, and they aided State and local agencies in adjusting 70 more cases. In only 61 cases were they unable to obtain any settlement, although even in this group of cases a few settlements were eventually reached by the disputants along the lines suggested by the Labor Department. Thirty-five cases which were pending at the close of the previous fiscal year were also adjusted, so that the total number of cases adjusted during the fiscal year 1926 is 412. The accompanying tables detail the number of workmen affected by these disputes over the various months of the year, and the number of cases handled over the period 1914-1926:

Month	Workmen affected		Month	Workmen affected	
1925	Directly	Indirectly	1926	Directly	Indirectly
July .....	33,777	60,851	January .....	19,404	3,212
August .....	14,714	13,861	February .....	22,668	4,971
September .....	16,031	14,020	March .....	17,169	14,895
October .....	7,610	2,286	April .....	26,307	14,017
November .....	107,995	8,656	May .....	28,714	33,837
December .....	3,388	5,500	June .....	10,291	7,024
			Total .....	308,068	177,680

## SUMMARY OF CASES, 1914-1926

Cases	1914	1915	1916	1917	1918	1919	1920	1921	1922	1923	1924	1925	1926

Adjusted .....	28	26	178	248	865	1,223	596	338	266	428	840	392	377
Unable to adjust .....	5	10	22	47	71	111	96	48	41	27	62	64	61
Pending .....		5	21	42	7	13	9	24	31	60	67	42	43
Unclassified .....		1	6	41	66	214	101	47	32	19	69	61	70

Cases pending at end of last fiscal year and now adjusted, 35.  
Total number of adjustments, 412.

It is to be noted that a total of nearly half a million workers were involved, directly or indirectly, in the disputes handled by the Conciliation Service. The general policy of the Department of Labor has been not to intervene unless one or both of the contending parties asks for its good offices. In the case of disputes of unusual or important character, however, the Secretary of Labor assigns commissioners

of conciliation to mediate even though their services have not been solicited. The most important disputes handled by the Conciliation Service during the year were the Anthracite Coal Strike and the Passaic Textile Strike. In the coal strike a settlement was obtained on February 18. Two conciliation commissioners, the director of the conciliation service, and the Secretary of Labor himself took an active part in the negotiations, but the principal stumbling block was the refusal of the coal miners to accept binding arbitration as a provision of the new wage contract. The actual protocol was reached through the personal negotiation of Richard F. Grant, president of the Susquehanna Collieries Co. with John L. Lewis, president of the United Mine Workers. The workers accepted the principle of arbitration in modified form. (For further details of the strike, see STRIKES.)

Another important dispute in which the Department of Labor intervened was the Passaic Textile Strike. This was a walk-out of 11,000 workers organized by Albert Weishord, a professed Communist. The workers sought the restitution of the 10 per cent wage cut of October, 1925, an additional increase of 10 per cent, and the recognition of the union. The intervention of the Department of Labor proved sterile because the operators refused to deal with Weishord as representing the workers. A settlement with one of the mills affected was finally brought about in December, after Weishord had resigned his leadership and the union was taken over by the American Federation of Labor. The fight for union recognition by the other mills was prolonged into the year 1927.

There follow brief summaries of other cases, typical of those handled by the department during the year:

**Cigar Makers, Boston, Mass.** This was a walkout of 1800 cigar makers who demanded the restoration in whole or part of the 1922 wage scale. A compromise

proposition by the employers was rejected, but using this offer as a basis of negotiation, the commissioner of conciliation finally secured a settlement, which granted an increase of \$1.50 per thousand and made certain changes in working conditions.

**Journeyman barbers, New York.** A strike of 1200 men in 700 shops was settled by the arbitration commissioner. The wage increase demanded by the workmen was compromised.

**Plasters v. Bricklayers.** This was a jurisdictional dispute in Indiana. A strike was averted after negotiations lasting some six months, during which the good

offices of the conciliation commissioner were constantly in use.

Carpenters, Columbus, Ohio. 1800 carpenters broke off negotiations and called a strike demanding an immediate increase of 12½ cents an hour and another such increase two months later. The commissioner of conciliation who had his headquarters in Columbus immediately got in touch with the situation and within five days the strike was settled through conferences called by the commissioner. The offer of the contractors for an immediate increase of 12½ cents an hour and an increase of the same amount for the second year, on a two year contract, was accepted by the workers.

KANSAS INDUSTRIAL COURT. A U. S. Supreme Court decision on October 25, upheld the provision of the Kansas Industrial Court Act which declared strikes for certain purposes illegal. (See STRIKES.)

**LABOR CONFERENCE. INTERNATIONAL.** In 1926, for the first time in the history of the official International Labor Organization two sessions of the Conference were held at Geneva. The eighth session, May 26 to June 5, was the regular annual meeting, while the ninth session, June 7-24, like the Genoa Conference in 1920, was devoted entirely to maritime questions. At the eighth session 39 countries were represented, 25 European, seven Latin-American and four Asiatic States, and the British dominions, Australia, Canada and South Africa. The number of delegates was 131 of which 71 were for governments, 29 for employers and 31 for workers. There were also a number of substitute delegates and over 100 technical advisers, making the total official attendance 246. M. Nolens, minister of state and government delegate for the Netherlands, was elected president, while delegates from Cuba, Czecho-Slovakia and Germany were made vice-presidents. In two cases, objection was made to seating of delegates. The Indian employers' delegate was protested by Indian employees' organizations, as representing English rather than Indian interests, but was seated by the Conference on the ground that the opposition candidate had declined to serve. The Italian workers' delegate, M. Rossoni, as in previous Conferences, was protested by the non-Fascist Italian labor unions, and, though seated by the Conference, was excluded by the workers' group from their committee.

The official agenda contained only one question on which a draft convention or recommendation could be adopted, namely, the simplification of the inspection of emigrants on board ship. A draft convention was adopted based on the principle that the official inspection carried out on board an emigrant vessel for the protection of emigrants shall be undertaken by not more than one Government—as a rule that of the country whose flag the vessel flies—in order that the present duplication and overlapping may be avoided. A recommendation was adopted for the protection of emigrant women and girls on board ship. A resolution was also adopted in favor of carrying an interpreter on certain emigrant vessels.

The number of represented countries failing to send complete delegations, i.e., two for the government and one each for employers and employees, was nine less than for any preceding Conference. The plan instituted provisionally by the 1924 Conference of subjecting draft conventions to two readings at successive conferences, with final vote at the second, having proved unsatisfactory, a new procedure was adopted. The chief steps of this new procedure

were (1) discussion by Conference of subject matter concerning conventions under consideration; (2) formation of questionnaires to be sent to governments before next Conference; (3) report on replies of governments, to be published at least four months prior to next Conference; (4) adoption by next Conference of Drafts by final vote. A committee of experts was instituted to assist in examination of reports. Among resolutions adopted were two in furtherance of the interests of Indian workers and one proposed by the Swiss workers' delegate concerning investigation of unemployment.

At the ninth session, which began two days after the close of the eighth, the countries represented were the same, with the exception of Switzerland which, having no maritime interests, did not take part. The number of regular delegates present was 129 and the official attendance, including substitutes and technical advisers, 271. The agenda comprised (1) international codification of the rules relating to seamen's articles of agreement, and (2) general principles for the inspection of the conditions of work of seamen. Two draft conventions were adopted; one concerning seamen's articles of agreement, the other relating to the rights of repatriation of seamen. Recommendations were adopted in favor of measures for repatriation of masters and apprentices and concerning general principles for the inspection of the conditions of work for seamen.

As a result of strenuous opposition, particularly by the British shipping interests and the British government, the Conference failed to include in the draft convention concerning seamen's articles of agreement any reference to the practice of arresting a seaman for quitting his job upon arrival at a port. It refused to set an international standard as high as that in the American seamen's act which by abolishing arrest and imprisonment for "desertion" makes seamen "free men." Instead, the Conference, by resolution, referred this vital matter back to the International Labor Office for "further study." Another resolution asked the Governing Body to place the question of regulation of hours of work on board ship on the agenda of a special maritime session in 1928.

**LABOR LEGISLATION.** In 1926, the legislatures of nine States and the Philippines, and the 69th Congress, met in regular session. Several other legislatures held short special sessions. Notable among new laws enacted were that of New Jersey forbidding courts to issue injunctions in restraint of peaceful activities connected with strikes; the Kentucky old age pension law, and the Federal act abolishing the Railroad Labor Board and establishing new machinery for the settlement of railroad labor disputes. At the Missouri November election, the workmen's compensation act, passed by the 1925 legislature, was ratified by a referendum vote of 561,898 to 252,882.

*Kentucky.* Mechanics' lien law amended; compensation of certain public employees increased; safety laws concerning construction work in cities of the first and second class provided; workmen's compensation law amended; old age pension law enacted.

*Louisiana.* Law forbidding payment of wages in scrip enacted; mechanics' lien law amended; payment of wages by contractors safeguarded; hour limitations for minors between 14 and 18 years of age changed from 10 a day and 60 a week to 8 a day and 48 a week, and exception of stores on Saturdays removed; requirements concerning work certificates for minors

strengthened but those concerning filing and posting lists of employed minors weakened; prohibition against deceiving factory inspectors or interfering with their performance of duty strengthened; general election days, except in certain parishes, removed from list of legal holidays; assisting any laborer between sunset and sunrise, to remove himself or his effects from any plantation or premises without consent of owner or proprietor is declared unlawful with maximum penalty of \$1000 fine or six months in jail or both; workmen's compensation law amended.

**Massachusetts.** Eight-hour law for public employees in certain cases modified; factory ventilation requirements extended to all factories and work shops employing more than one person; school attendance regulations for persons between 16 and 21 years of age is extended to all who have not met requirements for completion of 6th grade; workmen's compensation law amended; commission for investigation of workmen's compensation authorized; retirement systems for public employees modified.

**Mississippi.** Requirement for registration of industrial establishments extended; salary of factory inspectors increased.

**Missouri.** Workmen's compensation act passed by 1925 legislature ratified by referendum vote.

**New Jersey.** Courts forbidden to issue injunctions to restrain peaceful termination of employment, peaceful picketing, persuading others to work or abstain from work, or other peaceful procedure in labor disputes; wages of certain public employees increased; workmen's compensation law amended; retirement systems for public employees expanded.

**New York.** Law concerning garnishment of wages amended; disclosing or aiding, or threatening to disclose without permission of employer, information obtained in the course of employment from books or records of an employer declared a misdemeanor; laws affecting trade unions relative to group insurance amended; prohibition of Sunday work for barbers made State-wide by removing exception of New York City and Saratoga Springs; midway lunch period required for factory employees who work three hours before and three hours after midnight; penal law amended to forbid employment of minors in drug traffic; joint legislative committee authorized to investigate conditions in manufacturing and mercantile business, with special reference to all matters affecting the health, safety and welfare of the working people, to the end, among other things, that remedial legislation be enacted; workmen's compensation law amended; insurance law regarding compensation rates and investment of surplus of state insurance fund amended; law charging to insurance corporations expense of investigating their affairs is extended to all insurers, societies, pension and retirement systems and the State compensation fund; State aid for benefit of physically-handicapped children extended to counties; special rehabilitation fund is made available for general administrative expenses assignable to rehabilitation instead of for compensation and maintenance only; uninsured employers required to pay \$500 into special rehabilitation fund in case of death of injured employee without dependents; public employees' retirement systems expanded; commission for purpose of investigating the condition of aged poor authorized; labor department reorganized pursuant to amendment of State constitution ratified by referendum vote in 1925; salary of industrial commissioner raised from \$10,000 to \$12,000 and his term made coincident with that of governor appointing him; industrial board increased from three to five members, whose salary is raised from \$8000 to \$8500 each; approval of commissioner as well as majority vote of board made necessary for change in industrial code.

**Porto Rico.** Employees' retirement act amended.

**Rhode Island.** Factory and sanitation regulations strengthened; educational requirement for working minors between 15 and 16 years of age raised from completion of 6th to completion of 8th grade; school attendance requirements no longer except minors between 7 and 16 years of age who have completed 8th grade; provisions are weakened in regard to special work certificates, particularly those issued to minors between 15 and 16 years of age judged to be mentally incapable of fulfilling educational requirements; antiquated indenture and apprentice law liberalized; under old law any minor could be bound as an apprentice or servant by parent or guardian, or, if an indigent orphan or child of indigent parents, by overseers of the poor with consent of the town council, whereas as amended, the law requires for every contract of indenture three signatures, those of the employer, the minor and his parent or guardian, a statement of the trade, craft or business which the minor is to be taught and an agreement that he shall receive a certificate at the close of his apprenticeship; age at which a minor, with consent of parent or guardian, may bind himself as

apprentice raised from 14 to 16 and under that age a certificate from the school committee is required; provisions that overseers of the poor with consent of the town council might bind as apprentices or servants indigent minors and certain adults who live idly or squander their earnings and abandon their families repealed; workmen's compensation law amended; joint commission for investigation of workmen's compensation authorized; law regulating maternity hospitals enacted.

**South Carolina.** No labor legislation.

**Virginia.** Mechanics' lien law amended; commission authorized to investigate operation of federal immigration law with reference to its effect upon industries and agriculture of the State; wages for certain public employees increased; women's ten-hour law extended to restaurant workers and strengthened in other details; employers' liability law relating to railroad employees reenacted and amended; workmen's compensation law amended; commission for investigating insurance rates, including those for workmen's compensation authorized; law relating to group insurance for employees of corporations enacted.

**United States.** Railroad Labor Board abolished and act of 1913 for mediation and arbitration in railroad labor disputes repealed; new act establishes machinery for settlement of such disputes; adjustment boards must be established by joint action of carriers and their employees, to consist of equal numbers of representatives designated by collective action of each of the disputants without coercion by the other; these boards deal only with disputes arising out of interpretation of agreements concerning pay, rules, and working conditions and grievances under such agreements; decisions are by majority vote and binding upon disputants; a board of mediation is provided consisting of five, instead of nine, members appointed by the President with consent of the Senate, at a salary of \$12,000 each; function of board, upon request of either disputant or upon its own motion, to mediate but not to hand down decisions, in cases which adjustment boards have failed to settle and in disputes regarding changes in rates of pay, rules or working conditions; in case its mediation is unsuccessful, board to urge and assist arbitration; in case of intended change in pay, rules or working conditions, carriers and representatives of employees must give at least 30 days notice and agree upon a place of conference; no carrier may alter conditions while conferences are in progress or services of mediation board have been requested or proffered; in case disputants agree to arbitrate, regulations are provided for forming board, whose decision by majority vote shall be binding unless declared invalid by the court; if dispute is not settled by foregoing means, the President may appoint a board to investigate and report to him within 30 days, during which time and for 30 days following the report, no change except by agreement by disputants shall be made in conditions out of which dispute arose. Federal employees' workmen's compensation and retirement acts were amended.

**LABOR LEGISLATION, AMERICAN ASSOCIATION FOR.** Founded in 1906, this membership organization of socially minded economists, lawyers, journalists, labor leaders, and employers, has worked along scientific lines, fearlessly attacking needless industrial evils from the general welfare viewpoint. It will continue its work as the American arm of the International Association for Social Progress formed by the fusion of the three international organizations for labor legislation, unemployment, and social insurance. (See SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR.)

Progress of the association is recorded in its substantial quarterly, *American Labor Legislation Review*, the December issue of which contains a convenient annual summary and index of all new labor laws enacted in the United States. One of the most important activities of the Association during 1926, in cooperation with influential labor groups and their advisers, resulted in the introduction of a Federal workmen's compensation bill to protect longshoremen. This legislation was passed by the United States Senate, June 3, 1926, and favorably reported by the House Judiciary Committee. Among other activities in the line of work-

men's compensation, were those in favor of the Fitzgerald bill for protection of private employees in the District of Columbia, which was again favorably reported by the House District Committee, and the new Missouri compensation bill which was ratified by referendum vote in November and became effective Jan. 9, 1927. The campaign in which the Association had been energetic for several years for rock-dusting coal mines to prevent great coal dust explosions resulted in encouraging increase in the number of coal companies which have voluntarily adopted rock-dusting. At the beginning of the Association's special campaign four years ago, only three mines could be discovered that had employed rock-dusting. At the close of 1926, the number of coal companies (many of them operating several mines each) which were officially on record as employing this means of preventing explosions had grown to more than 180.

Measures which the Association sponsored were adopted in several States establishing old age pensions, vocational rehabilitation, one day of rest in seven, and measures for the mitigation of unemployment. The twentieth annual meeting was in St. Louis, December 28-30, several sessions being held jointly with the American Economic and Political Science Associations. The chief subjects of discussion were international competition in labor conditions and the maintenance of protective standards, relation of welfare work in America to labor legislation, new developments in workmen's compensation and accident prevention, labor problems in the bituminous coal industry, and relation of government to private property. Among the speakers were: Leifur Magnussøn, Mary Van Kleeck, Leo Wolman, John A. Lapp, John A. Fitch, Lewis A. DeBlois, Joseph P. Chamberlain, Alroy S. Phillips, Tracy Copp, Daniel Harrington, John H. Walker, E. E. Witte, Anthony J. Chlopek, Paul U. Kellogg and Donald R. Richberg. The president in 1926 was Thomas L. Chadbourne; the secretary, John B. Andrews, with headquarters at 131 East 23rd Street, New York City. See LABOR LEGISLATION.

**LABRADOR.** A large peninsula in British North America, forming the easternmost part of the North American continent; lying between the Atlantic Ocean and Hudson Bay. It includes the northeast portion of the province of Quebec in Canada and a small strip along the northeast coast dependent upon Newfoundland. The term Labrador is also applied to the latter portion, which has an area of 120,000 square miles, with a population in 1924 of 3874.

**LABUAN,** lá'boó-án'. A small island off the north-eastern coast of Borneo, included in the settlement of Singapore after Jan. 1, 1907. Area, 30 square miles; population, in 1924, 6122, mostly Malays from Borneo. Capital, Victoria, with a population of 1500. Revenue, 1924, \$118,425; expenditure, \$134,162; trade, \$5,500,000.

**LACROSSE.** The visit of an Oxford-Cambridge lacrosse team to the United States in 1926 served to stimulate interest in this sport. The visitors met many college and club organizations during their stay but succeeded in capturing only a few of the contests played. Among the American colleges lacrosse showed a decided revival in popularity. At the second annual meeting of the United States Intercollegiate Lacrosse Association 25 institutions were repre-

sented. On this occasion the official ranking of the various teams was announced with Johns Hopkins, first, Syracuse, second, and United States Naval Academy, third. Oxford defeated Cambridge in their annual match.

**LAFAYETTE COLLEGE.** An institution for the higher education of men at Easton, Pa.; founded in 1826. For the autumn of 1926 there was an enrollment of 1074. The faculty numbered 90. The productive funds amounted to \$2,700,000, and the income for the year to \$450,000. The number of volumes in the library, was 65,000. During the year 1925-26 gifts amounting to \$245,000 were received. Easton Hall, a dormitory for freshmen, the gift of the citizens of Easton, was completed at a cost of \$185,000. President John H. MacCracken resigned on Oct. 1, 1926, and Donald Bishop Prentice, Ph.B., M.E., was appointed Acting President.

**LAMBS.** See LIVESTOCK.

**LAND RECLAMATION.** See RECLAMATION.

**LANDS, PUBLIC.** The Commissioner of the General Land Office reported that for the fiscal year ending June 30, 1926, the total area of public and Indian lands originally entered and allowed was 3,243,446 acres, not including 137,845 acres embraced in finals not heretofore counted as original disposition of land, and constituted as follows: public auction, 19,987 acres; abandoned military reservations, 3673; cash and private sales, individual claimants, and small holding claims, 9040 acres; preemption entries, 1933 acres; soldiers' additional homesteads, 1913 acres; timber and stone entries, 19,221 acres; mineral entries, 81,838 acres; coal entries, 240 acres. Of the total area originally entered and allowed during the fiscal year 1926, 2,250,485 acres were allowed under the stock raising act of Dec. 29, 1916. The area patented during the fiscal year was 4,409,181 acres, of which 3,677,462 acres were patented under the homestead laws, not including as homesteads 2167 acres patented as soldiers' additional entries.

The total cash receipts from sales, leases, and other disposition of public lands, including receipts from copies of records, sales of Government property, etc., for the year were \$10,608,056.71, and from sales of Indian lands, \$805,983.75, an aggregate of \$11,414,040.46, all of which was deposited in the Treasury.

Five per cent of the net proceeds from cash sales of public lands were paid to the public-land States within which such sales were made, and the balance of such net receipts from States included within the Reclamation Act, together with the net receipts from fees and commissions from these States, were credited to the Reclamation Fund; 90 per cent of the receipts under the mineral leasing act (exclusive of \$4,859.26 from lands within the naval petroleum reserves) were divided between the States from which the minerals (principally oil) were taken and the reclamation fund; the receipts from reclamation town sites and royalties and rentals from potash deposits were credited to the reclamation fund; the receipts from Indian lands were deposited to the credit of the various Indian tribes. All other moneys deposited in the Treasury were credited to the general fund.

The total expenditures for the conduct of the business of the General Land Office, including expenses of the district land offices for salaries and commissions of registers and incidental ex-

penses (\$371,280.35) for the fiscal year 1926 amounted to \$2,370,170.19. Disbursements from the following trust funds and reimbursable appropriations are not included in the above figures, either as receipts or expenditures: from deposits by individuals for surveying public lands, \$29,894.32; from surveying within land grants (reimbursable), \$14,109.96; from opening Indian reservations (reimbursable), \$461.62; from surveying and allotting Indian reservations (reimbursable), \$33,207.41; and from enrollment and allotment of Lac de Flambeau band of Chippewa Indians, \$2,289.50.

The sum available for inspection service during the year was \$420,000. The total amount of cash collected and turned into the Treasury as the result of the work of the field force was \$48,947.37; of this amount, \$26,190.21 was in settlement of trespass cases and \$6,001.07 was secured from timber sales; \$16,756.09 was recovered through civil and criminal action brought by the Department of Justice in cases of depredations on the public lands and violations of the public-land laws. As a result of investigations by the field employees, 120,240 acres were restored during the year to the public domain, representing fraudulent entries canceled through proceedings based upon inspectors' reports. Inspectors investigated and reported 16,489 cases, of which 4305 were adversely and 12,184 favorably reported; 401 hearings in Government contests were held. Civil suits in 113 cases were recommended to the Department of Justice for court action as the result of investigations made during the year; 86 suits were won and 15 lost. As a result of successful prosecutions during the year \$16,306.09 was recovered and 190,256.20 acres were restored to the public domain. Seventy indictments were returned for offenses under the public land laws. Of the criminal cases tried during the year, 33 resulted in convictions, under which there were 19 prison sentences and fines amounting to \$11,125 imposed. There were 19,724 cases pending investigation in the field at the close of the fiscal year 1925, and at the close of the year 1926 there were 22,002, an increase of 2278 cases.

The results obtained from the reorganization of the cadastral engineering service, which went into effect at the beginning of the fiscal year, fully met all expectations in terms of direct economy and effective service. The technical, clerical, and accounting forces were reduced during the year by 22. Public land surveys and resurveys to meet the requirements of agricultural settlement, industrial expansion, and for administrative and other purposes were executed during the year in 20 States and in the Territory of Alaska, under 270 groups, including 90 groups of resurveys in 19 States, in addition to a number of miscellaneous surveys. Original surveys under the rectangular system, together with such resurveys as could be measured on a mileage basis, but exclusive of miscellaneous surveys, aggregated 19,965 linear miles, at an average cost of \$21.49 per mile. During the year there were accepted and placed on file plats representing 1,944,232 acres of original surveys of public lands, and in addition 513,986 acres of lands resurveyed, comprising an aggregate area of 2,458,218 acres.

Nineteen thousand two hundred and eighty-five patents covering 4,409,181 acres were issued

during the year, of which 3,685,002 acres, more than 83 per cent of the total, were disposed of under the various homestead acts. Six thousand four hundred and ninety stock-raising homestead patents included 2,513,676 acres, while 6586 homestead patents of all other classes covered 1,171,326 acres. Coal, oil, gas, phosphate, and other minerals were reserved to the United States in 2,812,138 acres of the lands patented.

**LANGE-MÜLLER, PETER ERASMUS.** A distinguished Danish composer, died in Copenhagen, February 26. He was born at Frederiksberg, Dec. 1, 1850. After graduation from the Copenhagen Conservatory he won the coveted Ancker stipend, which enabled him to spend a year in further study in Vienna and Italy. He held only two official positions in Copenhagen, one as conductor of the Concert Society (1877-9), the other as conductor of the Students' Singing Society (1881-2), the rest of his time being devoted entirely to composition. His four operas maintained themselves among the most popular works in the repertory of the Scandinavian opera houses, all having had their première at Copenhagen: *Tove* (1878), *Spanske studenter* (1883), *Fru Jeanna* (1891), *Vikingeblod* (1900). Besides he wrote two symphonies, two orchestral suites, several cantatas, incidental music for many dramas, numerous choruses, a violin concerto and some chamber-music. Of his songs many attained the popularity of folksongs.

**LANGUAGE.** INTERNATIONAL. See INTERNATIONAL LANGUAGE.

**LAOS.** See FRENCH INDO-CHINA.

**LATHROP, ROSE HAWTHORNE** (Mother Mary Alphonsa). Mother Superior of the Dominican Community of the Third Order and directress of the Rosary Hill Home, an American poet and philanthropist, died in the Rosary Hill Home at Hawthorne, N. Y., July 9. She was born at Lenox, Mass., in 1853, the daughter of Nathaniel Hawthorne, and lived in England and Portugal, studying art at Dresden and in London. She married George Parsons Lathrop, the author and journalist, in 1871 and after his death in 1898 she prepared herself to join the Dominican Order, taking the veil in 1899, becoming Mother Alphonsa. In 1896 she had established in New York City, St. Rose's Free Home for Cancer, maintaining a cancer home which gradually developed, until a five-story building was erected with beds for 100 patients, becoming known as St. Rose's Free Home for Incurable Cancer. With the increased interest in this work, and the growing number of needy patients, Mother Alphonsa opened the Rosary Hill Home in Hawthorne, Westchester County, N. Y., having previously organized the Servants of Relief for Incurable Cancer. The work was widely commended and on Apr. 18, 1926, Mother Alphonsa received the gold medal of the New York Rotary Club for outstanding humanity during the previous year. In addition to many stories and sketches she wrote a volume of poems, *Along the Shore*, 1888; and in coöperation with her husband, *Memoirs of Hawthorne*, 1897.

**LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF.** A religious body commonly known as the Mormon Church, existing chiefly in the United States. It was organized Apr. 6, 1830, at Fayette, N. Y., by Joseph Smith, whom his followers credit with having discovered, through a Divine revelation, a number of plates, buried in a hill, from which by a special power re-

ceived from God, he translated the text of the Book of Mormon, the special sacred book of the Church. The Mormon articles of faith include belief in God, Jesus Christ, and the Holy Ghost, the punishment of men for their own sins, the atonement, divine authority, baptism, laying on of hands, prophecy, the Bible "as far as it is translated correctly," the common virtues, and obedience to constituted authorities. The membership of the church is chiefly in the Mountain States, owing to the early migrations of Mormons and their final settlement in Utah.

The administrative divisions of the church are known as the stake, ward, branch, and mission. A stake comprises wards and branches, and is directed by a presidency of three. A ward is frequently a part of a city, and is directed by a bishop and two counselors. The branch, similar to the ward, is directed by an elder. In 1926 the church consisted of 96 stakes, 15 wards, and 74 independent branches. The estimated membership in 1926 was 613,000. Eleven missions in America had a membership of approximately 82,000; those in Europe, 27,000, and in the Pacific Islands, 14,000 members. The chief authorities of the church were Heber J. Grant, president; Anthony W. Ivins, first counselor; Charles W. Nibley, second counselor; Rudger Clawson, president of the Quorum of the Twelve Apostles; and Reed Smoot, George Albert Smith, George F. Richards, Orson F. Whitney, David O. McKay, Joseph Fielding Smith, James E. Talmage, Stephen L. Richards, Richard R. Lyman, Melvin J. Ballard, and John A. Widtsoe, apostles. Hyrum G. Smith was presiding patriarch; Sylvester Q. Cannon, presiding bishop; David A. Smith, first counselor; and John Wells, second counselor.

The church authorities reported 2333 missionaries at work in various countries, 1016 being outside the United States. There were 1753 Sunday schools, with 231,909 pupils and 26,313 officers and teachers. The Melchizedek Priesthood, a senior order, had 69,841 members, and the Aaronic priesthood, a junior order, 68,302 members. The church maintains Brigham Young University (q.v.) at Provo, Utah, 6 colleges, 2 high schools, and 65 seminaries, small schools connected with high schools and providing special religious instruction. The auxiliary bodies include a women's relief society numbering about 61,000, which cares for the poor and sick. The two Mutual Improvement Associations, composed of young persons, had an enrollment of about 97,000. The primary Association had about 100,000 children under 14. The church holds general conferences in the first week of April and of October of each year, at Salt Lake City, Utah, at which the work of the general authorities is reviewed.

**LATTER-DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF.** After the death of Joseph Smith in 1844 several factions developed among the Latter-Day Saints. In 1852, in Wisconsin, some of these scattered congregations effected a partial reorganization, which was later completed under the name of the "Reorganized Church of Jesus Christ of Latter-Day Saints," and which claims to be the true continuation of that established by Joseph Smith. In 1860 they were joined by Joseph Smith, the son of the prophet, who became presiding officer of the organization until his death in 1914, when he was succeeded by his son, Frederick M.

Smith. The Reorganized Church holds the same faith and religious practice which Smith established, but rejects as false and inconsistent with Smith's revelation the doctrine of polygamy. Its membership as reported in 1925 was 99,460, including members throughout the United States and in Canada, Great Britain, Australia, and Germany. It had 692 churches, 6405 ministers, 891 Sunday schools, and 42,091 scholars. It maintains Graceland College at Lamoni, Ia., the Institute of Arts and Sciences, at Independence, Mo., and several homes for orphans and the aged, as well as a powerful radio broadcasting station, at its headquarters in Independence, Mo. Its official periodical, the *Saints' Herald*, is issued weekly.

**LATVIA.** A Baltic state formed after the war from territories of the old Russian Empire. Capital, Riga.

**AREA AND POPULATION.** The total area is approximately 24,400 square miles, made up as follows: The former province of Courland (about 10,435 square miles; the four southern districts of the province of Livonia (about 8715 square miles); and three districts of the province of Vitelsk (5292 square miles). According to the census of 1925, the population was 1,844,805, of whom 1,779,593 were Latvian citizens and 65,212 foreigners. The birth rate during 1924 was 22.32 per thousand and the death rate 15.30 per thousand. The chief cities with their populations at the census of 1925 are: Riga, 337,700; Libau, 60,762; Dvinsk, 40,640; and Mitau, 28,321.

**EDUCATION.** According to Latvian law, every national minority has a right to its own schools, which may employ its own language in instruction, and the state contributes to such institutions in proportion to the percentage of total inhabitants. During the year 1924-25 there were 1854 elementary schools in Latvia, with 170,803 pupils and 6928 teachers, while 20,000 children between the ages of seven and 14 could not find accommodation at schools. In the 122 secondary schools there were 2321 teachers and 22,531 pupils. After the University of Dorpat became an Estonian institution, the polytechnic school at Riga became the Latvian University (1919). In 1924-25 there were 309 professors and 6052 students in the university.

**PRODUCTION.** Latvia is still predominantly an agricultural country, although in recent years there has been a decided trend toward industry. In 1924 the principal crops were: Rye, 657,533 acres, 199,370 metric tons; barley, 442,556 acres, 161,920 tons; oats, 825,941 acres, 161,919 tons; potatoes, 675,770 tons; flax, 149,495 acres. The state and private timber lands of Latvia produced in 1924 120,000,000 cubic feet of lumber and exported 43,012,370 cubic feet either as logs or sawn goods, or manufactured into furniture or building material. In 1924 the livestock census showed 340,200 horses, 905,000 cattle, 1,235,000 sheep, and 458,000 pigs. At the beginning of 1925 there were 2598 industrial enterprises in Latvia, employing 48,134 workers. The largest industry is the manufacture of matches. Latvia has no mineral resources.

**COMMERCE.** In 1925 the total value of all imports was 280,324,401 lats and of exports 170,598,010. General statistics for the year were not available but the United States Bureau of Foreign and Domestic Commerce gave out the following information concerning trade with the

United States during that year. Latvian exports to the United States during 1925 were valued at \$2,941,123 and represented an increase of \$186,653 over 1924. All of this gain is more than accounted for by goods of Latvian origin, in spite of the fact that more than half the total exports consisted of transit goods. Exports of Latvian products increased by 43 per cent (from \$873,202 in 1924 to \$1,255,985 in 1925), whereas transit shipments fell off 10 per cent (from \$1,881,268 to \$1,685,138). Furs are the item mainly responsible for this change, their total export value dropping from \$1,103,906 to \$762,823, while the local product increased in export value.

**FINANCE.** The budget bill as passed for 1926-27 called for ordinary revenues of 148,500,000 lats and an extraordinary revenue of 12,000,000 lats; ordinary expenditure of 109,134,005 lats and extraordinary expenditure of 51,352,283 lats. The budgets for 1925-26 and 1926-27 were the first to be drafted in accordance with the State budget law that went into effect July 1, 1924, and the proposed budget for 1926-27 is the first to total below the preceding year's estimates as voted by parliament, instead of greatly exceeding them as heretofore. On Dec. 31, 1925, the debt of Latvia totaled 60,213,271 lats, of which 438,094 lats represented internal loans.

**COMMUNICATIONS.** In 1924, 3937 vessels of 1,494,752 tons entered and 3900 of 1,486,523 tons cleared from the ports. The gross receipts from the Latvian railways from freight and passenger traffic during 1925 amounted to 33,773,750 lats (\$6,494,960), as compared with 32,998,000 lats in 1924. A total of 10,972,400 passengers were carried during the year and 3,174,100 tons of freight were handled, compared with 2,203,782 tons in 1924. The railways, which are state owned, comprise 2805 kilometers of track and are equipped with 342 locomotives, 642 passenger cars, and 6173 freight cars. Very little new rolling stock is in operation, and although there is critical need for new passenger coaches the government feels that it cannot grant an appropriation for this purpose. Construction was started on the new Libau-Gluba line, which is to cover 169 kilometers and permit a direct service, without change of cars, between the port of Libau and points in Russia. The plans of the ministry of Communications call for the completion of this railway in 1928, but it is feared that the appropriation will not be sufficient to accomplish this on scheduled time.

**GOVERNMENT.** Under the constitution adopted by the constituent assembly, Feb. 15, 1922, executive power is vested in a president, elected by parliament for three years; and legislative power in the Saeima, or parliament, comprising 100 members elected for three years, by universal suffrage (men and women), equal, direct, and secret ballot, on the basis of proportional representation. The ministries are those of Interior, Foreign Affairs, Finance, War, Public Works, Education, Agriculture, Justice, Communications, and State Control. President at the beginning of the year, J. Tschakate (re-elected October, 1925); Prime Minister, M. K. Ulmanis (appointed December, 1925).

**HISTORY.** At the beginning of the year relations between Latvia and Russia were severely strained because of the murder of a Soviet agent in Latvia. The Soviet government sent a sharp note to the Latvian government, and the latter

apologized and promised to prosecute two assassins who were probably bandits. Moscow seemed to think that the murder was a part of Polish machinations to disturb the friendly relations existing between the Soviet and Latvia. On April 28, the Ulmanis ministry was compelled to resign its position and was succeeded by a ministry formed under the leadership of A. Alberings of the Peasants' League, who also took the portfolio of War. The other members of the ministry were: Foreign Affairs, K. Ulmanis (former premier); Interior, Colonel Laiminch; Finance, J. Blumbergs; Communications, P. Aronietis; Agriculture, M. Gaillits; Public Instruction, E. Ziemelis; Social Welfare, M. W. Rubuls. This ministry was virtually the old ministry with a change in the premiership, and represented the bourgeois classes of the country.

**LAW, INTERNATIONAL.** See **INTERNATIONAL LAW.**

**LAWN TENNIS.** See **TENNIS.**

**LEAD.** The recoverable lead contained in ore mined in the United States in 1926 was about 672,000 short tons, as compared with an output of 684,073 tons in 1925, according to the U. S. Bureau of Mines. The output of soft lead by mines of the Mississippi Valley and a small output from the Eastern States amounted to about 305,000 tons, and that of argentiferous lead by mines of the Western States amounted to about 367,000 tons. Corresponding figures for 1925 were 320,052 tons from the Mississippi Valley and the Eastern States, and 364,021 tons from the Western States. The largest output came from the southeastern Missouri district and amounted to about 200,000 tons, as compared with 208,915 tons in 1925. The output of Utah came next and amounted to about 146,000 tons, compared with 153,335 tons in 1925. Idaho ranked third with an output of about 133,000 tons, compared with 126,521 tons in 1925.

The output of primary domestic desilverized lead was about 368,000 tons; of soft lead about 248,000 tons, and of desilverized soft lead about 56,000 tons, making a total output from domestic ores of about 672,000 tons of refined lead. Corresponding figures in 1925 were 345,429 tons of desilverized lead, 260,560 tons of soft lead, and 48,932 tons of desilverized soft lead, making a total of 654,921 tons. The output of lead smelted and refined from foreign ore and bullion was about 128,000 tons, as compared with 112,048 tons in 1925. The total lead smelted or refined in the United States in 1926 was thus about 800,000 tons, as compared with a total of 766,969 tons in 1925—a gain of about 4 per cent. The output of antimonial lead in 1926 was about 20,000 tons, as compared with 19,667 tons in 1925.

Exclusive of the stocks of lead on hand at the smelters and refineries and of the amount of lead exported with benefit of drawback, for which figures were not available, it was calculated that the amount of lead available for consumption in 1926 was about 744,000 tons, as compared with 655,655 tons in 1925.

In addition to the slightly increased production of lead in the United States in 1926, Spain, Canada, Mexico, British India and Australia all contributed to an increased world production, consumption being greater in practically all importing countries except Germany.

According to figures published by the American Metal Market, the average quoted price of

lead for prompt delivery at New York for the year was 8.45 cents a pound, as compared with an average selling price of 8.7 cents in 1925. The quotation at the beginning of the year was 9.37½ cents and in the closing days of the year it was 7.8 cents.

**LEAGUE OF NATIONS.** The Assembly of the League of Nations met in extraordinary session, March 8, for the purpose of electing Germany to membership and thereby putting into effect the Locarno treaties. On March 17, the Assembly adjourned without having voted on Germany's admission, a deadlock having developed on the question of permanent seats in the Council. Under the existing scheme of organization, there was absolutely no way of proceeding, so the Assembly and the Council adjourned to settle the crisis by study and conference. The first phase of the crisis was due directly to the candidacy of Germany. In October, 1925, the Locarno treaties were designed to end the bitter feeling of insecurity between the nations of Western and Central Europe, and to permit them to go forward with the reparation of the economic and financial destruction which came with the Great War. These agreements were far-reaching and idealistic—as Charles C. Bauer, Editor of the *Non-Partisan League of Nations News*, put it, “so much so that the phrase ‘Spirit of Locarno’ immediately became grafted on the languages of the world and the entrance of Germany into the League was intended to be the practical application of the Locarno ideals.”

It was evident as the time approached for the actual election, that the entrance of Germany would require some radical re-organization of the League. For a time it was feared that accord established between the former enemy countries would not be complete enough to stand the strain of nationalism which would be manifest in League re-organization. This danger, however, did not materialize. In spite of the postponement, the “Locarno spirit” was unimpaired on the day of adjournment. There was a closer understanding, a higher degree of cordiality among Luther, Stresemann, Chamberlain, Briand, Vandervelde, Benes and Skrzynski at the end of the crisis than at its beginning. The good accomplished at Locarno was really reinforced by the difficulties at Geneva.

The second crisis according to the Non-Partisan League of Nations Association was perhaps the most vital. It might have arisen at any other time and had little to do with Germany. It dealt with the fact that the very life of the League depends on public discussion of public questions and full opportunity for study and consideration. This is illustrated by the Rules of Procedure which intentionally make it difficult to put any items on the Order of the Day for discussion which have not been called to the attention of the Member States four months before the opening of the Assembly. These elaborate rules have been devised to prevent surprise and to decrease the chances of stampeding the Assembly. The delegates do not like to be asked to vote on questions which have not previously been submitted to their Governments for careful study.

In the past this issue has arisen a number of times in smaller matters and the Assembly has jealously sought to guard its prerogatives. This time it arose in an aggravated form. The

Member States were invited on very short notice to attend an Extraordinary Session of the Assembly and the second of the three items on the Order of the Day called for action on suggestions which would be made by the Council in regard to creating new seats on the Council. This meant that not until after delegates had reached Geneva would they know what proposals in this very important matter would be laid before them. The Dutch Government protested against this procedure at once. It was the common understanding that Germany should be given a Permanent Seat on the Council—on this there was general agreement. However, rumors were afoot that the Council would propose a much more sweeping reorganization and no one knew exactly what the terms of the proposal would be.

Details of the situation were complicated in the extreme and even after the event it was impossible to separate fact from fancy. It was generally believed that some of the Locarno group had got together in private and agreed on a programme—the simultaneous creation of Permanent Seats for Germany, Poland, Spain and Brazil—which they intended to spring suddenly on the Assembly, and, as everybody was anxious to get Germany into the League, they hoped to jam this proposal through quickly without adequate discussion. Whether this was well founded or not, it was not the substance of the proposals which mattered—they might be good or bad—the important thing was the procedure.

If it should prove possible for a group of members to get together in private and without public discussion decide on a programme and force it through the League, it would be an unqualified defeat. It was necessary to prevent such a defeat, even if the cost was to postpone the entrance of Germany.

This phase of the crisis was solved—a victory for the League principle—by the veto of Sweden. The Council could not act in the matter without unanimity. Sweden refused to vote for any enlargement of the Council beyond the granting of a permanent seat to Germany. The Swedish attitude did not seem, according to the Association, to have been a decisive stand against any re-organization of the Council, but against any such action without public discussion and time for consideration.

A third crisis was that raised by the veto of Brazil. When the matter of Germany's entrance into the League was first brought up, Germany asked for assurance that she would be recognized as one of the Great Powers and be given a Permanent Seat on the Council. She addressed a diplomatic note to the 10 governments represented on the Council—Brazil was one of them—and later announced that she had received satisfactory answers. The Swedish reply to Germany was sent to the League and was published; but the others were not. It now develops through the subsequent publication of the Brazilian reply that that government had vaguely hinted at the action which her representative actually took. Up to the last moment, everyone at Geneva thought that the Brazilian representative would withdraw his veto of Germany's admission to a Permanent Seat unless his country received one, but he did not. There was very little support for the Brazilian claim, even among the Latin American republics.

Brazil's stand was the definite cause of the deadlock.

The Assembly adjourned in the face of this deadlock. The League has learned, in its short career, that it was determined that the only proper solution of the difficulties which confronted it would be one that could voluntarily be accepted by all. The Germans were quick to realize this; several proposed "solutions" were rejected by them because they did not want to have their entrance into the League the cause of fatal offense to any of its members.

One compromise discussed was the proposal that Sweden and Czecho-Slovakia should voluntarily resign from their non-permanent Seats on the Council and so allow the immediate election of Poland and Holland. But such a solution would obviously have dodged the real issue. The important thing was to assure full and free discussion and this was accomplished by adjournment. Germany's quick understanding of the situation was one of the most encouraging phases of the whole episode.

It is evident from the proceedings that a struggle over procedure, vital to the health of the League, was fought and won. The efficacy of the Rule of Unanimity has been thoroughly established. The question of Council re-organization was definitely raised. The Council accordingly created a special commission of 15 representatives to seek a solution.

This general view of the extraordinary session of the Assembly in March was sustained by Edwin D. Mead, a veteran observer of international development and an internationalist of note. He said:

As we read the dispatches from Europe, we find that the representatives of France, Germany and Great Britain went home from Geneva, while recognizing the seriousness of the problems which had engaged them, yet all confident that those problems will be duly settled, all with their friendship for each other strengthened, and all confident that the League of Nations is the true and only efficient agency for the establishment of the peace and order of Europe and the world.

"Only those who are already prejudiced against the league," says the Paris dispatches, "seek to proclaim its failure in this crisis. There is scarcely a newspaper which does not acclaim the assembly for its wisdom." Dr. Stresemann, the German foreign minister, said, as he was leaving Geneva for Berlin, that although the events of the week made the task of the friends of the league in Germany harder, "nevertheless, the statements of M. Briand and Sir Austen Chamberlain in the assembly to-day will help greatly. We shall be particularly sustained by the assembly's applause for those orators who maintained that Germany will soon be welcomed into the league. I wish to emphasize that Germany's collaboration for a good understanding among peoples will not be changed." He expressed special gratitude for M. Briand's courtesy in receiving the German press representatives and assuring them that the closest coöperation would continue between the two nations. In London, the dispatches state, the foreign office gratefully recognizes the fact that "the Locarno agreements came through unscathed. That the league still stands as the only alternative to European wars is the consensus of Downing street. The breakdown came through the inability of a non-European power to meet the European nations in the same spirit of conciliation as resulted at least in a temporary solution of the problem."

"As far as Sir Austen Chamberlain is concerned," say the London dispatches, "his friends realize that he will return home to face the bitterest criticism over the delay in Germany's entry into the league." That criticism will be deserved. The English minister was betrayed by his manifest partisanship for France into utterances at the most critical moment which were discreditable to himself and most prejudicial to the common interest. M. Briand, from the moment he realized his initial blunder yielding for an unhappy moment to a recrudescence of the fatal "balance of power" instinct, in espousing at this time the Poland interest, showed himself the true statesman that he is. Dr.

Stresemann was his close second, with Benes, as always, the faithful lieutenant of the righteous leaders. The whole trouble, which is temporary and the occasion for no antics, is stated correctly and sufficiently in half a dozen lines of an editorial in the *Boston Herald*: "Probably if France, heading the Locarno allies, had made no move to interfere with the admission of Germany alone to the council, the meeting would have been harmonious. But when France appeared leading Poland by the hand, and claiming for her a permanent seat, opposition was instantly aroused. When Germany was invited to join the household, care should have been taken not to keep her standing at the door because of a family squabble within." The whole incident, so unnecessary and so easily avoidable, had the organization of the council been slightly different, so far from casting discredit upon the league or upon the European statesmen, was finally dealt with in a way under the circumstances greatly to their credit; and the necessary changes in the constitution of the league will be promptly undertaken and gradually effected.

**MANDATES.** The report of the Permanent Mandates Commission on its extraordinary session of February 16-March 6, held in Rome to discuss the report of the French administration of Syria during 1925 was neither a forthright condemnation of the mandate administration, such as would have pleased the Syrian nationalists and their friends, nor the indiscriminate whitewash desired by the supporters of French policy. The Commission had before it not only the report of the French administration which the Commission requested at its ordinary session last October, but also many petitions from Syrian and Lebanese groups living outside Syria. The fact that there were no petitions coming directly from Syria was due to the practice of the Commission to receive no petition from inhabitants of mandated territories unless forwarded through the mandatory power. The French Government, however, had an accredited representative to explain its policy before the Commission, but no Syrian representatives were given an official hearing.

The report of the Commission was drawn up after a thorough examination of the documents received, as well as a searching oral examination of M. de Caix, the representative of the mandatory government. Disclaiming any intention or power to deprive France of the Syrian mandate, and ending with a reminder of France's sacrifices and disinterested aims in Syria and an exhortation to all Syrians to coöperate with the mandatory government, the report of the Commission does contain certain specific criticisms of the French administration in Syria:

(1) It criticizes the French report for omitting a statement of the "immediate causes of the present risings," and of "the deeper causes of the unrest."

(2) It intimates that the approval of the League is necessary for the modifications of the boundaries provided for under the conventions between M. de Jouvenel and the Angora government.

(3) It criticizes the French administration for its frequent changes of policy in regard to the territorial organization of the area under mandate, and in the methods and personnel of the internal administration.

(4) It criticizes the complex and confused judicial system.

(5) It considers the establishment of a new Syrian currency based on the French franc very disadvantageous to the mandated territory.

(6) It places some of the responsibility for the Druse uprising upon the French administration, particularly upon General Sarraïl and Captain Carbillat. The Commission refuses to comment, however, on the methods used by the French in dealing with the insurrection.

Perhaps the most important part of the report according to the Foreign Policy Association is the emphasis placed by the Commission upon the provisional and advisory character of the

mandate system. In a declaration on behalf of the French Government, M. de Caix definitely stated that "the mandate is a provisional system designed to enable populations which, politically speaking, are still minors to educate themselves so as to arrive one day at full self-government." Examining the record of the French administration in the light of this principle, the Commission expresses the opinion that "it seems clear that the French advisers have shown a too pronounced tendency to take the place of the native authorities. In this way the mandate has appeared to the Syrians to be gradually transforming itself into a system of direct administration."

**COUNCIL OF THE LEAGUE.** The Special Commission established to study the question of reconstructing the Council of the League met May 10 in Geneva. The Commission, the representatives of 15 nations, elected Dr. Giuseppe Motta of Switzerland, President and Senor Lereon of Argentine, Vice-President. The issues immediately developed included the amendment of the League Covenant and the changing of the rule of unanimity regarding Council decisions. The following day, the German delegate reaffirmed Germany's desire to see the successful culmination of negotiations in a way that would permit Germany to enter the League; the Spanish delegate reaffirmed the desire of Spain for a permanent seat, arguing that with the entry of Germany, the agreement regarding the permanent membership being based on war-time allies ceased; and the Brazilian delegate made a long academic speech to show his country's right to a permanent seat. The first constructive plan came from Viscount Cecil, who proposed that the elected members of the Council be increased to nine for a three-year term and chosen on a basis of proportional representation.

On May 12, the Commission voted the first part of Lord Cecil's propositions. These provided that elections should take place at the beginning of the Assembly session and that newly elected members should immediately take their seats. By getting rid of the calendar year's term of office, both Brazil and Spain might lose their seats at the beginning of the September session of the League if they obstructed the will of the majority.

China officially announced that she was willing to withdraw her demand for a permanent seat on the Council conditioned upon Brazil, Spain and Poland doing likewise; the Far Eastern Republic made her withdrawal contingent upon there being no increase in the number of permanent seats except in the case of Germany. Poland likewise took a conciliatory position.

A draft report recommended that non-permanent members be increased from six to nine and that they should be elected "as soon as possible at the next Assembly." Other provisions of the report included the stipulation for the rotation of non-permanent members on the Council, with the proviso that one-third of the number should be eligible for reelection as soon as their three-year term expires; that the Assembly, by the two-thirds majority, might call for an election of all non-permanent members at any time; and that the three non-permanent seats be allocated to Latin America.

A German-Russian treaty was published in April. The exchange letters accompanying the treaty and of equal force and authority with

it, were more detailed and specific. As summarized by the Foreign Policy Association the following were the chief points:

1. The purpose of both the contracting parties is to maintain peace.
2. The German Government regards the League as "designed for peaceful and just settlement of international disputes."
3. Under Article 16 and 17 of the Covenant, "punitive undertakings against the Soviet Union could be contemplated only if the Soviet Union started an aggressive war against another State." Furthermore, the vote of Germany as a Council member would be necessary in order to declare Russia an aggressor. As to Germany's participation in any punitive measures, the German Government significantly refers to the letter addressed to it by the Allied Governments at the time of signing the Locarno treaties, interpreting Article 16 "to mean that each state member of the League is bound to cooperate loyally and effectively in support of the Covenant and in resistance to any act of aggression to an extent which is compatible with its military situation and takes its geographical position into account."
4. The negotiation of a treaty between Germany and Russia for the peaceful solution of disputes, "in which special consideration shall be given to the possibilities of arbitral processes," is envisaged.

The reply of the Russian ambassador reaffirmed the declaration of peaceful intentions and the proposal concerning an arbitration treaty, but merely took note of the observations in regard to Germany's relations with the League.

The 40th session of the Council which adjourned June 10, proved a dramatic sequel to the sessions of the Council and the Assembly in March. The Council, faced with the alternative of again failing to admit Germany in September or losing the cooperation of Spain and Brazil chose the latter. Thereupon Brazil resigned first from the Council and then from the League; and the Spanish representative made statements which foreshadowed similar action on the part of Spain. This occasion was the decision of the Council to adjourn *sine die* at the next meeting of the Council Reorganization Committee, tentatively fixed for June 28. Since this meeting of the Committee was to have discussed the question of additional permanent Council members, its indefinite postponement was regarded as a rejection of the Spanish and Brazilian demands. It had been hoped, according to the Foreign Policy Association, that the scheme of the Committee, providing for nine non-permanent Council members, three of them eligible for reelection by a two-thirds vote of the Assembly, would give satisfaction to Spain and Brazil by enabling them to be reelected more or less indefinitely; but the statement read by M. de Mello Franco, the regular Brazilian representative, revealed that his government persisted in its attitude of all or nothing. He announced the resignation of Brazil from her non-permanent seat on the Council and her impending resignation from the League unless she was given "satisfaction," in this case synonymous with a permanent Council seat. A letter from the Brazilian government to the Secretary General of the League, published the following day, repeated these announcements, and denounced the scheme of the great powers to keep all the permanent Council seats for themselves. Then after the Council had adjourned, the Brazilian government cabled notification of its withdrawal from the League, to take effect in two years.

On the last day of the Council session the Spanish representative also made a statement

which was interpreted as foreshadowing Spain's withdrawal. After announcing that his government had decided to ratify the amendment to Article 4 of the Covenant pending since the 1921 Assembly, Senor Querbole declared that his country could not accept the status of a secondary power, and that "the present situation prevents the presence of Spain at an election." This was taken to mean that Spain would not be a candidate for a non-permanent Council seat, but would demand a permanent seat. The amendment to Article 4, which had been kept ineffective by Spain's failure to ratify, enables the Assembly to make rules for the election of the non-permanent Council members by a two-thirds majority. Thus the way was opened for acceptance by the Assembly of the report of the Council Reorganization Committee.

Other items on the agenda attracted very little general notice because of the excitement caused by the controversy over permanent Council seats. In Austria, however, there was great rejoicing because the Council decided to terminate League control over the Austrian finances. The reconstruction of Austria's finances in less than four years is regarded as one of the greatest successes achieved by the League. The Council also decided to release Hungary's finances from League control, except as regards revenue services. An attempt by the French and the Czech delegates to inject politics into the question by introducing the subject of the Hungarian franc forgeries was sidetracked by referring that matter to the Financial Committee. The financial reconstruction of Hungary, under Jeremiah Smith, Jr., of Boston, as the League's commissioner, has been even more remarkably quick than Austrian reconstruction. The Bulgarian request for authorization for a loan to be used for the settlement of refugees in Bulgaria was also granted by the Council. The scheme involves supervision of the expenditure of the loan by the League of Nations.

The Commission on Reorganization of the Council reconvened in Geneva on August 30, with the Spanish delegate, Señor Palacios, irreconcilable on Spain's demand. After a heated debate the Commission finally decided to pass directly to the Council the minutes of the Commission's meeting. These show that all the States represented with the exception of Spain were against the creation of any permanent seat except the one to be granted to Germany. The plan added three semi-permanent seats, thus theoretically taking care of the demands of Spain, Poland and Brazil. Poland seemed to be satisfied, but the Spanish delegate left Geneva for Madrid on September 4, and Spain's seat at the Council was vacant, as was Brazil's. It was reported that the Spanish Cabinet meeting, September 7, agreed to Spain's resignation from the League and in a note reproaching Geneva for lack of consideration, regretted the need for such a drastic step. On September 4, the League Council formally adopted the report of the Reorganization Commission and the last barrier to Germany's admission to the League and the Council was removed.

On September 8, Germany was unanimously elected to a permanent seat in the Council and Assembly by the Seventh Assembly, 12 years to a day after the turning of the tide in the Battle of the Marne. The three-year seats provided for under the reorganization plan were allotted to

Rumania, Chile and Poland, but only the last named country was declared re-eligible under the compromise plan intended to save Spanish and Brazilian pride. Colombia, Holland and China were elected to the Council for two years and Czechoslovakia, Belgium and Salvador for one. On September 11, Spain formally withdrew.

M. Nintchitch of Yugoslavia, the President of the Seventh Assembly, formally welcomed Germany as a League member. Dr. Stresemann's first speech raised no disputed questions, but it stressed the fact that Germany "now wished to follow a path of subversion of selfish nationalism, to promote international goodwill and peace." He hailed the League as "heir to and executor of the treaties of 1919," which may be interpreted as indicating that the Reich expects to have the troublesome problems of the occupation of the Rhineland, German Kolonialpolitik and the war-guilt question eventually settled by the League.

Aristide Briand, Foreign Minister of France, fittingly welcomed Germany into the League. (See ARBITRATION, INTERNATIONAL.) There have been many eloquent and emotional speeches, the Foreign Policy Association said, delivered from the platform of the Salle de la Reformation, but those of Stresemann and Briand "carry a note of real sincerity which, with the going into effect September 14, of the Locarno treaties, must be regarded as significant in marking a lasting reconciliation between these two ancient enemies." Spain and Brazil may be missed but the final outcome in September is of far greater importance and significance toward the peaceful settlement of international difficulties.

The work of the Seventh Session was thus summarized by the Foreign Policy Association:

"1. A resolution passed September 24 calls for a world disarmament conference to be held before September, 1927, 'unless material difficulties prevent.' France, Germany and Britain earnestly pledged their support of the forthcoming conference.

2. A speedy convocation of an economic conference was urged in a resolution passed September 21.

3. Unanimous approval was given to a project to found an Armenian national home in the Republic of Erivan.

4. The slavery convention drawn up by Lord Cecil was adopted September 25 and signed at once by representatives of 20 states including Abyssinia and Portugal, the two states most affected by its terms. The convention provides for the prevention and suppression of the slave trade and complete abolition of slavery in all forms as soon as possible. Compulsory enforced labor is to be done away with and provision is made for prevention of the slave trade.

The 43rd session of the Council of the League convened in Geneva on December 6. It decided the following matters: An Economic Conference will be held May 4, 1927, at Geneva, and all non-League states, including the United States and Soviet Russia, will be invited. The Disarmament Preparatory Commission which was to meet in March, 1927, was asked "to submit proposals with regard to the moment at which it will be possible to convene a general disarmament conference." This will probably postpone the Conference until 1928 to assure adequate preparation. The convocation of an international conference on private manufacture of arms in

the fall of 1927 was asked in case the general disarmament conference does not meet before September, 1927. Non-League states will be invited including the United States. A resolution to build a giant wireless station in Geneva was approved. An international loan for the Free City of Dantzig was authorized. The report on the loan for the settlement of the Bulgarian refugees was approved.

See DISARMAMENT; GERMANY, especially section *Germany and the League*.

**LEATHER.** In 1926 the production of leather in the United States showed substantial increases over 1925 in almost all lines. The tanning industry consumed 127,000,000 hides and skins, as compared with 119,000,000 pieces in the previous year, according to the statistics of the U. S. Bureau of the Census, as summarized in the accompanying table.

	1926	1925
Cattle-hide leather . . . . .hides	22,270,000	22,817,000
Calf and kip leather . . .skins	15,745,000	13,877,000
Goat and kid leather . . .do.	49,776,000	42,486,000
Sheep and lamb leather . .do.	31,665,000	38,089,000
Other leather . . . . .pieces	7,757,000	7,513,000
Total . . .hides and skins	127,213,000	119,782,000

In 1926 more cattle and sheep were slaughtered, as inspected by the Federal authorities, than for several years previously, but there was a slight reduction in the number of calves and goats, the statistics for five years ending in 1926 being given in the accompanying table.

FEDERAL INSPECTED SLAUGHTER  
[000 omitted]

Year	Cattle	Calves	Sheep	Goats
1918 . . . . .	11,829 *	3,546	10,320	138
1919 . . . . .	10,089	3,969	12,691	87
1920 . . . . .	8,609	4,058	10,982	42
1921 . . . . .	7,608	3,808	13,005	12
1922 . . . . .	8,678	4,182	10,920	21
1923 . . . . .	9,163	4,500	11,529	27
1924 . . . . .	9,593	4,935	11,991	33
1925 . . . . .	9,853	5,352 *	12,001	39
1926 . . . . .	10,180	5,153	12,961	32

\* Peak year.

In 1926 the U. S. Bureau of Agricultural Economics reported that there were on farms 59,829,000 cattle, as compared with 72,134,000 in 1907, the peak year; 40,748,000 sheep, as compared with 63,965,000 in 1903, the peak year; 15,778,000 horses, as compared with 21,195,000 in 1915; but 5,780,000 mules, which made a record figure. In 1926 the exports were less in value than in 1925, amounting to \$49,814,000, as compared with \$52,155,000 in the earlier year. There were increases in the exports of cattle hide leather, amounting in 1926 to 22,827,000 square feet, as compared with 18,624,000 square feet in 1925. Calf and kip were 31,726,000 square feet, as compared with 29,276,000 square feet in 1925; sheep and lamb, 8,190,000, as against 6,487,000 in 1925; and goat and kid leather, 48,546,000 square feet in 1926, as compared with 45,242,000 in 1925. There was a decline in the exports of patent leather from 36,985,000 square feet in 1925 to 30,616,000 in 1926. Sole leather also declined from 19,327,000 in 1925 to 13,470,000 in 1926. The imports of leather in 1926 had a total value of \$28,662,000, as against \$22,412,000 in 1925.

The imports of hides and skins in 1926 were valued at \$96,812,000, as against \$96,764,000

in 1925. The principal items were the following: cattle hides, 3,361,000 pieces in 1926, as against 3,817,000 in 1925; calf-kip skins, 7,587,000 pieces, as against 4,853,000 in 1925; goat-kid skins, 53,498,000 pieces in 1926, as against 47,532,000 in 1925; slats, 19,504,000 in 1926, as against 20,547,000 in 1925. The total value of the exports of hides and skins from the United States was \$15,921,000 in 1926, as compared with \$20,433,000 in 1925.

According to data collected at the biennial census of manufactures by the U. S. Department of Commerce taken in 1926, the establishments classified in the "Leather and its Manufactures" group reported, according to a preliminary statement for 1926, products valued at \$1,767,540,294, a decrease of 6 per cent as compared with \$1,880,085,716 for 1923, the last preceding census year. The total for 1925 was made up as follows: Leather, tanned, curried, and finished, \$462,013,572, a decrease of 5.5 per cent as compared with 1923; boots and shoes, \$925,383,422, a decrease of 7.5 per cent; and other manufactures of leather, \$380,143,300, a decrease of 2.8 per cent. The leather group comprised the industries in which are classified establishments engaged in tanning, currying, and finishing leather and those manufacturing leather products, such as boots and shoes, gloves and mittens, belting, saddlery and harness, trunks, suitcases and bags, pocketbooks, purses, etc.

The total number of establishments so classified for 1925 was 4263, of which number 532 were engaged in the tanning, currying, and finishing of leather, and 3731 in the manufacture of leather products. The total represented a decrease of 12.4 per cent as compared with 4868 in 1923. In considering the total value of products for the group, it must be borne in mind that this total includes a considerable amount of duplication due to the fact that nearly all the tanned, curried, and finished leather is used as a material by the other industries in the group. Thus the total value of products of the group (f. o. b. factory) is considerably greater than the net value of the products in the form in which they reach the ultimate consumer.

**LEE, SIR SIDNEY.** English Shakespearean scholar and author, died at London, England, March 3. He was born in London, Dec. 5, 1859, of Jewish descent, and was educated at the City of London School, and Balliol College, Oxford, where he was Brackenbury history scholar. His passion for Shakespeare dated from his school days, where he was under the influence of the well-known Shakespearean scholar, Dr. Abbott, and, while at Oxford, he began his studies in general literature and in Shakespearean literature, which were destined to place him among the leading scholars in this field. He was the first secretary of the Oxford Browning Society, and in London became treasurer of the New Shakespeare Society. He was also president of the Elizabethan Society for 30 years. After graduating from Oxford, and serving for a while as tutor, he applied himself vigorously to Shakespearean studies. In 1883, however, Leslie Stephen selected him as assistant editor of the *Dictionary of National Biography*, and from that time he became a zealous, accurate biographer, writing with care and facility. In 1890 he became joint editor and, in the following year,

became editor of this remarkable Dictionary, serving as head of this work until it passed into the hands of the Oxford Delegacy in 1917.

Lee was professor of English language and literature at the University of London East London College from 1913-24, and dean of the Faculty of Arts of the University of London from 1918-22. In 1917 he became president of the English Association. His scholarship was recognized by many honorary degrees including that of Litt.D., Victoria University, Manchester, 1900; LL.D. Glasgow, 1907; and Litt.D. Oxford, 1907. He was knighted in 1911. He was a fellow of the British Academy and foreign member of the American Academy of Arts and Sciences; a corresponding member of the Massachusetts Historical Society; and a member of the Royal Commission on Public Records in 1910; chairman of the executive, Shakespeare's Birthplace Trust, Stratford-on-Avon in 1903; and registrar of the Royal Literary Fund in 1907. He was in active demand as a lecturer, being Clark lecturer in English literature at Trinity College, Cambridge, 1901-02; lecturer at the Lowell Institute, Boston, 1903; and lecturer for the Common University Fund at Oxford, 1909.

Lee was known in addition to his general biographical work for a notable *Life of William Shakespeare* (1898); *Life of Queen Victoria* (1902); and *Life of King Edward VII*; the last two of which were considered not only standard volumes, but valuable contributions to history, dealing with a critical time and with two interesting personages. The *Life of King Edward VII* was undertaken at King George's request and was prepared from original papers. In addition to these notable biographies Sir Sidney Lee's writings include: *Stratford-on-Avon from the Earliest Times to the Death of Shakespeare* (1885, new ed. 1906); *Lord Herbert of Cherbury's Autobiography, with a continuation of his Life* (1880, new ed. 1906); *Shakespeare First Folio Facsimile, with Introduction, and Census of Extant Copies* (1902); *Elizabethan Sonnets* (1904); *Great Englishmen of the 16th Century* (1904); *Shakespeare's Poems and Pericles* (1905); *Shakespeare and the Modern Stage* (1906); *America and Elizabethan England* (in Scribner's Magazine, 1907); *The French Renaissance in England* (1910); *Principles of Biography* (1911); *Shakespeare and the Italian Renaissance* (1915); and *Comment on Prefatory Pages of First Folio* (1923).

**LEEWARD ISLANDS.** A group of islands belonging to Great Britain in the West Indies; the most northerly group of the British Lesser Antilles, lying to the north of the Windward group and southeast of Porto Rico; comprising Antigua, Dominica, Montserrat; St. Kitts (with Nevis and Anguilla), and the British Virgin Islands. Total area, 715 square miles; population at the census of 1921, 122,242, as compared with 127,193 in 1911. The two largest islands with their area and population in 1921 are: Dominica, 305 square miles and 37,059 inhabitants; Antigua, 108 square miles, but with Barbuda and Redonda, 170 square miles, with a population of 29,767. The chief towns are: Roseau (Dominica), 7000 inhabitants; St. John (Antigua), 9262 inhabitants; and Basseterre (St. Kitts), 7736 inhabitants. The British Virgin Islands comprise all those in the group which do not belong to the United States; area, 58 square miles; population (1921), 5082. The

staple products in most of the islands are sugar and molasses. Cacao and onions are also grown. The culture of tobacco and cotton is successfully carried on in Dominica. On that island and Montserrat, lime juice and citrate of lime are important products. The accompanying table from the *Statesman's Year Book* for 1926 gives statistics of finance and commerce for 1923-24 and 1924-25:

	1923-24 £	1924-25 £
Revenue .....	267,597	240,272
Expenditure .....	276,022	268,255
Public debt .....	281,450	281,340
Imports .....	765,782	753,170
Exports .....	898,255	667,828

The islands are divided into five presidencies under a central government, at the head of which is a governor, who is also commander-in-chief, a federal executive council, and a federal legislative council. Governor, Sir Eustace Piennes.

**LEGION, AMERICAN.** See AMERICAN LEGION.

**LEGISLATION.** See AGRICULTURAL LEGISLATION; LABOR LEGISLATION; paragraphs on Legislation under the several States; and the article UNITED STATES.

**LEHIGH UNIVERSITY.** A non-sectarian institution for the higher education of men at Bethlehem, Pa.; founded in 1866. It is composed of colleges of engineering, business administration, and arts and science. The enrollment for the autumn of 1926 was 1511, and for the summer session of that year there were 336 registered. The number of members of the faculty was 136. Endowment funds for the year amounted to \$4,851,036.81, and the income for the year to \$837,810.42. There were 116,742 bound volumes and 51,468 pamphlets in the library. During the summer of 1926 a building for the College of Business Administration was erected, linking Christmas and Saucon Halls, and another building renovated for the Armory. In 1926, also, the University acquired an additional large athletic field. President, Charles Russ Richards, M.M.E., Eng.D., LL.D.

**LEISHMAN, LT.-GEN. SIR WILLIAM BOOG.** Director general of the British Army Medical Service, died in London, June 2. He was born Nov. 6, 1865, and was educated at Westminster School and Glasgow University. In 1887 he entered the medical service of the British Army, and in 1899 was appointed major in the Royal Army Medical Corps, serving in various expeditions with honor, and reaching the rank of colonel at the outset of the World War in 1914. In this conflict he was promoted to major-general in 1918, being mentioned three times in dispatches, and in 1923 was made lieutenant-general and director-general of the Army Medical Service. He served as assistant professor of pathology at the Army Medical School at Netley, 1900-03, and professor of pathology at the Royal Army Medical College, 1903-13. General Leishman also was examiner in pathology at the University of Oxford, and in tropical medicine at the University of Cambridge. He was Harben lecturer in 1910, and in the following year president of the Society of Tropical Medicine and Hygiene. He served as a member of the Yellow Fever Commission of West Africa, 1913-15, and of the Medical and Sanitary Ad-

visory Committee for Tropical Africa in the Colonial Office in 1913. Sir William was a member of the Medical Research Council, 1913-23, and chairman of the Foot and Mouth Disease Research Committee of the Ministry of Agriculture in 1924. He was also a member of the Scientific Advisory Committee of the British Empire Cancer Campaign in 1924. He was knighted in 1909 and in 1915, made C.B.; he was the recipient of various other honors until in 1924 he was created K.C.B. He was a fellow of the Royal Society, of the Royal College of Physicians in London, and of the Royal Faculty of Physicians and Surgeons at Glasgow. He was also an honorary LL.D. of the latter University and of McGill University, Montreal. In 1912 he was appointed honorary physician to the King. In recognition of his care and expert attention to the American soldiers in the World War he was given the Distinguished Service Medal by the United States. He also received many honors from foreign governments and contributed extensively to medical literature.

**LELAND STANFORD UNIVERSITY.** See STANFORD UNIVERSITY.

**LEWIS, DR. AGNES SMITH.** English Orientalist, died in England, March 27. She was born at Irvine, Ayrshire, in 1833, the daughter of John Smith, a Scottish jurist. She was educated in private schools and by tutors, later becoming proficient in modern Greek, Arabic, and Syriac. She wrote several novels and works on travel including, *Glimpses of Greek Life and Scenery* and *Through Cyprus*. In 1887 she married the Rev. Samuel Savage Lewis (1836-91), fellow of Corpus Christi College, Cambridge, and in 1892 with her twin sister, Mrs. Margaret Dunlop Gibson, discovered, in the library of the Convent of St. Catherine on Mount Sinai, a text of the Four Gospels in Syriac, which was the oldest version then known of any part of the New Testament. In 1896 she and her sisters brought back the first leaf of the Hebrew Ecclesiasticus. She received honorary degrees from the Universities of Halle, Wittenberg, St. Andrews, Heidelberg, and Dublin. She and her sister gave the site for Westminster Theological College at Cambridge in 1897. Her writings include: a biography of her husband (1892); an introduction to the edition by Bensly, Rendel Harris, and Burkitt of *The Four Gospels from the Sinaitic Palimpsest* (1894; revised by her as *The Old Syriac Gospels*, 1910); *In the Shadow of Sinai* (1898); *The Story of Ahikar*, with Conybeare and Harris (1898, 2d ed., 1913); *A Palestinian Syriac Lectionary of the Gospels*, with Mrs. Gibson (1900); and several volumes in *Studia Sinaitica and Horæ Semiticæ*, published by herself and Mrs. Gibson.

**LEWIS, JEFFREYS (MRS. HARRY MAINHALL).** American actress, died in New York, N. Y., April 28. She was born in England in 1857, and while but a girl made her first appearance at the Theatre Royal, Edinburgh, Scotland, and after appearing in London came to the United States, where she soon became leading woman at Wallack's Theatre where Lester Wallack himself was leading man. Later she joined the company of Augustin Daly, where she made a great success in certain character types of melodrama. In addition to her work with Daly's Company, she visited California each summer, acting the part of Stephanie in *Forget-Me-Not* and the Countess Zeika in *Diplomacy*. Later she starred in these

plays in the United States and Australia. Other plays in which Miss Lewis appeared were *Americans in France*, *The Promise*, *As You Like It*, *Oh, I Say!*, *The Klanman*, and *La Belle Rousse*.

**LIBERIA.** A negro republic on the west coast of Africa, reaching from the British colony of Sierra Leone on the west to the French Ivory coast on the east, with about 350 miles of coast line, and extending inland at some points to a distance of 200 miles. Area, variously estimated at 35,000 to 43,000 square miles, and population at 2,000,000 to 2,500,000, most of whom live in the interior. They belong to about 40 tribes and speak as many languages, though they fall into the six main stocks of: Mandingos, who are Mohammedans; Gola, Kpwezi, Gissi, Kru, and Greboes. The civilized inhabitants, reported at about 50,000, live along the coast, speak English, and are industrious. Capital, Monrovia, with 6000 inhabitants (including Krutown). The ports of entry are Monrovia, Robertsport, Marshall, Grand Bassa, Buchanan, River Cess, Liberian Gene; Saywolu, Greenville, Nana Cru, Grand Cess, Sasstown, Harper, Kablake, Half Cavalla, and Webó.

**PRODUCTION.** Agriculture, mining, and industrial resources are comparatively undeveloped. Although the soil is very fertile, cultivation is backward. Cacao and cotton are produced in small quantities, but the staple product is native coffee. Other products include: Piassava fibre, palm oil, palm kernels, chillies, beniseed, anatto seed, rice, beeswax, and tortoise shell. The mineral resources include: Gold, copper, tin, zinc, monazite, lead, corundum, lignite, and iron. The last named is worked by natives. Some diamonds have been found.

**COMMERCE.** The total value of exports in 1924 was \$1,303,722 and the total value of imports \$1,319,719. In 1925 the imports from the United Kingdom were valued at £156,088 and the exports to the United Kingdom £117,680. The chief exports are coffee, cacao, palm kernels, piassava fibre, palm oil, ivory, rubber, and camwood. The chief imports are rice, cottons, haberdashery, salt, provisions, arms and ammunition, hardware, tobacco, ready-made clothing, glass and earthenware, rum, gin, building timber, dried and preserved fish, and beads.

**COMMUNICATIONS.** In 1926 there were no railways of any kind, and only three stretches of motor roads, of 50, 40, and 23 miles, respectively. Ox-carts remained as the chief means of conveyance. There are two wireless stations at Monrovia and there is direct cable communication with Europe and New York.

**GOVERNMENT.** The constitution is modeled after that of the United States. Under it executive power is vested in the president, who is assisted by a council of six ministers, and legislative power in the Congress made up of the Senate and House of Representatives. Qualifications for the franchise are negro blood and ownership of land; although the natives are not disfranchised, they take no part in political affairs. The official language of the administration is English. President, in 1926, Charles D. B. King (chosen for the term 1924-28); vice president, H. Too Wesley.

**LIBRARY ASSOCIATION, AMERICAN.** An official organization functioning "to promote library service and librarianship" and to carry out the intention of its founders "by disposing the public mind to the founding and improving

of libraries" in the United States and Canada. It celebrated its fiftieth anniversary in 1926, with more than 9000 members, as compared with 103 in 1876. Its activities are carried on by its officers; by a staff of more than ninety people employed in Chicago, St. Louis, Washington, Philadelphia, and Paris; by sixty-one voluntary committees engaged in studying library problems, such as book buying, library legislation, revenues, salaries, international relations, school libraries, cataloguing civil service relations, library extension, work with the blind, work with the foreign-born, etc.; and by hundreds of individual volunteer workers. The Association activities include giving advisory assistance to all who are interested in library establishment or development by answering questions about every phase of library service; by publishing and distributing books and pamphlets on different aspects of library work; by providing buying lists for libraries, schools, and individuals; and by the distribution of leaflets, posters, broadsides, etc., about library work.

The publications of the Association include the *Booklist*, a buying guide to new books, prepared especially for small libraries and issued ten times a year; the monthly *Bulletin*, the official organ of the Association, and which includes the conference proceedings and handbook; the *A. L. A. Catalog*, a basic list of selected books to serve as an aid to libraries in book buying; and about 150 books and pamphlets on various phases of library service, designed to promote library development, the demand for which showed a marked increase during the year. Sales of publications for the first six months of 1926 showed a gain of more than 250 per cent over the same months of the previous year, and of about 500 per cent over the same period five years earlier. Notable among the books published during the year was the *Survey of Libraries in the United States*, a study in four volumes of library problems and administration; *Libraries and Adult Education* (MacMillan), a work prepared after a two-year investigation by a special commission of seven librarians of the United States and Canada; *Library Extension*, a report of the committee in charge of extension work; and the *Winnetka Graded Book List*, a study of children's reading made by the superintendent of schools of Winnetka, Ill., and a departure from the usual booklist. More than 30,000 children in 36 cities and towns helped with the preparation of this work, and the result was a list of 750 children's books graded according to the children's own judgment and annotated with the children's own comments. As a part of its work for the advancement of adult education the Association engaged more than twenty-five specialists to prepare short reading courses for men and women, and boys and girls out of school, with a view to supplementing their education by systematic reading for a definite purpose. Twenty-two of these courses were published in booklet form and more than 213,000 copies distributed.

The fiftieth anniversary conference of the A. L. A., held at Atlantic City and Philadelphia in October 1926, was attended by 2500 librarians and library trustees. As a part of its observance of "fifty years of progress" the Association had an exhibit at the Sesquicentennial Exposition at Philadelphia and was awarded a grand prize by the International Jury of Awards for the

development of interest in libraries at home and abroad.

The Association receives its income from membership dues, sale of publications, endowments, and gifts. In March, 1926, the Carnegie Corporation set aside \$4,170,000 for library purposes, of which \$1,345,000 was to be paid to the American Library Association in the form of annual grants over a period of five years. The executive headquarters of the A. L. A. are at 86 Randolph Street, Chicago, Ill., and its officers in 1926 were: president, George H. Locke, Public Library, Toronto, Canada; first vice-president, Joseph L. Wheeler, Enoch Pratt Free Library, Baltimore, Md.; second vice-president, Anne M. Mulheron, Library Association, Portland, Ore.; treasurer, Edward D. Tweedell, The John Crerar Library, Chicago; secretary, Carl H. Milam, 86 East Randolph Street, Chicago.

**LIBRARY PROGRESS.** A study of library conditions made by the library extension committee of the American Library Association in 1926 disclosed that 56 per cent of the total population of the United States and Canada enjoy library service. 7 per cent of the people without library service live in urban communities; 93 per cent live in rural or small town communities. There are 6524 public libraries in the United States and Canada; these libraries contain 68,653,275 volumes, or six-tenths of a book per capita; 237,888,282 volumes were loaned in the year, or two per capita; \$37,294,303 was expended for public libraries in the year, or about 32 cents per capita for the population.

Although there are fifty million people in the United States and Canada without access to free public libraries, there was, nevertheless, a marked advance in library service during the year 1926. The American Library Association and other national agencies, including the League of Library Commissions, the National Association of State Libraries, the American Association of Law Libraries, the Special Libraries Association, the American Library Institute, the Association of American Library Schools, the Bibliographical Society of America, the Medical Libraries Association, the Library Department of the National Education Association, and the American Merchant Marine Library Association, were engaged in nation-wide activity to speed the time when adequate public library service will be within easy reach of everyone. There was a widespread and growing need for adult education through libraries that was being met in part through the publication of a "Reading With a Purpose" series of reading courses prepared by experts under the auspices of the American Library Association. Other assistance is offered through three channels: personal guidance in reading and preparing courses for individual readers or students not enrolled in classes for correspondence study; coöperation with other adult education enterprises so that books needed might be easily available to students and teachers, and that a life-long connection might be established between the student and the library; an information service to be prepared to give to any adult inquirer specific information as to opportunities for class work and correspondence study in any subject.

In response to the urgent need for a more adequate financing of the library training agencies to the end that more well-qualified people might be prepared for library work, the

Carnegie Foundation in 1926 set aside \$1,385,000 to establish a graduate school of librarianship at the University of Chicago and \$1,440,000 to give help to other library schools. During the year new library schools were established at Columbia University and at the University of Michigan. With the former were merged the New York State Library School at Albany and the Library School of the New York Public Library. Another venture in training for librarianship was the holding of a Summer Institute for Instructors of Library Science at the University of Chicago in 1926. The Paris Library School, founded by the American Library Association in 1923 to train a personnel for positions in the libraries, supplied former students for library positions in many countries other than France.

Reference and research libraries in Europe, which were unable, because of the depreciation of foreign currency, to purchase American publications, were supplied with books and other publications from funds provided for this purpose by the Carnegie Endowment for International Peace. The \$1,000,000 fund for restoring the Library at Louvain University, Belgium, was raised and the work of restoration resumed. Library extension in China showed marked advancement. The China Foundation for Education and Culture, a body consisting of five Americans and ten Chinese members chosen to administer the returned Boxer Indemnity Fund, made a grant of \$500,000 gold for a national library in Peking. The Chinese government gave a site for the building in the Winter Palace grounds and agreed to be responsible for half of the expense of administration for ten years, and also to turn over to the new library as a nucleus the books now under the care of the Peking Library, a part of the Imperial collection in the Forbidden City.

**LIBYA.** The name of a former Italian colony on the north coast of Africa. In 1919, for administrative and military purposes it was divided into Cyrenaica and Tripolitania. See articles under these titles.

**LIFE INSURANCE.** See **INSURANCE.**

**LIGHTHOUSES.** On June 30, 1926, the U. S. Bureau of Lighthouses was maintaining a total of 18,130 aids to navigation, a net increase of 266 during the year, according to the annual report of Commissioner George R. Putnam for the fiscal year 1925-26. During the year 694 aids were discontinued, so that the net increase was more significant than would appear from the mere statement. Of the total number of aids, 6460 were lighted and 8901 were floating. There were 1239 fog signals and 10,718 unlighted aids. During the year automatic lighting apparatus was installed at 83 stations, so that on June 30 the total number of automatic lights on fixed structures in commission was 1093, not including some lights partially automatic. In addition, there were 751 buoys with automatic lights, making a total of 1844 automatic lights in the U. S. Lighthouse Service. There were also 12 fog bells operating automatically. The installation of automatic apparatus produced large economies through the reduced cost of maintenance and made possible the grouping of minor lights under the care of keepers of near-by stations or a single light attendant. Accordingly there was a net reduction during the year of 81 in the number of employees in the lighthouse service, the total number on June 30 being 5880, or slightly less than the total number in 1918, 5899, though in the interval of eight years there had been an increase of 2457, or 15 per cent, in the number of aids to navigation maintained.

The total cost of operation of the U. S. Lighthouse Service during the fiscal year was \$9,538,390, of which light stations accounted for 38.3 per cent, lightships for 13.8 per cent and tenders for 29.8 per cent. The total appropriations for the maintenance of the service for the fiscal year 1926-7 were \$10,154,481, an increase of \$346,501 over the fiscal year 1925-26. The appropriations for special works for the latter year amounted to \$834,601, including \$350,000 for vessels.

The most important lighthouse construction during the fiscal year, was the work on the light and fog-signal station at Cape Spencer, Alaska, which at the end of 1926 was practically completed, the structure having been placed in

\* Gas buoys with whistles and bells are counted only once in the grand total.

commission in December, 1925. There was under construction a lighthouse to replace the lightship at Martin Reef in the northern part of Lake Huron, while work on the station at Milwaukee Breakwater was continued, and the new station at Point Vicente, California, was completed.

Among the most important improvements in aids to navigation, made during the fiscal year were the changing of 77 fixed lights to flashing or occulting; the changing of the illuminant of 10 lights to incandescent oil vapor, 76 lights to acetylene, and 16 to electric incandescent; the establishment of 12 radio beacons, and the installation of three gas-operated fog signals at light stations and on buoys. Improvements also were made in apparatus used in connection with electric illumination of light stations, the report reveals. These include an acetylene stand-by equipment to be turned on automatically in case of failure of the electric light. A special electric lamp for use in connection with flash panel lenses was being developed, the primary object being an increase in the duration of the flash and a better arrangement of the light source.

The installation of radio beacons for protection of navigation in fog was extended by the addition of 12 new stations, the total number of such being 28 at the end of the fiscal year. Automatic lighting apparatus was installed at 83 stations.

**AIDS TO AERIAL NAVIGATION.** The Act of May 20, 1926, charged the Department of Commerce with fostering air commerce, and accordingly, the Lighthouse Service was cooperating in the matter of marking and lighting airways. Already it had cooperated in a project at the suggestion of the Navy Department of painting the roofs of lighthouses with characteristic marks along certain defined airways over Chesapeake Bay. In Europe also the construction of new lighthouses for the guidance of aircraft was assuming important dimensions, and on Mt. Valerien just outside of Paris a new lighthouse was inaugurated late in the year which was said to throw a beam of 1,000,000,000 candle power, visible for over 60 miles.

#### LIGHTSHIPS. See LIGHTHOUSES.

**LIME.** The U. S. Bureau of Mines estimated the lime sold by producers in the United States in 1926 at 4,580,000 short tons, valued at \$40,800,000. This was approximately the same quantity, but a decrease of 4 per cent in value as compared with sales in 1925. The sales of hydrated lime, which are included in these figures, amounted to 1,570,000 tons, valued at \$14,576,000, a small increase in quantity and a decrease of 5 per cent in value. The average unit value of all lime showed a decrease from \$9.30 a ton in 1925 to \$8.91 in 1926, and that of hydrated lime a decrease from \$9.79 a ton in 1925 to \$9.28 in 1926.

Ohio, the leading State, with 1,069,000 short tons in 1926, showed a decrease of 2 per cent in total sales and 5 per cent in sales of hydrated lime which amounted to 743,000 short tons. Pennsylvania which ranked second, with a total of 828,000 short tons, showed an increase of 4 per cent in total sales. Its output of hydrated lime was 225,000 short tons. Of the 22 States in which more than 25,000 tons were sold, 12 showed increased sales, but in no State was the increase or decrease large.

According to data collected at the biennial

census of manufactures taken in 1926, the establishments in the United States engaged primarily in the production of lime reported, for 1925, a total output valued at \$50,651,748, an increase of 7.2 per cent as compared with \$47,243,756 for 1923, the last preceding census year. Of the total for 1925, \$26,310,529 was contributed by quicklime, \$15,539,371, by hydrated lime, \$4,724,653 by limestone sold as such, and \$4,077,195 by other products (including agricultural limestone, road material, lime marl, lime putty, poultry grit, plaster, insecticides, screenings, etc.).

**LIMITATION OF ARMAMENTS.** See DISARMAMENT; NAVAL PROGRESS.

**LINCOLN, ROBERT TODD.** Former United States Secretary of War and American Minister to Great Britain, died at Manchester, Vt., July 25. Robert Todd Lincoln, the eldest son and last survivor of President Abraham Lincoln's family, was born at Springfield, Ill., Aug. 1, 1843. He was educated at Phillips Exeter Academy, Illinois State University, and Harvard University from which he graduated in 1864. He entered the Harvard Law School, but left and entered the Federal Army, serving until the end of the war as a captain on General Grant's staff. In 1867 he was admitted to the Illinois Bar, and practiced in Chicago until 1881, when he became Secretary of War in President Garfield's cabinet. He was retained in this position by President Arthur after Garfield's death, and was then mentioned in 1884 as a candidate for the presidency. In 1889 he became Minister for the United States to Great Britain, serving until 1893. He was counsel for the Pullman Company and after the death of George M. Pullman became its president, serving until 1911, when he resigned and became chairman of the board. He was a director in various banks and industrial corporations.

**LINSEED OIL.** See FLAX.

**LIONS CLUBS, INTERNATIONAL ASSOCIATION OF.** An organization of business men's clubs united in one association for the accomplishment of good to the community and to the nation. In 1917 the Business Circle of Chicago issued a call to approximately 150 business organizations, inviting them to send representatives to a meeting in Chicago on June 7, 1917. At this meeting more than 20 delegates, representing 50 clubs, were present and voted to form the Association of Lions Clubs, with the understanding that each club was to retain its own name. Additional Lions Clubs have been organized by choosing one man from each business or profession in the community. The objects of the organization are to promote good government and good citizenship, and to encourage efficiency and promote high ethical standards in business and the professions. At the 1926 convention, held July 21-24 at San Francisco, 1077 clubs were reported in the Association, with a total enrollment of 48,363 members.

The officers for 1926-27 elected at this convention were: William A. Westfall, Mason City, Iowa, president; Irving L. Camp, Johnstown, Pa., Ben A. Ruffin, Richmond, Va., and Ray L. Riley, Sacramento, Calif., vice-presidents. It was decided to hold the 1927 convention at Miami, Fla. The *Lions Club Magazine* is the official organ of the Association. The international headquarters are in the McCormick Building, 332 South Michigan Avenue, Chicago.

**LITERATURE, ENGLISH AND AMERICAN.** A survey of publications in English during 1926 will show, it is believed, that, so far as this year is concerned, the genius of the Anglo-Saxon countries in the more artistic literary forms, such as poetry and the drama, was torpid. This however was not true of fiction, though that condition obtained during 1926 probably by pure chance. The distinction of the writing done and the intellectual activity displayed in other fields, such as biography, history, politics, and travel, were remarkable. It must be remembered that the classifications hereinafter made are really arbitrary, for we have sociological fiction and poetry, such as that dealing with the negro and "poor white"—very fashionable now—fictionized biography, educational travel books, dramatic and fictional history, poetic books of religion.

**FICTION.** One feels that 1926 was a notable year in fiction, though more for a highly developed activity than for any startling progress in the art. Almost all the men and women to whom one is accustomed to look for important work published during the period, and in addition there was a host of new and emerging figures who promised well for the future. These showed a grasp of technique and a depth of inspiration quite gratifying and surprising.

Perhaps H. G. Wells' *The World of William Clissold*, a huge work, caused as much discussion as any one book. It is an encyclopedic affair, rich and meaty, though it shows Wells growing even more materialistic than before. With *The Nun Also Rises*, a story of Americans against a European background, remarkably deft in both dialogue and character, Ernest Hemingway won wide acclaim. John Galsworthy pleased with the second volume of the second Forsyte trilogy, *The Silver Spoon*. Three novels used effectively Southern backgrounds: *Teetfallow*, by T. S. Stribling, about Tennesseans, *The Time of Man*, by Elizabeth Madox Roberts, about Kentucky mountain people, and *The Romantic Comedians*, by Ellen Glasgow, an ironic treatment of Virginians. C. E. Montague's *Rough Justice*, a novel of post-war disillusion, was beautifully and engagingly done. In *Galahad: Enough of His Life to Explain His Reputation*, John Erskine continues to work the mine of philosophic narrative he opened last year with *Helen of Troy*. Ford Madox Ford bought out the third volume of the troubles of Christopher Tietjens, *A Man Could Stand Up*. George Moore's *Ulick and Soracha* shows that author turning gravely to eleventh century Ireland for inspiration suitable to limited editions.

A very distinguished group of novels might be called "psychological": May Sinclair's *Far End*, proving that novelists shouldn't have secretaries; Dorothy Canfield's *Her Son's Wife*; J. D. Beresford's *Almost Pagan*; Willa Cather's *My Mortal Enemy*; Beatrice Kean Seymour's *The Last Day*; D. H. Lawrence's *The Plumed Serpent*, laid in Mexico; Zona Gale's *Preface to a Life*; Harvey O'Higgins' *Clara Barron*.

Among the novels which seem to follow the realistic tradition more or less faithfully: *Early Autumn*, by Louis Bromfield; *Pig Iron*, by Charles G. Norris; *Lord Raino*, by Arnold Bennett; *A Deputy Was King*, by G. B. Stern; *Spring Sowing*, by Liam O'Flaherty; *Harmer John*, by Hugh Walpole; *Chimes*, by Robert Herrick, about university life; *Jorgensen*, by Tristram Tupper; *Show Business*, by Thyra Sam-

ter Winalow; *One Little Man*, by Christopher Ward; *Hill-Billy*, also about Southern people, by Rose Wilder Lane; *Chevrons*, a war novel, by Leonard H. Nason; *Hot Saturday*, by Harvey Fergusson; *Labels*, by A. Hamilton Gibbs; *Tides*, by Ada and Julian Street; *Summer Storm*, by Frank Swinnerton; *Mated*, by Wallace Irwin; and *The Pool*, by Anthony Bertram.

But there was a small and bright stream of novels of fantasy. Among them were: Lord Dunsany's *The Ocharwoman's Shadow*; Sylvia Townsend Warner's *Lolly Willowes*; Elinor Wylie's *The Orphan Angel*, about Shelley, who was not drowned; Heywood Broun's *Gandle Follows His Nose*; and Ronald Fraser's *Landscapes with Figures*.

Of noteworthy historical novels there were: *Cloud Cuckoo Land*, by Naomi Mitchison, about ancient Greece; *The Fourth Queen*, by Isabel Patterson, of Elizabethan times; *The Great Valley*, by Mary Johnston; *The Black Hunter*, by James Oliver Curwood; and that remarkable hoax, *The Diary of a Young Lady of Fashion in the Year 1764-65* by Cleone Knox.

Novels which seemed to aim at "escape": W. J. Locke's *Perella*; Cyril Hume's *The Golden Dancer*; Marmaduke Pickthall's *The Valley of the Kings*; Jim Tully's *Jarnegan*; Fannie Hurst's *Mannequin and Appassionata*; Mary Butts' *Ashe of Rings*; Sinclair Lewis' *Mantrap*; and Donn Byrne's *Hangman's House*. Important adventure and mystery stories: *Odtaa*, by John Masefield; *The Incredulity of Father Brown*, by G. K. Chesterton; *The Murder of Roger Ackroyd*, by Agatha Christie; *Beau Sabreur*, by Percival Christopher Wren; and *The Viaduct Murder*, by Ronald Knox. Three satirical novels deserve mention: *Count Bruga*, by Ben Hecht; *The Sacred Giraffe*, by Salvador de Madariaga; and *Revelry*, a political novel indicating a recent President of the United States as hero, by Samuel Hopkins Adams.

Other important novels that evade classification were: Sylvia Thompson's *The Hounds of Spring*; Percy Lubbock's *The Region Cloud*; Frances Newman's *The Hard-Boiled Virgin*; Osbert Sitwell's *Before the Bombardment*; H. M. Bates' *The Two Sisters*; Stella Benson's *Good-bye, Stranger*; Edna Ferber's *Show Boat*; Nancy Hoyt's *Roundabout*; William C. Bullitt's *It Isn't Done*; Storm Jameson's *Three Kingdoms*; Joseph Hergesheimer's *Tampico*; Compton Mackenzie's *Fairy Gold*; L. Allen Harker's *Hilda Warc*; "Elizabeth's" *Introduction to Sally*; Martha Ostenso's *The Dark Dawn*; Carl Van Vechten's *Nigger Heaven*; Walter White's *Flight*, also about negroes; Carl Van Doren's *The Ninth Wave*; Charles Caldwell Dobie's *Less Than Kin*; Robert Nathan's *The Fiddler in Barly*; Floyd Dell's *An Old Man's Folly*; Kathleen Norris' *The Black Flemings*; and Sir Harry Johnston's *Relations*.

There were many important translations, of which the following may be noted: Ivan Bunin's *Mitya's Love*, by Madeline Boyd; Lion Feuchtwanger's *Power*, by Willa and Edwin Muir; Lady Murasaki's *The Sacred Tree*, volume II of *The Tale of Genji*, by Arthur Waley; Leo Tolstoy's *The Devil*, by Aylmer Maude; M. A. Aldanov's *The Ninth Hermit*, by A. E. Chamot; P. N. Krassoff's *From Double Eagle to Red Flag*; Arthur Schnitzler's *Beatrice*, by Agnes Jaques, and *None But the Brave*, by Richard L. Simon; J. Anker Larsen's *Martha*

and *Mary*; Sergeev Tzensky's *Transfiguration*, by Marie Budberg; Jacob Wassermann's *Oberlin's Three Stages*, by Allen W. Porterfield; Luciano Zuccoli's *Things Greater Than He*, by Eloise Parkhurst; Pio Baroja's *The Lord of Labraz*; and Fritz Mauthner's *Mrs. Socrates*, by Jacob W. Hartmann.

The year was marked by a number of notable volumes of short stories, such as: *Debits and Credits*, by Rudyard Kipling; *Here and Beyond*, by Edith Wharton; *Two or Three Graces*, by Aldous Huxley; *The Nest*, by Anne Douglas Sedgwick; *The Torrents of Spring*, by Ernest Hemingway; *Circe's Island*, and *The Girl and the Faun*, by Eden Philpotts; *The Leper Ship*, by Isadore Lhevinne; *The Casuarina Tree*, by W. Somerset Maugham; *Joanna Godden Married and Other Stories*, by Sheila Kaye-Smith; *The Love Nest*, by Ring W. Lardner; *All the Sad Young Men*, by F. Scott Fitzgerald; *The Whole Story*, by Elizabeth Bibesco; *The Connoisseur*, by Walter de la Mare; *Tall Tales from the Kentucky Mountains*, by Percy MacKaye; *Dreams and Delights*, by L. Adams Peck; *Iowa Interiors*, by Ruth Suckow; *Kyra Kyralina*, by Panait Istrati; *The Cabala*, by Thornton Niver Wilder; *Skaski*, by Ida Zeitlin; *Stories and Dramas*, by Leo Tolstoy, translated by Mrs. Lydia Turin; Mrs. H. M. Lucas and C. J. Hogarth; and Ferenc Molnar's *Eva and the Derelict Boat*, translated by Emil Lengyel.

**POETRY.** The poetry published during 1926 was very ordinary, viewed by and large. There were a very few distinguished volumes, and no interesting new figures appeared in the field. Humbert Wolfe's *News of the Devil*, a philosophic poem, won praise in England, though it had not been published in America at the end of the year. There were also: Edith Sitwell's *Elegy on Dead Fashion*; Amy Lowell's *East Wind*; Robert Bridges' *New Verse*; Joseph Auslander's *Cyclops' Eye*; E. E. Cummings' *Is Five*, typographically radical; Leonard Bacon's *Animula Vagula*; Archibald MacLeish's *Streets in the Moon and Nobodaddy*; Nathalia Crane's *The Singing Crow*; Vachel Lindsay's *Going to the Stars*; Muriel Stewart's *New Poems and Old*; Alfred Kreymborg's *Scarlet and Mellow*; Leonora Speyer's *Fiddler's Farewell*; J. V. A. Weaver's *More in American*; W. H. Davies' *The Song of Love*; V. Sackville-West's *The Land*; Sacheverell Sitwell's *Exalt the Eglantine*; A. P. Herbert's *Laughing Ann*; Edmund Blunden's *English Poems*; Virginia Moore's *Not Poppy*; Melville Cane's *January Garden*; *The Poems of Richard Cameron Rogers*.

Among the anthologies appeared: *The Silver Treasury of English Lyrics*, edited by T. Earle Walby; *Negro Workaday Songs*, collected by Howard W. Odum and Guy B. Johnson; and *Ballads and Songs of the Shanty-Boy*, edited by Franz Rickaby. There were three translated anthologies from the French: *A Bouquet from France*, by Wilfrid Thorley; *Casements*, by Richard Cloudesley Savage; and *Modern French Poetry*, by Joseph T. Shipley. Altogether a discouraged year.

**DRAMA.** The year 1926 was strangely barren in published plays. It is certainly not true that interest in the theatre is diminished, but the reading public's indifference to drama in book form, long a marked trait of both the English and Americans, no doubt discouraged the publishers. Most notable perhaps was Sean O'Casey's

*The Plough and the Stars*, whose performance was greeted in Dublin by riot and civil commotion. It is a sturdily realistic play of the 1916 rebellion, but almost plotless. Other important works were: Eugene O'Neill's *The Great God Brown*; John Galsworthy's *Plays*; *Sixth Series*, including *Old English*, *The Forest*, and *The Show*; George Bernard Shaw's trivialities, *Translations and Tomfooleries*; George S. Kaufman's *The Butter and Egg Man*; Maxwell Anderson and Laurence Stallings' *Three American Plays*; John Van Druten's *Young Woodley*; Philip Barry's *In a Garden*; Sidney Howard's *Ned McCobb's Daughter*; William Hurlburt's *Bride of the Lamb*; John Dos Passos' *The Garbage Man*, played under the title *The Moon is a Gong*; Clemence Dane's *Granite*; I. Zangwill's *We Moderns*; Paul Green's *Lonesome Road*, plays for the negro theatre; John Colton's unsavory *The Shanghai Gesture*; Lord Dunsany's *Alexander and Three Small Plays*; Frank Jewett Mather's *Ulysses in Ithaca*. Of translated plays there were only *Juarez* and *Maximilian*, by Franz Werfel, and Nikolai Gogol's *The Government Inspector and Other Plays*, translated by Constance Garnett. (See THEATRE.)

**ESSAYS.** Essays are usually sample sizes of writings that full grown would appear in other classifications, or else they are marked principally by gentleness and humor. The volumes of essays for 1926 are much like those for any other year in that they can be divided in this way. Of the more or less philosophical: William R. Inge's *Lay Thoughts of a Dean and England*; Floyd Dell's *Intellectual Vagabondage and Love in Greenwich Village*; H. L. Mencken's *Prejudices, Fifth Series*, and *Notes on Democracy*; Joseph Collins' *The Doctor Looks at Love and Life*; Lewis Mumford's *The Golden Day*; Elie Faure's *The Dancer Over Fire and Water*; translated by John Gould Fletcher; Irwin Edman's *Richard Kane Looks at Life*; Henshaw Ward's *Throbbing*; of the more or less literary: Sherwood Anderson's *Note-Book*; Llewelyn Powys' *The Verdict of Bridlegoose*; Robert Lynd's *The Money Bow*; John Drinkwater's *A Book for Bookmen*; Gertrude Stein's *Composition as Explanation*; Hilaire Belloc's *Short Talks with the Dead and Others*; Robert Littell's *Read America First*; Christopher Morley's *The Romany Stain*; of humor: Stephen Leacock's *Winnowed Wisdom*; Milt Gross' *Nize Baby*; David McCord's *Oddly Enough*; of nature: D. L. Murray's *Scenes and Silhouettes*; Dallas Lore Sharp's *Sanctuary! Sanctuary!*; Charles Downing Lay's *The Freedom of the City*; Walter Prichard Eaton's *A Bucolic Attitude*. Others: *The Home-Town Mind*, by Duncan Aikman; *Last Essays*, by Joseph Conrad; *Few Rayonets*, by John W. Thomason; *Things That Have Interested Me, Third Series*, by Arnold Bennett; and *Detours*, by Philip S. Marden. A collection is *Essays of 1925*, by Odell Shepard.

**CRITICISM AND THE HISTORY OF LITERATURE.** The year's work in this field was marked by the rather unusually large amount of attention paid poetry, and unusually small attention paid drama. Important books seemed to be: Of general criticism: *Romanticism*, by Lascelles Abercrombie; *Essays on Literature and Life*, by A. Clutton-Brock; *Authors Dead and Living*, by F. L. Lucas; *The Element of Irony in English Literature*, by F. McD. C. Turner; *The Great Abnormals*, by Theodore B. Hyslop;

WILL DURANT

FOUR AUTHORS OF 1926

Emile Legouls' *History of English Literature*, translated by Helen Douglas Irvine; *Sea in Literature*, by V. F. Calverton; *Studies in Green and Gray*, by Henry Newbolt.

Of poets and poetry: Harold Nicolson's *Swinburne*; T. Earle Welby's *A Study of Swinburne*; Edith Sitwell's *Poetry and Criticism*, really a criticism of critics; Harriet Monroe's *Poets and the Art*; Louis Untermeyer's *The Forms of Poetry*; H. P. Collins' *Modern Poetry*; Osbert Burdett's *William Blake*; Vernon Lee's *The Poet's Eye*; Robert Graves' *Another Future of Poetry*; Laurence Binyon's *Tradition and Reaction in Modern Poetry*; Crane Brinton's *The Political Ideas of the English Romanticists*.

Of novels and novelists: *Transition*, by Edwin Muir; *Some Great English Novels*, by Orlo Williams; *George Meredith*, by William Chislett, Jr.; *George Meredith*, by J. B. Priestley; *The Modern Novel* by Elizabeth A. Drew; *A Century of the English Novel*, by Cornelius Weygandt; *Fielding the Novelist*, by Frederic T. Blanchard; *Dostoevsky*, by André Gide; *Four Novelists of the Old Régime*, by John Garber Palache; of the drama and dramatists: *Sheridan to Robertson: A Study of the Nineteenth Century London Stage*, by Ernest Bradlee Watson; *Drama*, by Ashley Dukes; and *Rip Van Winkle Goes to the Play*, by Brander Matthews.

These must also be mentioned: H. W. Fowler's *Dictionary of Modern English Usage*; Fred Newton Scott's *The Standard of American Speech and Other Papers*; Joseph Warren Beach's *The Outlook for American Prose*; and Michael Joseph and Grant Overton's *The Commercial Side of Literature*. An entertaining collection of critical essays is *American Criticism*, 1926, edited by William A. Drake.

BIOGRAPHY AND AUTOBIOGRAPHY. As much distinguished writing was done in this field in 1926 as in any, and it is difficult to make awards of merit where the general average is so high. There is discernible a trend toward impressionism, as opposed to the sober search for and interpretation of fact, particularly in the foreign importations, such as Joseph Delteil's *Joan of Arc*. Classified by subject noteworthy books seem to be: American political figures: Carl Sandburg's *Abraham Lincoln: The Prairie Years*; W. E. Woodward's *George Washington: the Image and the Man*; Rupert Hughes' *George Washington: the Human Being and the Hero, 1732-1762*; Phillips Russell's *Benjamin Franklin: the First Civilized American*; Albert Jay Nock's *Jefferson*; Philip Guedalla's *Fathers of the Revolution*; James Kerney's *The Political Education of Woodrow Wilson*; C. Bascom Slemph's *The Mind of the President*; Don C. Seitz' *Horace Greeley*; American literary figures: Joseph Wood Krutch's *Edgar Allan Poe*; Hervey Allen's *Israfel: The Life and Times of Edgar Allan Poe*, and also *Toward the Flame*, an autobiography of war experience; Herbert S. Gorman's *A Victorian American: Henry Wadsworth Longfellow*; *Letters of Bret Harte*, edited by Geoffrey Bret Harte; *Letters of Louise Imogen Guiney*, edited by Grace Guiney; *Tar: A Midwest Childhood*, autobiography by Sherwood Anderson; other Americans: *Memoires of a Happy Life*, by William Lawrence; Walt MacDougall's *This Is the Life*; Hamlin Garland's *Trail Makers of the Middle Border*; *The Rosalie Evans Letters from Mexico*, edited by Daisy Caden Pettus; Cameron Rogers' *The*

*Magnificent Idler*; Fitzhugh Green's *Peary, the Man Who Refused to Fail*; Rollo Walter Brown's *Dean Briggs*; Leah Morton's *I Am a Woman and a Jew*; James Stevens' *Brawnymann*; Robertus Love's *The Rise and Fall of Jesse James*; Lorine Pruette's *G. Stanley Hall*; Helen Woodward's *Through Many Windows*; Jack Black's *You Can't Win*; Blaise Cendrars' *Sutter's Gold*, translated by Henry Longan Stuart.

Distinguished British political figures: Philip Guedalla's *Palmerston*; Sir Edward Clarke's *Benjamin Disraeli*; Shane Leslie's *George IV*; John Drinkwater's *Mr. Charles, King of England*; A. G. Gardiner's *Certain People of Importance*, about living personages; *The Letters of Queen Victoria, second series*, edited by George Earle Buckle; Beatrice Webb's *My Apprenticeship*; the Earl of Oxford and Asquith's *Fifty Years of British Parliament*; Ford K. Brown's *The Life of William Godwin*; British literary people: H. W. Garrod's *Keats*; Clarence Dewitt Thorpe's *The Mind of John Keats*; Hugh L'Anson Faussett's *Samuel Taylor Coleridge*; Lucy Eleanor Watson's *Coleridge at Highgate*; Jessie Conrad's *Joseph Conrad as I Knew Him*; G. Jean Aubrey's *Joseph Conrad in the Congo*; *The Letters of Sir Walter Raleigh, 1879-1922*, edited by Lady Raleigh; Stephen Gwynn's *Experiences of a Literary Man*; J. Fisher Unwin's *The Art of Publishing*; Isaac Goldberg's *Havelock Ellis: Private Correspondence and Miscellaneous Papers of Samuel Pepys, 1674-1703*, edited by J. R. Tanner; *The Days of My Life*, by Sir H. Rider Haggard; *Samuel Butler and His Family Relations*, by Mrs. R. S. Garnett; *All Summer in a Day*, by Sacheverell Sitwell; other Britishers: *Darwin*, by Gamaliel Bradford; *Melodies and Memories*, by Nellie Melba; *Ruby Robert, alias Bob Fitzsimmons*, by Robert H. Davis; *The Esquise Perdita*, by E. Barrington; *Lamfranco*, by A. J. MacDonald; Europeans: Ernest Boyd's *Guy de Maupassant*; Robert Harborough Shepard's *The Life, Work, and Evil Fate of Guy de Maupassant*; Emil Ludwig's *Kaiser Wilhelm II*, translated by Ethel Colburn Mayne; Wilhelm II's *My Early Life*; Mary Duclaux' *The Life of Racine*; Margherita G. Sarfati's *The Life of Benito Mussolini*; Guy de Portales' *Franz Liszt*; Dostoevsky as *Portrayed by His Wife*, translated by S. S. Kotliansky; *Memoirs of Halide Edib*; *Correspondence of Descartes and Constantine Huygens*, edited by Leon Roth; Paul Bekker's *Beethoven*, translated by M. M. Bozeman; and Egon Wellesz' *Arnold Schönberg*, translated by W. H. Kerridge.

THE FINE ARTS. Among the noteworthy books on the Fine Arts during 1926, painting was considered in: A. P. Laurie's *The Painter's Methods and Materials*; Roger Fry's *Transformations*; Albert C. Barnes' *The Art in Painting*; Frank Rutter's *Evolution in Modern Art*; Helen Gardner's *Art Through the Ages*; George J. Cox's *Art for Amateurs and Students*; Adolfo Venturi's *A Short History of Italian Art*, translated by Edward Hutton; sculpture in: *Primitive Negro Sculpture*, by Paul Guillaume and Thomas Munro; architecture in: A. S. C. Butler's *The Substance of Architecture*; F. R. Yerbury's *Georgian Details of Domestic Architecture*; Francis Bond's *An Introduction to English Church Architecture*; George Oakley Totten's *Maya Architecture*; prints in: Frank

W. Wettenkamp's *Famous Prints*; and William M. Ivins' *Prints and Books*. Hayford Pierce and Royall Tyler's *Byzantine Art*, and Garrett Warren and Horace B. Cheney's *The Romance of Design*, should also be mentioned. See also PAINTING AND SCULPTURE.

RELIGION. The production of books on religion is very large in both England and America. What seem to be representative works for 1928 may be classified as follows: Statements of belief: *Twelve Modern Apostles and Their Creeds*, by various authors; *My Idea of God*, and *The Truth and the Life*, by Joseph Fort Newton; *The God of the Liberal Christian*, by Daniel Sumner Robinson; *My Faith in Immortality*, by William E. Barton; *Can We Then Believe?* by Charles Gore; *Where Do You Live?* by Charles Reynolds Brown; *Adventurous Religion*, by Harry Emerson Fosdick; *Religion in the Making*, by Alfred North Whitehead; *The Spirit of Worship*, by Friedrich Heiler, translated by W. Montgomery; *My Heresy*, by William Montgomery Brown. Histories of Religion: *This Believing World*, by Lewis Browne; *The First Age of Christianity*, by Ernest F. Scott; *An Outline of Christianity*, edited by A. S. Peake and R. G. Parsons; *Christian Science*, by Sir William Barrett and Rosa M. Barrett. Biographies of religious figures: *The Life of Jesus*, by J. Middleton Murry; *Jesus the Nazarene*, by Maurice Goguel, translated by Frederick Stevens; *Jesus: a Myth*, by Georg Brandes; *The Life of St. Paul*, by F. J. Foakes-Jackson; *Mohammed*, by R. F. Dibble. Concerned with the conflict between science and religion: *The Survival Value of Christianity*, by John Moffat Mecklin; *Christianity and Naturalism*, by Robert Shafer; *Evolution and Religion in Education*, by Henry Fairfield Osborn; *Landmarks in the Struggle between Science and Religion*. Of the Bible: *The Book Nobody Knows*, by Bruce Barton; and *The Psalms*, translated by J. M. Powis Smith.

SOCIOLOGY AND EDUCATION. Almost any realistic writing may be called sociology, and under this head will be found anthropology, criminology, prophecy, prejudice, and philosophy. Important books were: J. A. Hobson's *Free Thought in the Social Sciences*; H. A. Overstreet's *Influencing Human Behavior*; Frank W. Blackmar's *History of Human Society*; John H. Randall's *The Making of the Modern Mind*; *What is Civilization?* by Maurice Maeterlinck and others; four books from the absorbing "Today and To-morrow" series: *Ouroboros: the Mechanical Extension of Mankind*, by Gareth Garrett; *Lycurgus: the Future of Law*, by S. S. P. Haynes; *Pygmalion: the Doctor of the Future*, by R. M. Wilson; and *Plato's American Republic*, by Douglas Woodruff; *Regional Sociology*, by Radhamal Mukerjee; *The Conquest of New England by the Immigrant*, by Daniel Chauncey Brewer; *The Melting Pot Mistake*, by Harry Pratt Fairchild; *The Advancing South*, by Edwin Mims; *Folk Beliefs of the Southern Negro*, by Newbell Niles Puckett; *Historical Materialism*, by Nikolai Bukharin; *The South Africans*, by Sarah Gertrude Millin; *Crime and Custom in Savage Society*, by Bronislaw Malinowski; *Woman's Dilemma*, by Alice Beal Parsons; *Criminology and Penology*, by John Lewis Gillen; *Working Days: the Personal Records of Sixteen Working Men and Women*, edited by Margaret A. Pollock; *A Million and One Nights*,

about the movies, by Terry Ramsaye; and *The Country Newspaper*, by Malcolm M. Willey.

Bertrand Russell's *Education and the Good Life*; Ira Woods Howerth's *The Theory of Education*, and M. J. Walsh's *Teaching as a Profession*, were among the prominent general books on education. Historical and descriptive books were: *Roman Education from Cicero to Quintilian*, by Aubrey Gwynn, and *Education in Soviet Russia*, by Scott Nearing. About the college: J. E. Kirkpatrick's *The American College and Its Rulers*; Percy Marks' *Which Way Parnassus?* Charles F. Thwing's *The College President*; Everett Dean Martin's *The Meaning of a Liberal Education*. Concerning the education of adults: *The Meaning of Adult Education*, by Eduard C. Lindeman; *The Threat of Leisure*, by George Barton Cutten; *Spiritual Values in Adult Education*, by Basil A. Yeaxlee; *Integrity in Education*, by George Norlin. About the high school: *The Practice of Teaching in the Secondary School*, by Henry C. Morrison.

POLITICS AND ECONOMICS. Writers on politics during 1928 were concerned with the threatened breakdown of democracy, the problem of preserving peace, and the difficulties of national administration. *Man and the State*, by William Ernest Hocking; *The Modern State*, by R. M. Mclver; *The Art of Being Ruled*, by Wyndham Lewis; *Essays on Nationalism*, by Carlton J. H. Hayes; *The Democratic Way of Life*, by Thomas Vernor Smith; *Eugenics and Politics*, by F. C. S. Schiller; and *The Survival of the Democratic Principle*, by Perry Belmont, considered the principles underlying modern government. These books had to do with the United States particularly: *The New Democracy: Presidential Messages, Addresses, and Other Papers, 1913-1917*, by Woodrow Wilson, edited by Ray Stannard Baker and William E. Dodd; *The Usages of the American Constitution*, by Herbert W. Horwill; *The Genesis of the Constitution of the United States of America*, by Breckenridge Long; *Law Reform*, by Henry W. Taft; *Midax; or the United States and the Future*, by C. H. Bretherton; *The Conquest of the Philippines by the United States, 1898-1925*, by Moorfield Storey and Marcial P. Lichauco; *The United States and Mexico*, by J. Fred Rippy. Dealing with the governments of particular nations: *Italy*, by Count Antonio Cippico; *Italy and Fascismo*, by Luigi Sturzo; *The Fascist Experiment*, by Luigi Villari; *The Changing East*, by J. A. Spender; *The Blight of Asia*, by George Horton; *Contemporary Political Thought in England*, by Lewis Rockow; *Post-War Britain*, by André Siegfried, translated by H. H. Hemming; *Whither Russia?* by Leon Trotsky. These were concerned with international relations and the preservation of peace: *International Anarchy*, by G. Lowes Dickinson; *Pan-Europe*, by Richard N. Coudenhove-Kalergi; *The Origin of the Next War*, by John Bakeless; *Man Is War*, by John Carter; *Disarmament*, by P. J. Noel-Baker; *The World Court*, by Antonio S. Bustamante, translated by Elizabeth F. Read; *International Relations as Viewed from Geneva*, by William E. Rappard; *The Causes of Peace and War*, by C. T. Wrench; and *The Road to Peace*, by Herman Bernstein.

A large number of the books in the field of economics were concerned with the reform of industry. Probably most important were: To-

*day and To-morrow*, by Henry Ford in collaboration with Samuel Crowther; *Incentives in the New Industrial Order*, by J. A. Hobson; *The New Leadership in Industry*, by Sam A. Lewishohn; *The Secret of High Wages*, by Bertram Austin and W. F. Lloyd; *The Social Control of Business*, by John Maurice Clark; *An End to Poverty*, by Fritz Werfels, translated by Eden and Cedar Paul; *Wages and the State*, by E. M. Burns; *The Coöperative Republic*, by Ernest Poisson, translated by W. P. Watkins; *The Ethics of Business*, by Edgar L. Heermance; *The Theory of International Prices*, by James W. Angell; *The Taxation of Inheritance*, by William J. Schultz; *Pegasus; or Problems of Transportation*, by Col. J. F. C. Fuller; *Artifax; or the Future of Craftsmanship*, by John Gloag; *The Rise of Modern Industry*, by J. L. and Barbara Hammond; *The War Period in American Finance, 1908-1925*, by Alexander D. Noyes; *The Coal Miner's Struggle for Industrial Status*, by Arthur E. Sufferin; and *The Scourge of Europe*, about war debts, by L. V. Birck.

**HISTORY.** The year's historical publications were unusually interesting. Charles Francis Atkinson's translation of Oswald Spengler's *The Decline of the West* made this extraordinary work available to English and American readers. These books about the World War were of great interest: *The Intimate Papers of Colonel House*, edited by Charles Seymour; two volumes of *The Memoirs of Raymond Poincaré*, translated by Sir George Arthur; Harry Elmer Barnes' "revisionist" *The Genesis of the World War*; Sir William Robertson's *Soldiers and Statesmen, 1914-1918*. There was a sudden fashion for American history by decades: *The Mauve Decade*, by Thomas Beer, about the '90's; *Our Times: The Turn of the Century*, by Mark Sullivan; *The Dreadful Decade, 1869-1879*, by Don C. Seitz. Other important American history: Ellis Paxton Oberholtzer's third volume of *The History of the United States since the Civil War*; James Truslow Adams' *New England in the Republic, 1775-1850*; Charles F. Horne's *The Story of Our American People*, sponsored by the American Legion, and similar patriotic organizations; five volumes of the pictorial history, *The Pageant of America*, edited by Ralph Henry Gabriel. Other important history: volume IV of the *Cambridge Ancient History*, edited by J. B. Bury, S. A. Cook, and F. E. Adcock; volume V of the *Cambridge Medieval History*, edited by J. R. Tanner, C. W. Previté-Orton, and Z. N. Brooke; Percy Ashley's *Europe from Waterloo to Sarajevo*; the second series of *The Fugger News-Letters*, edited by Victor von Klarwill and translated by L. S. R. Byrne; Jacques Bainville's *History of France*, translated by Alice and Christian Gauss; Hilaire Belloc's *Napoleon's Campaign of 1812*; G. Lenotre's *Paris in the Revolution*; George Macaulay Trevelyan's *History of England*; Stephen Hemmley Longrigg's *Four Centuries of Modern Iraq*; Roy Nash's *The Conquest of Brazil*; N. Iorga's *A History of Rumania*, translated by Joseph McCabe; Bernard Pares' *A History of Russia*; W. A. R. Wood's *A History of Siam*; Herbert H. Gowen and Josef Washington Hall's *An Outline History of China*; M. Rostovtzeff's *The Social and Economic History of the Roman Empire*; Sir Valentine Chirol's *India*; Howard Swiggett's *The Other Side of the Medal*, also about India; Allen John-

son's *The Historian and Historical Evidence*; and Joseph McCabe's *1825-1925, A Century of Stupendous Progress*.

**SCIENCE.** Important books of popular science were somewhat fewer in 1926, but they reflected the interest in evolution and heredity, and were as usual predominantly about biology. *Microbe Hunters*, by Paul de Kruif, scored a success, quite deservedly. It dealt with prominent figures in biological research. Others were: *The Nature of the World and of Man*, by sixteen members of the University of Chicago Faculty; *The Pedigree of the Human Race*, by Harris Hawthorne Wilder; *Evolution and Creation*, by Sir Oliver Lodge; *The Collective Spirit: An Idealistic Theory of Evolution*, by Viggo Carling, translated by W. Worster; *Temperament and Race*, by S. D. Porteous and Marjorie E. Babcock; *The Natural Increase of Mankind*, by J. Shirley Sweeney; *Love-life in Nature*, by Wilhelm Bolsche; *Sex in Man and Animals*, by John R. Baker; *The Evolution of Anatomy*, by Charles Singer; *The Theory of the Gene*, by Thomas Hunt Morgan; *Reptiles and Amphibians*, by Thomas Barbour; *Alcohol and Longevity*, by Raymond Pearl; *Ice Ages Recent and Ancient*, by A. P. Coleman; *Fundamental Concepts of Physics*, by Paul R. Heyl; *Beyond the Milky Way*, by George Ellery Hale; *Rain-making and Other Weather Vagaries*, by W. J. Humphreys; volume 2 of *Popular Research Narratives*; and *Aspects of Science*, second series, by J. W. N. Sullivan.

**TRAVEL AND THE OUT-OF-DOORS.** The titles in this field are many and fascinating. Describing trips around the world: Aldous Huxley's *Jesting Pilate*; Vicente Blasco Ibañez's *A Novelist's Tour of the World*; and Stanton Hope's *Around the World—for Fun*. About Europe: Ford Madox Ford's *A Mirror to France*; Homer Croy's *They Had to See Paris*; Waldo Frank's *Virgin Spain*; Mildred Stapley Byne's *Forgotten Shrines of Spain*; René Jutta's *Concerning Corsica*; Henry C. Shelley's *Majorca*; A. MacCallum Scott's *Beyond the Baltic*; Maurice Hindus' *Broken Earth*, about Soviet Russia; James Bone's *The Perambulator in Edinburgh*; Padraic Colum's *The Road Round Ireland*. Journeys in Africa: *An American Among the Riffs*, by Vincent Sheehan; *People of the Veil, the Tuareg*, by F. Rennell Rodd; *Through Liberia*, by Lady Dorothy Mills; *By the City of the Long Sand*, by Alice Tisdale Hobart. Life in and about Asia: *Leaves from a Viceroy's Notebook and Other Papers*, by Lord Curzon of Kedleston; *The City of the Sacred Well*, by T. A. Willard; *My Crowded Solitude*, by Jack MacLaren; *Northern Lights and Southern Shade*, by Douglas Goldring; *In Unknown Arabia*, by Major R. E. Cheesman; *East of the Sun and West of the Moon*, by Theodore and Kermit Roosevelt; *We Tibetans*, by Rin-Chen Lha-Mo; *On the Mandarin Road*, by Roland Dorgeles; *In Unknown New Guinea*, by W. J. V. Saville; *The Heart of Black Papua*, by Merlin Moore Taylor; *The Orient I Found*, by Thomas J. McMahon. Of the Americas: J. St. Loe Strachey's *American Soundings*; Mrs. William T. **LITHIUM.** See CHEMISTRY, INDUSTRIAL.

**LITHUANIA.** One of the new states formed out of the territory of the Russian Empire after the War. Capital, Kovno, although the Lithuanians claim Vilna as the capital of their country.

**AREA AND POPULATION.** The eastern boundary of the country was defined in a treaty with Russia, July 12, 1920; on the north the boundaries nearly coincide with the former boundary between Courland and Kovno; on the south they are still undetermined. The area, based on 1914 figures, is 59,633 square miles; population, Jan. 1, 1924, 2,175,121. On Feb. 16, 1923, the Council of Ambassadors transferred the Memel district with a population of 170,000 to Lithuania. Just a month later they gave Vilna to Poland. Lithuania, however, continued to claim this district and to consider Vilna the Lithuanian capital. Important cities are: Kovno, 92,446; Grodno, 61,600; Memel, 35,715; Suvalki, 31,600; and Shavli, 21,387.

**EDUCATION.** The latest figures for education show 2020 primary schools with 117,564 pupils and 93 secondary schools with 17,149 pupils. The University of Kovno was opened on Feb. 16, 1922, with 25 professors and 800 students.

**PRODUCTION.** Lithuania is preponderantly an agricultural country and the two principal products are farm produce and timber. Production in Lithuania in 1924 was as follows, in cwts.: Rye, 9,294,300; wheat, 1,806,400; barley, 4,057,200; oats, 5,395,000; potatoes, 33,163,000; peas, 1,356,800; and flax-seed, 676,500. In 1924 the country possessed 482,000 horses, 1,252,000 cattle, 1,399,000 sheep, and 1,564,000 pigs. Lithuania raises horses of a very fine grade. Poultry farming and bee keeping have become important occupations in recent years.

**COMMERCE.** According to the United States Bureau of Foreign and Domestic Commerce, the outstanding feature in the foreign trade of Lithuania for the year 1925 was the reversal of its trade balance by over \$7,000,000. Exports during the year declined to \$22,280,000 from \$26,658,360 in 1924, while imports rose to \$23,423,000 from \$20,653,380; the 1924 favorable balance of \$6,004,980 was thus changed in 1925 to an unfavorable one of \$1,140,000. This adverse result was caused by the poor harvest of 1924 which entailed a large decrease in exports of live hogs, grains, eggs, and flax, and a corresponding increase in imports of similar foodstuffs. By a new import tariff which became effective early in January, 1926, the government hoped to restrict imports of certain articles and thereby improve the general foreign trade situation. The better crops of 1925 also gave promise of enlarged exports in 1926, so that a recovery to normal was anticipated for 1926.

**FINANCE.** The state budget for 1926, as passed by the parliament, represented a reduction of approximately 60,000,000 lits from the draft originally proposed; it was also 17,319,000 lits below the 1925 budget as originally voted by

the diet, and 25,343,000 lits below the same budget with its supplements as authorized at the close of 1925. Estimated revenues and expenditures for 1926 balance at 241,935,375 lits, and without the aid of prospective or foreign loans. In the budget as originally proposed, the extraordinary revenues included a foreign loan of 40,000,000 lits; before final passage, however, this item was eliminated, partly because of unsettled economic conditions locally and the unfavorable rates extended, but mainly to conform with the finance minister's economic programme. In effecting this economy the reductions were shared by practically all the government departments except the ministries of agriculture and foreign affairs. Compared with the 1925 budget and its supplements, appropriations for the ministry of agriculture were enlarged one-fifth; for foreign affairs, only very slightly. Appropriations for the president and cabinet were cut more than half; for parliament, for national defense, for communications, and for finance, each one-seventh; and for the remaining departments, in smaller fractions.

**RAILWAYS.** On Jan. 1, 1924, the total length of railways was 965 miles, of which 700 miles were broad gauge lines.

**GOVERNMENT.** According to the constitution adopted Aug. 1, 1922, executive power is in the president of the republic who acts through a responsible ministry; and legislative power in a diet, elected by universal, equal, direct, and secret suffrage. President at the beginning of the year, A. Stulginskis (elected Dec. 21, 1922); prime minister, Leonas Bistras, who formed a cabinet on Sept. 25, 1925.

**HISTORY.** At the beginning of the year reports were rife of rioting along the Polish-Lithuanian border, each side, in almost every case, putting the blame upon the other. The Lithuanians were still dissatisfied with the situation in Vilna. As the result of the elections held in May there was a shift in party alignment. The Christian Democratic bloc composed of the Christian Democrats, Farmers' Union, and Workers' Federation lost its former power, which passed to the hands of the Populists who had the greatest number of seats in the new parliament. The Populists formed a coalition with the Socialists and organized a government under the leadership of M. Slezevicius as prime minister. Dr. Kasmir Grinius, premier from 1920 to 1922, was elected president on June 3. As reported in *Current History* for September, the prime minister announced on June 23, that among others the following were the purposes of the cabinet: (1) to get back Vilna and to have no normal relations with Poland until it had returned Vilna and restored the Suvalki agreement; (2) to obtain commercial treaties with France, Belgium, Italy, Spain, Austria, and Hungary and to convert the provisional agreement with Great Britain into a permanent commercial treaty; (3) to undertake negotiations with Germany for arbitration; (4) to complete the negotiations with Soviet Russia begun by the former government; (5) to seek a concrete expression of unity with the Baltic states; (6) to pursue a policy of reducing expenditures by the government and of increasing working capacity; (7) to give special attention to preserving the country's greatest source of wealth, its forests.

On September 28, Prime Minister Slezevicius

signed a treaty of non-aggression with Soviet Russia at Moscow. A unique provision of this treaty was the recognition on the part of Russia of Lithuania's claim to Vilna, despite the fact that the Council of Ambassadors awarded it to Poland. It seemed as though Russia was going to back up Lithuania's claim to this city although Moscow disclaimed any such intention. The two countries agreed to respect each other's sovereignty and territorial integrity; they agreed not to make war on each other and to remain neutral in case one or the other was attacked; they were not to join coalitions hostile to one government; a conciliation commission was to settle any disputes between the two countries; and neither government was to participate in any combination for a financial or economic boycott of the other. Needless to say the treaty was looked upon with considerable suspicion throughout Poland.

On December 17, the Lithuanian government was overthrown by a military coup under the leadership of Antona Smetona, a former president of the country. The revolution was accomplished without any bloodshed, upon the arrest of President Grinius and as many of the members of the cabinet as could be caught. Smetona became the head of the state until regular constitutional elections could be held. On the next day the president was temporarily restored to power to accept the resignation of the Slezevicius ministry and the appointment of a ministry led by Augustine Valdemaras, hand picked by Smetona. The parliament met and, although the left stayed away, the rump conservative group legalized the above acts and elected Smetona president of the republic. All kinds and shades of opinions were expressed throughout the countries bordering on Lithuania as to the cause of the upheaval. Poland looked upon the move as a result of German and Russian machinations. Those countries looked upon Poland as the prime mover in the drama. The leaders of the revolt stated that it was brought about to forestall a similar uprising planned by the Communists for January, 1927. They charged that the Slezevicius ministry was cognizant of this plot but was doing nothing to prevent it. Prime Minister Valdemaras charged that Poland was fomenting this Communist plot in order to have an excuse to throw Polish troops across the border into Lithuania. As the year closed observers were still at loss to know the real reason for the manœuvre. The government immediately took steps to quash any individuals hostile to the government. Jews were arrested, Germans were ousted from official positions, Socialist and peasant political groups were dissolved, and four Communists were shot because of connection with the plot that gave Smetona the excuse for his coup d'état.

**LIVESTOCK.** The livestock and meat situation in the United States in 1926 was slightly better than in 1925. Estimate of the numbers of cattle, hogs and sheep on farms at the first of the year pointed toward a small reduction in the numbers of cattle and hogs and a small decrease in sheep as compared with the first part of 1925. On the whole the indications were toward a better stabilized industry as a result of the bitter experiences following the War when both the cattle and swine industries suffered severely as a result of overproduction and low prices. Adjustment was obviously more rapid

with swine than with cattle. Greatly increased interest was shown in the sales and exhibits of breeding animals. The International Livestock Exposition, held annually at Chicago, was one of the best from the standpoint of the numbers and the quality of the animals exhibited and the attendance exceeded all records. The grand champion steer, which this year was an 11-month-old Hereford shown by the Oklahoma Agricultural and Mechanical College, was pronounced by the Argentinean judge of the fat stock as the finest steer he had ever seen.

The average prices received for cattle, calves and hogs for slaughter were slightly higher than those of 1925, but lamb and mutton prices were not quite so good as those in the previous year, though the small reduction was largely due to an oversupply of heavy lambs in the spring. A somewhat similar situation occurred at times during the year with cattle. More high grade heavy weight beef was produced during the spring and summer than the market could absorb at good prices. The unusual production of finished cattle and sheep appeared to be the result of the favorable conditions for feeding. Corn, the basis for pork production, was unusually cheap, while pork was relatively high, making a larger number of bushels of corn equivalent in buying power to 100 pounds of pork than has occurred for many years. The pig survey conducted by the U. S. Department of Agriculture as of June 1, indicated a 36 per cent increase in the numbers of sows farrowing in the fall of 1926 as compared with 1925. This should tend to increase the numbers of swine for slaughter in the spring of 1927 and result in a reduction in the price so that a more normal corn-hog ratio will exist. A survey of the lamb crop conducted in June indicated an approximate 10 per cent increase over 1925.

As an indication of the comparative production and slaughter of meat animals during the past year, data showing the numbers and weights of animals slaughtered under Federal inspection in the first nine months of 1925 and 1926, together with the three-year average for 1923, 1924, and 1925 are presented in the table on page 442.

Conditions in the production of pork were complicated during the year by the most serious outbreak of hog cholera that has occurred in the last 12 to 15 years.

**INTERNATIONAL CONDITIONS.** Of outstanding interest in the international meat trade during the past year was the discovery of foot-and-mouth disease in hog carcasses which were imported by Great Britain from the Netherlands. This resulted in the British Ministry of Agriculture and Fisheries prohibiting the landing in Great Britain of carcasses of cattle, sheep, or hogs from continental European countries. In 1925 92,000,000 pounds of the total British importation of 139 million pounds of fresh and frozen pork were from the Netherlands which according to this order were shut off. All classes of animals in Russia showed considerable increases in numbers and the Soviet government was much interested in stimulating the livestock industry. The large increase in the pork production of Russia has been of considerable significance in European markets, especially in Great Britain and Germany. The numbers of swine in Denmark increased from estimated total numbers of 2,517,000 in 1925 to 3,034,-

**COMPARATIVE MEAT SLAUGHTERED AND STORED UNDER FEDERAL INSPECTION IN THE  
UNITED STATES FOR THE NINE-MONTH PERIODS JANUARY 1 TO SEPTEMBER 30

<sup>d</sup> 57,930,000 lbs. fresh and 26,048,000 lbs. of cured beef.

<sup>e</sup> 164,418,000 lbs. fresh, 557,471,000 lbs. cured pork and 131,411,000 lbs. of lard.

<sup>f</sup> 51,914,000 lbs. fresh and 23,938,000 lbs. of cured beef.

<sup>g</sup> 169,840,000 lbs. fresh, 615,171,000 lbs. of cured pork, and 108,901,000 lbs. of lard.

000 in 1926. This is the largest number of swine ever reported for Denmark.

In Canada the inspected slaughter of cattle, calves and sheep showed a small increase in the first nine months of 1926, while hogs showed a small decrease. The slaughtered and live animals exported for meat purposes from Canada were mainly to the United States and Great Britain. A serious condition developed in Belgian livestock circles which endangered the continuance of the livestock industry, especially cattle. The falling Belgian exchange brought foreign buyers from Germany and Holland who took advantage of the exchange conditions and offered prices in excess of those possible in Belgium, raising prices to a point where they were a hardship to local consumers.

A considerable decrease occurred in the amount of beef exported from New Zealand during the first part of the year 1926, although the mutton and lamb carcasses were quite uniform as compared with the last two years, and pork showed some increase. It was estimated that the numbers of cattle slaughtered in 1926 would not exceed 300,000 head as compared with 552,000 head in 1925. The establishment of lower freight rates on meats from Australia and New Zealand to the United Kingdom became effective in July, the rates on meat, cheese, wool, sheep, skins and hides were reduced by one fourth cent per pound.

**RESEARCH.** The energy requirements of animals have long been known to be in proportion to the surface areas of the animals, but considerable difficulty has been experienced in estimating surface area. During 1926 the Missouri Agricultural Experiment Station measured nearly 100 dairy cattle by means of a revolving cylinder and derived a formula for estimating surface area on the basis of live weight, which proved to be more accurate than others in common use. Interesting developments in the world meat situation during the last year were studies of the quality and palatability of meat in the United States, and the active interest of the Australian National Research Council in fostering investigations of the factors which affect the quality of frozen meat. Further studies were being undertaken coöperatively by the State agricultural experiment stations and the U. S. Department of Agriculture, dealing with various factors including feeding, breeding, management, sex and age, which affect the quality and palatability of the finished product. In connection

with this work the U. S. Department of Agriculture defined the market classes and grades of animals as they are classified in the stockyards and efforts were made to establish measures for determining the texture, flavor, juiciness and chemical constituents of raw and cooked meat. The Australian studies were concerned with the effects of various temperatures and the length of the freezing and thawing processes on the amount of drip and shrinkage in frozen beef, and brought out results of much practical importance. The U. S. Department of Agriculture also inaugurated a service whereby meat may be stamped according to the grade of the animal from which it is obtained, provided the individual packer requests it. This allows the consumer to know what kind of meat he is purchasing. An educational program was in operation for some time to teach the public the characteristics of desirable and undesirable meat.

**BIBLIOGRAPHY.** The more important livestock books recently published include: H. J. Waters and F. G. King, *Animal Husbandry* (Boston and London, 1925); F. W. Woll and G. H. True, *Productive Feeding of Farm Animals* (Philadelphia and London, 1925, 4. ed., rev.); N. Hansson, *Fütterung der Haustiere* (Dresden, 1926); A. F. Shull, *Heredity* (New York and London, 1926); J. Hammond, *Reproduction in the Rabbit* (Edinburgh, 1925); G. Schwarznecker, *Lehrbuch der Pferdezucht* (Berlin, 1926, 6. ed., rev.); W. G. L. Taylor, *The Saddle Horse* (New York, 1925); [E.] Huard du Plessis, *La Chèvre; Races, Elcavage, Exploitation* (Paris, 1926); T. F. McGrew, *The Book of Poultry* (New York, 1926); J. R. Arnold, *Hides and Skins* (Chicago and London, 1925).

**LIVONIA.** A Baltic province on the Gulf of Riga between Esthonia and Courland; formerly a province of the Russian Empire; after the war divided between the two new republics of Esthonia and Latvia. The area has been variously estimated at from 16,930 to 18,158 square miles. Population at the beginning of 1915 (estimated), 1,778,500.

**LOAN EXHIBITIONS.** See ART EXHIBITIONS.

**LOCARNO TREATIES.** See LEAGUE OF NATIONS.

**LOCOMOTIVES.** See CELEBRATIONS; RAILWAYS.

**LONDON.** MEYER. American Socialist and labor leader, died in New York City as the result of an automobile accident, June 6. He

was born in Russia, December 29, 1871, and at first worked as a printer and cigar maker, later being employed by the Education Alliance in New York. This afforded him an opportunity for advanced study and preparation for the practice of law, and he was admitted to the New York bar in 1898. He was counsel for labor unions and assisted in building up these agencies. He was connected with the cloakmakers' strike in 1910 and the garment workers' strike in 1912, aiding in their settlement. The first of these difficulties was ended by means of an agreement known as an industrial protocol. In addition to his activity in the labor movement and as a community worker on the east side of New York, London became prominent as a Socialist, being a delegate to the National Convention of the Social Democracy in 1900, and to the National Convention of the Socialist Party in 1910 and 1912.

London was chosen to represent the American Socialists at the International Socialist Congress called for 1914 in Vienna, but not held on account of the War. In 1914 he was elected to Congress as a Socialist from the twelfth New-York district, serving in the Sixty-fourth and Sixty-fifth Congresses until 1919, and was again elected to the Sixty-seventh 1921-23. He was the first Eastern Socialist, and the second in the United States, to gain this distinction. At the time he took his seat in the House, there was no other Socialist in its membership. While in Congress he opposed the entry of the United States into the great War, and made a determined fight against conscription.

**LONG ISLAND, BATTLE OF.** See CELEBRATIONS.

**LOUISIANA. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,798,509. The estimated population on July 1, 1926, was 1,919,000. The capital is Baton Rouge.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926.

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1926		760,000 <sup>a</sup>	
	1925	1,854,000	900,000 <sup>a</sup>	\$81,450,000
Rice	1926	495,000	16,088,000	16,892,000
	1925	430,000	14,919,000	21,908,000
Corn	1926	1,127,000	19,722,000	17,750,000
	1925	1,225,000	22,050,000	20,727,000
Potatoes	1926	36,000	2,196,000	3,733,000
	1925	30,000	1,800,000	3,780,000
Sweet potatoes	1926	79,000	7,110,000	6,399,000
	1925	72,000	5,769,000	6,624,000
Hay, tame	1926	262,000	305,000 <sup>b</sup>	4,422,000
	1925	254,000	228,000 <sup>c</sup>	4,332,000
Tobacco	1926	1,000	400,000 <sup>c</sup>	180,000
	1925	1,000	504,000 <sup>c</sup>	277,000

<sup>a</sup> bales, <sup>b</sup> tons, <sup>c</sup> pounds.

**MINERAL PRODUCTION.** Petroleum, providing the greater part of the total value of the State's annual mineral production, declined somewhat in 1925 as to the quantity produced, but attained a higher total value for the year's product. There were produced 20,013,000 barrels in 1925, and 21,124,000 barrels in 1924; having a value of \$32,800,000 (estimated) in 1925 and \$30,340,000 in 1924. Louisiana ranked second in 1924 in the production of sulphur, in which the total production of the United States was 1,409,240 in 1925. The quantity and value of the State's recent sulphur production were not separately rendered

in the reports of the Bureau of Mines. Natural gas production rose in 1924, to a total quantity of 160,945,000 M cubic feet, as against 112,031,000 M cubic feet in 1923; its value was \$7,626,000 in 1924 and \$6,022,000 in 1923. From natural gas were produced 45,800,000 gallons of gasoline in 1925, and 48,098,000 gallons in 1924; in value, \$4,035,000 (estimated) in 1925 and \$3,887,000 in 1924. Salt production 383,104 short tons in 1924 and 359,161 short tons in 1923; in value, \$2,182,797 in 1924 and \$1,808,762 in 1923. Sand and gravel were produced in important quantities. The total value of the State's mineral products was \$56,930,681 in 1924; in 1923, \$61,199,048, eliminating duplications.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending Dec. 31, 1925, were \$16,905,706. Their per capita rate was \$9, as against \$7.29 in 1924 and \$3.50 in 1917. Their total included \$3,808,419, for education, apportioned among the minor civil divisions. Expenses totaling \$72,280 for public service enterprises, \$638,287 for interest on debt and \$7,916,589 for permanent improvements, added to payments for the maintenance and operation of State departments, made the total of State payments \$25,532,862. For highways was expended the sum of \$8,355,633, of which \$2,518,127 was for maintenance and \$5,837,506 for construction.

Revenue receipts of the State were \$24,160,153, or \$12.86 per capita. They exceeded by \$6,543,880 the total payments except for permanent improvements, and were \$1,372,709 less than the total with these included. Payments in excess of revenue were met from proceeds of debt obligations. Property and special taxes formed 39.7 per cent of the total revenue in 1925, as against 38.8 per cent in 1924 and 54.1 per cent in 1917. Their per capita rate was \$5.11 in 1925, \$5.10 in 1924 and \$2.33 in 1917. Earnings of the general departments and compensation for officials' services furnished 5.6 per cent of the 1925 revenue; business and non-business licenses, 35.6 per cent. State license receipts were derived chiefly from taxes on insurance companies, on licenses for trades and professions, on sales of gasoline, from the severance tax and from licensing of motor vehicles.

The net indebtedness of the State on Dec. 31, 1925, was \$14,372,188, or \$7.65 per capita, as against \$7.49 in 1924 and \$7.70 in 1917. The assessed valuation of property subject to State tax was \$1,685,501,824. The State tax levy was \$9,691,635, or \$5.16 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 4868. Construction in 1926 totaled 17 miles of first track. There were abandoned in the year 25 miles of line between Neame and Camp Baker, six miles between Woodworth and Lamorie and certain terminal facilities of the Texas Pacific at New Orleans.

**EDUCATION.** It was calculated that school funds in the State would be increased to the extent of from \$1,500,000 to \$2,000,000 by the operation of the tobacco tax enacted by the Legislature. The increase in the State's school funds was expected to be about 50 per cent of the total yearly school fund revenue before the operation of the new tax.

The school population of the State in the

academic year 1925-1926 was given by the Department of Education as: white, 358,930; colored, 242,706. Total enrollment was: white, 260,584; colored, 130,878. That in elementary schools was: white, 221,725; colored, 126,993. That in high schools: white, 38,859; colored, 3885. There was expended for education in the State, \$30,774,743. Salaries of white teachers averaged, for men, \$1434 and for women, \$537; those of colored teachers, \$1004 for men and \$444 for women.

**CHARITIES AND CORRECTIONS.** A State Board of Charities and Corrections, established in 1904 and reorganized in 1921, is composed of six members, including the Governor, its ex-officio chairman, and supervises State institutions. It has no executive or administrative powers. Over private institutions it holds visitatorial power. The chief State institutions reporting at the end of 1925 were: Charity Hospital, New Orleans; Charity Hospital, Shreveport; Central Louisiana Hospital (for the insane), Pineville, 1139 patients; East Louisiana Hospital (for the insane), Jackson, about 2200 patients, including criminal insane; Louisiana State penitentiary, Baton Rouge; Louisiana training institute, Monroe, for correctional work; state colony and training school for feeble minded, Alexandria; and State schools for the blind and the deaf, and a State soldiers' home.

**LEGISLATION.** A constitutional amendment providing for revision of the criminal code of the State was passed and was presented to the electorate for ratification on November 2. In accordance with the change thus provided for, the Governor was enabled to appoint members to a Criminal Code Revision Commission, which he did, naming as its members St. Clair Adams, H. B. Warren and S. R. Thomas. It was provided that the commission should report to the Legislature of 1928. The lower house adopted a resolution to appeal to the President of France for clemency on behalf of an American named Doty, serving in the French Foreign Legion, condemned to death for desertion. A bill to forbid the teaching of the theory of man's descent by the evolutionary process from other forms of life was introduced in the lower chamber.

**POLITICAL AND OTHER EVENTS.** Edwin S. Broussard, the incumbent Senator, won the Senatorial nomination in the Democratic primaries, held September 14, defeating former Governor Jared Y. Sanders. Broussard was reelected on December 2, in the general election.

Governor Henry L. Fuqua (q.v.) dying while in office on October 11, Lieutenant-Governor Oramel H. Simpson was sworn in as Governor to succeed him. The regular biennial session of the State Legislature was held, convening May 10. The city of New Orleans at a special election in November voted the expenditure of \$7,500,000 for divers purposes, to include a \$2,000,000 municipal auditorium, a criminal court building, a parish prison and farm, garbage incinerators, and a 2000 acre addition to City Park. Operations toward giving the city highway communication to the east were carried on by the New Orleans Lake Pontchartrain Bridge Company, engaged in the construction of a \$6,000,000 highway bridge across Lake Pontchartrain. (See BRIDGES.) This company denied in December that it intended to provide a railroad way on the Pontchartrain bridge. As a result of extensive channel deepening between the city of Lake Charles,

Calcasieu Parish, near the western end of the Louisiana coast line, and the Gulf of Mexico, that city was thrown open to ocean shipping, and was formally tendered to the Nation on November 30 by Governor Simpson as a port.

**OFFICERS.** Governor, H. L. Fuqua (died October 11); Lieutenant-Governor (Governor after October 11), O. H. Simpson; Lieutenant-Governor (succeeding O. H. Simpson), Philip H. Gilbert; Secretary of State, J. J. Bailey; Treasurer, L. B. Bayard, Jr.; Auditor, Eugene T. Lyons; Attorney-General, Percy Saint; Superintendent of Education, T. H. Harris.

**JUDICIARY.** Supreme Court; Charles A. O'Neill, Chief Justice; Associate Justices: Ben C. Dawkins, Winston Overton, John St. Paul, Wynne G. Rogers, John R. Land, H. F. Brunot.

**LUMBEE.** See FORESTRY.

**LUMINESCENCE.** See ZOÖLOGY.

**LUTHERAN ANNIVERSARY.** See CELEBRATIONS.

**LUTHERANS.** A denomination made up of groups of religious bodies holding in doctrine to the unaltered Augsburg Confession and to Luther's Small Catechism. Its membership is chiefly in Germany and northern Europe and in the United States and Canada. The Church in the United States comprises several groups which, in 1926, were taking definite steps toward organic union. Of these, the United Lutheran Church in America comprised about one-third of the Lutheran membership in the United States, and some 19 independent synods and a negro mission comprised the remainder. A number of these synods were based on the languages of the countries of origin of their members. At its 1926 convention, held at Richmond, Va., the United Lutheran Church completed the organization of the American Board of Missions, to take the place of five home mission boards. The joint Ohio and Missouri synods carried on work in Mexico, the Missouri synod organized a new synodical district in Argentina, and the work among American negroes was definitely advanced. This synod also created a new board of Mexican missions and a committee on immigrant mission work in western Canada.

The United Lutheran Church, at the Richmond Convention, received the Lutheran Church in the Andhra Country of India as an associate synod. Its mission in the Shantung Province became a member of the organized Lutheran Church in China. The Norwegian Lutheran Church took over the Schreuder mission of Zululand and Natal. Many of the inner mission institutions received notable bequests during the year. The Texas synod of the United Lutheran Church established a hospital at Cuervo, Tex. The Augustana synod completed the Augustana Hospital in Chicago, Ill., as well as a \$200,000 addition to Immanuel Hospital, Portland, Ore.; it also was erecting a new hospital at Astoria, Ore., besides purchasing a Seamen's Home in New York City for \$200,000. The Lutheran Immigrants' House Association cares for the port work in New York.

The joint Ohio synod dedicated an orphans' and old people's home at Melville, Sask., Canada, and the Lutherans of southern California completed the California Lutheran Hospital at Los Angeles. The convention of the United Lutheran Church authorized a \$4,000,000 campaign for ministerial pensions, to be conducted in 1928, and the Missouri synod laymen's league re-

ported the completion of its fund of \$3,000,000. Street preaching was inaugurated in several large cities.

A number of synodical histories, hand books, and other books were published by the United Lutheran Church and other groups during the year. The official publication is *The Lutheran*. The United Lutheran Publication House, with headquarters in the Muhlenberg Building in Philadelphia, added to its branch property holdings a building at 39 East 35th Street, New York City, at a cost of about \$200,000, and this was to become headquarters for the United Lutheran Church in New York City in 1927. Greater emphasis was placed on organized and systematic effort for the dissemination of information concerning the Lutheran Church, especially through daily newspapers and magazines. The United Lutheran Church established a radio station at Cornell University, and undertook the support of the Concordia Seminary radio broadcasting station in St. Louis.

Building programmes were carried on in a number of Lutheran colleges, including one involving \$500,000 at Capital University, Columbus, O., and several endowment campaigns were successfully completed. The Lutheran Training School for the people of the Southern mountains was established at Konnarock, Va., and Luther College, Regina, Sask., Canada, was dedicated by the joint Ohio synod. An endowment campaign conducted by the Norwegian Lutheran Church raised almost \$3,000,000 for its colleges. The Missouri synod dedicated Concordia Theological Seminary, said to be the largest of the kind in America, at a cost of \$2,500,000, as well as a preparatory college for ministerial students at Austin, Tex.; the latter was opened October, 1926. The number of students increased in all the educational institutions, especially the number of students for the ministry.

Statistics for the denomination in the United States and Canada are given in the accompanying table:

Ministers .....	11,149
Congregations .....	16,686
Membership:	
Baptized .....	4,057,859
Confirmed .....	2,657,824
Communing .....	2,243,266
Sunday schools .....	11,508
Officers and teachers .....	115,377
Scholars .....	1,181,591
Value of congregational property .....	\$273,504,973
Total congregational expenses .....	\$39,795,957
Total benevolence .....	\$12,088,478
Total expenditure .....	\$52,409,904

The Lutherans of the world numbered 80,000,000 to 100,000,000, with 69,441 congregations served by 48,689 pastors. They formed 47 per cent of Protestantism, 14 per cent of Christendom, and 5 per cent of the world population. The outstanding events of 1926 were: The meeting of the executive committee of the Lutheran world convention at Dresden, Germany, June 30-July 7, at which it was decided to hold the second world convention at Copenhagen in June or September, 1929 (the 400th anniversary year of the publication of Luther's Small Catechism) and to publish before that time a hand book of the Lutheran Church of the world; the quadri-centennial celebration of Lutheran church polity; the tri-centennial of

the Lutheran church in Paris in December; the placing of a loan in America for the Protestant Welfare Agencies; the presentation of Luther's birthplace to the Lutheran Church by the City Council of Eisleben and the change of the city's name from Eisleben to Eisleben-Lutherstadt; the organization of the Lutheran Church Union of South and West Africa as an intersynodical organization; the organization of the Lutheran Church of Jugo-Slavia in April, with 250,000 members; the removal of the missionary restrictions in British possessions against the Schleswig-Holstein, Gossner, and Danish missionary societies. The significant tendency of the year was a swing from nationalism and rationalism back to evangelical faith.

**LUXEMBURG**, lüks'em-bürg. A small state of western Europe, bounded by Germany, France, and Belgium; neutralized by the Treaty of London, 1867; occupied by the Germans during the war; restored to independence after the armistice. Area, 999 square miles; population, according to the census of 1922, 260,767, as compared with 263,824, Dec. 1, 1916. The great majority of the population is Roman Catholic. Luxembourg is a country of small landowners and of farmers tilling their own holdings. The total area of land devoted to agriculture is about 500,000 acres, and of this amount approximately 430,000 acres are farmed by resident proprietors. Individual farms number in the neighborhood of 40,000. The principal foodstuffs raised in the grand duchy are potatoes and cereal grains, including rye, wheat, barley, and oats. The cultivation of oats covers the largest area of land and is followed in importance by potatoes. The leading industry of the state, however, is mining and the production of iron and steel. The mineral resources of Luxembourg include comparatively extensive iron-ore mines, as well as slate, lime, dolomite, quartzite, and stone beds. The production of iron ore which in 1925 reached 6,786,845 tons was gradually returning to its pre-war level of nearly 7,500,000 tons. The bulk of the 1925 production was consumed domestically and the remainder shipped to neighboring steel centres in Belgium, France, and Germany. Brick, printing, and leather and glove industries are also relatively important. Separate figures on foreign trade have not been available since the economic union in 1922 with Belgium. The budget estimates for 1926 were: Revenue, 166,173,340 francs; expenditure, 161,534,437 francs. The public debt on Dec. 31, 1924, amounted to 468,742,945 francs. In 1924 there were 334 miles of railways. Under the constitution, as amended in 1910, sovereign power rests in the nation and the representatives are elected on the basis of universal suffrage and proportional representation. The Grand Duchess in 1926 was Charlotte Aldegonde, born Jan. 23, 1896, who succeeded to the throne, Jan. 9, 1919. The Minister of State and President of the Government was Pierre Pruom. The other members of the cabinet were: Director-General of Justice, Public Works, Trade and Industry, N. Dumont; Social Welfare and Labor, O. Decker; Finance and Public Instruction, A. Schmit.

**LYMAN**, GEORGE RICHARD. American plant pathologist and dean of West Virginia College of Agriculture, died at Baltimore, Md. June 7. He was born at Lee Center, Ill., Dec. 1, 1871, and after graduating at Beloit (Wis.) College in 1894, studied at Harvard, where he took the

degree of Ph.D. in 1906. From 1901-04 he was instructor in botany at Dartmouth, and from 1904-15 assistant professor. From 1916-23 he was pathologist in charge of plant disease survey of the United States Department of Agriculture, and in the latter year became dean of the West Virginia College of Agriculture, a position he held at the time of his death. During the War he was a member of the War Emergency Board of American Plant Pathologists, and chairman of the advisory board of the same organization, 1919-21. From 1919-22 he was a member of the National Research Council. He belonged to many scientific societies both general and those especially devoted to botany, serving as secretary-treasurer of the American Phytopathological Society from 1919-22, and president in 1923. He was the author of many articles and reports on mycology and plant diseases.

**LYNCHINGS.** The number of lynchings in the United States during the year 1926, as compiled by the Department of Records and Research of Tuskegee Institute, was put at 29. This was 13 more than the number, 16, for 1925, 13 more than the number, 16, for 1924, 4 less than the number, 33, for 1923, and 28 less than the number, 57, for 1922. In a statement to the press analyzing the lynching figures, Dr. Robert R. Moton, principal of the Institute, pointed out that the courts had acquitted one of the victims, and that 20 of the persons lynched had been taken from the hands of the law, 8 from jails, and 12 from officers or the law outside of jails. Two of the persons lynched were women.

"There were thirty-three instances in which officers of the law prevented lynchings," Dr. Moton said. "Four of these were in Northern States and twenty-nine in Southern States. In twenty-seven of the cases the prisoners were removed or the guards augmented or other precautions taken. In six other instances armed force was used to repel the would-be lynchers. In thirty-four instances during the year persons charged with being connected with lynching mobs were indicted. Of the thirty-four persons thus before the courts, nine were sentenced to the penitentiary; eight for terms ranging from four to twenty years, and one for life."

According to Dr. Moton's statement 22 of the total number of lynching victims were Negroes. Six were whites and one an Indian. The charge of rape or attempted rape figured only in the cases of five of the lynched persons, that is, less than 17 per cent of the total. The offenses charged against the victims were as follows: murder, 8; rape, 2; attempted rape, 3; killing officer of the law, 5; wounding officer of the law, 2; attacking woman, 1; insulting woman, 1; frightening woman, 1; burglary, 1; charge not reported, 5.

The lynchings were distributed according to states as follows: Arkansas, 2; Florida, 8; Georgia, 1; Kentucky, 1; Mississippi, 4; New Mexico, 1; South Carolina, 3; Tennessee, 1; Texas, 7; Virginia, 1.

The triple lynching of Bertha Lowman and her two brothers at Aiken, S. C., on Oct. 8 raised a storm of protest throughout the country. The *New York World* sent a reporter to investigate the lynching. The reporter succeeded in getting the names of the mob which had killed the three victims (one of whom was acquitted by the courts, and the other two granted new trials). The *New York World* published the

names in the hope of stirring the South Carolina authorities to action. But up to the end of the year no action was taken. According to a survey made by the *World*, a number of Southern states were active in punishing members of lynching mobs. The State of Georgia speedily meted out various punishments to nine confessed members of the Coffee County mob responsible for the lynching of Dave Wright on August 27. Wright was a white man.

The State of Kentucky did not hesitate to use machine guns to guard prisoners against lynching mobs. The State has a law providing for the removal of officials in direct charge of prisoners who do not use the utmost effort of protection. The States of Tennessee and Oklahoma have laws providing strict penalties for depredations or violence committed by persons wearing masks. The State of North Carolina is remarkably free from lynching, the survey showed. It has had only one lynching in six years. About a dozen men are serving terms in prison for participation in mob activities during the year 1925, and the governor steadfastly refused to exercise clemency in their behalf. In the State of Virginia, action by the Grand Jury has always followed any lynching. In the case of the 1926 lynching, Governor Byrd posted \$1000 reward for information as to members of the mob.

**McALPINE, REV. ROBERT JOHN.** Canadian clergyman, died at Waverly Beach, Ontario, September 5. He was born at Cedarville, Ontario, Canada, Aug. 25, 1874, and after graduating in pharmacy at the University of Toronto continued his studies, receiving the degree of B.A. in 1899 and M.A. in 1900, later studying theology at Knox College. He was ordained to the Presbyterian ministry in 1902 in which year he became pastor at Owen Sound, Ontario, 1902-07, when he went to the North Church, Cleveland, Ohio. In 1909 he became pastor of the Boulevard Church in the same city, being there until 1914, when he was called to the Central Church, Buffalo, N. Y. Here he was able to build up the membership of the church from 500 to 2650, making it the third largest Presbyterian congregation in the United States. For two years the services of this church and Dr. McAlpine's sermons were broadcast regularly, and he enjoyed a wide influence, not only in his own parish, but throughout his radio congregation. He was a member of the General Assembly's Committee on consolidation and reconstruction of all boards of the Presbyterian Church in the United States. His writings included: *Bible Readings and Prayers* (1918); *What Is True Religion?* (1923); *There Is No Death*.

**MACAO, mǎ-k'ǎo.** An island at the mouth of the Canton River, in China, which with the two adjacent islands of Taipa and Colôane, constitute a province of Portugal. Area, 4 square miles, population, according to the census of 1910, 74,866, of whom 2171 were Portuguese and the remainder for the most part Chinese. The trade is chiefly in transit and is mainly in the hands of the Chinese. In 1924-25 the revenue and expenditures balanced at 5,473,925 escudos. The city of Macao is divided into two parts, inhabited respectively by Chinese and non-Chinese, each under its own administration.

**MacARTHUR, ARTHUR FREDERIC.** American engineer and contractor, died at Salt Lake City, Utah, November 30. He was born at Oramel, Allegany County, New York, Oct. 24, 1860, and

graduated from Harvard University in 1882. In the following year he was superintendent for MacArthur Brothers in St. Paul, and continued with that contracting firm which handled some of the largest railway, water works, and other construction work in the United States. In 1892 he became general manager at Chicago of MacArthur Brothers, in 1893 vice-president, and five years later, president of the same company with headquarters in New York. He was also president of various subsidiary companies. Some of the construction under his direction included the dam and reservoir for the Boston water supply system, many sections of aqueduct and the Ashokan Dam of the Catskill water supply for New York City, and various projects during the World War.

**McBRIDE, ROBERT W.** American jurist, died at Indianapolis, Ind., May 15. He was born in Richland County, Ohio, Jan. 25, 1842, and after studying at public schools in Ohio and Iowa, and at the Kirkville, Iowa, Academy, taught school for three years and then entered the Union Army. The cavalry regiment in which he served during the war was the Union Light Guard of Ohio, Abraham Lincoln's body guard. After the war he was captain, lieutenant-colonel, and colonel in the Third Regiment of the Indiana National Guard. After the war Judge McBride was admitted to the bar in April, 1867, practicing at Waterloo, Indiana. He became judge of the Circuit Court of the Thirty-fifth Judicial District in 1882, serving until 1888, and on December 17, 1890 became justice of the Supreme Court of Indiana, by appointment of the Governor, to fill a vacancy, serving until January 2, 1893. He was director and counsel of the loan department of the State Life Insurance Company, and a member of the Indianapolis Bar Association, and of the Indiana State Bar Association, being president of that Association, 1915-16. In 1917 he was adjutant-general of the Grand Army of the Republic, and department commander of the Department of Indiana, 1920-21. In 1921-22 he was senior vice-commander in chief of the G. A. R. and from 1922-26 he held the office of Judge Advocate General.

**McCLERNAND, EDWARD JOHN.** American soldier, died February 9. He was born at Jacksonville, Ill., Dec. 29, 1848, the son of Major-General John Alexander McClernand who commanded the Thirteenth Army Corps in the Civil War. Graduating from the United States Military Academy in 1870, he was appointed Second Lieutenant of the Second Cavalry, being successively promoted until in the Spanish-American War he was made lieutenant-colonel, assistant adjutant-general of volunteers, May 9, 1898, serving in this rank until Aug. 16, 1899. He was colonel of the Forty-fourth United States Infantry Volunteers, Aug. 17, 1899, serving until honorably mustered out of the volunteer service June 30, 1901, in which year he returned to the regular establishment as major of the Twelfth Cavalry, serving in this arm of the service and as brigadier-general until retired Dec. 29, 1912. During his campaigns in the west he was breveted first lieutenant Feb. 27, 1890, "for gallantry in pursuit of Indians and in actions against them at Bear Paw Mountains, Mont., Sept. 30, 1877," and was awarded a Congressional Medal of Honor, Nov. 27, 1894, "for most distinguished gallantry in action against Nez Percé Indians." He served in the Spanish Amer-

ican War, in the Santiago Campaign, and later in the Philippines.

**McCOY, WILLIAM JOHNSTON.** An American composer, died in Oakland, Cal., October 15. He was born in Bucyrus, O., Mar. 14, 1854, and received his musical education in New York and Leipzig. Returning from Germany, he settled in New York as a concert pianist. From 1896-1918 he was professor of Theory at the University of the Pacific in San José, and from 1918-25 he was connected with Mills College. For his opera *Egypt* he received the David Bispham Medal from the American Operatic Society. He wrote the music for two of the Bohemian Grove Plays, *The Hamadryad* (1904) and *The Cave Man* (1910). He tried his hand at practically every form of composition and was the author of *Cumulative Harmony*.

**McDONALD, JOHN BACON.** American army officer, died March 15. He was born in Alabama, Feb. 8, 1859, and after graduating from the United States Military Academy in 1881, was commissioned second lieutenant in the Fifth Infantry, serving in this arm of the service until Mar. 2, 1882 when he transferred to the Tenth Cavalry. In addition to service with the troops he was commandant of cadets at the Agricultural and Mechanical College, Auburn, Alabama, 1888-91, professor of military science and tactics and commandant of cadets at the South Carolina Military Academy, 1897-98, and served as mustering officer to the State of Alabama, September to November, 1898. In 1898 in the Spanish-American War, he was lieutenant colonel of the First Alabama Infantry, and was honorably mustered out of the volunteer service October 31 of the same year. He served in the cavalry in the Philippine Islands, where he was wounded in battle at Borongahong, April 27, 1901, and became commander of Fort Ethan Allen, Vermont, in 1907. He served in the Inspector General's Department, 1914-17, and in the World War he became brigadier-general commanding the One-hundred and Eighty-first Infantry in the Ninety-first Division in Belgium and France, participating in the St. Mihiel, Meuse-Argonne, and Ypres-Lys offensives.

**MACEDONIA**, mäs'e-dō'nä. A region in the Balkan peninsula, nearly corresponding to the vilayet of Saloniki, in the former Turkish Empire; after the Balkan Wars partitioned among Greece, Serbia, and Bulgaria, Greece receiving the largest share. The departments under Greek control with their populations, according to the census of 1920, are as follows: Saloniki, 407,238; Drama, 182,593; Kosani, 163,004; Florina, 127,941; Serres, 112,135; Pellis, 97,521; total, 1,090,432.

**McFADDEN, GEORGE H.** American cotton merchant, died at Rosemont, Pa., October 15. He was born at Philadelphia, Pa., July 24, 1847, and was educated at the Friends' Central High School of Philadelphia. He was in business in Philadelphia from 1868, and for many years was senior member of the firm of George H. McFadden & Brother, cotton merchants. He was also a partner in cotton firms in Liverpool and other European cities, and a director of the Pennsylvania Railroad, the Philadelphia National Bank, the Girard Trust Company, the Insurance Company of North America, and the Western Savings Fund. He was interested in many philanthropic enterprises in Philadelphia, and was a leading benefactor of the University of Pennsylvania being also a trustee of its

hospital. He equipped the hydrotherapeutic laboratory of that institution, and in 1914, gave \$12,000 for the purchase of radium to be used in cancer research. During the World War he represented the United States War Trade Board in France, and received the Distinguished Service Medal for his services to the Government, the presentation being made by General Pershing. He was one of the leading figures in the world's cotton markets, and the New York Cotton Exchange not only passed resolutions of sympathy, but suspended trading for two minutes as a mark of respect to one who had been a member of the exchange since 1881.

**MCGILL UNIVERSITY.** A co-educational institution of higher education at Montreal, Quebec, Canada; founded in 1821. The enrollment for the fall session of 1926 was 2719, distributed as follows: arts, 1023; applied science, 337; medicine, 438; commerce, 213; graduate school, 128; music, 153; dentistry, 56; law, 61; physical education, 59; pharmacy, 26; social workers, 29; graduate nurses, 24; Macdonald College (agriculture and household science), 172. The registration in the French Summer School of 1926 was 181. The number of members on the teaching staff was 421. Additions to the staff during the year included W. L. Graaf, Ph.D., assistant professor of German; W. C. Poole, M.A., instructor in sociology; L. A. Bissell, M.A., assistant professor of romance languages; W. H. Brittain, B.S.A., Ph.D., professor of entomology; J. E. Lattimer, B.S.A., Ph.D., assistant professor of agricultural economics; Aigy S. Noad, M.A., assistant professor of English. The productive funds of the University amounted to \$17,895,000, and the income for the year to \$1,917,000. The library contained 268,059 volumes. During the year a new Arts Building was erected at a cost of over \$750,000. Principal, Sir Arthur William Currie, G.C.M.G., K.C.B., LL.D.

**McKENNA, JOSEPH.** American jurist and former justice of the Federal Supreme Court, died at Washington, D. C., November 21. He was born at Philadelphia, Pa., Aug. 10, 1843, and attended St. Joseph's College in that city until 1855, when he moved with his parents to Benicia, Calif. There he went to the public schools, and after graduating from the Benicia Collegiate Institute in 1865, was admitted to the bar in the same year. From 1866-68 he served as district attorney of Solano County, Calif., and from 1875-76 he was a member of the California House of Representatives. He was a candidate for Congress in 1876 and 1878, and later elected; he served from 1885-92 as the representative from the Second California District in the Forty-ninth to Fifty-second Congresses. On March 28 he resigned from Congress to become United States circuit judge of the Ninth Circuit, serving until 1897 when he was appointed Attorney-General in the Cabinet of President McKinley. On Jan. 26, 1898 he became Associate Justice of the United States Supreme Court, serving until Jan. 5, 1925 when he resigned.

**McKINLEY, WILLIAM BROWN.** United States senator from Illinois, died at Martinsville, Ind., December 7. He was born at Petersburg, Ill., Sept. 5, 1856, and after studying two years at the University of Illinois, entered business as a drug clerk, but in 1877 he became a partner with his brother in the banking and mortgage loan business. In 1885 he became interested in the development of electric interurban railways, and

continued in this field for the rest of his life, merging his own companies in 1923 with those of Clement Studebaker, Jr. into a new corporation known as the Illinois Power and Light Corporation. He entered political life in 1905, being elected a member of the Fifty-ninth Congress as a Republican, and remained in the lower house until 1913. After being out of office for two years he again served in the Sixty-fourth, Sixty-fifth, and Sixty-sixth Congresses from the Nineteenth Illinois District, and was elected United States senator in 1921. During his public life Senator McKinley showed great gift for party organization and he was an active member of the congresses in which he served as well as of the Senate. He advocated the building of a Great Lakes-St. Lawrence waterway, and favored the World Court. This was stated to have cost him the Republican nomination for the senatorship in 1926, when he was defeated by Colonel Frank L. Smith in the Republican primary.

**MacLAREN, JOHN JAMES.** Canadian jurist, died in Toronto, Canada, July 3. He was born at Lachute, Quebec, July 1, 1840, and was educated at Victoria University, receiving the degree of B.A., and being Prince of Wales Gold Medallist in 1862. In 1868 he received the degree of LL.B. and served as British Secretary of the British and American Joint Commission on Oregon Claims, 1867-69. He became advocate at Quebec in 1868, and Queen's Counsel in 1878, being a member of the Bar Council and law examiner. In 1884, moving from Montreal to Toronto, he became a barrister of Ontario, and from 1886-90 he was honorary lecturer on comparative jurisprudence at the University of Toronto. MacLaren became vice-chancellor and regent of Victoria University in 1870, which honored him with the degree of LL.D. in 1886, and in 1891 senator of the University of Toronto. He was appointed a judge of the Supreme Court of Judicature for Ontario and a Puisne Judge of the Court of Appeal for Ontario, Nov. 21, 1902, serving until 1923 when he retired. In addition to being justice of the Appellate Division of the Supreme Court of Ontario he served as president of the Toronto Young Men's Christian Association, the Toronto Law and Order League, the Dominion Prohibitory Alliance, and the International Sunday School Association. In 1920 he was president of the World's Sunday School Convention at Tokyo, Japan, and later succeeded John Wanamaker as the head of the Association. He served on the International Sunday School Lesson Committee. He wrote: *Roman Law in English Jurisprudence* (1887); *Bills, Notes, and Cheques* (5th edition 1916); and *Banks and Banking* (4th edition 1914).

**MCMILLAN, SIR WILLIAM.** Australian politician and former President of the Sydney Chamber of Commerce, died at Melbourne, Australia, on December 21. He was born at Londonderry, Ireland, on Nov. 14, 1850, and was educated at Wesley College, Dublin, and at private schools in London. He arrived in Australia in 1869 and was a member of the firm W. and A. McArthur of London and Sydney. In 1886 he became President of the Sydney Chamber of Commerce, and in the following year he entered the New South Wales Parliament. He became Colonial Treasurer in 1889 and in the next year was appointed a member of the Federal Conference. He was a delegate to the Federal Conventions in 1891 and 1897. In 1901 he was made a K.C.M.G. for his services to the Commonwealth, and from 1901 to

1903 he was a member of the House of Representatives of the Federal Parliament.

**MCNARY-HAUGEN BILL.** See AGRICULTURAL LEGISLATION.

**MADAGASCAR.** An island belonging to France lying off the southeast coast of Africa, from which it is separated by the Mozambique Channel, about 240 miles wide at its narrowest point. The island, whose area is estimated at 228,707 square miles, has over 3000 miles of coast, and is 980 miles long with a greatest breadth of 360 miles. The population according to the census of July, 1921 (including the Mayotte and Comoro Islands), was 3,382,161, of whom 3,353,731 were Malagasy, 19,359 Europeans, and 8135 Asiatics. The most numerous tribes of the Malagasy are the Hova or Merina, which are the most industrious and enterprising, and whose language is the prevailing dialect. Capital, Antananarivo, in the centre of the island with a population in 1921 of 58,459. Other large towns are: Tamatave, with a population in 1921 of 11,762; and Diego Suarez, with 11,855. The former is the principal port on the east coast and the latter in the north. Education is compulsory from 8 to 14 years of age. On Sept. 15, 1925, there were 991 official schools for European and native children, with 90,833 pupils and 1739 teachers, and 517 private schools, with 49,750 pupils and 1144 teachers.

**PRODUCTION.** The chief occupation of the people is agriculture and the principal product grown by the natives is rice. Other products are vanilla, cloves, coffee, sugar cane, manioc, butter beans, and mangrove bark. The French have introduced the culture of cotton, rubber, tobacco and the silk worm. The forests contain many valuable woods. Among the minerals are graphite, corundum and mica, gold, precious stones, iron, and copper. Some radio-active ores have been exported in small quantities.

**COMMERCE.** A new high level for imports and exports expressed the economic prosperity of Madagascar that was so decisively manifest in 1925 and in the preceding year. Of primary importance in bringing about this improvement was the spectacular rise of vanilla prices in the world market, although good conditions in such lines as coffee, rice, graphite, hides, canned meats, and manioc also contributed. The total imports of Madagascar and its dependencies during the year 1925 amounted to 116,300 metric tons, valued at 491,854,000 francs. This represents an increase of 28 per cent in tonnage and 89 per cent in franc value, as compared with imports in 1924. Exports of rice showed a heavy decline from 1924, but shipments of other products maintained a high average. Shipments abroad in 1925 totaled 229,969 tons, valued at 44,923,818 francs and represented a decrease of 23 per cent in tonnage and an increase of 14 per cent in franc value as compared with 1924.

**FINANCE.** Actual receipts for 1924 amounted to 131,286,274 francs, and expenditures to 103,682,750 francs. The budgetary estimates for the calendar year, 1925, balanced at 122,497,834 francs.

**COMMUNICATIONS.** In 1924, 6903 vessels of 2,185,959 tons entered and 6917 vessels of 2,194,952 tons cleared from the ports of Madagascar. The total railway mileage (including narrow-gauge local lines) on Dec. 31, 1925, was 430 miles. Late in 1926 the French Minister for the Colonies approved a programme covering the execution of extensive public works in Madagas-

car, submitted by the Governor-General of that island. Among the projects provided for was the construction of a railroad to connect part of Manakara on the east coast with the region of Betsileo, rich in agricultural and mining possibilities. The building of this railroad was definitely authorized by a decree dated Sept. 23, 1926.

**GOVERNMENT.** The colony is under a governor-general aided by a consultative council of administration. Governor-General in 1926, Marcel Olivier (appointed Jan. 11, 1924). Dependent upon Madagascar are the small islands of Nossi Bé, Diego Suarez, Ste. Marie, and the Comoro group.

**MAINE. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 768,014. The estimated population on July 1, 1926, was 790,000. The capital is Augusta.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Potatoes	1926	127,000	38,830,000	\$48,984,000
	1925	135,000	33,750,000	67,500,000
Hay, tame	1926	1,272,000	1,428,000 *	18,850,000
	1925	1,268,000	1,531,000 *	18,372,000
Oats	1926	136,000	5,168,000	3,256,000
	1925	135,000	6,075,000	3,341,000

\* tons.

**MINERAL PRODUCTION.** The chief mineral product of the State is stone, of which the quantity produced in 1924 was 263,720 short tons, and in 1923, 306,620 short tons; in value, \$2,411,938 in 1924 and \$3,168,396 in 1923. Slate, classified separately, was produced to the value of \$604,062 in 1925 and \$667,541 in 1924. Lime production attained a quantity of 117,000 short tons (estimated) in 1925 and 125,688 short tons in 1924; and a value of \$1,600,000 (estimated) in 1925 and \$1,809,929 in 1924. Clay products, field-spar and sand and gravel were produced. The total value of the State's mineral products in 1924 was \$6,035,160; in 1923, \$7,565,553.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$10,104,899. Their per capita rate was \$12.93, as against \$13.09 in 1924 and \$8.56 in 1917. Their total included \$1,852,025 for education, apportioned to minor civil divisions. Expenses totaling \$131,797 for public service enterprises, \$621,074 for interest on public debt and \$4,683,275 for permanent improvements, added to payments for the maintenance and operation of State departments, made the total of State payments \$15,541,045. For highways was expended the sum of \$6,349,087, of which \$2,189,920 was for maintenance and \$4,150,167 for construction.

Revenue receipts of the State were \$15,428,944, or \$10.75 per capita. They exceeded by \$4,571,174 the total payments except those for permanent improvements, and were \$112,101 less than the total with these included. Payments in excess of revenue were met from the proceeds of debt obligations. Property and special taxes formed 44.6 per cent of the total revenue in 1925, as against 41.4 per cent in 1924 and 56.8 per cent in 1917. Their per capita rate was \$8.82 in 1925, \$8.14 in 1924 and \$5.49 in 1917.

Earnings of the general departments and compensation for officials' services furnished 10 per cent of the 1925 revenue; business and non-business licenses, 34 per cent. State license receipts were derived chiefly from taxes on incorporated companies and on sales of gasoline and from the licensing of motor vehicles. The net indebtedness of the State on June 30, 1925, was \$15,548,359, or \$19.90 per capita, as against \$19.23 in 1924 and \$4.99 in 1917. The assessed valuation of property subject to State tax was \$700,439,207. The State tax levy was \$5,058,422, or \$6.49 per capita.

**TRANSPORTATION.** The total mileage of railway line in operation at the end of 1925 was 2228. No new construction in 1926 was reported. Five miles of line between Kennebunk and Kennebunkport and 4 miles north of Caribassett were abandoned.

**EDUCATION.** The school population of the State, of ages from 5 to 21 years, was given by the State Department of Education as 243,151. Pupils enrolled, those in parochial schools not included, numbered 163,986; of this total 133,069 were enrolled in common schools and 30,917 in high schools. The year's expenditure for public education in the State totaled \$10,724,950. Salaries of teachers averaged \$980 per annum.

**CHARITIES AND CORRECTIONS.** The State Board of Charities and Corrections, a body of six appointive members created by act of 1913, inspects charitable and correctional institutions in the State, and presents recommendations as to their management. Its members constitute *ex officio* the Board of Mothers' Aid and the Board of Children's Guardians. For mothers' aid they expended \$99,591 in the fiscal year ending June 30, 1926; for child guardianship, \$274,995. The mothers' aid maintained 1635 children under 16 years of age at home with their mothers. The average monthly rate paid was \$27.12. In the work of child guardianship, the Board had custody of nearly 2000 children at the end of the fiscal year. These were placed in boarding homes and their welfare was supervised by 11 field workers.

The State maintained the following institutions in 1926: Augusta State Hospital, Augusta; Bangor State Hospital, Bangor; Central Maine Sanatorium, Fairfield; Northern Maine Sanatorium, Presque Isle; Western Maine Sanatorium, Greenwood Mountain; Bath Military and Naval Orphan Asylum, Bath; Pownal State School, West Pownal; State School for Boys, South Portland; State School for Girls, Hallowell; Maine State Prison, Thomaston; Reformatory for Men, South Windham; Reformatory for Women, Skowhegan.

**POLITICAL AND OTHER EVENTS.** At the special senatorial election on November 29, Arthur R. Gould of Presque Isle, Republican candidate, was elected U. S. Senator for the unexpired term of Bert M. Fernald, deceased, to continue until Mar. 4, 1931. He obtained a majority of approximately 50,000 votes over the Democratic candidate, Fulton J. Redman. Governor Ralph O. Brewster was reelected, September 13, on the Republican ticket as Governor for the term beginning Jan. 1, 1927. He made a declaration unfavorable to Gould a few days before the Senatorial election. All four Republican members of the United States House of Representatives from Maine were reelected in September. A constitutional amendment to forbid

use of State funds for private schools was defeated at the polls Sept. 13.

The White Star Line announced in September that it would cease using Portland as a winter terminus. Inhabitants of Kennebunk and Kennebunkport petitioned the Interstate Commerce Commission for further hearing of their pleas against abandonment by the Boston and Maine Railroad of line through their territory, but the Commission denied further hearing.

**OFFICERS,** Governor, R. O. Brewster; Secretary of State, Edgar C. Smith; Treasurer, William S. Owen; Auditor, E. D. Hayford; Attorney-General, Raymond Fellows; Commissioner of Education, A. O. Thomas; Adjutant-General, James W. Hanson; Chairman Public Utilities Commission, Charles E. Guernsey.

**JUDICIARY.** Supreme Court, Chief Justice, Scott Wilson; Associate Justices, Warren C. Phillbrook, Charles J. Dunn, Luere B. Deasy, Guy H. Sturgis, Charles P. Barnes, Norman L. Bassett and William Pattangall.

**MAINE, UNIVERSITY OF.** A co-educational State institution of higher education at Orono, Me.; founded in 1862. The enrollment for the autumn of 1926 was 1340. There were 292 members on the faculty, distributed as follows: teaching and administration, 147; experiment station, 22; agricultural extension service, 43. The productive funds of the University amounted to \$650,508.32, and the income for the year to \$845,250.67. The library had 80,000 volumes. A new laboratory for mechanical engineering, the gift of the late Oliver Crosby of the class of '76, to be known as the Crosby Memorial Laboratory, was under construction. Harold Sherburne Boardman, C.E., D.Eng., who was acting president in 1925, was inaugurated as President.

**MAIR, GEORGE HERBERT.** British journalist and at one time assistant director of the League of Nations Secretariat, died at London, England, January 3. He was born May 8, 1887, and was educated at Aberdeen University, and at Christ Church College, Oxford, where he graduated with honors. Later he studied at the Sorbonne, after which he joined the editorial staff of the *Manchester Guardian*. In 1914 he became assistant editor of the London *Daily Chronicle*, but being unfit for active service resigned, and devoted his full time to government work. In 1918 he was assistant secretary of the Ministry of Information, and in the following year director of the press section of the British Peace Delegation at Paris, France. He was made a Chevalier of the Legion of Honor in 1919, and in 1920 was honored by the British Government as Companion of St. Michael and St. George. He went to Geneva as assistant director of the League of Nations Secretariat, and returned to London as the head of the League of Nations' office in that city. Resigning his connection with the League he returned to journalism. His publications included: An edition of Wilson's *Arte of Rhetorique* (1908); *English Literature: Modern* (1911); enlarged edition of above, (1914); and many articles in papers and reviews.

**MAIZE.** See CORN.

**MALACCA.** One of the STRAITS SETTLEMENTS (q.v.).

**MALAY STATES.** See FEDERATED MALAY STATES.

**MALDIV ARCHIPELAGO.** See CEYLON.

**MALTA.** An island in the Mediterranean Sea, forming along with the adjacent islands of Gozo and Comino a British colony, lying 58

miles south of Italy and 180 miles from the African coast. Area of the island of Malta, 95 square miles; total area with Gozo and Comino, 122 square miles. Population, according to the census of April 24, 1921, 224,680, of whom the civil population numbered 213,024. Valletta is the chief town and port. There were 109 public schools with 22,741 pupils at the beginning of the school year 1924-25; a university with six faculties and 130 students; a lyceum for boys with 638 students; two secondary schools; and seven technical manual schools. Farming is the principal occupation and the chief products include: Wheat, potatoes, onions, barley, tomatoes, forage, cotton, grapes and other fruits. The value of agricultural produce in 1924-25 was £800,016. Stock-raising and fisheries are also of importance. The manufactures include lace, cotton, cigarettes, and filigree. The imports normally exceed exports, although invisible items of trade such as tourist money, the importance of the island to the British navy, and as a port of call for merchant steamers, and money sent home by emigrants tend to balance the imports and exports. The imports in 1924 were valued at £4,416,423 and the exports at £1,451,766. Most of the imports come from Great Britain and British possessions. The revenue in 1924-25 was £773,015 and the expenditure, £757,966. Executive power is in the governor and commander-in-chief, and legislative power in a legislature of two chambers. Governor and commander-in-chief at the beginning of the year, Gen. Sir W. N. Congreve; prime minister, Ugo Pasquale. The other members of the cabinet were: Public Health, Carmelo Mifsud; Public Instruction, Enrico Mizzi; Public Works, Giovanni Adami; Justice, Carlo Mallia.

**MAMMALS.** See ZOOLOGY.

**MAN, PREHISTORIC.** See ANTHROPOLOGY.

**MANAGER, CITY.** See MUNICIPAL GOVERNMENT.

**MANCE, SIR HENRY CHRISTOPHER.** British electrical engineer and inventor, died at Oxford, England, April 22. He was born at Brockley in 1840, and after being educated privately, entered the service of the Indian Government in the Persian Gulf Telegraph Department in 1863. He became engineer and electrician of the line in 1879, holding the position until his retirement in 1885. He was a keen student and inventor, particularly in the field of submarine telegraphy, his invention of "Mance's Method" for locating faults in ocean cables being familiar to electricians universally. He also designed a method of testing the internal resistance of electric batteries, as well as the heliograph which was used by the Indian Government for the rapid transmission of messages in frontier warfare. The importance of this device was recognized by Lord Roberts in the second Afghan War, and from that time became a feature of the communication equipment of the British Army, and later in other countries. Sir Henry Mance was a member of the Physical Society, and published many papers of importance on electrical subjects.

**MANCHURIA,** man-chōō'-rē-ā. A vast region in Asia, lying between the province of Chihli in China proper and the Amur River, extending eastward from the Hingan Mountains to Korea and the Usuri River; divided into the three provinces of Feng-tien, Kirin, and Heilungchiang. The total area is estimated at about 363,610 square miles and the population esti-

mates vary from slightly under 6,000,000 to almost 30,000,000. The true figure is probably around 20,000,000. Capital, Mukden, with a population of about 250,000. Other important cities are: Newchang, 65,600; Ying-K'ou, 60,000; An-lung, 74,600; and Chang-chun, 80,000.

The most important industry of the country is agriculture, the soil being among the richest in the world. Beans, millet, rice, and wheat are the chief crops. The area under cultivation is approximately 81,718,000 acres, of which beans occupy 19,193,756 acres and wheat 7,241,087 acres. Formerly the entire wheat crop was exported, but of late years the flour milling industry has grown up with the increase in the production of wheat. There are about 40 mills in operation which have an annual output of about 15,000,000 sacks. Beet-growing is also developing. Livestock interests are also considerable and hog-raising is the leading industry in the densely populated regions of the north. The mineral resources are also considerable and include coal, iron, gold, silver, lead, and asbestos. Manchuria has increased in wealth more rapidly than any other part of China, partly because of improved transportation, partly because of the great development of soya bean cultivation. In 1924 the direct foreign imports of Manchuria amounted to 126,495,474 haikwan taels, and the direct foreign exports to 208,477,112 haikwan taels.

Manchuria is traversed by the South Manchuria Railway, the Chinese Eastern Railway, and the Chinese Government Railways. Freight carried on the South Manchurian Railway increased from 13,371,589 tons in 1923-24 to 14,600,000 tons in 1924-25, and on the Chinese Eastern Railway from 2,767,350 tons in 1924 to 3,199,148 tons in 1925. Extensive railway development took place in Manchuria in 1925. The first railway construction undertaken in 1925 was a 190-mile line from Mukden to Hailung. The undertaking was semi-official and involved the construction of a standard gauge line between these two points, traversing a rich, thickly populated area, which produces beans, hemp, wheat, tobacco, and has mineral resources. Another important transportation development was the undertaking of construction of a railway from Taonan, northward to Tsitsihar, a distance of 150 miles. The line is an extension of the Supinghai-Taonan, which connects with the South Manchurian at Supinghai, north of Mukden. Considerable opposition was raised to the construction of the line because it was feared that traffic now handled by the Chinese Eastern Railway might be diverted to the new line. Contracts were let late in 1925 for the construction of the Kirin-Tunhua line, construction of which was to begin near the end of 1926. This railway, which lies entirely within Kirin province, will run a distance of 162 miles from Kirin City due east to Tunhua. The line will be an extension of the Kirin-Changchun, which joins the South Manchurian west of Changchun. The extension will tap a rich timber district and fertile agricultural country. Since 1922 Manchuria has been practically autonomous under the rule of Marshal Chang Tso-lin. In February, 1926, a conference of delegates assembled at Mukden to draft a Manchurian constitution.

**MANDATES.** See LEAGUE OF NATIONS.

**MANGANESE.** Domestic shipments of manganese ore containing 35 per cent and more of metallic manganese totaled in 1926 approximately 44,000 long tons, valued at \$1,185,000,

according to estimates of the U. S. Bureau of Mines. This was a decrease of 55 per cent from the 1925 shipments, amounting to 98,324 tons. The increase in average value per ton of all ore shipped in 1926 was due to the fact that the ratio of the shipments of chemical ore to those of metallurgical ore greatly increased. The shipments of metallurgical ore amounted to 24,200 tons, valued at \$332,000, while those of 1925 were 76,173 tons, valued at \$954,799. The shipments of chemical ore in 1926 amounted to 19,800 tons, valued at \$853,600, while those of 1925 were 22,151 tons, valued at \$902,970.

The total imports of manganese ores for the year 1926 were estimated at about 745,000 tons, as compared with 615,000 tons in 1925, an increase of 130,000 tons. This large increase may be accounted for by the decrease in imports of ferromanganese and to the increase of stocks in the United States. A portion of this during 1926 was in part due to the increase in the production of steel. The shipments of domestic ores containing from 10 to 35 per cent manganese increased in 1926 from 267,252 tons, valued at \$915,316, to approximately 366,500 tons, valued at \$1,119,000. This increase was due to the large increase in production in Minnesota and New Mexico, whereas production in Colorado and Georgia decreased. The domestic shipments of ore containing 5 to 10 per cent manganese show a decided decrease from those of 1925. This decrease was due to the fact that the Ottawa mine in Wisconsin produced 347,639 tons of ore containing only 4.8 per cent manganese in the natural state. Shipments from Minnesota increased from 741,409 tons in 1925 to 810,769 tons in 1926, and those from Wisconsin decreased from 404,014 tons containing over 5 per cent manganese to 347,639 tons containing 4.8 per cent.

**MANHATTAN ISLAND, ANNIVERSARY OF PURCHASE OF.** See CELEBRATIONS.

**MANITOBA, măn'itô'bă.** The most eastern of the Prairie Provinces of Canada, situated west of the province of Ontario and Hudson Bay and east of the province of Saskatchewan, extending from the American boundary north to latitude 60°. Area, 251,832 square miles; population, according to the census of 1921, 610,188. Capital, Winnipeg, with a population in 1921 of 179,087 (Greater Winnipeg, 230,000); Brandon, 15,359; St. Boniface, 12,821; Portage la Prairie, 6748. The movement of population in 1924 was: Births, 15,445; deaths, 5020; marriages, 4129. In 1924 there were 3980 teachers and 144,491 pupils in the 3887 public classrooms. There are 46 high schools, 9 junior high schools, 9 collegiate departments, and 12 collegiate institutes. For higher education there is the University of Manitoba at Winnipeg, with 3138 students enrolled for the full courses.

The estimated area of arable land in Manitoba is 25,000,000 acres of which about 30 per cent is under cultivation. In 1924 the mineral output consisting mainly of building material and gypsum was valued at \$1,569,571. Other important resources are forests and fisheries. In September, 1925, there were 692 grain elevators in Manitoba with a capacity of 25,120,600 bushels. The revenue in 1925 was \$7,239,520 and the expenditure, \$7,134,385. The total funded debt on April 30, 1925, \$72,066,802. The railway mileage was 4585.

The government consists of a lieutenant-governor appointed by the governor-general of

Canada and a legislative assembly consisting of 55 members elected for five years. Women have the right to vote and are eligible to parliament. Manitoba is represented in the Dominion Parliament by 6 members in the Senate and 17 in the House of Commons. Lieutenant-governor in 1926, Sir J. A. M. Aikens; prime minister, president of the council, and provincial treasurer, John Bracken; education, C. Cannon; agriculture, lands commissioner, and provincial secretary, A. Prefontaine; public works, W. R. Clubb; attorney-general and minister of telephones, R. W. Craig; municipal affairs and public utilities commissioner, D. L. McLeod.

**MANURES.** See FERTILIZERS.

**MAPOTHER, WIBLE LAWRENCE.** American railway president, died at Louisville, Ky., February 3. He was born at Louisville, Ky., Sept. 28, 1872, and after studying in public and private schools of that city, took a special commercial course at St. Mary's College. In 1888 he entered the service of the Louisville and Nashville Railroad as office boy, rising through successive grades to president of that company on Mar. 17, 1921. In 1918 he was appointed Federal manager of the United States Railroad Administration with jurisdiction over the L. & N. System, the L. H. & St. L., the N. C. & St. L., the Tenn. Central, the Birmingham and Northern Railways, and other terminal properties. Nov. 20, 1919 he was appointed Federal manager of the Atlanta & West Point Railway, and Western Railway of Alabama. He was a director on many railway boards, and also of the American Railway Association, and on the advisory committee of the American Railway Executives. His career with the Louisville and Nashville covers the extensive development of that system.

**MARATHONS.** See CROSS COUNTRY RUNNING.

**MARGHERITA, mür'gä-rë'tä** (MARIE MARGHERITA TERESA GIOVANNA DE SAVOIA). Dowager Queen of Italy, died at Bordighera, Italy, January 4. She was born at Turin, Nov. 4, 1851, the daughter of Prince Ferdinand of Savoy, Duke of Genoa, and the Princess Elizabeth, a daughter of the King of Saxony, who was an accomplished scholar. She was married Apr. 22, 1868, at Turin to her cousin, Humbert, Prince of Piedmont, and their son King Victor Emmanuel III was born at Naples, Nov. 11, 1869. On the death of King Victor Emmanuel II in January, 1878, Prince Humbert ascended the throne as Humbert I of Italy, and Queen Margherita soon established herself in the affections of the people, sharing in the popularity of the King. She participated actively in his philanthropic and charitable work, and on such occasions of national calamity as the floods of Verona and Venetia, the earthquake at Iachia, and the cholera outbreaks at Busca and Naples, she worked with the King, who devoted himself personally to relief measures. She was with the King on Nov. 16, 1878, when an attempt was made on his life, and her presence of mind, in throwing her bouquet of flowers in the face of the assassin, frustrated his attack. The King was finally murdered, at Monza, July 29, 1900, by an anarchist. Queen Margherita possessed a charm of manner and a sweetness of disposition which endeared her to the Italian people, and during her widowhood she continued various philanthropies and social activities.

**MARIE, QUEEN OF RUMANIA.** See RUMANIA.

**MARIETTA COLLEGE.** A non-sectarian co-educational college at Marietta, O.; founded in 1835. The fall term of 1926 had a total registration of 357 students, of whom 217 were men, and 140 women. The faculty numbered 31, an addition of three new members since 1925. The productive funds amounted to \$1,253,017.95 and the income for the year to \$143,999.91. In 1925 the library contained between 89,000 and 90,000 volumes. A new building was constructed during the year for the Betsy Mills Club, containing a fully equipped women's gymnasium with swimming pool. It was planned to use this gymnasium as a centre for the physical education work of the young women of the college. Towards a new men's gymnasium \$25,000 was given and \$10,000 to the scholarship funds. The alumni contributed \$9000 during 1925 through the Revolving Fund. President, Edward Smith Parsons, A.M., L.H.D.

**MARINE DISASTERS.** See SAFETY AT SEA.

**MARINE ENGINES.** See INTERNAL COMBUSTION ENGINES; SHIPBUILDING.

**MARINE INSURANCE.** See INSURANCE.

**MARITIME LAW.** See INTERNATIONAL LAW.

**MARITIME PROVINCES.** The name applied to the three Canadian provinces of Nova Scotia, New Brunswick, and Prince Edward Island (qq.v.).

**MARKETS, MARKETING.** See AGRICULTURE.

**MARKLEY, ALFRED COLLINS.** American soldier, died at Alton, Ill., August 25. He was born at Doylestown, Pa., Apr. 18, 1843, and was educated in Philadelphia, Pa., entering the Union Army with the Twenty-fifth Pennsylvania Infantry in 1862. He served in various Pennsylvania regiments, and in 1864 became second lieutenant of the One Hundred and Twenty-seventh United States Colored Infantry, being mustered out on October of the following year. On July 28, 1866, he was appointed second lieutenant of the Forty-first United States Infantry of the regular army, and served through successive grades to brigadier-general, being retired Apr. 18, 1907. In addition to his services in the Civil War, he was with the Army of Observation on the Rio Grande under General Sheridan in 1865, in frontier service against the Indians, 1867-80, served in Cuba in the Spanish-American War, June-August, 1898, and was commanding officer with the Twenty-fourth Infantry that volunteered to go to the yellow fever camp at Siboney for hospital and other service. Later General Markley commanded Fort D. A. Russell, Wyoming, and Vancouver Barracks, Washington, until December, 1899, when he was ordered to the Philippines, serving until 1902, when he returned to the United States to command Fort McDowell. He returned to the Philippines Oct. 5, 1905, and commanded Fort William McKinley at Manila.

**MARQUETTE UNIVERSITY.** An institution of higher education under Roman Catholic direction at Milwaukee, Wis.; founded in 1907. It comprises the following departments: Arts and Sciences, Applied Science and Engineering, Dentistry, Law and Economics, Journalism, Medicine, Conservatory of Music, Training School for Nurses, Hospital Administration, Business Administration. The enrollment for the autumn of 1926 was 2748 regular students, distributed as follows: arts and sciences, 871; graduate school, 104; business administration, 322; dentistry, 295; engineering, 456; journalism, 113; law, 196, medicine, 341; music, 27;

speech, 23. In addition there were 368 students in night courses in business administration, 26 in dental hygiene, 512 in the high school, 18 in the College of Hospital Administration, 343 in the Music Academy, 11 in the night law school, 94 in nursing courses, and 317 in teachers' course, making a grand total of 4,437 for the University. The registration for the 1926 summer session was 727. The faculty had 373 members, 64 being additions during the year. Endowment funds amounted to \$2,604,761.57, and the income for the year to \$1,055,907, from the following sources: endowment income, \$148,614; tuition, \$718,508; for increase in plant, \$585; for increase of endowment, \$158,101; for current expenses, \$4225; miscellaneous, \$25,874. Marquette University also enjoys the service of Jesuit instructors and administrative officers who receive their maintenance only. The value of their services over their maintenance for 1925-26 was estimated at \$119,500. The library contained 47,150 volumes. In 1926 the School of Speech was organized under the directorship of Prof. William R. Duffey. President, Rev. Albert C. Fox, S.J., M.A., LL.D.

**MARRIAGE AND DIVORCE.** A falling marriage rate and an increasing divorce rate in the United States were indicated by the report on marriages and divorces issued by the Department of Commerce in November, 1926. The figures are for the years 1924 and 1925, and show that while the marriage rate dropped from 10.4 per thousand population to 10.2, the divorce rate went up from 1.50 per thousand to 1.52. While the statistical changes were too small to give any cause for alarm, they indicated the trend of the times—a trend, which as stated in the 1925 YEAR BOOK was based on economic, moral, and religious conditions.

The theory that extensive publicity for divorce suits is a deterrent was beginning to be abandoned. In England in December, a bill passed the House of Commons on the third reading providing for the limiting the reports of divorces in the press. This was in line with the policy that had been practiced in France. There the newspapers mention only the names of the parties but give no details as to the testimony. Such a policy does not necessarily lead to less divorce, but is perhaps preferable on other grounds. A similar proposal has never been taken seriously by the various American State legislatures.

The total number of marriages in the United States for 1925, was 1,181,838, and the total number of divorces for that year was 175,495. The number of marriages increased by 3520, or 0.3 per cent, the number of divorces increased by 4543 or 2.7 per cent. In the meantime the estimated population increase was 1.5 per cent, so that the marriage increase was one-fifth of the population increase while the divorce increase was double the population rise. See table on Page 454.

**MARTIN, THOMAS F.** Secretary of State of New Jersey, died at Weehawken, N. J., July 20. He was born at Hartford, Conn., Jan. 30, 1868, and entered the publishing business through learning the printing art in Vermont. Going to New York he became a reporter on the *Hudson Dispatch*, a newspaper published in northern New Jersey, and in 1901 transformed that paper from a weekly into an afternoon daily. Along with his editorial and publishing work, Mr. Martin became active in politics and

## MARRIAGE AND DIVORCE IN THE UNITED STATES, 1924 AND 1925

	Marriages		Per cent of increase *	Number per 1000 of the population		Divorces		Per cent of increase *	Number per 1000 of the population

\* A minus sign denotes decrease.

<sup>b</sup> South Carolina grants no divorces, for any cause.

in 1911 was elected to the Assembly, being re-elected for several years, serving as minority leader in 1915. He was appointed Secretary of State by Governor Fielder in 1915, a post made vacant by the death of Joseph H. Crater, and in 1920 was reappointed by Governor Edwards, and again in 1925 by Governor Silzer. During his service in the New Jersey Assembly he was aligned with the anti-Wilson forces, supporting former United States Senator James Smith in his unsuccessful fight for the Senatorship against James E. Martine. Active and successful in many political contests in New Jersey, his last efforts were to secure the consolidation of the seven municipalities in North Hudson County. Largely as a result of his efforts West Hoboken and Union Hill became Union City in 1924.

**MARTINIQUE**, mārtē-nēk'. One of the Lesser Antilles group of the West Indies, forming a colony of France. Area, 385 square miles; population, according to the census of 1921, 244,439. Capital and chief port, Fort-de-France, with a population of 26,399. Sugar, rum, cacao, coffee, tobacco, pineapples, and bananas are the chief products of the colony. In 1925, 40,000 tons of sugar, 3,707,900 gallons of rum, and 281 tons of cocoa beans were exported. The foreign trade of Martinique for the first nine

months of 1926, amounted to approximately \$10,455,270, as compared with \$12,814,050 for the same period of 1925. The colony is administered by a governor and a general council, and an elected municipal council; it sends one senator, two deputies, to the French Parliament.

**MARVIN**, WINTHROP LIPPITT. American steamship official, died February 3. He was born at Newcastle, N. H., May 15, 1863, and graduating from Tufts College in 1884, became a reporter on the *Boston Advertiser* until 1886, when he became connected with the *Boston Journal*, serving as associate editor and chief editorial writer from 1895-1903. He was a member of the Massachusetts Civil Service Commission in 1901-04, and in the latter year became secretary of the U. S. Merchant Marine Commission at Washington. From 1905-09 he was active in connection with ocean shipbuilding and shipowning interests, and in 1909 was treasurer of the National Association of Wool Manufacturers and also secretary-treasurer of the Woolen Goods Exchange. In 1919 he became vice-president and general manager of the American Steamship Association.

**MARYLAND**. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,449,661. The estimated

population on July 1, 1926, was 1,580,000. The capital is Annapolis.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1926	554,000	22,049,000	\$14,111,000
	1925	554,000	24,980,000	17,451,000
Wheat,	1926	520,000	11,960,000	15,548,000
	winter 1925	495,000	10,395,000	15,696,000
Hay, tame	1926	398,000	516,000 <sup>a</sup>	10,320,000
	1925	416,000	577,000 <sup>a</sup>	10,963,000
Tobacco	1926	32,000	28,800,000 <sup>b</sup>	6,221,000
	1925	30,000	24,690,000 <sup>b</sup>	4,691,000
Potatoes	1926	41,000	3,690,000	5,904,000
	1925	37,000	2,701,000	5,240,000
Sweet potatoes	1926	11,000	1,815,000	1,361,000
	1925	9,000	1,161,000	1,974,000

<sup>a</sup> tons, <sup>b</sup> pounds.

**MINERAL PRODUCTION.** Coal, the State's leading mineral product, was produced in 1925 to the total quantity of 2,514,000 short tons. Production in 1924 was 2,133,703 short tons, valued at \$4,629,000. Clay products attained a value of \$3,973,074 in 1924, and of \$4,909,098 in 1923. Production of sand and gravel was 2,418,137 short tons in 1924 and 2,044,490 short tons in 1923; in value, \$2,308,813 in 1924 and in 1923 \$2,155,383. Stone, pig iron, slate, lime, talc, feldspar and potash were produced in commercial quantities in 1924. The total value of the State's mineral products, duplications eliminated, amounted to \$18,506,867 in 1924 and \$21,189,542 in 1923.

**FINANCE.** As summarized by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending Sept. 30, 1925, were \$16,395,828. Their per capita rate was \$10.69, as against \$9.47 in 1924 and \$5.49 in 1917. Their total included \$3,212,772 for education, apportioned among minor State divisions. Expenses totaling \$95,339 for public service enterprises, \$1,427,420 for interest on public debt and \$6,170,118 for permanent improvements, added to payments for the maintenance and operation of State departments, made the total of State payments \$24,088,705. For highways was expended the sum of \$9,019,682, of which \$3,519,888 was for maintenance and \$5,499,974 for construction.

Revenue receipts of the State were \$22,813,392, or \$14.88 per capita. They exceeded by \$4,894,805 the total payments except those for permanent improvements, and were \$1,275,313 less than the total with these included. Payments in excess of revenue were met from the proceeds of debt obligations. Property and special taxes formed 31.3 per cent of the total revenue in 1925, as against 32.4 per cent in 1924 and 43.1 per cent in 1917. Their per capita rate was \$4.66 in 1925, \$4.44 in 1924 and \$3.10 in 1917. Earnings of the general departments and compensation for officials' services furnished 17.6 per cent of the 1925 revenue; business and non-business licenses, 35.7 per cent. State license receipts were derived chiefly from taxes on incorporated companies and on gasoline sales and from the licensing of motor vehicles. The net indebtedness of the State on Sept. 30, 1925, was \$21,803,235, or \$14.22 per capita, as against \$14.94 in 1924 and \$14.34 in 1917. The assessed valuation of property subject to State tax was \$2,060,596,615. The State tax levy was \$5,213,634, or \$3.40 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 1447. No new construction and no abandonment of moment were reported.

**EDUCATION.** The school enrollment in 1926 was stated to be 263,249, that of whites being 214,084 and that of colored pupils 49,165. In the common schools were enrolled 184,148 whites and 46,408 colored, a total of 230,556; in the high schools, 29,936 whites and 2757 colored, a total of 32,693. Current expenses for public education in the State in 1926 amounted to \$22,511,324, capital outlay and debt service included. Salaries of all teachers in the schools averaged \$1348; those of white teachers, \$1432; those of colored teachers, \$914.

**CHARITIES AND CORRECTIONS.** Several State agencies share direction of charitable, health, welfare and penal activities. In the Department of Welfare is the Board of Welfare, successor of the former Board of Prison Control, administering the Maryland Penitentiary and the House of Correction. Under this department are also four State hospitals, a training school and a Board of Mental Hygiene. A second department, the Department of State Charities, includes a Board of State Aid and Charities, commissioned to consider all matters of State aid to public and private institutions, and to enforce welfare laws as to children, notably the law prohibiting separation of babies from mothers during the first six months of life. Under this department are three State tuberculosis sanatoria. The chief State institutions in 1926 were: Maryland Penitentiary, Baltimore; House of Correction, Jessups; Crownsville State Hospital; Eastern Shore State Hospital, Cambridge; Rosewood State Training School, Owings Mills; Spring Grove State Hospital, Catonsville; Springfield State Hospital, Sykesville; Maryland Tuberculosis Sanatorium, at Sanatorium, Md.; Maryland School for Deaf and Dumb, Frederick; Maryland Training School for Boys, Loch Raven; Montrose School for Girls, Woodensburg. About 100 non-State institutions received State cash aid in 1926.

**POLITICAL AND OTHER EVENTS.** At the general election on November 2, Gov. Albert C. Ritchie, Democratic nominee for reelection, was elected Governor for a third term, commencing Jan. 1, 1927. He defeated by a majority of approximately 20,000 votes the Republican candidate, Mullikin. Millard E. Tydings, Democratic candidate, was elected to the U. S. Senate for the six-year-term. He defeated the incumbent, Sen. Ovington E. Weller, who was the Republican candidate. Shortly before the election the Association Against the Eighteenth Amendment withdrew an indorsement, previously given, of Senator Weller.

The other chief State officers elected November 2, to take office in 1927, were: Attorney General, T. H. Robinson (Rep.) reelected; Comptroller, W. S. Gordy, Jr., (Dem.) reelected.

Fort McHenry near Baltimore, famous for its connection with the writing of the patriotic poem "The Star Spangled Banner," was declared a national monument.

**OFFICERS.** Governor, Albert C. Ritchie; Secretary of State, David C. Winebrenner, 3d.; Treasurer, J. M. Dennis; Auditor, L. M. Milbourne; Comptroller, William S. Gordy, Jr.; Attorney-General, T. H. Robinson; Superintendent of Schools, Albert S. Cook.

**JUDICIARY.** Court of Appeals: Chief Judge, Carroll T. Bond; Associate Judges: John R. Patterson, T. Scott Offutt, Wm. H. Adkins, Francis N. Parke, Hammond Urner, W. M. Digges, D. Lindley Sloan.

**MARYLAND, UNIVERSITY OF.** An institution of higher education at College Park and Baltimore, Md.; founded in 1807. The enrollment for the fall term of 1926 was 3156, distributed as follows: agriculture, 120; arts and sciences, 494; dentistry, 391; education, 127; engineering, 229; graduate school, 78; home economics, 46; pharmacy, 275; law, 439; medicine, 370; nursing, 110. The enrollment for the 1926 summer school, held at College Park, was 477. The faculty in 1926 numbered 450. The total income from appropriations and other receipts amounted to \$2,087,173.16. The library contained 42,089 volumes. During the year progress was made on the construction of a new dining hall and a science building. President, Raymond A. Pearson, M.S., D.Agr., LL.D.

**MASINI, ANGELO.** A celebrated Italian dramatic tenor, died in Forli, September 29. He was born there, in 1843, and received his vocal training, also in his native city, from Gilda Minguzzi. After five years of earnest study he made his debut at Modena, in 1867, as Pollione in Bellini's *Norma*, winning instant success. But he was not satisfied, and after two years of further study he appeared again at Bologna in Donizetti's *Don Sebastiano*. From then on his career was an uninterrupted succession of triumphs through Italy, South America, in Madrid, Vienna and Petrograd (Leningrad). In the last named city he was for many seasons the chief attraction at the Italian Opera, his position there being in many respects similar to that held by Caruso later at the Metropolitan Opera House. He was a close friend of Verdi, of whose works he was an unsurpassed interpreter. Of all the world-famous tenors he is the only one who never was heard on the operatic stage of any English speaking country. In London he appeared only once, in 1875, at the special request of Verdi, when the latter conducted the English premiere of his *Requiem*. Masini retired about 1900, devoting himself to scientific agriculture in his native town and to works of charity. By his will he left half a million lire to various institutions in Forli, and the same amount to the Verdi Home for aged musicians in Milan.

**MASON, GEORGE.** DECLARATION OF RIGHTS ANNIVERSARY OF. See CELEBRATIONS.

**MASSACHUSETTS. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,852,356. The population by the State census of 1925, was 4,144,205. The estimated population on July 1, 1926, was 4,197,000. The capital is Boston.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Hay, tame	1926	475,000	594,000 "	\$14,197,000
	1925	471,000	628,000 "	14,398,000
Potatoes	1926	18,000	2,015,000	3,627,000
	1925	14,000	1,960,000	4,802,000
Corn	1926	45,000	2,160,000	2,484,000
	1925	43,000	2,150,000	2,865,000
Tobacco	1926	6,500	9,412,000 "	3,294,000
	1925	8,600	10,690,000 "	1,710,000
Cranberries	1926	14,000	430,000 "	2,752,000
	1925	14,000	429,000 "	4,826,000

" tons, " pounds, " barrels.

**MINERAL PRODUCTION.** Stone, the leading mineral product, attained a total production of 1,936,520 tons in 1924, as against 1,788,860 in 1923; in value, \$6,063,048 in 1924 and \$5,794,941 in 1923. Clay products of the State were valued at \$3,859,253 in 1924 and \$4,194,855 in 1923. Lime was produced to the quantity of 195,000 (estimated) short tons in 1925 and 194,402 short tons in 1924; and to the value of \$2,520,000 (estimated) in 1925 and \$2,693,028 in 1924. Sand and gravel and coke were also produced. The total value of the State's mineral products, duplications eliminated, was \$15,725,882 in 1924; in 1923, \$14,781,129.

**FINANCE.** As summarized by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending Nov. 30, 1925, were \$38,552,955. Their per capita rate was \$9.30, as against \$10.29 in 1924 and \$6.64 in 1917. Their total included \$2,178,062 for education, apportioned among the minor State divisions. Expenses totaling \$184,501 for public service enterprises, \$1,754,203 for interest on debt and \$5,699,440 for permanent improvements, added to payments for maintenance and operation of the State departments, made the total of State payments \$46,191,099. For highways was expended the sum of \$9,826,476, of which \$5,872,381 was for maintenance and \$3,954,095 for construction.

Revenue receipts of the State were \$50,655,017, or \$12.22 per capita. They exceeded by \$10,163,358 the total payments except those for permanent improvements, and furthermore, exceeded by \$4,463,918 the total with these included. Excess of receipts was reflected in reduction of debt, purchase of investments and increased cash balances. Property and special taxes formed 49.6 per cent of the total revenue in 1925, as against 54.4 per cent in 1924 and 66.3 per cent in 1917. Their per capita rate was \$6.06 in 1925, \$6.65 in 1924 and \$5.49 in 1917. Earnings of the general departments and compensation for officials' services furnished 6.1 per cent of the 1925 revenue; business and non-business licenses, 25.4 per cent. State license receipts were derived chiefly from taxes on incorporated companies and from the licensing of motor vehicles.

The net indebtedness of the State on Nov. 30, 1925, was \$25,211,217, or \$6.08 per capita, as against \$6.51 in 1924 and \$8.93 in 1917. The assessed valuation of property subject to State tax was \$6,632,755,277. The State tax levy was \$12,000,000, or \$2.90 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 2071. No new construction of moment took place in 1926. Five short lines abandoned by the Boston and Maine had an aggregate length of 32 miles, and 2 lines abandoned by the New York, New Haven and Hartford had a combined length of 5 miles.

**EDUCATION.** Increasing activity of the State normal schools brought their enrollment to the highest total ever attained. It was estimated that owing to the increase in the recent numbers of normal school students the State was in a position to furnish teachers of standard training for all the needs of the public schools. The public elementary and high schools (day-time) of the State had in the school year 1925-1926 an enrollment of 721,702 pupils, the average

membership of the day high schools alone being 121,947. Expenditures for schools in the year were \$59,894,839 for support and \$14,474,287 for outlay.

**CHARITIES AND CORRECTIONS.** The Department of Public Welfare, Richard K. Conant, commissioner in 1926, administers mothers' aid and other forms of State assistance, care of dependent, neglected and delinquent children, supervises housing and private charitable organizations, and has supervision of almshouses. It reported the population of State institutions as being, Dec. 1, 1926, as follows: State Infirmary, Tewksbury, 2451; Hospital School for Crippled and Deformed Children, Canton, 305; Lyman School for Boys, Westborough, 473; Industrial School for Girls, Lancaster, 272; Industrial School for Boys, Shirley, 303.

**LEGISLATION.** There was enacted a motor vehicle liability and security law, to go into effect Jan. 1, 1927. It required all persons applying to register a motor vehicle to meet contingent liability for damage committed, in one of three ways. They might provide a motor vehicle liability insurance policy, a liability bond or a deposit with the highway commission of cash or securities to the value of \$5000.

**POLITICAL AND OTHER EVENTS.** In the general election November 2, Alvan T. Fuller, Governor, was reflected on the Republican ticket. For the unexpired term as U. S. Senator terminating Mar. 3, 1929, David I. Walsh, former Senator, running as Democratic candidate, was elected, defeating the Republican candidate, Senator William M. Butler, who held the place by interim appointment. Senator Butler had the support of President Coolidge, who issued a statement representing his election as desirable to the administration. The approximate lead of Walsh in the popular vote was 55,000 over Butler; that of Fuller, 188,000 over the Democratic candidate, W. A. Gaston.

Other State officers elected November 2 for the ensuing term were: Lieutenant Governor, Frank G. Allen; Secretary, Frederic W. Cook; Treasurer, William S. Youngman; Auditor, Alonzo B. Cook; Attorney General, Arthur K. Reading. A constitutional amendment to provide elective town meetings in corporate towns of more than 6000 was approved at the polls.

Governor Fuller in his annual message to the Legislature urged extensive amendment of the criminal laws, January 6. In the city of Boston, Malcolm E. Nichols, the first Republican mayor since 1909, was inaugurated January 4. After the November election counsel for the Liberal Civic League communicated with Chairman James A. Reed of the U. S. Senate campaign investigation committee, and offered data on alleged excessive campaign expenditures of the Republican State Committee, asserting the liabilities of this committee to have been about \$235,000. Steps were taken late in the year toward the permanent closing of the mills of the Otis Company at Ware, in the early summer of 1927. The officers of the company, dispensing a payroll of approximately \$100,000 a month in Ware, asserted that they could not meet the lower cotton knitting costs of the mills in the South.

A bill was filed with the Massachusetts House of Representatives to provide public funds for advertising the commercial, recreational and industrial advantages of the State. The State

claimed right, in a proceeding before the U. S. Supreme Court, to all lands under the waters of Lakes Ontario and Erie, lying within the bounds of New York State, as riparian owner; likewise to beds of lakes in Western New York. Miss M. S. Donaldson, the first woman to act as presiding officer of the lower house of the legislature, held that position temporarily in February. The policy of giving military training in high schools was opposed by some principals, and formed a topic of controversy. A committee on militarism in education rendered a report June 2, denouncing the practice. The Supreme Court upheld, July 10, the right of the State to tax securities of corporations of other States, held under trust in Massachusetts.

The case of Nicola Sacco and Bartolomeo Vanzetti, under conviction for murder of a paymaster and guard in 1920, and a subject of radical agitation against the American authorities in many countries, came before the State Supreme Court on appeal, January 11. The court, May 12, denied a new trial. Further motion for a new trial adduced an alleged confession made by C. F. Madeiros, then under sentence of execution, as tending to overthrow the case against the two defendants; the withholding of files of the U. S. Department of Justice bearing on the case was represented as indicating a plot on the part of Federal authorities to obtain a conviction. Justice Thayer denied a new trial October 23.

**OFFICERS.** Governor, A. T. Fuller; Lieutenant Governor, F. G. Allen; Secretary of State, F. W. Cook; Treasurer, W. S. Youngman; Auditor, A. B. Cook; Attorney-General, Jay R. Benton; Commissioner of Education, Rayson Smith; Commissioner of Public Welfare, Richard K. Conant.

**JUDICIARY.** Supreme Court: Chief Justice, Arthur Prentice Rugg; Associate Justices: Henry King Braley, John Crawford Crosby, Edward Peter Pierce, James Bernard Carroll, William C. Waite, George A. Sanderson.

**MASSACHUSETTS INSTITUTE OF TECHNOLOGY.** A non-sectarian institution for technical education at Cambridge, Mass.; founded in 1861. The enrollment for the autumn of 1926 was 2671, including 362 graduate and 33 unclassified students. For the summer session the registration was 1470. There were 188 members on the faculty, and 265 others on the staff of the Institute. The productive funds amounted to \$28,009,340.50, and the income for the year to \$2,831,567.73, from various sources, as follows: funds, \$1,526,953.93; student fees, \$955,250.95; miscellaneous, \$349,302.85. The book value of land and buildings in Boston and Cambridge was \$12,620,469.84. The library contained 172,000 volumes. During the year regular four-year courses were established in Aeronautical Engineering and in Building Construction, leading to the degree of Bachelor of Science. President, Samuel Wesley Stratton, D.Eng., D.Sc., Ph.D., LL.D.

**MASSEY, CHESTER D.** Canadian manufacturer and philanthropist, died at Toronto, Canada, June 2. He was born in Haldimand Township, Northumberland, Ontario, Canada, June 17, 1850, and after receiving a common school and business school education, entered the Massey-Harris Company, manufacturers of agricultural implements at Toronto, a firm founded by his father, Hart A. Massey. He became president of

this company in 1901, and was honorary president in 1903. He devoted his life and wealth extensively to religious and educational enterprises. He was chairman of the Massey Foundation which he established, and to the Metropolitan Methodist Church of Toronto, he gave an endowment for the parsonage, and a carillon of bells. He also gave to the village of New Castle, Ontario, the home of his boyhood, a fully equipped community house.

**MASTBAUM, JULES E.** An American moving picture producer, died at Philadelphia, Pa., December 7. He was born in 1872, and graduating from the Philadelphia public schools, and the Wharton School of the University of Pennsylvania, became a buyer for the Milwaukee store of Gimbel Brothers. He came to Philadelphia and, associating himself in the real estate business with Felix Isman, became active in this field. Later he founded the real estate firm of Mastbaum Brothers and Fleisher, and early in the days of the photoplay industry he became an exhibitor, leasing a theatre and showing one-reel pictures. His brother, Stanley, and a third partner acted with him in this enterprise, which gradually developed until there was organized the Motion Picture Company of America, which later developed into the Stanley Company. This company had a phenomenal growth, not only building a number of new theatres in Philadelphia and vicinity, but extending its chain into other states from upper New York to Virginia, and as far west as Ohio. This company also became allied with the Keith vaudeville interests. Mr. Mastbaum was interested in a Rodin Museum, a memorial to the great sculptor, and intended as a gift by him to the City of Philadelphia. He had acquired a vast collection of works of Rodin for this museum, the erection of which it was understood would be continued.

**MATERNITY PROTECTION.** President Coolidge in his annual budget message to Congress expressed himself as in favor of extending the provisions of the Sheppard-Towner Act until 1929. The law, which provided for Federal subsidies to States subscribing for the programme of maternity protection, would expire in 1927, unless its provisions were renewed. In recommending the proposed legislation extending the operation of this law, the President said, however, that it was "with the understanding and hope that the administration of the funds to be provided would be with a view to the gradual withdrawal of the Federal Government from this field, leaving to the States, which have been paid by Federal funds and schooled under Federal supervision, the privilege and duty of maintaining this important work without aid or interference from the Federal Government."

During the fiscal year 1926, 43 states and Hawaii accepted the provisions of the Sheppard-Towner Act. The maximum amounts available from Federal maternal and infancy funds from the 1925 and 1926 appropriations aggregated \$1,201,725.96. The various States accepted from the 1925 appropriation \$935,318.57, and from the 1926 appropriation \$857,796.75.

A conference of the State directors of maternity and infant hygiene was held at the Children's Bureau of the U. S. Department of Labor in January. Prominent obstetricians and pediatricians took part in the programme of the

conference, and discussed such subjects as the relation of statistical studies to maternity and infancy work, the education of public opinion, and a practical state programme in prenatal care. Through the agency of the bureau two educational bulletins have been prepared: *Standards for Physicians Conducting Conferences in Child-Health Centres*, and *Standards of Prenatal Care—An Outline for the Use of Physicians*. The second of these bulletins was used by three medical schools in their class work.

The report of State activities showed that the 43 states and the Territory of Hawaii co-operating under the Federal law held 1945 combined prenatal and child-health conferences, 15,524 child-health conferences, and 2686 prenatal conferences. Examinations were made at these conferences of 10,554 prospective mothers and of 159,244 infants and pre-school children. One hundred and thirty-five combined prenatal and child-health centres were established, as were also 140 child-health centres and 8 prenatal centres.

The statistical division of the Children's Bureau has collected information showing the comparative infant and maternity mortality rates in Europe and in the United States. "Six foreign countries," says the report, "have a lower infant mortality than the United States, according to the rates for 17 countries available for 1923. Foreign statistics for later years are not complete, but the trend of infant mortality in the United States has shown a marked improvement. The provisional rate of 72 announced for the United States birth-registration area for 1925 indicates that the reduction made in 1924 has been maintained."

**MAURITANIA.** A French colony in French West Africa (q.v.), consisting of eight districts: having the status of a colony since Jan. 1, 1921. Area, 347,400 square miles; native population, 284,399, mostly Moorish Mohammedans; European population, about 300. The budget for 1925 was 6,400,431 francs. The colony is under a lieutenant-governor, subject to the governor-general of French West Africa.

**MAURITIUS,** ma-rish'its. An island possession of Great Britain in the Indian Ocean, situated 500 miles east of Madagascar, which, with its dependencies of Rodrigues, Diego Garcia, the St. Brandon group of six islands, and other small islands, forms a colony of the British crown. Area of Mauritius, about 720 square miles; population, according to the census of 1921, 385,074. The estimated population at the end of 1924 was 387,743. Capital, Port Louis, with a population of 53,215 in 1924 (including suburbs). In recent years the greater part of Port Louis has passed from the hands of the Europeans to Asiatic or Chinese hands. The movement of population in 1924 was: Birthrate, 39.6 per thousand (exclusive of Indians); death-rate, 27.5 per thousand (also exclusive of Indians). Primary education is free but not compulsory. At the end of 1924 there were 57 government schools, 93 aided schools, and three technical schools. The average attendance in government schools in 1924 was 9343, in aided schools, 13,283, more than three-fourths of whom were in Roman Catholic schools. In 1924 the exports were valued at £3,485,502 and the imports at £5,094,376. The staple exports are sugar, aloe fibre, and coconut oil. The principal participants in the foreign trade are the United Kingdom,

the British possessions, France, and the islands of Réunion and Madagascar. The registered shipping on Jan. 1, 1925, was 23 vessels of 5612 tons. Vessels entered in 1924, 215 of 487,282 tons; vessels cleared, 210 of 480,927 tons, the greater part of each being British. Railway mileage, 144, of which 24 miles are narrow gauge. There is cable connection with Australia, South Africa, and the islands of Madagascar, Zanzibar, and Réunion. The colony is under a governor aided by an executive council and a council of government, the latter having a minority of elected members. Governor in 1926, Sir Herbert James Read.

**MAYOTTE**, mā-yōt', **AND COMORO ISLANDS**. An archipelago belonging to France and administered by the governor-general of Madagascar. Total area, about 790 square miles; population in 1921, 109,860; in 1925, 119,305. The area of Mayotte is 140 square miles, and the population (1925) about 12,674. In late years there has been a decided tendency to emigrate to Madagascar and Zanzibar. Vanilla is one of the chief products. Others are sugar, cacao, aloes, and perfumes. The chief imports into the islands are cotton fabrics, metals, and rice; the principal exports, hides, sugar, copra, and vanilla.

**MEASLES**. Since measles in private practice is a disease almost without mortality there would appear to be no need of a preventive serum and of wholesale immunization. In founding hospitals on the other hand measles is a grave and much dreaded disease because half the patients may die from terminal bronchopneumonia. Since no microorganism has as yet been found to cause measles we can only make preventive use of the serum of convalescent patients, and this means a crude substance which cannot be standardized. Convalescent serum has been in use off and on for over thirty years and since 1920 a serum prepared by Degwitz has been employed on a large scale. The disease is not invariably prevented, but when it appears runs a mild course. The blood is taken anywhere between the seventh and seventeenth day after convalescence sets in, and is injected into the muscles after the usual precautions. Degwitz claims a prevention of 85 per cent of cases, which is probably exaggerated.

Since 1921 the same principle has been carried out in the Hospital for Contagious Diseases, New York City, for children in the wards who have been exposed to contagion (Park and Freeman, *Journal of the American Medical Association*, August 21). A grant of money by the Metropolitan Life Insurance Co. has made it possible to provide sufficient serum to immunize all of the exposed inmates in the children's institutions of the metropolis under the age of three years. The figures in institutional children were: 11 per cent of those treated developed modified measles and 5 per cent unmodified measles. This means some success in 95 per cent and complete success in 84 per cent. For control purposes the serum was tested in private practice with a less favorable showing. Here no less than 42 per cent developed modified measles while 5 per cent developed the unmodified form. Hence while there was some success in 95 per cent as in the institutions, children complete success was obtained in but 52 per cent. The total number of children who received the immunizing treatment was 970.

**MEAT**. See **LIVESTOCK**.

**MECHANICAL ENGINEERS, AMERICAN SOCIETY OF**. An organization founded in 1880 and incorporated in 1881 under the laws of the State of New York, with the following objects: to promote the arts and sciences, to encourage original research, to foster engineering education, to advance the standards of engineering, to promote the intercourse of engineers among themselves and with allied technologists, and, in coöperation with other engineering societies, to broaden the usefulness of the engineering profession. The Society conducts a broad programme of research and is a member of the American Engineering Standards Committee, the national clearing-house for engineering and industrial standardization. Under the procedure of this committee the Society was engaged in 1926 in twenty-four standardization projects. Other important projects on which it was working were the formulation of test codes for power plants and heat apparatus, and the formulation of standard specifications for the construction of steam boilers. The Society conducts meetings at the headquarters and at the local sections throughout the country. There were sixty-eight of these sections in 1926 and fourteen professional divisions. The publications of the Society include *Mechanical Engineering*, the journal; *Transactions*, the annual volume of papers of permanent value; *The Engineering Index*, an index to the technical press of the world; *Condensed Catalogues of Mechanical Equipment*; the *A. S. M. E. News*, the semi-monthly newspaper; and the *Year Book*. In November, 1926, the membership was about 18,000. Officers for 1926-27 were: president, Charles M. Schwab; vice-presidents, A. G. Christie, W. T. Magruder, Roy V. Wright, H. V. Coes, Charles L. Newcomb, E. O. Eastwood, Edwards R. Fish; managers, John H. Lawrence, Edward A. Muller, Paul Wright, Robert L. Daugherty, William Elmer, Charles E. Gorton, Paul Doty, Ralph E. Flanders, Conrad N. Lauer; treasurer, Erik Oberg; secretary, Calvin W. Rice. Headquarters are located in the Engineering Societies Building, 33 West 39th Street, New York City.

**MEDICINE AND SURGERY**. The subjects considered in the present YEAR BOOK are of medical rather than surgical interest and this is the general rule rather than the exception for the majority of the great social maladies have only an incidental surgical importance. One of the most far reaching surgical subjects of the day is that which involves the surgical division of the sympathetic nervous system in some one of its anatomical relationships for the cure or relief of various obstinate affections which are not amenable to ordinary therapeutic resources. Opinions differed notably among surgeons as to immediate and end results of

these operations and the amount of harm they may incidentally bring about, but there was a consensus of opinion among the majority that these operations were devoid of a sound theoretic or physiological basis and that it is far too soon to lay down the proper indications and technic. Among the diseases alleged to be benefited by these operations are angina pectoris, various diseases of the extremities, and the rigid spinal paralyses.

Among the acute contagious diseases the interest still centred about scarlet fever and diphtheria, and among surgical affections those of the gall bladder were chiefly conspicuous, because of the great activity in the new method of diagnosis by the Röntgen rays and of the constantly increasing use of the so-called method of non-surgical drainage in which the duodenal bucket and sound are employed both for diagnosis and treatment.

Study of abnormal psychology and psychoanalysis continued to show the omnipresent tendency of mankind to regress to more primitive and infantile mentality, not only as to psychopathy and insanity but in the daily life of the people, their outlook on life, their recreations, their politico-religious beliefs, their preference for the pseudo-sciences and indifference and distrust toward science itself. See articles listed above under MEDICAL RESEARCH; PSYCHO-ANALYSIS; PSYCHOLOGY.

**MEGATA, BARON TANETARO.** Japanese Government official and financial adviser, died in Tokyo, September 10. He was born in Japan in 1851, two years before Commodore Perry entered Tokyo Bay, and thus saw his nation pass through the most stirring times from feudalism to its wholesale adoption of Western forms of civilization. He was one of the first, if not actually the first, of the students sent by the Imperial Government to the United States, and he was the first Japanese to graduate from an American University, being a member of the class of 1874 at Harvard. Returning to Japan he took office in the Department of Education, later transferring his energies to law which he practiced in the Tokyo and Yokohama courts. He then became interested in finance and the stabilization of currency, and about 1880 he joined the staff of the Treasury as adviser in financial matters. This post he held until 1904, and after the Russo-Japanese War he was appointed financial adviser to the Korean Government. He was made Baron in 1907 and later took a seat in the Japanese House of Peers. His services were further recognized by his being given a seat on the Privy Council. Some time before his death he was sent to the United States, representing Japan on a Government mission.

**MELTON, WILLIAM DAVIS.** President of the University of South Carolina, died on May 3. He was born near Lewis Turnout, Chester County, S. C., on May 26, 1868, and after graduating from the University of Virginia in 1890 received his degree of LL.B. at the University of South Carolina in 1892. He began the practice of law at Chester, S. C., but in 1893 he moved to Columbia, and became a member of the firm of Melton and Belser. He was alderman, serving as chairman of the ways and means committee of the City of Columbia (1900-06), from 1910 to 1919 he was chairman of the State Board of Law Examiners. In 1922 he received

the degree of LL.D. from the University of South Carolina and on July 1 of that year he became its president. In 1922 he published *Our Country, Its Foundations, Its Problems and Its Future*.

**MEMEL.** See LITHUANIA.

**MENINGITIS.** It was noted in 1926 that there had been no epidemic of epidemic meningitis in the New York City area for about sixteen years, but during this period 654 sporadic cases had been reported to the City Department of Health. The great majority of individuals seem to possess a natural immunity from this infectious disease, the cause of which is invariably the organism known as the meningo-coccus. No diagnosis is ever made unless the latter is found by culture in the cerebro-spinal fluid. The majority of victims are infants and young children. During the period covered there was so little tendency to spread that only fourteen times did more than one case occur in a family. The report covering the disease in question is published in the *Journal of the American Medical Association* for Dec. 11, 1926, by Drs. Neal, Jackson and Applebaum of the Health Department, and the greatest interest is attached to the treatment and the after effects of the disease. The mortality for the entire series was a shade under 30 per cent, this figure being swelled by the high mortality of the first year of life which was about 45 per cent. In some of the more advanced years even in children it went as low as 20 per cent. The treatment practiced was conservative in character. It is true that some phenomenal results have followed heroic treatment, but study of many epidemics does not show superiority over the conservative plan but quite the reverse. By conservative treatment the authors refer to one intra-spinal injection of serum in 24 hours while the radical treatment may involve one intra-spinal injection every eight hours fortified by intra-venous and intra-muscular injections.

**MENTAL TESTS.** See PSYCHOLOGY, under *Mental Measurement*.

**MERCIER, DESIRÉ JOSEPH, CARDINAL.** Primate of the Roman Catholic Church in Belgium, a leading figure in the World War, died January 23, in Belgium. He was born at Braine l'Alleud, Belgium, in 1851, and was educated at Malines, Paris, and Leipzig, becoming a priest in 1874. He took the degree of licentiate in theology at the University of Louvain in 1877, and in that year was made professor of scholastic philosophy at the Lesser Seminary in Malines. This appointment he held until 1882, by which time he had demonstrated his belief in the supremacy of the philosophy of Aquinas, and was appointed to the chair in Aquinas' Philosophy, founded at Rome by Pope Leo XIII. At the same time he was honored by the University of Louvain by appointment to the newly founded Chair of Scholastic Philosophy. He maintained his connection with the University of Louvain uninterruptedly until 1906, when he was made Archbishop of Malines. He was consecrated Primate of Belgium and in the following year, (1907), he was made Cardinal. During this period he had many other activities, and one of the most important was his founding, in 1894, the *Revue Néo-Scholastique*, of which he remained editor until 1906. His most important work, *Les Origines de la Psychologie Contemporaine*, appeared in 1897, and although he wrote much

thereafter, it is by *Les Origines* that students and philosophers will remember him. He was also founder of the Institute of Philosophy.

It was on account of his great and brave stand against the invading Germans in 1914, that he became an international figure and commanded unusual respect and admiration. In October, 1914, when M. Max, Burgomaster of Brussels, was deported and King Albert was separated from his subjects, Cardinal Mercier was left alone in the country as the spokesman of the people. In his famous pastoral letter of Christmas, 1914, he exhorted the Belgians to defend their rights, and he condemned the Germans for their wanton violation of international law and the laws of humanity. He said that the whole duty of Belgians in such times of stress might be summed up in the two words, patriotism and endurance. He was accused by Von Bissing, the German military governor, of indulging in "political propaganda calculated to turn the heads of the mob," and in addition he was ordered not to leave his residence at Malines. His masterly reply to the effusion of Von Bissing was probably his best war effort. In it he insisted that there was nothing political in his actions, that he was engaged in the spiritual work of looking after his people, and if his logic and reason seemed to point the way to final deliverance for the Allies, he maintained the right to comfort his people with the pronouncement of that assurance. At this utterance the Germans were furious but powerless, being forced to content themselves with ordering his restraint. The Cardinal continued to make the boldest possible use of his ecclesiastical authority, and in this way stimulated the independent spirit of the Belgian nation through the entire period of the German occupation. There is no doubt that he, more than anyone else, held up the courage of his people under German tyranny.

After the War he turned his attention to the unification of the Christian churches, an ideal which was never long from his thoughts. He made several journeys abroad in connection with the Conferences which had been arranged between the leaders of the Anglican, Protestant Episcopal and other churches and the Roman Catholic representatives at whose head he was. As in the case of his War activities, the Pope added his blessing to these efforts. Cardinal Mercier visited the United States in 1919, to express the thanks of the Belgian people, arriving in New York on September 9. Among his published works, besides the one mentioned, are the following: *Critériologie Métaphysique Générale*; *A Manual of Modern Scholastic Philosophy*, (1917); *A Mes Séminaristes*; *Retraite Pastorale*; and his mystical work, *La Vie Intérieure*.

**MERCURY**; See QUICKSILVER.

**MERCURY BOILERS**. See BOILERS.

**MERRIMAN**, JOHN XAVIER. South African statesman, died on August 3. He was born in 1841, at Street, Somersetshire, England, and was educated at Rondebosch Diocesan College, at Radley, near Oxford. He went to South Africa in 1849 and again in 1861. He first entered the political life of the Cape Colony in 1869. In 1875 he joined the Moltenus Ministry remaining therein until 1878. He was a member of the Scanlen Government, 1881-84, and for these two periods, (1875-78 and 1881-84), he was Commissioner of Crown Lands. For the period 1890-93 he was Treasurer General to the Government,

and he was a member of the Cape Jamieson Raid Committee for which he drew up the official report. In 1898-1900 he was again appointed Treasurer General, and during the years 1908-10 he was both Prime Minister and Treasurer. He was made a Privy Councillor in 1909 and from 1910 till his death he was a member of the Legislative Assembly of the Union of South Africa. He was later elected a member of the Cape Parliament for Namaqualand, then he served in the same capacity for the Wodehouse district, and finally for Victoria West. He was also a member of the National Convention for the Union of South Africa.

**MERTEN**, REAR ADMIRAL (PASHA). A German naval officer who directed the artillery operations for the Turks during the World War, died April 12. He was born in 1857 in West Prussia and entered the German navy at the age of 18, after a rigorous schooling at the gymnasium of Königsberg. Here he advanced rapidly and soon received his own ship, the *Albatross*, used for naval engineering in the North Sea. He later advanced to the post of resident commander at Cuxhaven, at Heligoland, and at Bremerhaven. During his 37 years of service he was also commander of the Navy Yard at Kiel and inspector general at Wilhelmshaven. In 1912 he retired, but was recalled to service in 1914, when he became naval adviser to the Sultan of Turkey during the allied attack on the Dardanelles.

**MESOPOTAMIA**, IRAK or IRAQ. A territory under British mandate, in Asia. It comprises the region on the Tigris and Euphrates Rivers between Persia and Northern Arabia; formerly consisting of the vilayets of Bagdad, Basra, and Mosul in the Turkish Empire; conquered by British and Indian troops during the World War and recognized afterwards as an independent state to be placed under a mandatory power (Great Britain.)

**AREA AND POPULATION**. The area is given at 143,250 square miles; population, according to the census of 1920, 2,849,282, distributed as follows among the respective divisions: Bagdad, 1,360,304; Basra, 785,000; Mosul, 703,378. The inhabitants are mainly Mohammedan and are divided among the two Mohammedan sects as follows: Shiites 1,494,015; Sunnites, 1,146,685. The Jews in 1920 numbered 87,488 and the Christians, 78,792. The chief seaport is Basra on the Persian Gulf.

**EDUCATION**. In 1925 there were 21,755 pupils in 233 government schools and 12,900 pupils in 45 private schools. During 1926 construction was proceeding on the University of Bagdad.

**PRODUCTION, ETC.** Although its oil deposits have marked it as a region of international importance, it has other valuable resources, particularly its rich soil, which has great possibilities under cultivation. Wheat, barley, cotton, dates, rice, and groundnuts are the chief products. The exceptionally cold winter of 1924-25 and the lack of rain during 1925 made that year a disastrous one in many respects for agriculture, and particularly for the cereal crops. The rain-fed crops failed completely, and the northern districts suffered severely from locusts, with the result that prices of wheat and barley rose to nearly double those of the preceding year. Grain imports were necessary from India, although formerly there were excess crops of these grains for export. The severe

cold and lack of pasturage also caused a mortality of 40 to 60 per cent in livestock, and affected somewhat the quality of wool exported. The cotton production was 2000 bales and the date crop increased to 135,000 tons as compared with 105,000 in 1921-22. Industrially Mesopotamia is very little developed, such activity being confined mainly to a few ice plants and other small industries in the chief cities. The petroleum industry, however, as yet in its earliest stages, promises a rapid development. There are two known petroleum-bearing regions in Irak, the Mosul area in the north along the Tigris River and the Kirkuk-to-Khannaqin area in the east of the mountains of the Persian border. Some asphalt deposits also are found near Hit, on the Euphrates. Production of oil on a commercial basis has not begun as yet although several wide surveys were under way in 1926.

COMMERCE. Mesopotamia's chief commercial importance is as a medium for transit trade to and from Persia. Great Britain easily leads among the countries exporting to Irak, with India a close second, but Persia is so much more important as a purchaser of exports and re-exports that the total volume of trade with Persia is considerably above that with any other country. The greater part of British and Indian exports to Irak are in reality transit shipments to Persia. The United States, although exporting very little to Irak, nevertheless, as a purchaser from Irak moved in 1924-25 from third place to second, surpassing Great Britain as a customer.

FINANCE. After two successive years of surplus the budget for the year 1925-26 showed a slight deficit; which was met, after considerable delay, from the existing treasury surplus. Of the total expenditures for the year approximately 40 per cent were consumed by the Ministry of Defense and the Irak Police. The service on the public debt constituted about seven per cent of the expenditures, and the combined expenditures for the departments of the interior, public works, and agriculture accounted for 14 per cent. Expenditures for the port of Basra and the railways department are balanced by estimated receipts from the same sources. Revenues derived approximately 45 per cent of their total from customs and excise dues, a large proportion of which comes from the Persian transit trade through Bagdad. Land revenues and the income from government property constitute about 28 per cent of the total revenues. The budgetary situation for the past five years reduced to dollars is summarized in the following table:

IRAQ BUDGETS FOR FIVE FISCAL YEARS

Fiscal year beginning April 1	Revenues	Expenditures	Surplus (+) or deficit (-)
	Dollars	Dollars	Dollars
1921.....	13,844,160	14,997,840	-1,153,680
1922.....	13,651,500	13,766,460	-114,960
1923.....	15,808,880	13,008,980	+2,799,900
1924.....	16,525,000	14,618,800	+1,906,200
1925.....	19,345,616	19,551,633	-206,017

COMMUNICATIONS. Railroad construction, under the supervision of British advisers to the Irak government, had advanced on both sides of the two Bagdad-to-Mosul lines, reaching Sharqat on the direct route along the west bank of the Tigris, and Kirkuk on the longer, or east bank, route. The latter line will open up a large productive area around Kirkuk, which will add considerably to the available export resources

of the country. The direct railroad from Bagdad to Sharqat, following the Tigris, is part of the pre-war "Bagdad Railroad" plan, but the Sharqat-Mosul-Nisibin section had not yet been completed. A further piece of construction under consideration is a 12-mile extension from Khannaqin to the Persian border, which will facilitate transshipment of Persian goods.

GOVERNMENT. In 1921 the Emir Faisal was proclaimed King by the British High Commissioner, and on Oct. 11, 1922, a treaty was formed between the British and Irak governments in which the latter agreed to be guided by British advice in important matters affecting financial operations and international relations. According to the constitution of Oct. 31, 1923, the executive power is vested in the King as sovereign, but edicts had to be signed by the prime minister and one or more of the other ministers. Legislative power is vested in a senate of 20 members appointed by the king and a chamber of deputies of 88 elected members. The ministry was responsible to the chamber of deputies. The cabinet as appointed on June 26, 1925, was as follows: Premier and Minister of Foreign Affairs, Abdul Muhsin Beg al Ga'dun; Interior, Hikmat Beg al Gulaiman; Defense, Gabih Beg Nashat; Finance, Rauf Beg al Chadirji; Justice, Naji Beg al Guwaidi; Works, Gabih Beg Nashat; Education, 'Abdul Husain Chalabi; Auqaf, Handi Beg al Pachahji.

HISTORY. The chief event in the year as far as Mesopotamia was concerned was the settlement of the troublesome Mosul boundary dispute. At the beginning of the year the Council of the League of Nations, having stated on Dec. 10, 1925, that if Mosul was to remain with Mesopotamia, Great Britain would have to extend her relations with Irak for a longer period of time, negotiations were carried out with this end in view and an agreement was drawn up by which the relations were extended for a period not to exceed twenty-five years and to terminate whenever Mesopotamia entered the League of Nations. King Faisal in commenting upon the agreement stated "I see no reason why Irak should not have an amicable alliance with England, not only for twenty-five years, but for any length of time which may be necessary, provided always that the dignity of the nation is preserved, and that there are no stipulations which would retard the progress of the Iraqi people." On March 11, the League Council announced that the disputed territory was awarded to Great Britain inasmuch as she had complied with the demands of the Council in December, 1925. Turkey maintained that the decision was not binding on her.

Shortly after this, however, Turkey evinced a desire to settle the matter directly with Great Britain through diplomatic negotiations. The result was an agreement signed by the British ambassador, Sir Ronald Lindsay, and Tewfik Rushdi Bey, the Turkish Foreign Minister. The essential features of the settlement was the acceptance by Turkey of the so-called Brussels Line (see YEAR BOOK for 1924) which was originally laid down by the League of Nations, and the agreement of the part of Great Britain to give Turkey ten per cent of all revenue obtained from the exploitation of the oil fields of Irak for a period of twenty-five years. Other provisions was the recognition of the inviolability of the frontier line and the establishment of a

neutral zone in which the formation of marauding bands was forbidden. Persons inhabiting the districts recognized as Irak were to have the privilege of choosing Turkish nationality within a given time according to the Treaty of Lausanne.

In July King Faisal left his country for a trip to Europe and left one of his brothers in charge of the government. The King was accompanied on his trip by Naji Beg al Suwaidi, Minister of Justice. Shortly after his return he was faced with a crisis in his government. Rashid Ali Beg was elected president of the chamber on November 1, defeating a government candidate. The ministry promptly resigned and after a three weeks' interval King Faisal was able to form a cabinet only by recalling the Irak representative from London. The cabinet as constructed on November 21, was as follows: Prime Minister and Minister of Foreign Affairs, General Jafur Pascha el Askari; Finance, General Yasim Pascha el Hashimi; Interior, Rashid ali Beg el Gilani; Justice, Rauf Beg el Shaldirshi; Communications and Public Works, Amin Beg Zaki; Education, Seyyid Sheikh Abdul Mahdi el Muntafiq; Pious Foundations, Amin Ali Beg Bashayan; Defense, General Nuri Pascha Said. The new government announced that it intended to inaugurate compulsory military service, improve foreign relations, particularly with other nations, improve education, and aid agricultural development by furthering new schemes for irrigation.

**MESSEL MEDAL.** See CHEMISTRY, INDUSTRIAL under *Medals*.

**METALLURGY.** Much technical progress was made during 1926 in the recovery of metals from their ores, advances being particularly significant in the fields of concentration by flotation, and in hydrometallurgy. Pyrometallurgy has become somewhat more standardized, and except for certain special processes in course of development, changes have been only in details of equipment and process. Generally speaking, it may be said that costs of production of most of the non-ferrous metals in 1926 were no higher than before the World War, in spite of increased costs of commodities and labor, and the enforced mining of lower-grade ores. Copper, in fact, no doubt was being won at a cost substantially below pre-war costs. Improved equipment and processes, and the large scale on which many operations are conducted, are responsible. As a result of reasonable costs of production, and therefore prices, of most metals, consumption has continued at an enormous rate, in many instances being beyond the peak reached during the World War.

**ORE DRESSING.** Three 60-inch gyratory crushers were built during the last year, two of them for the Chile Copper Co., these being the largest crushers ever constructed, and weighing about a million pounds apiece. Each of them will receive lumps up to 5 feet in diameter, and will crush 2500 tons an hour to a 12-inch product. A combination of gyratory and disk crusher, of new design, was tried out with promising results in Missouri.

In cylindrical grinding mills, the field was well divided between the use of balls and rods for crushing media, some plants installing one type and some the other, for similar work. Rods were thought to give a somewhat more homogeneous product, with a smaller proportion

of excessively fine material. Square blocks instead of spheres have given satisfaction at one or two plants without arousing much enthusiasm at others. Hexagonal rods have also been tried, but it has been found that they quickly wear to the cylindrical form. A step form of end liners for grinding mills, a type known as the Williamson mill, has been experimented with at the Inspiration plant, in Arizona, and put on the market. Rubber linings, mentioned in the 1925 YEAR BOOK, have not yet become popular; they seem to be giving satisfaction where used, but little was heard of them.

The Fahrenwald constant-density classifier has been generally accepted, and was probably the most efficient form of hydraulic classifier yet developed. At least two makes of combined thickening and filtering equipment have been placed on the market, and have given good results where used.

Selective flotation processes have made further progress so that it was possible to take the most complex sulphide ore and make several commercial concentrates, such as a lead product with only a little zinc, a zinc concentrate with but a small amount of lead, and in some cases an important middling or iron product. In concentrating copper-iron sulphide ores, great success was had in depressing the iron sulphide into the tailing, thus improving the grade of the copper concentrate. Sodium cyanide and sodium sulphite have proved useful in inhibiting the flotation of zinc, in lead-zinc ores; copper sulphate is then commonly added to the pulp to float the zinc. Many other chemical reagents are used to meet certain conditions. An excellent discussion of the matter is contained in a bulletin entitled *The Trend of Flotation*, published by the Colorado School of Mines, Golden, Colo., at the end of the year.

More has been accomplished in the flotation of oxidized ores also, sulphidizing agents being utilized to alter the surface of the carbonate particles. The Shattuck-Denn mine, in Arizona, is a good example of this class of work. Flotation has become common practice on the lead-zinc ores of the Oklahoma-Kansas-Missouri district, thereby considerably improving recoveries and costs, in this important area.

Improved types of flotation machines have been developed as a result of the clogging of the blankets of pneumatic machines by the alkaline circuits commonly employed. In the MacIntosh machine, a rotating horizontal cylinder, covered with canvas, is used for the introduction of the air; in the Forrester machine, air is introduced through a simple perforated pipe. Considerable savings in power are thereby obtained, through the use of air at a lower pressure.

Flotation litigation had not been entirely cleared up, by the end of 1926, the Magma case not having been settled. Practically all operators, however, had licenses from the Minerals Separation Company.

**HYDROMETALLURGY.** Of outstanding importance during 1926 was the completion of the \$6,000,000 leaching plant for the Inspiration Copper Co., in Arizona, to treat mixed oxide and sulphide ores. An acidified solution of copper and iron sulphates is used as the leaching agent, iron sulphate having a solvent action on copper sulphide, a mineral not attacked much by sulphuric acid. In this respect, the plant is

novel among commercial installations, others requiring roasting of the sulphides to make them amenable to acid leaching. The free acid, of course, is an aid in dissolving the oxidized copper minerals. The presence of ferric iron, which is regenerated during electrolysis, reduces the current efficiency, but this is partly counterbalanced by using a higher current density than is usual. The copper sulphide in the ore will reduce the iron to the ferrous condition, instead of using sulphur dioxide, as at Ajo.

The Bwana M'Kubwa ammonia leaching plant, in Africa, also went into operation towards the end of the year. Ammonia losses were reported higher than expected in the first few months of operation, but difficulties will no doubt be ironed out soon. Heap leaching of copper ores at Bisbee, Ariz., where about 8,500,000 tons of siliceous ore carrying about 0.72 per cent of copper are to be treated, is in progress, with results somewhat better than expectations so far. The leaching cycle is expected to be about six years, in the course of which about 70 per cent of the copper is likely to be recovered. It is precipitated with scrap iron.

Another plant was in process of construction for the leaching and subsequent electrolytic precipitation of zinc, the Bunker Hill & Sullivan Mining & Concentrating Co., Kellogg, Idaho, being the builders. A capacity of 50 tons of zinc per day was planned and the ideas of U. C. Tainton were to be carried out in its design and operation, the chief features being solutions of greater acidity than are usual, higher current densities, and mechanical agitation. The only other electrolytic zinc plant in the United States was that of the Anaconda Copper Mining Co. at Great Falls, Mont., which had been enlarged to a capacity of 150,000 tons a year. The Trail plant, in British Columbia, has also been enlarged. Tainton has also carried out considerable work on an experimental scale looking towards the production of electrolytic lead. A diaphragm cell is used, with evolution and utilization of chlorine. Other lead leaching experiments are being made in the Southwest and in Utah.

The Salt Lake station of the U. S. Bureau of Mines had been working on chloridizing roasting and brine leaching of ores, but this process has had little or no application in the United States since the Tintic Standard plant closed down. However, a new plant was built at Caylloma, Peru, where table and flotation concentrates averaging about 30 per cent sulphur were treated in a Holt-Dern furnace, with subsequent leaching. Bolivian plants also were to adopt the process, and it was likely that the Cerro de Pasco would adopt substantially the same method of treating a large body of low-grade silver ore.

In cyanidation, work on the regeneration of cyanide has been carried further, with successful results, particularly at Pachuca and at Tonopah. Flotation has been generally adopted in the Kirkland Lake district of Ontario, for the recovery of gold tellurides, which are then oxidized and added to the cyanide mill circuit. Continuous filters have become generally accepted as the best means for final dewatering.

**Pyrometallurgy.** Copper smelting remains much as it was in 1925, being pretty well standardized, with roasting of copper concentrates in multiple-hearth furnaces, smelting of

the calcine in powdered-coal or oil-fired reverberatories, and converting of the matte in basic-lined converters. The Carson patent situation had not been settled so most smelters were keeping their reverberatory practice very quiet, and continued their efforts to avoid infringement. Some improvements over the old practice might result from new methods of charging and construction that were being developed.

The Copper Queen smelter at Douglas, Ariz., was carrying on an expensive programme of remodeling and enlargement. The roasting furnaces were to have ten hearths instead of the conventional eight, and were to be superposed, along with the waste-heat boilers, above the reverberatories. A lead blast furnace was also being constructed, the first in Arizona. A copper smelter, embodying reverberatory smelting, was in course of construction in the Rouyn district, in Quebec, to treat the copper-gold ores of the Horne mine, as well as custom ores. The Mason Valley smelter, at Wabuska, Nev., resumed operations during the year. This was a small blast furnace-plant, one of the few such that were left in North America.

Many enlargements were made in lead-smelting plants to handle the record tonnage that was being produced. No important changes in design were made, however. Double sintering had become commonly accepted, preparatory to blast-furnace smelting. The Harris process of refining was further developed at the American Smelting & Refining Co.'s plant at Perth Amboy, N. J., the entire lead refinery there having been remodeled and many improvements in details having been made in the process as originally proposed in England.

In the metallurgy of zinc, the chief item of interest is perhaps the development of the Coley process in England, the old methods of distillation by the retort process continuing practically unchanged, though inefficient in many ways. In the Coley process, the ore is ground to pass a  $\frac{1}{4}$ -inch mesh screen, and is pre-heated for a partial roast. It is then fed into a rotating tube about 30 feet long, so inclined and revolved that it takes about three hours for the charge to pass through. Surrounding the tube, which is made of a special heat-resistant alloy, is a brickwork structure provided with a regenerative system for burning producer gas and thus maintaining the high temperature necessary for reducing and volatilizing the zinc. When the ore passing through the tube has been oxidized and is in a porous condition, it is sprayed with a heavy oil which is kept cold until it leaves the nozzle, in order to prevent "cracking," which would diminish its reducing effect. A water-cooled nozzle is employed for this purpose. The temperature in this zone of reduction is said to be no more than 1000 deg. C. The reduced metal immediately volatilizes and is condensed in a water-cooled chamber, the accompanying gases passing on, and the solid residue being in shape for treatment for the recovery of lead, silver, or other byproducts. Carbonate, silicate, and sulphide ores may be treated by this process, a calamine assaying only 19 per cent of zinc having given satisfactory results, it was reported. Among the advantages of this process are continuity of operation; increased recovery (90 to 98 per cent instead of 80 to 88 per cent customarily obtained by the retort process); reduction of

labor costs; reduction of fuel costs; and increased value of the residues. The cost of production is said to be only from one-half to one-third that of retort smelting. The metallurgical principle involved may well be applied to other metals, including the reduction of iron ore.

Aluminum productive capacity was vastly increased by the construction of a plant at Arvida, Quebec, where the electric power available makes possible the ultimate production of something like 200,000 tons of aluminum a year. The customary electric reduction of alumina in a fused electrolyte is employed, though details of the process used have never been published by the Aluminum Co. of America. Another process, known as the Haglund, has been developed in Sweden and has received some publicity. Alumina—the oxide—is thereby made directly in the electric furnace, the iron and silica in the ore being utilized in the manufacture of ferrosilicon as a byproduct.

Nickel production continued by the usual methods familiar to copper smelters. Many improvements in electrolytic refining were made at the Port Colborne plant of the International Nickel Co., so that that branch of the company's activities was greatly enlarged and an electrolytic product that was almost chemically pure was chemically produced.

When the commercial production of sponge iron began to be considered, many thought of it as an aid in the precipitation of copper rather than as a method of producing iron and steel without the use of a blast furnace. However, recent work demonstrated the possibilities in this other direction. The Lorain works of the National Tube Co. are planning to build a million-dollar plant to utilize the Hornsey process. The ore is crushed and charged into a rotary kiln, heated to a definite temperature; the charge then passes to a second rotary kiln where it is mixed with coal for reduction and heated to a higher temperature. In a third rotary kiln, the charge is subjected to a sudden cooling. Thus is produced a practically pure sponge or granular iron without the use of coke or limestone, the final product being brought up to a purity of about 98 per cent by magnetic separation. Should this process be successful, many ores not now of commercial importance might become so.

The School of Mines Experiment Station of the University of Minnesota developed a process that brought about much the same result only the reduction was carried on in retorts. The metallized ore, after reduction with coal at about 1000 deg. C., is pressed into briquets from which it is planned to make pig iron by melting in a reverberatory furnace. Standard practice in ferrous metallurgy changed only in details. The use of byproduct coke from 100 per cent high-volatile coal necessitated some changes in blast-furnace conditions. Enlargement of hearths added considerably to furnace capacity, so that as much as 1000 tons of basic pig a day were being made from all-ore charges. Three sintering plants for the reclamation of flue dust at blast furnaces were built in the United States during 1926.

By far the most important publication of the year was the *Handbook of Non-Ferrous Metallurgy*, with authoritative and up-to-date chapters on all the more important metals, written

by experts, the whole edited by Donald M. Liddell.

**METEOROLOGY.** In any attempt to increase our understanding of weather phenomena, the investigation of the energy mechanism of atmospheric processes is necessarily of fundamental importance; for all meteorological activity depends on the availability and the distribution of different forms of energy. Particular interest therefore attaches to the methods recently perfected by Sir Napier Shaw and his colleagues for adapting the data obtained by aerological soundings to the scientific investigation of the thermodynamics of weather phenomena, and for applying the results in practical work. Instead of plotting pressures, temperatures, etc., against height in the usual way, the data are entered on a temperature-potential-temperature diagram which consists of a groundwork of lines that show graphically what would happen to the condition of dry or of saturated air under continuously decreasing pressure (such as during convectational ascent); the resulting graph is called a tephigram. Then, e.g., any energy that may be available in a column of the atmosphere for producing thunder storms is plainly shown; the stability of any region of the atmosphere is easily found; thermodynamic cycles may be traced out, and their efficiencies determined, and the amount of energy consumed or given out in any adiabatic process calculated; and so on.

**DYNAMICAL METEOROLOGY.** A statement that the wind has a velocity of, say, 30 many meters per second refers to some mean value taken over an interval of several minutes; actually, at any instant, small portions of air are moving faster or slower than this mean, as well as up and down and to and fro, in an irregular, turbulent or gusty manner. These wandering masses carry with them, and cause a diffusion of, momentum (giving rise to "eddy viscosity"), moisture, heat, etc.; the motions of such masses of air are too intricate to be analyzed individually in detail, but their resultant effects can be statistically evaluated and expressed by a coefficient of diffusivity that represents the average rate of transfer of heat, momentum, etc. The value of this coefficient can be found by observation; if the motions of individual molecules are neglected, but all other motions individually taken into account, the coefficient furnishes the values of the coefficients of molecular viscosity, molecular heat-conduction, and so on; if not only molecular motions, but also the mass motions taking place in regions a few meters across, be neglected, the coefficient is many times larger than that corresponding to the neglect of molecular motions only, and it becomes larger still when the region in which details are ignored is extended to a few hundred meters and to several hundred kilometers. That is, the coefficient of diffusivity is a method for taking account of the net effects due to details which individually are ignored, and so of course this coefficient increases in size and importance as the things neglected include, in succession, molecular motions, gusts, squalls, and finally cyclones. The coefficient also varies with height, mean wind speed, nature of topography, etc. Many important studies of the coefficient of diffusivity, of turbulent motions in the atmosphere, and of the rôle these play in various phenomena (such as thermal convection) are

being carried out by L. F. Richardson, C. G. Rossby, and others.

Important advances in the mathematical theory of atmospheric circulation have recently been effected also, especially by H. Jeffreys.

**MISCELLANEOUS.** The great difficulty of finding exact and complete solutions of meteorological problems by the rigorous methods of mathematical physics has led, among other things, to the extensive use of the methods of mathematical statistics in the effort to discover laws of atmospheric phenomena, particularly such as might be useful in improving weather forecasts; a great volume of such statistical work is done every year.

The collection of aërological and climatological statistics from all quarters of the globe, the establishment of new meteorological observing stations, the development of instruments, and the extension and improvement of means for disseminating daily meteorological information and advices, also go on apace; while the utilization of meteorological data and weather forecasts in all fields of human activity continues to increase and to lead to continual extension of the services rendered by government meteorological bureaus.

**HURRICANES.** An unusual amount of destruction was occasioned by West Indian hurricanes in 1926. The hurricane of July 22-29 did a great deal of damage in the West Indies and along the east coast of Florida, but did not cause much loss of life; the wind velocity reached 135 miles per hour at Nassau. On September 14-16, four tropical cyclones, three of hurricane intensity, were simultaneously in progress over the North Atlantic, an event recorded but once before (in September, 1893). A hurricane first observed about 200 miles north-east of St. Kitts, W. I., on September 14, subsequently developed into the most severe tropical storm ever known to reach the coast of the United States; its center, with the attendant temporary calm, passed directly over Miami the morning of September 18, the barometer sinking to 27.61 inches—the lowest sea-level pressure ever recorded in this country; the storm then advanced northwest, passing near Pensacola and Mobile, and finally dissipated over Texas; the damage caused by this hurricane was enormous, and the loss of life has been exceeded only three times. Still another hurricane, originating north of Colon about October 16, passed directly over Havana on October 20, causing immense damage and loss of life in Cuba, then skirted the east Florida coast, passed centrally over Bermuda, and went off into the Atlantic. Typhoons in the Far East likewise occasioned much damage and loss of life.

The Alaskan winter of 1925-26 was the mildest on record, due to abnormal and persistent low pressure there and over the northeastern North Pacific.

**NECROLOGY.** Col. Francis S. Chaves, Director of the Meteorological Service of the Azores, July 23; Albert J. Monné, ex-official of the Netherlands Meteorological Institute, October 16; Ernst Biese, Director of the Meteorological Observatory, Helsingfors.

**BIBLIOGRAPHY.** Hann-Stüring, *Lehrbuch der Meteorologie*, 4th ed. (Leipzig); W. J. Humphreys, *Fogs and Clouds* (Baltimore), and *Rain-making and other Weather Vagaries* (Baltimore); Sir Napier Shaw, *Meteorology in His-*

*tory* (Cambridge, Eng.); C. E. P. Brooks, *Climate Through the Ages* (London); W. Schmidt, *Der Massenaustausch in freier Luft* (Hamburg); I. M. Cline, *Tropical Cyclones* (New York); A. Defant, *Wetter und Wettervorhersage*, 2nd ed. (Leipzig); W. G. Rotmistroff, *Das Wesen der Dürre* (Dresden).

**METHODIST, WESLEYAN CONNECTION OF AMERICA.** A branch of the Methodist Episcopal Church, organized May 31, 1843, at Utica, N. Y., the outgrowth of controversy over what was termed "liberty of testimony and freedom of discussion," and was also a protest against the exercise of ecclesiastical authority. The purpose of the new organization was a church that should be anti-slavery and non-Episcopal. In doctrine the church is in accord with the Methodist bodies generally. In 1926 the branch comprised 23 annual conferences, with mission conferences in India and Africa; its General Conference meets quadrennially and was to convene in June, 1927. Statistics for 1926 give 675 churches, 666 ministers, 21,000 church members, 521 Sunday schools with an enrollment of 40,100. The Home work was being pushed aggressively and three new conferences were organized, one of them on the Pacific Coast. Colleges maintained by the church are: Central College, Central, S. C.; Houghton College, Houghton, N. Y.; Marion College, Marion, Ind.; and Miltonvale College, Miltonvale, Kan. *The Wesleyan Methodist* (weekly), Syracuse, N. Y., is the official organ of the church. Headquarters are at 330 East Onondaga Street, Syracuse, N. Y.

**METHODIST EPISCOPAL CHURCH.** The original Methodist Church in America, begun in Georgia in 1735 by John and Charles Wesley upon the invitation of General Oglethorpe. The first annual conference in America was held at Philadelphia in 1773, and in 1784 the church was set apart independently from the British Church. It has retained the Wesleyan doctrine. It is directed by a board of trustees appointed by and amenable to the General Conference. In 1926 the full and preparatory membership of the Church in the United States and foreign countries, including non-resident, inactive, and conference members, amounted to 5,173,141, according to statistics given in the *Methodist Year Book* of 1927. There were 28,656 churches, with an estimated valuation of \$397,609,220; a total of 19,104 traveling preachers, of whom 1801 were on trial; local preachers numbered 14,556; 34,370 Sunday schools were conducted by a teaching staff of 407,182, and had a total enrollment of 4,624,554. The foregoing statistics include affiliations of the Methodist Episcopal Church in the United States, Denmark, Finland, Korea, China, Norway, Germany, Sweden, Switzerland, Italy, Mexico, Philippine Islands, and several South American countries. The denomination maintains missions in Austria, Bulgaria, Jugo-Slavia, Africa, Netherlands, Indies, Porto Rico, Rhodesia, South Florida, France, Russia, Alaska, Hungary, Utah, Hawaii, and among the Southern Swedish, Pacific Swedish, Latin American, Pacific Chinese and Japanese, Baltic and South American peoples. On Apr. 25, 1926 the first unit of the Mexican Church and Community Centre was opened, and at the end of the year had a membership of over 300.

The missionary work of the denomination is conducted by a Board of Foreign Missions and a Woman's Foreign Missionary Society. In 1926

there were 1187 missionaries of the Foreign Missions Board and 738 missionaries of the Woman's Society; ordained native preachers numbered 3799, and church membership was 661,400 in 2990 churches. There were 29,940 adults and 29,948 children baptized.

The Epworth League is the largest society of the denomination. In 1926 there were reported at the spring and fall conferences and missions 480,291 senior members and 194,185 junior members. In the United States alone, the senior membership was 431,221, and the junior membership 167,537. In the domestic conferences there was reported a total membership of 4,183,863 in the Church.

The educational interests of the denomination are conducted by a Board of Education which comprises the following departments: Schools and Colleges; Negro Education; Church Schools; and Epworth League. It sponsored throughout the year 1926, 135 educational institutions, 46 of which were colleges and universities, 41 professional and graduate schools, 30 secondary schools, and 18 colored; in addition to 144 summer schools for teachers and others interested in religious education. The student enrollment in 1925 was 70,733. Productive funds of the various educational institutions amounted to \$47,000,000, and the value of grounds, buildings, equipment, etc., was \$48,000,000.

During the year women were ordained as elders for the first time in the history of the

church. The Board of Home Missions maintains the Good Will Industries in 25 cities to give the poor of those cities a chance to help themselves. In 1926 there were 79 Methodist Episcopal hospitals in the United States, with 7532 beds. These trained 2400 under-graduate nurses during the year, and had a staff of 1600 physicians and surgeons. There were 44 homes for the aged, caring for 72,018; 45 children's homes, caring for 3541 children; 17 homes for young men and young women; and 11 training schools. The Methodist Book Concern opened a large new manufacturing plant at Dobbs Ferry, N. Y., in 1926. Publications during the year included *The Story of Methodism*; *The Methodist Year Book*; *The Minutes of the Annual Conferences of the Methodist Episcopal Church*; *The Methodist Review* (bi-monthly); the *Christian Advocate* (weekly), published in 9 different cities; the *Epworth Herald* (weekly); and *Der Christliche Apologete* (a German weekly).

In 1926 there was raised for building and improvement of churches \$20,134,180, and there was paid on the indebtedness of property \$6,549,169, and for current expenses of churches \$16,682,163. The General Conferences expended for world service, such as missions, education, American Bible Society, etc., \$8,546,565. There was received for the Children's Day Fund \$168,536, for the Women's Foreign Missions Board, \$2,230,449, and for the Woman's Home Missions Society, \$1,766,817. There was raised for General Conference expenses \$57,214, for ministerial

## GENERAL STATISTICS OF METHODISM, 1926

Denomination	Minist- ters	Lay preach- ers	Church members and proba- tioners	Sunday schools	Officers and teachers	Sunday school scholars	Churches, etc.

\* Seating accommodation, 2,411,975.

<sup>b</sup> These figures include the Solomon Islands Mission, with 67 lay preachers, 45,504 members, 41 Sunday schools, 1,384 scholars and 115 churches and preaching places.

<sup>c</sup> Methodism is also represented in several European countries by Conferences and Missions affiliated with the Methodist Episcopal Church of America, and their membership is included in the figures. The latest returns available are: Austria, 1,005 members; Bulgaria, 879; Denmark, 4,242; Finland, 2,204; France, 1,374; Germany (North), 22,348; Germany (South), 18,208; Hungary, 750; Italy, 4,247; Jugo-Slavia, 1,298; Norway, 7,631; Russia (and Baltic Mission), 3,545; Sweden, 16,662; Switzerland, 11,765.

<sup>d</sup> The United Church of Canada includes in membership—Congregationalists, 12,220; Methodists, 414,017; Presbyterians, 266,111. Their Sunday Scholars' total includes Teachers and Officers.

support \$31,896,632, and for Sunday School expenses \$3,031,855. It was estimated that at least one-half as much more was raised for items of local expenditure.

Statistics compiled by the Methodist Publishing House in London and giving the latest procurable statistics are given in the table on page 467.

#### METHODIST EPISCOPAL CHURCH,

**SOUTH.** A separate branch of the Methodist Episcopal Church formed in 1845 over the question of slavery. At the quadrennial meeting of the General Conference held in May, 1926, 56 annual conferences were reported, 41 in the United States and 15 in other countries. The executive body is the College of Bishops, which has 15 members who hold office for life. A plan for the unification of the Methodist Episcopal Church and the Methodist Episcopal Church, South, agreed upon by a Joint Commission of the two churches in 1923, was passed with a large majority vote by the General Conferences of both churches in 1924, but in 1925, when submitted to the annual conferences to be acted upon, was defeated because, while a three-fourths majority in both branches was necessary, in the Southern Church the vote was only 4528 to 4108 in favor of the union. The denomination sponsors 248 educational institutions, including 29 universities and colleges, 29 junior colleges, 20 academies, 10 mission schools, and 1 Bible and Missionary Training School. In 1925 the enrollment in these institutions was 40,000 students. In the same year there were 8296 traveling preachers, 5304 local preachers, and 17,699 churches with a membership of 2,254,901. There were 267,494 members in the Epworth League and 16,823 Sunday Schools with an enrollment of 2,056,458. The Board of Missions carries on work in Belgium, Brazil, Mexico, China, Czecho-Slovakia, Poland, Japan, Cuba, Korea, Siberia, and the Congo. The most important periodicals of the denomination are the *Methodist Quarterly Review* and the *Christian Advocate*. Headquarters are in Nashville, Tenn. The secretary of the General Conference was A. F. Watkins, Meridian, Miss.

**METHODISTS, COLORED.** Several churches of the Methodist faith and form, composed of colored members. One of these, the Colored Methodist Episcopal Church, formed in 1870 as an offshoot of the Methodist Episcopal Church, South, effected the separation from that body of its remaining colored membership. Its quadrennial general conference was held at Muskogee, Okla., May, 1926, when it reported 10 bishops (one retired). It sponsored 14 schools and a hospital at Memphis, Tenn. It has 3619 traveling clergymen and 2101 local clergy. Its churches numbered 4295, with 436,952 members. There were 3119 Sunday schools with an enrollment of 247,526. Epworth Leagues to the number of 1192 had 36,923 members. The amount raised during the year for educational purposes was \$210,670; for missions in Trinidad, British West Indies, where it maintains 4 churches with 237 members and 6 ministers, \$237,510; for Sunday schools, \$310,560; and for salaries of pastors, bishops, and general officers, \$1,210,566.33. It published the following periodicals: *Christian Index*, *Western Index*, *The Index Herald*, and *Colored Methodist*. Its headquarters are at Jackson, Tenn.

The African Methodist Episcopal Church, the

outgrowth of an early colored Methodist movement in Philadelphia, developed rapidly in the Southern States after the Civil War. It follows the Methodist doctrine, but its bishops are appointed over districts, in contrast to itinerant bishops of other Methodist groups. Twelve colleges and four theological seminaries are maintained by this group. It holds a general conference every four years. The secretary was the Rev. William D. Johnson, Plains, Ga.

The African Methodist Episcopal Zion Church, the outgrowth of a Negro congregation formed in New York in 1796, follows the general Methodist doctrine and polity, including itinerancy. It publishes the *Star of Zion* (weekly), *Western Star of Zion* (weekly), *Quarterly Review*, and *Missionary Seer* (monthly).

Statistics for the foregoing and other colored Methodist bodies will be found in the article on **METHODIST EPISCOPAL CHURCH**.

**METHODISTS, CONGREGATIONAL.** A group of Methodists organized at Forsyth, Ga., in May, 1852, as a protest against certain features of the episcopacy and itinerancy. In 1887-88 nearly one-third of the churches of this group united with the Congregationalists, but a number of them later returned and gains in strength took place. Recently, however, losses have been suffered. There are 13 State conferences, and a general conference is held every fourth year. Latest available statistics, those for 1923, gave the number of churches as 352, with about 21,000 members and 500 ministers, and 182 Sunday schools. These were located in most of the southern and some of the northern states. The president of the General Conference in 1926 was the Rev. N. E. Fair, and the secretary J. M. Hays, Laurel, Miss.

**METHODISTS, WESLEYAN.** The principal branch of the Methodist denomination in Great Britain and Ireland, founded at the University of Oxford in 1729 by John and Charles Wesley, and holding its first conference in London in 1744. This is the mother church of the denomination and is composed of five divisions: Great Britain; Ireland; Foreign Missions; French Conferences; and South African Conferences. Statistics for all divisions for 1926 were: 18,764 churches; 35,939 lay preachers; 990,613 church members and probationers; 11,555 Sunday schools; 135,996 officers and teachers; and 1,063,467 pupils. In Great Britain alone there were 8591 churches, 18,850 lay preachers, and a church membership of 515,301. In July, 1926, the church held its 185th Conference. A publishing house is conducted by the denomination at 25 City Road, London, E. C. The branch of the church in Ireland reported 412 churches; 603 lay preachers; and a church membership of 29,322. Its general conference met in June, 1926, for the 156th session. See also **METHODIST, WESLEYAN CONNECTION OF AMERICA**.

**PRIMITIVE METHODIST CHURCH.** Commonly known as the "Camp Meeting Methodists," organized in Staffordshire in 1810. In 1926 there were reported to be 4566 churches; 13,636 lay preachers; 219,335 church members and probationers; 3920 Sunday schools, with 55,125 officers and teachers and an enrollment of 398,534. The publishing house of the denomination is at Holborn Hall, Clerkenwell Road, London E. C. A branch of this church was established in the United States in 1840. It comprises three conferences—the Western, the Pennsylvania, and

the Eastern—and reported in 1926, 86 churches, 73 lay preachers, 9986 church members, 87 Sunday schools, and an enrollment of 16,807 pupils. It holds a General Conference every four years, that for 1925 being held in September, at Kewanee, Ill.

**UNITED METHODIST CHURCH.** Established in England in 1907 and composed of the New Connection, the Bible Christians, and the United Methodist Free Churches. In 1925 there were 3055 churches; 5602 lay preachers; a church membership of 187,405; 2236 Sunday schools, 38,171 officers and teachers; and an enrollment of 264,796 pupils. Publishing House, 12 Farringdon Avenue, London, E. C.

**WESLEYAN REFORM UNION.** One of the smaller divisions of the denomination. It separated in 1850 from Wesleyan Methodist and was organized as a separate body in 1859. For statistics see **METHODIST EPISCOPAL CHURCH**.

**INDEPENDENT METHODIST CHURCHES.** These churches were founded in 1796, and united with other societies in 1806. The title was changed twice, but in 1898 the old name was resumed. In 1925 there were 165 churches; 10,384 church members and probationers; 166 Sunday schools; 3183 officers and teachers; and 24,758 pupils.

**AUSTRALIAN METHODIST CHURCH.** Methodism in Australia dates from 1812, the first conference being held in 1855. In 1926, there were 3752 churches, 8036 lay preachers, 166,101 church members, 3511 Sunday schools, with an enrollment of 203,431. Several publishing houses are conducted by the church, in Melbourne, Sydney, and Adelaide.

Other foreign branches of the denomination include the New Zealand Methodist Church and the Japan Methodist Church, for statistics of which see **METHODIST EPISCOPAL CHURCH**.

**METROPOLITAN MUSEUM OF ART.** See **ART MUSEUMS**.

**METROPOLITAN OPERA HOUSE.** See **MUSIC**, under *Opera*.

**MEXICAN BEAN BEETLE,** See **ENTOMOLOGY**, **ECONOMIC**.

**MEXICO.** A federal republic lying between the United States and Central America. Capital, Mexico City.

**AREA AND POPULATION.** The area of the republic, which is divided into 28 states, one federal districts, and two territories, is 767,198 square miles. The population, according to the census of 1921, was 14,234,799 of whom 6,974,213 were males and 7,287,586 females. The prevailing religion is Roman Catholic, but according to the new constitution of 1917, the church is separated from the state, and there is toleration of all other religions. No ecclesiastical body can acquire landed property. Mexico City, the capital of the republic, had a population of 615,367, of whom 23,668 were foreigners, at the census of 1921. Other large cities are Guadalajara, 119,468; Monterey, 73,528; San Luis Potosi, 68,022; and Mérida, 62,447. Immigration in 1925 was 127,336 and emigration, 81,757, leaving a balance in favor of immigration of 45,579.

**EDUCATION.** Education is free and compulsory, and according to the constitution of 1917, secular. It is regulated by the state authorities except in the federal district where it is regulated by the national government. The accompanying table published by the Bureau of Special Sta-

tistics shows the number of primary schools (not including rural schools) maintained by the federal government and the enrollment in each class:

	No.	Total enrollment
Kindergartens .....	81	5,958
Day primary schools .....	426	117,168
Evening primary schools .....	97	7,101

The following facts and figures are taken from the report of the Secretary for Public Education presented to Congress on Sept. 2, 1926: Five large modern open air schools were built in the past year in the crowded districts of Mexico City. Seven technical and industrial schools were also established during the same period. The rural schools have an enrollment of 143,435 children, as against 121,035 in 1925, while the average attendance in 1926 was 117,673 against 97,166 in 1925, an increase of 20,507. Adults being taught by rural teachers in 1925 numbered 16,138, whereas in 1926 they numbered 36,738. The increase in pupils in the rural schools since the last enrollment was 13,100.

In a circular letter to the governors of the states, Dr. Puig Casauranc, Secretary of Public Education, requested their earnest coöperation in the spread of public education throughout the country. In this letter he stated that a study of the most recent and complete statistics for 1925 showed that the total expenditure by state and local governments on education was about 20,000,000 pesos. The Federal Government in 1925 spent 23,252,992 pesos on education, aside from school construction and repairs, whereas in 1926 it was expected to spend not less than 25,000,000 pesos. This included expenditures for 143,000 pupils in Federal primary schools outside of the Federal District. It was thought that the number of such pupils in 1926 would reach nearly 200,000 because of the addition of 1000 new rural schools. The 1921 census figures showed the percentage of illiterates to be 62.29, while 1926 statistics show that there are in the country 2,652,199 children of school age, of whom only 1,040,521 are attending school, or 35.57 per cent of the school population. Therefore of each 10 Mexican children 6 are not attending school. The need of rural schools is very great, the total number maintained by the states being 4635 and by the federal government, 2690.

On July 23, 1926, the President signed the regulations for the conduct of private schools, which were hereafter to be lay schools and not permitted either to teach or disparage any particular religion. Private primary schools may be either incorporated under the Department of Education, accepting the official curriculum and standards, or not incorporated; that is, without the required studies and standards to give their graduation certificate value equal to those of standard schools. The regulations further provide that private schools may not have a name which indicates religious affiliations nor a connection with a religious order, nor may they have chapels or rooms reserved for religious services, nor religious decorations such as pictures, statues or other objects.

**AGRICULTURE.** According to the United States Bureau of Foreign and Domestic Commerce, the

effect of nearly a decade of political and social disturbance in Mexico was reflected in a lower agricultural productivity, the loss amounting on the average to slightly over 17 per cent. That the attention of the Mexican government was increasingly focused upon intensified agriculture was evidenced by the number and ambitious extent of certain plans, notably those for farm schools, rural credits, and the distribution of agricultural implements. The basic inefficiency of Mexican agriculture is shown by the per capita area of cultivation and the ratio of actual cultivation to the arable domain. The area under cultivation and its distribution among the various crops is given in the accompanying table:

AREA AND PERCENTAGES OF AREA DEVOTED TO AGRICULTURE AND TO VARIOUS CROPS IN MEXICO FOR 1924-1925 CROP YEAR

Item	Area Hectares *	Percentage of cultivated area
Total area .....	200,000,000	....
Cultivable area .....	150,000,000	....
Cultivated area .....	7,000,000	100.0
Principal commercial crops:		
Henequin .....	206,320	2.9

\* One hectare = 2.471 acres.

Accepting the 1926 population of Mexico as 15,000,000, the per capita area of cultivation, was 0.46 of a hectare. The total area under cultivation was, moreover, but 3.5 per cent of the cultivable area of the republic—indicating how wide a margin existed between actual and potential production in agriculture.

With the exception of the State of Jalisco, from which reports indicate an increased agricultural production over 1924, the year 1925 was very unfavorable for Mexican agriculture. The principal causes were the locust plague, the unusual drought during the earlier season, and the very heavy rains and winds during the growing seasons in the principal producing areas.

**MINING AND PETROLEUM.** Although the Mexican mining industry was affected by adverse legislation and labor agitation during 1925, the favorable prices for silver, lead, and zinc gave an impetus to production and exploration. The output of both lead and zinc was higher than ever before, while silver production—although somewhat below the 1924 level—showed an increase over the three preceding years, as did also the production of gold. The district of Pachuca continued to hold its position as the world's largest silver producer. The increasing number of flotation plants for the selective concentration of silver-lead-zinc ores, along with other evidences of progress in ore treatment was particularly significant, since it was enabling min-

ing companies to develop ore bodies which in the past have been ignored because of the base character or low grade of the ore.

According to statistics published by the Mexican Department of Mines, 3176 petitions for mining concessions, involving 39,722 hectares of land were filed with that department in 1925, as compared with 2011 petitions, covering 25,006 hectares in 1924.

The *Engineering and Mining Journal*, (New York), stated in its annual review, mining in Mexico in 1926 was generally profitable, and production of metals was, in most cases, in excess of that of previous years. Notable occurrences were the completion of several differential flotation concentration plants, the drop in the price of silver, and the enactment of a new Mexican Federal Mining Law. The figures in the accompanying table are actual for the year 1925 and for the first nine months of 1926, but estimated for the remainder of the year. The data were supplied by the Mexican Federal Mining Department.

MEXICAN MINERAL PRODUCTION

	1926	1925	1924
Gold, oz. ....	753,757	788,993	792,401
Silver, oz. ....	93,235,000	92,885,176	91,437,944
Lead, tons ....	227,115	196,528	181,569
Copper, tons ....	61,820	60,056	55,068
Zinc, tons ....	105,050	56,974	27,125
Mercury, tons ....	45	43	40
Antimony, tons ....	2,668	1,473	852

Graphite, tons ....	5,005	6,890	8,825
Manganese ore, tons ....	4,400	3,666	1,980
Coal, tons ....	1,100,000	1,588,948	1,393,366

The new Mexican mining law, which went into effect Aug. 1, 1926, greatly limits the conditions under which mines may be developed and operated. Under the new law, it is necessary, in taking up virgin ground, to apply for an exploration license, which when minable ore is discovered, may be converted into a mining license that will be continued for as long as desired, provided the operator conforms to government regulations. Penalties for infractions of the regulations are either fines of varying amount or forfeiture of the mining license. Among other things, regulations limit the size of group of claims. Provision was made in the law for registration of preexisting mining concessions, which if effected before Aug. 1, 1927, will entitle the owners to continue operations with the full enjoyment of preexisting rights and laws. The law limits the right of states to levy taxes on mining rights and properties. There was great opposition to the law, but with the provision in the law for recognition of preexisting rights and titles under the terms by virtue of which these were granted, it would not seem that these owners were seriously affected in their operations.

Mexican petroleum activities in general showed a decline in 1925 as compared with 1924. The total production of crude oil in 1925, amounted to 114,827,186 barrels—24,851,108 barrels less than during the preceding year. The 1924 drilling record showed 296 productive wells and 403 abandoned; corresponding statistics for 1925 revealed 299 productive wells and 498 abandoned. During 1924 an average of 126 wells were drilled monthly, compared with 121 monthly in 1925. Considering the productive wells only, the daily capacity of the new wells of

1924 averaged 3384 barrels, compared with 3608 in 1925. During 1925, 1522 drilling permits were issued, an increase of 151 over the 1914 record.

Of the total Mexican production in 1925, approximately 13,360,000 barrels of crude and its derivatives were consumed within the country. In addition, 1,809,000 barrels of products were imported. It is estimated that a total of 37,456,348 gallons of gasoline, domestic and imported, were consumed during 1925, or a monthly average of 3,121,362 gallons. The 1925 production of crude was 18,254,624 cubic meters or 114,827,186 barrels, valued at 296,899,788 pesos.

COMMERCE. According to *Commerce Reports*, the foreign trade of Mexico in 1925 increased considerably over 1924. The total of imports and exports amounted to 1,073,481,004 pesos (\$563,740,502) in 1925 compared with 936,084,120 pesos in 1924, an increase of about 14.6 per cent. Exports amounted to 682,484,832 pesos (\$341,242,416) and imports to 390,996,172 pesos (\$195,498,086) of the total trade for 1925, giving a favorable visible balance of trade of 291,488,660 pesos. The export trade for 1925 expanded considerably over that for 1924. Most of the exports showed increases but the value of crude petroleum shipments decreased from 163,853,581 to 137,411,054 pesos. Exports of fuel oil also declined, but those of gasoline increased about 50 per cent. Other exports that were noticeably greater in 1925 than in the previous year were henequen, copper, lead, zinc, coffee, rubber, vegetables, and vanilla. Other declines occurred in the exportation of bananas, sugar, and cotton. The accompanying table includes exports by major classifications for the years 1924 and 1925.

Classifications	1924	1925
Live animals .....	\$350,492	\$624,426
Articles of food and drink .....	20,516,656	27,883,917
Materials, raw or partly manufactured .....	223,793,300	213,032,927
Manufactured articles .....	1,594,436	1,817,990
Gold and silver (including coin) .....	61,101,373	67,883,156
Total .....	307,356,257	341,242,416

The increase in the value of imports was distributed over most of the import items, although a number registered declines. The accompanying table shows imports by major classifications for the years 1924 and 1925.

Classifications	1924	1925
Live animals .....	\$1,435,403	\$2,778,074
Articles of food and drink .....	25,364,649	31,776,918
Materials, raw or partly manufactured .....	21,211,478	21,173,978
Manufactured articles .....	11,848,399	134,824,793
Gold and silver (including coin) .....	825,873	4,944,323
Total .....	160,685,802	195,498,086

The following tables show imports and exports of Mexico by countries for 1924 and 1925:

#### IMPORTS OF MEXICO BY COUNTRIES

[Value in thousands of pesos, i. e., 000 omitted. Peso equals at par 49.85 cents U. S. currency]

All others .....	53,777	8.7	67,103	9.9
Total .....	614,713	100.0	682,485	100.0

Imports for the first six months of 1926 amounted to 185,741,357 pesos and exports to 357,934,260. Imports for the corresponding period of 1925 were 200,987,589 pesos and exports 358,807,470 pesos. Imports decreased 15,226,232 pesos and exports, 873,210 pesos.

FINANCE. The revenue for 1925 was 286,399,372 gold pesos and the expenditures 291,863,677 pesos. On Sept. 1, 1925, the figures for the public debt of Mexico were given as follows: Debts not included in the de la Huerta-Lamont Convention of 1922, capital and interest, 171,445,085 pesos; debts included in the convention, 982,136,775 pesos. During 1926 the service on the debt amounted to 64,824,412 pesos, of which 39,324,412 represent service on the internal debt and 25,500,000 that on the external debt.

COMMUNICATIONS. No later statistics on shipping are available than those given in the preceding YEAR BOOK; in 1923, 13,921 vessels of 26,188,422 tons entered the ports of Mexico and 13,799 vessels of 26,084,140 tons cleared. The most important railway in Mexico is the National Railways of Mexico which in 1925 operated 8200 miles of track and controlled an additional 322 miles. There were also 4676 miles of private line.

According to the *Railway Age*, the National Railways of Mexico, by virtue of an agreement reached in New York on Oct. 23, 1925, were returned to private owners on Jan. 1, 1926. The system had been operated by the government since it was taken over by the Constitutionalist government on Dec. 4, 1914. Under the new agreement, the entire net receipts of the National Railways were to be sent monthly by the executive president to the office of the international committee in New York. In the event that the receipts exceeded the payments due, the excess was to be used to retire some of the outstanding paper. It was estimated at that time that the railway debts amounted to 479,268,644 pesos as capital and 197,053,926 pesos as back interest.

GOVERNMENT. Under the constitution of 1917, executive power is vested in the president, elected by direct popular vote for four years and ineligible for reelection; legislative power in the congress, consisting of the house of representatives, elected for two years by universal suffrage, and the senate, comprising two mem-

bers from each state, elected in the same manner. President, Plutarco Elias Calles (Elected July 7, 1924, assumed office Nov. 30, 1924).

### HISTORY

**LAND AND PETROLEUM LAWS.** Throughout the year the relations between the United States and Mexico were severely strained because of the difficulties arising over the new land and petroleum laws which the government of Mexico announced would go into effect in January, 1927. From the time that the Mexican government announced its intention of promulgating these laws the United States government objected on the grounds that they were retroactive and confiscatory in nature, and in violation of the agreement reached in 1923 as a basis for recognition of the Obregon government. On April 10 the American State Department published a series of ten notes which had passed between the two governments concerning the issues at stake and on November 24, the contents of four more notes, two from each government were published. The last four notes dealt with the fundamental principles which Secretary of State Kellogg believed to be basic in considering the problems. He defined them as follows: First. Lawfully vested rights of property of every description are to be respected and preserved in conformity with the recognized principles of international law and equity. Second. The general understanding reached by the Commissioners of the two countries in 1923, and approved by both governments at the time of resumption of diplomatic relations with them, stands unmodified and its binding force is recognized. Third. The principles of international law that it is both the right and the duty of a government to protect its citizens against any invasion of their rights of person or property by a foreign Government, and that this right may not be contracted away by the individual is conceded. Fourth. The principle that vested rights may not be impaired by legislation retroactive in character or confiscatory in effect is not disputed.

According to *Current History*, New York, Secretary Kellogg's assertion that there was virtual agreement between the governments of the United States and Mexico with respect to the above basic principles was not to go unchallenged by the Mexican Foreign Minister, Sáenz. Instead, the correspondence showed, first that the Mexican government adheres unqualifiedly to the first principle; second, that it adheres to the fourth principle while contending with respect to it, "that the mere retroactive character of a law, taken by itself and until it does produce confiscatory effects or is harmful in any other way when applied cannot give rise to any objection whatever, nor be the cause of diplomatic representation"; and, third, that there is a wide difference in the opinions of the two governments with respect to the second and third of the above principles.

On the assumption that the Mexican government evidently considers "property rights, which are commonly regarded as vested, in terms of a mere right of user or enjoyment, which might lawfully be interrupted or wholly taken away by laws or regulations," Secretary Kellogg indicated how the application of such a theory would affect American property owners. Owners of the subsoil who acquired their

titles before the constitution of 1917 was promulgated are required "under penalty of forfeiture, to apply within one year for 'confirmation' of their titles and to accept 'concessions' for not more than fifty years from the time the exploitation works began." The American government contended that this was retroactive and confiscatory because it converted exclusive ownership into a mere authorization to exercise rights for a limited period of time. Foreign Minister Sáenz disagreed with this contention and stated that "the best defense that may be offered for the petroleum law . . . is the large number of applications for confirmation that have been filed and published, many of them being from foreign concerns."

In referring to the land law Secretary Kellogg stated that "foreign absolute owners of stock in Mexican corporations holding rural property for agricultural purposes" are required "to dispose of their corporate interests in excess of 49 per cent within the term of 10 years." According to Mr. Kellogg, this meant that "a plainly vested interest . . . is divested by compelling the holder, without his desire or consent, to dispose of the same within a limited time under conditions which may or may not be favorable to the transfer." He said that the United States could not accept such a conception of a vested right. Mexico replied that the law merely imposed on foreign owners of corporate stock in excess of 49 per cent the obligation to transfer this property incompatible with the law into another form which can be compatible, fixing a term of years for this to be accomplished.

In the last note of the year sent by Secretary Kellogg on October 30, he stated that the United States government saw no reason to change its previous position on any of the matters in dispute between the two countries and that he "desires to be understood as maintaining these positions with utmost emphasis." His purpose had been "to point out so clearly as to leave no room for misunderstanding the extremely critical situation affecting the relations between the two countries." In conclusion he warned the Mexican government that the United States "expects the Mexican government not to take any action under the laws in question and the regulations issued in pursuance thereto which would operate either directly or indirectly, to deprive American citizens of the full ownership, use and enjoyment of their said properties and property rights." In reply to this Minister Sáenz stated in what was to be his last note of the year "My Government on its part expects that your excellency will indicate the concrete cases in which recognized principles of international law may have been violated or may be violated in disregard of legitimate interests of American citizens, since in such cases it will be disposed to repair such violations." These notes which were published on November 24 were, as noted above, the final correspondence of the year in respect to the petroleum and land laws. The situation from that date until the end of the year was tense and fraught with all sorts of possibilities. Mexican and American public opinion were divided as to the outcome of the putting into effect of the laws on Jan. 1, 1927. In some quarters of the American press there was an attempt to connect the Sinclair-Doheny oil interests with the insistent demands made upon the Mexican government by the

United States government. These papers alleged that the oil companies which had not complied with the "confirmation" provision of the law were controlled by the above interests and they expected the Coolidge government to go to the same length for the oil interests that the Harding government had gone. Generally speaking, the papers supporting Mr. Coolidge gave him and his Secretary of State their full support. American-Mexican relations were further strained by the revolution in Nicaragua (q.v.) and the struggle carried on between the Mexican government and the church in general and the Roman Catholic Church in particular.

**STRUGGLE BETWEEN THE STATE AND CHURCH.** In some measure the strained relations between the United States and Mexico were overshadowed by the titanic struggle carried on throughout the year between the Calles government and the Roman Catholic Church. This struggle dated back to the constitution of 1917 as did the disagreements over the land and oil laws. In that constitution the following provisions concerning religion and education were incorporated: "Religious institutions known as churches, irrespective of creed, shall in no case have legal capacity to acquire, hold, or administer real property. Places of public worship are the property of the nation, as represented by the Federal Government, which shall determine which of them may continue to be devoted to their present purpose. Episcopal residences, rectories, seminaries, orphan asylums, or collegiate establishments or religious institutions, convents, or any other buildings built or designed for the administration, propaganda, or teaching of any religious creed, shall forthwith pass, as of full right, to the legal ownership of the Nation. Only a Mexican by birth may be a minister of a religious creed in Mexico. No ministers of religious creeds shall criticize the fundamental laws of the country, the authorities in particular, or the government in general."

On February 11 the government announced that it would begin immediately to carry out these provisions of the constitution, and that immediate steps would be taken to nationalize all the churches and deport all foreign priests. On the next day the government ordered the closing of all schools, orphan asylums, and convents where instruction was given. Steps were immediately taken to carry out the deportation provisions and within a few weeks the press of the entire world was reporting forcible and voluntary deportations in order to avoid arrest and its consequences. In some cases mild cases of rioting were reported in places where the state attempted to close the churches.

Generally speaking the acts of the state were directed against the Roman Catholic churches chiefly because they were in the vast majority and partly because the Protestant denominations had already complied with the provisions of the constitution. Private schools were ordered to register with the Ministry of Public Instruction within a given period of time or be forcibly closed. Religious instruction was forbidden in all private primary schools and they were ordered to sever any connections whatsoever with a religious organization. The action of the Calles government was received in the United States with vigorous demands for American interference in certain quarters. The Coolidge government

stoutly refused to make any formal complaint to the Mexican government despite repeated requests from many quarters and a growing and ever-increasing insistent demand that some action be taken. The only comment in the early stages of the struggle was the presentation of a note to the Mexican government on March 9 which expressed the hope that American citizens would not be obliged to undergo actual hardship or injury because of their religious beliefs and practices.

On April 19 Pope Pius XI published a letter to the Archbishops and bishops of Mexico in which he severely criticized the "wicked regulations, and laws against the Catholic citizens of Mexico which have been sanctioned by officials hostile to the church." The National Catholic Church of Mexico was declared a schismatic sect. All Catholics were forbidden to establish any political party under the name Catholic and all bishops and priests were forbidden to become members of any political party or to write for the journals of any political faction.

The first organized resistance of the church to the acts of the government occurred on July 31, when for the first time since the conquest of Mexico by the Spaniards, the religious ceremonies of the Roman Catholic Church were suspended throughout Mexico. This was done as a result of a conference of the leaders of the church and with the sanction of the Pope. The selection of this date was made because it was the time set for the enforcement of the decrees of the Calles government for the full enforcement of the provisions of the constitution of 1917. The churches were not closed by the priests but were to be left in the hands of the worshippers. On July 27, the Mexican Minister of the Interior sent a message to all State governors telling them that the Catholic clergy "in an act of rebellion and disowning constitutional precepts" was planning to suspend religious services "to evade the supreme law, to agitate public opinion and procure disorders." The governors were directed to seize the churches when such action took place and "on no account should any church be handed to a committee or individuals named by priests or Catholic bishops."

The last religious services of the Roman Catholic Church were held on July 30 and immediately after they were finished the civil government took charge of all buildings throughout the country and locked them up. This was carried out without any particular disorder. Many of the churches opened as usual on August 1 and about the only difference that a lay person could notice was the absence of officiating priests. In accordance with a letter from the Pope all Catholic churches throughout the rest of the world were requested to pray for the Catholics of Mexico on August 1. While this was presumably being done, a tremendous parade was staged in Mexico City as a demonstration in favor of the programme of President Calles and his cabinet. The leaders in this demonstration were the labor bodies, which heartily endorsed the anti-church decrees.

Throughout the summer the conflict between church and state raged. President Calles remained firm in his insistence that the constitution be upheld and apparently did not lose any of his popularity because of the fact that the church leaders denounced him as a rank Bolshevik. Some effect on business was noted due

to the economic boycott sponsored largely by Catholic lay organizations. The government arrested any person furthering this movement although it declared the scheme ridiculous, President Calles remarking on one occasion, "He who has no clothes I am sure will buy them."

In the early part of September the Catholic Episcopate of Mexico presented a petition to the Chamber of Deputies of the Mexican Congress requesting that body to amend or repeal the provisions of the constitution of 1917 as they affected the church and educational institutions. On September 24 the Chamber rejected the petition by a vote of 171 to 1. During the autumn there was some trouble in the outlying states, chiefly with the Yaqui Indians, in Sonora. The uprising was put down without much trouble. It is mentioned here because charges were made in the Mexican Congress that the movement was sponsored and financed by Catholic organizations both within and without Mexico. These charges were never definitely proved.

The year closed with the church and state still deadlocked. The regulations of the government were made more severe by a bill passed on November 25. On November 20, the Pope issued an encyclical which bitterly attacked the Mexican government and praised the lay bodies, such as the Knights of Columbus, for the firm stand they had taken on the side of the clergy. The Pope's letter ended with supplications to Our Lady of Guadalupe, the patroness of the Mexican Indians, to forgive the crimes committed against her and to intercede for the return of peace and concord in Mexico. Shortly after the publication of this letter the Episcopate declared that Calles was motivated largely by his Bolshevistic leanings. The President in a statement to the press stated that all charges that he was Bolshevistic were pure propaganda.

**MICHIGAN. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,668,412. The estimated population on July 1, 1926, was 4,390,000. The capital is Lansing.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1926	1,593,000	54,162,000	\$39,538,000
	1925	1,642,000	65,680,000	49,260,000
Hay, tame	1926	2,869,000	4,097,000 *	56,539,000
	1925	2,887,000	2,871,000 *	47,372,000
Wheat,	1926	979,000	17,916,000	21,858,000
	winter	851,000	14,467,000	22,569,000
Wheat,	1926	5,000	82,000	100,000
	spring	5,000	90,000	140,000
Oats	1926	1,570,000	51,810,000	20,724,000
	1925	1,619,000	51,808,000	20,723,000
Potatoes	1926	261,000	29,880,000	35,856,000
	1925	237,000	24,411,000	39,546,000
Beans, dry	1926	552,000	6,624,000	18,547,000
	1925	639,000	8,626,000	25,447,000
Rye	1926	199,000	2,686,000	2,095,000
	1925	216,000	2,700,000	2,106,000
Barley	1926	133,000	3,790,000	2,464,000
	1925	129,000	3,160,000	2,275,000
Sugar beets	1926	103,000	842,000 *	
	1925	99,000	969,000 *	6,836,000

\* tons.

**MINERAL PRODUCTION.** Iron ore, the leading mineral product of the State, was actively mined in 1925. There were shipped from the State's mines 15,254,003 long tons of iron ore, as against 11,248,641 long tons in 1924; in value \$40,926,315 in 1925 and \$35,605,902 in 1924. Pig iron

produced in the State attained for 1925 the quantity of 831,435 long tons, and for 1924, 650,333 long tons; with a value, for 1925, of \$18,452,346 and for 1924 of \$15,225,900. Next in importance, the production of copper was 138,029,764 pounds in 1925 as against 145,333,227 pounds (smelter output). The copper product was valued in 1924 at \$17,771,801 and in 1923 at \$20,330,700. Coke production, one of the important mineral industries of the State, was 1,770,547 short tons in 1924 and in 1923, 1,648,773 short tons; its value in 1924 was lower than in 1923, being in 1924 \$11,914,028 and in 1923 \$14,389,742. Coal production supplied only a part of the State's coal needs, being in 1925 808,233 net tons, and in 1924 831,020 short tons; in value, \$3,391,000 for 1925, and for 1924 \$3,602,000. Cement was a growing industry, of which the product in 1925 totaled 10,920,000 barrels, and in 1924 9,259,781 barrels; in value, cement shipments in 1925 attained \$18,825,000 and in 1924 \$16,405,761. Clay products had a value of \$10,246,953 in 1924 and in 1923 of \$6,959,278. Salt production was important, being the highest for any State. The totals were 2,172,000 short tons in 1925 and 1,918,463 short tons in 1924; in value, \$7,710,331 in 1925 and in 1924 \$7,864,838. Sand and gravel, calcium chloride, gypsum and stone were produced in important quantities. The total value of the State's mineral products, duplications eliminated, was \$114,239,386 in 1924; in 1923, \$128,291,450.

**FINANCE.** Payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$43,691,390. Their per capita rate was \$10.63, as against \$9.53 in 1924 and \$7.25 in 1918. Their total included \$15,055,175 for education, apportioned among minor State divisions, from a "Primary School Fund." Expenses totaling \$82,122 for public service enterprises, \$4,219,940 for interest on debt and \$31,616,192 for permanent improvements, added to payments for maintenance and operation of State departments, made the total of State payments \$79,609,644. For highways was expended the sum of \$27,915,618, of which \$3,264,166 was for maintenance and \$24,651,452 for construction.

Revenue receipts of the State were \$65,945,861, or \$16.04 per capita. They exceeded by \$17,952,409 the total payments except those for permanent improvements, and were \$13,663,783 less than the total with these included. Payments in excess of revenue receipts were met from the proceeds of debt obligations. Property and special taxes formed 53.4 per cent of the total revenue in 1925, as against 60.8 per cent in 1924 and 60.2 per cent in 1918. Their per capita rate was \$8.56 in 1925, \$8.92 in 1924 and \$4.18 in 1918. Earnings of the general departments and compensation for officials' services furnished 8.9 per cent of the 1925 revenue; business and non-business licensees, 21.4 per cent. State license receipts were derived chiefly from the taxes on incorporated companies and on gasoline sales, and from the licensing of motor vehicles.

The net indebtedness of the State on June 30, 1925, was \$81,610,233, or \$19.86 per capita, as against \$18.42 in 1924 and \$2.64 in 1918. The assessed valuation of property subject to State tax was \$6,836,601,622. The State tax levy was \$24,610,750, or \$5.99 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 8349.

The new construction in 1926 was about 10 miles of first track and one mile of second track. The Pere Marquette system abandoned 19 miles of line between White Cloud and Big Rapids.

**EDUCATION.** A child accounting system was installed in the State. It was organized to function on a centralized plan and had the department of public instruction as its head. Under this system a series of reports to the superintendents of schools, to county superintendents and to the department of public instruction, concurrently, affords a continuous check on the school progress of each child of school age in the State. The system, according to the *Journal of the National Education Association*, had the recommendation and endorsement of the Michigan Education Association.

The school population as estimated on May, 31, 1925, the latest available figure, was 1,160,435. Total enrollment in public schools was 845,118; of this number 719,344 were enrolled in common schools and 125,774 in high schools. Expenditure for public education in Michigan in 1926 was reported as \$68,344,635. Salaries of men teachers averaged \$1870, those of women teachers, \$1400, yearly.

**CHARITIES AND CORRECTIONS.** Charitable and correctional institutions of the State include the following: State Prison and Branch State Prison; several State Hospitals; a Farm Colony for Epileptics; industrial schools, for boys and for girls; Soldiers' Home; schools for the deaf and the blind.

**POLITICAL AND OTHER EVENTS.** In the general election of November 2, the Republican candidate for Governor, for the term beginning in December, 1926, Fred W. Green, was elected, defeating William A. Comstock, the Democratic candidate. A solid delegation of 13 Republicans was elected to the U. S. House of Representatives. The State party primaries were held September 14, and in the Republican primary Green defeated Governor Groesbeck, serving his fourth term, by about 140,000. Other State officers elected in November to enter office in 1927 were: Lieutenant-Governor, Luren D. Dickinson; Secretary of State, John S. Haggerty; State Treasurer, Frank D. McKay; Auditor General, Oramel B. Fuller; Attorney General, William W. Potter.

The labor situation in the automobile factories of Michigan was the subject of action at the annual meeting of the American Federation of Labor, held at Detroit early in October. (See **LABOR, AMERICAN FEDERATION OF.**) In accordance with an act of the 1925 Legislature which permitted 500 miles of highway to be added to the State system, 377 miles of unimproved highway was admitted into that system, and contracts totaling more than \$12,000,000 for construction in 1927 were let during the year. Following an escape from Ionia prison on August 28, Judge R. A. Hawley conducted an investigation and made in December a report condemning the dormitory system there in use and advocating a return to the earlier block system of lodging the convicts. The State Supreme Court held in a decision rendered December 8 that the Governor had a right to nullify paroles and subsequent pardons, when terms of parole had been violated by a criminal. A committee of the Michigan League of Municipalities devoted study to means of relieving general property from the burden of State taxation, in the interest of municipalities taxing property. Proceedings against Benjamin

Purnell, head of the House of David, a communistic religious organization established at Benton Harbor, were instituted when Purnell after a long search on the part of the authorities was reported as living secretly within the premises of the colony. State troopers raided the House of David premises and arrested Purnell November 17. He was arraigned at Benton Harbor on charges brought by former women members of the religious colony, and held for examination December 22. In Detroit a division of the Recorder's Court was created, known as the Traffic Court. In its first 6 months it disposed of 42,117 cases of defendants charged with serious violations of traffic regulations; 59,059 (chiefly) minor charges were canceled by the police.

**OFFICERS.** Governor, Alexander J. Groesbeck; Lieutenant-Governor, George W. Welah; Secretary of State, Charles J. Deland; Treasurer, Frank D. McKay; Auditor, Oramel B. Fuller; Attorney-General, Andrew B. Dougherty; Superintendent of Public Instruction, Thomas E. Johnson.

**JUDICIARY.** Supreme Court: Chief Justice, John S. McDonald; Associate Justices: Howard Wiest, George M. Clark, John E. Bird, Nelson Sharpe, Joseph H. Steere, Ernest C. Snow, Grant Fellows.

**MICHIGAN, UNIVERSITY OF.** A co-educational State institution of higher education at Ann Arbor, Mich.; founded in 1837. The University, made up of nine schools and colleges, admits graduates of accredited high schools to the College of Literature, Science, and the Arts, to the College of Engineering and Architecture, to the College of Pharmacy, and to the Training School for Nurses, as well as to the special programme for dental hygienists and the curriculum in physical education. In 1925-26 the enrollment was 12,690, of whom approximately 33 per cent were women. Of this number, 63 per cent were inhabitants of the State of Michigan, the remaining 37 per cent, with the exception of 314 foreign students, from all parts of the United States. The teaching staff was composed of 701 members. The University libraries contained 619,508 volumes. For current expenses, the University receives annually \$3,700,000 from the State, together with more than two and one-half million from other sources. The University hospital contained 724 beds, as against 600 in 1925, when it was opened, and it was planned to extend it still further. The Thomas Henry Simpson Memorial Institute of Medical Research, the gift of Mrs. T. H. Simpson of Detroit, was completed during the year. There were under construction a new architecture building, to be completed by September, 1927; and a stadium with a seating capacity of 70,000, to be completed by the autumn of 1927. President, Clarence Cook Little, Sc.D., LL.D.

**MIDDLEBURY COLLEGE.** A co-educational, non-sectarian college at Middlebury, Vt.; founded in 1800. For the fall term of 1926 a total of 610 students were registered as undergraduates, of whom 329 were men and 281 were women. There were also 6 men and 13 women enrolled as graduate students. The summer session had enrollment of 384. The faculty in 1926 comprised 59 members, 55 teachers and 4 officers of administration. The college's productive funds amounted to \$2,900,065, and the income for the year to \$292,459. In 1926 gifts to the college amounted to \$113,991.82. There were 50,000

volumes in the library. President, Paul Dwight Moody, D.D.

**MIDDLE CONGO.** See FRENCH EQUATORIAL AFRICA.

**MIGRATION.** See ZoöLOGY.

**MILITARY PROGRESS.** Progress in things military did not characterize the year 1926, and stagnation would best describe these conditions throughout the world—and in many cases, there was retrogression in morale in many armies. The notable exception in the way of national and international achievement was that of Germany. The Locarno Pacts, accomplished in the latter part of 1925, gave Germany an advantageous international position. The results of these agreements were the evacuation of Cologne on Jan. 31, 1926, and a general letting up in the Allied handling of the Rhineland occupation, with even a small withdrawal of troops. In September Germany was admitted to membership in the League of Nations (q.v.). The Inter-Allied Aeronautical Commission of Control withdrew in September as the direct result of the Franco-German Air Treaty in April, whereby planes of either country were allowed to fly over the other's territory. The degree of technical perfection of the Reichswehr had been noticeably increased. The dismissal of General Von Seeckt did not affect, apparently, this disciplined army.

The situation on the eastern frontier had not cleared. Relations between Poland and Germany were strained and sudden armed action was entirely possible. Germany did not acquiesce in the loss of the Polish Corridor, Upper Silesia, and Danzig, and it was not a far guess that Germany would take the first opportunity to regain these territories lost to her. Germany is the outgrowth of a military force and knows what force will accomplish. What other inference from the semi-military societies that devote so much time to military drills and training? The psychological effect of the prohibited training of the Versailles Treaty on a nation of her mind and experience are self-evident. The resignation of General Von Seeckt of the German Reichswehr satisfactorily solved his unwise action in allowing a son of the Ex-Crown Prince William to serve in a well known regiment during the Munsingen summer manœuvres. The minister of defense, Herr Gessler, knew nothing of it, and President Hindenburg had no alternative but to accept the resignation. It gave too much recognition to the monarchists in Germany. General Von Seeckt was succeeded by General Heye as Commander-in-Chief.

The powers had agreed that the Inter-Allied supervision over Germany's armaments, effective for the previous eight years, would cease on Jan. 31, 1927. At that time the Allied Military Control Commission under Marshal Foch was to leave Germany, and responsibility for German fulfillment of disarmament clauses of the Versailles Treaty would fall to the League of Nations. The *New York Herald Tribune*, Dec. 12, stated that the agreement stipulated that the delinquencies heretofore reported,—among others, that Germany was building forts on the Polish frontier,—would be attended to, and that unless satisfaction was given the Allies before Jan. 31, 1927, the whole matter would pass to the League Council for arbitration or for moral pressure to force Germany to comply. At the Allied embassies in Berlin military experts were to be maintained to watch the League's control of

German armaments. Another question was that relating to the export of war materials. The transfer of armament supervision to the League of Nations was only a detail in its process of treaty enforcement, according to the *New York Times* of December 14.

The year witnessed the first manœuvres of the German Army since the World War, in which forces larger than a division participated. The German Army was regulated by the Treaty of Versailles to number 96,000 men and 4000 officers. It was organized into seven rifle and three cavalry divisions. Each rifle division consisted of three infantry regiments, one artillery regiment of six batteries of four guns each and three batteries of four howitzers each, one squadron of cavalry, one pioneer battalion with detachments of signal, motor trains and sanitary services. It lacked air service, gas service, tanks, heavy artillery, light artillery, accompanying weapons for the infantry, sufficient heavy field guns and light automatic weapons. The strength of an infantry company was 130 men, a number most effective to be handled by a single officer.

**MOROCCO.** The war was finally ended on May 25, 1926, by the surrender of Abd-El-Krim, and his later banishment from Morocco. The French and Spanish started the year with a short and speedy campaign, but though costly, it was successful in the final elimination of that rebel leader.

**SYRIA.** Sueida, the capital and chief city of the Druses, with the important town of Salkhad, was captured by the French under the command of General Andreas in June. The efforts of Sultan At Trash, the Druses' leader, to recapture Sueida, had failed, and all had retired into their native hills. The support expected of Ibn Saud, the new Arabian leader, did not materialize, and they saw the hopelessness of their long and brave struggle against the French.

**GREAT BRITAIN.** For Great Britain the year 1926 was a difficult one. The Sudan—Egypt—Palestine presented their ever present and uncertain problems. Chaotic, war-troubled China had caused her uneasiness. The Russian situation threatened her Indian possessions and Russian agents were active in their endeavors to spread sedition and undermine the national stability. While working for peace the British were not inclined to fold their arms. Air and sea power and a striking force were to be maintained and a reserve for home defense to make it impossible or very dangerous for any enemy to land on its shores. That was Britain's thought on preparedness, and so the training of "Territorials" went on. By the middle of September 100,000 lads had been under military training and more would have been trained had not the general strike intervened.

In August successful trials were made at Lulworth of a new wireless apparatus—invented by an English engineer officer—by which it was possible for tanks to communicate with each other or with airplanes. The tank officer commanding the unit was to be equipped with a new and more powerful set than the others so as to be able to maintain communication with a base 50 miles away. Fire also could be controlled and directed on many targets. A new service rifle which had been adopted by the British army was a modification of the short model Lee-Enfield. Its improvements were an aperture sight, a heavier barrel, and the discarding of the heavy

nose cap on the former model. The weight complete was to be 8 pounds 9 ounces; calibre .303 remained the same. The new bayonet was to have a triangular blade 8 inches long, weight 6¾ ounces.

**FRANCE.** The morale of the French army was low because both officers and men felt it offered a poor opportunity for a career. According to Monsieur Painlevé this condition was driving the best men out of the army, and according to his letter to the Premier: "The officers are discouraged and are looking for opportunities to leave the service. The best young men no longer are attending the military schools, thus depriving the Army of elements which both morally and technically have made its strength and grandeur for the past fifty years." It was unquestionable that something should be done to maintain the high standard of the French military establishment, and more especially its moral support.

The total effectives of the French army at home and abroad, according to Paris despatches of November 9, would number 31,029 officers and 647,434 enlisted men and 147,300 horses. These figures included 47,418 native Colonials and 96,449 native Africans. Troops in Morocco for frontier patrols and police operation were fixed at 2819 officers, 82,795 men, and 31,438 camels and horses. The Army of the Levant, in Syria, was cut by more than half, totaling 648 officers, 15,087 men, and 5609 animals—a cut due entirely to the fact that the Druse rebellion was practically over.

According to reports from Military Information sources, the unit of combat in the French army was a group of 12 men formed about an automatic rifle, thus getting the collective power of a group. The strength of an infantry company is not now thought of in terms of 185 men or 160 rifles, but it is 12 automatic rifles. The word "squad" is no longer used. The basic component of a group was the automatic rifle crew, composed of five men and a corporal. For each one of these crews was another crew, likewise of five men and a corporal, whose duty was to assist, aid in the advance of, protect, inform, and reconnoitre for the first crew. The second crew was armed with rifles, pistols and grenades. The two crews or groups were commanded by a sergeant. Three groups constitute a section under a lieutenant, and four sections a company under a captain. The French retained their three infantry regiment divisions.

**ITALY.** On March 15, 1926 the King signed the Army Reorganization Bill. By it the number of army corps was increased from 10 to 11 for Italy proper, with additional special organizations for Sicily and Sardinia. The Army corps was to consist of from two to four infantry divisions, one regiment of field artillery, one group of anti-aircraft artillery, and one regiment of engineers. Alpini troops, Bersaglieri, cavalry, heavy artillery and special engineer troops might be assigned to corps. The 30 infantry divisions were to consist of three brigades of three regiments and one regiment of field artillery. Bersaglieri regiments were to be cyclist units armed with machine guns; light and heavy field artillery were to be increased to 30 and 11 regiments respectively. Radio-telegraphists increased to two regiments, one battalion assigned to each army corps. The tank corps organization remained independent. The period

of compulsory service is to be 18 months, and the minimum strength of the army 150,000. Four armies, 10 army corps, 29 divisions; with one army corps for Sicily and one division for Sardinia.

**SPAIN.** The *Diario* published the details of the organization of the Guardia Civil of Spain, showing it to consist of 1245 officers, 26,224 other ranks, and 5557 horses. Although paid by the Ministry of the Interior, its organization, personnel, armament and discipline were administered by the War Department. It is divided into 28 regiments. The corps consisted of 21,000 infantry and 5200 cavalry grouped under command of a Colonel, with battalions commanded by Lieutenant-Colonels.

**RUSSIA.** Late in the year amnesty to all soldiers who fought in the counter-revolutionary army of General Miller, whose forces acted with American troops at Archangel in 1919, had been granted by the Central Executive Committee. Similar amnesties had heretofore been granted to soldiers of the White Army of Wrangel, Petlura, Yudinitch, Kolchack, Denikin and Semnoff. None of them applies to any category of officers or to White soldiers living outside of Russia. Military training for all university students, both men and women, was ordered by the Commissariat of War. All students were required to take 180 hours instruction in Military Science during their regular four years course and two months of field training during the summer. When their university course is finished the men must serve nine months in the Army, or if they prefer one year in the Navy. The women, it was planned, would be exempt from field practice and active service.

The organization of a foreign legion in the Red Army was progressing. The centre of the formation is at Tula, to which place approximately 12,000 foreigners had been transferred from the Red Army. There were five regular battalions, a foreign school for non-commissioned officers, and an artillery division. In Perm, cavalry detachments were equipped with arms of Polish type. In Orenburg were cavalry units of Mohammedan religion. The citizens of the Baltic States formed a separate regiment. Another infantry regiment is formed by citizens of Finland; two brigades of Ukrainians from Eastern Galicia. The destination of the foreign legion was said to be toward the frontiers of Russia and in Turkestan.

**POLAND.** The manoeuvres in the summer at Rembertow near Warsaw, Poland, developed a new kind of a tank for emitting protective smoke from cylindrical reservoirs. Compressed gas from the reservoirs created a curtain in front of the firing line of the infantry, permitting the men to advance without being seen.

**FINLAND.** The Bergmann automatic gun, about the size of the Thompson, though lighter, with magazine holding 25 shells, had been adopted by the Finnish army, but none issued to it as yet. The civil guard only was equipped with it. There were three cyclist battalions in the Finnish army with approximately 1000 men in each. Each battalion has three rifle companies and one machine gun company of six guns. During winter weather these battalions are used as ski battalions.

**JAPAN.** The passage of the General Pre-Conscription Act in April and its going into effect

in July, requiring 200 hours military training per year for all boys between 16 and 19 years of age inclusive, had put over 1,000,000 boys under military instruction. Their military training before being called to the colors was of two kinds: (a) Military training in the schools, compulsory, except in private schools, for all boys above the 6th grade; (b) General pre-conscription voluntary training for all boys between 16 and 20 years of age.

The purpose of this training was without doubt to prepare youths of the nation for war and the correction of practices which led the young men away from the standards of their parents. When he finished, the boy would have had five years of military instruction in the middle schools; three more in college preparatory, and five more in the university; a total of 13 years in all. When called to the colors he would need only field training and firing. Under this system about 70 per cent of all Japanese boys would have had considerable military training by the time they reached the conscription age of 20 years. The Japanese soldier conscript was called in his 20th year. His first seven years and four months were divided between the active period of usually one year 10 months and 20 days, and the First Reserve. The ten year period following the First Reserve was spent in the Second Reserve; after that, service in the First National Army until 40 years of age.

The number of officers in the First Reserve was about 16,000; in the Second Reserve about 14,000. Reserve officers were informed in advance of the duty to which they would be assigned when called to the colors. Although the pre-conscription training was introduced on July 1, 1926, by the end of that month 15,130 schools were giving this training to 1,128,386 youths. By enrolling while pursuing their ordinary academic studies, the students materially shortened their future terms of conscription.

CHINA. The important river port of Kiu-Kiang on the Yang-Tze River had been captured by the Kuomintang forces. General Chiang-Kai-Sek was the southern leader who dominated the Nationalist forces that had been making consistent progress into Central China. With the provinces of Kiang-Si, south Honan and Fui-kien under their control, a very populous and important area had come into the possession of the Southerners. The opposition forces were apparently under the control of General Chang-Tso-Lin of Manchuria, Wu-Pei-Fu of Central China and General Chuang-Feng of Che-Kiang, Anhwei and Kiang-su. At the end of the year there had not been any effective concerted action among them. As General Feng-Yu-Hsiang was an adherent of the Kuomintang Party he was expected to cooperate with General Chiang-Kai-Sek. Chiang's forces were advancing down the Yang-Tze River, apparently with Shanghai as an objective. For the moment the Nationalistic forces were carried away with the propaganda against foreigners, particularly the British. That served to bring recruits to their ranks.

With each Southern Army was assigned a political officer to educate the troops politically—a practice of the Canton Government, which attached great importance to having an army with impeccable Red principles. Severe fighting near Hangchow, capital of Chikiang Province,

about 100 miles south of Shanghai, brought the year to a close. Evidently the move was to force the Northern troops out of Chikiang back on Shanghai. The real objective of the Kuomintang was its recognition as the Government of China. See CHINA, *History*.

UNITED STATES. A study of the reports of the Secretary of War and the Chief of Staff, as well as those of the chiefs of the various branches of the Military Service, showed among other shortcomings that "the effectiveness of the nation's defenses is sadly imperiled." The Secretary of War called attention to the practical nullification of the Defense Act because of the failure of Congress to appropriate for more than 116,000 men instead of the 280,000 authorized, a total unquestionably below the lowest safety mark set by experts on military effectiveness.

The complexities of modern weapons have greatly increased because of the developments of the Great War, according to the Chief of Staff, Maj. Gen. John L. Hines, who was succeeded by Maj. Gen. Charles P. Summerall during November. There are "new and essential branches" in the Army with "many new weapons and technical appliances" incorporated in the older branches. By the continued extension of the skeleton organization of our defensive structure it has become perilously attenuated.

The problem of individual protection from gas has had first priority in the Chemical Warfare Service since the War, and much progress had been made. The problem of protecting enclosed spaces had been employing the attention of the authorities of this Service, for collective protection was important. No satisfactory solution, however, had so far been achieved. Of the compounds for the production of toxic smokes, the Chemical Warfare Service had only adopted three as standard chemical agents, viz: Lewisite, diphenylchlorarsine and diphenylaminochlorarsine, known as D. A. and D. M. They are called toxic smokes because they do not produce their toxic effect by the formation of vapor, but by minute, finely divided solid particles which are liberated in the air, thus forming a true smoke—according to the Medical Research Division of Edgewood Arsenal.

The Chemical Warfare Service was engaged in research and development work in regard to the safe and effective use of industrial poisons. The commercial use and production of toxic chemicals was increasing with especial rapidity. Contacts with the scientific and industrial chemical activities of the country permits the selection of those reserve officers best fitted to carry on in an emergency crisis. Progress during the year 1926 was in connection with the development of defensive methods and equipment, offensive weapons, medical research and investigations undertaken to determine poisonous substances which may be effectively employed for the eradication or control of insect pests. New types of gas masks were being developed. Screening smokes in connection with defensive measures had been developed.

The total strength of the military personnel of the Chemical Warfare Service was on July 1, 1926, 89 officers, two warrant officers, and 399 enlisted men. Of the 89 officers seven were detailed from other branches. Reserve officers, Chemical Warfare Service, totaled 1168 with requirements of 1273 additional. There were five

procurement districts with headquarters at Boston, Pittsburgh, New York, Chicago, and San Francisco, with permanent men functioning as chiefs of districts. Sources of material were located and location of industrial establishments made.

*Cavalry.* The Phillip Standard pack saddles were adopted during the fiscal year 1925, and were being supplied to the cavalry. There have been developed, adopted and supplied cavalry combat pack leads and accessories fitted to these saddles, to such an extent that the Cavalry Division had its entire quota of pack equipment. The Browning automatic rifle had been replaced by the Browning machine rifle, all cavalry organization being equipped with this latter type. During the year 429 cavalry reserve officers received training at posts and camps. There were 39 regular cavalry officers on duty with the cavalry reserves, with the National Guard 48 regular cavalry officers.

From the R. O. T. C. Camps 196 students were commissioned in the Reserve. The War Department study on replacement officers contemplated the annual replacement at 361. It was apparent that this source of supply was not sufficient, and that additional enrollment or more units would be required. With each unit were approximately 60 horses, with a detachment of 12 men to care for horses and equipment; one stable sergeant, 1 horseshoer and 15 privates.

*Field Artillery.* On June 30, 1926, there were 1425 officers in the Field Artillery of the Regular Army, of which 17 were detailed from other arms. Of this total 802 were for duty with units of the Regular Army. There were 9926 reserve officers enrolled on June 30, 1926, a gain of 1027 during the year. The distribution in field grades is in the proportion of 1, 1½ and 5¼ per cent in Colonels, Lieutenant-Colonels and Majors, respectively. There were 744 R. O. T. C. graduates accepting commissions, an increase over previous years. The shortage of horses at the end of the fiscal year was close to 1500.

The 75mm gun Model 1923 had been adopted as a standard type. A 75mm gun, Model 1925-E, undergoing tests at proving grounds, was to go before a Field Artillery Board for service tests. The 105mm Howitzer, Model 1925, was expected to be ready for service tests during the next year. The Model T-1 had been under design since 1925 but was not yet completed. The Caterpillar marks 30 and 60 had been tested and adopted as standard for future procurement. The Fordson Tractor with adaptors was then undergoing tests to determine its suitability for use in the Field Artillery. The Ford cross-country car, which is a Ford chassis equipped with a Warford or Hinckley transmission, had been adopted as standard for the vehicles of motorized Field Artillery units. Coleman trucks were being tested for use of Field Artillery tactical units.

*Coast Artillery.* Under existing mobilization plans there was a shortage of 677 officers and 19,557 enlisted men in this branch of the service. Three anti-aircraft units were established at Fort Tilden, New York; Fort Monroe, Virginia; and Fort Scott, California, respectively. There was no such unit in the central part of the United States. The limitation placed on estimates for the past year resulted in practical cessation of work on approved plans in

most of the defenses of the Continental United States. The Ordnance Department had on hand the guns and majority of carriages to complete the approved plans for long range weapons at the most important harbors. The Corps of Engineers had developed a mobile searchlight designed especially for illuminating aircraft, which was greatly superior both for anti-aircraft and sea-coast use to anything so far produced. Tests of the Star Shell for augmenting the searchlight in illuminating Naval targets were still being undertaken.

*Air.* For the purchase of new aircraft, during the year 1926, funds in the amount of \$4,001,290.62 were obligated for airplanes and spares as follows:

Primary training .....	100
Nieuport .....	1
Pursuit .....	65
Cargo .....	10
Observation .....	35
Amphibians .....	15
Bombardment .....	24
Remodeled—steel fuselages .....	85

Foreign service units were at approximately half their commissioned strength, but with the material available this was sufficient. Within the United States the school and tactical units were short of pilots and observers. On June 30, 1926, there were 47 flight surgeons from the Medical Corps on duty with the Air Corps. During the year 1288 applicants were examined for appointment as flying cadets. Of this number only 362 were found qualified, 254 appointed, 237 sent to airplane training school and 20 to lighter-than-air training. The percentage of the number of students who enter the Primary Flying School of all classes—officers of the Regular Army, Reserves, National Guard and flying cadets—was very small. Experience was demonstrating that some men could learn to fly and others could not, just as some have musical ability and others have not. The problem is to determine some means which will establish with a fair degree of certainty whether or not it is worth while to attempt the training of the candidate—preferably, some time before he enters the class.

For experimental and research engineering there was appropriated for the fiscal year of 1926 \$2,730,000, a decrease of \$350,000 from the year before. There had been no outstanding changes in the trend of airplane development during the year. Most of the production airplanes purchased were of the single bay, externally braced, bi-plane type, with semi-thick wings. There was very little indication of any marked change from this type of structural arrangements. In the Bomber Type there had been a reaction from the single engine type to the twin engine type which would enable the airplane to fly with only one of its engines operating.

A more extensive use of metal for structural parts was being shown in the airplanes received during the year. Duralumin was used, because of its weight, but increased cost, difficulties in fabrication and uncertainty as to resistance to deterioration militated against its more extensive use. Wood was still used for wing structure. The Thomas-Morse Corporation was building under contract five observation air-

planes called the O-6, entirely of metal. The use of metal propellers was becoming more general because of increased efficiency. Twenty-eight lives had been saved in emergencies as the direct result of Army Air Corps developments of the parachute.

There were furnished to the National Guard 49 complete airplanes and 62 airplane engines. Under the policies of the National Defense Act given out by the War Department, much money had been spent in building airdromes near important cities, where Reserve Officers might be given opportunity to fly. This in addition to the aircraft maintained at regular service airdromes for use of Reserve Officers.

Six Air Corps R. O. T. C. units were maintained during the year with an enrollment of 1005. There were only two sources of supply for Reserve Officer Air Corps, the R. O. T. C. units and graduates of the course for flying cadets. The training of flying cadets was limited to 212 annually. Five hundred annually is the normal requirement for replacement after reaching the peace-time objective strength.

**Ordnance.** Civilian personnel on June 30, 1926, amounted to 4757. Civilian engineers working in connection with the Department had developed the manufacture of projectiles from seamless tubing. The 75mm calibre projectile had been produced and successfully tested. These methods were expected to increase production probabilities tremendously, and to decrease time for production in quantity. Development of 37mm gun, Model 1925-E, and 75mm Mortar, Model 1924, material and infantry cart, Model 1925, for use by Infantry, had continued during the year. Final tests had not been conducted. The 75mm gun Mortar, Model 1923-E, tested by the Field Artillery and adopted by the War Department as a standard for manufacture, had a split trail. The 4.7-inch gun material, Model 1921-E, the 155mm Howitzer, Model 1920, and experimental model carriage for mounting interchangeably either the 155mm gun or 8-inch howitzer, were all undergoing tests. The pilot 14-inch gun railway mount, Model 1920, shipped in 1925 on its own wheels to the Pacific Coast, had been emplaced at Fort McArthur, California, on an all-around fire emplacement. Two similar mounts were nearing completion for use on Panama railroads. The service tests of the Caterpillar 30 and the Caterpillar 60 had been made and their adoption as a standard for medium and heavy tractor had been recommended.

**The Signal Corps.** Enlisted men of the Signal Corps operated during the year the deep sea cable between Seattle, Washington, and Alaska, in connection with a net of 37 radio, cable, and telegraph stations scattered over the territory. There were some quarter of a million dispatches during the year, resulting in the payment of \$268,094.32 to the Treasury. The project for the abandonment of the Richardson Trail Telegraph Line between Valdez and Fairbanks, Alaska, to be substituted by radio, was approved by the War Department. When this will go into effect, the last section of the one-time extensive War Department land telegraph system in Alaska will have been completely abandoned. Pigeon lofts were maintained for the training of communication personnel at 18 military posts, with approximately 1200 pigeons on hand. Signal Corps units of the R. O. T. C. were main-

tained at Massachusetts Institute of Technology, Cornell University, Carnegie Institute of Technology, Universities of Michigan, Illinois, Wisconsin, Minnesota, and Texas Agricultural and Mechanical College.

**Active Strength.** The actual strength of the active Army of the United States on June 30, 1926, by classes of personnel, was as follows:

<b>Commissioned officers:</b>	
Regular Army (active list) .....	11,681
Philippine Scouts (active list) .....	98
Retired Regular Army, on active duty ..	185
Retired Philippine Scouts, on active duty ..	18
Reserve, on active duty .....	210
Emergency (World War non-Regular), undergoing treatment for physical reconstruction .....	1
<b>Total Commissioned Officers .....</b>	<b>12,143</b>
<b>Warrant Officers:</b>	
Regular Army (active list) .....	1,325
Retired Regular Army, on active duty ....	2
<b>Total Warrant Officers .....</b>	<b>1,327</b>
<b>Enlisted Men:</b>	
Regular Army (active list) .....	112,856
Philippine Scouts (active list) .....	7,072
Retired Regular Army, on active duty ....	27
Reserve, on active duty .....	18
<b>Total Enlisted Men .....</b>	<b>119,973</b>
<b>Grand total .....</b>	<b>133,443</b>

In addition to all of the foregoing, there were 673 Army nurses (498 Regular and 175 Reserve), 30 contract surgeons, and 822 United States Military Academy Cadets, making altogether 134,968 individuals in the military service of the United States on that date. Of the 133,443 commissioned officers, warrant officers, and enlisted men accounted for above, 94,561 were serving in the Continental United States, 14,433 in Hawaii, 12,189 in the Philippines, 8645 in the Canal Zone, 1161 in Porto Rico, 1015 in China, 363 in Alaska, 9 in Europe (attached to the Graves Registration Service), and 1067 were either en route from one country to another or were serving as military attachés in various foreign countries. During the fiscal year 230 persons were accepted for appointments as commissioned officers in the Regular Army and Philippine Scouts, and 187 commissioned officers resigned, 68 were retired, 17 were discharged, 7 were dismissed, 3 were dropped as absent without leave, and 58 (including two retired and five Reserve officers on active duty) died.

**Reserve Corps.** The strength of the officers' Reserve Corps increased from 95,154 on June 30, 1925, to 103,829 on June 30, 1926,—a net gain of 8675. During the fiscal year 12,205 appointments were made and 3530 members of the corps were separated from the service. Of the latter, 507 resigned, 686 were discharged, 312 died, 84 accepted appointments in the Regular Army, 1562 appointments terminated, and 379 appointments were either declined or canceled. Of the officers appointed, 4842 were Reserve Officers' Training Corps graduates of the school year ending in 1926 and 299 were graduates of the "Blue" Course at Citizens' Military Training Camps held during the summer of 1925. On June 30, 1925, there were 421 Reserve

Officers on active duty. During the ensuing fiscal year 15,817 Reserve Officers were placed on active duty, 16,023 were relieved from active duty, 5 were killed as the result of accidents, leaving 210 Reserve Officers on active duty on June 30, 1926. During the same period the strength of the Enlisted Reserve Corps increased from 5115 to 5775, principally in the Infantry and Air Service sections. On June 30, 1925, there were two enlisted reservists on active duty, 718 were called to active duty for 15 days training during the fiscal year, and 702 were relieved from active duty, leaving 18 on active duty on June 30, 1926.

For several years, as the general public had become more impressed with the importance of adequate national defense, there had been a steadily increasing enrollment in the Reserve Officers' Training Corps. During the fiscal year 1925 it became evident that demands for training were rapidly out-growing both facilities and appropriations. Surplus stocks from which free issues had been made to the Reserve Officers' Training Corps were depleted and the consequently increased per capita cost made it imperative that measures be taken to reduce the enrollment to such numbers as could be trained with the funds appropriated. It was estimated that at the existing rate of growth the enrollment for the fiscal year 1926, if not limited, would reach 135,000, a number considerably in excess of that which could be adequately handled with available personnel and funds. Corps area commanders were accordingly instructed early in July to take measures to insure that the initial fall enrollment, fiscal year 1926, should not exceed the initial fall enrollment fiscal year 1925, and to conserve the funds allotted with the view of carrying out the entire annual programme, including the summer camps.

On June 30, 1926 there were 323 units of the Reserve Officers' Training Corps, with a total enrollment of 106,778, in existence at 223 civilian educational institutions throughout the United States, of which 223 were senior units, with an enrollment of 68,553, and 100 were junior units, with an enrollment of 38,225. During the fiscal year commissions as second lieutenants in the Reserve Officers' Training Corps were tendered to 4842 graduates of the second year advanced course and 920 others, who were under 21 years of age or who did not desire appointment at the time, received certificates which entitled them to appointment at any time within five years from date of graduation. Fifty-six camps for the further practical instruction of members of the Reserve Officers' Training Corps were maintained during the summer of 1926, for a period of six weeks, at 34 Army posts throughout the United States, with a total attendance of 7636.

During the summer of 1925 42 camps were conducted at military posts and camps in various parts of the United States to provide for the military instruction and training of the civilians, selected warrant officers and enlisted men of the Regular Army with a view to their appointment as Reserve Officers or non-commissioned officers. The total attendance at these camps was 33,914. Commissions in the Officers' Reserve Corps were tendered to 299 graduates of the highest, or "Blue" course, and 94 others received certificates of eligibility but were not commissioned on account of being under age.

Approximately 49 per cent of the total authorized peace strength of the Regular Army—5625 officers and 58,370 enlisted men—was engaged in connection with the training of other elements of the Army of the United States during the summer training camp season of the past year. During the remainder of the year 4342 officers and 35,025 enlisted men of the Regular Army, approximately 30 per cent of its total authorized peace strength, was similarly engaged at one time or another. During the fiscal year 1926, approximately 15,000 officers of units of the Organized Reserves received tours of active instruction duty. Their units were trained with organizations of the Regular Army, of the National Guard, at Citizens' Military Camps, at separate local unit camps and at combined unit camps. For the first time, Reserve units received instruction by being associated with National Guard organizations. As a result, the officers of both components made favorable reports on this method and suggested further development throughout the United States of the associate training of Organized Reserves and National Guard. This plan afforded associate training to many more Reserve organizations than could otherwise be accommodated by the limited personnel and facilities of the Regular Army.

There were 105,769 officers commissioned in the Officers' Reserve Corps, and within the limits of the United States 93,843, a gain of 7332 over 1925. There were 6757 Federally recognized National Guard Officers, and 3450 enlisted men of the United States Army holding commissions in the Officers' Reserve Corps. Of the total number 65,487 were in the combat branches and were divided as follows: General officers—84; Infantry officers—30,599; Cavalry—3825; Field Artillery—10,379; Coast Artillery—4412; Air Corps—6982; Engineers—6884; Signal—2332;—comprising 62.4 per cent of the total commissioned. Of the Staff branches there were 10,964 Medical; 4389 Dental; 1066 Veterinary; 514 Sanitary; and 1590 Medical Administrative,—a total of 18,523. Thirty-four camps with a total estimated attendance of 7300 students were held for the Reserve Officers' Training Corps during the six weeks following the close of the last academic year.

The estimates as submitted by the President in his annual message and the budget message totaled for the War Department for military purposes, including the Panama Canal, \$306,722,142 and showed an increase of \$12,000,000. Of this increase \$7,000,000 came from returns from sales of surplus property, and \$5,000,000 for the Air Corps. The direct provision for the support of the army was \$269,155,068,—practically the identical amount as the previous year. The average enlisted strength was to be 115,000, daily ration cost based on .3574 cents; and 12,000 officers. Estimate was made for 12,572 Reserve officers for a period of two weeks and 352 for from one month to one year; for the attendance of 30,000 men at C. M. T. Camps, for the enrollment of 116,141 students in R. O. T. C. units, and for keeping the National Guard at an average strength of 180,000.

*Air.* The net results of Congressional action in adopting the Morrow Board policies, were the change of the name of the service to "Air Corps"; representation on the General Staff; two additional brigadier generals; temporary

rank in higher grade; special aviation medal; training reserve officers who may qualify as pilots, with provision for enlisted men as pilots; a five-year development programme; and extra flight pay.

The new United States Army semi-rigid dirigible, *R. S.-1*, was launched from hangar at Scott Field, Illinois, on January 8, and made a successful flight. This "blimp" was propelled by 4300 horsepower Liberty motors, was 282 feet long, had a gas capacity of 755,500 cubic feet of gas, and carried 9 officers and men in its crew.

Three types of auto-rifles underwent tests at the Infantry School. The Grand rifle, the Thompson gun, and the Pedersen gun were tested; all were designed for operation on the semi-automatic or self-loading principle, requiring a squeezing of the trigger for each shot. The first is primer operated, firing calibre .30 Springfield cartridges with five in a clip. The Thompson gun operates on the blow-back principle, in which the pressure of the explosion on the breech mechanism is used; it also fires calibre .30 Springfield cartridges with five to a clip. The Pedersen gun operates on the blow-back principle, with a positive breech-locking device; it has a smaller calibre and has 10 cartridges to the clip. Rifle and automatic tests at the Infantry School, according to a member of the Department of Experiment, indicated that a represented airplane can be hit consistently by a rifle platoon of average shooting ability. A simple sight for both weapons is needed, so that the aiming point could be the object instead of an indefinite point in the sky ahead of the target.

**MILITARY TERRITORY OF THE NIGER.** A territory under the governor-general of French West Africa (q.v.). Capital, Zinder.

**MILK.** See DAIRYING; FOOD AND NUTRITION.

**MILLER, HENRY.** American actor and manager, died April 10, at New York City. He was born in London, Feb. 1, 1860, and when 11 years old, came to America with his parents, settling in Toronto, Canada, where he received a public-school education. He made his first appearance on the stage in 1879 in *Amy Robart*, and after a brief experience in Modjeska's company he went to New York in 1880 and appeared in minor Shakespearean rôles at the Booth Theatre with Adelaide Neilson. Six years later he joined Daniel Frohman's Lyceum Company as leading juvenile. In 1893 he became a member of Charles Frohman's Empire Theatre Stock Company and remained there as leading man until 1896, playing, among other parts, John Worthing in *The Importance of Being Earnest* and Michael Faversham in *Michael and his Lost Angel*. After leaving the Empire Company he made his first appearance as a star at the Garden Theatre, New York, in 1897, in *Heartsease*. He starred in *The Master* in 1898; and created the leading rôle in *The Only Way* in 1899. In 1903 he joined Margaret Anglin in a series of co-star performances, playing Dick Dudgeon in *The Devil's Disciple*, Armand Duval in *Camille*, and (in 1906) Stephen Ghent in William Vaughn Moody's *The Great Divide*. After touring America he made his first appearance in England in this play in 1909. Thereafter he appeared in various plays under his own management, including *Her Husband's Wife* (1910), *The Rainbow* (1912), with Ruth Chatterton, and with her also, in 1913, in *Daddy Long Legs*. In 1918,

he opened Henry Miller's Theatre in New York with *The Fountain of Youth*, later producing *A Marriage of Convenience*, first with Billie Burke and then with Ruth Chatterton as the Comtesse. After this he produced *Molière*, playing the leading rôle, and *The Famous Mrs. Fair*, creating the rôle of Mr. Fair and playing it until April, 1922, with Blanche Bates in the title rôle. In this year he produced *La Tendresse* with Ruth Chatterton as co-star. This was followed by his appearance in the title rôle of *Pasteur* in 1923, and the production of *The Changelings* in the same year. Jointly with J. Hartley Manners he wrote *Zira*, and played the leading part in it in 1906.

**MINERALOGICAL CHEMISTRY.** See CHEMISTRY.

**MINERALOGY.** The year 1926 was a notable one in respect to the large number of new mineral species which had been added to science during this period. It is significant, however, that almost without exception these have been found in localities where conditions have been previously recognized as favorable to the formation of rare combinations of elements. The famous locality at Långban, Sweden, probably the most productive locality for rare minerals in the world, has yielded three new species to its already long list. A new beryllium oxide, occurring in white hexagonal crystals of the same group as zinc oxide, has been named *bromelite*. A new lead ferrate, near the rare mineral plumboferrate in composition but differing from the latter in exhibiting strong magnetism, has been named *magnetoplumbite* in recognition of this property. It occurs in hexagonal pyramidal crystals which are black with a brilliant metallic lustre. A basic lead manganate, which is the third new mineral from Långban, occurs in small black monoclinic crystals. This has been named *quenselite*. The Norberg mining district, in Central Sweden, is to be credited with two new mineral species. *Norbergite*, a new magnesium fluo-silicate, is found in pink white masses in the Östanmossa iron mine. *Fluoborite*, a magnesium borate with fluorine, occurs in colorless, hexagonal, prismatic crystals in the Tallgruvan mine. Another portion of the world which has in recent years yielded many new mineral species is the section of the Belgian Congo that lies in the vicinity of Katanga. Two new species have been recently discovered in this region. A hydrated copper nitrate with chlorine occurs with the silver and copper deposits of Likasi, in mats of light blue needle-like crystals. This has been named *buttgenbachite* in honor of Prof. Henri Buttgenbach, who has done much to develop the Belgian Congo minerals.

A mineral believed to be new has been found at Kasolo, Katanga, in small-range radial aggregates, and since it differs in properties from other Katanga species the name *droognansite* has been assigned to it. A new bismuth sulpho-salt, called *warthait*, has been found in an iron mine at Vasko, Krasso-Szorény, Roumania, in metallic, steel-gray, fibrous crystals radially grouped. Also from Roumania comes a new silver ore mineral, called *fielyite*. This is a silver lead sulphantimonide, which occurs in steel gray prismatic crystals at Kisbanya, Szatmar. The volcanic rocks of the Lipari Islands, which have long been a fruitful source of rare minerals have now yielded a new lead sulphobismuthide, which occurs in aggregates of lead

gray crystals in the fumeroles of Vulcano, Lipari Islands, and has been named *cannizzarite*. A new selenide of lead, copper, cobalt and nickel from Colquechaca, Peru, has been named *penroseite* in honor of Dr. Richard A. F. Penrose, Jr. The neighborhood of Pintados, Tarapaca, Chile, notable as a locality rich in sulphates has yielded a new hydrous aluminium sulphate rich in chlorine to which the name *trudellite* has been given in honor of Mr. Harry W. Trudell, an amateur of Philadelphia. The compact masses of this mineral are amber yellow in color. It is highly deliquescent.

**MINERAL PRODUCTION AND RESOURCES OF THE UNITED STATES.** In 1925 the mineral industries of the United States shared in the general industrial prosperity, and the total value of mineral products was stated by the United States Bureau of Mines in its preliminary estimates at \$5,696,000,000 as compared with \$5,305,800,000 in 1924, or an increase of 7 per cent. With the exception of the prolonged suspension of anthracite mining due to the strike which lasted into 1926 (see COAL), there were no major disturbances, and the 1925 production would probably have approached the

1923 value which marked the peak of production, if the 1920 inflation of values had been discounted. The total value of metallic production in 1925 was \$1,380,100,000, an increase of 12 per cent over \$1,232,330,000 in 1924. Nonmetallic mineral products other than fuels produced in 1925 were valued at \$1,293,900,000, an increase of 11 per cent over \$1,169,100,000 in 1924. The output of mineral fuels, coal, petroleum, natural gas, and natural-gas gasoline, in 1925 had an aggregate value of \$3,016,000,000 or 4 per cent more than the value of \$2,898,630,000 in 1924. The bituminous coal mining industry in 1925 showed an increase in production over 1924 of approximately 40,000,000 short tons, the estimated production for the year being 522,967,000 short tons as compared with 483,687,000 short tons in 1924. The accompanying statistical summary prepared by the United States Bureau of Mines, indicates the mineral products of the United States in the year 1924-25. Detailed discussion of the various important minerals and their production are discussed in separate articles such as COAL, COPPER, GOLD, IRON AND STEEL, SULPHUR, etc. See also MINES, BUREAU OF.

## MINERAL PRODUCTS OF THE UNITED STATES, 1924-25 \*

Product	Quantity	1924 Value	Quantity	1925 Value
<b>Metallic</b>				
Aluminum ..... pounds..	.....	\$37,607,000	.....	\$36,430,000
Antimonial lead <sup>b</sup> ..... short tons (2,000 pounds)	20,787	3,376,713	19,667	3,785,547
Antimony <sup>c</sup> ..... do..	2,763	596,800	2,624	918,400
Bauxite ..... long tons (2,240 pounds)	347,570	2,187,990	316,540	1,988,250
Cadmium ..... pounds..	129,328	77,597	( <sup>d</sup> )	( <sup>d</sup> )
Chromite ..... long tons..	288	1,140	108	2,105
Copper, <sup>e</sup> sales value ..... pounds..	1,634,249,192	214,087,000	1,674,869,886	237,832,000
Ferroalloys ..... long tons..	497,244	43,249,948	616,222	53,048,100
Gold <sup>f</sup> ..... troy ounces..	2,528,900	52,277,000	2,411,987	49,860,200
Iron:				
Ore <sup>g</sup> ..... long tons..	52,083,375	151,807,105	63,924,763	160,796,886
Pig ..... do..	31,064,129	665,078,972	36,814,702	739,816,333
Lead (refined), <sup>h</sup> sales value ..... short tons..	566,407	90,625,000	654,921	113,956,000
Manganese ore (35 per cent or more Mn) <sup>i</sup> ..... long tons..	58,348	1,318,771	98,824	1,857,769
Manganiferous ore (5 to 35 per cent Mn) <sup>i</sup> ..... long tons..	898,468	2,739,254	1,448,054	3,752,486
Mercury:				
Metal ..... flasks (75 pounds net)	10,061	691,090	9,174	762,616
Ore ..... short tons..	70,000	( <sup>j</sup> )	65,000	( <sup>j</sup> )
Nickel (values at New York City) ..... do..	191	114,908	272	169,664
Ores (crude), tailings, etc.:				
Copper ..... do..	49,432,000	( <sup>k</sup> )	( <sup>j</sup> )	( <sup>k</sup> )
Copper-lead and copper-lead-zinc ..... do..	220,000	( <sup>k</sup> )	( <sup>j</sup> )	( <sup>k</sup> )
Dry and siliceous (gold and silver) ..... do..	8,979,000	( <sup>k</sup> )	( <sup>j</sup> )	( <sup>k</sup> )
Lead ..... do..	8,569,000	( <sup>k</sup> )	( <sup>j</sup> )	( <sup>k</sup> )
Lead-zinc ..... do..	13,356,000	( <sup>k</sup> )	( <sup>j</sup> )	( <sup>k</sup> )
Zinc ..... do..	3,160,000	( <sup>k</sup> )	( <sup>j</sup> )	( <sup>k</sup> )
Platinum and allied metals (value at New York City) ..... troy ounces..	66,007	7,611,319	49,643	5,661,809
Silver ..... do..	65,407,186	43,822,814	66,155,424	45,911,864
Tin (metallic equivalent) ..... short tons..	7	7,028	9	9,934
Titanium ore:				
Ilmenite ..... do..	4,769	( <sup>k</sup> )	5,566	89,000
Rutile ..... do..	.....	.....	46	11,500
Tungsten ore (60 per cent concentrates) ..... do..	565	287,000	1,191	755,500
Uranium and vanadium ores ..... do..	( <sup>k</sup> )	( <sup>k</sup> )	12,093	841,240
Zinc, <sup>e</sup> sales value ..... do..	515,831	67,058,000	555,631	84,456,000
Total value of metallic products (approximate) .....		1,232,330,000		1,380,100,000

\* In this general statement certain of the figures represent shipments rather than quantity mined, and some of the figures for 1925 are estimates. The reader is referred to the sections on the various mineral products for information in greater detail than it seems practicable to give here.

<sup>b</sup> From both domestic and foreign ores.

<sup>c</sup> Content of antimonial lead. Values excluded from metallic totals as the values of the antimony are included in the antimonial lead values.

<sup>d</sup> Figures not yet available. Estimate of value included in total value of metallic products.

<sup>e</sup> Product from domestic ores only.

<sup>f</sup> Value, \$20,871,834,825,823 an ounce.

<sup>g</sup> Value not included in total value.

<sup>h</sup> Including ore used for fluxing.

<sup>i</sup> Figures showing values not available.

<sup>j</sup> Figures for 1925 not yet available.

<sup>k</sup> Value included in total value of metallic products. Bureau of Mines not at liberty to publish figures.

<sup>l</sup> Canvases discontinued by U. S. Geological Survey after 1920. Figures obtained through cooperation with Bureau of the Census.

<sup>m</sup> Figures not yet available. Estimate of value included in total value of nonmetallic products.

<sup>n</sup> Includes brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania.

<sup>p</sup> No canvass. Estimate of value included in total value of nonmetallic products.

<sup>q</sup> Canvass discontinued after 1915. Value of iron ore sold for paint included under last item ("un-specified").

<sup>r</sup> Sublimed blue lead, sublimed white lead, leaded zinc oxide, and zinc oxide.

<sup>s</sup> Figures for 1925 represent talc only. Value of soapstone is included in total value of nonmetallic products.

<sup>t</sup> Includes for 1925 the value of bismuth, cadmium sulphide and other cadmium compounds, chatas (\$379,000), flint lining for tube mills and pebbles for grinding (\$48,762), iron ore sold for magnets, iron ore sold for paint (\$140,986), lithium minerals (\$58,500), natural magnesium chloride (\$911,440), natural magnesium sulphate (\$841,670), calcareous marl (\$187,839), greensand marl (\$179,788), mineral soap, molybdenum (\$450,080), monasite (\$120), pyrite radio crystals, selenium, silica sand and sandstone (finely ground) (\$1,321,250), sodium salts (carbonate, bicarbonate, sulphate, and trona) from natural sources (\$1,007,140), tellurium, zircon (\$87,860), and an estimate of the value of miscellaneous mineral products, statistics for which are not collected annually by the Bureau of Mines.

**MINES, UNITED STATES BUREAU OF.** The fiscal year ending June 30, 1926, was the first complete year in which the Bureau of Mines had functioned in the Department of Commerce. Conspicuous in the year's activity was the continuation of the educational campaign designed to decrease the death and injury rates among the million miners of the United States. Substantial progress was achieved in the movement for the rock-dusting of bituminous coal mines as a preventive of explosions, a great number of the larger mines having adopted this safety measure. The Bureau continued its intensive efforts in the teaching of safety to the miner. During the year 28,041 miners were trained in first-aid and mine rescue methods, an increase of 3866 over the number trained in the previous year. This training was conducted in 33 States and in Alaska.

Mine-safety studies were continued in the experimental coal mine at Bruceton, Pa., the only coal mine in the world devoted exclusively to Government safety research. Tremendous explosions of coal-dust were frequently staged at this mine and vivid demonstrations of the efficiency of rock-dust for limiting or preventing such explosions are given. Cooperation was continued with the Mines Safety Research Board of the British Mines Department at the Bureau's experiment station at Pittsburgh and in the Eskmeals experimental gallery in England. A new type of gas mask, devised to afford protection in air against all gases, vapors and smokes was developed. A carbon monoxide recorder developed at the Pittsburgh station gave excellent service in a number of fields. This delicate instrument gives warning of the presence of this deadly gas in tunnel atmospheres of four parts in ten thousand parts of air, and indicates much lower concentrations.

The Bureau continued its study of the causes of mine fires and explosions, furnishing reports to the mine operators following investigations of disasters at their mines. Investigations on the use of electrical equipment in mines and the use of flame safety-lamps and gas-detecting apparatus were continued.

Chemists at the Pittsburgh experiment station developed a new respirator which is believed to be superior to other devices as a means of protecting wearers from injurious dusts encountered in mining and other industries. Studies conducted in cooperation with the United States Public Health Service and the American Society of Heating and Ventilating Engineers were affording information relative to temperatures and air-movement conditions which afford the best safety and efficiency conditions in mines and factories. As the result of studies by Bureau engineers, definite increases in the production of lump coal in mines have been attained through more efficient use of explosives. The use of liquid oxygen explosives in the mining and quarrying industries has been investigated.

Studies were conducted looking toward the utilization of vast deposits of low-grade iron ores in Minnesota, Alabama and elsewhere. As an aid to this study, the Bureau operated at its Minneapolis station the only experimental blast furnace in the world capable of producing conditions encountered in the large commercial furnaces. Improved metallurgical practices designed to utilize enormous deposits of

low-grade lead, zinc and copper ores were being developed at the Bureau's different experiment stations located in the mining districts of the West.

During the year a survey was made in several States of leakage in natural gas transmission lines, and immense savings were found possible by testing and repairing the lines. In the Powell oil field in Texas, an increased production of 1,000,000 barrels of oil was attained from wells repaired under the supervision of Bureau engineers. The Bureau also studying the problem of increasing the recovery of oil from depleted sands, it being estimated that 80 per cent of the oil was left underground under existing methods of production. The Bureau continued its studies looking toward the more efficient utilization of fuels in industrial plants and in homes. Problems of this nature studied included refractories in boiler furnaces; the clinkering properties of coal; pulverized coal for marine boilers; properties of coke; coal washing; boiler water conditioning; and the spontaneous combustion of coal. An economic Branch was established for the study of economic problems in the mineral industries. This new branch was giving attention to the uses of coal, coal reserves, prices, distribution, consumption, stocks and marketing.

**MINIMUM WAGE.** In view of the hostile attitude of the Supreme Court, the protagonists of minimum wage legislation were largely marking time in 1926. There was a great deal of sentiment for the adoption of the Massachusetts plan, according to which a board publicly recommends wage scales and depends on the power of publicity to enforce them. This plan was endorsed by Governor Smith of New York in his message to the legislature prepared at the close of 1926 and submitted on January 5 following. Governor Smith pointed out that while "the United States Supreme Court has held that the State is without power to impose a penalty on an employer for failing to pay the amount of the living wage," this was "no reason why the State should stand by idly and take no action that would, at the least, tend to discourage the employment of women in industry at starvation wages."

Some hope was also expressed that sooner or later the Supreme Court would reverse its stand and make it unnecessary for States to adopt the Massachusetts plan. Following the Supreme Court's endorsement of the Kansas anti-strike law (see under STRIKES), the *Wichita Beacon* pointed out that of the two provisions of the Kansas Industrial Court Act, the limitation of the strike, and the minimum wage, the court had upheld the former and had condemned the latter. The principle of the industrial court as a solution for industrial unrest, it added, would not become firmly established until the minimum wage law were restored to favor. The *Beacon* expresses the views of former Governor Allen of Kansas, who was responsible for the Industrial Court Act.

**MASSACHUSETTS.** Seventeen decrees establishing minimum wage scales in various industries were in effect in Massachusetts, according to the report of the division of the minimum wage of the Massachusetts department of labor and industries. The report is for the year ending Nov. 30, 1925, and was made public late in 1926. These decrees had not been overthrown by the

decisions of the United States Supreme Court because they are technically advisory. The division makes no attempt at enforcement except to carry out inspections and to advertise in the press cases of non-compliance. Inspection was carried out in the case of 14 of the decrees, and in nine cases non-compliances were advertised, the report shows.

Since the creation of the minimum wage division (July 1, 1913), 32 decrees have been issued. All the decrees made prior to Dec. 1, 1919, had been superseded. The oldest in effect in 1925 was that applying to men's clothing and raincoats, which went into effect Feb. 1, 1920. The other decrees in existence in 1926, were enacted as follows: 1920, 2; 1921, 1; 1922, 6; 1923, 1; 1924, 1; 1925, 3; and 1926, 2. In making revisions the division advanced rates in all cases except two. In women's clothing an order dated May 15, 1922, fixed \$14 as the minimum weekly wage instead of \$15.25 as in the order of May 6, 1920. The rate for the paper box industry was also revised downward, the order of May 15, 1922, substituting the weekly wage of \$13.50 for the amount of \$15.50 fixed in the order of May 26, 1920. The highest wage fixed by the minimum wage division was \$15.40, for women engaged in office and other building cleaning. This rate was effective Feb. 1, 1921. For men's clothing the wage was \$15. Of the other wage rates, none were higher than \$14, and none were lower than \$13.

**MINING AND METALLURGICAL ENGINEERS, AMERICAN INSTITUTE OF.** An organization founded in 1871 and incorporated under the laws of New York State in 1905, "to promote the Arts and Sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries." It is made up of 25 local sections and has 40 affiliated societies at colleges throughout the country. There are four classes of membership: members are men who have been practicing engineers for at least six years; associates, men interested in or connected with mining, geology, metallurgy, or chemistry, but not practicing engineers; junior associates, students in engineering schools; honorary members, these elected by unanimous vote of the Board of Directors. On Jan. 1, 1926, there were 8602 members, distributed as follows: honorary, 17; members, 6563; associates, 865; junior associates, 1157. The income for 1925 was \$202,314.61. In addition to the monthly meetings of the local sections, the annual meeting, a four-day convention, is held on the third Tuesday in February in New York City, and a visit is made in the fall to some important mining or metallurgical centre in the United States or abroad. The Institute publishes *Transactions*, an annual containing the best papers of the year on mining and metallurgical subjects; *Mining and Metallurgy*, a monthly bulletin; the *Year Book*, which constitutes a "Who's Who" in the profession; and special volumes from time to time. In connection with three other societies the Institute maintains the Engineering Societies Library and an employment bureau. The headquarters are in the Engineering Societies Building, 33 West 39th Street, New York City.

**MINNESOTA. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,387,125. The estimated

population on July 1, 1926, was 2,651,000. The capital is St. Paul.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1926	4,343,000	147,662,000	\$82,691,000
	1925	4,136,000	148,896,000	88,382,000
	1926	4,582,000	129,162,000	48,915,000
Oats	1925	4,770,000	200,340,000	62,105,000
	1926	2,091,000	2,741,000	88,922,000
Hay, tame	1925	2,258,000	3,989,000	43,879,000
	1926	1,967,000	24,588,000	30,243,000
Wheat, spring	1925	2,098,000	27,209,000	87,276,000
	1926	187,000	3,272,000	3,926,000
Wheat, winter	1925	170,000	3,060,000	4,162,000
	1926	1,807,000	32,675,000	16,664,000
Barley	1925	1,098,000	82,940,000	17,129,000
	1926	367,000	4,954,000	3,765,000
Rye	1925	448,000	5,824,000	4,135,000
	1926	910,000	8,554,000	16,851,000
Flaxseed	1925	740,000	7,400,000	17,020,000
	1926	298,000	29,800,000	34,270,000
Potatoes	1925	276,000	26,772,000	41,229,000

\* tons.

**MINERAL PRODUCTION.** Much the greater part of the State's total mineral product year by year, measured in terms of value, is derived from iron ore, of which the State is the leading producer. There were shipped from the State's mines 38,022,237 long tons of iron ore, in 1925, and in 1924, 31,076,114 long tons; in value \$96,083,485 in 1925 and \$93,311,092 in 1924. Only a small proportion of the ore was used for the production of pig iron within the State, the pig iron product being 276,240 long tons in 1925 and 189,033 long tons in 1924. Coke production in connection with the iron industry was important. There were produced 514,764 short tons of coke in 1924 and in 1923, 695,824 short tons; in value \$4,903,891 in 1924 and \$5,104,330 in 1923. Stone production was 804,280 short tons in 1924 and 701,210 short tons in 1923; in value, \$4,220,658 in 1924 and in 1923, \$4,281,687. Clay products had a value in 1924 of \$1,675,204 and in 1923 of \$2,031,408. The total value of the State's mineral products, duplications eliminated, was \$107,844,680 in 1924; in 1923, \$174,105,328.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$31,500,334. Their per capita rate was \$12.37, as against \$12.34 in 1924 and \$8.15 in 1917. Their total included \$9,038,547, for education, apportioned to minor State divisions. Expenses totaling \$3,703,304 for interest on debt and \$13,842,147 for permanent improvements, added to payments for maintenance and operation of State departments, made the total of State payments \$49,045,785. For highways was expended the sum of \$14,449,371, of which \$3,835,885 was for maintenance and \$10,613,486 for construction. Interest was paid to the amount of \$1,463,069 on county reimbursement road bonds not included in the State debt.

Revenue receipts of the State were \$55,191,283, or \$21.66 per capita. They exceeded by \$19,987,645 the total payments except those for permanent improvements, and furthermore exceeded by \$6,145,498 the total with these included. Surplus of receipts resulted in purchase of investments. Property and special taxes formed 30.3 per cent of the total revenue in

1925. Their per capita rate was \$6.57 in 1925, \$4.19 in 1924 and \$3.66 in 1917. Earnings of the general departments and compensation for officials' services furnished 9.1 per cent of the 1925 revenue; business and non-business licenses, 40.4 per cent. State license receipts were derived chiefly from taxes on incorporated companies and from the licensing of motor vehicles. Litigation over back taxes on iron ore led to a diminution in receipts from that source.

The net indebtedness of the State on June 30, 1925, was \$14,717,257, or \$5.78 per capita, as against \$6.57 in 1924 and 61 cents in 1918. The assessed valuation of property subject to State tax was \$2,357,576.43. The State tax levy was \$11,497,617, or \$4.51 per capita. In addition to the indebtedness shown above, the State is obligated to pay principal and interest upon county reimbursement bonds, issued by counties for road construction.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 8787. Some 16 miles of new first track were constructed in 1926. The Great Northern system abandoned 4 miles of line between Holman and Coleraine.

**EDUCATION.** Consistent improvement in the length of the school term was reported by J. M. McConnell, State commissioner of education, commenting on the year's progress. He also noted a rise in the attendance figures. With regard to teacher standards, school organization and curriculum, he reported that the State schools had made progress. There were enrolled in the public schools of the State in 1925-1926, 549,899 pupils, of whom 454,638 were in the common schools and 95,261 in the high schools. Expenditures for education in the public schools of the State attained a total of \$58,128,771. Salaries of teachers averaged in the graded elementary and high schools, \$195.71 a month for men and \$130.36 for women; in the ungraded elementary rural schools, \$113.73 for men and \$114.36 for women.

**CHARITIES AND CORRECTIONS.** The State Board of Control, created in 1901, exercised in 1926 control over 18 State institutions, including hospitals and asylums for the insane, institutions for the feeble minded, epileptics, blind and deaf, special schools, reformatories and the State prison. It also supervised (starting with 1925) 14 county tuberculosis sanatoria, and conducted several convict industries; appointed county welfare boards; cared for child delinquents and defectives; licensed maternity homes and infant caring agencies; safeguarded interests of illegitimate children; investigated petitions for child adoption; gave home aid and instruction to the blind; and administered the soldiers' welfare fund. An act of 1925 charged it with the sterilization of defectives of certain types. The chief insane institutions under its control and the numbers of inmates on June 30, 1926, were as follows: Anoka Asylum, 1006; Hastings Asylum, 963; Willmar Asylum, 670; Fergus Falls Hospital, 1611; Rochester Hospital, 1386; St. Peter Hospital, 1395; Asylum for Dangerous Insane, 141. Schools and colonies were: School for Feeble Minded, 953; Colony for Epileptics, 60; State Training School, 350; Home School for Girls, 299; School for Blind, 99; School for Deaf, 261; State Public School (for dependent and neglected children), 363. Criminal institutions were: Reformatory (for

males), 826; Reformatory for Women, 80; Prison, 1230. The State Sanatorium for Consumptives had 263 inmates; the Hospital for Crippled Children, 233.

**POLITICAL AND OTHER EVENTS.** In the general election of November 2, Theodore Christianson, Governor of the State, was reelected on the Republican ticket, to serve the term beginning January, 1927. With him were elected the rest of the Republican State ticket. All ten of the Republican candidates for the U. S. House of Representatives were likewise elected.

Other State officers elected in November, to take office in 1927 were: Lieutenant Governor, W. I. Nolan; Secretary of State, Mike Holm; State Auditor, Ray P. Chase; State Treasurer, Julius A. Schmahl; Attorney General, Clifford L. Hilton; Associate Justice of the Supreme Court, Homer B. Dibell. A constitutional amendment to promote forestation of private and of public lands, rendering it possible to fix in advance the annual tax on forested land for the term of growth or for a period of years, and a yield tax to be paid when the timber should mature, was adopted by popular vote.

According to the U. S. Department of Commerce census figures for 1925, given out late in 1926, the two-year total of the manufactured products of the city of St. Paul was \$192,366,323, and represented an increase of \$42,011,248 over the corresponding total for the two years ending with 1923. Minneapolis manufactured products were reported as attaining for the two years ending with 1925, a total of \$345,875,440, and for the two years ending with 1923, \$338,329,208. Activity in State road construction was maintained, the concreting of State Highway 27, an important north-and-south route, being completed.

**OFFICERS.** Governor, Theodore Christianson; Lieutenant-Governor, W. I. Nolan; Secretary of State, Mike Holm; State Treasurer, Edward W. Stark; Auditor, Ray P. Chase; Attorney-General, Clifford L. Hilton; Commissioner of Education, James M. McConnell.

**JUDICIARY.** Supreme Court: Chief Justice, Samuel B. Wilson; Associate Justices: Homer B. Dibell, Andrew Holt, James H. Quinn, Royal A. Stone.

**MINNESOTA, UNIVERSITY OF.** A State institution of higher education at Minneapolis, Minn.; founded in 1851. The 1926 fall enrollment included 10,816 students of collegiate grade, and there were 4867 registered for the summer session. There were 910 members on the faculty. The endowment of the University amounted to \$7,852,074.03, and the income for the year ending June 30, 1926, including State appropriations, totaled \$8,212,400.70. The library contained 465,000 volumes. During the year an Institute of Child Welfare was established with funds given by the Laura Spelman Rockefeller Memorial and amounting to \$250,000 over a period of five years. At the end of the year the Institute was conducting a study of the pre-school child. The following new buildings were completed during the year: administration building, at a cost of \$476,795; the main building of the Grand Rapids Agricultural School, costing \$75,000; an addition to the Minnesota Union, at a cost of \$45,794. Additional campus and experimental plots cost \$333,000. Gifts received during the year included: a gift of insurance policies amounting to \$80,000 by Dr. George

G. Eitel, to found the George G. Eitel Scholarship Fund; a gift of \$100,000 from W. H. Eustis; and a gift of \$10,250 annually for five years by the Bureau of Social Hygiene to be used in conducting investigations in coöperation with the Women's Coöperative Alliance of Minneapolis. President, Lotus D. Coffman, Ph.D., LL.D.

#### MISSIONS, MISSIONARY ACTIVITIES.

See religious denominations such as CONGREGATIONALISM, METHODIST EPISCOPAL CHURCH, etc.

**MISSISSIPPI.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,790,618. Owing to a decrease between 1910 and 1920 no later estimates have been made. Capital, Jackson.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1926	3,768,000	1,930,000 <sup>a</sup>	\$188,175,000
	1925	3,516,000	1,991,000 <sup>a</sup>	
Corn	1926	1,918,000	36,826,000	30,197,000
	1925	1,977,000	35,586,000	33,451,000
Hay, tame	1926	425,000	499,000 <sup>b</sup>	7,984,000
	1925	593,000	399,000 <sup>b</sup>	6,956,000
Potatoes	1926	12,000	852,000	1,534,000
	1925	11,000	737,000	1,474,000
Sweet potatoes	1926	60,000	6,240,000	5,928,000
	1925	62,000	5,952,000	5,952,000
Oats	1926	63,000	1,386,000	915,000
	1925	85,000	1,615,000	1,260,000

<sup>a</sup> bales, <sup>b</sup> tons.

**MINERAL PRODUCTION.** The mineral production of the State, which is not large, underwent no important alteration. Sand and gravel, the leading product in respect to annual output value, totaled 2,442,911 short tons in 1924 and 2,772,149 short tons in 1923; in value, \$1,134,288 in 1924 and in 1923, \$1,229,809. Clay products attained a value of \$955,328 for 1924 and of \$878,684 for 1923. The total value of the State's mineral products in 1924 was \$2,090,422; in 1923, \$2,163,343.

**FINANCE.** As summarized by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State in the year ending Sept. 30, 1925, were \$10,341,867. Their rate per capita was \$5.78, as against \$6.04 in 1924 and \$2.54 in 1917. The total included \$3,660,297 for education, apportioned among minor State divisions. Expenses totaling \$856,090 for interest on debt, and \$4,752,288 for permanent improvements, added to payments for maintenance and operation of State departments, made the total of State payments \$15,950,245. For highways was expended the sum of \$5,563,901, of which \$1,092,781 was for maintenance and \$4,471,120 for construction.

Revenue receipts of the State were \$16,192,630, or \$9.04 per capita. They exceeded by \$4,994,673 the total payments except those for permanent improvements, and furthermore exceeded by \$242,385 the total with these included. Property and special taxes formed 42.2 per cent of the total revenue in 1925, as against 40.9 per cent in 1924 and 52.8 per cent in 1917. Their per capita rate was \$3.81 in 1925, \$3.44 in 1924 and \$1.55 in 1917. Earnings of the general departments and compensation for officials' services furnished 8.7 per cent of the 1925 revenue; business and non-business licenses, 19.6 per cent. State license receipts were derived chiefly from

privilege taxes, taxes on incorporated companies and on sales of gasoline and from the licensing of motor vehicles.

The net indebtedness of the State on Sept. 30, 1925, was \$16,785,709, or \$9.37 per capita, as against \$9.61 per capita in 1924 and \$3.03 per capita in 1917. The assessed valuation of property subject to State tax was \$738,182,734. The State tax levy was \$5,905,462, or \$3.30 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 4170. There was constructed in 1926, 15 miles of new first track.

**EDUCATION.** A general tendency in the State toward rendering ampler financial support to schools, on the part of local units, as well as the State and counties, was noted by W. F. Bond, State Superintendent of Education. The Mississippi Education Association established an accrediting commission to formulate standards of qualification for elementary school teachers, and of adequacy for school furniture and curriculum. There arose a movement for the standardization of grammar school courses, prompted by the opinion that grammar school standards had suffered relative neglect in the course of the preceding movement to elevate the level of high school instruction.

**LEGISLATION.** The State Legislature convened on January 5, in regular biennial session. A bill introduced in the House and later passed by the State Senate prohibited teaching in tax-supported schools the theory that man was descended, or had ascended, from lower animals, and providing fines of from \$100 to \$500 for infraction, as well as cancellation of the teaching contracts of offenders. The bill was in large measure modeled on that of Tennessee, which governed the course of the latter State in the Scopes case. Governor Whitfield signed the measure May 11.

**OFFICERS.** Governor, Henry L. Whitfield; Lieutenant-Governor, Dennis Murphy; Secretary of State, Walker Wood; State Treasurer, Ben S. Lowry; Auditor, George D. Riley; Attorney-General, Rush H. Knox; Superintendent of Education, W. F. Bond.

**JUDICIARY.** Supreme Court: Chief Justice, Sydney Smith; Associate Justices: W. D. Anderson, James G. McGowan, George Ethridge, J. B. Holden, and W. H. Cook.

**MISSISSIPPI, UNIVERSITY OF.** A State institution of higher education at University, Miss.; founded in 1848. The total enrollment for the autumn of 1926 was 1078, distributed as follows, college of liberal arts, 603; school of law, 75; school of engineering, 75; school of medicine, 60; school of pharmacy, 59; school of commerce and business administration, 215. There was also a school of education, the students of which, however, count their education courses toward a degree in one of the other schools. The faculty numbered 51, not including 2 instructors, 3 teaching fellows, and about 30 student assistants. Summer school work, interrupted by the World War, was resumed in 1926 with a registration of 196. It was expected that this number would be more than doubled in 1927. The legislative appropriation for the current session, including approximately \$42,000 interest on the \$700,000 University funds in the State Treasury, was about \$170,500, and the student fees for the same

period amounted to over \$60,000. There were approximately 40,000 volumes in the library. A new department of rural economics and sociology was added in 1926. The 1926 legislature appropriated an extra \$150,000 for a new chapel, which was under construction during the year. Chancellor, Alfred Hume, C.E., D.Sc.

**MISSOURI. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,404,055. The estimated population on July 1, 1926, was 3,498,000. The capital is Jefferson City.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1926	6,404,000	174,189,000	\$118,449,000
	1925	6,741,000	198,860,000	137,213,000
Hay, tame	1926	3,147,000	3,569,000 "	48,182,000
	1925	3,272,000	3,622,000 "	46,362,000
Wheat, winter	1926	1,391,000	21,282,000	26,390,000
	1925	1,696,000	22,387,000	33,580,000
Wheat, spring	1926	12,000	192,000	240,000
	1925	8,000	128,000	191,000
Oats	1926	2,077,000	41,540,000	17,447,000
	1925	1,923,000	49,998,000	21,999,000
Cotton	1926	473,000	253,000	
	1925	507,000	294,000	
Potatoes	1926	81,000	6,480,000	11,016,000
	1925	76,000	4,332,000	9,747,000
Sweet potatoes	1926	10,000	1,120,000	1,456,000
	1925	10,000	950,000	1,568,000

" tons.

**MINERAL PRODUCTION.** Lead, of which the State was the leading producer, constituted Missouri's most valuable mineral product yielding in 1924, 189,929 short tons, and in 1923, 169,743 short tons; in value \$30,388,640 in 1924, and in 1923, \$23,764,020. Cement production was 8,371,000 barrels in 1925 and in 1924, 7,871,621 barrels; in value, cement shipments totaled \$14,822,000 in 1925 and \$13,515,267 in 1924. Coal was produced to the amount of 2,694,215 tons in 1925 and of 2,480,880 in 1924; and to the value of \$8,281,000 in 1925 and in 1924 of \$8,154,000. Clay products were valued in 1924 at \$16,338,161 as against \$17,903,774 in 1923. Stone production was 2,320,010 short tons in 1924 and 2,134,910 short tons in 1923; in value, \$4,961,333 in 1924 and in 1923, \$4,345,526. Zinc production fell in 1924 to 12,920 short tons from 18,265 short tons in 1923; and in value, to \$1,679,600 in 1924 from \$2,484,040 in 1923. Barytes was produced in considerable quantity, 77,189 short tons in 1924, as against 81,701 tons in 1923, with a value of \$604,390 in 1924 and \$629,097 in 1923. The total value of the State's mineral production, duplications eliminated, was \$81,054,122 in 1924; in 1923, \$79,201,473.

**FINANCE.** As summarized by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending Dec. 31, 1925, were \$23,577,512. Their rate per capita was \$6.80, as against \$1.26 in 1924 and \$3.31 in 1917. The total included 5,324,004 for education, apportioned among the minor State divisions. Expenses totaling \$1,945,690 for interest on debt and \$27,122,013 for permanent improvements, added to payments for maintenance and operation of the State departments, made the total of State payments \$52,645,215. For highways was expended the sum of \$28,853,076, of which \$2,654,801 was for maintenance and \$26,198,275 for construction.

Revenue receipts of the State were \$36,370,245, or \$10.49 per capita. They exceeded by \$10,847,043 the total payments except those for permanent improvements, and were \$16,274,970 less than the total with these included. Payments in excess of revenue receipts were met from the proceeds of debt obligations. Property and special taxes formed 31.2 per cent of the total revenue in 1925, as against 34.7 per cent in 1924 and 36.3 per cent in 1917. Their per capita rate was \$3.28 in 1925, \$3.16 in 1924 and \$1.40 in 1917. Earnings of the general departments and compensation for officials' services furnished 15.5 per cent of the 1925 revenue; business and nonbusiness licenses, 38.5 per cent. State license receipts were derived chiefly from taxes on incorporated companies and sales of gasoline and from the licensing of motor vehicles. The gasoline sales tax became operative in 1925. The net indebtedness of the State on Dec. 31, 1925, was \$55,676,711, or \$16.06 per capita, as against \$12.51 per capita in 1924 and \$2.01 in 1917. A bond issue of \$15,000,000 for highways, to meet increased road construction payments, caused the sharp rise in the per capita debt occurring in 1925. The assessed valuation of property subject to State tax was \$4,613,899,269. The State tax levy was \$4.613,899, or \$1.33 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 8051. Switching and terminal companies had 428 miles of tracks. New construction in 1926 aggregated 3 miles of first track and 21 miles of second track. There were abandoned 8 miles of line near Flat River and 16 miles of line of the St. Louis and San Francisco near Harlan Junction.

**EDUCATION.** The political campaign in the State brought forth indorsements of the merits of the State's chief needs in the educational field, from both the chief parties. Democratic and Republican platforms alike contained expressions favoring larger State support for public schools and for the State educational institutions, and affirming the need of a retirement fund for teachers. In 1926 according to official figures the school population of the State was 917,085. Of this number, 723,167 were enrolled in the schools. Common school enrollment was 612,509; that in high schools, 110,658. The year's expenditure for public education was \$52,917,105. Salaries of teachers, by the month, averaged, for men, \$121; for women, \$87; for both, \$99.

**CHARITIES AND CORRECTIONS.** Chief among the charitable and correctional institutions of the State are the following: State hospitals (four); Missouri Colony for the Feeble Minded and Epileptic; Missouri State Sanitarium; Confederate Home; State Federal Soldiers' Home; Missouri State Penitentiary; Missouri Reformatory; Industrial Home for Girls; Industrial Home for Negro Girls. The State Board of Charities and Corrections issues reports biennially.

**POLITICAL AND OTHER EVENTS.** In the general election of November 2, Harry B. Hawes, Democratic candidate for U. S. Senator for the six year term beginning Mar. 4, 1927, was elected, defeating Senator George H. Williams, who ran for reelection on the Republican ticket. Twelve Democrats and four Republicans were elected to the U. S. House of Representatives. A refer-

endum proposal for the repeal of the laws of the State for the enforcement of alcoholic prohibition was defeated. The electorate approved an act creating a Workmen's Compensation Commission and a system of industrial compensation for injuries, to go into effect Jan. 9, 1927.

Charles A. Lee was reelected State Superintendent of public schools for the ensuing four-year term, and Ernest S. Gantt was elected a judge of the State Supreme Court for the term of 10 years. A referendum proposition that a workmen's compensation law enacted by the State general assembly receive popular approval was carried at the polls.

The finance committee and city manager of Kansas City, Mo., recommended to the city council in December the passage of an ordinance to tax sales of cigarettes within the city, and to require packages of cigarettes when sold to bear tax stamps to the amount of the tax. In St. Louis the city plan commission offered plans for improvement of the river front and reclamation of a portion of the downtown district by the construction of a double deck street 100 feet broad and two miles long, the upper deck to run without intersections from the eastern boundary of the business district, and the whole to cost \$20,000,000.

**OFFICERS.** Governor, Sam A. Baker; Lieutenant-Governor, Phil A. Bennett; Secretary of State, Charles U. Becker; Auditor, L. D. Thompson; Treasurer, C. Eugene Stephens; Attorney-General, North T. Gentry; Superintendent of Public Schools, Charles A. Lee.

**JUDICIARY.** Supreme Court: Chief Justice, David E. Blair; Associate Judges: Walter W. Graves, William T. Ragland, Robert F. Walker, John Turner White, Frank E. Atwood.

**MISSOURI, UNIVERSITY OF.** A State institution of higher education at Columbia and Rolla, Mo.; founded in 1839. The enrollment for the first semester of 1926-27 at Columbia and Rolla was 4321, of whom 394 were men and 1310 women. This enrollment was distributed as follows: agriculture, 317; arts and science, 1880; business and public administration, 169; education, 379; engineering, 437; mines, 413; fine arts, 97; graduate, 267; journalism, 253; law, 136; medicine, 86; short course in agriculture, 51. The total enrollment for the 1926 summer session was 1587, of whom 697 were men and 890 women. The total annual enrollment of all classes of students was more than 9000. There were 400 members on the faculty. The endowment of the University was approximately \$2,500,000, and the total income from all sources a little over \$3,500,000. The University received a gift of \$75,000 toward the erection of a law building, as a memorial to Lee H. Tate by his parents, Mr. and Mrs. Frank R. Tate of St. Louis. The State appropriated \$75,000 to be used in connection with this gift. A gift of \$50,000 from Joseph K. Gwynn, together with a State appropriation for a like amount was made for the erection of a Home Economics Building. The libraries contained approximately 326,000 volumes. President, Stratton Duluth Brooks, LL.D.

**MOFFETT, CLEVELAND (LANGSTON).** American author and newspaper man, died in Paris, October 13. He was born at Boonville, N. Y., Apr. 27, 1863, and educated at Yale University, graduating in 1883. From 1887 to 1891 he was on the European staff of the *New York Herald*

and 1891-1892 in its New York office. After a year as foreign editor of the *New York Recorder* he devoted himself to writing books, plays, and magazine stories and articles, with the exception of a brief period in 1908-9 when he was Sunday editor of the *New York Herald*. His books included: *Real Detective Stories*, 1898; *Careers of Danger and Daring*, 1901; *A King in Rags*, 1907; *The Battle*, 1909; *Through the Wall*, 1909; *The Bishop's Purse* (in collaboration with Oliver Herford), 1913; *The Mysterious Card*, 1913; *The Hand of Mystery*, 1913; *The Conquest of America*, 1916; *How to Live Long and Love Long*, 1917; *The War Beautiful*, 1917; *Possessed*, 1919; *Glint of Wings* (in collaboration with Virginia Hall); also prose poems, *A Woman's Creed*, *The Litany of the Men*, *A Vision of Christmas*, 1917, *Glorious France*. Among his plays were: *Money Talks*, produced 1906; *Playing the Game*, produced in 1907; *The Battle*, produced in 1908; *For Better for Worse*, produced in 1910; *Greater Than the Law*, 1912. He also translated *Cosmopolis*, by Paul Bourget, in 1894.

**MOHAMMED VI, VAHID-ED-DIN, EFFENDI.** Former Sultan of Turkey, died May 16, in exile at San Remo. He was born Jan. 12, 1861, the youngest son of Sultan Abdul-Medjid, and brother of Sultans Abdul Hamid II and Mohammed V. Abdul Hamid, who reigned from 1876 to 1909, liked him and because he was only third in the order of succession he occasioned his brother little anxiety. Allowed relative liberty, Mohammed's education was much neglected, and he grew up with merely a fair knowledge of Arabic and a slight understanding of French, together with an ignorance of politics. Until the suicide of Yusuf Izzeddin in 1916 made him heir presumptive, he spent his days in the management of his large estates, rather than in affairs of state. On July 3, 1918, at the age of 57, he succeeded his brother Mohammed V, with the title of Mohammed VI, but did not support any active policy. At this time the military power of Turkey was practically exhausted by the great war, and within a few months it surrendered. Mohammed made several unsuccessful attempts to improve relations between the Turks and the occupying forces. However, the Greek occupation of Smyrna ended his hopes of reconciliation and the growth of the national resentment at the cession of Smyrna aroused his alarm. He raised a small army to drive the Kemalists, or Nationalists, from Ismid, but when, in 1920, Mohammed signed the Treaty of Sèvres, consenting to the dismemberment of Turkey and proposing to put her principal governmental departments under foreign control, his troops refused to defend him against Kemal Pasha. From this time on he was merely a political figurehead, and on Nov. 3, 1922, the Grand National Assembly declared him deposed. He took refuge on the British battleship *Malaya*, which conveyed him to Malta, and later he went to France and Switzerland, where he lived in comparative poverty, without, however, ceasing to hope that he might regain his position.

**MOLLUSCA.** See Zoölogy.

**MONACO, mōn'à-kō.** A principality on the Mediterranean coast, surrounded on the land sides by the French department of Alps Maritimes. Area, eight square miles; population, according to the census of 1913, 22,956. It is chiefly known for its gambling resort, Monte

Carlo (population in 1913, 9627). Other towns are Monaco (2247) and La Condamine (11,082). Under the constitution of Jan. 7, 1911, the government consists of the prince assisted by a council of state and a national council elected by universal suffrage. The ruler was Prince Louis II, born July 12, 1870, who succeeded his father, Prince Albert, June 26, 1922.

**MONET**, mō'nā', CLAUDE. French landscape painter, died December 5 at Giverny, near Paris. He was the leader of the Impressionist school, which took its name from his painting "Impression, Rising Sun," exhibited in 1874. Monet was born in Paris on Nov. 14, 1840, and when he was five years old his family moved to Havre, where he neglected school or spent his time there in making caricatures and drawings in his books. At this time he became acquainted with Boudin, a marine painter, from whom he learned to love and understand nature. At 16, having earned 2000 francs by the sale of caricatures, for which he was now well-known in Havre, he set out for Paris to study. When he was twenty he entered the army and was assigned to a regiment in Algeria, where he spent two years. Sent home as an invalid, he entered the atelier of the classicist Gleyre, but withdrew because of lack of sympathy with the style of work done there. He next met Jongkind, to whom he owed his final training in observation. In the beginning he was strongly attracted by the work of Courbet and Corot, and to some extent by the Barbizon school. He was also somewhat indebted to Manet and the Japanese. However, he followed no master but drew his inspiration largely from nature, apparently caring little for subject, detail, or composition, and aiming chiefly to reproduce the effects of light and air and to portray the fleeting aspect of things. For over 20 years he struggled against ridicule and hostile criticism before his ideas were accepted. Part of that time he spent in Holland, England, and Italy, and finally settled at Giverny, France. While in England he was befriended by Daubigny, and was introduced by him to Durand-Ruel, who exhibited many of his works in his gallery. Examples of his earlier style include "The Breakfast" (Luxembourg), "Camille," "Fontainebleau Forest" (1866), "Vessels Leaving Havre" (1868), and many landscapes produced before 1875, nine of which are in the Moreau-Nelaton collection, Musée des Arts Decoratifs (Louvre). Among his later works may be mentioned: "Bordighera"—the town in the half distance, led up to by a foliated foreground; "The Orchard"—a landscape vibrating with light and showing the possibilities of his use of pure color; "The Sun in a Fog, Waterloo Bridge" (1904); "Palazzo Dario, Venice" (1908). Nine of his paintings in the Luxembourg include "The Church of Vetheuil," "The Rocks of Belle Isle," and "Saint-Lazare Station." Monet's best work, however, was done in his series of variations of the same themes in different light conditions, as in "Rouen Cathedral" (Luxembourg), and "Views of the Thames." The last years of his activity were spent at his home at Giverny, making numerous studies of the same scenes in varying lights and at different seasons of the year, which some critics regard as his best work. At the age of 80 he began to be troubled with cataract and was much hampered in his work, but after three operations he was able to continue work on a mural design of water lilies which he was paint-

ing as a gift to the French government, to be hung in the Orangeries at the Tuileries Gardens, a gallery established by the government in 1922 to be a permanent museum of Monet's works. Consult: Théodore Duret, *Le Peintre Claude Monet* (Paris, 1878), English translation, *Monet and the French Impressionists* (London, 1912); J. C. Van Dyke, in *Modern French Masters* (New York, 1896); W. H. Fuller, *Monet and his Paintings* (ib. 1899).

**MONEY**. The table on page 492 from the annual report of the Director of the United States Mint shows the distribution of the stock of money in the United States on June 30, 1926, in comparison with the totals for June 30, 1924, Nov. 1, 1920, July 1, 1914, and Jan. 1, 1879.

**MONEY AND MONEY RATES**. See FINANCIAL REVIEW.

**MONGOLIA**. A vast and indefinite tract of territory lying to the west of Manchuria. Area, about 1,875,000 square miles, although some authorities place it as low as 1,367,600 square miles. Population, variously estimated at 750,000 to 2,000,000. Capital and chief town, Urga. It is inhabited by nomadic Mongol and Kalmuk tribes, but latterly the Chinese have immigrated in considerable numbers. The chief occupation is stock raising, and the principal exports are furs, skins and hides, horns, and wool. The soil is naturally fertile but needs irrigation to be productive. Gold, iron, copper, silver, and tin, are found, but are not worked extensively. Since 1917 there has been a motor car freight service across the Gobi desert. The trip takes three days and is only feasible in the summer.

**MONOPLANES**. See AERONAUTICS.

**MONTANA**. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 548,889. The estimated population on July 1, 1926, was 695,000. The capital is Helena.

**AGRICULTURE**. The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Wheat, winter	1926	448,000	6,272,000	\$6,711,000
	1925	224,000	3,248,000	4,320,000
Wheat, spring	1926	3,147,000	38,393,000	43,384,000
	1925	3,026,000	31,773,000	44,482,000
Hay, tame	1926	1,239,000	1,968,000	20,664,000
	1925	1,232,000	2,046,000	20,460,000
Barley	1926	179,000	4,296,000	2,749,000
	1925	156,000	3,276,000	2,359,000
Flaxseed	1926	171,000	804,000	1,487,000
	1925	244,000	1,098,000	2,416,000
Potatoes	1926	35,000	2,975,000	3,570,000
	1925	35,000	3,780,000	6,048,000
Oats	1926	635,000	16,510,000	8,750,000
	1925	605,000	13,612,000	7,214,000
Rye	1926	107,000	1,284,000	963,000
	1925	80,000	1,000,000	740,000
Corn	1926	359,000	3,949,000	3,633,000
	1925	399,000	6,584,000	6,255,000

\* tons.

**MINERAL PRODUCTION**. The State in respect to copper, its chief mineral product, exceeded Utah in 1925 and attained the rank of the second copper producer. Its mine production of copper in 1925 was 268,910,847 pounds, and the smelter output was 270,604,676 pounds as against 249,322,394 pounds in 1924. The value of the copper output in 1924 was \$32,638,290 and in 1925 approximately \$38,000,000. The total value of gold, silver, copper, lead and zinc produced in Montana in 1925 according to the United States Bureau of Mines was \$61,044,006. Quantities

<sup>a</sup> Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agencies of the Federal reserve banks. Does not include silver bullion (a potential monetary asset) to the value of \$8,438,120, nor nickel and bronze coin, the value of which depends almost exclusively on the Government impression rather than intrinsic metallic value or a specific reserve.

<sup>b</sup> Includes money held by the Cuban agencies of the Federal reserve banks of Boston and Atlanta.

<sup>c</sup> Population of continental United States (estimated) June 30, 1926, 115,523,000; June 30, 1925, 114,104,000; Nov. 1, 1920, 107,491,000; July 1, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

<sup>d</sup> Does not include gold bullion or foreign coin outside of vaults of the Treasury. Federal reserve banks, and Federal reserve agents.

<sup>e</sup> These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

<sup>f</sup> The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

<sup>g</sup> This total includes \$18,406,917 of notes in process of redemption, \$151,662,551 of gold deposited for redemption of Federal reserve notes, \$8,605,429 deposited for redemption of national-bank notes, \$4,065 deposited for redemption of additional circulation (act of May 30, 1908), and \$6,603,490 deposited as a reserve against postal savings deposits.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$154,188,886 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National-bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national-bank notes secured by Government bonds.

produced were, of gold, 82,122 fine ounces, silver, 13,158,191 fine ounces, lead, 37,530,644 pounds, zinc, 115,316,922 pounds. Manganese and man-ganiferous ore was produced in 1925 to the quantity of 76,188 long tons, and to the value of \$1,411,001. Petroleum production rose notably, to 4,029,000 barrels in 1925, from 2,815,000 barrels in 1924, with a value of \$7,500,000 (estimated) in 1925, as against \$3,754,000 in 1924. Arsenious oxide was produced on an important scale. The total value of the State's mineral products, duplications eliminated, was in 1924 \$70,631,806.

The value of the gold, silver, copper, lead, and zinc produced from Montana mines in 1926, according to an estimate of the Bureau of Mines, was \$57,988,000. The value of the gold output decreased to \$1,185,000 in 1926. The mine output of silver decreased slightly to 12,570,000 ounces, but the value decreased relatively more, to about \$7,844,000, as the average price of silver decreased. Most of the silver was produced from copper ore as in the past, but an increasing quantity resulted from the milling of zinc ore and lead-zinc ore at Butte and Anaconda. The copper output decreased to 256,725,000 pounds, and the value to about \$35,428,000. The Anaconda Copper Mining Co. produced most of the copper, from mines at Butte. The production of lead increased to 41,700,000 pounds, valued at \$3,461,000. The output of zinc recovered from ore mined in Montana increased to about 137,000,000 pounds in 1926. The value increased to about \$10,070,000.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$5,077,228. Their per capita rate was \$7.96, as against \$7.82 in 1924 and \$8.46 in 1917. The total included \$818,215 for education, apportioned among the minor State divisions. Expenses totaling \$469,181 for interest on debt and \$2,008,803 for permanent improvements, added to payments for maintenance and operation of State departments, made the total of State payments \$7,555,212. For highways was expended the sum of \$1,478,868, of which \$140,155 was for maintenance and \$1,338,713 for construction.

Revenue receipts of the State were \$7,366,633, or \$11.55 per capita. They exceeded by \$1,820,224 the total payments except those for permanent improvements, and were \$188,579 less than the total with these included. Property and special taxes formed 33.7 per cent of the revenue in 1925, as against 34.8 per cent in 1924 and 23.1 per cent in 1917. Their per capita rate was \$3.90 in 1925, \$3.77 in 1924 and \$2.92 in 1917. Earnings of the general departments and compensation for officials' services furnished 8.4 per cent of the 1925 revenue; business and non-business licenses, 16.4 per cent. State license receipts were derived chiefly from taxes on corporations and on gasoline sales. Revenue from licensing motor vehicles was credited to the counties.

The net indebtedness of the State on June 30, 1925, was \$4,318,844, or \$6.77 per capita, as against \$7 per capita in 1924 and \$1.91 per capita in 1917. The assessed valuation of property subject to State tax was \$441,274,763. The State tax levy was \$1,995,164, or \$3.13 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 5037. There were constructed in 1926, of new first track, 29 miles. The Great Northern abandoned 5 miles of line between Windham and Leigh.

**EDUCATION.** A referendum measure submitted to popular vote in the November election received what the correspondent of the *Journal of the National Education Association* characterized as much more favorable consideration than had been expected. This measure, which did not pass, sought to provide for the equalization of educational opportunities for pupils in the different subdivisions of the State. A site was selected for a new normal school to be built in eastern Montana. Minimum standards were adopted for determining the education requirement for high school graduation and the professional qualifications for certification of teachers.

For the school year 1925-1926, the school population according to the data of the State Department of Public Instruction was 156,651 persons of from six to 21 years. Total enrollment in the schools was 116,990 of which 96,049 was common school enrollment and the remainder in high schools. Expenditures for education attained the total of \$12,425,496. The average salary of teachers was \$1110.

**CHARITIES AND CORRECTIONS.** Chief among the charitable and correctional institutions of the State are the following: State Soldiers' Home; State School for the Deaf and Blind; State Prison; State Hospital for the Insane; State Tuberculosis Sanatorium, State Industrial School for Boys; State Vocational School for Girls; State Orphans' Home.

**POLITICAL AND OTHER EVENTS.** A vote taken on November 2, on a referendum proposal for the repeal of the State laws for the enforcement of alcoholic prohibition gave a majority in favor of repeal. The two U. S. Representatives from Montana in the 69th Congress, one Democrat and one Republican, were reelected. Lee Dennis was elected Railroad and Public Service Commissioner at the November election.

The semicentennial of the battle of the Little Big Horn, in which General George A. Custer lost his life and a force of U. S. troops was wiped out by Indians, was commemorated by ceremonies on June 24 at the Crow agency, attended by Indian and white surviving combatants of the Indian wars. Hardships encountered by some of the State's dry land farmers in 1926 or in preceding years led to the formation of an understanding between the State attorney-general and the tax commission for the remission of penalties and interest in cases of tax delinquency. Penalties of 5 per cent and interest at the rate of 1 per cent a month were to be remitted from tax bills. All State statutes for the enforcement of prohibition were automatically removed from the body of State law when Governor J. E. Erickson signed, November 20, a proclamation stating the result of the popular referendum vote of November 2, for the repeal of these laws. Attorney-General L. A. Foot in December advocated passage by the Legislature of a measure empowering the State's authorities to receive revenue from its oil lands in oil, to be refined into gasoline, so as to reduce the price to consumers in the State.

**OFFICERS.** Governor, J. E. Erickson; Lieutenant-Governor, W. S. McCormack; Secretary

of State, C. T. Stewart; Treasurer, W. E. Harmon; Auditor, George P. Porter; Attorney-General, L. A. Foot; Superintendent of Public Instruction, May Trumper.

**JUDICIARY.** Supreme Court: Chief Justice, Lew L. Callaway; Associate Justices: John A. Mathews, Albert J. Galen, Albert P. Stark and Henry L. Myers.

**MONTANA, STATE UNIVERSITY OF.** A co-educational State institution of higher education at Missoula, Mont.; founded in 1895. The enrollment for the autumn of 1926 was 1404, 773 men and 631 women, distributed among the various schools as follows: arts and sciences, 945; business administration, 54; forestry, 102; journalism, 124; law, 46; music, 30; pharmacy, 58; music specials, 30; unclassified, 15. In the summer session 429 students were registered, of whom 144 were men and 285 were women. The faculty had 93 members. The productive funds and income for the year amounted to \$457,207.43. There were about 100,000 volumes in the library, including government documents. President, Charles H. Clapp. Ph.D.

**MONTENEGRO,** mōn'tā-nā'grō. An integral part of the state of Jugo-Slavia (q.v.). Before the war it was a Balkan kingdom, bounded by Serbia on the east, Albania on the south, Dalmatia on the west, and Herzegovina on the west and north, with an area of 5603 square miles and a population of 436,789 on Jan. 1, 1917. After Dec. 1, 1918, its status was indeterminate until 1921 when it became an integral part of Jugo-Slavia. The area in 1921 was placed at only 3733 square miles, and the population, according to the census of that year, 199,857. Capital, Cetinje, with a population of 5500.

**MONTSERRAT,** mōnt'sē-rāt'. One of the presidencies of the Leeward Islands (q.v.).

**MOONEY, CHARLES PATRICK JOSEPH.** American editor, died at Memphis, Tenn., on November 22. He was born in Bullitt Co., Ky., on Sept. 15, 1865, and at the age of 13 he began work as a telegraph operator. Later he went to St. Mary's College, where he received the degree of A.B. in 1886. For the next two years he was a teacher of the classics and mathematics in the high school at Uptons, Hardin County. He began also to read law, but he soon became connected with a newspaper where he worked as a reporter, editorial writer, and an advertisement clerk. In June, 1890, he went to Memphis as a reporter on the *Avalanche*. Almost as soon as he made this connection the paper was amalgamated with the *Appeal*, and Mooney went to the *Scimitar*, of which paper he soon became city editor. In 1896 he became managing editor of the *Commercial Appeal* of Memphis, from which he resigned in 1902 to go to New York in the same capacity for Munsey's *Daily News*. He did not stay long in this place, but joined the Hearst forces and in 1905 he took charge of the *Chicago Examiner*. He relinquished this post in 1908 and went back to the *Commercial Appeal*. Mr. Mooney served as second vice president of the Associated Press in 1924 and 1925.

**MOORE, FORBES JEWETT.** American chemist and educator, died at Boston, Mass., on November 20. He was born at Pittsfield, Mass., on June 9, 1867, and graduated at Amherst in 1899, where in the following year he was made an assistant in the chemistry department. He continued his studies in Germany, receiving the degree of Ph.D. from Heidelberg in 1893 and in

1894 he was appointed an instructor at Cornell University. After a year in this post he was called to the Massachusetts Institute of Technology where he held various posts until appointed Professor of Organic Chemistry in 1910, a position he occupied at the time of his death. He was a member of many learned societies and the author of papers in the publications of these institutions, as well as *Outlines of Organic Chemistry* (1910); *Experiments in Organic Chemistry* (1911); *A History of Chemistry* (1918).

**MOORE, HARRY HUMPHREY.** An American painter, died on January 2. He was born in 1844 in New York, N. Y., and studied there and at San Francisco. In 1865 he went to Munich, and later studied at l'Ecole des Beaux Arts in Paris. Here he met Fortuny and they went to Madrid and Moore studied the methods of Fortuny, devoting two years to the study of Moorish life. Between 1873 and 1875 Moore worked on his "Almeh" with Fortuny in Rome. In 1875 he returned to the United States, where his studies of Moorish life immediately attracted attention for their color and line. He also painted in Japan where his studies were considered bright and delicate. His best known pictures are "Almeh," which won a medal at the Philadelphia Centennial Exhibition in 1876, "Blind Guitar Player," "A Moorish Bazaar," "A Bulgarian," and "A Moorish Merchant."

**MOORE, WALTER WILLIAM.** American clergyman, died on June 14. He was born at Charlotte, N. C., on June 14, 1857, and took his A.B. degree at Davidson College in North Carolina in 1878. From 1878 to 1881 he studied at the Union Theological Seminary, and in the latter year he was ordained to the Presbyterian ministry. He first was an evangelist in Western North Carolina, and then was pastor at Millersburg, Ky., in 1882-83. He then went to the Union Theological Seminary as Professor of Hebrew language and literature, holding this chair until 1912. In 1904 he was made President of the Virginia Theological Seminary. In 1908 he was Moderator of the Presbyterian General Assembly, and for some time he was a trustee of Hampden-Sidney College. He received the degree of D.D. from Central University in 1885. Dr. Moore's published works include *A Year in Europe* (1904); *The Indispensable Book* (1910); *Appreciations and Historical Addresses* (1914); *The Value of the Church* (1918), etc.

**MORAN, THOMAS.** American painter, died on August 26, at Santa Barbara, Cal. He was born at Bolton, England, on Jan. 12, 1837, and began his career as a weaver's apprentice. He followed his brother Edward to the United States, where after failing to support himself in various capacities, including that of house painter, he had to turn to repairing looms. A chance meeting with James Hamilton gave him his first start, and he soon succeeded with his etchings, paintings and magazine illustrations, studying in Paris and in Italy. A plate of his exhibited in London was singled out by John Ruskin as the finest produced in America. In 1871 Mr. Moran visited the Yellowstone country, and after a similar trip with Major J. W. Powell in 1873, he produced two pictures which were purchased by Congress. These are "The Grand Canyon of the Yellowstone" and "Chasm of the Colorado," and they now hang in the Capitol in Washington. He painted extensively

and his works are found in the leading American collections. His "The First Ship," "Ruins in the Nile" and others are in the Wiltstach Collection in Philadelphia and "Bringing Home the Cattle" in the Buffalo Museum. Mr. Moran became a member of the National Academy in 1884 and was also a member of the American Water Color Society and of the Pennsylvania Academy of Fine Arts.

**MORAVIANS.** A religious denomination comprising, in the United States, three branches: The Moravian Church (Unitas Fratrum); the Evangelical Union of Bohemian and Moravian Brethren in North America; and the Independent Bohemian and Moravian Brethren Churches. It was formed in Bohemia in 1457, under the leadership of John Huss and Jerome of Prague, and opposed the efforts of Austria and the Roman Catholic authorities to suppress it. At the beginning of the Reformation it had more than 400 churches. In 1741 Moravians settling at Bethlehem, Pennsylvania, founded the first Moravian church in the United States. The doctrine is evangelical, without doctrine peculiar to itself, and in its polity follows a modification of the episcopacy, having a ministry of three orders, bishops, presbyters, and deacons.

The Unitas Fratrum, the largest branch, is organized in two coordinate provinces: the Northern, with a provincial synod meeting every fifth year; and the Southern, of which the provincial synod meets every third year. The church maintains the following five educational institutions: Linden Hall, Lititz, Pa.; Moravian College and Theological Seminary and Moravian Seminary and College for Women, Bethlehem, Pa.; Nazareth Hall, Nazareth, Pa.; and Salem Academy and College for Women, Winston-Salem, N. C. Missionary workers are maintained in southern California and Alaska, and abroad, in Nicaragua, the West Indies, Jamaica, Labrador, Surinam, South Africa, the Himalayas, and Unywanesi. The official periodical, *The Moravian*, is published weekly at Bethlehem, Pa. In 1926 it had 125 churches, 153 ministers, 25,170 communicant members, although the actual membership was estimated at 35,264, and 119 Sunday schools with 21,534 scholars.

The Evangelical Union of Bohemian and Moravian Brethren in North America, of which the first congregation was organized in 1864, at Wesley, Tex., is under the direction of a synod which meets each year on July 6, the day of the death of John Huss. The Independent Bohemian and Moravian Brethren Churches were founded in 1858 in College Township, Iowa. In 1926 there were 3 churches with one minister and 356 members. Three Sunday schools had 381 scholars.

**MORMONS.** See LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF.

**MOROCCO.** The largest of the Barbary states, occupying the northwestern corner of the continent of Africa; bounded on the west by the Atlantic Ocean, on the north by the Mediterranean Sea, on the east by Algeria, and on the south by the Sahara Desert and the Spanish colony of Rio de Oro. From an administrative and political point of view, Morocco is divided into three zones: First, and most important, the French protectorate, including approximately 85 per cent of both area and population, with Fez as the political capital and Casablanca as the leading port and commercial centre; second, the

Spanish protectorate, a narrow strip of land extending for about 300 miles from the Atlantic Ocean along the Mediterranean with Ceuta, Melilla, and Tetuan as the principal localities; and third, the international Tangier zone, ruled in accordance with the terms of the Paris convention of Dec. 18, 1923, between France, Great Britain, and Spain. The latest estimate of the total area places it at 231,500 square miles, of which the area claimed by Spain for her zone in the north was 8280 square miles; for her southern zone, 9500 square miles; and for Ifni on the west coast, 580 square miles. In 1921, the area effectively held by the French was estimated at 92,664 square miles.

Estimates of the population vary widely, although in 1926 an authoritative estimate placed it in the neighborhood of 6,000,000. According to this same source the French Protectorate had a population of 4,411,000, of which 95,000 were Europeans, including 60,000 of French nationality. About 800,000 natives have not yet been brought under French rule. Exclusive of this latter element, there were 611,000 persons living in cities and 3,000,000 in tribal communities. The population of the Spanish zone has been placed at 600,000. The largest towns in the French zone with their estimated populations in 1924 are: Marrakesh, 145,000; Fez, 124,500; and Casablanca, 110,934. In the Spanish zone the largest town is Tetuan, with a population of about 30,000. The population of Tangier has been variously estimated at 50,000 to 80,000, including about 12,000 Europeans. The chief languages are French, Spanish, Arabic, and Berber dialects. In 1924 the number of schools in the French zone was 199; in the secondary schools there were 188 teachers and 2822 pupils; in the high schools, 26 teachers and 417 pupils; in the primary schools, 645 teachers and 23,327 pupils; in the professional schools, 79 teachers and 1029 pupils. There are Moslem schools at Rabat and Fez, and a research institute for the study of Arabic and Berber languages at Rabat.

**PRODUCTION.** Although Morocco is essentially an agricultural country, it must depend upon timely rainfalls to reap the full benefit of the soil's possibilities. The proper exploitation of the natural agricultural resources is prevented by a practically total lack of irrigation and the crude implements and methods of farming. In 1924 the yield of the chief crops in metric quintals was as follows: Barley, 11,626,750; wheat, 7,824,700; beans, 369,250; oats, 158,150; maize, 998,000; sorghum, 235,350; chickpeas, 154,700; and linseed, 133,350. In the same year the number of livestock in the French zone was: sheep, 8,214,000; goats, 2,646,000; cattle, 1,840,000; pigs, 55,000; asses, 536,000; horses, 174,000; mules, 66,000; and camels, 114,000. Over 3,000,000 acres of the total area is covered by forests, but only one-sixth can be exploited at present, owing to the lack of irrigation, poor transportation facilities, or constantly unsettled conditions in certain parts. Cork and gum are the main products from this source. The development of the rich mineral resources of Morocco is also retarded by the adverse conditions which prevent the exploitation of the forests. No coal is to be found, but the phosphate mines in the vicinity of Casablanca are steadily increasing their output, which was estimated at 700,000 tons in 1925 as compared with 400,000 in 1924.

These mines are exploited by the government and under its monopoly. Iron mines in the Spanish zone are also being exploited.

**COMMERCE.** French Moroccan imports from all countries in 1925 were valued at \$55,626,000, as compared with \$52,748,000 in 1924. As in the past France and Algeria together ranked first in the import trade supplying 61.88 per cent. England ranked second and was followed by the United States and Italy. The exports were valued at \$26,392,000 as compared with \$33,109,000 in 1924. Of the 1925 exports France and Algeria took 38.52 per cent, Spain, 31.54 per cent, and Great Britain, 9.81 per cent. The United States took 1.48 per cent. A large part of the Moroccan goods exported to France is reshipped to other countries. In 1922 the imports of the Spanish zone amounted to 128,604,382 francs and the exports to 14,387,590 francs. The imports at Tangier in 1924 amounted to 77,885,831 francs and the exports to 11,569,827 francs.

**FINANCE.** The estimated revenue in French Morocco for 1925 was 342,184,960 francs and the estimated expenditure, 342,099,086 francs. In Spanish Morocco the expenditure in 1923 was 311,044,372 pesetas and in 1924 433,277,668 pesetas.

**COMMUNICATIONS.** In 1924, 1498 vessels of 1,607,458 tons entered the ports of French Morocco and 1502 vessels of 1,014,018 tons entered the port of Tangier. There are about 730 miles of narrow gauge railways in the French zone, 308 miles in the Spanish zone, and none at all in the Tangier zone.

**GOVERNMENT.** As noted above the Tangier district is governed by an international commission. The French zone constitutes a protectorate, under a French and native administration. Its status was defined in the treaty of Mar. 30, 1912. The highest local authority is the French Resident General. The office of Sultan continues but the Sultan is obliged to follow the advice of the French Resident in all matters. The native Shereefian administration comprises a Grand Vizier and the Viziers of Justice, Crownlands, Pious Foundations, and Instruction, and the Resident of the Native High Court. The position of War Minister is held by the officer commanding the French troops in Morocco. Sultan Mulai Yusef (proclaimed Aug. 18, 1912). French Resident General, Theodore Steeg, appointed Oct. 11, 1925. Abd-el-Krim, the Rifian leader responsible to a large degree for the successful resistance against the Spanish troops since 1921 as well as for the formation of the dictatorship in Spain, was finally compelled to surrender on May 26, in the face of overwhelming French and Spanish forces. After considering ways and means of dealing with him he was finally exiled to the island of Réunion in the Indian Ocean. This method was not particularly pleasing to the Spanish who were desirous of trying him for abuses committed on Spanish war prisoners.

**MOSAIC DISEASES.** See BOTANY under PLANT DISEASES.

**MOSES, REVEREND DR. ISAAC S.** Rabbi and Biblical scholar, died at New York, N. Y., on December 3. He was born on Dec. 8, 1847, at Santomischel, Posen, Germany, and went to the United States in 1871. Soon after his arrival he became rabbi of a small congregation at Quincy, Ill., leaving in 1879 to go to Milwaukee and in 1888 to Chicago. In this city he founded

the People's Synagogue, one of the first free synagogues in the United States. In 1901 he was called to New York as Rabbi of the Congregation Ahawath Chesed, later known as the Central Synagogue, and afterward merged with the Free Synagogue. In 1917 he retired and was made rabbi emeritus. He was one of the pioneers in reformed Judaism, working with Isaac M. Wise, Kaufman Kohler and others. His first book was *The Pentateuch*, published in 1881, and he followed this with *The Historical Books of the Bible*, and *The Ethics of Hebrew Scripture*. In 1894 and in 1904, he published a Sabbath School Hymnal, but his greatest work was *The Union Prayer Book*, first issued in 1892. Dr. Moses' published sermons include *Man and Humanity* (1886); *The Message of the Age* (1890); and *On the Heights* (1892). He was, at Milwaukee, editor with his brother of *Der Zeitgeist*, a German-Jewish periodical.

**MOSES SOHN, REVEREND DR. NEHEMIAH.** Jewish scholar and founder of the *Jewish Tribune*, died in New York, N. Y., on December 10. He was born in the Crimea, Russia, in 1853, his father being chief rabbi of Odessa. He studied at the universities of Odessa and St. Petersburg, receiving from the latter his directorate in Semitic languages. In 1887 he left for the United States and served until 1902 as rabbi of orthodox congregations in Philadelphia, Pa., Dallas, Tex., and Portland, Ore. In 1902 Dr. Mosessohn received the LL.D. degree from the University of Oregon, and in the same year he became editor of the *Jewish Tribune*. This journal he published in Oregon until 1918, and afterward he continued its publication in New York. Dr. Mosessohn retained active editorship until 1923 when he was elected founder-editor. He was an associate editor of the *Hebrew Encyclopædia* and author of *Almah Again*. He was National Director of the Jewish Consumptive Relief Society, as well as Past President of Bnai Brith.

**MOTT, SIR FREDERICK WALKER.** British neurologist, died on June 8. He was born at Brighton, England, Oct. 23, 1853, and was educated at University College and Hospital, London, where he became University scholar and gold medallist. He was for some time lecturer on morbid psychology in the University of Birmingham, England, and in 1900 he was appointed Croonian Lecturer to the Royal College of Physicians. He was also Fullerton Professor of Physiology at the Royal Institute. In 1910 he was the Fothergill Gold Medallist and Prizeman, and in 1918 he was the Moxon Gold Medallist. In 1916 he was appointed Lettson Lecturer to the Medical Society, and on this occasion he presented his famous dissertation, *The Effects of High Explosives upon the Central Nervous System*. To gain the material for this thesis he had undertaken military service in the World War and served in the Royal Army Medical Corps. In 1919 he was created a Knight of the British Empire, and among his many duties were Consulting Physician to the Charing Cross Hospital,

London, pathologist to London County Asylums, and his academic posts. He was a Fellow of the Royal Society, of the Royal College of Physicians, and of University College, London. His works include *War Neuroses and Shell-shock*, and *Brain and the Voice*.

**MOUNT HOLYOKE COLLEGE.** An institution for the higher education of women at South Hadley, Mass.; founded in 1837. The registration for the fall session of 1926 was 1032, divided as follows: seniors, 253; juniors, 251; sophomores, 208; freshmen, 222; specials, 10; graduate students, 28. The number of members on the faculty, including professors, associate professors, assistant professors, instructors, and chief administrative officers, was 120, and in addition there were 41 assistants, readers, graduate teaching fellows, curators, and secretaries. During the year 17 additions were made to the faculty, including Cornelia C. Coulter, Ph.D., professor of Latin; Kathleen M. Lunch, Ph.D., assistant professor of English Literature; James Muilenberg, Ph.D., assistant professor of Biblical history and literature; Clara B. Tillinghast, A.B., assistant professor of music. The productive funds of the College amounted to \$3,677,647.65, and the income for the year to \$158,811.99. There were 95,354 volumes in the library. President, Mary Emma Woolley, A.M., Litt.D., L.H.D., LL.D.

**MOVING PICTURES.** According to data collected at the biennial census taken in 1926 by the United States Department of Commerce, the organizations engaged primarily in the production of motion-picture films reported, for 1925, a total production cost amounting to \$93,636,348, of which sum \$71,488,457 represented studio work, and \$22,147,891, laboratory work. The total represents an increase of 8.4 per cent over \$86,418,170 for 1923. The census industry classification "Motion pictures" embraced all processes and activities connected with the production of motion-picture films, such as construction of scenery, stage settings, and properties; employment of managers, photographers, actors, and all other persons engaged in connection with the "shooting" of scenes; laboratory work necessary in the developing of exposed films and the printing of projection films; and other work in connection with the preparation of the projection films for use. It did not, however, include distribution and projection in theatres. Of the 132 organizations reporting for 1925, 72 were operated in California, 18 in New York, eight in Illinois, eight in New Jersey, four in Ohio, three in Michigan, three in Pennsylvania, three in Washington, and 13 in eight other States.

The year 1926 was more notable for technical advance and improved photographic effects in the new pictures than for dramatic progress. Photoplays, from the dramatic viewpoint, showed no improvement. The output from the studios was very large; but the quality of the presentations, the dramatic value, was not higher than in former years. Moving pictures in natural colors were made with fairly satisfactory results, but did not seem to arouse more than a passing interest in the minds of the public. Talking moving pictures, also were practically within reach of the public. The synchronization of action and voice was accomplished by means of apparatus that recorded the speaker's voice on the film on which the action was simultaneously

photographed; and its projection on a screen became a problem of a somewhat similar nature to that involved in radio transmission. These devices, such as the vitaphone, the photophone and the pallophotophone were exhibited in many motion picture theatres toward the close of the year and the manufacturers of machines equipped especially to project such pictures were anticipating a heavy future demand. (See *MOVING PICTURES*, in *YEAR BOOK* for 1925.) Censorship remained practically unchanged. In only seven states were there laws providing for ownership; and in no state had any such law been enacted since 1921. The Motion Picture Producers and Distributors of America, Inc., composed of about 85 per cent of the producers in the United States cooperated with the National Board of Review of Motion Pictures in the matter of censoring new productions before their release for showing on the screen.

**MOZAMBIQUE.** See **PORTUGUESE EAST AFRICA.**

**MUDD, SEELEY WINTERSMITH.** American mining engineer, died on May 24. He was born at Kirkwood, Mo., on Aug. 16, 1861, and became assayer and superintendent of the copper department of the St. Louis Smelting and Refining Company in 1883-85. In 1885 he went to Leadville, Colorado, and became interested in many mining companies and enterprises. He was commissioned major of engineers O.R.C. in 1917, being on active duty in 1918, and serving as assistant director United States explosives plants, Washington. He was promoted to be Colonel, U. S. A. in May 1918, and was honorably discharged in 1919. He was a trustee of Pomona College and the Southwest Museum.

**MUNICIPAL GOVERNMENT.** Unlike in the immediately preceding years, no large city of the United States adopted the commission-manager form of government in 1926. The plan was defeated in two cities of considerable size—*Minneapolis* and *Seattle*—but the proposed new charters in those cities did not run true to the general commission-manager plan. A modified council-manager plan was adopted by the voters of *Newport, R. I.*, on November 2 by a vote of 5020 to 1865. This plan does not go into effect until Jan. 1, 1928. There was to be a manager at Newport with much the usual run of powers and duties except as regards the police. The council will have five members. There will be a city planning board of eight members: The manager, the directors of law and of works, and five qualified electors appointed by the manager. The mayor under the new charter will head the Police Department and make all police appointments. Newport for some years had been governed by a representative council of 195 members and a board of aldermen. Effective Jan. 1, 1927, the number of representative councilmen was to be reduced to 25. A notable feature of the new charter for Newport is that in framing the budget the manager would, among other things, recommend "a long-time programme of proposed activities, developments and improvements listed in order of relative importance," at the same time "specifying whether the work is to be done by bond issue or by taxation." The budget framed by the city manager would be subject to approval by the city council with power to reduce or eliminate items, but not to cut out essential items. Civil service provisions will result in a personnel board composed of the city

manager, a member chosen by the city council, and a member elected by ballot by the officers and employees of the city.

Another city that adopted the council-manager plan on November 2 was *Oklahoma City*. The new charter provides for a council of eight members and a mayor to serve as the ninth member and to be designated the chief executive officer of the city. The city manager is to be called the chief administrative officer and would prepare the budget. The council-manager charter previously adopted went into effect at *Kansas City, Mo.*, on April 10. The manager appointed by the city council was chosen in advance by old-time party caucus methods from the party which won the majority of seats in the new council. *Minneapolis* voted on a proposed council-manager charter on June 21, with about 55,000 votes against 26,000 for the charter. A 60 per cent majority was required for adoption. A proportional representation provision was said to have caused many votes against the charter. Another feature of the charter which may have lost a considerable number of votes was the provision for a board of financial review, which on petition of only 100 taxpayers, could nullify any appropriations or bond issues proposed by the council. Altogether, *Minneapolis* voters have defeated a half dozen proposed charter changes in the past 18 years, the only change adopted being one providing for the city larger measure of home rule.

Early in the year *Seattle* defeated a charter amendment providing merely for a city manager, the same election declaring by a good majority for a charter revision commission and electing as mayor Mrs. Bertha K. Landis. Mrs. Landis favored the manager amendment, although if it had been adopted she would not have become mayor. This was the second defeat for establishing the manager plan at *Seattle* by charter amendment. As a result of the provision for a charter revision commission, there was submitted to the voters on November 2, a draft for a complete charter. This also went down to defeat, the vote being only some 20,000 for to 31,000 against adoption. The total vote was only some 43 per cent of the registration and was much under that for United States Senator. The charter defeated November 2, provided for a short ballot, a weak mayor, a strong council, a "city business manager" in control of engineering, public works and utilities, and fire protection, a single health commissioner, and a half dozen commissions of several members including one commission in charge of the Police Department. The draft provided for 14 councilmen, all elected at large but chosen to represent seven districts. All the department heads and commissions would have been appointed by the city council instead of following the common practice of having the appointments made by the city manager.

*Santa Barbara, Cal.*, on November 16, by a 5 to 3 vote, adopted a new city charter which substitutes for the manager form of government a mayor and ward councilmen. Two weeks earlier *Pasadena, Cal.*, rejected a proposal to abandon the manager plan, although voting for the election of "city directors" (councilmen) to represent seven districts of the city on the election-at-large plan. Early in the year *Waco, Texas*, voted against changing from the council-manager to the aldermanic type of government

and on November 2, *Ashtabula, Ohio*, cast a considerable majority of votes against abandoning the proportional representation plan of election and against having the city manager elected by popular vote instead of being appointed by the city council. Another attack on the city manager plan that failed was at *Stockton, Cal.*, where, on October 12, there was defeated an initiative measure designed to reduce the salary of the city manager from \$20,000 to \$10,000 a year.

**COUNTY CONSOLIDATION.** The proposed consolidation of the city and county of *St. Louis, Mo.*, was defeated by votes outside the city limits on October 26, but the vote within the city was heavily in favor of the consolidation. A favorable vote would have created a municipality with an area of almost 550 sq. mi., of which 55 per cent is classed as farmland, although there are cities in the county besides *St. Louis*.

**GERMANY.** An interesting pamphlet of a dozen pages, entitled "German Cities Since the Revolution of 1918," was issued as a supplement to the *National Municipal Review* (New York City) for November, 1926. The original paper was prepared by Dr. Mitzlass, formerly chief burgomaster of Berlin, and had been translated into English. From a summary prefixed to the article it appears that "The traditional home-rule powers of German cities were little affected by the revolution, but that proportional representation and universal suffrage have been introduced since 1918" to the destruction of the old three-class system of voting. There is now a "drift towards the single-chamber council and away from the magistrate as an executive board enjoying the prerogative of a second chamber." Budget systems have been restored; "wartime socialism has virtually disappeared"; and to-day "German municipal administration is more conscious than ever of its place in the life of the nation and is facing the future with courage."

**ITALY.** According to an Associated Press dispatch of August 30, "the election of municipal officers by popular suffrage, allowed since the Kingdom of Italy was founded in 1870, was abolished to-day by the Fascist Government." In its place the Podesta system "was made applicable" to every city, town and village in Italy, Rome and Naples alone being excepted, the former continuing under a governor and Naples under a high commissioner, but neither of these cities having any elected officials. Before the decree of August 30 was issued, the Podesta system prevailed in 1341 towns of less than 5000 population and also in towns considered as health resorts or located in the earthquake zone. About 1700 places were affected by the new decree, bringing the total Podesta towns and cities up to over 3000. The first Podesta decree became effective Feb. 1, 1926. The governor or Podesta is appointed by the central government. In places of more than 20,000 population, he is aided by one or two vice-governors and by a consulta or council graded in size according to the importance of the city, the members of the council being appointed either by the prefect of the commune or by the minister of the interior from a list suggested by the recognized syndical organizations. These syndical organizations embrace various professions and trades "which alone," the dis-

patch states, "will have representation in legislative bodies."

During the year there appeared a rewritten and enlarged edition of Munro's *The Government of American Cities* (New York), and a new book, by Anderson, *American City Government* (New York).

See also CITY PLANNING, GARBAGE, ROADS AND PAVEMENTS, SEWERAGE, WATER-WORKS.

**MUNICIPAL HOME RULE.** See MUNICIPAL GOVERNMENT.

**MUNICIPAL LEAGUE, NATIONAL.** An organization to promote efficient and democratic government in city, county, state, and nation; founded in 1894, and incorporated in 1923. It has committees of experts at work studying, from practices in different parts of the country, sound principles of government methods and government administration. These committees submit reports which are approved by the League and distributed where they will have most effect. The active committees in 1926 were as follows: Committee on Government for Regional Areas; Committee on Municipal Indebtedness; Committee on Revising Model City Charter; Committee on Election Administration. Recent publications included a model municipal bond law; a model system of election registration; and two monographs, one on municipal budgets and one on depreciation in public utilities.

The thirty-second annual meeting of the League was held in St. Louis, Nov. 9 and 10, 1926. Joint sessions held with the National Association of Civic Secretaries and the Illinois Home Rule Conference, were unusually well attended. The *National Municipal Review* (monthly) is the official organ of the League and records the latest developments and most interesting experiments and theories in government, in addition to the record of the yearly meeting. The number of members of the League in 1926 was 2500. Its officers were: Frank L. Polk, president; Carl H. Pforzheimer, treasurer; Clinton Rogers Woodruff, honorary secretary; and H. W. Dodds, secretary. Headquarters are at 261 Broadway, New York City.

**MUNICIPAL RESEARCH.** See MUNICIPAL GOVERNMENT.

**MURKLAND, CHARLES SUMNER.** American agriculturalist, and educator, died at Waltham, Mass., on November 11. He was born on May 20, 1856, at Lowell, Mass., and graduating from Middlebury College, in 1881, then studied for the ministry at Yale Divinity School. He graduated from the Harvard Theological School in 1884, and served as pastor of Congregational parishes in Chicopee, Mass., and Manchester, N. H., until he became President of New Hampshire College of Agriculture and Mechanic Arts in 1893. This position he relinquished in 1903 to become Principal of Brewster Free Academy at Wolfboro, N. H. In 1910 he retired but resumed his educational work with the Young Men's Christian Association in France, during the War. In 1893 Dr. Murkland was granted a Doctor of Philosophy degree by Dartmouth College.

**MUSCLE SHOALS.** During the year no definite decision had been reached as to the utilization of the power plant and resources at Muscle Shoals. The United States Treasury Department analyzed, during the year, the bids submitted by the Air Nitrates Corporation and by the Associated Power Companies for the use of Dam Number 2, Dam Number 3, and the

steam plant, all fully equipped, and compared these bids with one previously submitted by Henry Ford. The Treasury Department analysis showed that the Air Nitrates Corporation bid would give to the Government 2.828 per cent interest on the investment and that no money would be available to repay any of the principal. The Ford offer, on a 50-year basis, would return 2.798 per cent, while the Associated Power Companies' offer would return 3.252 per cent interest on the total investment if no headwater storage was constructed and 4.32 per cent interest if headwater storage were constructed in ten years. This offer, if headwater storage were constructed in ten years, it was stated, would return 4 per cent interest to the United States on the early balances of the total investment, and in addition repay to the United States \$66,015,000, or 81.7 per cent of the total investment.

The Secretary of War, for the fifth consecutive time, leased the Government 60,000 kw. steam plant at Muscle Shoals to the Alabama Power Company until Nov. 17, 1927, at a rental of \$1,250,000. The output of this plant was fed into the Southern superpower system. At the end of the year various plans for utilizing the Muscle Shoals power were being put forward and it was anticipated that the contest would continue between the advocates of the various measures. One of the bills put forward at the end of the year provided for the incorporation of the Farmers Federated Fertilizer Corporation under a Federal Charter to lease the power facilities for the manufacture of fertilizer and the disposal of the surplus power.

Power from Wilson Dam, called into use Sept. 12, 1925, for the first time, amounted up to Dec. 31, 1926, to 477,058,000 kw. hrs., the revenue to the Government being \$946,070.84. See FERTILIZERS.

**MUSEUMS, ART.** See ART MUSEUMS.

**MUSIC. GENERAL NEWS.** Owing to extensive alterations begun immediately after the close of the 1925 festival, the Festspielhaus at Bayreuth remained closed during 1926, and thus it came to pass that the 50th anniversary of the establishment of the Bayreuth Festival passed unobserved in the very theatre, the opening of which, in 1876, marked the definite triumph of the supreme art of Richard Wagner. At the time that announcement was made of the temporary suspension of the festival performances the management already was planning their resumption, in 1927, on a scale of unprecedented magnificence, in a practically new theatre. However, the disappointed devotees of Bayreuth found compensation in the superb performances of the annual Wagner-Mozart Festival at Munich (August 1-September 5) which consisted of Wagner's *Tristan und Isolde*, *Die Meistersinger*, *Parsifal* and the complete *Ring des Nibelungen* and Mozart's *Die Entführung aus dem Serail*, *Figaros Hochzeit*, *Die Zauberflöte*, *Don Giovanni* and *Così fan tutte*.

In Germany the centenary of Weber's death (June 5) was observed in every theatre. Gotha produced a new version of *Der Freischütz* by Robert Hernried, who had set to music all the original spoken dialogue, employing Weber's own motives. The Deutsche Akademie in Munich began the publication of the master's complete works, in 24 volumes.

Nothing affords more striking proof of the

vitality of Beethoven's music than the somewhat premature celebration of the centenary of the great master's death. Instead of waiting till the actual date (Mar. 26, 1927), all the musical organizations throughout the civilized world, as if by preconcerted agreement, began their series of Beethoven programmes with the opening of the concert season in the fall. Thus the orchestras played all the symphonies on a schedule to end the series with a performance of the *Ninth* near the real date, and a similar method was followed by the chamber-music organizations.

In the archives of the Benedictine Abbey in Lembach Prof. Wilhelm Fischer, of Vienna, discovered the manuscript score of a Symphony in G by Mozart, dated 1769. Although listed in Köchel's catalogue, the work was supposed to have been lost. Upon the death of its owner the house in which Mozart completed his *Don Giovanni* passed into the possession of the Mozarteum in Salzburg. The Mozart Society of Prague will renovate the house and open it as a Mozart Museum.

At a distinguished social gathering in Berlin (November 1) a clever work of Richard Strauss, written as far back as 1918, had its first semi-public performance by Frl. Johannsen of the Staatsoper. In a series of poems, under the collective title *Der Krämerspiegel*, Alfred Kerr satirizes the various publishers of Strauss's works. The composer employs themes from his own earlier works in such a way, that for every stanza satirizing a particular publisher the themes are drawn from the scores issued by that firm.

On April 25, Puccini's posthumous opera *Turandot* had its première at La Scala, in Milan, under Toscanini, with Raisa (Turandot) and Fleta (Calaf). Clever advertising had excited public curiosity to the highest pitch, and lavish staging and superb execution on the part of conductor and singers resulted in a tremendous outward success. (For critical comment see the section *Opera*.) At its first performance at the National Slovak Theatre in Pressburg (in May) Leoslav Bella's *Wieland der Schmid*, on Wagner's text, was hailed as the first thoroughly national opera of Slovakia.

The general level of the works submitted to the Carnegie Trust, in London, was so low that out of 50 scores only two were recommended for publication: Harry Farjeon's *Phantasy Concerto* for piano and chamber orchestra and Alec Rowley's *The Princess Who Lost a Tune*, a mime play without words.

A committee headed by N. Penrose Hallowell secured one of the most valuable collections of ancient musical instruments of the 17th and 18th centuries, brought together by Henri Casadesus, and presented it to the Boston Symphony Orchestra, on October 23. It was installed in Symphony Hall as a memorial to the late Col. H. L. Higginson, the founder of the orchestra.

After his quarrel and resignation as director of the Staatsoper in Vienna, two years ago, Richard Strauss has made his peace with the new management, agreeing to appear every year as guest-conductor for 20 performances. On his reappearance in his own opera *Elektra* (December 7) he was greeted with tumultuous applause.

During the celebration of Civic Week the great organ of Liverpool Cathedral was formal-

ly dedicated (October 16). The instrument has 10,690 speaking pipes controlled by 168 stops, and is second only to the famous organ at St. Michael's in Hamburg, which has 12,174 pipes.

After considering various plans for the establishment of a fully equipped Conservatory, the trustees of the Juilliard Foundation (see YEAR BOOK, 1919) came to an agreement with the trustees of the Institute of Musical Art, in New York, by which the latter was incorporated with the Foundation. Dr. Frank Damrosch was to continue as artistic director. The original endowment fund of the Institute of \$5,000,000, given by James Loeb, was to be known as the Betty Loeb Fund and be administered by a special board of directors. The income henceforth was to be devoted to providing pensions and scholarships.

Now that New York has had three different societies devoted exclusively to the production of futuristic works, Philadelphia followed suit by organizing the Society for Contemporary Music (in November). Alexander Smallens is chairman of the music committee, and three concerts are to be given annually. The Horatio Parker Memorial Fellowship of the American Academy at Rome was awarded to Robert L. Sanders, of Chicago, a graduate of the Bush Conservatory.

ARTISTS. Three new pianists, recognized in Europe as of the first rank, made their American début, and won unstinted praise. Of these the German Walter Gieseking (New York, January 10) proved himself a universalist, equally at home in all styles of music from Bach to Debussy. Mieczysław Horszowski, a Pole (New York, February 24), who 20 years ago attracted attention as a youthful prodigy, returned a consummate master. The Frenchman Paul Doguerneau (New York, November 4), although only 18 years of age, already measures up to the full height of the greatest interpreters. The English pianist Irene Scharrer, introducing herself in Beethoven's G major concerto, with the New York Symphony Society, under Otto Klemperer (February 28) also made a very favorable impression. Ethel Newcomb, an American pianist, was heard again with pleasure after an absence of 10 years (January 19). Worthy of record are three concerts given by Ernest Schelling, with the assistance of the Philharmonic Orchestra, under Mengelberg (New York, November 8, December 4 and 13), when he played concertos of Mozart, Beethoven, Chopin, Schumann, Liszt, Paderewski and himself. The list of great pianists whose art is too well known to call for detailed comment includes the familiar names of Bachaus, Bauer, Brachocki, Brailowsky, Buhlig, Casella, Cherkassy, Deering, Dohnányi, Friedmann, Gabrilovitch, Gebhardt, Hess, Hilsberg, Hofmann, Hughes, Leginska, Levitzky, Levy, Lhevinne, Maier, Merù, Moiseiwitch, Münz, Murdoch, Ney, Novas, Niregyhazy, Paderewski, Pattison, Pettis, Puishnov, Reisenberg, Rosenthal, Sampaix, Samuel, Schmitz, Schnitzer, Wittgenstein.

Among the large number of débutants the following made more than a passing impression (all débuts at New York, except where specially noted): Dorsey Whittington (February 9), Solito de Solis (February 20), Helen Mennig (February 24), Bruce Simonds (February 27), Paul de Marky (March 11), Leo Podolsky (Chicago,

October 10), Beatrice Pinkham (October 22), George Mulfinger (October 26), Signe Johanson (October 27), Nikolai Orlov (October 28), Charles Naegele (November 11), Samuel Reichmann (December 6), Felian Garzia (December 12).

Although the year brought forth no new violinist of the first magnitude, the performances of the débutants showed a high level of accomplishment. Worthy of mention are: Mischa Weishord (February 23), Gisella Neu (March 7), Jacob Zayde (March 26), Vladimir Resnikov (November 4), Sigmund Feuermann (November 7), Frances Berkova (November 24), Josef Gingold (December 10). The list of established favorites includes the names of Birkenholz, Dushkin, Elman, Hansen, Kochanski, Kortschak, Kreisler, Luboshutz, Mischakov, Niernack, Ocko, Polah, Rabinov, Reuter, Seidel, Spalding, Stern, Szigeti, Teschner-Tas, Thibaud, Wadler, Zimbalist.

Three new cellists made their first bow to American audiences and won immediate recognition. Mila Wellerson (January 28) and Gdal Salesky (December 1) were first heard in recital, while Maurice Maréchal appeared as soloist with the Philadelphia Symphony Orchestra (New York, November 2). With the mention of the names of Belusov, Bilstin, Casals, Durieux, Kindler, Salmond, Schroeder, Van Vliet, Varady and Willeke the list of the great cellists heard during the year is practically exhausted.

To mention merely by name all the vocalists who contributed to the year's musical offerings would be a task not unlike the preparation of a practically complete directory of the concert singers of the United States. To these would have to be added the large number of foreign visiting singers and all the operatic artists of the Metropolitan and Chicago companies, for of late years a fixed tradition seems to have sprung up, that success on the operatic stage carries with it the obligation of a certain number of appearances on the concert platform. What has been said in former years regarding the mixed character of the programme, the preponderance of operatic excerpts and the almost complete neglect of the highest form of vocal expression, the Lied, still holds true in general of the performances of the past year. However, a slight increase in the number of Lied recitals can be recorded. While only one great singer well known to American audiences, Elena Gerhardt, was heard in this form of art, three newcomers, all of established European reputation, received a hearty welcome on the occasion of their American début. These were a German baritone, Eduard Erhard (March 1), a German contralto, Lulu Mysz-Gmeiner (March 8) and a Danish tenor, Lauritz Melchior (March 30). A very unusual and interesting recital was that of the Australian soprano, Irma Carson, who made her début (March 21) in a programme, with explanatory comments, of Malay and Maori songs.

**CHAMBER MUSIC.** The second Washington Festival (Coolidge Chamber-music Festival), a continuation of the former Berkshire Festival (see *YEAR BOOK*, 1925), was held at Washington, D. C., from October 7-10. From among 108 manuscripts submitted, the judges, Olga Samarov, Albert Spalding, Frank Bridge, Howard Hanson and Carl Engel, awarded the Elizabeth Coolidge prize of \$1000 to a violin-sonata by Albert Huy-

brechts of Brussels. The work was performed by A. Onnou and R. Schmitz on Oct. 8. Of more importance was the American début of the famous Pro Arte String Quartet of Brussels (October 8), whose initial number was also a novelty, J. Jongen's *String-quartet*, op. 67, a work of considerable merit. But the rare perfection of this fine ensemble was not fully disclosed until the great *Quartet* of César Franck afforded them an opportunity. The other novelties were N. Berezovsky's *Theme and Fantastic Variations* (October 8), Luc Balmer's *Third String Quartet* (October 9) and A. Huybrechts' *Poème* and F. Malipiero's *Ricercari* for chamber orchestra (October 10). All these works were typically futuristic and ugly. The high lights of the festival were the superb performances of masterpieces by Bach, Haydn, Mozart, Beethoven, Schumann, and Fauré. Besides the Pro Arte String Quartet (A. Onnou, L. Halleux, G. Prevost, R. Maas), two other famous chamber-music organizations participated in the masterly renditions of the programmes, the Flonzaley Quartet (A. Betti, A. Pochon, N. Moldavan, I. d'Archambeau) and The Stringwood Ensemble (Stopak, Kuskina, Cores, Borodkin, Bellison, Loesser).

A new organization of the very first rank, the Curtis Quartet of Philadelphia (Carl Flesch, Emanuel Zetlin, Louis Bailly, Felix Salmond), gave their first concert in Washington (February 4) and scored an overwhelming success, which caused no surprise in view of the fact that every member is not only a soloist of international reputation, but has also had wide experience as an ensemble player in various distinguished quartets.

Of the numerous novelties by American and foreign composers produced by various organizations throughout the country it can safely be predicted that the vast majority will never secure a second hearing, and that none will ever find a place in the standard repertory of chamber-music. As in former years, the latest productions of the extreme futurists were brought out by their special organizations. The International Composers' Guild, The League of Composers and the Pro Musica Society, the latter being none other than the former Franco-American Music Society under a new name.

A recital given by Evsei Belusov and Wanda Landowska (New York, January 27), consisting entirely of works of Bach for cello and harpsichord, emphasized once more the utter futility of any attempt to revive interest in older keyboard instruments. All the compositions for these instruments gain immeasurably when performed on the modern piano.

For the first time Chicago had the opportunity of hearing all Beethoven's string-quartets in chronological order. The cycle, begun in October, was the contribution to the Beethoven centennial by the Gordon String Quartet (J. Gordon, J. Weicher, C. Evans, R. Wagner).

A concert of most extraordinary interest, one that attracted visitors even from distant cities, was given in the auditorium of Wanamaker's, in Philadelphia (December 29). Thaddeus Rich, who in May resigned as concertmaster of the Philadelphia Symphony Orchestra to become curator of the Rodney Wanamaker collection of old string instruments, gave practical demonstration how these valuable instruments could still serve the artistic purpose for which they

had originally been constructed. He engaged the entire personnel of five of the most famous string quartets, the Flonzaley, Pro Arte, New York, Lenox and Vertchamp, and to these he added four double-bass players from the Philadelphia Orchestra, constituting a full string orchestra of 24 eminent artists. But each performer, instead of playing on his own instrument, was provided with the corresponding one from the Wanamaker collection. Under the direction of Mr. Rich this unusual ensemble performed a *Suite* in C by Purcell, the *Prelude to Le Déluge* by Saint-Saëns and a *Concerto Grosso* by Veracini, the last two with the assistance of the organ, played by C. M. Courboin. Between these numbers each organization, as a separate unit, executed a string-quartet of its own choice. According to the unanimous testimony of witnesses the tonal effect was of indescribable beauty.

**FESTIVALS.** The 20th annual Bach Festival took place at Bethlehem, Pa., (May 14, 1915), under the direction of Dr. F. J. Wollé. The programme of the first day contained seven cantatas, while the second day, as customary, was devoted to the great *Mass* in B minor. The second annual Westchester County Festival was given at the Kensico Dam, White Plains (May 20-24), under M. G. Williams. A special feature was the concert of the second day, when the programme was rendered by a chorus of 2500 school children and an orchestra of 150 recruited from several high schools. As the directors had received numerous complaints regarding the disturbance caused by passing trains, it was decided to begin immediately the erection of a suitable auditorium, and to postpone the next festival until the completion of the hall in 1928.

The 18th annual North Shore Music Festival was held at Evanston, Ill., (May 24-29), under the direction of Frederick Stock. The \$1000 prize, for which 80 scores had been submitted, was awarded by the judges, Henry Hadley, Howard Brockway and Adolf Weidig, to a *Tragic Overture* by Edward Collins. Its performance revived the comments by musicians made the preceding year in regard to the very poor quality of the works submitted. The board of directors evidently heeded these indications of discontent, and withdrew the prize for the coming year, and offered, instead, a prize of \$500 for a children's cantata with orchestra. After the festival was over, it became known that the *Tragic Overture* under other titles, had been sent before for two competitions of previous years. The 67th annual Worcester Festival (October 6-9), under Albert Stoessel, brought two novelties—Whithorne's *Saturday's Child*, revised as a symphonic poem, and Mussorgsky's original version of the Coronation scene from *Boris Godunov*. The principal work of the festival was Verdi's *Requiem*.

**ORCHESTRAS.** From January 14 to February 7, the concerts of the New York Philharmonic Society were conducted by Arturo Toscanini as guest, whose every appearance aroused unbounded enthusiasm. That among the world's greatest conductors he is unsurpassed needed no further demonstration at this late day. But certain it is, that, at least in New York, he never had at his disposal such a perfect body of instrumentalists capable and ready to convey his intentions. Without detracting from the superlative merits of Toscanini, it seems but fair to

remind the thoughtless that this wonderful orchestra is the result of the incessant rehearsals of the regular conductors, Mengelberg and Furtwängler, the latter conducting the regular concerts of the spring season, the former those of the fall season until the end of the year. The directors decided to add to the regular concerts of the year two special concerts, the proceeds of which were hereafter to be turned over to the Pension Fund, the performers and conductors giving their services gratis for this purpose. The Fund was established by two special productions of Beethoven's *Ninth Symphony* in April, 1922 but since then the question has received no further attention. The first of these Pension Fund concerts took place on December 21, under the direction of Mengelberg and a guest-conductor, George Georgesco, conductor of the Rumanian Opera at Bucharest, who on this occasion made his American début with pronounced success. Another guest-conductor, who also made a favorable impression at his début, was George Zaslavsky (April 12).

The New York Symphony Orchestra on one occasion was directed by the English conductor Eugene Goossens (January 7), while the prolonged engagement of Otto Klemperer (January 24 to March 28), general music director at Wiesbaden, gave him the position as regular alternate with Mr. Damrosch. Before the end of the season Mr. Klemperer had succeeded in establishing himself as a prime favorite with his audiences.

The Boston Symphony Orchestra also was heard under two guest-conductors, Michael Press (January 14, 15, 16) and Eugene Goossens (January 22, 23), while the concerts led by the regular conductor, Sergei Kussevitzy, offered a profusion of modernistic compositions, often very extreme, which the audience received invariably with respectful applause.

Of the Philadelphia Symphony Orchestra several experiments have to be recorded which, unfortunately, verge upon the sensational. The first of these was the daring innovation of performing Rimsky-Korsakov's *Scheherazade* with the addition of the Clavilux (color-keyboard) in Philadelphia (January 2) and New York (January 5). The orchestra was completely hidden behind a screen, upon which the colors were projected. The consensus of critical opinion was that the effort of trying to establish a relation between color and sound distracted from the enjoyment of the score, which needed no additional effects beyond the purely musical ones provided by the composer. After unsuccessful experiments with darkened halls and strange lighting effects Mr. Stokowski was obliged to yield to the wishes of his audience regarding normal conditions, when the music can be heard and the conductor and orchestra can also be seen. The idea of devoting an entire concert to works by Respighi (January 15), and, in addition introducing the composer in the further rôles as conductor and pianist, met with very adverse criticism. For the summer months the entire orchestra was engaged at the Exposition. After 20 years of distinguished service as concertmaster Thaddeus Rich resigned and was succeeded by Michael Gusikov. Dr. Artur Rodzinski, formerly conductor of the Warsaw Philharmonic Society, was appointed assistant-conductor. Owing to Mr. Stokowski's indisposition toward the end of the year Dr. Rodzinski had

ample opportunity of demonstrating his excellent qualities both in Philadelphia and New York.

That the keen rivalry among the great orchestras of this country has been productive of excellent results was proved by the concerts given in New York by the Cincinnati Symphony Orchestra, under Fritz Reiner (January 6), and the Cleveland Symphony Orchestra, under Nikolai Sokolov (January 19). Both organizations have developed into virtuoso orchestras of the first rank.

The opening of the fall season saw several changes in the position of concert-master. The St. Louis Symphony Orchestra had secured Sylvain Noack, the Los Angeles Philharmonic Orchestra Alfred Megerlin, while in Minneapolis J. E. Shadwick succeeded Pierre Henrotte, who returned to his former post as concert-master at the Metropolitan Opera House.

Owing to lack of support the State Symphony Orchestra of New York was disbanded in January. After complete reorganization on a permanent basis the Seattle Symphony Orchestra began its fall season under a new conductor, Karl Krueger (November 8).

Lively interest was shown in the performances of the official orchestra of the Republic of Mexico, the Tipica Orchestra, conducted by José Briseno, which made a coast to coast tour of the United States from June to December. Dressed in their picturesque national costume, they offered typical Mexican and Spanish music, interspersed with selections from the standard classical and modern repertory.

The fifth season of summer symphony concerts at the Hollywood Bowl, Los Angeles (July 6 to August 28), was given in the new permanent auditorium seating 20,000 persons. The conductors were Sir Henry Wood, Eugene Goossens, Emil Oberhoffer, Willem Van Hoogstraten and Alfred Hertz. The total attendance exceeded that of the preceding summer by 75,000. Mrs. J. J. Carter, the founder of these concerts, resigned as president of the board of directors and was succeeded by Allen C. Balch.

The ninth summer season of the Philharmonic Orchestra at the Stadium of the College of the City of New York (July 7 to August 31) also broke all records for attendance, and this in spite of unfavorable weather. Besides the now customary performances of Beethoven's *Ninth Symphony* and Verdi's *Requiem*, a special Wagner Night (August 19) enlisted the services of soloists and full chorus in excerpts from the master's music-dramas. The winners of the Stadium Audition contest, Enrique Ros (pianist), Giuseppe Martino-Rossi (baritone) and Alice Godillot (soprano), made their debut in the concert of August 6. The principal conductor was Willem Van Hoogstraten, while Henry Hadley, Nikolai Sokolov and Frederick Stock appeared as guest-conductors.

The new orchestras that began their career during the year were the Glendale (Cal.) Symphony Orchestra, under J. Arthur Myers (January 25), the Washington Symphony Orchestra, under Kurt Hetzel (April 20), the Boston Philharmonic Orchestra, under Ethel Leginska (October 24) and the Dallas Symphony Orchestra, under Paul Van Katwijk (November 21).

**NOVELTIES.** The following list includes the more important—not necessarily valuable—new works introduced during the year: New York

Philharmonic Society (under Toscanini): O. Respighi, *Pini di Roma*, symphonic poem (January 14); V. de Sabata, *Gethsemane*, symphonic poem (January 21); under Furtwängler: R. Strauss, *Interlude* and *Waltz* from the opera *Intermezzo* (March 4); under Mengelberg: T. Strong, *An Artist's Life*, violin-concerto (played by Szigeti, October 28); H. Hanson, *Pan and the Priest*, symphonic poem (Boston, October 21; New York, October 31); A. Honegger, *Prelude to The Tempest* and A. Casella, *Suite* from the ballet *La Giara* (November 4); H. Pfitzner, 3 *Preludes* to the opera *Palestrina* (November 11); J. Wagenaar, *Overture to The Taming of the Shrew* (November 21). New York Symphony Orchestra, under Goossens: A. Bax, *Tintagel*, symphonic poem (January 15); under Klemperer: O. Respighi, *Overture to Belfagor* (March 7); under Damrosch: D. Milhaud, *Ballad* for piano and orchestra (composer as soloist; December 5); J. Sibelius, *Tapiola*, symphonic poem (December 26).

Boston Symphony Orchestra, under Kussevitzky: H. Gilbert, *Symphonic Piece*, on American Folk-themes (February 26); T. Spelman, *Assisi*, part IV of a suite *Saints' Days* (March 28); M. Delmas, *Penthésilée*, overture to Mortier's tragedy (March 26); S. Prokofiev, *Seven, They are Seven*, Akkadian incantation for orchestra and chorus (April 23); A. Steinert, *Southern Nights*, tone-poem (October 15); J. Ibert, four movements from a ballet, *Les Rencontres* (October 22); A. von Webern, *Five Pieces* for orchestra, J. Walton, *Portsmouth Point*, overture, and H. Krasa, *Pastorale* (November 19).

Philadelphia Symphony Orchestra, under Stokowski: N. Miaskovsky, *Symphony No. 5*, in D (January 2); O. Respighi, *Old Dances and Airs* and *Concerto in Miwo-Lyidian Mode* for piano and orchestra (composer as soloist; January 15); J. Sibelius, *Symphony No. 7*, in A (April 3); J. Sibelius, *Symphony No. 6*, in D minor (April 23); E. Hutcheson, *Fantasy Concerto* for two pianos and orchestra (composer and G. Maier as soloists; May 2); A. Pingaud, *Le Prophète* (October 22); A. Caplet, *Epiphanie*, fresco for cello and orchestra (M. Marechal, soloist; November 2); N. Miaskovsky, *Symphony No. 6*, in Eb (November 26); K. Szymanowski, *Symphony No. 3, Chant de la Nuit* (November 19); H. Kaminsky, *Concerto Grosso* (December 10).

Chicago Symphony Orchestra, under Stocks: J. Ibert, *Concerto* for cello and orchestra (A. Wallenstein, soloist; November 12). Minneapolis Symphony Orchestra, under Verbrugghen; J. Beach, *The Asolani*, suite for orchestra (November 12). Rochester Philharmonic Orchestra, under Goossens: L. Weiner, *Concertino* for piano and orchestra (S. Vas, soloist; December 2). Syracuse Symphony Orchestra, under Shavitch: C. Erlanger, *Sursum Corda*, symphonic poem (February 18).

**OPERA.** At the Metropolitan Opera House in New York 205 performances were given from a repertory of 50 operas by 29 composers. According to nationality these were divided as follows: Italian, 23 works by 13 composers totaled 107 performances; German, 12 works by 4 composers totaled 42 performances; French, 9 works by 7 composers totaled 29 performances; Russian, 3 works (including 1 ballet) by 2 composers totaled 13 performances; Bohemian, 1 work had 4 performances; Spanish, 1 work had 4 performances; American, 1 work had 6 per-

formances. Wagner, represented by 9 works, stood first with 32 performances. Next came Verdi, represented by 5 works and 28 performances. Third stood Puccini, represented by 5 works and 25 performances. The opera that achieved the greatest number of representations was Verdi's *Rigoletto* (8), while no less than 9 operas were given only once, among these *Das Rheingold* and *Parsifal*.

The first novelty was Giordano's *La Cena delle Beffe* (January 2), under Serafin, with Alda, Gigli and Ruffo as principals. The superficial success was due entirely to Benelli's excellent libretto. The music itself never rises above the commonplace. Even more insignificant was the next novelty, Carpenter's ballet *Sky-scraper* (February 19), conducted by Hasselmans. Two one-act operas, De Falla's *La Vida Breve* and Stravinsky's *Le Rossignol* were brought out in a double bill (March 6). Both were conducted by Serafin, while the principal rôles in the former were sung by Bori, Howard and Tokatyan, and in the latter by Talley, Bourskaya, Errolle and Didur. *La Vida* suffers from a very conventional and utterly undramatic plot, from which the composer evidently could draw no inspiration. Then followed Massenet's *Don Quichotte* (April 3), under Hasselmans, with Easton, De Luca and Chaliapin as principals. Were it not for the fact that the title-rôle of this opera was especially written for Chaliapin, it would be impossible to discover any reason for producing this work.

Unquestionably the event of the year was the production of Puccini's posthumous *Turandot* (November 16), under Serafin, with Jeritz, Altglass, Ludikar and Lauri-Volpi as principals. It scored a brilliant outward success, due primarily to the gorgeous stage-pictures, although singers, chorus and orchestra gave their very best. The libretto, by G. Adami and R. Simoni, offers little opportunity for character development, but all the more for effective staging. The score gives evidence of careful and skilled workmanship, yet the music lacks spontaneity and real inspiration. In fact, the music appears as little more than an accessory element in a sumptuous spectacle making its principal appeal to the eye. Even now there can be no doubt that the success of *Turandot* will be as ephemeral as was that which greeted the same composer's *Panciulla del West*, *La Rondine* and the *Triptych*. As far as the standard repertory is concerned, Puccini has made only three contributions: *La Bohème* (1896), *Tosca* (1900) and *Madama Butterfly* (1904). As a matter of record it should be stated that the finale of *Turandot* was written by Franco Alfano after sketches left by the composer.

An unusually large number of artists new to the Metropolitan audiences appeared during the year. Mary Lewis (as Mimi in *Bohème*, January 28), Lauritz Melchior (in the title-rôle of *Tannhäuser*, February 18), Marion Talley (as Gilda in *Rigoletto*, February 18), Dorothea Flexer (as Old Woman in *Andrea Chénier*, March 5), Nanette Guilford (as Ginevra in *La Cena delle Beffe*, March 20), Ezio Pinza (as Pontifex Maximus in *La Vestale*, November 1), Edith Fleischer (as First Lady in *Die Zauberflöte*, November 6), George Cehanorsky (as Kothner in *Die Meistersinger*, November 13), Martha Attwood (as Liu in *Turandot*, November 16), Pavel Ludikar (as Timur in *Turandot*,

November 16), Elda Vettori (as Santuzza in *Cavalleria Rusticana*, November 20), Joseph Macpherson (as Il Re in *Aida*, December 30). A new conductor, Vincenzo Bellezza, made his début with Wolf-Ferrari's *Jewels of the Madonna* (November 4) and made an excellent impression.

A very important event in the history of the Metropolitan Opera House was the acquisition by the Metropolitan Realty Company of a large plot of land on 57th Street and Eighth Avenue for the erection of a new opera house.

The Chicago Civic Opera Company gave 82 performances of 36 operas by 25 composers. According to nationality these were distributed as follows: Italian, 20 works by 11 composers totaled 52 performances; French, 8 works by 8 composers totaled 16 performances; German, 6 works by 5 composers totaled 12 performances; American, one work was performed twice. The opera produced most frequently was Alfano's *Risurrezione* (7 times), one of the novelties of the preceding year, while not less than 12 operas had only one hearing. The only novelty produced was Cadman's *The Witch of Salem* (December 8), under H. G. Weber, with Norena and Hackett as principals. Its performances meant only the addition of one more to the already considerable number of operas on American subjects by American composers, without furnishing a solution of the vexing problem of American Opera. Of greater interest was the revival, after several years, of Wagner's *Tristan und Isolde* (November 12), in which Elsa Alsen made her début. Her almost sensational success was a foregone conclusion after her previous appearances in Chicago and New York with the Wagnerian Opera Company (1923). Other artists new to the company were Aroldo Lindi (as Rhadames in *Aida*, November 8), Kaja Norena (as Gilda in *Rigoletto*, November 13) and Louise Loring (as Leonora in *Il Trovatore*, November 13). Antonio Sabino, who made his début with *Aida* (December 5), proved an inspiring conductor.

**BIBLIOGRAPHY.—REFERENCE WORKS:** W. Altmann, *Franks kurzgefasstes Tonkünstlerlexikon* (Leipzig), articles very brief, but a vast number of names included. W. Altmann, *Orchesterliteraturkatalog* (2d, enlarged edition, Leipzig), very valuable; lists all published orchestral works in all countries up to 1925. A. Della Corte and G. M. Gatti, *Dizionario di Musica* (Turin), gives only biographical data without attempt at critical estimate. E. Duncan, *Reeve's Dictionary of Musicians* (London), too brief and rather incomplete. E. Favilli, *Il Piccolo Fétis* (Piacenza), a concise biographical dictionary from the earliest times to the present, suffers from lack of proportion and some serious omissions.

**BIOGRAPHY:** H. Collet, *Albeniz et Granados* (Paris), full biographical sketches and sane critical estimate of works. D. C. Parker, *Bizet* (London), sympathetic and critical. J. Pulver, *Brahms* (London), a very uncritical and childish attempt to establish the master's superiority over Bach, Beethoven and Wagner. H. Bidon, *Chopin* (Paris), very appreciative. R. De Koven (Mrs.), *A Musician and his Wife* (New York), reminiscences of the musical and social life at the end of the last century. H. Curzon, *Leo Delibes* (Paris), an excellent estimate of the man's work. C. Gray and Ph. Heseltine, *Carlo Gesualdo, Prince of Venosa: Musician and Mur-*

derer (London), in spite of sensational title a valuable critical estimate of the musician. W. Kienzl, *Meine Lebenswanderung: Erlebtes und Ersehntes* (Stuttgart), not only interesting, but reliable as to facts and dates. A. Sandberger, *Orlando Lasso und die geistigen Strömungen seiner Zeit* (Munich), critical and very scholarly. R. Maud (Mrs.), *Jenny Lind* (London), a remarkable objective and impartial account by the singer's daughter. J. G. Prod'homme, W. A. Mozart: *Sa vie et ses Œuvres* (Paris), rather an adaptation than a faithful translation of the second edition of Schurig's authoritative work. O. von Riesemann, *Modest Petrovitch Mussorgsky* (Munich) lacking in systematic arrangement, but valuable as the first extensive biography written in another language than Russian. C. L. Graves, *Hubert Parry: His Life and Works* (2 vols., New York), authoritative, because based on the composer's diary, but far too many unimportant details included. E. Flade, *Der Orgelbauer Gottfried Silbermann* (Leipzig), an excellent survey of the art of organ-building at the time. J. Kapp and H. Jachmann, *R. Wagner und seine erste Elisabeth, Johanna Jachmann-Wagner* (Berlin), throws new light on Wagner's relations toward his niece and her father, his brother Albert, and contains some hitherto unpublished letters of the master. A. Seidl, *Neuzeitliche Tondichter und zeitgenössische Tonkünstler* (2 vols., Ratisbon), contains critical estimates and biographical data about contemporary composers and executants.

HISTORY: A. Aber, *Die Musik im Schauspiel* (Leipzig), the first historical account of incidental music in the spoken drama, especially valuable to the theatrical manager. F. Blume, *Studien zur Vorgeschichte der Orchestersuite im 15. und 16. Jahrhundert* (Leipzig), a very important monograph establishing on the evidence of old manuscripts that the beginnings of the orchestral suite go back to the early years of the 15th century. A. Capri, *La Musica da Camera dei Clavicembalisti a Debussy* (Bari), suffers from frequent digressions and lack of balance. R. Malsch, *Geschichte der deutschen Musik, ihrer Formen, ihres Stils* (Berlin), clear and concise. H. O. Osgood, *So This is Jazz* (Boston), the first serious attempt, from the standpoint of an admirer, to trace its origin and development from the beginnings of rag time about 1890 to the present day. H. Schnoor, *Musik der germanischen Völker im 19. und 20. Jahrhundert* (Breslau), brief but illuminating. H. P. Schökel, *J. C. Bach und die Instrumentalmusik seiner Zeit* (Wolfenbüttel), a valuable contribution to the history of English music of the period. J. B. Trend, *The History of Spanish Music to 1600* (Oxford), an authentic, scholarly account with excellent musical illustrations. C. Van den Borren, *Guillaume Dufay: Son importance dans l'évolution de la musique au 15me siècle* (Brussels), a work of scholarly research. A. Weissmann, *Der Dirigent im 20. Jahrhundert* (Berlin), a brief history of conducting up to the end of the last century, followed by detailed analyses of the work of the most eminent conductors of to-day. J. Wolf, *Geschichte der Musik* (Vol. I, Leipzig), an admirable account of the music of antiquity and the middle ages, utilizing all the most recent researches of musicologists. *25 Jahre Neue Musik* (Vienna), published in commemoration of

the 25th anniversary of the founding of the "Universal Edition," contains valuable information about the younger contemporary composers with complete statistics of opera premières in Germany for the preceding quarter of a century.

ÆSTHETICS, CRITICISM: H. Chorley, *Thirty Years' Musical Recollections* (New York), a new edition, with introduction by E. Newman, of a work originally published in 1862, makes little appeal to the reader of to-day. J. Jeannin, *Étude sur le rythme grégorien* (Lyons), rather a polemic against the theories of Riemann and Mocquereau than an objective study. J. Jeannin, *Sur l'importance de la Tierce dans l'accompagnement grégorien* (Paris), advances some new and debatable ideas. E. Paccagnella, *L'elaborazione tematica nelle opere di J. S. Bach* (Monza), an attempt to establish a fancied relationship between the theme of each Prelude and its corresponding Fugue in the Well Tempered Clavichord. K. E. Schomann, *Akustik* (Breslau), concise and practical, valuable for a very extensive bibliography. F. Stege, *Das Okkulte in der Musik* (Münster), a disguised attack on futuristic music.

THEORY: G. Bas, *Trattato d'armonia* (Milan), a very elaborate attempt to reduce even polytonal combinations to a system, leading the author far beyond the limits of his subject. J. L. Dunk, *Tonality: Its Rational Basis and Elementary Development* (London), a logical and convincing argument that tonality cannot be disregarded without violating fundamental laws of acoustics. J. Huré, *Saint Augustin* (Paris), really an extensive commentary on St. Augustine's treatise "De Musica," with apposite quotations from medieval theorists. F. Jöde, *Die Kunst Bachs: Dargestellt in seinen Inventionen* (Wolfenbüttel), an excellent analysis that can serve as a practical treatise in applied composition. R. O. Morris, *Foundations of Practical Harmony and Counterpoint* (London), a presentation resting on a solid scientific basis, making no attempt to invent artificial schemes for the explanation of haphazard futuristic sound combinations. G. Venezian, *Teoria generale della Musica* (Vols. II and III, Trieste), intended originally as a practical treatise, the author gradually drifted from his subject and produced in reality a history of the evolution of musical theory. B. Weigl, *Harmonielehre* (Mayence), approaches the subject from the empirical standpoint and fails to emphasize the underlying fundamental principles.

CORRESPONDENCE: A. Orel, *Wiener Musikerbriefe aus zwei Jahrhunderten* (Vienna), letters of eminent Viennese musicians, from Haydn to Mahler, selected for the special purpose of showing the importance of Vienna as a centre of musical activity. A. Pescarzoli, *R. Wagner e Matilde Wesendonk: Diario e Lettere* (Milan), the first Italian translation.

NAPOLEON, PRINCE VICTOR JEROME FREDERICK. French pretender as head of the Bonaparte family, died May 3. He was born at the Palais Royal, Paris, on the 18th July, 1862, and was the eldest son of Prince Napoleon and Princess Marie Clothilde de Savoie. In 1886 he was expelled from France, and in 1910 he married H. R. H. Princess Clementine of Bel-

gium and thereafter made his home in that country.

**NATIONAL ACADEMY OF DESIGN.** See ART EXHIBITIONS.

**NATIONAL ACADEMY OF SCIENCES.** A body of American scientists incorporated by Act of Congress approved by President Lincoln in 1863, for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art, when called upon by any department of the Government, the actual expense of such investigations, examinations, experiments, and reports, to be paid from appropriations made for the purpose without compensation for any services to the Government. The membership is limited to 250 active members and 50 foreign associates. New members are elected by the Academy on nominations from its ten sections: mathematics, astronomy, physics, engineering, chemistry, geology and palaeontology, botany, zoology and animal morphology, physiology and pathology, anthropology and psychology. No new members but four foreign associates were elected in 1926, the latter as follows: Sir Frank Watson Dyson, Jacques Hadamard, Max Planck, Richard Willstätter. The Academy holds two meetings each year: the annual meeting, held in Washington beginning the fourth Monday in April; and the autumn meeting, held at a place and on dates decided upon by the Council of the Academy. The autumn 1926 meeting was held in November at Philadelphia, Pa.

The Academy has trust funds which grant money for the furtherance of research investigations and other trust funds which provide for gold medals in recognition of outstanding scientific work. Two medals were presented at the annual meeting in April 1926: the Henry Draper Medal was awarded to Harlow Shapley, a member of the Academy, in recognition of his contributions to astronomical science; the Alexander Agassiz Medal was awarded to Vilhelm Bjerknes of Bergen, Norway, in recognition of his outstanding contributions to dynamic oceanography. The *Memoirs* consist of monographs by Academicians and others, and reports of investigations conducted by the Academy for the Government. The Academy also publishes *Biographical Memoirs* of the deceased members. The *Proceedings*, issued monthly, is devoted to condensed reports on the most recent scientific discoveries. The officers in 1926 were: A. A. Michelson, president; John C. Merriam, vice-president; R. A. Millikan, foreign secretary; David White, home secretary; George K. Burgess, treasurer. The headquarters are at B and 21st Streets, Washington, D. C.

**NATIONAL BANKS.** The Comptroller of the Currency, in his annual report, issued on December 10, 1926, as usual called attention to a number of most important features connected with the organization and operation of national banks in the United States. From Oct. 17, 1925, to Oct. 1, 1926, 87 national banks, with aggregate resources of about \$560,000,000 went into the State systems, while during the same period 29 State banks, with aggregate resources of about \$235,000,000, were nationalized. The national banks in 1926 continued to decline, so that at that time they were

holding only about 46 per cent of the total commercial banking resources of the United States, although there had been an actual increase in their aggregate resources, the figure in 1926 standing at around \$25,000,000,000. The reason for this condition obviously was that State laws were operating more favorably to modern banking than the National Banking Act.

In the year ended Oct. 31, 1926, 91 national banks, with aggregate capital of \$5,412,500, were placed in charge of receivers, and on this date there were 378 national banks still in charge of receivers, 31 receiverships having been terminated during the year. The Comptroller of the Currency stated, however, that during the fiscal year ended June 30, 1926, there were 496 failures of state and private banks, with total liabilities aggregating \$147,823,000, which was an increase of 56 failures over the previous year and was an increase of \$29,095,000 in liabilities. On Oct. 31, 1926, there were in existence 8008 national banks, with a capital of approximately \$1,422,132,000, and in the year under consideration 156 applications to organize national banks or to convert state banks into national bank associations were approved, 122 were rejected, and 43 abandoned. Sixty national banking associations were consolidated into 30, with, in some cases, a reduction in capital, and in others an increase.

On June 30, 1926, the total resources of 7978 reporting national banks in the continental United States, Alaska, and Hawaii aggregated \$25,315,624,000, as compared with resources of 8072 national banks amounting to \$24,350,863,000 on June 30, 1925. The 1926 resources were distributed as follows: loans and discounts, \$13,417,674,000; overdrafts, \$9,719,000; investments, \$5,842,253,000; cash, \$359,951,000, and other items as indicated in the table on page 200, which accompanies the article FINANCIAL REVIEW. The liabilities, on the other hand, consisted of: capital stock paid in amounting to \$1,412,872,000; surplus, \$1,198,899,000; deposits, \$20,642,164,000, as indicated in the table mentioned.

The loans and discounts of the national banks on June 30, 1926, \$13,417,674,000, were in excess of \$743,607,000 over the previous year. The total investments of the national banks in United States Government and other miscellaneous bonds and securities amounted to \$5,842,253,000, an increase of \$111,809,000 in the year.

During the year ended June 30, 1926, the gross earnings of the national banks reporting were \$1,192,218,000, as compared with \$1,124,097,000 shown by 8070 banks during the previous fiscal year. The amount of net earnings after the payment of expenses, with the addition of \$44,005,000 recovered from charged-off assets, was \$394,557,000, an increase in the year of \$29,488,000. Losses charged against net earnings aggregated \$145,390,000 and were \$4,256,000 more than in the previous year. The net addition to profits after the losses were charged off totaled \$249,167,000, or an increase of \$25,232,000 during the year, while dividends to the amount of \$173,753,000 were declared and exceeded by \$8,720,000 the total dividends of the previous year. On Dec. 31, 1925, of the 8054 reporting national banks, 2425 were capitalized at less than \$50,000, while 4257 had a capital of between \$50,000 and \$200,000, 890 had a capital of \$200,000 but less than \$500,000, 249 had

\$500,000 but less than \$1,000,000, and 205 had a capital of \$1,000,000 but less than \$5,000,000, and 28 banks had a capital of \$5,000,000 or more, these two last-named classes having resources of \$6,050,716,000 and \$7,425,555,000 respectively. See FINANCIAL REVIEW; STATE BANKS, SAVINGS BANKS, etc.

**NATIONAL BUREAU OF INFORMATION AND EDUCATION.** The Educational Department of the Committee of Forty-eight. See FORTY-EIGHT, COMMITTEE OF.

**NATIONAL CIVIC FEDERATION.** An educational movement, organized in 1900, for the purpose of seeking the solution of some of the great problems related to social and industrial progress, providing especially for the discussion of questions of national import, aiding in the crystallization of the most enlightened public opinion, and promoting legislation when desirable. The Federation is directed by an executive committee composed of representatives of the public, of employers, and of wage earners. Its activities are conducted through specialized departments and committees. It is essentially a patriotic institution, advocating proper and adequate military defense and opposing super-pacifist efforts against "all war," including defense of our country against invasion.

The Department of Political Education completed, on Nov. 1, 1926, the initial drive in a two-year educational campaign to arouse the qualified voters of the nation to the fulfillment of their civic obligations with respect to registering, enrolling, voting in primaries and elections, and participating in other party activities. In making this drive, the Americanism Commission of the American Legion, acting for the Department, called more than 1500 meetings throughout the country between September 20 and October 15. At the end of the year there was being organized in each community a permanent Joint Committee made up of representatives of the participating local bodies, to co-operate with the Department. The Industrial Relations Department, organized for the purpose of seeking a method of reducing to a minimum friction and misunderstanding between the two great industrial groups, employers and wage-earners, seeks to bring these two great forces together for discussion, at the Industrial Round Tables, of questions responsible for bitterness, and advocates trade agreements in organized industries. In 1926 these Round Tables discussed "Problems of the United States Coal Industries"; and "Is Compulsory Arbitration Practicable?" The Subversive Movements Department has for its object the counteraction of foreign propaganda, especially that of the Russian Soviet, intended to undermine the government, by informing citizens about such propaganda.

The officers of the Federation for 1926 were: Elihu Root, honorary president; Matthew Woll, acting president; Samuel McRoberts, treasurer, D. L. Cease, secretary; Ralph M. Easley, chairman of the executive council; Miss Maude Wetmore, chairman of the Woman's Department; Charles L. Edgar, chairman, Industrial Welfare Department; Condé B. Pallen, chairman, Department on Subversive Movements; Archibald E. Stevenson, chairman, Committee on Free Speech; John Hays Hammond, chairman, Department of Political Education; V. Everit Macy, chairman, Department on Industrial Re-

lations; Marcus M. Marks, chairman, Industrial Round Table; Jeremiah W. Jenks, chairman, Department on Current Economics; Gertrude Beeks Easley, secretary, executive council; Mrs. Coffin van Rensselaer, executive secretary, Woman's Department; Peter J. Brady, secretary, Department on Political Education. The headquarters are in the Metropolitan Tower, East 23d Street, New York City.

**NATIONAL CRIME COMMISSION.** See CRIME.

**NATIONAL EDUCATION ASSOCIATION OF THE UNITED STATES.** An organization of persons actively engaged in educational work and others interested in education, organized in Philadelphia, Aug. 26, 1857, under the name of the National Teachers' Association, and on June 30, 1907, incorporated by Congress under its present name. In July, 1920, at the annual meeting, the Association was reorganized and provision made for a Representative Assembly composed of delegates from State and local education associations. The other governing bodies are a board of directors, an executive committee of five, a board of trustees, departmental organizations, standing and special committees, and a staff at headquarters which is held responsible for carrying out the decisions of the governing bodies. There are 17 departments, each having its own officers, and in 1926 there were more than 20 committees actively at work on professional problems. Two conventions are held yearly. The summer meeting serves as a clearing-house for educational ideas and reviews the progress of the year in education. At this time, in addition to the general sessions, meetings of the Representative Assembly, the departments of the Association, and a number of allied organizations are held. In 1926 this meeting was held at Philadelphia, Pa., June 27 to July 2, 1926, the attendance being 15,000. The 1927 convention was to be held at Seattle, Wash., July 3 to 8. The Department of Superintendence holds a winter convention the last week in February, that of 1927 to be at Dallas, Texas.

The chief objective of the Association is to secure from the American public a broader recognition of education and, through a legislative programme, to provide for increased educational opportunities for American children. It advocates a Department of Education with a Secretary in the President's Cabinet, as provided for in the Curtis-Reed Bill. Other objects of the Association are: a competent, well-trained teacher in every public-school position in the United States, with increased facilities for teacher training; continued investigation of educational problems as the basis for revised educational standards and methods; and active assistance to state and local affiliated associations in securing needed legislation and in promoting the interests of such associations.

The Association's monthly *Journal*, established in 1921, supports the policies and programmes of the Association, aims to reflect the activities of professional organizations, and gives special consideration to new movements in education of national and international interest. The Association also publishes an annual volume of *Proceedings* and numerous reports on the activities of the Association. *Research Bulletins* containing statistical information on educational subjects are issued regularly. The finances of the

Association are embodied in two funds, the current and permanent. The amount in the permanent fund on May 31, 1926, was \$227,331.31, and the receipts for the year ending on that date were \$378,202.32. The enrollment at the end of 1926 was 175,000. Headquarters of the Association are maintained at 1201 Sixteenth Street Northwest, Washington, D. C. Officers for 1926-27 were: president, Francis G. Blair, State Superintendent of Public Instruction, Springfield, Ill.; secretary, J. W. Crabtree, Washington; and treasurer, Henry Lester Smith, Indiana University, Bloomington, Ind.

**NATIONAL FORESTS.** See FORESTRY.

**NATIONALITY.** See INTERNATIONAL LAW.

**NATIONAL KINDERGARTEN ASSOCIATION.** An organization founded in New York in 1909 for the spread of kindergarten education. It works in coöperation with men's and women's organizations such as the Congress of Parents and Teachers, Federation of Women's Clubs, Woman's Christian Temperance Union, Federation of Labor, and Chambers of Commerce, many of which it was instrumental in interesting in this manner of early education. In 1912 the Association affiliated with the National Kindergarten and Elementary College of Evanston, Illinois, and from 1913 to 1919 it worked in coöperation with the United States Bureau of Education. It was through the efforts of the Association that the Kindergarten Division of the Bureau was organized, and in 1917, with the aid of the Bureau, it undertook the preparation of weekly articles on Home Education which were issued free of charge to the press. In 1926 these articles were being sent by request to nearly 1200 periodicals in the United States and to 44 foreign countries. Organizations were encouraged and assisted to work for better kindergarten legislation and by 1926 eleven states had secured petition laws, nine of them mandatory, as a result. During the year the Association was instrumental in opening 98 new kindergartens, making a total of 733 resulting from its work. These kindergartens were located in 440 towns and had trained 308,812 children. Kindergartens are opened largely through the efforts of Field Secretaries and 1926 witnessed a marked increase in the number of these representatives. The Association is supported by voluntary contributions, and its income in 1926 was nearly \$30,000. It has the unique record of having secured a year's training for one child for every dollar received. Officers in 1926 were: Maj. Bradley Martin, president; P. P. Claxton, honorary president; Mrs. Henry Phipps, first vice-president, Mrs. Charles Cary Rumsey, second vice-president; Mrs. Roger C. Aldrich, secretary; Julian M. Gerard, treasurer. Miss Bessie Locke was executive secretary, with headquarters at 8 West Fortieth Street, New York City.

**NATIONAL MUNICIPAL LEAGUE.** See MUNICIPAL LEAGUE, NATIONAL.

**NATIONAL PARKS.** See PARKS, NATIONAL.

**NATIONAL SAFETY COUNCIL.** An association of 4300 companies and individuals, representing 8000 workshops and 8,000,000 workers. It was formed as the result of a safety congress held in Milwaukee in 1912 under the auspices of the Association of Iron and Steel Electrical Engineers, and functions for the prevention of accidents in factories, streets, schools, and homes, as well as for the health,

comfort, and general welfare of the public at large. The Council supports an extensive safety service, issuing posters for bulletin boards, pamphlets describing safety practices, and a monthly magazine, the *National Safety News*. It maintains a staff of engineers, who are available for consultation, and forms schools for the instruction of foremen and safety supervisors, publishing for use in these schools loose-leaf outlines of lectures on subjects in which instruction is given. Among the special fields covered are those of engineering, public safety, education, health service, and the following industrial sections: automotive, cement, chemical, construction, electric railway, food, marine, metals, mining, packers and tanners, paper and pulp, petroleum, public utilities, quarry, rubber, steam railroad, taxicab and fleet-owners, textile and woodworking. Affiliated with the National Safety Council in 1926 were 65 Local Safety Councils, 52 with paid officers and 13, 4 of which were industrial councils, with voluntary officers. These local organizations were served by 3100 volunteer committeemen. Many of them were publishing their own magazines, bulletins, and other literature, and were of great service to their respective communities. Up to the end of 1926 the Council had aided in drawing up more than 40 national safety codes. Industrial sections were active, and many regional conferences were held. Eight community safety surveys were made during the year. The Council was represented at the Second National Conference on Street and Highway Safety, as were also many of the Local Safety Councils. The Council receives \$35,000 annually from the National Bureau of Casualty and Safety Underwriters for the support of an executive secretary and traveling secretaries engaged in educational research. The Fifteenth Annual Congress of the Council, held at Detroit, October 25 to 29, was attended by 5000 delegates. A large exhibit of commercial safety devices and appliances was shown. The officers elected at the Congress were: Walter G. King, president; A. W. Whitney, H. A. Reninger, C. E. Hill, W. F. Austin, Dr. L. A. Shoudy, C. E. Pettibone, H. E. Niesz, vice-presidents; H. M. Webber, treasurer; and W. H. Cameron, managing director. The headquarters of the Council are at 108 East Ohio Street, Chicago, Ill.

**NAVAL PROGRESS.** The tendencies which had been operative in the navies of the world since the Washington Conference were still active in 1926. Great Britain, France, and Japan were building light cruisers at a rate never before attained. France and Japan were also building flotilla leaders, destroyers, and submarines to the limit or beyond the limit of their financial resources. Spain was strengthening her navy rapidly, but was, of course, in the second class. Great Britain, which was placed in the lead by the enormous sacrifices of the United States in the Conference, was expected to lead the United States by a wide margin—even in capital ships—when the *Nelson* and *Rodney* were placed in service early in 1927. With a weakness in capital ships in the proportion of 5 to 4, or thereabouts, a deficiency in light cruisers, a total lack of flotilla leaders and large destroyers, a reduced rate of submarine construction, the increase in age of the destroyer fleet, its deterioration due to being laid up in reserve, and the reduction in numbers of of-

fliers and men, the United States had dropped back to a position of about 3.5 as regards England and Japan; so that the relative strengths of the three fleets were now about 5—3.5—3 instead of 5—5—3 as theoretically assigned by the Conference. Germany was building up to the limit permitted by the Versailles treaty, and was anxious to have the restrictions modified or removed.

#### NAVIES OF THE WORLD AT THE END OF 1926

**ARGENTINA.** The Argentine parliament allotted the sum of 32,000,000 pesos for building the following vessels: 2 light cruisers of 4000 to 4500 tons, 3 submarines of about 800 tons, 2 destroyers of 1200 to 1400 tons, 2 sailing sloops with auxiliary Diesel engines. The dreadnought battleship *Rivadavia* underwent rebuilding at Fore River, Mass., whereby her speed and offensive powers were much increased and many other important changes effected. Several Argentine destroyers were also undergoing repairs and alterations expected to nearly bring them up to date.

**AUSTRALIA.** The naval budget for 1926 was £3,921,145. At the beginning of the year there were building in England for the Australian navy two 10,000-ton light cruisers—the *Australia* and *Canberra*—and two submarines—the *Otway* and *Oxley*—which were similar to the new British submarine *Oberon* (ex-*O-1*) that had a displacement of 1365 tons on the surface and 1778 when submerged. A considerable sum was being expended for aviation and an aircraft carrier was building at Sydney.

**BRAZIL.** The personnel of the Brazilian navy consisted of 207 commissioned officers, 254 junior and warrant officers, and 3075 petty officers and men. The scout cruisers *Bahia* and *Rio Grande do Sul* had been reconstructed, the work being completed in 1926. These vessels have a displacement of 3100 tons. With new boilers and engines and oil fuel in place of coal the speed has been increased to 27 knots.

**CANADA.** Since the War, the Canadian naval budget had been reduced to trifling proportions. The allotment for 1926 being £280,000. Two submarines, *CH-14* and *CH-15* and the light cruiser *Aurora* were sold. The only vessels on the active service list were the destroyers *Patrician* and *Patriot* of 1020 tons, 35 knots, launched in 1916, and armed with 2 4-inch guns, 1 3-pounder, and 4 21-inch torpedo tubes.

**CHILE.** The government decided to reorganize the navy. It was proposed to order at once in Europe 6 destroyers. Later, several light cruisers were to be built. Naval aircraft were ordered in Italy.

**CHINA.** The navy of China has always been a peculiar force. Different squadrons belonged to different sections of the country. The rapidly changing fortunes of the great war lords rendered it doubtful to whom the various naval units owed allegiance.

**DENMARK.** The disarmament plans of the Denmark pacifists, which were proposed to the parliament two years ago, seem to have been definitely abandoned. During 1926, the navy had been conducting maneuvers that involved nearly all available vessels.

**EGYPT.** The naval force and coast-guard were still controlled by the British. Two coast-guard vessels of 1050 tons were building in England.

**FINLAND.** The government desired to build up a naval force sufficient for defense, but the parliament (Riksdag) cut the government proposals from 315,000,000 to 47,000,000 marks.

**FRANCE.** The naval budget for 1926, including supplementary credits, was about 1,512,000,000 francs. The budget for 1927 was 1,915,432,377 francs (about \$78,617,000 at the 1926 value of the franc). The new programme included the following vessels, all to be commenced in 1927: 1 light cruiser of 10,000 tons; 3 flotilla leaders of about 2700 tons; 4 destroyers of about 1500 tons; 1 submarine of about 3000 tons; 5 submarines of about 1560 tons; 2 mine-laying submarines; 1 submarine mother ship; 2 motor tankers; and 1 5400-ton cadet training ship. Since 1921, the French navy had completed or had commenced the following vessels: 3 light cruisers of 8000 tons; 3 light cruisers of 10,000 tons; 6 flotilla leaders of 2400 tons and 3 of 2700 tons; 12 destroyers of 1460 tons and 10 of 1495 tons; 3 submarines of 3000 tons; 12 submarines of 1500 tons; 3 submarines of 1150 tons; 12 submarines of 600 tons; 2 submarines of 760 tons (mine-layers); 1 aircraft carrier of 21,450 tons; 1 submarine mother ship; 2 motor tankers; 1 cadet training ship of 5400 tons. To man such of the new vessels as were practically complete at the end of 1926 required about 300 officers and 3000 men. The personnel of the service was to be increased to cover part of these requirements.

The French naval department had recently undergone a very extensive reorganization in regard to nearly all matters connected with the navy but particularly as regards the High Naval Command. The Vice-Admiral, who was Chief of the Naval Staff in time of peace, assumes supreme command of the navy on the outbreak of war, with the title of Commander-in-Chief of the French Navy, exercising this command from on shore. His duties as Chief of the Naval Staff are then undertaken by a vice-admiral, nominated in time of peace, who assumes the title of Deputy Chief of the Naval Staff. The importance of aviation in the French navy was fully realized but very little had been accomplished due to lack of proper organization and of competent direction.

**GERMANY.** The naval budget for 1926-27 was approximately \$49,503,000. One light cruiser of 5800 tons was completed in 1926; one was laid down in 1925; and two that were provided for in the 1927 budget were to be laid down in the current fiscal year. Since the armistice, provision has been made for 4 light cruisers to cost \$7,000,000 each, 12 destroyers at \$1,340,000, and 1 experimental torpedo boat at \$500,000. Further vessels were projected and some of the old ships were to be refitted and altered to an extent that would make them effective war vessels under modern conditions. The personnel of the navy consisted of about 14,000 officers and men—of which 18 per cent were commissioned or warrant officers.

**GREAT BRITAIN.** The navy estimates for 1926-27 provided for an expenditure of £58,100,000 (\$282,743,650). The enlisted force consisted of 102,675, and no material increase or decrease of these figures was anticipated. The 1926 building programme included 2 "A class" light cruisers of about 10,000 tons, 1 "B class" light cruiser of 8000 tons, 6 "O class" submarines, 1 submarine depot ship, 1 repair ship, and 4 motor

launches. Including the foregoing and the two 10,000-ton cruisers building for Australia, there were 14 light cruisers under construction, viz: the *Kent*, *Cumberland*, *Berwick*, *Suffolk*, and *Cornwall*, which had been launched; the *Shropshire*, *Sussex*, *London*, and *Devonshire*, which had been laid down during 1926; the 2 Australian cruisers; and the 3 cruisers of the 1926-27 programme. All but one of these cruisers were of 10,000 tons. The "O class" submarines were to be similar to the *O-1*, then called the *Oberon*, as all British submarines built after that time were to bear names instead of numbers. The *Oberon* had a displacement on the surface of 1480 tons and a submerged displacement of 1750 tons. The light cruisers *Effingham* (9900 tons), *Emerald* (7720 tons), *Enterprise* (7720 tons), the flotilla leader *Keppel* (1750 tons), and the submarine *L-27* (890/1080 tons) were vessels begun during the war and not completed until 1926. The submarine *L-26*, another war-time vessel, had not been reported complete. The destroyers *Amazon* (1330 tons) and *Ambuscade* (1210 tons) were practically finished, and the submarine *Oberon* was in the same condition. The mine-layer *Adventure* (6840 tons) was still under construction and the work was proceeding slowly.

The modernizing of the battleships and battle cruisers of the fleet was proceeding steadily. The battle cruisers *Repulse* and *Renown* were practically rebuilt; the five battleships of the *Royal Sovereign* class had been fitted with anti-torpedo bulges, deck-armor, etc.; and work on the *Queen Elizabeth* class was under way—the *Warspite* having been completed. There was a possibility that the *Iron Duke* class of battleships and the battle cruiser *Tiger* might not be refitted. They were the oldest and weakest vessels of the fleet.

The partial consolidation of the engineering and executive branches of the service which took place in 1903 had been abolished and the engineer officers were deprived of their executive rank and military status. Changes had also been made in the education and training of engineers and executive officers; also in the training and advancement in rating of the enlisted force. Owing to the reduction of the fleet and the necessity for economy, the dockyard at Pembroke and the large new yard at Rosyth were closed down, the force retained being sufficient only to take care of the buildings, docks, machinery, etc.

Work upon the great eastern naval base at Singapore was being carried on with as much speed as financial conditions permitted. Masonry dry docks had not yet been commenced and, as they were slow and expensive to build, a floating drydock of the largest size was to be constructed without delay. The contract for the dock was let on November 16, and it was to be completed in 18 months. When the dredging work was finished, and adequate shops built and equipped, the base was expected to be in operative condition, though eight or nine years were expected to elapse before the scheme was fully carried out. In order to help the Admiralty in financing its plans the Federated Malay States had agreed to contribute £2,000,000 and Hong Kong £250,000. The Admiralty was further developing the naval base at Malta for taking care of a fleet protecting the Suez Canal. A floating dock, capable of lifting vessels 1000

feet in length, was sent out in 1925. The new Indian navy was developing bases at Trincomali and the Andaman Islands but it was believed that these were chiefly intended to assist the cruiser strategy of the Royal navy.

Aviation in the British navy at the end of 1926 was most unsatisfactory to the navy in general. The control of the naval air force by the Air Ministry—though apparently waning—was still sufficient to prevent naval efficiency; and the partial control of aircraft carriers by the Air Ministry was declared to be intolerable as well as absurd. The total effect of existing conditions as to control had rendered British naval aviation, possibly, not much better than that of Japan and far inferior to that of the United States. It was, however, better than that of Italy and considerably more efficient than the French naval air force.

GREECE. A British naval commission was in Greece to assist in reorganizing and developing the navy and to assist in the administration afterwards. The cruiser *Ateroff* had been repaired, refitted, and modernized to some extent. Four destroyers had been similarly treated. The battleship *Salamis* had not yet been turned over to Greece owing to disputes with the builders. The old battleships *Kilkis* (ex-*Mississippi*) and the *Lemnos* (ex-*Idaho*) were undergoing repair in Greek dockyards as were a number of destroyers. Two, and possibly four, new destroyers had been ordered. Four submarines of 605/776 were ordered in France in 1925 and the contracts for 3 others of 730 tons each had also been placed.

INDIA. The Government of India announced on Feb. 11, 1926, its decision to reestablish the India naval service. With the approval of the King, the new organization had taken the name of the Royal Indian Navy and its vessels of war were to fly the white ensign. Its functions in time of peace were to be as follows: (a) Training of the personnel for service in war; (b) services for the Indian Government in the Indian Ocean and in the Persian Gulf; (c) organization of naval defense in ports under control of the Indian Government; (d) hydrographic service in waters adjacent to India; (e) water transportation for the government. Upon its organization, its fleet comprised 4 sloops, 2 patrol vessels, 4 trawlers, 2 surveying vessels, and a depot ship. The personnel of the previously existing minor services, which the new navy succeeded, were being adapted to the changed conditions as rapidly as practicable. Natives of India were enabled to rise to the rank of officer, the changes implied by this policy to be operative after consultation with the British Admiralty upon the details of administration, organization, and finance. Naval bases were to be established at Trincomali and in the Andaman Islands. The former, which had long been a subsidiary naval station, was to be further developed as a refitting and supply station for vessels of the British and Indian navies. Fifteen reservoirs, each holding 12,000 tons of petroleum, were already in existence and twenty-five others were to be built, the total capacity to be about 552,000 tons. Wharves are under construction and the land and aerial defenses were to be improved.

ITALY. The naval budget for 1926-27 amounted to 1,049,595,130 lire (1926 value of 1 lira = \$0.0447). This was an increase of 69,595,130

lire over the figures of the budget for 1925-26. The budget provided 31,053,000 lire for increased pay of the personnel, 33,500,000 for new naval construction, and 26,940,000 for coast defense and improvement of the military value of harbors. The personnel provided for in the budget was: Executive or line officers, 1031; naval engineers, 313; naval constructors, 117; surgeons, 184; pharmacists, 10; commissary officers, 217; chaplains in chief, 5; officers of the Corpo Reale Equipaggi, 350; petty officers, 6000; and men, about 37,000. The total items of the budget that were concerned with the vessels building and with those to be commenced in the financial year 1926-27 were 210,500,000 lire. The organization of the navy was reported to be very good and the general character of the service to be excellent. The chief of the naval general staff and the commander-in-chief of the Italian naval forces were selected by the council of the ministry from the list of admirals and vice-admirals and appointed by the King.

By a royal decree, the naval chief of staff was given wide powers. Subject to the general approval of the minister of marine, he controlled all matters pertaining to the construction of ships and other naval material, and the organization, equipment, and operations of the naval forces. The two light cruisers of 10,000 tons, the *Trento* and *Trieste* (see VESSELS, NAVAL, ETC., *Cruisers*) were under construction and three similar vessels were authorized but they had not been laid down. Of the 16 destroyers authorized since 1922, the four of the first series were completed in 1926. They are the *Quintino Sella*, *Francesco Crispi*, *Giovanni Nicotera*, and *Bettino Ricasoli*. The displacement was 1150 tons; length, 276.5 feet; beam, 28.2 feet; mean draught, 10 feet; armament, 3 4.7-inch guns, two 2-pdr. anti-aircraft guns, two sets of twin launching tubes for 21-inch torpedoes; horsepower of engines, 28,000; designed speed, 35 knots. On trial, the *Sella* developed 35,000 hp. and a speed of 38.2 knots; and another of the class had reached 38.8 knots.

The four destroyers of the second group were nearly complete and those of the third were well advanced. The boats of the second and third groups were larger than those of the first. Those of the second had a displacement of 1300 tons; length, 295.9 feet; beam, 30.18 feet; draught, 10.7 feet; horsepower, 34,000; speed, 35 knots; armament, four 4.7-inch guns on twin mounts, two sets of triple tubes for 21-inch torpedoes, and three anti-aircraft guns. The boats of the third group were of the same size, or of nearly the same size as those of the second, but were designed to be one knot faster. The boats of the fourth group had not yet all been laid down. Four submarines of 1360 tons and eight of about 800 tons were under construction. Their principal details were given in the YEAR BOOK for 1925, page 474. Another submarine, details not reported, was laid down in 1926. Several of the mining gunboats, mentioned in the YEAR BOOK for 1924, page 504, as laid down in 1924-25, had been launched. The *Durazzo*, of the smaller class, which was launched early in 1926, had a displacement of 610 tons; length, 196.8 feet; beam, 32.8 feet; draught, 5.9 feet; speed, 10 knots; carried 200 mines; and was armed with one 2.96-inch gun. The *Legnano*, of the larger class, was launched in May, 1926. She had a displacement of 700 tons; horsepower, 1500;

speed, 15 knots; carried 200 mines and was armed with two 3.9-inch guns.

The Italian aviation service was mainly under control of the army general staff, but the navy seems to have full control of the units turned over to it. The aviation budget, voted in May, 1926, provided for an expenditure of 700,000,000 lire. A law, passed in 1925, established the following standard for the Italian air forces: (a) an independent air fleet of 78 echelons; (b) an army air fleet of 57 echelons; (c) a naval air fleet of 35 echelons; (d) a colonial air fleet of 12 echelons; total, 182 echelons of 10 planes each. The plan was to be fully developed by the end of five years when the personnel was to consist of 2000 officers and 20,000 men. In the summer of 1926 the air fleet consisted of 90 echelons and 900 planes. Of the echelons assigned to the navy, six were to be attached to the fleet and 29 to coast defense. The great expansion of Italian aviation was due to the interest taken in it by Signor Mussolini, who believed that the great extent of the Italian coast line demanded an air force of the largest size compatible with the country's financial resources and the necessary expenditure for other purposes.

JAPAN. The recent naval programme and budgets had been heavily reduced before being approved by the parliament. The original programme of new construction for 1927-28, as presented, called for four 10,000-ton cruisers, eight destroyers and five submarine cruisers of about 2000 tons. This had been reduced to two 10,000-ton cruisers, four destroyers of about 1700 tons, and five submarines of about 2000 tons. The naval budget, as originally presented, called for the expenditure of 320,000,000 yen. This had been reduced to 255,000,000 yen; and the special budget for replacements in 1928-31 was cut from 297,000,000 yen to 244,000,000. The replacements planned for 1927-30 were as follows: 1927-28: 2 light cruisers of 10,000 tons, 4 destroyers, 1 submarine, 1 gunboat; 1928-29: 2 light cruisers of 10,000 tons, 4 destroyers, 4 submarines, 1 gunboat; 1929-30: 8 destroyers, 1 gunboat, 1 tanker, 1 repair ship, 1 aircraft carrier, 2 mine layers.

As the four cruisers to be replaced were of less than 5000 tons, the parliament reduced the new replacing cruisers to two. The vessels building at the end of 1926 are listed in the accompanying table. Those noted as "authorized" were submitted in the budget and approved by parliament but, at the end of 1926, had not yet been laid down. The aircraft carrier *Akagi* was commenced as a battle cruiser and transformed into a carrier. The *Kaga* was commenced as a battleship and similarly transformed. It was said that each was designed to carry 50 planes. The anticipated speed of the *Akagi* was reported to be 28 knots; that of the *Kaga* somewhat less. Both were nearly ready for service. The aircraft carrier *Naruto* was formerly a tanker and was being transformed into a carrier; the progress of the work had not been reported. The light cruisers *Aoba* and *Kinugasa* were similar to the *Furutaka* and *Kako*, which were completed in 1926, but carried their 8-inch guns in pairs in three turrets, two forward and one aft—all on the midship line; while the *Furutaka* and *Kako* had their guns mounted singly in gunhouses on the midship line, three forward, three aft—the central gun of each group being raised

high enough to fire over the other two. The lists of submarines and destroyers are only approximate. Some may have been completed and some not yet laid down. The exact significance of the letters prefixed to the numbers of submarines has not been explained in the public press.

Some of the data in regard to destroyers and submarines was derived from the Japanese newspapers and is probably inexact. The submarines of 1400 tons (surface displacement) were reported to have a submerged displacement of about 2000 tons; those of 998 tons (surface) to have a displacement of about 1500 tons when submerged; and the one of 1500 tons (surface) to have a submerged tonnage of 2200. If these figures are correct, the boats should be high out of water when on the surface and should be slow to submerge; yet one of the 998-ton boats in service was reported to have submerged in 52 seconds and others of the same class in 55. The designed speed of the 998-ton boats was 17.5 knots on the surface and 10 knots; the speeds of the 1400-ton class were 20 and 12 knots; and those of the 1500-ton class were 25 and 12. Some of the 20 boats whose details were not given have displacements of about 700 tons. The 1400-ton boats carried one 4.7-inch gun and two smaller pieces; the 1500-ton boats carry two 4.7-inch and one 3-inch. The eight gunboats are designed for use on Chinese rivers and were to replace old and less efficient boats; they were to have displacements of 150 to 300 tons.

#### WARSHIPS BUILDING FOR JAPAN

Name	Tons	Condition
<b>Aircraft carriers:</b>		
Akagi .....	26,900	Launched 1925
Kaga .....	26,900	Launched 1921

<b>Gunboats:</b>		
8 authorized .....	?	not commenced

The aviation service of the Japanese army was said by the Japanese press to be defective and inefficient. They considered that the naval aviation service was much better, though lacking in organization and in an understanding of the strategical and tactical rôle to be played by naval aircraft. Too much time had been spent on long flights—too little time in learning their duties with the fleet. After a careful study of naval aviation in Europe and the United States, the authorities had apparently decided to develop their air service along the same lines that the United States Navy had adopted, rejecting definitely all consolidation plans or the organization of any fighting air force not controlled either by the army or the navy.

**LATVIA.** At the end of 1926, two small submarines and two mine sweepers were approaching completion. The submarines, *Spidola* and *Ronis*, were similar in all respects. The former was launched on October 6 and the latter on July 1. The surface displacement was about 400 tons; length, 170.4 feet; beam, 15.1 feet; surface speed, 14 knots; submerged speed, nine knots; surface radius of action 1600 miles; submerged radius, 85 miles; armament, six torpedo tubes (four admit of some train) of 17.7 inches, one 3-inch anti-aircraft gun and two machine guns; complement, three officers and 28 men. The mine sweepers, *Imanta* and *Viesturas*, have a displacement of 255 tons; length, 152.8 feet; speed, 14 knots; armament, 1 anti-aircraft gun of 3.15 inches, and 4 machine guns; complement, 3 officers and 35 men.

**NETHERLANDS.** The estimates of the naval budget for 1927 provided for an expenditure of 40,982,965 florins (1 florin = \$0.40). The building programme called for the laying down of two destroyers for service in the East Indies and the submarine *O-12* for home defense. The light cruiser *Sumatra* was completed in 1926, visiting New York in October. It had a displacement of 7150 tons and a speed of 31.8 knots on trial. The length over all was 509.4 feet; beam, 52.5 feet; mean draught, 18 feet. The battery consisted of ten 50-cal. 6-inch guns, four 3-inch anti-aircraft, and four machine guns. An armor belt of 3 inches thickness protected the water line and the conning tower was 5 inches thick. The submarine *K-XII* was completed early in 1926, also the submarines *O-9*, *O-10*, and *O-11*. The surface and submerged displacements were 670 and 720 tons and the corresponding speeds 18 and 9 knots. The armament was 6 torpedo tubes and 1 3-inch gun. The budget estimates allot 12,136,620 florins for new construction including the three vessels to be commenced in 1927. Of this, the colonies are charged with 5,807,810 florins. There were building four large destroyers of 1620 tons and two patrol vessels (YEAR BOOK, 1925, p. 475) of 1676 tons. In July, 1926, the Netherlands parliament voted supplementary credits for the transfer of the naval school from Gorinchem to Flushing.

**NEW ZEALAND.** The naval budget for 1925-26 was £538,325 (\$2,511,286.12).

**NORWAY.** It was reported that the Norwegian navy would expend 20,000,000 crowns (present value of 1 crown = \$0.2515) in strengthening its naval forces. The armed coast-defense ships, *Tordenskjold* (3920 tons), *Harald Haarfagre* (3920 tons), *Fidsvold* (4233 tons), and *Norge* (4233 tons), all completed between 1898 and 1901, were to be rebuilt and modernized as far as practicable, receiving new machinery and batteries of twelve high-powered 6-inch guns. New construction was to be undertaken which would comprise flotilla leaders, destroyers, submarines, and aircraft.

**PERU.** The Peruvian government had placed an order with the Submarine Boat Corporation in the United States for two submarines. The surface displacement of each was to be 570 tons and the submerged displacement 670 tons; the corresponding speeds were 14.5 and 10.5 knots. The length was to be 200 feet. The propelling machinery for surface cruising was to consist of two Diesel engines of 440 horsepower and the estimated cruising radius was 8000 miles. The armament was to consist of four torpedo tubes

and one 3-inch anti-aircraft gun; and the complement of 4 officers and 24 men. The boats were expected to be finished in 1928.

POLAND. The *Burza* (Tempest) and the *Wicher* (Breeze), two large destroyers for the Polish navy, were under construction in France. Their principal characteristics were: displacement, 1540 tons; length on the water line, 338.5 feet; beam, 33.5; mean draught, 10.2 feet. The sea-going fleet was formed in two divisions: the first, called the torpedo division, consisting of three torpedo boats of the *Slazas* class (350 tons) and the *Hazur* of 420 tons; the second, called the practice division, was composed of the gunboats *Commandant Pileudski* and the *General Haller*—each of 340 tons.

RUSSIA. Except where German advice, assistance, and partial control had been given, the Russian navy was still very inefficient and the fleet—if this name could be applied to a collection of ill-kept vessels without organization—was wholly negligible as a weapon of war. Some of the officers of the old navy had taken service in the Soviet vessels and helped to prevent total ineffectiveness. The glaring fault which lay at the root of these conditions was a lack of proper discipline without which no military force can be of use. Nor can this fault be remedied so long as the bolshevik principles are carried out. There were no grades of officers from seamen to commander, the sole distinction being concerned with the charge with which individuals were invested. Apparently, duties of importance may be assigned to any good bolshevik without regard to his knowledge or capacity. The recruiting was carried out in two ways—conscription and volunteering. About 25 per cent of the conscripts reenlisted for a later period of voluntary service.

The prime requisite for the acceptance of a volunteer was a firm faith in communistic principles; the second requirement was the ability to read and write. The enrollment took place in the autumn. During the winter and spring the recruit was given a course of preliminary instruction on board ship and ashore. In the summer, service in the active ships was commenced. In the following autumn, those men who desired to take the course for becoming officers were given an examination. In this way about 300 young men were admitted to the preparatory schools in the summer vacations during three years. These schools were open to all branches. After finishing the preparatory school work, those that were competent to continue study entered the naval school and the school of marine engineering, frequently taking higher courses, and finally entered the naval academy which was divided into the following branches: general staff, artillery, machinery, naval construction, electricity, and hydrography.

The periods spent in the various schools and courses of study were not then definitely fixed because the new bolshevik admiralty had, so far, been unable to make the young men pass rapidly through all the school courses. However, some officers of the old imperial navy, readmitted to the service, had been able to follow the higher courses of the academy. As already stated, the bolshevik navy admits no grades—only the capacity to command. Those young men that were retained because of having this capacity wore a uniform with a narrow stripe on the left arm surmounted by a red star. Command was only

exercised on board ship or in naval territory on shore. Elsewhere the enlisted men were not required to obey or salute. On small vessels the officers ate at the same table with the men; on the larger ships the food was the same for all, but the captain and certain other officers ate by themselves. A characteristic of all ships was "the corner of Lenin," a place of recreation adorned with portraits of Lenin and Trotsky where officers and men amuse themselves together.

Various building programmes were published from time to time, but few appear to have been carried out even in part. One announced by the Soviet authorities proposed the construction of 10 small submarines of 130 tons and a radius of 200 to 300 miles, 15 motor driven submarine chasers, and several flotilla leaders of about 2200 tons. Much attention was paid in Russia to aviation. Sixty planes were said to have been attached to the Baltic Fleet and 100 to the Black Sea. The condition and usefulness of these planes was unknown. There should have been no difficulty in obtaining men suitable for pilots; but few high-grade mechanics, competent to care for airplane machinery and keep it in repair, were likely to be found in Russia, unless French and German mechanics were employed.

SOUTH AFRICA. The naval budget for South Africa was the least of any of the British self-governing colonies. The amount allotted for naval affairs in 1926 was £139,893 (\$680,789.28).

SPAIN. A royal decree of July 4, 1926, concerning a special budget of 3,454,000,000 pesetas (1926 value of 1 peseta = \$0.1525), had accorded to the navy a total of 877,000,000 pesetas. The expenditure of this fund was to be spread over ten years. The sum of 175,000,000 pesetas was to be applied as follows: to improve the naval bases of Mahon, Cartagena, and Vigo; to establish an aviation school at Barcelona; to the construction of powder magazines at Cartagena, Cadiz, and Ferrol; to build shops for the manufacture of torpedoes, submarine mines, nets, cables, etc. The remainder of the fund, 702,000,000 pesetas, was for new construction: (a) the completion of the three light cruisers *Almirante Cervera*, *Miguel de Cervantes*, and *Principe Alfonso* (each of 7975 tons); of six flotilla leaders of the *Churruca* type (1650 tons); of six submarines of type C; and of the school ship *Juan Sebastian Elcano* (3600 tons—fitted with sails and auxiliary Diesel-engine power); (b) to the building of three light cruisers of 10,000 tons (95,000,000 pesetas each, including equipment); three flotilla leaders of the *Churruca* type of 1650 tons (17,000,000 pesetas each); twelve submarines of type C (12,000,000 pesetas each); (c) two tankers of 7000 tons; three patrol boats of 250 tons; and several mine-layers and minesweepers.

The only naval vessels completed during 1926 were the flotilla leader *Churruca* of 1650 tons and the destroyers *Alcedo*, *Lazaga*, and *Velasco* of 1145 tons. The *Churruca* developed a mean speed on trial of 37.6 knots and a maximum of 39.8. The destroyers attained speeds of 36.4 to 38.2 knots. The light cruiser *Almirante Cervera* was launched in October, 1925, and a new ship of the same class, the *Miguel de Cervantes*, was laid down in the summer of 1926. The Spanish naval aviation school is on the grounds of the naval academy at Barcelona and has for experimental use a small airplane carrier which saw service

during the Riff war. The Spanish aviation programme was contemplating an enlargement of this school so as to provide aviators for both the army and the navy. This was opposed by the navy on the ground that the requirements of the two services were so different that the schools had best be separated.

**SWEDEN.** It was proposed in Sweden to bring forward with some changes the plans of 1914 for the defense of the country. The ministry of defense was to be composed of the division of the army and the division of the navy. The proposed changes were too extensive for detailed consideration here: they involved an increase in both army and navy budgets of about 20 per cent. The vessels building for the Swedish navy consisted of two destroyers of 974 tons and 35 knots and one submarine of 1000 tons (surface displacement).

**TURKEY.** The Navy was being developed in a modest but most definite manner. While the navy yard at Constantinople was for the time being preserved, a new naval port and dockyard was being developed at Ismid on the Black Sea beyond the limits of the Zones of the Straits that were defined by the International Commission. A new floating dock of 26,000 tons capacity was under construction at Lilbeck for the new port. The Flenders Company, which was building a gunboat as well as the floating dock, had a contract for shops and tools for the new dockyard. The Turkish government had also ordered two submarines from Rotterdam builders.

**UNITED STATES.** The appropriations for the navy for 1926-27 were \$322,061,975. The budget estimates for 1927-28, as presented to Congress in December, 1926, were \$313,815,500. No additional cruisers were authorized in the new budget; and no appropriation recommended for the remaining three cruisers authorized in a previous session of Congress, nor for airships; and provision was made for only a small part of the first year's share of the five-year authorization for aviation. The naval bill was under discussion in Congress at the end of the year, and some changes from the budget allotments were probable. At the end of 1926 there were under construction: 2 aircraft carriers of 33,000 tons (*Saratoga* and *Lexington*) which were expected to be ready for service before July 1, 1927; 2 light cruisers of 10,000 tons (*Pensacola* and *Salt Lake City*) which were to be completed in the summer of 1929; 3 fleet submarines (*V-4*, *V-5*, and *V-6*), the first of which was expected to be completed in about a year, the other 2 in about two years; 6 river gunboats of 380 to 580 tons, building at Shanghai, China, all to be completed in 1927. The older battleships were undergoing a general refit and a certain amount of modernizing. The *Utah*, *Florida*, *Arkansas*, *Wyoming*, *Texas* and *New York* were in hand. These vessels were to be fitted with bulge and other protection against torpedoes; the upper decks were to be increased in thickness as a defense against aerial bombs; new boilers designed to burn oil only were to replace the old ones (which burn either coal or oil and are less efficient for oil burning only); the necessary changes in boiler rooms, bunkers, and oil tanks were to be made; the cage masts were to be replaced by new types of tripod masts; and the smokepipes reduced in number and changed in shape.

No increase in the personnel of the navy was

provided for in the budget for 1927, the numbers remaining substantially the same as given in the YEAR BOOK for 1925, page 476. The bill authorizing the reorganization of the naval reserve was approved to take effect on July 1, 1925, and the reorganization was in part completed. Units of the Reserve Officers Training Corps were established in six universities and it was intended to establish other units in suitable localities so that there should be, roughly, one for each naval district. Instruction was to be given in ordnance, seamanship, and navigation—three hours a week for the first two years, five hours for the last two. Additional summer practice work was to be given. Students graduating from the Corps were to receive commissions as ensigns in the Naval Reserve. Aviation in the United States navy was maintaining its lead over that in other naval services and increasing it in some directions. The completion of new aircraft carriers was expected to improve aviation in the fleet and to develop it in a manner not previously practicable.

Instruction in aviation as a part of the Naval Academy course, was being given; and the aviation reserve was organized in 10 squadrons distributed among the naval districts—4 of the 10 units providing preliminary flight training for about 90 aviators a year. Reports stated that all battleships and large cruisers were equipped with catapults. All battleships carried 1 scouting and 2 combat planes and the large cruisers 2 scouting planes. There were no small fast cruisers in the navy, but about 18 destroyers carried 1 combat plane and 9 of the larger submarines were being equipped with 1 small scouting plane. In no other navy were catapults and airplanes carried by any type of fighting ship, though the Japanese and French were planning to so equip their battleships and cruisers. See VESSELS, NAVAL, ETC.

**NAVARRO, ALFONSO DE.** Vice-President of the Atlas Portland Cement Company, died at Brechin, Scotland, on August 15. He was born in New York in 1860, his father, José de Navarro, being at one time Consul General for Spain in the United States. Mr. de Navarro had been abroad a month when his totally unexpected death occurred. He was also a Director of the New York and New England Cement and Lime Company, the Hannibal Connecting Railroad, and the Northampton and Bath Railroad, while he held similar office in connection with the Equitable Life Assurance Society.

**NAVIES.** See NAVAL PROGRESS; VESSELS, NAVAL, ETC.

**NAVILLE, EDOUARD.** Swiss Egyptologist, died at Geneva, October 17. He was born in Geneva in 1844, and was educated at the university there, at King's College, London, and at Bonn, Paris, and Berlin. He was a member of many learned and religious societies, was at one time President of the Evangelical Alliance, and for several years Professor Naville was President of the International Red Cross. He spent some forty years in excavation in Egypt and professed a great admiration for England and English scholarship. By reason of his many activities and sympathies he was able to use the results obtained by British Egyptologists in the furtherance of his own researches into Biblical Archaeology. He was much to the fore in 1923, when he declared that the tomb discovered by Howard Carter and Lord Carnarvon was not the

one which Tut-ankh-amen had prepared for himself and in which he was first laid. He maintained that the tomb intended by Tut-ankh-amen for his own use had been usurped by the second of his successors, Horemheb, an event for which, he asserted, there was ample precedent. Books to the number of a score came from Professor Naville's prolific pen.

**NEBRASKA. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920 was 1,296,372. The estimated population on July 1, 1926, was 1,385,000. The capital is Lincoln.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1926	8,994,000	139,407,000	\$94,797,000
	1925	9,100,000	236,600,000	144,326,000
Hay, tame	1926	1,761,000	3,288,000 *	45,962,000
	1925	1,672,000	3,635,000 *	43,984,000
Wheat, winter	1926	2,881,000	37,165,000	43,483,000
	1925	2,493,000	31,661,000	44,642,000
Wheat, spring	1926	196,000	2,920,000	3,270,000
	1925	183,000	2,489,000	3,285,000
Oats	1926	2,537,000	52,516,000	21,006,000
	1925	2,699,000	73,953,000	26,623,000
Potatoes	1926	73,000	5,329,000	8,526,000
	1925	84,000	6,300,000	11,340,000
Barley	1926	227,000	4,699,000	2,725,000
	1925	233,000	5,662,000	3,057,000
Rye	1926	253,000	2,606,000	1,981,000
	1925	205,000	2,522,000	1,791,000
Sugar beets	1926	79,000	920,000 *	
	1925	60,000	933,000 *	5,574,000

\* tons.

**MINERAL PRODUCTION.** Mineral industries hold a minor place in the productive activities of the State. Production of sand and gravel, the most important of them, attained a total of 2,008,400 short tons in 1924 and of 1,930,104 short tons in 1923; in value, \$1,099,499 in 1924 and in 1923 \$921,433. Clay products had a value of \$796,725 in 1924 and \$939,138 in 1923. Pumice and potash were also produced. The total value of the State's mineral products, duplications eliminated, was in 1924 \$3,209,425; in 1923 \$3,302,397.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$8,423,505. Their per capita rate was \$6.24, as against \$6.06 in 1924 and \$3.86 in 1917. The total included \$1,310,052 for education, apportioned among minor State divisions. Expenses totaling \$1415 for interest on State debt and \$5,055,035 for permanent improvements, added to the payments for maintenance and operation of departments, made the total of State payments \$13,479,955. For highways was expended the sum of \$3,816,267, of which \$145,362 was for maintenance and \$3,670,905 for construction.

Revenue receipts of the State were \$12,485,360, or \$9.25 per capita. They exceeded by \$4,060,440 the total payments except those for permanent improvements, and were \$994,595 less than the total with these included. Property and special taxes formed 47.8 per cent of the revenue in 1925, as against 54.4 per cent in 1924 and 60 per cent in 1917. Their per capita rate was \$4.42 in 1925, \$4.94 in 1924 and \$2.55 in 1917. Earnings of the general departments and com-

pensation for officials' services furnished 13.6 per cent of the 1925 revenue; business and non-business licenses, 10 per cent. License receipts were derived chiefly from taxes on incorporated companies and on the sale of gasoline and from the licensing of automobiles.

The State had in 1925 no indebtedness save that represented by its outstanding warrants. The assessed valuation of property subject to State tax was \$3,189,188,337. The State tax levy was \$5,806,398, or \$4.30 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 6189. There was constructed in 1926 12 miles of new first track.

**CHARITIES AND CORRECTIONS.** The Department of Public Welfare includes the Bureau of Health with the following divisions: venereal disease, vital statistics, child hygiene, and laboratories; the Bureau of Child Welfare; and the Bureau of Examining Boards. The State institutions are under the State Board of Control. Chief among the charitable and correctional institutions of the State are the following: State Penitentiary at Lincoln, with 652 inmates in September, 1926; State Industrial School, Kearney, population 209; Girls' Training School, Geneva, 226; state reformatories at York (for women) and at Lincoln (for men), with a combined population of 299; hospitals for the insane (three); Hospital for the Tuberculous, Kearney, 89; Home for Dependent Children, Lincoln, 122; Soldiers' and Sailors' Home, Milford, 132; and at Burkett, 264; schools for the deaf, Omaha, 190, and blind, Nebraska City, 46; Nebraska Institution for the Feeble Minded, Beatrice, 845.

**EDUCATION.** Charles W. Taylor was elected State superintendent. The operation of the law of 1925 revising the certification of teachers was represented as promoting an advance in professional standards of the teachers in the State. The University of Nebraska liberalized its entrance requirements and undertook to give special guidance to the lower quartile of the incoming freshman class. The school population of the State was placed in 1926 at 415,053 children between the ages of 5 and 21. The total public school enrollment was 327,472, of which number 324,733 were enrolled in common schools and 2739 in accredited high schools. Expenditure for public education during the year was 22,451,050. Salaries of teachers in rural schools averaged \$798. In city and village schools salaries averaged \$1978 for men, and for women \$1326 a year.

**POLITICAL AND OTHER EVENTS.** At the general election on November 2, Governor Adam McMullen, Republican candidate to succeed himself, was elected Governor for the two year term beginning Jan. 1, 1927. He won by a narrow lead of 3432 over the Democratic candidate, former Governor C. W. Bryan.

Difficulties between farmers and the irrigation administration became acute early in the year on the North Platte irrigation area. Farmers in the spring charged the government with failing to supply necessary water for the growth of crops, and officials demanded the payment of arrears on water dues. A gathering of farmers at Scott's Bluff, May 28, burned in effigy the Secretary of the Interior and the Director of Reclamation, after refusing payment of arrears. The Department of the Interior proposed as a possible solution a plan by which the local

water users' association would take over the reclamation project.

**OFFICERS.** Governor, Adam McMullen; Lieutenant-Governor, George A. Williams; Secretary of State, Charles W. Pool; Treasurer, Charles D. Robinson; Auditor, George W. Marsh; Attorney-General, O. S. Spillman; Superintendent of Public Instruction, John M. Matzen.

**JUDICIARY.** Supreme Court; Chief Justice, Andrew M. Morrissy; Associate Justices: William B. Rose, James R. Dean, W. H. Thompson, George E. Eberle, Edward E. Good, George A. Day.

**NEBRASKA, UNIVERSITY OF.** A State institution of higher education at Lincoln, Neb.; founded in 1869. The enrollment for the fall term of 1926 was 6115, of whom 3447 were men and 2668 women. They were distributed as follows: agriculture, 448; arts and sciences, 1947; business administration, 718; dentistry, 99; engineering, 611; graduate, 248; law, 161; medicine, 281; nursing, 85; pharmacy, 130; teachers' college, 1442. Included in arts and sciences and in teachers' college are 448 students of the school of fine arts and 133 of the school of journalism. There were 3355 students registered in the summer session, of whom 967 were men and 2388 women. The faculty numbered 336 in the autumn of 1926. The total income for the year was \$3,783,550. The library contained 200,000 volumes. Chancellor Samuel Avery, Ph.D., LL.D.

**NEBULÆ.** See ASTRONOMY.

**NECROLOGY.** The following list contains the names of notable persons who died in 1926. Articles will be found in this volume, in their alphabetical order, on those whose names are given below without other text.

Abbott, Edwin.  
Adami, John George.  
Aitchison, John Young.  
Akeley, Carl Ethan.  
Albers, Henri.  
Allen, Charles Watson. American publisher, died at Boston, Mass., Nov. 29. He was born in Roxbury, Mass., Jan. 6, 1849, and became connected with Ticknor & Fields, publishers, in 1866. In 1869 he entered the employ of Little, Brown & Co., publishers, later becoming a partner, and president of the company when it was incorporated in 1913.  
Allen, The Rt. Rev. Edward Patrick. Roman Catholic Bishop of Mobile, died at Mobile, Ala., Oct. 21. He was born at Lowell, Mass., Mar. 17, 1853, and after studying at Mount St. Mary's College, Baltimore, Md., where he received the degree of A.M. in 1878, and after theological studies, was ordained as priest Dec. 17, 1881. He was professor of English and Greek at Mount St. Mary's College, 1881-82. In 1883-84 he was pastor at Framingham, Mass., and in 1884 president of Mount St. Mary's College, serving until 1897, when, on May 16, he was consecrated fifth bishop of Mobile.  
Allen, Fred Hovey. American clergyman, author and art critic, died in New York City, Dec. 24. He was born at Lyme, N. H., Oct. 1, 1845, and after graduating from Harvard Theological Seminary in 1875 studied at Boston University, and in Berlin, Vienna, and Paris. He founded the *Lawrence (Mass.) Eagle* in 1867, serving as its editor until 1869, when he became proprietor and editor of the *Suffolk County Journal*, Boston. He was ordained to the Congregational ministry in 1874, and was acting pastor at North Brookfield, Mass. for a year; this tenure was followed by service in various churches in and about Boston until 1902. He was the author of many books dealing with art, history and travel.  
Allison, Sir Robert Andrew. British scholar, died in Carlisle, Jan. 15. He was born at Stanwix, Carlisle, Mar. 5, 1838, and was educated at Rugby and at Trinity College, Cambridge. As a Liberal, he represented the North Division of Cumberland in Parliament, 1885-1900. He was a strong supporter of the temperance movement, being vice-president of the United Kingdom Alliance. He was also a director of the Midland Railway. His literary works include: *Essays*

and *Addresses*, 1913; *Five Plays of Plautus*, 1914; *Belgium in History*, 1914; *Cicero's De Senectute* (translated into blank verse) 1916; *Lucretius' De Rerum Natura*, 1919, and other translations.

Amendola, Giovanni.

Atkins, Edwin F. American sugar importer and manufacturer, died at Belmont, Mass., May 20. He was born in Boston in 1850. Entering his father's sugar business, he became a partner of E. Atkins & Co. in 1874, and was president of the Bay State Sugar Refinery, 1878-88. He was also connected with the American Sugar Refining Co. serving as chairman of the board of directors until July 13, 1915, when he resigned, to continue as a director until 1920. Mr. Atkins was a vice-president of the Union Pacific Ry. System, 1889-95, president of the Aetna Mills, a director of the Westinghouse Electric & Manufacturing Co., the Westinghouse Electric International Co., and other commercial organizations.

Ayres, Frederic (real name Johnson). An American composer, died at Colorado Springs, Colo., Nov. 23. Born in Binghamton, N. Y., in 1876, he studied under E. S. Kelley and Arthur Foote. In 1902 he settled in Colorado Springs as a teacher of composition, lecturer, and writer. His compositions include an overture, *From the Plains*, a string quartet, two piano trios, a violin sonata, and piano pieces.

Bacardi, Facundo. A Cuban distiller, died at Havana, Nov. 22. He was born in 1842 of a Spanish father and French mother, and in 1862, with his brother, Emilio, established a still at Santiago de Cuba. This enterprise was a small one, as the brothers did not possess much capital, but they gradually acquired a reputation for their product, which was known throughout the world. Their business survived the various revolutions in Cuba, and with more settled conditions became one of great profit, Bacardi rum becoming known the entire world over.

Baddeley, Sir John James. Former Lord Mayor of London and London antiquarian, died at Lakefield, Stoke Newington, England, June 28. He was born at Hackney, Dec. 22, 1842. He was chairman of the Cripplegate Foundation, and was knighted in 1909. He was Lord Mayor of London in 1921-22, and was created a baronet in 1922. He was a Commander of the Swedish Order of Wasa, the Russian Order of St. Anna, and the order of the Crown of Belgium. He wrote several works connected with London history, including *A History of St. Giles's Church, Cripplegate*; *A History of the Guildhall*; *The Aldermen of the City of London from 1275; Cripplegate Ward*.

Bailey, Eli Stillman. American surgeon and former dean of Hahnemann Medical College, Chicago, died in that city Apr. 26. He was born at Little Genesee, N. Y., Sept. 2, 1851, and graduated from Milton College, Wisconsin, in 1873, and from Hahnemann Medical College, Chicago. He practiced in Chicago from the time of his graduation, and was among the first to use the microscope, the clinical thermometer, and radium.

Baker, Darius. American jurist and former judge of the Rhode Island Supreme Court, died at Newport, R. I., Mar. 19. He was born at Yarmouth, Mass., Jan. 18, 1845, and graduated from Wesleyan University in 1870, previously having served in the Civil War in the Fifth Regiment of Massachusetts Volunteers. He was admitted to the Connecticut bar in 1874 and removing to Rhode Island, was judge of probate, 1877-98, at Newport. He was also municipal justice, 1879-86, and justice of the First District Court, 1886-1905; in the latter year he became justice of the Superior Court and served until 1913, when he became justice of the Supreme Court, a position he held until his resignation Mar. 13, 1919. He served as a trustee of Wesleyan University, 1887-1912.

Bamberger, Simon. Railway president and former governor of Utah, died at Salt Lake City, Utah, Oct. 6. He was born at Darmstadt, Germany, Feb. 27, 1847, and went to the United States in 1861. In 1869 he moved to Utah. In 1908 he became a member of the Utah Senate, serving until 1907. He was Governor of Utah for the term 1917-21, being the first Democratic Governor of that state as well as the first non-Mormon Governor.

Bancroft, Sir Squire.

Barrett, Field Marshal Sir Arthur (Arnold). British soldier, died in Bedfordshire, England, Oct. 20. He was born June 3, 1857. Entering the army in 1875, he was commissioned captain in 1886, and rose through successive grades to the rank of General in 1917. He served in the Afghanistan war, 1879-80, and in 1891. He participated in other frontier campaigns, and was brigade commander at Nowahera, 1907-09, and adjutant-general in India, 1909-1912. He was divisional commander at Poona, 1912-14. In the World War he commanded in the early operations in Mesopotamia. He had the northern command in India, 1916-20. He received many honors, in addition to his

FOUR PROMINENT MEN WHO DIED IN 1926

military decorations, culminating in his appointment as Knight Grand Commander of the Order of the Star of India, in 1920.

Barth, Charles H. American soldier, died at Leavenworth, Kan., Dec. 5. He was born in Iowa, Dec. 28, 1858, and, graduating from the U. S. Military Academy in 1881, was commissioned second lieutenant in the 12th Infantry. He served through the various grades to that of brigadier-general, Dec. 2, 1922. He fought in the Apache Indian campaign in 1881, and, after graduating with honors from the Infantry and Cavalry School at Ft. Leavenworth, Kan. in 1891, became an assistant instructor, serving in that capacity until 1898. He served in the Philippine insurrection, 1899-1902. On the outbreak of the World War, he was commander of the 156th Depot Brigade and 81st Division at Camp Jackson, S. C., and later commanded the 12th Infantry Brigade and the 7th Division in Texas and in France. He was recommended twice for the D.S.M. and was decorated with the Legion of Honor and the Croix de Guerre by the French Government. On Aug. 29, 1921, he was made colonel of the 57th Infantry. Later he commanded the 23rd Infantry Brigade; he was retired Dec. 28, 1922. In 1925 General Barth was appointed governor of the National Military Home in Kansas.

Bassett, Harry H. American manufacturer, died at Neuilly, Paris, France, Oct. 17. He was born in Utica, N. Y., Sept. 11, 1875, and after graduating from the Ilion, N. Y. High School went to work with the Remington Arms Co. in that city. He rose to be assistant to the general manager of the plant, and later became assistant superintendent of the plant of the Weston-Mott Co., of Utica. He was appointed manager of the new plant built for that company in Flint, Mich., in 1907, and became general manager of the company in 1913 and vice-president in 1917. When the Weston-Mott Co. was consolidated with the Buick Motor Co., in Dec. 1913, he became assistant general manager of the latter, and in Apr. 1919, general manager. A month later he was elected vice-president and director of the General Motors Corporation, and in Jan. 1920, he became president of the Buick Motor Co., a position he held at the time of his death.

Bates, David Homer. Telegraph operator for the United States War Department during the Civil War, died at New York, June 15. He was born at Steubenville, Ohio, July 2, 1843. During the Civil War he was manager of the War Department telegraph office and came in contact frequently with President Lincoln, who would visit the cipher room to receive the latest news from the field. After the war he entered the service of the Western Union Telegraph Co. He published, in 1911, *Lincoln in the Telegraph Office*. At the time of his death he had prepared another small book entitled *Lincoln's Stories in the Telegraph Office*.

Bateson, William.

Bauermeister, Mathilde.

Bausch, John Jacob. An American manufacturer of optical goods, died at Rochester, N. Y., Feb. 14. He was born at Susslen, Wurtemberg, Germany, July 25, 1830, going to the United States in 1849. In 1853 he started in the optical business at Rochester, N. Y., becoming president of the Bausch & Lomb Optical Co. He was at one time president of the Mechanics Savings Bank of Rochester, and was identified with many important civic movements.

Bax, Ernest Belfort.

Bazan y Bustos, Monsignor Juan Abel. Roman Catholic Bishop of Parana, Entre Rios, died at Buenos Aires, Argentina, Apr. 25. He was born in 1867, and in 1911 was made bishop.

Beach, David Nelson. American theologian and educator, died at Southington, Conn., Oct. 18. He was born at South Orange, N. J., Nov. 30, 1848, and graduated from Yale College in 1872 and from the Yale Divinity School in 1876, being ordained a Congregational minister in the same year and becoming pastor at Westerly, R. I. Subsequently he served in various pastorates until 1903, when he was made president and professor of homiletics at Bangor Theological Seminary. He retired from this chair in 1921 and devoted himself to independent preaching and writing. He was a worker for temperance and church unity. His writings include *Plain Words on Our Lord's Work*, 1886; *The Newer Religious Thinking*, 1893; *The Intent of Jesus*, 1896; *Statement of Belief*, 1897; *A Handbook of Homiletics*, 1917.

Bean, Theodora. American journalist, died at New York, Aug. 5. She was born in Anoka, Minn., and was educated at Carlton College, Northfield, Minn., leaving before graduation to work on the *Chicago Daily News*. She later went to Europe, obtaining important interviews. She was a member of the staff of the *Morning Telegraph*, New York, and did feature work for the *Evening Telegram*. She became Sunday editor of the *Morning Telegraph*, resigning in 1924 to found the T-Bean Syndicate. At the time of her death Miss

Bean was president of the New York Newspaper Women's Club, of which she was a charter member. Beatty, Frank Edmund.

Beers, Henry Augustin.

Behrman, Martin. Former mayor of New Orleans, La., died at New Orleans, La., Jan. 12. He was born in New York, Oct. 14, 1864, and received a public school education in New Orleans, where he was taken at an early age. He became interested in municipal activities, serving as a member of the school board, assessor, and clerk of the city council of New Orleans; he was elected Mayor of that city in 1904, and served four terms, until 1920. He was also president of the Louisiana State Board of Assessors, a member of the Louisiana Constitutional Convention in 1898 and 1921, and state auditor, 1904-05. He was a director of the American Bank & Trust Co., and in 1917-18 served as president of the League of American Municipalities.

Bell, Edward

Bell, George, Jr.

Bell, Gertrude Margaret Lowthian.

Berea, Don Alejandro. Spanish Consul General in New York, died in New Rochelle, N. Y., July 29. He was born in Coruña, Spain, in 1866, and spent his life in the Spanish consular service, serving as vice-consul at Liverpool and London, and consul at Hamburg, Mazagan (Morocco), Gibraltar, and New Orleans; he was appointed consul-general in New York in 1919.

Bermudez, Jorge.

Bertram, Sir Alexander. Canadian soldier, died at Montreal, P. Q., Apr. 24. He was born at Dundas, Ontario, Feb. 18, 1853. Serving in the Dominion militia in 1905, he was appointed to command the Third Infantry Brigade, the West Ontario Command, and in 1909 commanded the Bisley rifle team. He was made a colonel in the following year, and served as deputy chairman of the Canadian Imperial Munitions Board. He was knighted in 1916.

Bertrand, Francisco.

Bettus, Cyrus K.

Bierck, Albert Boykin.

Bigland, Percy.

Bird, George Emerson. American jurist and justice of the Supreme Court of Maine, died at Yarmouth, Me., Jan. 19. He was born at Portland, Me., Sept. 1, 1847, and graduated from Harvard College in 1869, receiving the degree of A.M. in 1872. In that year he was admitted to the bar, and practiced at Portland, Me., serving as United States District Attorney of Maine, 1885-90. He was a member of the Maine House of Representatives, 1893-95, and in 1908 was made associate justice of the Supreme Judicial Court of Maine, serving until 1915, and for a second term, 1915-22, but resigned Aug. 29, 1919. In Oct., 1923, he was appointed active retired justice of the Supreme Court of Maine. He was an overseer of Bowdoin College and a director of the Maine General Hospital.

Blake, Sir Herbert Acton, K.C.M.G. British Naval Officer, Deputy Master of Trinity House, died at sea on his way from South Africa, Mar. 7. He was born at Winchester, Eng., Oct. 19, 1857, and was educated privately. He became a mariner and was in command of vessels in the British India Steam Navigation Co. and the African Royal Mail Co. In 1901 he became an Elder Brother of Trinity House, the British organization in charge of lighthouses, and served on various important committees.

Bobbs, William Conrad.

Boggs, Frank Myers. American landscape and marine painter, died at Meudon, near Paris, France, Aug. 11. He was born in Springfield, Ohio, Dec. 6, 1855, and studied at the Ecole des Beaux Arts in Paris under Gérôme. He exhibited in the leading cities in France and Germany, and his "Rough Day at Honfleur" awarded a prize of \$2500 in a competition in New York City, was acquired by the Boston Museum of Fine Arts. His work is considered to belong to the French rather than to the American school. His "La Place de la Bastille" painted in 1882, was purchased for the Luxembourg Museum, and his "Isigny" was acquired by the Museum of Niort.

Booth, Herbert.

Bowers, the Rt. Rev. John Phillips Allcot. Anglican Bishop of Thetford, died at Norwich, Eng., Jan. 6. He was born at Portsmouth, Eng. May 15, 1854, and was educated at Magdalen School, Oxford, and St. John's College, Cambridge. After taking his degree, he was ordained deacon in 1877, and after serving as curate in Essex he became canon residentiary and canon missionary of the Diocese of Gloucester, 1885-1902. In 1902 he resigned his canonry to become Archdeacon of Gloucester. In 1903 he became rector of North Creaks and Suffragan Bishop of Thetford. He was also Provincial Grand Master of Norfolk in 1920, having been Past Grand Chaplain of England in 1898.

Boyle, Emmet Derby.

Boyleave, René.

Bradford, Edward Hickling. American surgeon, died at Boston, Mass., May 7, where he was born, June 9, 1848. He graduated from Harvard College, 1869, receiving the degree of M.D. from the Harvard medical school in 1878. He became clinical instructor of orthopedic surgery in 1881, serving in various capacities until 1903, when he was made professor of orthopedic surgery. He became dean in 1912, a position he occupied at the time of his death. He was surgeon of the Children's Hospital of Boston and the Boston City Hospital, and a member of many medical and other learned bodies. He wrote *Treatise on Orthopedic Surgery* (1895), and was a contributor to medical journals.

Brandt, Jacob.

Breed, Richard Edwards.

Briel, Joseph Carl.

Briggs, Edward Cornelius.

Brigham, William Tufts.

Bright, James Wilson.

Brindell, Robert P.

Brooke, John Rutter.

Broughton, Phyllis. British actress, died in London, July 21. Her first appearance was in the ballet at the Canterbury Music Hall in 1876. For five years she was connected with the Gaiety Theatre company, and later was at the Avenue Theatre. In 1897 she played Princess Vea at the Metropolo in *The Vagabond King*, and her last appearance on the stage was in Nov., 1914, at the Aldwych in *The Earl and the Girl*.

Brown, Arthur Henry. A British composer, died in Brentwood, Essex, in February. He was born there July 24, 1830. From 1852-7 he was organist at Romford, and from then on until his death he was organist of the Brentwood Parish Church. He composed several masses, and a great quantity of music for the Anglican service, but he is best known as the composer of more than 800 hymn tunes, some of which achieved immense popularity.

Brown, Charles Sumner. Mechanical engineer and professor of mechanical engineering at Vanderbilt University, Nashville, Tenn., died at Woodmont, Conn., Aug. 31. He was born at East Hampton, Conn., Aug. 23, 1860, and graduated from Yale in 1883. He practiced mechanical engineering until 1888, when he became professor of steam engineering in Rose Polytechnic Institute at Terre Haute, Ind. He served there until 1896, when he became professor of mechanical engineering in Vanderbilt University, a position he held at the time of his death. He received the degree of M.E. from Yale in 1888, and in 1918, was fuel administrative engineer and chief of conservation for Tennessee in the United States Fuel Administration. He was a member of the American Society of Mechanical Engineers and of the Engineering Association of the South, of which he was president in 1915, and of the Engineering Association of Nashville, of which he was president in 1919.

Brown, Henry Martin. American banker, died at Providence, R. I., June 9. He was born at Bolton Conn. Apr. 28, 1850, and, after receiving a high school education at Rockville, Conn., entered business at a clerk in a dry-goods store, later forming a partnership with his brother, ex-Governor D. Russell Brown, and Charles H. Child, as Brown Bros. & Co., to engage in the business of mill supplies. This concern was incorporated in 1893 as the Brown Bros. Co., of which he was secretary, 1893-99. In 1899 he organized the United States Bobbin & Shuttle Co., of which he was treasurer and general manager; he was also president of the National Ring Traveler Co. He was an officer in the various banking, public utility, insurance, and other companies in Rhode Island, and in 1890 was a member of the City Council of Providence. In 1892 he was colonel and chief of staff under Governor Brown, and in 1900-02 he was a member of the Rhode Island House of Representatives. He was a delegate to the Republican National Convention in 1904, and a presidential elector in 1908.

Brown, Sir John McLeavy.

Browning, John M.

Rusiloff, Alexi Alexeivitch.

Bullock, Lieutenant-General Sir George.

Burbank, Luther.

Burne-Jones, Sir Philip. British figure and portrait painter, died at London, June 21. He was the son of Sir Edward C. B. Burne-Jones, and was born Oct. 2, 1861. He was educated at Marlborough College and at University College, Oxford, studying art with his father. His works are of a highly imaginative character and include the "Vampire" after Kipling's poem (1897); "Earth Rise to the Moon"; and the "Madonna of the Future," after Henry James' story. In his later life he devoted himself to portraits; of which his finest are said to be those of his father before an easel (1898); "Sir G. F. Watts Modeling and Statute" (1900); "Rudyard Kipling in his Study" (1900); "Lord Rayleigh" and "Sir Walter Gilbey" (1910). He wrote *Dollars and Democracy* (1904).

Burrage, Henry Sweetser.

Burrell, David James.

Buttrick, Wallace.

Cambridge, Ada (Mrs. George Frederick Cross).

Campbell, James Mann. American clergyman, editor and author, died at Claremont, Calif., May 7. He was born in Scotland, May 5, 1840, and was educated in the schools of Dumbartonshire and at Glasgow and Edinburgh Universities. He was ordained to the Congregational ministry in 1868, and went to the United States in 1874. He held pastorates at Streator, Ill., Abingdon, Ill., Watertown, Wis., Morgan Park, Ill., and Lombard, Ill. He was a frequent contributor to religious periodicals and wrote a number of religious books.

Campbell, William Francis. American surgeon, died in New York, Sept. 7. He was born in Brooklyn, Nov. 7, 1867, and after graduating from New York University, 1887, studied at Long Island College Hospital, where he received the degree of M.D., 1892. He immediately engaged in practice in Brooklyn, becoming professor of surgery at the Long Island College Hospital in 1910, was connected with several other Brooklyn hospitals. He was surgeon, with the rank of major, in the 2nd brigade, N.G.N.Y., 1908-13, and in 1918, during the war, served with the American Red Cross in France. He was a fellow of the American College of Surgeons, a member of the American Medical Association, president of the Medical Society of the State of New York, in 1913, and also of the Medical Society of Kings County in 1906, in addition to being a member of many other medical and social organizations.

Cannon, Joseph Gurney.

Cantlie, Sir James.

Canton, William. British author and journalist, died at Hendon, Eng., May 2. He was born on the island of Chusan, off the coast of China, Oct. 27, 1845, and was educated in Jamaica, and at Douay, France, for the Catholic priesthood. He became a Protestant, and for many years was editor and leader-writer on the *Glasgow Herald*. In 1891 he became sub-editor of the *Contemporary Review*, and manager of Isbister & Co., Ltd., keeping this connection until 1901. His writings include: *The History of the British and Foreign Bible Society* (5 vols. 1903-10); *The Story of the Bible Society* (1904); *The Bible and the Anglo-Saxon People* (1914); *Dawn in Palestine* (1918); and *The Five Colours* (1924).

Carhart, Daniel.

Carlisle, Alexander Montgomery

Carmichael, Thomas David Gibson-Carmichael, Lord, first Baron of Skirling. First Governor of Bengal, died in London, Jan. 16. He was born at Edinburgh, Scotland, Mar. 18, 1859, the eldest son of the Rev. Sir Henry William Gibson-Carmichael, thirteenth baronet. After leaving St. John's College, Cambridge, he served as private secretary to Sir George Trevelyan and Lord Dalhousie, secretaries for Scotland in the Liberal administration of 1886. Contesting Midlothian on Mr. Gladstone's retirement from Parliament in 1895, he served as a Liberal in that body until 1900, when he retired. He was then chairman of the Scottish Liberal Association. In 1908 he was made Governor of Victoria, Australia, and in the same year was created a Knight Commander of St. Michael and St. George. In his short career as Governor of Victoria he won much popularity, and in 1911 he was nominated as Governor of Madras. In the following year, when Bengal was elevated to a province, Sir Thomas became its first Governor, and was raised to the peerage, with the title of Baron Carmichael of Skirling. He held the Governorship of Bengal until 1917; his work was recognized by the creation of the Carmichael Institute of Hygiene at the School of Tropical Medicine. In 1923 he was made trustee of the National Gallery.

Carter, Lincoln J. American manager and producer, died at Goshen, Ind., July 13. He was born at Rochester, N. Y., Apr. 14, 1865, the son of theatrical parents who made extensive tours in the United States. Beginning as a player of small parts, Carter became a playwright, being the author of such plays as *Sidonia*, *Remember the Maine*, *Her Only Sign* and *The Flaming Arrow*, productions. His first production of melodrama was in 1890, when he staged *The Fast Mail*, and subsequently, he put on *The Heart of Chicago*, which was played for 14 years in all parts of the United States. Carter was said to have produced 35 melodramas in as many years. He retired from playwrighting and producing when motion pictures seriously interfered with the production of drama by traveling companies. In addition to the plays already mentioned he was the author of *The Eleventh Hour*, *The Tornado*, *Lost in the Desert*, *Down Mobile*, *Bedford's Hope*, *Under the Dome*, *The Eye Witness*, and *Tempest and Sunshine*. These plays were known throughout the United States, and some in London. A number of the plays were adapted by film producers.

Cashin, Sir Michael Patrick.

Cassatt, Mary.

Cassidy, James H. Former representative in Congress, from Ohio, died at Forest Hills Gardens, N. Y., Aug. 23. He was born at Cleveland, Ohio, Oct. 28, 1869, and in 1902 became clerk of the committee on rivers and harbors of the U. S. House of Representatives, of which his friend, Theodore E. Burton, was chairman. After serving as clerk until January, 1909, he was elected to succeed Mr. Burton as representative from the 21st Ohio district, comprising a part of the City of Cleveland. In 1910 he was defeated for reelection. In the latter part of his life he made his home at or near New York.

Chandler, Francis Ward. American architect and professor, former head of the department of agriculture at the Massachusetts Institute of Technology, died at North Haven, Me., Sept. 8. He was born at Boston, Mass., Sept. 30, 1844, and after studying at Lancaster Academy and serving with the 53rd Mass. Volunteers during the Civil War, studied architecture, and in 1864 became associated with the firm of Ware & Van Brunt. From 1867-69 he studied in Paris, and on his return to Boston became associated with the department of architecture of the Massachusetts Institute of Technology, becoming its head in 1886, and serving in this capacity until 1911, when he retired as professor emeritus. He was a member of the firm of Cabot & Chandler, architects, Boston. At one time he was advisory architect for the City of Boston, and was a member of the Boston Art Commission, and of the American Institute of Architects. Professor Chandler, in cooperation with Edmund Wheelright, edited *Municipal Architecture* in 1898. He was the author of: *Construction Details* (1892), and *Notes on Limes, Cements, Mortars, and Concretes* (1892).

Channing of Wellingsborough, First Baron of: Francis Allston Channing, British reformer and author, died at Eastbourne, Eng., Feb. 20. Born in the U. S., Mar. 21, 1841, a son of the Rev. William Henry Channing, American Unitarian clergyman and author, he was educated at Exeter College, Oxford. From 1885-1910 he served as a Labor member of Parliament for East Northamptonshire. From 1893-96 he was a member of the royal commission on agricultural depression, and in 1894 he was chairman of the Central and Associated Chambers of Agriculture. He was a barrister of Lincoln's Inn, and a justice of the peace for Northamptonshire. His writings include *Instinct, The Greek Orators as Historical Authorities; the Second Ballot, The Truth about Agricultural Depression, Memories of Midland Politics* (1917), etc.

Chapin, Charles Frederic.

Chaplin, Maxwell. American missionary to China, died from cholera at Tsing-tao, China, July 20. He was born in 1880, and was educated at the Hill School, and at Princeton, graduating from the latter in 1913. He studied for the ministry at Hartford Theological Seminary and Union Theological Seminary, going to China in 1919 as a missionary of the Presbyterian Board of Foreign Missions. He was stationed in the Province of Anhwei, and at the time of his death was at Tsing-tao on his vacation.

Chapman, Sir Austin, K.C.M.G. Australian statesman, died Jan. 12. He was born at Bowral, N. S. W., July 10, 1864, and was educated at Marulan. He represented Bradwood in the New South Wales Parliament as a member of the Legislative Assembly, 1891-1901. In the latter year he became a member for Eden Monaro in the House of Representatives. He was a member of the New South Wales Commission for the Chicago Exposition, 1893. He was justice of the peace for New South Wales in 1894. He attended the coronation of King Edward VII in 1902. In 1903-04 he was Minister for Defense, and in 1905-06 chairman of the federal royal commission on old age pensions. In 1905-07 he was Postmaster-General of Australia, and represented Australia, New Zealand, and Fiji at the Postal Union Convention held in Rome in 1906, where he advocated universal penny postage. In the same year he proposed penny postage to the Australian Parliament, and introduced the penny and toll telephone system in Australia, and a bush telephone scheme. He also established uniform telegraph rates and postal orders throughout the Commonwealth. In 1907-08 he was Minister of Trade and Customs, and again in 1923 and 1924, in which years he served as Minister for Health. In 1924 he was created Knight Commander of St. Michael and St. George.

Chapman, William Young.

Chauvin, Mlle. Jeanne. Said to be the first woman lawyer in France, died in Provins, Sept. 28. She was born in 1866, and having tutored her brother for the degree of doctor of laws, took the examinations which she passed with honor, and applied for admission to the bar. Upon being refused, she took the question to the Chamber of Deputies. With the advocacy of René Viviani, a bill was passed and she was duly admitted

to the bar as the first woman in France in that calling.

Chien, Chang. Chinese manufacturer and industrialist, died at Nantungchow, near Shanghai, Aug. 25. He was born in 1852, and first made a reputation by transforming a wretched native village into the so-called Chinese "model city" of Nantungchow. He was at one time Minister of Agriculture and Commerce, procuring the promulgation of progressive forestry laws, which were strengthened in 1916 on the organization of the Chinese forest service. He organized the National Conservancy and Irrigation Bureau, and in 1920 organized the Kiang-su Grand Canal Board at Yangchow, of which body he became president.

Chiston, First Viscount, Aretas Akers-Douglas. British political leader, died in London, Jan. 1. He was born in Kent, Oct. 21, 1851, and was educated at Eton, and University College, Oxford. In 1875 he became a barrister. He studied in the Inner Temple at the general election of 1880 and became a barrister in 1875; he was returned as conservative member for East Kent. In 1885, when this constituency was divided, he sat for the St. Augustine division, and represented it until he was raised to the peerage in 1911, when he was created first Viscount Chilton of Boughton Malherbe. He was active in Parliament. In 1895 he became First Commissioner of Works, with a seat in the Cabinet, and remained as such until 1902, when he became Home Secretary of State in the Balfour government. At the end of 1905 he was created Knight of the Grand Cross of the Order of the British Empire.

Cieplak, John.

Clark, Charles Hopkins

Clark, Michael. Canadian physician and pioneer, died near Olds, Alberta, July 29. He was born in Northumberland England, 1862, and was educated at York and Edinburgh Universities. He moved to Canada, and in 1902 took up farming and ranching in Alberta. He was elected to the House of Commons for Red Deer in 1908, as a Liberal, and reelected in 1911.

Class, Franklin Morris. An American composer, died in New York, Feb. 15. He was born there, May 2, 1881. After completing his musical studies under Paine and Spalding at Harvard, he studied medicine at Columbia, and from 1907 practiced in New York. He wrote numerous pieces for piano, some choruses, motets and chamber music.

Coffin, Charles Albert.

Colver, William Byron.

Concanon, Henry. British shipping head, died Sept. 18. He was born in 1861, and was from his start in business life associated with shipping interests. During the World War he joined the Territorial forces, and at one time commanded the 7th Battalion of the King's Liverpool Regiment. He received the Territorial Decoration, the Coronation (King Edward VII) Medal, the Italian Medal of Merit, and the Messina Medal. He was a justice of the peace, and a director of the Oceanic Steam Navigation Co., Ltd., of the International Navigation Co., and of George Thompson & Co., Ltd. At the time of his death he was joint manager of the Oceanic Steam Navigation Co., (The White Star Line), and the International Navigation Co. In 1920-21 he was chairman of the Steamship Owners' Association.

Cook, Charles Cyrus. American clergyman and evangelist, died at Upper Montclair, N. J., Sept. 5. He was born in Baltimore, Md., in 1861, and for many years was a publisher of scriptural literature, with offices in New York City. He was for 12 years pastor of the South Brooklyn Gospel Church, and wrote several books and pamphlets on biblical literature.

Coolidge, William Augustus Brevoort.

Cornell, Rev. H. John. American clergyman, died at Portsmouth, R. I., Sept. 23. He was born in New York, N. Y., June 11, 1839, and studying at Princeton and Princeton Theological Seminary, was ordained a deacon in the Protestant Episcopal Church in 1863. After holding various charges, 1876-94, he became pastor of the American Church at Nice, France. In 1895 he retired and lived at Portsmouth, R. I., until his death.

Corrucini, Roberto.

Corry, Sir William. British shipping authority, died at London, England, June 9. He was born Mar. 20, 1859, and was educated at Eton, and Trinity College, Cambridge. For many years he was a director of the Cunard Line and of the Commonwealth and Dominion Line, and was considered one of the leading shipping authorities in England.

Coué, Philip Émile.

Craig, John Millar. A British baritone, and choral conductor, died at Glasgow, in March. He was born in Edinburgh, Nov. 15, 1839. From 1883-1904 he was conductor of the famous Glasgow Select Choir, with which he made extensive tours of the United Kingdom and gave an annual concert in London on St. Andrew's Day. For some years he also conducted the concerts of the Edinburgh Bach Society.

Cranston, Alexander B.O. American evangelist, died at North Bergen, N. J., Aug. 5. Born at Athlone, County Westmeath, Ireland, in 1829, he went to the U. S. in the early sixties, serving in the Civil War, and entering the employ of A. T. Stewart, the dry goods merchant. He preached continuously during the time of that employ, and in recent years was termed the world's oldest evangelist, holding his last evangelistic meeting but a month prior to his death.

Craven, Alfred.

Crews, Ralph.

Crossley, the Rt. Rev. Owen Thomas Lloyd. Anglican Bishop of Auckland, New Zealand, 1911-13, was killed by a motor car in London, Mar. 3. He was born Apr. 30, 1860, and was educated at Trinity College, Dublin, from which he received the degree of M.A. He was ordained in 1884. He lectured at St. Aidan's, Birkenhead, 1900, and at Lichfield Theological College 1903-04. He later was fellow of the Australian College of Theology, lecturer at St. John's College, Melbourne; and select preacher at the University of Dublin. He went out to Australia in 1905 to become archdeacon of Geelong, where he served until 1911, being also incumbent of All Saints, St. Kilda. In 1911 he was consecrated as Bishop of Auckland, N. Z., serving as chaplain to the Archbishop of Melbourne. In 1913 he returned to England, and he became rector of St. Andrew's Major, Dinas Powis, Cardiff. In 1914-20 he was assistant to the Bishop of Llandaff.

Cummins, Albert Baird.

Cunliffe-Owen, Philip Frederick.

Cunningham, Andrew Oswald. American civil engineer, died at University City, Mo., May 11. He was born at Rangoon, British Burmah, July 8, 1866, the son of General Percy S. Cunningham of the British Army, and was educated at South Eastern College, England, leaving at the conclusion of his course in 1883 to go to the United States. He graduated from the University of Minnesota as B.C.E. in 1894. He entered the service of the Wabash R. R. in 1902 as bridge engineer, and in 1905 became its chief engineer, serving in this capacity until 1923, when he resigned to take up private practice as a consulting engineer in river-improvement work. He was elected mayor of University City, Mo. in 1924.

Curtis, Mrs. Henry. The former Lady Stanley, widow of the famous explorer and an accomplished artist, died in London, Oct. 5. Dorothy Tennant, sister of Lady Asquith, a woman of intellectual and artistic gifts, as early as 1886 exhibited her paintings at the Royal Academy and in 1890 married the famous explorer, Sir Henry M. Stanley, in Westminster Abbey. In 1893 she exhibited an admirable portrait of the explorer, and accompanied him on his lecture tour in the United States and Canada. Stanley died in 1904, and in 1907 his widow married a distinguished physician, Sir Henry Curtis, F.R.C.S. She edited the *Autobiography of Sir Henry M. Stanley* (1909). In 1890 she had brought out a book of her own, *London Street Arabs*.

Cushny, Arthur Robertson.

Darling, Charles K. American soldier and lawyer, died at Waverly, Mass., Dec. 29. He was born at Corinth, Vt., in 1864, and studied at Dartmouth, receiving his A.B. degree in 1885. For two years he was a cadet at West Point. He graduated from Boston University Law School, and was admitted to the bar in 1885. In 1898 he became instructor in criminal law in Boston University. He served in Porto Rico in the Spanish American War as a major in the 6th Regiment, Mass. Volunteers; on the return of the regiment he was made colonel and received his discharge from the Federal service. On his retirement from the militia he received the retirement rank of brigadier general.

Davis, Sir Sarracomb.

Davis, Charles Belmont.

Davis, George Schley. American radio worker died at Boston, Mass., Oct. 10. He was born in Nebraska in 1884, and, serving in the U. S. Navy, studied radio communication as it was developed in that service. In 1909 he became connected with the United Fruit Co. radio service, rising rapidly from operator to superintendent of the radio department, general manager, and vice-president. He was vice-president and a director of the Tropical Telegraph Co., president of the Wireless Specialty Apparatus Co., and a director of the Radio Corporation of America. He was a member of many technical organizations, a fellow of the Institute of Radio Engineers, of the American Geographical Society, and of the Royal Society of Arts.

Davis, the Right Rev. James J.

Davis, John D. American theologian and member of the faculty of Princeton Theological Seminary, died June 21. He was born at Pittsburgh, Pa., Mar. 5, 1854, and, graduating from Princeton in 1879, took post-graduate studies at the University of Bonn. He was graduated from Princeton Theological Seminary

in 1883, and he was appointed professor of Hebrew and cognate languages at Princeton in 1888. In 1892 he succeeded to the chair of Semitic philology and Old Testament history, which he held until 1900, when he became professor of Oriental and Old Testament history, being at the time of his death the senior member of the faculty of Princeton Theological Seminary. He was the author of *Genesis and Semitic Tradition* (1894); *A Dictionary of the Bible* (1898), (fourth edition) (1924); and critical notes in the *Westminster Teacher* from July, 1899, to December, 1907.

Davis, William Blackford. American soldier and physician, died at Baltimore, Md., Nov. 30. He was born Aug. 5, 1848, at Charlottesville, Va., and graduated from the University of Virginia in 1870. He entered the Army as an assistant surgeon in 1877. Retiring in 1912, Colonel Blackford went to live at Baltimore, but he rejoined the Army in the World War. He was in command of the hospital at the Soldiers' Home, Washington, D. C.

Debs, Eugene Victor.

Decourcelle, Pierre.

Del Mar, Alexander.

Demarest, William Thomas. Secretary of the Board of Domestic Missions of the Reformed Church in America, died at Greenwich, Conn., Aug. 20. He was born in New York City, Aug. 17, 1866, and studied at the College of the City of New York. He was engaged in commercial employment and syndicate newspaper work until he became, in 1909, secretary of the Board of Domestic Missions of the Reformed Church in America. He was a member of the board of managers of the Theological Seminary at New Brunswick, N. J.

Dent, Joseph Mallaby. British publisher, died at London, May 11. He was born at Darlington, England, in 1849 and, at the age of seventeen, was apprenticed to bookbinding and printing. In 1872 he began business as a bookbinder, and in 1888 started as a publisher on his own account. He produced the *Temple Shakespeare*, *Temple Classics*, *Everyman's Library*, the *Collection Galia*, the *King's Treasuries*, and other works, which were widely circulated. He was also interested in archaeology, being a member of the British Archaeological Society.

Doble, Budd. American horseman, died at Puente, Calif., Mar. 29. He was born in Philadelphia in 1841, and, becoming interested in trotting racing in 1860, drove Dexter one mile in 2:17 1/4. In 1865 Doble drove the famous trotting mare, Goldsmith Maid, owned by Henry N. Smith, on the various trotting circuits throughout the United States, in 12 years winning stakes estimated at \$365,000. In 1892 he drove Nancy Hanks to three world trotting records, 2:07 1/4, 2:05 1/4, and 2:04, the last record being made at Terre Haute, Ind., Sep. 25, 1892. He retired from the track in 1906.

Dodge, Cleveland Hoadley.

Dole, Sanford Ballard.

Dominguez, Lorenzo.

Dorman, Franklin Abbott. American physician and head of the obstetrical division of the Sloane Hospital for Women, New York City, died in New York, Aug. 6. He was born in Upper Montclair, N. J., in 1874, and was educated at the Montclair High School and Harvard University, from which he graduated in 1894. In 1898 he graduated from the College of Physicians and Surgeons in New York City, and after serving at the Post-Graduate Hospital as an interne became connected with the Sloane Hospital for Women as resident physician, later devoting himself to outside practice as an obstetrician, though retaining his position as head of the division. Dr. Dorman was a deacon of the Broadway Tabernacle and a trustee of the American University, Beirut, Syria.

Doughty, Charles Montague. British explorer of Arabia, and author, died Jan. 21. He was born in 1843, and was educated at the Naval School, Portsmouth, England, and at Caius College, Cambridge. He received his M.A. degree and was made an honorary fellow of Gonville and Caius College, Cambridge, being honored later with the degree of D.Litt. from Oxford and Litt.D. from Cambridge. He was an honorary member of the British Academy, and in 1912 he received the Royal Founder's Medal from the Royal Geographical Society. His publications include *Travels in Arabia Deserta*, 2 vols., published in 1888, and republished in popular editions several times; *The Dawn in Britain*, 6 vols., 1906; *Adam Cast Forth*, 1908; *The Chiffs*, 1909; *The Clouds*, 1912; and *Mansoul, or the Riddle of the World*, 1920.

Douglas, George William. American clergyman, died at Tuxedo Park, N. Y., Oct. 20. He was born in New York, N. Y., in 1850, and went to school at Concord, N. H. He graduated in 1871 from Trinity College and, received his Master of Arts degree in 1874. He studied at the General Theological Seminary in New York, and on completion of his course there he was admitted as a deacon in the diocese of New

York. For two years he studied at the University of Bonn, Germany, and at Oxford, Eng. In 1878 he was made a priest of the Protestant Episcopal Church. He was vicar of Trinity Church, New York, from 1879 to 1886, after which he was transferred to Washington. He returned to New York in 1898 as preacher at Grace Church, and instructor at the training school for deaconesses, a position which he held until 1904. In this year he was appointed canon at the Cathedral of St. John the Divine. His best known books are *Christ's Challenge in the World's Crisis*; *Spiritual Healing and the Holy Communion*; and *Essays in Appreciation*.

Douglas, Henry Thompson. American soldier and civil engineer, died at Providence Forge, Va., July 20. He was born in 1836, and served through the Civil War, being one of the engineers who built the defenses of Richmond. At the time of his death he was said to be the last surviving general of the Confederate forces, and was one who had known General Lee and the other leaders of the Southern army. In the Spanish-American War he served as a commissioned officer in the United States Army, and at the time of the World War offered his services to the United States. He was one of the engineers engaged in the construction of the New York subway system, and was also connected with other important engineering projects.

Dowling, Thomas Barrow. British organist and conductor, died at Cape Town, South Africa, in August. He was born in Hampshire, May 31, 1861. In 1888 he became organist at St. George's Cathedral in Cape Town, where he was an important factor for the advancement of musical culture, founding choral societies and organizing festivals on a grand scale. From 1894-1912 he also was conductor of the Cape Town Musical Society's Orchestra.

Downey, George Eddy. American jurist, died in Washington, D. C., May 24. He was born in Rising Sun, Ind., July 11, 1860, and was graduated from Ashbury (now DePauw) University, Greencastle, Ind. in 1880. He began the practice of law in that town at the age of 21 and for two years, from 1882-84, was editor of the *Franklin Democrat*, Brookville, Ind., returning to the practice of law and removing to Aurora, Ind., in 1886. He served as mayor of Aurora from 1894-1902 and was judge of the 7th Judicial Circuit of Indiana from 1903-13, when he resigned to become Comptroller of the Treasury by appointment of President Wilson. He was appointed judge of the United States Court of Claims Aug. 3, 1915, and was serving in that capacity at the time of his death.

Dreyer, John Louis Emil. British astronomer, died at Oxford, Eng., Sept. 14. He was born in Copenhagen, Denmark, Feb. 13, 1852, and was educated at Copenhagen University. In 1874 he became astronomer at the Earl of Rosse's observatory, a position he held until 1878, working with the 6-foot reflector in examinations of the nebulae. From 1878 to 1882 he was assistant astronomer at the Dublin University Observatory. In 1882 he became director of the Armagh Observatory, serving in this position until 1916, when, upon retiring, he went to Oxford to carry on further researches. He had the honorary degree of M.A. from Oxford and that of D.Sc. from Belfast, as well as the gold medal of the Royal Astronomical Society in 1916, he served as the president of the society from 1923-25. He was author of many important works on astronomy, and in his later life on the history of Astronomy, including *Second Armagh Catalogue of 3300 Stars* (1886); *New General Catalogue of Nebulae and Clusters of Stars* (1888; supplements 1895 and 1908); a monumental work entitled *Tycho Brahe: A Picture of Scientific Life and Work in the Sixteenth Century* (1890); *Planetary Systems from Thales to Kepler* (1906); and *Cosmicus: An International Journal of Astronomy* (1881-84) (jointly with Prof. Copeland).

Drury, the Right Reverend Thomas Wortley.

Duane, Alexander.

Dula, Robert B.

Dunn, Arthur Wallace.

Dunn, Sir William (Henry). Lord Mayor of London, 1916-17, died at Bournemouth, Eng., June 12. He was born at Clitheroe, Eng., in 1856 and was educated privately. He held many local offices in London, being magistrate for the County of London, alderman of the City of London, 1909-23, sheriff, 1906-7, Lieutenant of the City of London, and Lord Mayor, 1916-17. He was a Unionist M. P. for West Southwark, 1910. He was chairman of the Royal Botanic Society; trustee and treasurer of Lord Mayor Treloar Cripples' Hospital and College; liverman of the shipwrights' and other city companies, being on the court of several. He was the recipient of war-time honors and decorations from the leading governments of Europe.

Dunraven, Earl of. Windham Thomas Wyndham-Quin.

Du Pont, Henry Algernon.

Durnford, Sir Walter. Provost of King's College, Cambridge, and a fellow of Eton College, died at Cambridge, Eng., Apr. 7. He was born at Manchester, Feb. 21, 1847, and was educated at Eton, and at King's College, Cambridge, where he graduated with honors in 1869. He was elected a fellow of King's College, and in 1870 he returned to Eton as a master. In 1899, retiring from Eton, he entered residence as a fellow of King's College, being elected vice-provost in 1909 and provost in 1918.

Dzerzhinsky, Felix E.

Eberlein, Gustav.

Edge, Sir John. British barrister, died July 30. He was born July 28, 1841, in Ireland, and was educated at Trinity College, Dublin, becoming an Irish barrister in 1864. In 1866 he became an English barrister of the Middle Temple. From 1866 to 1898 he was chief justice of the high court of judicature in the North Western Provinces of India. In 1898 he was appointed a member of the council of India, retaining his seat till 1908. He was elected a bencher of the Middle Temple in 1898, and in 1908 became a privy counselor. In 1909 he was made a member of the judicial committee of the Privy Council.

Edgeworth, Francis Ysidro.

Edwards, John Lewis. American banker and president of the Washington Stock Exchange, died at Washington, D. C., Aug. 6. He was born at Washington, in 1879. In 1912 he organized the firm of John L. Edwards & Co., a New York Stock Exchange house. He was also a member of the Washington Board of Trade and the Rotary Club, and a director of the Riggs National Bank, the Norfolk and Washington Steamboat Co., and the Fireman's Insurance Company.

Elliott, Charles William

Elliott, Charles Gleason. American civil engineer, died at Washington, D. C., Sept. 14. He was born in La Salle County, Ill., June 8, 1850, and, graduating from the University of Illinois in 1877, devoted himself to civil engineering. In 1901-02 he was editor of the *Drainage Journal*, and in the latter year became connected with the United States Department of Agriculture as chief of drainage inspections. After retirement from the Department of Agriculture he took up private practice, as a member of the Elliott & Harman Eng. Co. of Peoria, Ill., and Washington, D. C. He received the degree of C.E. from the University of Illinois in 1893. He wrote a number of articles on drainage and irrigation as well as *Practical Farm Drainage* (1882 and 1908); *Engineering for Land Drainage* (1903, 1911, revised, 1919); *Drainage of Farm Lands* (Bulletin 187, Department of Agriculture) (1904).

Ember, Aaron. Egyptologist, died at Baltimore, June 1 as a result of burns incurred in an attempt to rescue manuscript of research records from a fire which destroyed his home. He was born at Tulas, Lithuania, Dec. 25, 1878, and, going to the United States in 1891, graduated from Johns Hopkins University in 1901, taking the degree of Ph.D. three years later. In 1907 he became connected with the university, and in 1924 was made professor of Egyptology. He was known for linguistic and other studies, demonstrating a theory of the close kinship between Old Egyptian and the Semitic languages. At the time of his death, Dr. Ember had prepared the manuscript of a work, to be published in four volumes, which sought to develop fully his theory. He was a member of the American Oriental Society, the Linguistic Society of America, the Johns Hopkins University Philological Association, and of the Deutsche Morgenländische Gesellschaft.

Emerson, Victor Hugo. American manufacturer, died at Downey, Calif., June 22. He was born in Forest, Ohio, in 1866, and with his parents moved to San Francisco. He organized and became president of the United States Phonograph Co. He was recording supervisor for the Columbia Phonograph Co. until 1915, when he organized the Emerson Phonograph Co. Resigning from the presidency of the company in 1922, he organized the Kodisk Mfg. Co. for the production of metal records, but retired from active business on account of ill health.

Emery, Albert Hamilton.

Emmott, Lord.

Endicott, Rear Admiral Mordecai Thomas.

Englis, Charles Mortimer. Shipbuilder, died Jan. 15. He was born at Long Island City, N. Y., Dec. 14, 1857, and studied at the Mount Washington Institute, and at New York University. Learning the shipbuilding business at his father's shipyard in Brooklyn, he became a member of John Englis & Sons in 1882, and was sole proprietor of the business from 1892. He was active in shipping circles, being president of the New York and Hudson Steamboat Co., a director of the

Union Ferry Co. of New York and Brooklyn, and the Iron Steamboat Co. of New Jersey.

Epstein, Julius. An Austrian pianist, died in Vienna, in March. He was born at Agram, Aug. 14, 1832. From 1861 to 1901 he was professor at the Vienna Conservatory, and enjoyed the reputation of being one of the foremost teachers in all Europe. Among his pupils were Gustave Mahler, Marcella Sembrich, Ignaz Brüll and his own son Richard, who died in New York in 1919. He was one of the editors of Breitkopf and Härtel's monumental edition of the works of Schubert.

Estill, Thomas.

Eucken, Rudolf Christoph.

Eulenburg, Ernst.

Evans, Brig. Gen. Robert Kennon. An American soldier died at Camaldoli, Italy, Aug. 3. He was born at Jackson, Miss., Nov. 19, 1852, and, graduating from the United States Military Academy in 1875, was commissioned second lieutenant in the 12th Infantry. He served in the Nez Percé and Bannock Indian campaigns, 1877-78, and was military attaché at the American Embassy in Berlin, 1892-96. He was in Cuba during the Spanish-American War, and later in the Philippines. In 1911-12 he was chief of the division of military affairs, and assistant to the chief of staff, U.S.A. He was commanding general of the Department of the Gulf at Atlanta, Ga., 1912-14, and commander of the 2nd Brigade of the 1st division, Jan., 1913. He was commander of the Department of the East, 1914-15, and of the 2nd Brigade at Laredo, Tex., 1915-16. He retired as brigadier-general, Nov. 19, 1916. At the outbreak of the World War he was ordered to active duty and placed in command of the Philippine Department, with headquarters at Manila.

Exner, Franz.

Fabrician, Brother. Roman Catholic educator, and member of the Brothers of the Christian Schools, died at New York City, Sept. 26. Felix Pelerin, who after joining the Brothers adopted the name of Brother Fabrician, was engaged in educational work throughout the United States, having been associated in New York City with the De La Salle Institute and Manhattan College. He also directed the La Salle Academy in Providence, R. I., and was president of St. John's College, Washington, and of St. Mary's College, Oakland, Calif. At the time of his death he was librarian of Manhattan College, New York City, where at one time he had taught philosophy.

Farris, Frank H. Democratic leader in Missouri, died at Rolla, Mo., Sept. 1. He was born in 1868, and in his early life was a page in the Missouri Senate. He was a member of the Missouri Senate in 1899, and in 1903, at the time of the passage of the notorious "alum" bill with its scandal involving bribery of legislators. He was exonerated, and returned to the Senate from a county which was largely Republican. He was at one time Democratic floor leader in the Senate, and chairman of the State Democratic Committee. In 1924 he was one of the convention managers for W. G. McAdoo, a Democratic candidate.

Farrow, Edward Samuel.

Fehrenbach, Constantine.

Fenner, Hurt Leslie.

Ferguson, Frank William.

Ferguson, Robert Gracey. American educator and clergyman, died at Pittsburgh, Pa., Nov. 8. He was born Feb. 16, 1842, at Dry Run, Pa., and after receiving the degree of A.B. in 1862 from Washington and Jefferson College, entered the Union Army. From 1863-64 he was second lieutenant in the 21st Pennsylvania Cavalry. He was graduated from the United Presbyterian Theological Seminary in 1866, and was ordained to the United Presbyterian ministry, becoming pastor at Mercersburg, Pa., Cove, Pa., and Butler, Pa., 1874-1884. In 1884 he became president, in 1907 professor of Biblical literature, and in 1915 professor emeritus, of Westminster College, Pa. Since 1889 he had been director of Allegheny Theological Seminary, and since 1898 moderator of the United Presbyterian Assembly. He received the degree of D.D. in 1885 and LL.D. in 1902 from Washington and Jefferson, and LL.D. from Monmouth in 1906.

Fernald, Bert Manfred.

Filippini, Tina. An Italian pianist, died at Resina, Sept. 15. Born in 1902, she gave early evidence of unusual talent, so that her teacher, Marciano, brought her out at one of the famous Augusteo concerts in Rome when she was only ten years old. However, she continued to study for several years more, and then established an enviable reputation through her tours of Italy. She made her American debut at New York Feb. 2, 1925.

Finck, Henry Theophilus.

Fish, William Hansell. American judge, died at Macon, Ga., Dec. 8. He was born at Macon, May 12, 1849, and in 1869 graduated with the degree of A.B. from the University of Georgia. From 1869-71 he was a law student at the University of Virginia. In

1891-96 he practiced law in Georgia, becoming circuit judge; and from 1897-1905 he was associate justice, and from 1905-23 chief justice, of the Supreme Court of Georgia. The University of Georgia in 1920 conferred on him the degree of LL.D., and in 1923 he became dean of the Mercer University Law School, at Macon, a position which he held until his death.

Fitzgerald, Desmond.

Flaherty, Lawrence J. Member of Congress from California, died at New York City, June 18. He was born in San Mateo, Calif., July 4, 1878. He was active in California Republican politics, serving on the Board of Police Commissioners of San Francisco, and was for eight years a member of the California House of Representatives. He was president of the San Francisco Building Trades, and surveyor of customs in San Francisco, 1923-25. In 1925 he was elected to the 69th Congress from the fifth California District, which included a portion of San Francisco.

Fleury, Louis. Eminent French flutist, died in Paris, June 10. As a leader of the Société Moderne des Instruments à Vent, which he founded in 1875, he exerted a powerful influence in developing the technical resources of his instrument. He made extended tours of Europe, and in 1925 took part in the first Coolidge Chamber Music Festival at Washington.

Forrest, Sir George William.

Forsander, Nils. Theologian, died Aug. 20. He was born at Gladax, Sweden, Sept. 11, 1846, and, going to America, graduated from Augustana College and Theological Seminary, Paxton, Ill., in 1872. He became a clergyman in the Evangelical Lutheran Church, and in 1889 was made professor of theology in Augustana Seminary. In 1907 he was decorated by King Oscar II of Sweden as a Knight of the Royal Order of the North Star. He was the author of *Augustiniska Bekännelsen* (1899 and 1902); *Life Pictures from Swedish Church History* (1913); *Olavus Petri* (1918); *The Marburg Colloquy* (1919); *Lifsbilder ur Augustana Synodens Historia*, Vol. I, (1915), Vol. II, (1925).

Forsyth, David Dryden. American clergyman, died Nov. 8. He was born in Dane County, Wis., Mar. 5, 1864, and in 1889 received the degree of bachelor of arts from the University of Nebraska. He was ordained to the Methodist Episcopal ministry in 1894, and held various pastorates. In 1905 he received the degree of doctor of divinity from Denver University. He served as superintendent of the churches of the Denver district, 1909-1915, secretary of the board of education of the Methodist Episcopal Church, 1915-16, and corresponding secretary of the Board of Home Missions and Church Extension, from May, 1916, until his death.

Foster, Ben (Jamin)

Fothergill, William Edward. English gynecologist and surgeon, died Nov. 4, at Manchester, Eng. He was born in 1805, and was educated at Edinburgh, Paris, and Jena. Since 1895 Dr. Fothergill had been in consulting practice in Manchester; and had many hospital connections. He was Director of the clinical laboratory of the Royal Infirmary, Manchester; and at the time of his death was honorary consulting gynecological surgeon of the Royal Infirmary. He had also been professor of clinical obstetrics and gynecology at the University of Manchester. Among his books were *Manual of Midwifery*, (5th ed. 1922); *Golden Rules of Obstetrics*, 1898 (6th ed.); *Handbook for Midwives*, (5th ed. 1925); *Manual of Diseases of Women*, (2nd ed. 1922); and numerous articles in medical journals and encyclopedias.

Fowler, George Little.

Francis, Lee Masten. American ophthalmologist, died at Buffalo, N. Y., Apr. 22. He was born at Sabinsville, Pa., Oct. 8, 1877, and after graduating from the Norwalk, Conn., Military Institute in 1894 attended Cornell University, Ph.B., 1898, and Rush Medical College of the University of Chicago, M.D., 1901. He carried on post-graduate work at the University of Vienna, and in 1904 began practice at Buffalo, N. Y. Dr. Francis was a member of the American Board for Ophthalmic Examinations, and head of ophthalmic service at Base Hospital 115 during the World War. He was a fellow of the American College of Surgeons, a member of the American Medical Association, and of the American Academy of Ophthalmology and Otolaryngology, serving as secretary, 1911-18 and president, 1919-20.

Fraser, Lovat. British journalist, died in Slough, England, Apr. 20. He was born Nov. 18, 1871, and with few educational advantages had a journalistic career with various provincial papers until 1896, when he was made assistant editor of the *Times of India*, of which paper he became editor in 1898. In 1907 he became connected with the editorial staff of *The Times* of London, serving until 1922. At the time of his death he was chief literary adviser for, and contributor to, the *Sunday Pictorial* and *Daily Mirror*. In addition to special contributions covering his travels, he was

the author of several books, including *At Delit* (1908); *India under Ourton and After* (1912).

Freeman, Franklin. American jurist and justice of the Massachusetts Superior Court, died at Leominster, Mass., Apr. 7. He was born in Mendon, Mass., in 1871, attended Phillips-Exeter Academy and the Boston University Law School, graduating from the latter in 1896. He practiced law in Boston, and was appointed justice of the Leominster Court, serving in that capacity until he was appointed to the Superior Court bench, Sept. 2, 1925. Previous to this appointment, he was the first district court judge designated to preside at criminal sessions of the Superior Court.

Friederika, Princess of Hanover, of Great Britain and Ireland, and Duchess of Brunswick and Lüneburg, died Oct. 16, at Biarritz, France. She was born in Hanover, Germany, on Jan. 9, 1848, the daughter of George V, the last king of Hanover and Duke of Cumberland, who relinquished his claims to Hanover for 16,000,000 thalers in 1868 and died in 1878. He was a first cousin of Queen Victoria. On Apr. 24, 1880, she married Baron von Pawel-Rammingen, a former aide-de-camp of her father, at Windsor Castle—largely, it was said, through the intervention of Queen Victoria.

Frothingham, Paul Revere.

Fullam, William Freeland.

Fuller, Charles E. Former United States congressman, died at Rochester, N. Y., June 25. He was born in Boone County, Ill., Mar. 31, 1849, and was educated at Wheaton College. He was admitted to the bar in 1870 and from that time continued the practice of law at Belvidere, Ill., where he made his home. He served both as city and state's attorney, and was a member of the state House of Representatives and Senate, 1879-93. In 1897-1903 he was judge of the Circuit Court in the 17th Judicial District, and in 1903 became a member of the 58th United States Congress serving through successive Congresses until 1913. In 1915 he became a member of the 64th Congress, and was reelected continuously being a member of the 69th Congress at the time of his death.

Fuqua, Henry L.

Gaines, John Wesley. A former representative in Congress from the 6th Tennessee district, died at Nashville, Tenn., July 4. Born in Tennessee in 1861, in his early years he worked on a farm, but later went to the University of Nashville and Vanderbilt University, taking degrees in medicine and law. He practiced law in Nashville. His first political office was as presidential elector on the Democratic ticket in 1892, and in 1897 he was elected to Congress, where he served nearly 12 years. He was one of the attorneys who assisted William Jennings Bryan in preparing the prosecution of the Scopes case, conducted in Dayton, Tenn., in 1925.

Gédalge, André. A French composer, died at Langy-sur-Marne, in February. He was born in Paris, Dec. 27, 1856, and studied under Guiraud at the Conservatoire. Later he was professor of counterpoint there. He wrote an opera, *Hélène*, three symphonies, several orchestral suites, music for a number of pantomimes, and chamber music.

Gibbon, Perceval. British author, died on the Isle of Guernsey, May 20. He was born at Trelech, Wales, Nov. 1, 1879, and was educated at the Moravian School at Konigsfeld, Baden. His early life was spent in the merchant marine, and later, becoming journalist and war correspondent, he traveled extensively in Africa, America, and Europe. In 1918 he was a major in the Royal Marines. He wrote a volume of verse entitled *African Items*, and his novels included *Souls in Bondage*, *Salvator*, and *Margaret Harding*. He wrote many short stories published in English and American magazines, some of which were collected into volumes.

Gilchrist, Albert Waller.

Gilchrist, John Dow Fisher.

Gill, Laura Drake.

Gill, Thomas Augustus. Rear Admiral, U.S.N., retired, and former chaplain of the United States Navy, died at Littleton, N. H., Aug. 2. He was born at Philadelphia, Pa., Feb. 8, 1840, and after graduating from Bucknell University in 1865, studied at its theological seminary from which he received the degree of B.D. in 1867, and that of D.D. in 1893. He served two enlistments in the Union Army during the Civil War. In 1868 he became a pastor in Philadelphia. On Dec. 22, 1874, he was appointed a chaplain of the Navy by President Grant. He was retired with the rank of rear admiral in Feb. 1902. He made his home in Brookline, Massachusetts.

Glenn, Edwin Forbes.

Glennan, Arthur Henry.

Goldsmith, Peter H.

Gonzales, Ambrose Elliott.

Gorst, Nina Cecelia Francesca (Mrs. Harold). British novelist and dramatist, died at London, England,

Oct. 19. She was born Nov. 2, 1869, and was a sister of Charles Rann Kennedy, author of *The Servant in the House*. She was educated at home. She was the author of many realistic novels, often using the London slums for their setting.

Govin, Rafael Ramon. American publisher, died at Monte Carlo, Monaco, Feb. 14. He was born in New York City, Aug. 31, 1868, and received his early education at private schools, and under tutors. In 1889 he graduated from the Columbia University Law School, and for a while practiced law in New York City. In 1896 he became interested in newspaper work, becoming publisher and manager of *The Journal of Commerce*, New York, and of *El Mundo* and *La Prensa*, Havana. From October, 1923, he was president and general manager of *The Journal of Commerce*, and was also active in various commercial enterprises, being president of the Inter-Ocean Oil Company.

Granniss, Mrs. Elizabeth Bartlett.

Greenway, John Campbell.

Greenfell, Bernard Pyne.

Grey-Wilson, Sir William. British Government administrator, died on Feb. 14. He was born in Kent, Eng., Apr. 7, 1852, and was educated at Cheltenham College, and in France. He was private secretary to Sir William Grey, Governor of Jamaica, in 1874, and to Sir Frederick Barlee in 1877. In the following year he was made clerk to the executive and legislative councils of British Honduras, and in 1884 he became assistant colonial secretary for the Gold Coast of Africa. In 1886 he was colonial secretary for St. Helena, and the year after he was made governor, which post he held for 10 years. On his recall thence he was appointed governor of the Falkland Islands, from 1897 to 1904, and from the latter year to 1912 he was governor of the Bahamas. He was made a K.C.M.G. in 1904, and in 1918 he was created a Knight of the British Empire.

Grossman, Louis.

Gunn, George Miles. American banker and Democratic politician, died in New Haven, Conn., Sept. 8. He was born at Milford, Conn., in 1851, and was graduated from Yale in the class of 1874, being a member of the first Yale football team and playing in the first Yale-Princeton game in 1873. After graduating, he taught in the Cheshire Military Academy, and then graduated from the Yale Law School in 1878. He practiced law in New Haven and in Milford until he became president of the National Tradesman's Bank of New Haven, Conn. He served several terms in the Connecticut Legislature, and in 1907 was Democratic leader of the house.

Guppy, Henry Brougham.

Gupta, Sir Krishna Govinda.

Guyer, William Harris.

Hackett, Frank Warren.

Hackett, James Keteltas.

Hackett, William Stormont. American banker, and mayor of Albany, N. Y., died at Havana, Cuba, Mar. 4. He was born at Albany, Dec. 7, 1868, and was educated at the high school of that city, entering commercial life as a clerk in the Albany City National Bank in 1887. In 1893 he became treasurer and secretary of the City Savings Bank of Albany, serving in this capacity until 1917, when he was elected president. He was admitted to the New York bar in 1889, and, as a Democrat, was elected mayor of Albany, 1922-26.

Haddock, Edgar. A British violinist, died at Leeds, Aug. 9. He was born there in 1862. In 1884 he began his series of musical evenings, which became an annual event and soon spread his fame throughout England. In 1891 he appeared with Joachim in Spohr's *Double Concerto*. With his brother Percy he founded the Leeds College of Music, of which he was director till his death. Besides a *Practical School for the Violin*, he wrote some original compositions for his instrument, and edited a number of famous violin pieces.

Haggard, Sir William Henry Doveton.

Haight, Albert. American jurist, died at Buffalo, N. Y., Oct. 6. He was born at Ellicottville, N. Y., Feb. 20, 1842, and received his early training at the Springville, N. Y., academy, being admitted to the bar in 1863. He became county judge of Erie County in 1872. In 1876 he became justice of the Supreme Court of the eighth judicial district, and was later justice for the 5th department, and associate judge of the 2d Division, Court of Appeals in 1889-94. On Jan. 1, 1895, he became an associate judge of the Court of Appeals of New York, serving until Dec. 31, 1912, when he retired from the bench.

Haines, Henry Cargill. Brigadier general, U.S.M.C., retired, died at Berkeley, California, Aug. 8. He was born at Ft. Leavenworth, Kan., Nov. 19, 1858, the son of Brig. Gen. T. J. Haines, U.S.A., and graduated from the U. S. Naval Academy in 1881. He was appointed second lieutenant in the Marine Corps, July 1, 1888, and was promoted through the various

ranks to brigadier general, Jan. 14, 1920, retiring Jan. 1, 1923. General Haines was in charge of the various local offices of the Marine Corps on the Pacific Coast, and in 1908-12 was on duty at Washington.

Halstead, Albert Edward. American surgeon, died Dec. 6. He was born at Ottawa, Canada, Apr. 21, 1868, and received his M.D. at Northwestern University Medical School in 1890, in which year he became interne at Cook County Hospital, Chicago, remaining there until 1891. He then began the practice of medicine in Chicago. In addition to his practice Dr. Halstead was for twenty years attending surgeon at Cook County Hospital; professor of anatomy at Northwestern University Medical School; and professor of surgery at Illinois State University. In 1917 he was made lieutenant colonel in the U. S. A. Medical Corps, serving abroad with the A. E. F.

Hamlin, Alfred Dwight Foster.

Hanford, Charles Barnum.

Harris, John Royall.

Harris, Admiral Sir Robert Hastings.

Harris, Robert Orr. American lawyer, died at Brockton, Mass., June 13. He was born at Boston, Mass., Nov. 8, 1854, and graduated from Harvard in 1877. Entering the profession of law he practiced at Boston and Brockton, Mass., being elected a member of the Massachusetts House of Representatives in 1889. From 1892-1901 he was district attorney for the southeastern district of Massachusetts, and in 1902-11 he was associate judge of the State Supreme Court. He served as a representative in Congress from 1911-13 from the 14th Massachusetts district. Appointed United States district attorney for Massachusetts in 1924, he became involved in a controversy with Mrs. Mabel Walker Willebrandt, assistant attorney general of the United States, over the enforcement of the Prohibition law, and was removed by order of President Coolidge after refusing to resign his office.

Harrison, Frederick.

Hart, William H.

Hartshorn, William Henry. American educator, professor of English in Bates College, Lewiston, Me., died at Lewiston, Feb. 24. He was born at Lisbon, Me., June 17, 1863, and graduated from Bates College in 1886. In the same year he became superintendent of schools and principal of the High School at Laconia, N. H., serving until 1889, when he became instructor in physics at Bates College. He was made professor in 1890, and was transferred to the English department in 1894. In 1919-20 he was acting president of the college.

Harwood, George Alexander. American railway official and a vice-president of the New York Central Lines, died at White Plains, N. Y., Nov. 4. He was born at Waltham, Mass., Aug. 29, 1875, and after graduating from the English High School, Boston, in 1892, studied engineering at Tufts College, receiving the degree of B.S. in 1898. In 1900 he joined the engineering staff of the New York Central, and Nov. 1, 1906, was appointed chief engineer of the electric zone improvements. He was also in charge of the construction of the Grand Central Terminal, and various improvements in connection with electrification. In 1918-20 Mr. Harwood was corporate chief engineer of the New York Central Lines and of the Rutland Railroad Co. and in the latter year was made assistant to the president, serving until 1924 when he was made vice-president. He was a trustee of Tufts College.

Harwood, Harry. American actor, died at Portland, Me., Aug. 2. He was born in New York City in 1848, and for fifty years was well known on the American stage, being a member of Frohman's and Daly's companies. Among the more notable plays in which he appeared were, *The Man of the Hour*, *Suzanne*, and *The Senator Keeps House*.

Haupt, Paul.

Hawkins, Thomas Hayden. American physician, died at Plainfield, N. J., July 20. He was born in Kentucky in 1848, and after graduating from De Pauw University entered Bellevue Medical College in New York, receiving the degree of M.D. in 1878. He engaged in general practice in New York until 1880, when he went to Denver, Colo., as president of Goss Medical College. He was editor of the *Denver Medical Times*, Hayami, Seiji.

Heigho, Colonel E. M. American railway man, died in Boise, Idaho, Aug. 27. He was born at Grays, Eng., Oct. 23, 1867, and, going to the United States at the age of 15, entered railway service in Detroit as an office boy. He served in many railway offices. In 1904 he was elected vice-president, general manager, and treasurer of the Pacific and Idaho Northern R. R., and in 1909 was elected president, general manager, and traffic manager. In Sept. 1915, he was appointed receiver, being in general control of the property and its operation. Notwithstanding a stroke of paralysis in Nov. 1917, he continued his duties as president and general manager until Oct. 1918, when he re-

signed the latter position, retaining the presidency until he was forced to retire from active business in March, 1919.

Henry, Bayard. American lawyer and financier, died at San Francisco, Calif., Sept. 17. He was born at Philadelphia, Pa., Jan. 15, 1857, and graduated from Princeton University in the class of 1876. He took up the profession of law and became a partner of George Wharton Pepper. He also was president of the United New Jersey Railroad & Canal Co., director of the Pennsylvania Railroad Co., the Lehigh Coal and Navigation Co., the United States Fidelity & Guaranty Co., of Baltimore, and many other corporations. In 1898-1902 he was a member of the Pennsylvania Senate, and he was a member of the Select Council of Philadelphia, 1908-11. He was a trustee of Princeton University.

Herd, Louis A.

Hering, Carl.

Hermann, Binger.

Herrick, George F. American missionary in Turkey, died in New York, N. Y., Oct. 28. He was born at Milton, Vt., in 1834, and, going to Turkey, was for 25 years a teacher in the Congregational Mission Theological Seminary, and for three years was president of Anatolia College. He translated and revised the Bible for Turkish readers, and superintended the publication in Turkish of various missionary books. He also wrote religious books in Turkish, and one in Armenian.

Herring, Augustus M.

Hewins, Caroline Maria.

Hioki, Eki.

Hitchcock, Francis R. American sportsman and breeder of thoroughbreds, died at sea, Apr. 18. He was born in New York, and after graduating from Columbia College in 1878, and studying law he became greatly interested in outdoor sports, and particularly in racing. He was elected a member of the Jockey Club in 1895, and on Oct. 18 of that year became one of its stewards, a place he held until his death. He was active in the reestablishment of racing at Saratoga, being president of the Saratoga Association for the Improvement of the Breed of Horses in 1904-08. He was a governor of the Coney Island Jockey Club for many years, serving as its treasurer in 1908 until the organization was dissolved in 1917. About that time he transferred a large part of his interest in the turf to France, and was an active participant in racing on the French tracks. Mr. Hitchcock also engaged in the breeding of thoroughbreds, and was the owner of many well known horses in America and Europe.

Hoban, the Rt. Rev. Michael John

Hobart, George Vere.

Holland, Arthur. American railway executive and at one time president of the Bangor and Aroostook R. R., died at Concord, Mass., Oct. 1. He was born at Boston, Mass., Sept. 22, 1850, was graduated from Harvard University in 1872. From 1897-1901 he was agent for the Illinois Steel Co. at London, Eng., and in 1902-05 he was president of the United Railroads of San Francisco. In 1908-11 he was a member of the executive committee of the York Ry., York, Pa., and in 1912 became president of the Bangor and Aroostook, a position he held until 1916.

Holland, Joseph Jefferson. American actor, died at New York, N. Y., Sept. 25. He was born in New York City, Dec. 20, 1860, the son of George Holland, a well known actor. He was educated in the public schools of New York City, and in his early life took juvenile parts in a number of productions. He appeared professionally with George Rignold, Mar. 25, 1878, in Shakespeare's *Henry V*. He played various rôles in New York, Philadelphia, and San Francisco, starting with his brother, E. M. Holland, in *The Social Highwaymen*, and alone in *The Mysterious Mr. Bugle*. He retired from the stage in 1904.

Holland, Sir (Thomas) Erskine.

Holley, Marietta.

Holt, Henry.

Hood, William. American civil engineer, died at San Francisco, Cal., Aug. 26. He was born at Concord, N. H., Feb. 4, 1846, serving as a private in the Forty-sixth Massachusetts Volunteers during the Civil War for two years. He graduated from Dartmouth College with the degree of Bachelor of Science in 1867, and immediately began work on the Central Pacific Railroad as rodman with an engineering field party. As a railway engineer he was responsible for much notable work in the way of railway location and construction on the Pacific Coast and in the Rocky Mountain region; his more notable achievements included the construction of the Tehachapi loop, the building of the Lucin cut-off across the Siskiyou Mountains, and the completion of the line through the Oquirrhos Gorge uniting the Imperial Valley with San Diego. In 1923 Dartmouth honored him with the honorary degree of

Doctor of Science, and at the time of his death he was one of the few remaining engineers identified with the bold, pioneer railroad construction in the western United States.

Hopkins, Archibald. American lawyer, died at Washington, D. C., June 18. He was born at Williamstown, Mass., Feb. 1842, the son of President Mark Hopkins of Williams College. He graduated from Williams in 1862, and, entering the Union Army, served as captain, brevet major, lieutenant colonel, and colonel with the 37th Massachusetts Volunteers, 1862-65. In 1867 he studied law at Columbia, being admitted to the bar in that year, and practicing in New York City until 1873, when he was appointed clerk of the United States Court of Claims, a position he held until 1914. He was chairman of the board of the Associated Charities of Washington, and a trustee of the Legal Aid Society. He was a member of the board of visitors to the U. S. Military Academy, and a delegate to the International Peace Conference. He was vice-president of the trustees of George Washington University, president of the District of Columbia Society of the Sons of the Revolution, and chancellor of the District of Columbia Commandery of the Loyal Legion. He wrote *The Apostles' Creed* (1909), and occasional prose and verse.

Horner, Ralph Joseph.

Hotchkiss, Dr. Lucius Wales. American surgeon, died at Santa Barbara, Calif. Apr. 13. He was born in New Haven, Conn., Dec. 31, 1859, and graduated from Columbia College in 1881, and from the College of Physicians and Surgeons of Columbia University in 1884. He began medical practice in New York in 1886, was professor of clinical surgery in the College of Physicians and Surgeons, and consulting surgeon for several hospitals.

Houdini, Harry.

House, Francis Edwin. American railway president, died at Janesville, Wis., Apr. 3. He was born at Houseville, N. Y., Nov. 15, 1855, and after studying at Rensselaer Polytechnic Institute, Troy, N. Y., began as a mining engineer and assayer for the Manhattan Silver Mining Co., at Austin, Nev., in 1877. Three years later he entered the engineering department of the Chicago, Milwaukee & St. Paul Ry. at Chicago. He held many railroad positions and in 1896 he was made chief engineer of the Ressemer & Lake Erie, general superintendent in 1897, and general manager in 1901. In the latter year he was elected president of the Duluth & Iron Range R. R., and, during the period of Federal control, was Federal manager of the Duluth & Iron Range and the Duluth, Missabe & Northern.

Houston, Sir Robert Paterson, First Baronet. British ship owner, died at St. Saviour's, Jersey, Eng., Apr. 14. He was born at Bootle, Eng., May 31, 1853, and was educated at Liverpool College and apprenticed to the engineering and shipbuilding trade. In business for himself, he built up the Houston Line to the River Plate. In addition to his activities as shipowner, he was elected to Parliament as a Conservative in 1892, for the West Toxteth division of Liverpool, and represented that division continuously for 32 years. In 1922 he was made a baronet, and in 1924 ill-health forced him to retire from Parliament. He was a well known yachtsman, and at one time was mentioned as a possible challenger for the American's Cup.

Howard, John Raymond.

Howe, Herbert Alonzo.

Howland, John.

Howson, Frank A. An American conductor and composer, died at Hollis, N. Y., June 29. He was born in London, Eng., in 1841, but was reared in Sydney, Australia. In 1866 he went to the United States as conductor for his father's opera company, which gave performances in California. Later he settled in New York as conductor at various theatres. His compositions consist almost exclusively of incidental music to plays produced by Daniel Frohman and Augustin Daly.

Howze, Robert Lee.

Hozumi, Baron Chinchō (Nobushige).

Hussey, William Joseph.

Hyman, Charles Smith. Canadian statesman, died Oct. 9. He was born at London, Ont., in 1854, and was educated at Hellmuth College of that city. He was president of the Board of Trade, 1881-82, alderman, and chairman of the Finance Committee of the city from 1882-83, and mayor in 1884. He was returned to Parliament in 1891, and served as secretary of the Dominion Liberal convention in 1893. In 1904 he was sworn of the Privy Council, and made a member of the cabinet without portfolio, and in 1904-05 was acting Minister of Public Works, resigning from this position in 1906.

Isley, the Most Reverend Edward.

Ingham, the Rt. Rev. Ernest Graham. British clergyman and vicar of St. Jude's, Southsea, died Apr. 9.

He was born in 1851. His father was speaker of the House of Assembly, Bermuda; he was educated at Bishop's College School, Lennoxville, Canada, and at Oriel College, Oxford. After serving in various positions in church work, he was consecrated Bishop of Sierra Leone, in 1883, serving until 1897, when he became rector of Stoke-next-Guildford. From 1904-12 he was home secretary of the Church Missionary Society. In 1912 he became vicar of St. Jude's, Southsea, a position he held at the time of his death. He was the author of *Sierra Leone After a Hundred Years* (1894); *From Japan to Jerusalem* (1911); and *Sketches in Western Canada* (1913).

Inness, George, Jr.

Jaegle, Charles J. Roman Catholic publisher, died at Pittsburgh, Pa., Nov. 6. He was born in Freiburg, Germany, in 1853, and came to America in 1868, settling in Pittsburgh. In 1880 he became manager of the *Pittsburgh Beobachter*, a German Catholic newspaper, holding this position until 1898, when he established the *Pittsburgh Catholic Observer*, the official organ of the Roman Catholic Diocese of Pittsburgh. He was publisher of this paper until 1916, when he retired. He was one of the founders of the Catholic Press Association in the United States and Canada, and at one time served as trustee of Duquesne University.

Jeffers, Leroy. American librarian, known as a mountaineer and explorer, died at Wawona, Calif., July 25. He was born at Ipswich, Mass., Aug. 1878, and after serving as manager of the Booklovers' Libraries, 1901-04, he became connected with the New York Public Library in 1905 as manager of the book order office, a position he held at the time of his death. In 1916 he organized the Associated Mountaineering Clubs of North America, comprising 65 clubs and societies active in the creation, development, and protection of national parks and forests. He was a member of the Council on National Parks, Forest and Wild Life, and of the general council of the National Conference on Outdoor Recreation. He was a member of many mountaineering and other societies, and was the author of *The Call of the Mountains* (1922); as well as a contributor to periodicals, on mountaineering, travel, psychology, and library economy.

Johnson, William F. American missionary in India, died in Mainpur, India, July 6. He was born at Oadiz, Ohio, in 1838, and graduated from Old Jefferson College at Canonsburg, Pa., in 1857, studying later at the Western Theological Seminary, Pittsburgh, Pa. He was ordained in 1860, and went to India as a missionary to take the place of a brother killed in the Cawnpore mutiny. In 1885 he returned to America, becoming president of Biddle University, Charlotte, N. C., but in 1891, went back to India. He translated the Bible and English classics into Hindustani.

Johnston, Rienzi Melville.

Jones, William Larimer. American steel manufacturer, died at Pittsburgh, Pa., Nov. 25. He was the son of Thomas M. Jones, a prominent steel manufacturer. After graduating at Princeton in 1887, he became assistant to his father. In 1922, when the Jones & Laughlin Steel Corporation was formed, he became its president.

Junod, Louis Henry. Consul general of Switzerland at New York, died at New York, N. Y., Aug. 3. He was born in Neuchâtel, Switzerland, in 1861, and was educated at the College of Nice. When 22 years of age he went to the United States as representative of Swiss manufacturers of laces and embroideries, and developed a large business. In 1917, as Swiss Consul, he took over the affairs of the German Consulate General until after the World War.

Kahn, Max D.

Kammerer, Paul.

Kato, Viscount Takaakira.

Kawamura, Viscount Kagesaki.

Kemp, James Furman.

Kendrick, Leon Harry. American editor, died Sept. 22. He was born in England in 1841, but went to the United States as a young man and made his home in New York. In the Civil War he enlisted in the 4th Massachusetts Cavalry and rose to the post of assistant adjutant general, with the rank of major, and became the chief of General Grant's escort. For many years he owned and edited the *Hudson County* (N. J.) *Democrat*, in which he maintained a Republican policy.

Kerimer, Otto.

Key, Ellen.

King, Alfred. British organist and composer, died at Brighton, Apr. 26. He was born at Shelley, Essex, Apr. 24, 1837. Having held various posts as organist, he settled in Brighton, in 1865, as organist at St. Michael's and subsequently became connected with the parish church. In 1878-83 he was one of the conductors of the Brighton festival. In 1888 he founded the Brighton School of Music, of which he still was

director at the time of his death. His works include an oratorio *The Epiphany* (Brighton Festival, 1891), a cantata, a mass, sacred music and choruses.

Klein, Franz.

Kneeland, Stillman Foster.

Kneisel, Franz.

Knox, William John.

Kohler, Kaufmann.

Lafayette, Paul Marie Joseph de Pourcet de Sahune du Motier, Comte de. Great-great-grandson of Major General Lafayette, and a great-grandson of George Washington Lafayette, the only son of the Revolutionary general, died in Mount Vernon, N. Y., June 17. He was born in France in 1844. He went to the United States in 1902 to represent the Lafayette family at the unveiling of the Rochambeau monument in Washington, and again in 1908 to live. He had been for 15 years an army officer serving in the French cavalry in Senegal, the French Sudan, and in Africa. He was a Chevalier of the Legion of Honor, and an honorary member of the Society of the Cincinnati, State of Virginia.

Lange-Muller, Peter Erasmus.

Lanier, Charles. American banker, died in New York City, Mar. 7. He was born at Madison, Ind., Jan. 19, 1837, and was educated at Russell's Military School, New Haven, Conn. Entering commercial life at the age of 23, he became a member of the firm of Winslow, Lanier & Co., bankers. In this capacity he was interested in many railway and other corporate interests, being president of the Pittsburgh, Fort Wayne & Chicago Ry. Co., and the Massillon & Cleveland R. R. He was a trustee of the Central Union Trust Co. of New York and a director of the Southern Railway Company.

La Rocque, the Rt. Rev. Paul. Roman Catholic Bishop of Sherbrooke, Quebec, died Aug. 15. He was born at Marieville, P. Q., Oct. 28, 1846, and was educated at the Colleges of Ste. Thérèse and St. Hyacinthe. He was ordained in 1869, and, after serving in various fields, became rector of the cathedral of St. Hyacinthe in 1884. He held this charge until 1893, when he was consecrated Bishop of Sherbrooke.

Lathrop, Rose Hawthorne.

Lattermann, Theodor. A famous German dramatic basso, died in Berlin, in March. Born in 1880 in Frankfurt, he began life as a sculptor, but soon turned to music. He won his great reputation at the Stadt-theatre in Hamburg, but appeared frequently as a guest at the principal German opera houses. In 1923 he made a tour of the United States as a member of the Wagnerian Opera Co. In 1910 he married the contralto Ottilie Metzger, one of the stars of the Hamburg Stadt-theatre.

Lawrence, (Alfred) Clive. British Government official and Solicitor to the Treasury since 1923, died at Cheltenham, Mar. 13. He was born in 1876, the eldest son of Baron Trevelthyn, and was educated at Haileybury and Trinity Hall, Cambridge. He was called to the bar at the Middle Temple in 1902, and served in various positions as counsel, and solicitor to government departments. In 1918 he was made Commander of the Order of the British Empire, and in the following year Officer of the Order of St. Maurice and St. Lazarus of Italy. In 1923 he was made King's Proctor, and Solicitor to the Treasury, a position he held at the time of his death.

Laws, Elijah. American naval officer, died at Morristown, N. J., Sept. 25. He was born in Pennsylvania in 1833 and entered the navy in 1858 as third assistant engineer. He held the rank of second assistant engineer during the Civil War, and in 1870 was advanced to chief engineer, retiring in 1906 with the rank of rear admiral.

Lee, John Mallory. American surgeon, died January 11. He was born at Cameron, Steuben Co., N. Y., Sept. 29, 1852, and after studying at the Penn Yan (N. Y.) Academy, and with private tutors, went to the University of Michigan where he received the degree of M.D. in 1878, later taking post graduate courses at the Post Graduate College and Polyclinic in New York City. From 1887-98 he was surgeon, consulting surgeon, and surgeon-in-chief to the Rochester Homeopathic Hospital, consulting surgeon of the Hahnemann Hospital, 1908-19, consulting surgeon to other hospitals, and state medical examiner under the Regents of the State of New York, 1895-1907, being president of the joint board of medical examiners representing the three schools of medicine, 1901-07. He had been at various times president of the American Institute of Homeopathy and of the American Radium Society. He was the author of many articles on medical and surgical topics, and one of the authors of the *Fisher-MacDonald Text Book of Surgery*.

Lee, Sir Sidney.

Le Hay (Healy), John. Irish actor, died in London, Eng., Nov. 10. He was born in Dublin, Mar. 25, 1854, and, becoming an actor in 1879, was a member

of the chorus of *The Zoo*. For a number of years he played in Gilbert and Sullivan operas with the D'Oyly Carte company at the Savoy Theatre. In 1886 he played Tom Strutt in *Dorothy*, and Crook in *Doris*, at the Lyric Theatre, and also was successful as Alexander McGregor in *My Girl*. He went on an American tour in the United States with the *Rose of Persia*, *Veronique*, and the *Emerald Isle*, and also traveled as a ventriloquist. In the performance of *Potash and Perlmutter* in London, during the War, he played Abe Potash.

Leishman, Sir William Boog.

Léon, Mischa. An American dramatic tenor, died in New York, Apr. 7. He was born in Minnesota, but studied in Copenhagen, where he made his début in Auber's *Fra Diavolo*. He went to the United States in 1912 as member of the Savage Opera Company, singing the next year with the Aborn English opera company in New York. After that he was heard at the Grand Opéra in Paris and at Monte Carlo and in recitals in London. In 1918 he married the dramatic soprano, Pauline Donalds.

Le Sage, Sir John Merry. British journalist, died at Hurlingham, Eng., Jan. 1. He was born at Clifton, Eng., Apr. 23, 1837, and was educated at that town, Bath, and London. Entering journalism, he worked first in the provinces, and then joined the staff of the *Daily Telegraph*, with which paper he was connected for years. He acted as special correspondent in several military campaigns, being with the German Army in 1870 and with Lord Wolseley's force in Egypt in 1882. He was in Paris during the whole period of the Commune. He became managing editor of the *Daily Telegraph*, retiring in June, 1923. He was knighted in 1918, and was Lieutenant of the City of London.

Leslie, Sir Bradford. British engineer, died at London, Eng., Mar. 21. He was born in London in 1831, and at the age of 16 was apprenticed to Brunel, the famous bridge designer and engineer, with whom he was associated until 1859. His first important achievement was the Gorai Bridge in India, where a new boring gear was used for sinking caissons in the shifting river bed. In 1876 he became agent and chief engineer of the East Indian Railway Co. In 1887 he was created Knight Commander of the Order of the Indian Empire.

Levy, Max. American inventor, died July 31. He was born at Detroit, Mich., Mar. 9, 1857, and after studying architecture in Detroit in 1875 engaged in photo engraving. To him was due the modern screen for the half-tone process as well as other advances in half-tone illustration, for which he received the John Scott medal, from the Institute of Philadelphia and other honors. He was a frequent exhibitor at many photographic and other exhibitions, and invented a counting chamber for the hemocytometer. During the World War he rendered valuable assistance to the U. S. War Department in the development of optical instruments.

Lewis, Agnes Smith.

Lewis, Jeffreys (Mrs. Harry Mainhall).

Lewis, William James. British mineralogist and professor at Cambridge University, died at Godalming, Eng., Apr. 16. He was born Jan. 16, 1847, and was educated at Jesus College, Oxford, taking honors in mathematics and natural science. In 1874 he went to Cambridge, and studied mineralogy under Prof. W. H. Miller as a member of Trinity College, and in Feb., 1881, he succeeded his teacher as professor of mineralogy in Cambridge University. In 1899 he published a treatise on crystallography.

Lincoln, Robert Todd.

London, Meyer.

Loomis, Archibald Gilbert. Banker and treasurer of the Chicago, Milwaukee & St. Paul Ry., died at Chicago, December 8. He was born in Hartford, Conn., June 20, 1848, and began business life as a bank clerk in Hartford, being with the Aetna National Bank of that city from 1865-99, and serving as its president from 1891, until he moved to New York to become vice-president of the National City Bank. He was also connected with the banking house of N. W. Halsey & Co., and in 1907-15 was vice-president of the Union Trust Co. of Providence, R. I. In 1917 he became treasurer of the Chicago, Milwaukee & St. Paul Railway.

Loukoff, General. Bulgarian soldier and statesman, died at Sofia, Apr. 19. He was commander of the second Bulgarian army during the World War, and later chief of staff. He represented Bulgaria in the negotiations with France for an armistice in Sept. 1918.

Lovett, Robert H. American jurist and at one time Assistant Attorney General of the United States, died in Chicago, Ill., August 28. Born at Brimfield, Ill., in 1852, he was educated at the State Normal School, Normal, Ill., and was admitted to the Illinois bar in 1885. After practicing in Peoria he served for 11 years as county judge. He acted as United States mas-

ter in chancery and commissioner for many years, and in April, 1921, was appointed by President Harding assistant attorney general of the United States in charge of litigation involving claims. He was active in the preliminary investigation of the Teapot Dome situation.

Lyman, George Richard.

MacAlpine, Robert John.

MacArthur, Arthur Frederic.

McAvoy, Francis S. American jurist, died in New York City, Aug. 6. He was born in 1856, and was active in Democratic politics in the city of New York. In 1905 he was made a city magistrate, and later became judge in the Court of General Sessions. He was elected Recorder of the Court of General Sessions, holding that office until it was abolished in 1907 by the legislature.

McBride, Robert W.

McClelland, Thomas. American educator, died at Galesburg, Ill., Jan. 29. He was born at Quilly, Ireland, May 1, 1846, and going to America, was graduated from Oberlin College in 1875, studying at the Oberlin Theological Seminary, 1876-77, and the Union Theological Seminary, New York, 1877-78, and graduating from Andover Theological Seminary in 1880. In that year he became professor of philosophy in Tabor College, serving until 1891, when he was elected president of the Pacific University of Oregon. He was there until 1900, when he was called to Knox College, serving as its president until 1917, when he became president emeritus. In 1905-17 he was a trustee of the Carnegie Foundation for Advancement of Teaching.

McClelland, Edward John.

McClurg, Ogden T. American publisher and explorer, died at Chicago, Ill., Apr. 20. He was born at Chicago, Ill., Sept. 8, 1879, the son of General Alexander C. McClurg, founder and president of the publishing firm of A. C. McClurg & Co. He was graduated from Yale in 1901 and became president of A. C. McClurg & Co. During the World War he was a lieutenant commander in the navy, acting as chief of staff of the district at Brest, France.

McCoy, William Johnston.

McDonald, John Bacon.

McFadden, George H.

McKenna, Joseph.

McKenzie, Andrew C. American architect, died at Brooklyn, N. Y., Oct. 10. He was born in Dunkirk, N. Y., in 1861, and, when a young man entered the practice of architecture with the firm of Eiditz & McKenzie. This firm, which designed a number of important buildings, later became McKenzie, Voorhies & Gmelin, and designed the Barclay-Vesey Building of the New York Telephone Company on Vesey Street, New York City, with others.

McKinley, William Brown.

MacLaren, John James.

McLeer, James Crooke. American soldier and lawyer, died at Brooklyn, N. Y., Sept. 25. He was born at Brooklyn, in 1871, the son of General James McLeer, a veteran of the Civil War. He attended the New York University Law School, being admitted to the New York bar in 1898. In that year he enlisted in Troop C, 1st New York Cavalry, and served during the Spanish-American War. In 1916 he served on the Mexican border as lieutenant colonel of the 1st New York Cavalry, and in the World War he commanded the ammunition train of the 27th Division.

McMillan, Sir William.

Mair, George Herbert.

Mance, Sir Henry Christopher.

Mapother, Wible Lawrence.

Margherita, (Marie Margherita Teresa Giovanna de Savoia), Queen Dowager of Italy.

Markley, Alfred Collins.

Marshall, William A. American naval officer, died at Jamestown, R. I., July 10. He was born Oct. 17, 1849, and graduated from the U. S. Naval Academy in 1871. He rose through successive grades to rear admiral in 1910, and was retired on account of age, Oct. 17, 1911.

Martin, Thomas F.

Marvin, Winthrop Lippitt.

Masini, Angelo.

Massey, Chester D.

Mastbaum, Jules E.

Megata, Baron Tanetaro.

Melton, William Davis.

Mercier, Cardinal Desiré Joseph.

Merck, George. American manufacturer, died at Orange, N. J., Oct. 21. He was born at Darmstadt, Germany, in 1867, the son of Wilhelm Merck, the founder of the chemical manufacturing firm of that name. He arrived in the United States in 1891 and established a business similar to that of his father, but preserving his independence. He retired from the active presidency of the company in 1924.

Merriman, John Xavier.

Merten, Rear Admiral (Pasha).

Metcalf, Leonard. American civil engineer, died Jan. 29. He was born at Galveston, Tex., Aug. 26, 1870, and graduated from the Massachusetts Institute of Technology in 1892. In 1897 he became a consulting engineer in Boston, and a member of the firm of Metcalf & Eddy. He had been president of the American Water Works Association, the Northeastern Water Works Association, and the Boston Society of Civil Engineers, and chairman of the Council of Affiliated Technical Societies of Boston.

Miles, Gwilym. A distinguished American concert baritone, died in St. Louis, July 2. He was born in 1868. He made several appearances with the Boston Symphony Orchestra, but his specialty was oratorio. From 1919 till his death he was director of music of the Fitchburg, Mass., high school.

Miles, Sir Herbert. British soldier and educator, died in May. He was born July 31, 1850, and was educated at Wellington College and the Royal Military College, Sandhurst. He entered the army in 1869. In May, 1881, he took over the position of garrison instructor at Aldershot, and became A.A.G. "for instruction" at Aldershot in 1893, and Commandant of the Staff College in 1898. In 1899, on the outbreak of the South African War, Colonel Miles was made A.A.G. on the headquarters staff of the original expeditionary force; while with this expedition he twice received mention in dispatches, the Queen's medal with six clasps, and a C.B., and was made chief of staff. He served in various positions until April, 1913, when he retired from the Army, and was appointed Governor of Gibraltar. He held this post until 1918. He was Colonel of the Royal Munster Fusiliers; Governor of Wellington College; Commissioner of Chelsea Hospital; Grand Officer of the Legion of Honor; Grand Officer of the Crown of Italy; and held the Grand Cross of Isabel la Catolica of Spain.

Miller, Harlan D. Bridge engineer of the California Highway Commission, died Oct. 20. He was a graduate of the Case School of Applied Science, class of 1904. He was successively with the J. P. Cowing Co., the bridge department of the New York Central R. R., and the New York State Engineer's Office. In 1915 he became a partner in the firm of Watson, Davis & Miller of Cleveland. In 1919 he was appointed assistant bridge engineer for the California State Highway Commission, and in 1924 became chief bridge engineer, which position he held until his death.

Miller, Henry.

Moffett, Cleveland (Langson).

Mohammed VI.

Mollenhauer, Louis. An American violinist and teacher, died in Brooklyn, Feb. 8. He was born there, in 1863, and studied with his uncle, Edward Mollenhauer. After the death of his father, Henry, in 1889, he succeeded him as director of the Mollenhauer Conservatory in Brooklyn, but two years later withdrew and established his own music school, which he conducted till his death.

Mouet, Claude.

Montgomery, Benjamin F. American soldier and first head of the White House telegraph bureau, died in New York, N. Y., July 7. He was born at Petersburg, Va., on July 5, 1853, was educated at the Kenley Academy, in Virginia. In 1875 he joined the Army Signal Corps, and in March, 1877, he was selected to take charge of the telegraph office then just established in the White House. For his services there during the Spanish-American War he was made a colonel. In 1905, Colonel Montgomery was transferred to California, and in 1907 he retired from the Army.

Mooney, Charles Patrick Joseph.

Moore, Forrius Jewett.

Moore, Harry Humphrey.

Moore, Walter William.

Moran, Thomas.

Morrow, William H. American lawyer, died on July 14, at Belvedere, N. J. He was born at Deckertown, N. J., Feb. 10, 1844, and was admitted to the bar in 1865. In December, 1878, he was appointed judge of the common pleas court of Warren County, and he served for five years. In 1891 he was reappointed by Governor Abbott, and in 1893 he was again appointed for a full term of five years by Governor Wertz. Judge Morrow was also mayor of Belvedere for two terms, and for a number of years he served on the State Board of Education.

Morschauer, Charles. American justice, died at Red Hook, N. Y., Dec. 30. He was born in 1859, a brother of Supreme Court Justice Joseph Morschauer, of New York State, and he was at one time a member of the State Court of Claims. Judge Morschauer was counsel for Harry Thaw in his unsuccessful attempt to obtain release from the State Hospital for the Criminal Insane at Matteawan. In 1923 he was designated an additional judge of the Court of Claims, and he was the Democratic candidate for attorney general in the 1918 elections.

Morse, Richard Cary. American pioneer in Y.M.C.A. organization, died at Brooklyn, N. Y., Dec. 25. He was born at Hudson, N. Y., in 1840, and in 1862 he graduated from Yale University. He took the degree of A.M. there, and later studied at Princeton and at Union Theological Seminary. He did not enter the active ministry, but became religious editor of the *Observer*, which had been founded by his father. Dr. Morse first became associated with the Y.M.C.A. movement in 1869, and from his efforts the organization grew from three or four branches to over two thousand. He followed the work in its various departments, rising to be general secretary of the international committee. Upon reaching the age for retirement in 1915 Dr. Morse resigned and was succeeded by Dr. John R. Mott. He would not leave the active work of the Association, however, and was made consulting general secretary of the international committee. He wrote *A History of the North American Young Men's Christian Associations*.

Moses, the Reverend Dr. Isaac S.  
Mossesohn, the Reverend Dr. Nehemiah.  
Mott, Sir Frederick Walker.  
Mudd, Seesley Wintersmith.  
Murkland, Charles Sumner.  
Murray, Lawrence O. American banker and politician, died at Elmira, N. Y., June 10. He was born in 1864 in Steuben County, N. Y., and received most of his education at Niagara University. He later received degrees from the Metropolis Law School in New York and from New York University. He was admitted to the bar in 1893, and after practicing law in New York, entered the Treasury Department under Secretary Carlisle. In 1898 he was appointed Deputy Comptroller of Currency, holding the post for one year. In 1904 he was appointed by President Roosevelt Assistant Secretary of Commerce and Labor, and in 1908 he became Comptroller of Currency. On the expiry of his term of office in 1913, Mr. Murray became president of the United States Trust Co. In 1917 he was made production expert in the accounting section of the Signal Corps, U.S.A., later serving in Europe as field secretary of the Knights of Columbus in the World War Work. After the War, Mr. Murray became chairman of the liquidation committee of the American Red Cross.

Nammack, Charles Edward. American physician, died in New York, Oct. 4. He was born in New York in 1856, and received his medical degree from Bellevue Medical College in 1881, and he became a bachelor of philosophy of St. Francis Xavier College in 1895. In 1908 Fordham University granted him an LL.D. He was attending physician to the out-patient department of the New York Hospital from 1881 to 1904, and surgeon of the New York Police Department for thirty-three years. On his retirement he was made honorary consulting neurologist to the Police Department. From 1896 he was visiting physician to Bellevue Hospital, and was professor of clinical medicine at Cornell Medical College, New York City, from 1898. For shorter periods Dr. Nammack was associated with the medical staffs of St. Vincent's and St. Lawrence Hospitals in New York City and St. Joseph's in Yonkers. He was president of the Board of Trustees of the Catholic Institute for the Blind, as well as a member of the Friendly Sons of St. Patrick.

Napoleon, Prince Victor Jerome Frederick.  
Naudière, C. T. de la. Canadian veteran, died in Montreal, June 2. He was a member of an old seigneurial family of Canada, and traced his ancestry to Madeleine de Vercheres. At the time of his death he was commander of the 11th Infantry Brigade, and was for forty years connected with the Joliet Regiment. Although advanced in years in 1914, he joined the 22nd Battalion in the World War and went overseas, having then the rank of major. He was promoted to the rank of colonel on the field of battle. He represented Canada at the coronation of King George.

Navarro, Alfonso de.  
Naville, Edouard.  
Nelson, Robert Wickham.  
Newbold, William Romaine.  
Nipher, Francis Eugene.  
Nolan, Thomas.  
North, Nelson Luther. American physician, eye and ear specialist, died at Sea Cliff, N. Y., July 18. He was born in 1864 in Brooklyn and after attending the Brooklyn Polytechnic Institute graduated from the College of Physicians and Surgeons of New York City. He practiced in Brooklyn, and was, for thirty-five years, an eye and ear specialist. He was senior physician of the Brooklyn Eye and Ear Hospital, and a member of the board of managers of the Brooklyn Y.M.C.A.  
Noyes, Walter Chadwick.  
Oakley, Annie (Mrs. Frank Butler).  
Odell, Benjamin B., Jr.  
Odlin, Arthur Fuller.  
Oki, Count Enkichi.

Olga, Dowager Queen of Greece.  
Onnes, Heike Kamerlingh.  
Oppenheimer, Karl.  
Orellana, General José Maria.  
Orléans, Louis Philippe Robert, Duke of.  
Osborne, Right Rev. Edward William.  
Osborne, Thomas Mott.  
Osman, Abubekr Digna.

Ostrander, Leroy F. American teacher and at one time head of the American School in Bulgaria, died at Lyons, N. Y., Dec. 12. He was born in 1872, and was educated at the Lyons Union School and Hamilton College. He was for twenty-five years head of the American School at Somakov, Bulgaria. He had returned to America from Bulgaria only two months before his death, suffering from a general breakdown consequent on the hardships endured during the World War and the period following. Before he left the country for home he was decorated by King Boris for distinguished services to Bulgaria.

Owen, the Right Reverend John.  
Page, Herbert William. British surgeon, died at Farnham, Eng. Sept. 8. He was born in 1845, and after studying surgery and entering practice served as an assistant surgeon with the Hessian division of the German army in the Franco-Prussian War. He was consulting surgeon to the Great Western and the London and North Western Rys, then to St. Mary's Hospital and the Cumberland Infirmary. In 1881 he was awarded the Boylston Medical Prize. Formerly he was a member of the court of examiners of the Royal College of Surgeons, and was examiner in surgery to the Universities of Oxford, Cambridge and Birmingham.

Pagenstecher, Albrecht. American manufacturer, died at Cornwall, N. Y., Aug. 6. He was born at Osnabrück, Prussia, in 1839, and removed to the United States. To him was given the credit of introducing into the United States the use of wood pulp in the paper industry. The first mill began operations at Curtisville, now Interlaken, Mass. Mr. Pagenstecher also organized the Laurentide Pulp Co., at Grand-Merc, Que. He was for many years a director of the International Paper Co., and was connected with various other paper and pulp companies.

Paladilhe, Emile. French composer, died in Paris, in January. He was born at Montpelier, June 3, 1844, and received his musical education at the Paris Conservatoire, winning the Grand Prix de Rome in 1860. Of his six operas *Patrie* (Paris, 1886) was the most successful, and was performed in Germany and Italy. He also wrote a symphony, two masses and other sacred music. In 1892 he was elected a member of the French Academy.

Parker, Alton Brooks.  
Parrish, James C. American financier and railway organizer, died July 1 in New York, N. Y. He was born in Philadelphia, Pa., in 1840, and graduated from Haverford College with the class of 1859. While working for his uncle, George D. Parrish, who was an importer, he traveled extensively in Europe in connection with this business, making contacts with many European capitalists. During the period, 1890-1900, when railroad readjustments were the order of the day, Mr. Parrish represented Dutch and English bondholders, and once he was said to be directly responsible for the reorganization of the Missouri, Kansas & Texas, and the Norfolk & Western Railroads.

Parry, Sir John Franklin.  
Pashitch, Nicola P.  
Pennell, Joseph.  
Pennington, Edmund.  
Perilli, John W. Physician and acting president of the board of trustees of Bellevue and Allied Hospitals' Board, died in New York, N. Y., Sept. 15. He was born in Italy in 1878. When 10 years of age he went to the United States, and attended the New York public schools. In 1898 he received his medical degree from Baltimore University. Dr. Perilli had been a trustee of Bellevue and Allied Hospitals since the beginning of 1920, and shortly before his death he retired from the presidency of the Italian Hospital, New York. He had been professor of clinical surgery at New York University Medical School. In September 1921, the King of Italy made him a Cavalier of the order of the Crown of Italy. In May, 1924, he was elected Grand Venerable of the Independent Order Sons of Italy.

Perris, Henry Woods. British Unitarian minister, died in London, Eng., Dec. 5. He was born in 1839. He represented English churches at the great Boston Unitarian conference. He had known Whitman, Holmes, Whittier, Longfellow, and Will Carleton.

Pettigrew, Richard Franklin.  
Phillimore, John Swinnerton. British Greek and Latin scholar, died Nov. 16, at Sheffield, Eng. He was born in 1873, the fourth son of the late Admiral Sir Augustus Phillimore, and was educated at West-

minster and at Christ Church, Oxford. The University of California appointed him to the Sather professorship of classics for the year 1914-1915, and he had been professor of Greek and of the humanities in Glasgow University. In 1895 he was president of the Oxford Union.

Platt, William Popham. American jurist, died at White Plains, N. Y., Nov. 2. He was born at White Plains, May 16, 1858, attended the public schools there and, in 1879, began the practice of law in that town. From 1890 to 1896 he was district attorney of Westchester County, and in 1901 returned to public office as county judge of Westchester. This office he retained until 1915 when he was elevated to the Supreme Court bench. Justice Platt was a Democrat.

Plummer, Alfred. Authority on English church history, died at his home at Bideford, Eng., Apr. 19. He was born in 1841 and was educated at Oxford, where the problem of English church history first began to attract his attention. He later became a fellow of Trinity College, Oxford (1865-1875), and was master of University College, Durham, from 1874 to 1902.

Pope, Sir Joseph. Former Under-Secretary for External Affairs in the Federal Government of Canada, died at his home in Ottawa, Dec. 2. He was born in 1853, and was the son of the late Hon. W. H. Pope, one of the fathers of Canadian confederation. He was once private secretary to Sir John MacDonald, whose biography he wrote. He represented the Canadian Government at the proceedings of the Joint High Commission which met at Quebec and Washington, 1898-99.

Postgate, John Percival. British philologist, died on July 15. He was born in England, Oct. 24, 1853, and was educated at King Edward's School, Birmingham. He gained a scholarship in Trinity College, Cambridge. He was appointed deputy reader in comparative philology in the University of Cambridge in 1889, having been classical lecturer at Trinity College since 1884. He was senior lecturer at Trinity College from 1903-1909, and was appointed professor of comparative philology in the University of London in 1908. From 1899 to 1907 he was editor of the *Classical Review* and from 1907 to 1910 acted as editor of the *Classical Quarterly*. From 1909 to 1920 he was Professor of Latin at Liverpool University, later becoming professor emeritus there. From 1922 to 1926 he was President of the Philological Society, and he was President of the Classical Association, 1924-25. Among his numerous works are *Critical Edition of Phædrus' Fables*, 1920; *Translation and Translations*, a critical work on the translations from the Classics, 1922; and *A Guide to Greek Accentuation*, 1925.

Potter, William.

Potts, James H. Editor of the *Troy Times* for 30 years, died Sept. 29, at Rockford, Ill. He was born in 1855, and in 1881 became assistant city editor of the *Troy Times*. In 1883 he became city editor, in which position he remained 13 years. From 1896 he had been editor.

Prior, Mgr. John. Dean of the Sacred Roman Rota, of the Roman Catholic Church, died April 28, at Darlington, Eng. He was born in England in 1861, and became the English member of the Sacred Roman Rota, the tribunal to which are referred all contentious cases requiring judicial procedure. One of the most famous cases coming under his jurisdiction was the appeal against the decision of the Rota annulling the marriage of Count Boni de Castellane with Anna Gould. In 1922 he was made a member of the Supreme Council for the Propagation of the Faith. His best known work is his book, *Is the Pope Independent?*

Pullen, Elisabeth (Mrs. Stanley T.). American author and critic, died at Portland, Me., July 15. She was a native of Portland, and being of Calabrian ancestry, wrote much in Italian. Her first husband was Nino Cavazza. He died at Portland, Me., a few weeks after the ceremony. In 1894 she married Stanley T. Pullen, a Portland lawyer and journalist. She was for some years musical and literary critic of the *Portland Press* and a staff contributor to *The Literary World* of Boston. Her earlier writings, written in Italian and translated into English for publication, had been signed "E. Cavazza," but after her second marriage she signed her work Elisabeth Pullen. She was a frequent contributor to the *Atlantic Monthly*. Her best known books were *Don Finimondone*; *The Man from Aidone*; *Cocco and Sidora*; and *Mr. Whitman*.

Pulver, Mary Brecht. American author, died at Philadelphia, Pa., July 16. She was born at Lancaster, Pa., in 1882, a daughter of Milton J. Brecht former public service commissioner of Pennsylvania. She graduated from the Pennsylvania State Normal School, and from the School of Applied Arts in Philadelphia. She became a frequent contributor to the *Saturday Evening Post* and other magazines. Mrs. Pulver wrote several novels. She was a member of the

Authors' League of America, the Penwomen of America, the Authors' Guild, and the Lancaster Press Club.

Purrington, William Archer. Lawyer, died in New York, N. Y., Oct. 26. He was born in Washington, D. C., in 1858, and graduated from Harvard in 1878. He studied law at Columbian (now Washington) University, and graduated in 1878. He also graduated from the law school of New York University with the class of 1880. He spent two years as consular clerk in Rome and as secretary of legation and chargé d'affaires ad interim, in Rio de Janeiro. He was a member of the law firm of Purrington & McConnell, and had been a director of the New York County Lawyers' Association. He was also secretary and trustee of the College of Dental and Oral Surgery. He wrote many law articles, and was the author of *Christian Science; an Exposition of Mrs. Eddy's Wonderful Discovery*. He was an adviser of President Grant, after the retirement from public life of the latter. Mr. Purrington was always closely associated with the revision and enforcement of the laws relating to medicine and dentistry, and collaborated with the late Dr. Allan McLane Hamilton in the latter's *System of Legal Medicine*.

Quackenbos, John Duncan.

Kaker, John Edward. Representative in Congress from California, died Jan. 22. He was born in Knoxville, Ill., Feb. 22, 1863, and was educated at the State Normal School, San Jose, Calif. He was admitted to the bar in 1885, and practiced at Alturas, Calif., from 1886 onward. He became district attorney of Modoc County, holding the post from 1895 to 1898. From 1905 to 1910, he was a judge of the Superior Court. He was a member of the 62nd Congress (1911-13), representing the 1st California District, and was also a member of the 63rd to 68th Congresses (1913-25), representing the 2nd California District.

Ramsay, Franklin Pierce.

Rawlinson, John Frederick Peel. Senior member of the British Parliament for Cambridge University, died in January. He was born Dec. 21, 1860, and was educated at Eton and at Trinity College, Cambridge. He gained the degrees of LL.B. and LL.M. at Cambridge, and in 1884 became a barrister of the Inner Temple. He was for some time lecturer and examiner in law at Pembroke College, Cambridge, and represented the British Treasury in the commission of inquiry into the South African Jameson Raid of 1896. From 1898 he was recorder of Cambridge, and was for a long time a member of the governing bodies of Eton and Malvern and of Brighton College. In 1906 he was elected to Parliament for the Cambridge University constituency. He was also vice-chairman of the general council of the bar, and in 1923 he was made a privy councillor.

Raymond, William Galt.

Read, Charles O. American manufacturer, died at Pawtucket, R. I., July 7. He was born at Norton, Mass., Dec. 31, 1846, and was educated in Pawtucket schools. In 1863 he entered the employ of the Sayles Finishing Plants, of which he later became president. He was director or trustee of many other industrial and financial organizations.

Reese, Robert Grigg. American physician and ophthalmologist, died Oct. 18, in New York. He was born in 1865, in Dinwiddie County, Va. He graduated from the New York University Medical School in 1891, began practice in New York, and later became professor in the Cornell Medical School of New York. Dr. Reese was a fellow of the American Medical Association, and of the American College of Surgeons. He was also a member of the American Academy of Ophthalmologists and the Medical Association of New York. He had long been associated with the New York Eye and Ear Infirmary, The Reconstruction, and other hospitals.

Reid, James Smith.

Ressler, Edwin DeVore.

Rhead, Louis.

Rhinock, Joseph Lafayette. American theatrical financier and former congressman from Kentucky, died at New Rochelle, N. Y., Sept. 20. He was born at Owenton, Ky., Jan. 4, 1863, and as a young man moved to Covington, Ky., where he remained for the greater part of his life, serving for seven years as mayor of the city. His first important business venture was in connection with oil refining, but later he took up other enterprises, of which his theatre interests soon became the chief. In 1904 he became associated with Lee and J. J. Shubert. For some time he was vice-president of the Shubert Theatrical Co., and later secretary and treasurer. From 1905 to 1911 he represented the 6th Kentucky District in Congress. At the time of his death, Mr. Rhinock was a director of the Shubert Theatre Corporation, and also vice-president of Loew's theatrical enterprises, and director and stockholder in other undertakings. Besides these activities, his racing interests were many, including holdings in Fairmount Park, St. Louis, of which he

was an organizer, as well as in several tracks in Maryland.

Rich, John T.

Ridgeway, Sir William.

Rilke, Rainer Maria. Czech-German lyric poet, died in Montreux, Switzerland, December 30. He was born in Prague in 1875, spent his early life in Bohemia, going later to Russia and then to Paris. In 1914 he retired to a thirteenth-century monastery and immersed himself in study. His last book was published in 1923.

Ringling, Charles. American circus owner, died at Sarasota, Fla., Dec. 3. He was born in 1864 at McGregor, Ia., and while still a child was taken by his parents to live at Baraboo, Wis. Charles was one of the famous "six brothers of Baraboo" who started, about 1881, a circus on a very small scale. They all trained themselves to do jobs of the circus type and gradually increased the attractiveness of their show, until, in 1888, it was ready to go on the road. Two years later it occupied thirty cars on the railroad and was ready to compete with the Barnum and Bailey enterprise. Some time before his death, James A. Bailey agreed to a division of territory, and sold to Ringling Bros. a half interest in his Forepaugh-Sells circus. In 1906, after the death of Mr. Bailey, the Ringlings took over the rest of the Forepaugh-Sells property, and by the end of 1907 they had purchased from Mrs. Bailey the entire Barnum and Bailey circus, at a cost of \$410,000. Mr. Ringling established a winter home in Florida about 1912, and since that time had been prominently identified with the development of the west coast section of the state. He was also president of the Ringling Bank and Trust Co., of the Sarasota Chamber of Commerce and the Charles Ringling Company.

Rivers, William Pitt. American dancing master, died at Lakeport, N. H., Oct. 2. He was born in 1863, in Brooklyn, N. Y., and spent most of his life there. He followed his father's calling and began teaching dancing while still in his teens. His father was of the highly conservative school, and objected to the introduction of such an innovation as the six-step waltz. The son, however, decided in the face of his father's opposition to sponsor the newer dances, and made such a success of his rival establishment that the American Society of Dancing Masters asked for a demonstration and afterward elected the 16-year-old instructor to membership. He became a well known figure in the social life of Brooklyn and New York.

Robb, Thomas. Secretary of the Shipping Federation of Canada, died Nov. 8, in Montreal. He was born in 1863 in Glasgow, and was educated at the Glasgow Academy. He began his career with the State Steamship Co., and later joined the Albion Co. in the New Zealand and Tasmanian trade. During the World War he was acting staff embarkation officer of Canada in the department of the quartermaster general. In 1917 he became chairman of the royal commission on pilotage, and in 1918 he was chairman of the royal commission on vessel traffic regulations and handling of explosives. He was also president of Radio Limited.

Rodgers, John.

Roebling, Washington Augustus.

Rogers, Henry Wade

Rohan, Herminie. Dowager Duchess de. Author and painter, died Apr. 13, at Paris, France. She was born July 28, 1853, in Paris, and was the widow of the Duc de Rohan, deputy of Morbihan, of a family claiming connection with the ancient sovereigns of Brittany. The duke died in 1914, and his son and successor, the twelfth duke, died of wounds received in the battles of Verdun and the Somme. The duchess was a member of the France-American Committee, the Society of Authors, the Society of French Poets and French Artists, and the Union of Women Painters and Sculptors. Soon after the World War began, the duchess converted her Paris house into a hospital, and for five years she was superintendent of the nursing staff caring for wounded soldiers. In recognition of her valuable services, the Cross of the Legion of Honor was awarded to her in 1920, and the decoration was taken to her by Marshal Foch himself.

Roshanara (Olive Craddock). Oriental dancer, died at Asheville, N. C., July 15. She was born Jan. 22, 1892, at Calcutta, India, and passed her childhood in that country. She received her professional training in India, afterwards studying in England, France, and Germany. She was the only European woman to have the privilege of dancing before Indian potentates. She appeared with the Philadelphia and Boston Symphony Orchestras, and later accompanied Pavlova on tour. She made her debut in England in William Asch's *Kismet*. When Winthrop Ames presented *The Green Goddess*, Roshanara assisted in the production. She had taught dancing at several schools.

Ross, Hugh Campbell.

Rossi, Auguste J.

Rothmühl, Nikolaus. German dramatic tenor, died in Berlin in June. He was born at Warsaw in 1857. After graduation from the Vienna Conservatory, he began his career at the Hof-opera there, then sang in Stuttgart and Dresden, finally becoming a member of the Royal Opera in Berlin. In 1895 he sang the Wagner rôle in Damrosch's operatic season at the Academy of Music in New York. He retired from the stage in 1907, and then lived in Berlin, well known as a teacher.

Rousmaniere, Edmund S. American clergyman, dean of St. Paul's Cathedral, Boston, Mass., died Sept. 26, at Hyannis, Mass. He was born Oct. 27, 1858, and graduated from Harvard in 1883. He was also a graduate of the Episcopal Theological School in Cambridge. Before going to Boston, he was rector of churches in Pontiac, R. I., New Bedford, Mass., and Providence, R. I. At the time of his death Dr. Rousmaniere had been dean of St. Paul's Cathedral for 14 years, from its consecration in 1912.

Roze, Marie-Hippolyte.

Russell, Charles Marion. American artist, died Oct. 25. He was born at St. Louis, Mo., Mar. 19, 1865. He received his education in the public schools. In 1880 he moved to Montana, and quickly made a reputation as a painter. He exhibited in London, New York, Chicago, San Francisco, Los Angeles, and in other cities.

Russell, Harold. British joint secretary to the Anglo-German mixed arbitral tribunal, died in August at Shere, Eng. He was born in England, Jan. 23, 1868, and was educated at Balliol College, Oxford. He was a fellow of the Linnean Society, a fellow of the Zoological Society, and a member of the British Ornithologists' Union. He was called to the bar in 1894, and for some years thereafter he served at midland sessions and was attached to the midland circuit. In 1915 he joined the Admiralty war staff, intelligence division, and in 1919 he was transferred to the foreign office, political intelligence department. He was made British joint secretary to the Anglo-German mixed tribunal appointed under Act 304 of the peace treaty of 1920. His writings include *Chalkstream and Moorland*, 1911, and *The Flea*, 1913.

Sackett, William Edgar.

Saint-Gaudens, Mrs. Augusta Homer. Widow of Augustus Saint-Gaudens, famous American sculptor, died at Cornish, N. H., July 7. She was born at Roxbury, Mass., May 17, 1848, and was a relative of Louise Homer, the opera singer. Since the death of her husband, Mrs. Saint-Gaudens maintained his studios at Cornish, N. H., at her own expense, and had gathered, in bronze and plaster copies, almost all his works. These, together with her estate, its furnishings and the studios, are bequeathed to the Augustus Saint-Gaudens Memorial, incorporated in 1919 by Mrs. Saint-Gaudens as a permanent memorial to her husband.

Sanders, Thomas W. Dean of British horticulture journalists, died Oct. 13. He was born in England in 1855 and was self-educated. He had a practical training in gardening and farming, and drew attention to himself by his extensive writings on these subjects. He was also well known for his authoritative articles on the breeding and management of domestic animals.

Sanderson, Lloyd Bowen. Shipping pioneer, died in New York, N. Y., Oct. 24. He was born in 1865, and with two of his brothers rapidly acquired interests in the shipping world. At the time of his death Mr. Sanderson with his two brothers had, combined, the largest shipping interest in the world. He was general manager of the Royal Mail and Pacific Steam Navigation Co., New York City, and senior partner in the firm of Sanderson & Son.

Sanderson, Oswald.

Sanford, Francis Hugh. British naval officer, died Feb. 16, at Wengen, Switzerland. He was born in England, Oct. 10, 1887, and was educated at Clifton College, Bristol, and at Balliol College, Oxford. He served at the Dardanelles in 1915, was severely wounded, mentioned in despatches, and awarded the D.S.O. He was promoted to the rank of commander and awarded the Croix de Guerre with palm in 1918, for services of distinguished gallantry in raids closing the harbors of Zeebrugge and Ostend. He was promoted to the rank of captain in 1924, and at the time of his death was assistant director of the plans division of the British naval staff.

Sanger, Joseph Prentice.

Sass, Charles. American banker, died in Berlin, Germany, Aug. 8, 1926. He was born in America in 1858, and was interested from his youth in the development of saving banks and allied institutions in the Middle Western States. He was a director of the Pioneer Trust Savings Co., of Dubuque, Ia., and at the time of his death was making a tour in Europe

for the purpose of studying financial and industrial conditions.

Sattler, Eric E. American oculist and medical writer, died July 5, at Cincinnati, Ohio. He was born at Cincinnati, Nov. 4, 1859, and graduated from Woodward High School, Cincinnati, in 1878. He took his diploma at Miami Medical College in 1882. Later he studied at the Universities of Strassburg, Vienna, Berlin, London, Utrecht, and at New York University. He was the first to call attention to nerve endings in the cornea and corneal epithelium. He also published a *History of Tuberculosis* (1888).

Schirmer, Frederick.

Schmid, Henry Ernest. Physician and scientist, died at White Plains, N. Y., Oct. 11. He was born May 1, 1834, at Querfort, Prussian Saxony. He became interpreter and surgeon on a British flagship engaged in making coast surveys in the Indian Ocean and Chinese waters. In this capacity he visited Borneo, Java, Sumatra, northern China and Korea. He organized the first modern hospital in Japan. He finally settled in the United States, and began to practice in White Plains, N. Y., in 1863.

Schultz-Adasievsky, Ella von.

Schuyler, Louisa Lee.

Schwan, Theodore.

Schwarz, Joseph.

Scott, William R.

Scripps, Edward Wyllis.

Seely, Sir Charles Hilton, Baronet. English colliery owner, died at Sherwood Lodge, Eng., Feb. 26. He was born July 7, 1859, and was educated at Harrow and at Trinity College, Cambridge. He sat as M.P. for Lincoln, 1895-1906, and in 1900-1908 was lieutenant colonel and honorary colonel of the 5th Battalion of the Hampshire Regiment. In 1915, on the death of his father, he succeeded to the title which had been created for his father in 1896. He was elected Liberal representative for the Mansfield division of Nottinghamshire, and sat from 1916 to 1918.

Shedd, John G. American financier and merchant, died at Chicago, Ill., Oct. 22. He was born July 20, 1850, at Alstead, N. H. About 1872 he went to Chicago and entered the employ of Marshall Field. He rose to be president of Marshall Field & Co. In 1923 he resigned the presidency of the company in order to become chairman. At different times Mr. Shedd served on the directorates of the Illinois Central, the Baltimore & Ohio, and the Rock Island R. Rs., as well as on those of several Chicago banking institutions.

Sherman, Richard W. American civil engineer and former mayor of Utica, N. Y., died at that city, May 23. He was born at Utica, Dec. 4, 1848, and in 1866 he was one of the engineering staff engaged in the construction of the Binghamton, Chenango & Susquehanna Valley R. R., now a part of the Delaware, Lackawanna & Western system. From this beginning he went on to help in the construction of roads now forming part of the Ontario & Western system. With his partner, Dr. Emmet Flagler, he erected waterworks at Watervliet, Green Island, Gloversville, Walton, and Richfield Springs. In 1880 Mr. Sherman constructed waterworks at Greenwich, Conn., and later organized the Troy Public Works Co. He was twice mayor of Utica and was once considered by the Democrats as a candidate for Governor. He was a member of the American Society of Civil Engineers.

Sherman, Stuart Pratt.

Sherry, Louis.

Shorwell, Guillermo Antonio.

Shorter, Clement K.

Shradhanand, Swami (Munshi Ram).

Sibley, Joseph Crocker.

Simon, Henri.

Simpson, Sutherland. Anglo-American physiologist, died Mar. 9. He was born in the Orkney Islands, Scotland, Feb. 3, 1863, and was educated at the Herriot-Watt College, Edinburgh, 1882-85. He received the degree of B.Sc. from the University of Edinburgh in 1894, and bachelor of medicine and bachelor of surgery in 1899. He won the degree of doctor of medicine, together with the gold medal in medicine at Edinburgh in 1901, and graduated as D.Sc. two years later. In 1908 he was appointed professor and head of the department of physiology and biochemistry at Cornell University, and he continued to hold this position until his death. He was a fellow of the Royal Society of Edinburgh, a member of the British Association for the Advancement of Science, a member of the British Medical Association, of the American Physiological Society, and of the Society of Experimental Biology and Medicine. He was the author of many original research papers on the central nervous system, on animal heat and body temperature, on the secretory glands, and on bile secretion.

Singmaster, John Alden.

Sistermanns, Anton.

Skinner, Henry. American physician and entomologist, died May 30. He was born at Philadelphia, Pa., Mar. 27, 1861, and was educated at the University of Pennsylvania, where he took his B.S. degree in 1881 and his M.D. in 1884. He received the degree of doctor of science from the University of Pittsburgh. He was at one time State entomologist of Pennsylvania, and was professor of entomology for the Pennsylvania Horticultural Society. He was in charge of the entomological department and chairman of the publications committee of the Academy of Natural Sciences of Philadelphia, of the council of which body he was also a member. He later became vice-president of that academy, and in 1909 he was president of the American Entomological Society. He was a member of the American Philosophical Society, and in 1925 of the permanent committee of the International Entomological Congress. From 1890 to 1911, he was editor of the *Entomological News*, and wrote much to forward a better understanding of the science, in addition to making valuable original researches.

Small, Albion Woodbury.

Smillie, Mrs. George Henry. American painter, died July 31. She was born Sept. 14, 1854, and studied under Joseph O. Eaton and James D. Smillie. Although competent in oils, her best work was done in water colors. She was a member of the American Water Color Society.

Smith, Allen John. American pathologist and scientific writer, died Aug. 19. He was born at York, Pa., Dec. 8, 1863, and took his A.B. at the Pennsylvania College in 1883, and his A.M. in 1886. In 1886 he received an M.D. from the University of Pennsylvania. From 1887 to 1891 he was assistant demonstrator of pathology at the University of Pennsylvania, and from 1891 to 1903, he was professor of pathology in the medical department of the University of Texas. He then returned to the University of Pennsylvania, where, from 1903 to 1910 he was professor of pathology. In 1910 he received the degree of Sc.D. from Pennsylvania College, and in the same year he became professor of comparative pathology and director of courses in tropical medicine at the University of Pennsylvania. In this post he remained until his death, receiving in 1921, the LL.D. degree from Pennsylvania State College, and in 1911, the same honor from McGill University. In 1917 he was command major, M.R.C., U.S.A., becoming lieutenant colonel in 1919. He was a member of many scientific societies, and the author of *Lessons and Laboratory Exercises in Bacteriology*, 1902.

Smith, Edmund Monroe.

Smith, Ernest Ashton.

Smith, Merritt Haviland.

Smith, Oberlin.

Smith, Sidney Irving.

Soulé, George. American educator, died Jan. 26. He was born at Barrington, N. Y., May 14, 1834, and graduated from the Sycamore Academy, Illinois, in 1853. He studied law and the business sciences at St. Louis, Mo., 1854-56. In 1856 he founded, and became first president of, the Soule Commercial College and Literary Institute, at New Orleans. He was a lieutenant colonel in the Confederate States Army, and at one time president of the Business Educator's Association of America. He was also at one time vice-president of the American Unitarian Association, and in 1918 he received the honorary degree of LL.D. from Tulane University. He was the author of many arithmetical and business manuals, including *A Manual of Auditing*, 1892; *Partnership Settlements*, 1893; and his *Practical Mathematics* was issued in its tenth edition in 1924.

Spender, E. Harold.

Sperry, Watson Robertson. American newspaper man and editor, died Feb. 13. He was born at Saquoit, N. Y., June 25, 1842. At 21 years he had become editorial writer for the *Otsego Republican* of Cooperstown, N. Y. He took an A.B. degree at Yale in 1871, in which year he joined the staff of the *New York Evening Post*. From 1875 to 1881 he was managing editor of this journal, and from 1882 to 1900 he was proprietor and editor of the *Wilmington, Del., News*. From 1892 to 1893 he was United States minister-resident to Persia. From 1901 he was connected with the *Hartford Courant*.

Spillman, Baldwin D. American soldier, died Nov. 17, at Washington, D. C. He was born in 1853, and after graduating from West Point and service in the West, he severed his connection with the Army. During the Spanish-American War, however, he was commissioned to command the West Virginia volunteers, but at the conclusion of hostilities he again retired.

Spreckels, John Diedrich.

Squire, Watson Carvoso.

Stanley, John J. American street railway executive, died Oct. 4, at Cleveland, Ohio. He was born at Cleveland in 1863, and was educated at the public schools there. In 1885 he first became associated with

the street railways of Cleveland, and continued, in various capacities, to preside over their development and extension until the time of his death. He was also a director of several banking institutions and trust companies, as well as a former president of the American Electrical Railway Association.

Stark, Otto. American artist, died at Indianapolis, Ind., Apr. 14. He was born at Indianapolis, Jan. 29, 1859. After studying at the Cincinnati School of Art and at the Art Students' League in New York, he went to Paris and continued his work at the Académie Julien. In 1892 Mr. Stark returned to his native city and became head of the art department of the Manual Training High School, and instructor in composition at the John Herron Art Institute. Mr. Stark twice exhibited at the Paris Salon, and held many exhibitions of his work in the United States.

Stedman, Henry Rust.

Steele, Theodore Clement. American artist, died at Bloomington, Ind., July 24. He was born in Owen County, Ind., Sept. 22, 1847, and studied art at Munich under Profs. Bentzue and Loeffitz, 1880-85. He held exhibitions of his work at the Paris and St. Louis expositions, and was a member of the Boston Art Club, as well as president of the Society of Western Artists. Pictures of his hang in the museums at St. Louis, Cincinnati, and Indianapolis, and at the Boston Art Club.

Sterling, John. British soldier, died in London, Eng., Dec. 7. He was born in England in 1840, and began his military career with the Liverpool Royal Regiment. At a later date he was transferred to the Coldstream Guards, with which force he served in the Sudan and elsewhere. He attained the rank of major general in 1896, and is chiefly remembered for his part in two irregular military adventures. He accompanied an expedition against Ferdinand VII of Spain, which ended disastrously. The second adventure was an attempt to rescue General Gordon from Khartoum. He retired in 1901.

Stevens, Frederick Weir. American financier, died at Grand Rapids, Mich., Nov. 2. He was born at Clinton, Mich., in 1865, and he took his law degree at the University of Michigan in 1887. From 1900 to 1909 he was general counsel of the Pere Marquette R. R., and in the latter year he became an associate of J. P. Morgan & Co. He was later a representative of an American group of bankers in the international consortium for China. In 1923 he received an LL.D. from the University of Michigan.

Stevens, George Washington. American art authority, died at Toledo, Ohio Oct. 28. He was born at Utica, N. Y., Jan. 16, 1866, and began his career as a newspaper man. He was later appointed director of the Toledo Museum of Art and made frequent trips to Europe on its behalf. He was at one time vice-president of the Faculty of Arts, London, and was a member of the National Institute of Social Sciences. Since 1919 he had been president of the National Association of Museum Directors.

Stevenson of Holmby, Baron.

Stewart, John Aiken.

Stocking, William Alonzo.

Stockman, Sir Stewart.

Stone, Galen L.

Storrow, James J.

Strathcona and Mount Royal, Baroness. Canadian baroness, died in London Eng., Aug. 18. She was born Jan. 17, 1854, and was christened Margaret Charlotte Smith. She inherited a very large fortune from her father, Lord Strathcona (Sir Donald Alexander Smith), who amassed his wealth through his connection with the Hudson Bay Co. and with the Canadian Pacific Ry. He received his baronetcy when High Commissioner of Canada. Lady Strathcona, who was Mrs. Margaret Charlotte Howard of Mount Royal, Que., succeeded to the barony on the death of her father in 1914. She had been married in 1888 to R. J. Bliss Howard, fellow of the Royal College of Surgeons; he died in 1921. In 1924 she gave \$120,000 to McGill University in Montreal for permanent endowment of the department of zoology.

Straus, Oscar Solomon.

Suter, Hermann. Swiss composer and conductor, died at Basle, June 22. He was born at Kaiserstuhl, Apr. 28, 1870. From 1892-1902 he lived in Zurich, as organist and conductor of various singing societies. He then settled in Basle, where he conducted the symphony concerts of the Allgemeine Musikgesellschaft and the two principal choral societies. He wrote two symphonies, a symphonic poem with chorus, *Die Walpurgisnacht*, chamber music and numerous choruses a capella for male and mixed voices.

Svecenski, Louis.

Taylor, William Henry. American jurist, died Mar. 28. He was born at Wheelock, Vt., July 18, 1863, and took a B.S. degree at Dartmouth College in 1886. From 1889 to 1891 he was supervisor of schools in

Caledonia County, Vt., and was admitted to the Vermont bar in 1892. From 1894 to 1898 he was state's attorney for Caledonia County, and in 1900 he became a member of the Vermont House of Representatives, being elected to the Senate in 1906. He became a judge of the Superior Court of Vermont, and held office from 1906 to 1913. He was appointed Justice of the Vermont Supreme Court on Oct. 1, 1913, being elected for the terms 1915-1925.

Tefft, Lyman Beecher. American educator and clergyman, died at Cranston, R. I., Nov. 29. He was born in 1833. In 1860 he graduated from the Rochester Theological Seminary, and held pastorates in Prescott, Wis., Winona, Minn., and Norwich, Conn. He wrote several books, including *Institutes of Moral Philosophy*. Theodorini, Helena.

Thompson, J. W. American evangelist, died at Cedar Rapids, Ia., July 1. He was born at Athens, Tenn., in 1838, and graduated from Burlington College, Iowa, later becoming a Bible teacher at the Moody Institute at Chicago. Still later he was more closely associated with Dwight L. Moody in his evangelical campaign, and on Moody's death he continued his work in the evangelical field. He was well known for his religious poetry and hymns, as well as for various writings on religious topics.

Thysen, August.

Todd, Sir Joseph White. British director of Argentine railways, died Feb. 19. He was born June 23, 1846, in Stirlingshire, Scotland. He was privately educated, and resided for several years in Havana, Cuba. He was a merchant banker, but retired from this business comparatively early in life (1885), and interested himself in railways. He became deputy chairman of the Callander and Oban Ry., Scotland, and, later, chairman of the Central Argentine Ry. and Director of the Buenos Aires Western Ry. Sir Joseph was the first baronet, the title having been created in 1913. He had also been decorated with the Grand Cross of the Spanish Order of Merit.

Tonjoroff, Suetozar (Ivanoff). American newspaper man, died June 11. He was born at Bansko, Macedonia, July 4, 1870, of Bulgarian parents. In 1888 he went to the United States and studied at the Worcester, Mass., High School, Phillips-Exeter Academy, and Harvard College. From 1897 to 1901 he was night editor of the *Boston Advertiser*, and from 1901 to 1906 he served in the same capacity with the *New York Press*. From 1906 to 1912 he was news editor of the *Providence Journal*, returning to the *New York Press* 1912-14. In 1914 he was associate editor of *Munsey's Magazine*, and from 1915 to 1920 was editorial writer for the *New York Evening Mail*. From 1921 until his death he had been a feature writer of the *New York Evening World*.

Tonking, Henry Charles. British organist, died at Glasgow, in July. He was born at Camborne Eng., Jan. 17, 1863. At an early age he appeared as a violin prodigy, but after study at the Royal Academy of Music he devoted himself to the organ. He held several important positions, the last being at the Wesleyan Church at Newquay. He was one of the most famous recitalists in England. His compositions consist of organ music and various songs.

Topakyan, Hagazoune Hohannes.

Torlonia, Prince Augusto.

Toselli, Enrico.

Touche, Cardinal.

Townley, Clarence Page.

Trask, John D. E. American art authority, died at Philadelphia, Pa., Apr. 16. He was born in Brooklyn in 1871, and was educated at St. Austin's School, New Brighton, N. Y. He then engaged in newspaper work and magazine writing, but in 1894 he went to Philadelphia as assistant secretary of the Pennsylvania Academy of Fine Arts. In 1905 he became secretary of that institution, and in 1910 was United States commissioner general to the International Fine Arts Expositions in Buenos Aires, Argentina, and Santiago, Chile. He resigned from the academy to serve as director of fine arts for the Panama Pacific Exposition of 1915, in San Francisco. As Director of Fine Arts for the Sesqui-Centennial Exposition in Philadelphia, Mr. Trask made the plans for the palace of art there. He had been also director of the Milwaukee Art Institute.

Treat, Charles Payson. American railroad builder, died Jan. 27. He was born at Talmadge, Ohio, Feb. 17, 1847, and took his A.B. degree at Oberlin College in 1870. It is estimated that he built more than 1500 miles of railroad in the United States and Canada. He was one of the promoters of the Nicaraguan Canal, and began its actual construction. In 1890 he built a railway across the swamps at Greytown, Nicaragua.

Trimble, Walter. American bank president, died Sept. 18, at Hewlett, N. Y. He was born in New York in 1857, and graduated from Harvard in 1879. His grandfather and his father had held the presi-

dency of the Bank for Savings, New York City, the first savings bank organized in New York State, and Mr. Trimble succeeded his father in 1907. He had been a trustee of the bank for 23 years.

Troubridge, Sir Ernest Charles Thomas. British naval officer, died at Biarritz Jan. 28. He was born July 15, 1862. From 1901 to 1904 he was naval attaché at Vienna, Madrid and Tokyo. For the period 1907-08 he was captain and chief of staff in the Mediterranean, and in 1911-12 he was chief of the war staff at the Admiralty. In 1912 he was commander of the Mediterranean cruiser squadron, and in 1915 he was the head of the British naval mission to Serbia. In 1918 he was appointed admiral commanding on the Danube, being gazetted admiral in the following year. In 1921 he was placed on the retired list, although he served through to the period 1919-1924 as president of the international commission of the Danube. In 1904 he received the M.V.O. and C.M.G. honors from the King, and in 1911 he became a Commander of the Bath. He was knighted in 1919, becoming a Knight Commander of the Order of St. Michael and St. George.

Tuck, Sir Adolph.

Tucker, William Jewett.

Tyler, James M. American jurist, died at Brattleboro, Vt., Oct. 13. He was born in 1835, at Wilmington, Vt., and studied at the Brattleboro Academy. He continued the study of law at the Albany Law School, graduating in 1860. In 1863 he was elected to the Vermont General Assembly, where he served two terms, later being elected District Attorney of Windham County. For some time he practiced law, and, was then elected to Congress, where he served two terms. He was a justice of the Supreme Court Bench of Vermont from 1887 to 1908.

Uhler, George S. Former supervising inspector general U. S. Steamboat Inspection Service, died in Washington, August 23, 1926. He was born in 1853 and spent part of his early life at sea. He had been chief engineer of the Morgan Line, and after that president of the Marine Engineers' Beneficial Association. In January, 1903, he became supervising inspector general of the United States Steamboat Inspection Service, and was American delegate to the International Conference on the Safety of Life at Sea held at London in 1923. He resigned from the U. S. Steamboat Inspection Service in 1925.

Valentino, Rydolph.

Valera y Delavay, Luis, Marquis de Villasinda.

Valentine, Benjamin Benton. American author and dramatist, died in New York, N. Y., Mar. 30. He was born in London, Eng., Sept. 7, 1843, and was educated at King Edward VI's School at Birmingham. For some time he was in Australia. He went to the United States in 1871. Shortly after, he was founder of *Puck*, which periodical he edited from 1877 to 1884. From 1886 to 1888 he was managing editor of the *Bachelor Newspaper Syndicate*, and from 1891 to 1898 he was a member of the editorial staff and dramatic critic of the *New York Herald*. He was the author of *Fitznoodle Papers* and *Fitznoodle in America*, and among his plays were: *A Southern Romance*, *In Paradise*, *Fritz in New York*, *Fitznoodle*, *The Locksmith of Paris*, and *The King of the World*. He also translated, into English, Zola's drama, *Rénée* (under the name *Madame Saccard*), and Daudet's *Sapho*.

Van Groningen, Steven. Dutch pianist and composer, died in Leyden, in March. He was born at Deventer, June 23, 1851. On the advice of Rubinstein he gave up the profession of engineering and completed his musical studies under Liszt. After several years of concerts in Europe, he lived some time at The Hague as conductor of choral societies. From 1894 until his death he was director of the music school at Leyden. He wrote chamber music and numerous compositions for the piano.

Van Sickle, James Hixon. American educator, died Feb. 12. He was born at South Livonia, N. Y., Oct. 24, 1852, and graduated from New York State Normal College, Albany, 1873. He was a student at Williams College in 1876-77, and then became a teacher in village schools, becoming later principal of the city school at Denver, Colo. He was Superintendent of the north side schools in Denver, 1890-1900. He received the degree of A.B. from the University of Colorado in 1896, and A.M. in 1898. He was superintendent of public instruction of Baltimore, 1900-1911. Williams University conferred an honorary A.M. upon him in 1913. From 1911 to 1923 he was Superintendent of Schools, Springfield, Mass., and in 1923 he resigned. He was the editor of the *Riverbide Readers* and *Pdot Arithmetics*.

Van Zandt, Clarence D. Mayor of Rochester, N. Y., died June 17. He was born at Rochester, Mar. 21, 1858, and was educated at public and private schools there. He began his business career with the Paine Drug Co., of Rochester, in 1868, and in 1910 he became president and treasurer. This post he held at the

time of his death. He was elected mayor of Rochester in 1921.

Verrill, Addison Emery.

Villalobar, Marquis de.

Vogt, Augustus Stephen.

Von Wangenheim, Baron Conrad. German agricultural expert, died June 10, in Berlin. He was born Sept. 17, 1849, and served throughout the Franco-Prussian War. He then took over the family estate at Klein Spiegel and Rahnwerder for agricultural experimentation, at the same time becoming a member of the Prussian Forestry Commission and of the Chamber of Agriculture of Pomerania. He took an active part in the work of the Prussian agricultural committee of the German Agricultural Council. He was for many years a member of the Reichstag and the Prussian Diet, becoming Nationalist leader before his death. He rendered great service to his country as President of the Agrarian League.

Vroom, Peter Dumont. American soldier, died Mar. 18. He was born at Trenton, N. J., Apr. 13, 1842, and became a C.E., at the Hensseler Polytechnic Institute, in 1862. In the same year he became first lieutenant in the 1st New Jersey Infantry, resigning in September of the following year. Joining the Army again before the end of 1863, he was promoted to major in the 2nd New Jersey Cavalry, being breveted colonel in 1865. In the same year he was mustered out with honors. In 1866 he was appointed a 2nd lieutenant, U. S. Cavalry, becoming captain ten years later. In 1903 he reached the rank of brigadier general with the assignment of inspector general, and later in the same year he was retired at his own request, after forty years' service. He was a member of the Order of the Cincinnati, the Loyal Legion, and the Sons of the Revolution.

Wadhams, Frederick Eugene. American lawyer, died at Albany, N. Y., Sept. 5. He was born at Wadhams, N. Y., Sept. 27, 1848, and studied at Cornell University, 1869-1871. He received an LL.B. degree from the Albany Law School (Union University) in 1876, and in the same year was admitted to the New York bar. From 1899 to 1922 he was secretary of the New York State Bar Association, and for many years he was secretary of the board of statutory consolidation of New York. In 1902 he was appointed treasurer of the American Bar Association, in which office he was serving at his death. Mr. Wadhams was made an honorary member of the Canadian Bar Association, a week before his death.

Wadsworth, James Wolcott.

Wainright, Richard.

Waldo, Clarence Abiathar.

Walker, Roberts. American lawyer, died at Scarsdale, N. Y., Dec. 22. He was born Aug. 24, 1874, at Rutland, Vt., and studied at the University School, Chicago. He graduated from Amherst College, 1896, and from Columbia University Law School, 1899, after which he engaged in general practice. In 1904 he became assistant to the counsel of the Rock Island Lines. In Jan., 1910, he was made general counsel of the system and chairman of the executive committee. Until a short time before his death, Mr. Walker served as chairman of the Pueblo Indians Land Board. He had also served as president and director of the Rock Island Co., of the Chicago, Rock Island and Pacific R. R., of Iowa, and as an official of other railroad, mining, steel, traction and improvement companies.

Walkley, Arthur Bingham.

Waller, Littleton Walter Tazewell.

Ward, Mrs. A. Montgomery. American philanthropist, died at Chicago, Ill., July 26. She was born in 1856 at Kalamazoo, Mich. The fortune left to Mrs. Ward on the death of her husband, founder of Montgomery Ward & Co., was the basis of her many philanthropies, and she turned her attention particularly to the development of educational institutions. She gave nearly \$8,000,000 to the Northwestern University. The first gift was made in 1923 for a medical and dental school to be known as the Montgomery Ward Memorial, on McKinlock Campus. In Jan. of the following year she added \$1,000,000 to the \$3,000,000 already given, and in May, 1926, she announced an additional gift of \$4,000,000 to the school.

Ward, Thomas Humphry.

Waters, Philip Melancthon. American clergyman and educator, died at New York, N. Y., Mar. 30. He was born in 1861 and graduated at Amherst in 1882. From 1897 to 1900 he was pastor of Grace Methodist Episcopal Church, New York, and superintendent of the New York district of the church from 1905 to 1911, after which he became pastor of the Washington Square Methodist Episcopal Church. On leaving this church he was appointed president of Gammon Theological Seminary, Atlanta, Ga. Here he remained for 11 years, retiring about six months before his death. He was the author of a *Life of Peter Cartwright*.

Watta, Sir Philip.

Webb, William Robert. American educator and senator, died Dec. 19. He was born at Mount Tizah, N. C., Nov. 11, 1842. He was educated at Bingham School, Oaks, N. C., 1856-1860, and entered the University of North Carolina, July, 1860. He served in the Confederate States Army, and took part in the last fight, Apr. 3, 1865. In 1868 he was graduated from the University of North Carolina, taking an A.M. in 1869. He was appointed to the United States Senate for three months in 1913, to serve out the unexpired term of Senator Robert L. Taylor.

Webb, William Seward.

Weekley, William Marion.

Weeks, John Wingate.

Weir, John Ferguson.

Welker, Philip A.

Wellington, Charles E.

Wheeler, Thomas H. American oil executive, died near Alexandria Bay, N. Y., Sept. 15. He was born at Phelps, N. Y., July 3, 1844. Immediately on Lincoln's first call for troops he enlisted in the 23rd New York Infantry, though not yet 17. Wounded in the first battle of Bull Run, he was captured and sent to Libby Prison, and thence transferred to Tuscaloosa, Ala. He was exchanged and took part in some of the later battles of the war. Soon after the cessation of hostilities, Mr. Wheeler went to the Pennsylvania oil fields, and he came into contact with John D. Rockefeller and other leading oil men of the day. In 1873 he began his long service with the Standard Oil Co., as head of the cooperage department at Cleveland. From 1887 to 1894 he was president of the Oswego Manufacturing Co., a Standard Oil concern, and for the next 19 years he was purchasing agent for the company. He retired from business in 1913.

Whitehead, Charles Nelson.

Whitman, John L. American penologist, died at Chicago, Ill., Dec. 13. He was born in 1862, and began his career as a penologist in 1896, becoming a guard in the Cook County jail in Chicago. After serving as superintendent of the house of correction for 10 years, and then as state superintendent of prisons, he was made warden at the Joliet Penitentiary in 1922. He made many experiments in the treatment of prisoners, and advocated many reforms.

Wickwire, Theodore H. American steel manufacturer, died at Buffalo, N. Y., Aug. 29. He was born in 1851, and early became a member of the firm of Wickwire Bros. In 1907 he organized the Wickwire Steel Co., of Buffalo, which was subsequently merged with another company and is now known as the Wickwire-Spencer Corporation. Mr. Wickwire was chairman of the board of directors.

Wiedfeldt, Otto.

Wilcox, Marion.

Wilfey, Lebbeus Redman.

Willcocks, Sir James.

Williams, John Skelton.

Willits, Albert Bower. Rear Admiral, U.S.N., retired, died at Philadelphia, Pa., Jan. 7. He was born at Philadelphia, Mar. 7, 1851, and graduated from the Naval Academy in 1874. He was commissioned assistant engineer in 1878, and rose through successive grades until in 1908 he became captain. He was senior inspector during the building of the battleships *Utah* and *Arkansas*. At the end of this work he was made rear admiral, and was director of the navy yards, 1911-12. In 1913 he retired.

Wood, Charles.

Wood, Francis Derwent.

Wood, William Madison.

Wright, Theodore Lyman. American classical scholar, died at Beloit, Wis., Oct. 4. He was born in 1858, at Beloit, and graduated from the college there in 1880. Later he studied at Harvard and at the American School of Classical Studies in Athens, Greece. In 1888 he was appointed professor of Greek at Beloit College, Wis., and remained in this position till his death.

Wyman, Bruce. American lawyer, died at Waban, Mass., June 21. He was born June 15, 1876, at Hyde Park, Mass. In 1900 he began to practice law in Boston, and from 1901 to 1914 he was professor of law, Harvard University. He was counsel for the National Civic Federation, 1911-1913, and in 1912 was investigator for the directors of the port of Boston. From 1917 onward he was professor of law at the Portia Law School, and throughout his life he specialized in the law regarding transportation and public utilities. He was frequently called upon by distant authorities as a consulting counsel. He was the author of *Restraint of Trade* (1902); *Mortgage Securities* (1903); *Railroad Rate Regulation* (1906, 2nd edn. 1915); *Public Utilities* (1909); *Control of the Market* (1911); and *Public Service Corporations* (1911).

Ximenes, Ettore. Italian sculptor, died in Rome, Italy, Dec. 31. He was born in 1855, and is represented by his paintings or his works of sculpture

in various South American capitals and in Russia, as well as in the principal cities of Italy. He was for twenty years art director of *Illustrazione*, and was commissioner of arts in the department of public instruction. He made a statue of President Taft. Ximenes designed the statue of Verazzano, the Italian navigator, Battery Park, New York City.

Yi (Syek), Prince.

Yoshihito, Harunomiya.

Young, Charles G. Former president of the C. G. Young Engineering Co., died at San Juan, Porto Rico, June 16. He was born Nov. 1, 1866, at Bath, N. Y., and at the age of 20 he began to work for the Schuyler Electric and Manufacturing Co., Hartford, Conn. He became general superintendent of the Mount Morris Electric Co. of New York. During the World War he was an executive member of the war service committee of the typewriter industry. Most of his work was in connection with the planning, consolidation, and financing of public utilities, work which took him to all parts of the world. He was a member of the New York Electric Society, a fellow of the American Institute of Electrical Engineers, a member of the American Society of Civil Engineers, and of the Pan-American Chamber of Commerce.

Young, Lafayette. American editor and politician, died at Des Moines, Ia., Nov. 15. He was born May 10, 1848, at Eddyville, Ia. At the age of 15, he became a printer apprentice in Albion, Ia. Later he went to St. Louis as a journeyman printer. He founded the *Atlantic Telegraph*, Atlantic, Ia., and in 1890 became owner and publisher of the *Des Moines Capital*. During the Spanish-American War Mr. Young was a newspaper correspondent with Shafter's army in Cuba, and later he was a member of the Taft mission to the Philippines. On the death of Jonathan P. Dolliver, in 1910, Mr. Young was appointed United States Senator, serving until 1911. In 1913 he was a correspondent in the Balkan War, and in 1915 he spent four months in Europe as war correspondent, suffering imprisonment at the hands of the Germans and receiving from the King of the Belgians, after the armistice, the Order of Leopold II. He served in the State senate 12 years.

Young, Rida Johnson.

Zajac, Florian. A celebrated Bohemian violinist, died in Berlin, May 17. He was born at Unhoscht, May 4, 1853, and studied under Mildner and Bennewitz at the Prague Conservatory. He began his career as a violinist in the Augsburg opera, was called as concertmaster to Mannheim and, in 1881, went in the same capacity to Strassburg. In 1891 he settled in Berlin, succeeding Sauret as violin professor at Stern's Conservatory. With Heinrich Grunfeld he gave annual chamber music recitals which became famous.

Zangwill, Israel.

Zevin, Israel J. Jewish editor, died at Brooklyn, N. Y., Oct. 6. He was born in 1872, at Harki, Russia, and went to New York in 1889. He worked for a time on the *New York Herald*, but in 1891 he joined the staff of the *Jewish Daily News* and was managing editor at the time of his death. Most of his writings appeared under his pen name, "Tas'arak." Among his books *The Sholen the Shoden*, and *Joe the Waxter*. Shortly before his death he had completed a translation of the Talmud into Yiddish.

**NEGRI SEMBILAN**, nā'grē sem'belān'. A federation of nine divisions, constituting a state in the Federated Malay States (q.v.).

**NEJD, SULTANATE OF**. See ARABIA.

**NELSON, ROBERT WICKHAM**. American newspaper man and manufacturer, died at Westfield, N. J., on July 28. He was born at Granville, N. Y., Sept. 20, 1851, and in 1877 he entered the newspaper business at Braidwood, Will County, Ill. In 1880 he formed the partnership of Nelson, Ferriss and Company, and established the *Joliet Daily News*, a name later changed to *Herald News*. Mr. Nelson established in Chicago in 1881 a stereotype plate service, known as Nelson's Ready Print. This interested O. J. Smith, proprietor of the *Chicago Express*, and was the direct cause of an amalgamation consisting of Smith, Nelson and G. W. Cummings, known as the American Press Association. Mr. Nelson succeeded in spreading the activities of the association until it had branches in twenty cities. In 1886 he promoted the Thorne type-

setting machine, of which, later, he became sole owner. In 1894 he became associated with the American Type Founders Company as general manager, becoming president in 1901. In 1900 he founded the National Paper and Type Company, establishing branch houses in the principal cities of South and Central America, Mexico and the West Indies.

**NETHERLANDS, THE, or HOLLAND.** A constitutional monarchy of Europe, bordering on the North Sea, which bounds it on the west and north; bounded on the east by Germany and on the south by Belgium. Capital, The Hague.

**AREA AND POPULATION.** On Jan. 1, 1925, the total area was 12,591 square miles, exclusive of water; population, according to the census of 1920, 6,865,314; according to the communal lists for Dec. 31, 1924, 7,315,046; density per square mile in 1924, 581. According to the figures for 1924, 46.35 per cent of the population, or 3,390,855, were inhabitants of towns of 20,000 or more, the remainder being classified as rural. In 1925 the movement of population was: Births, 178,524; deaths, 72,090; marriages, 54,712. The emigration, mostly to North America, was 3137 in 1924. The largest cities with their populations, Dec. 31, 1924, are: Amsterdam, 712,222; Rotterdam, 543,694; The Hague, 391,369; and Utrecht, 149,808.

**EDUCATION.** Elementary education is free and compulsory between the ages of seven and 13, the cost being shared by the state and the communes. Public elementary schools in 1922-23 numbered 3835 with 17,983 teachers and 534,863 pupils; and private elementary schools, 3203 with 17,291 teachers and 527,757 pupils. For higher education there are the four public universities at Leyden, Utrecht, Amsterdam, and Groningen, with totals of 375 members in the faculties and 6528 students. Besides there are a technical university, a private university, navigation schools, commercial schools, schools for working people, etc.

**PRODUCTION.** The cultivated land in 1924 amounted to 2,495,074 hectares, distributed as follows: Arable land, 891,118; pasture, 1,253,877; gardens and orchards, 99,850; forest, 250,229. The yield of the more important crops in 1924 were as follows: Wheat, 569,955 quarters; barley, 422,482 quarters; oats, 2,265,040 quarters; rye, 1,913,716 quarters; sugar-beet, 2,426,499 tons; and flax, 9294 tons. (See also article on AGRICULTURE, *Production by Countries*.) According to the latest available census of livestock there were 363,668 horses, 2,062,771 cattle, 668,211 sheep, and 1,519,245 pigs. Dutch agriculture during 1926 was adversely affected by high German tariffs that are cutting down Holland's sales to its big foreign customer, and inadequate returns on domestic sales were adding to the depression. A further difficulty arose from the competition of Belgian farm produce, which, as franc depreciation continued, was sold to Dutch canning factories far below local prices.

Coal is mined in the province of Limburg; the output in 1924 was 5,863,785 tons, of which mines owned by the State produced 2,942,718 tons. The 1925 production amounted to 6,848,000 tons, a record figure. In 1924 5137 vessels of all kinds were engaged in the fisheries; the herring fishing in the North Sea was valued at 14,350,015 guilders; the quantity of oysters produced was 1,745,270 kilos. Among the chief industries are: Shipbuilding, sugar refining, dis-

tilling, brewing, the production of salt, and diamond cutting.

**COMMERCE.** Trade figures for 1925 showed increases of 92,000,000 guilders in imports and 147,000,000 guilders in exports, the totals being 2,456,000,000 guilders and 1,808,000,000 guilders, respectively, and resulting in an adverse balance of 648,000,000 guilders as against 703,000,000 guilders in 1924. This represents the lowest import excess since the War and higher export values than in 1920. Dutch import values for the year ended June 30, 1926, amounted to 2,491,000,000 guilders and exports to 1,754,000,000 guilders, resulting in an unfavorable balance of trade of 737,000,000 guilders as against 685,000,000 guilders for the year 1924-25. Imports from the United States for the first half of 1926 decreased to 132,000,000 guilders from 147,000,000 in 1925, and exports to the United States increased from 23,000,000 guilders to 35,000,000. Notwithstanding the growing trade deficit as a source of concern, the situation does not seem to warrant great fear; for with the development of German transit business through Rotterdam and with the prosperity of colonial companies, Holland has large invisible exports which enable it to support a heavy trade deficit and, in addition, to export large sums of capital in the form of subscriptions to foreign loan issues.

**FINANCE.** As voted by parliament, the 1926 ordinary budget showed an excess of receipts for the first time since 1920, but the extraordinary budget still carried a rather large deficit. The "crisis" budget disappeared in 1924, and the extraordinary budget expenditures have declined from 289,676,000 florins in 1921 to 61,385,000 florins in 1926. Severe economies have likewise been effected in the ordinary budget, which for 1926 showed expenditures of 583,026,000 florins as compared with 832,367,000 florins in 1922, and receipts of 592,201,000 florins as compared with the high point of 613,695,000 florins reached in 1920. Tax yields in 1925 amounted to 464,076,000 florins, or 46,134,000 above estimates. During the first half of 1926 receipts amounted to 247,649,000 florins, or 18,551,000 above estimates. Most of this increase is derived from large income-tax payments, reflecting bigger earnings within the country and from the operation of the new tariff schedule, which raised duties from five to eight per cent.

On Jan. 1, 1926, the total debt was 3,177,670,000 florins, comprising a consolidated debt of 2,871,341,000 florins and a floating debt of 306,329,000 florins. Comparative figures for Jan. 1, 1925, were 3,283,037,000 florins for the total debt, comprising 2,923,433,000 florins of consolidated debt and 359,604,000 of floating debt. By July 7, 1926, the floating debt had further decreased to 268,044,000 florins.

**COMMUNICATIONS.** At the beginning of 1924 the merchant marine of The Netherlands consisted of 173 sailing vessels of 16,751 tons and 696 steamers of 1,302,783 tons. In 1924 18,870 vessels of 23,770,000 tons entered the ports of The Netherlands and 18,927 of 23,729,000 tons cleared. Of these vessels 5475 of 7,495,000 tons were Dutch (entered) and 5472 vessels of 7,642,000 tons (cleared). In 1924 the two principal railways had a length of 2405 miles.

**ARMY AND NAVY.** The strength of the Dutch army on Apr. 1, 1925, was 7839 officers and 329,324 men. The military budget for 1926 was 58,-

606,877 florins. The naval budget for the same year was 43,773,897 florins. See **MILITARY PROGRESS**; **NAVAL PROGRESS**.

**GOVERNMENT.** Executive power is vested in the sovereign and legislative power conjointly in the parliament, which is called the States-General and consists of two chambers. The upper chamber is composed of 50 members, elected by the provinces, and the lower chamber of 100 deputies, elected directly. Ruling sovereign at the beginning of the year, Queen Wilhelmina Helena Pauline Maria, born Aug. 31, 1880, and crowned Sept. 6, 1898. The first chamber as a result of the elections of 1923 was distributed among the political groups as follows: 16 Catholics, 8 Anti-Revolutionists, 7 Protestant Party, 5 Liberty Union, 3 Democrats, and 11 Social Democrats. The second chamber as a result of the elections of 1925 was distributed among the political parties as follows: Catholics, 31; Social Democrats, 24; Anti-Revolutionists, 13; Christian Historicals, 11; Liberty Union, 9; Democrats, 7; other parties, 5. The ministry as formed Mar. 8, 1926, was as follows: Prime Minister and Minister of Finance, Dr. D. J. de Geer; Foreign Affairs, Dr. H. A. van Karnebeek; Interior and Agriculture, Dr. J. B. Kan; Justice, Dr. J. Donner; Colonies, Dr. J. C. Konigsberger; War, L. A. van Roijen; Public Works, Dr. H. van der Vegte; Marine, L. A. van Roijen; Labor, Commerce, and Industry, Dr. J. R. Slotemaker de Bruïne; Instruction, Science, and Arts, Dr. M. A. M. Waszink.

**HISTORY.** As noted in the preceding **YEAR BOOK**, a severe cabinet crisis occurred in November, 1925, because of the amendment of the 1926 budget bill providing for the abolition of the Dutch Legation at the Vatican. At first the Catholic members of the cabinet resigned and they were shortly afterward followed by the Protestant members. All attempts to form a new cabinet were unsuccessful until Mar. 4, 1926, when Queen Wilhelmina was able to get a cabinet under the leadership of former Finance Minister de Geer, who was directed to form a cabinet without paying attention to the party groupings in the chamber.

The last two months of the year witnessed several uprisings in the Dutch colonies in the East Indies, particularly in Java where Communist uprisings were prevalent and were forcibly suppressed by the authorities and many of the leaders arrested.

**NEVADA. POPULATION.** According to the Fourteenth Census of the United States, the population of the State Jan. 1, 1920, was 77,407, and no subsequent estimate had been made to 1926. Capital, Carson City.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Hay, tame	1926	209,000	520,000 *	\$5,480,000
	1925	213,000	652,000 *	5,868,000
Potatoes	1926	5,000	700,000	910,000
	1925	4,000	680,000	1,292,000
Wheat, winter	1926	5,000	120,000	182,000
	1925	4,000	104,000	152,000
Wheat, spring	1926	12,000	288,000	840,000
	1925	11,000	352,000	514,000

\* tons.

**MINERAL PRODUCTION.** The metals gold, silver, lead, copper and zinc, furnishing about nine-

tenths of the total value of the State's mineral production, were produced to the total value of \$23,309,352 in 1925, as against \$22,799,790 in 1924. Gold and silver production declined. That of gold was 187,104 fine ounces in 1925 and in 1924, 217,962 fine ounces. That of silver was 7,096,618 fine ounces in 1925 and in 1924, 9,411,379 fine ounces. Copper, lead and zinc production rose considerably; that of copper to 79,300,224 pounds in 1925 from 73,805,323 for 1924; lead to 24,476,452 pounds in 1925 as against 20,060,041 pounds in 1924; zinc to 14,821,293 pounds in 1925, as against 11,002,910 in 1924. The production of gypsum increased in 1924, to 365,714 short tons, as against 289,390 short tons in 1923; in value, \$2,063,089 in 1924, and in 1923, \$1,952,007. The total value of the State's mineral products, duplications eliminated, was in 1924, \$26,225,943; in 1923, \$28,598,627.

The value of the gold, silver, copper, lead, and zinc in Nevada increased to about \$26,084,000 in 1926, according to a preliminary estimate. The gold output decreased to \$3,708,000 on account of the marked decrease in bullion from the mines at Jarbidge and Tonopah. The silver production decreased to about 6,462,000 ounces in 1926, and the value from \$4,925,053 to \$4,032,000. The copper output increased to about 113,616,000 pounds in 1926, and the value to about \$15,679,000. The Nevada Consolidated Copper Co., operating property at Ely, was by far the largest producer of copper in the State. The lead output decreased slightly to about 23,700,000 pounds in 1926, and the value to about \$1,967,000. The zinc recovered from ore mined decreased from 14,821,293 pounds in 1925 to about 9,500,000 pounds in 1926 and from \$1,128,418 in value to about \$698,000. The decrease is accounted for by the closing of the Yellow Pine mine which for many years was the largest zinc producer in the State.

**FINANCE.** As summarized by the Department of Commerce of the United States, payments for maintenance and operation of the general departments of the State in the fiscal year ending Dec. 31, 1925, were \$2,225,598. Their per capita rate was \$28.75, as against \$26.32 in 1924 and \$10.98 in 1917. The total included \$388,915 for education, apportioned among minor State divisions. Expenses totaling \$89,237 for interest on debt and \$2,437,890 for permanent improvements, added to the payments for maintenance and operation of departments, made the total of State payments \$4,752,815. For highways was expended the sum of \$2,819,235, of which \$537,947 was for maintenance and \$2,281,288 for construction.

Revenue receipts of the State were \$4,598,323, or \$59.40 per capita. They exceeded by \$2,283,488 the total payments except those for permanent improvements, and were \$154,492 less than the total with these included. Property and special taxes formed 29.9 per cent of the revenue in 1925, as against 28.5 per cent in 1924 and 57.4 per cent in 1917. Their per capita rate was \$17.79 in 1925, \$18.72 in 1924 and \$9.97 in 1917. Earnings of the general departments and compensation for officials' services furnished 3.8 per cent of the 1925 revenue; business and non-business licenses, 12.2 per cent. License receipts were derived chiefly from taxes on incorporated companies and on gasoline sales, and from licensing of motor vehicles.

The net indebtedness of the State on Dec. 31, 1925, was \$1,738,000, or \$22.45 per capita, as against \$21.45 per capita in 1924 and \$9.36 in 1917. The assessed valuation of property subject to State tax was \$199,318,674. The State tax levy was \$1,283,211, or \$16.58 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 2137. There was constructed in 1926, 72 miles of new line, chiefly pertaining to the Rogers-Wells route of the Oregon Short Line, completed in the course of the year.

**EDUCATION.** The use of achievement tests in the schools resulted, according to W. J. Hunting, State superintendent of public instruction, in a definite improvement in the quality of the school work performed. He also commented favorably on the operation of the increased requirements demanded for the issue and for the renewal of school teachers' certificates. A law enacted by the Legislature of the preceding year to render possible the consolidation of elementary and of high school districts bore fruit during 1926 in a widespread consolidation movement.

**LEGISLATION.** A special session of the Legislature convened in December. Republican members of the State Senate in order to prevent a change of the rules by members of the opposing party withdrew, preventing a quorum. They returned on receiving assurance that the rules would not be altered. A bill was enacted to permit county and city governing boards when petitioned by 51 per cent or more of the electorate, of the political subdivision affected, to reconvey lands previously donated for parks or other public purposes. The immediate purpose of the act was to meet the needs of Las Vegas, where it was desired to donate park lands to provide a site for a large privately owned hotel.

**POLITICAL AND OTHER EVENTS.** At the general election on November 2, Fred B. Balzar, Republican candidate, was elected Governor. U. S. Senator Tasker L. Oddie, Republican, was re-elected, to serve the six-year-term beginning Mar. 4, 1927. A referendum proposal to request Congress to call a convention for the submission of a proposal to alter the Eighteenth Amendment was carried. Mr. Balzar made his campaign for the Governorship largely on the issue of economy, and after election declared his intention to reduce State expenses, particularly those in the highway department. A prevalently Republican State Legislature was elected, giving Nevada the first consistently Republican government in eight years.

Other State officers elected November 2, were: Lieutenant-Governor, Morley Griswold; Secretary of State, W. G. Greathouse; State Treasurer, Ed. Malley; State Controller, E. C. Peterson; Attorney General, M. A. Diskin; Auditor, I. Jeffries; Superintendent of Public Instruction, Walter W. Anderson.

A tract of 100,000 acres of Federal land situated in Mineral County was withdrawn from the public lands open to homesteading, by Presidential order issued in October. This tract, lying south of Walker Lake and near Hawthorne, had been selected after inspection by U. S. Navy representatives as the site for a Navy ammunition depot. The intention was to replace the Lake Denmark, N. J., depot, destroyed in July, with a depot in a less populous area. The Navy Department did not immediately

take steps to acquire the Nevada tract, but deferred action until after further consideration of possible depot sites elsewhere, notably in California.

**OFFICERS.** Governor, J. G. Scrugham; Lieutenant-Governor, M. J. Sullivan; Secretary of State, Ed. Malley; Attorney-General, M. A. Diskin; State Comptroller, George A. Cole; Auditor, Iven Jeffries; Superintendent of Public Instruction, W. J. Hunting.

**JUDICIARY.** Supreme Court: Chief Justice, J. A. Sanders; Associate Justices, Ben W. Coleman and Edward A. Ducker.

**NEVADA, UNIVERSITY OF.** A State institution of higher education at Reno, Nevada; founded in 1874. There was an enrollment of 830 students for the fall term of 1926, of whom 502 were men and 328 women. These were distributed as follows among the various departments of the University: arts and sciences, 594; normal school, 42; engineering, 149; agriculture, 23; home economics, 22. The summer session of 1926 had a registration of 145. There were 70 members on the faculty. The productive funds amounted to \$358,439.19 and the income for the year to \$429,489.77. The library contained 45,850 volumes. President, Walter E. Clark, Ph.D., LL.D.

**NEWBOLD, WILLIAM ROMAINE.** Professor of Intellectual and Moral Philosophy at the University of Pennsylvania, died at Philadelphia, Pa., September 26. Born at Wilmington, Del., in 1865, he graduated from the University of Pennsylvania in 1887, becoming interested in psychic matters and the investigation of spirit phenomena. He became a well-known and highly esteemed authority on the history of the early Church and the development of Christianity. His work on the discoveries of the Church of San Sebastino was published in the *American Journal of Archaeology*. Perhaps Professor Newbold's greatest work was the decipherment of the Voynich cipher manuscripts of Roger Bacon.

**NEW BRUNSWICK,** brūnz'wīk. One of the Maritime Provinces of Canada, lying east of Maine and south of the province of Quebec. Area, 27,985 square miles; population, according to the census of 1921, 387,876. The capital is Fredericton, with a population in 1921 of 8114. The largest cities with their populations in 1921 are St. John, 47,166 and Moncton, 17,488. The chief industries are: Agriculture, mining, manufactures, fishing, and lumbering. The acreage and yield of the principal crops for 1925 were as follows: Wheat, 13,396 acres, 230,000 bushels; oats, 225,402 acres, 7,055,000 bushels; barley, 5966 acres, 142,000 bushels; rye, 245 acres, 4000 bushels; mixed grain, 3248 acres, 92,000 bushels; other grains, 48,000 acres, 1,074,000 bushels; potatoes, 40,000 acres, 4,232,000 cwts.; roots, 11,711 acres, 2,140,000 cwts.; hay and clover 548,408 acres, 954,000 tons; fodder corn, 3453 acres, 35,000 bushels. The livestock census in 1925 showed 50,782 horses; 111,225 milch cows; 105,263 other cattle; 151,349 sheep; 60,376 swine; and 951,063 poultry. The total value of the fisheries in 1924 was \$5,383,809. The province possesses various minerals including iron, gypsum, coal, building stone, antimony, copper, and manganese. The only active mining, however, is in coal and gypsum. The coal output in 1924 amounted to 215,632 short tons. In 1924-25 the exports from the Province amounted to \$77,321,958 and the imports for

consumption amounted to \$25,702,006. In the same year there were 1941 miles of railways open for operation. The province is under a lieutenant-governor appointed by the governor-general of Canada, and a legislative assembly of 48 members elected for five years. As a result of the election held in August, 1925, the political grouping in the assembly was as follows: Conservatives, 35; Liberals, 12; Independents, 1. Lieutenant-governor in 1926, W. F. Todd; Prime Minister, Minister of Public Works, and Attorney-General, J. B. M. Baxter; Secretary-Treasurer, A. J. Leger; Agriculture, Lewis Smith; Public Health, Dr. H. I. Taylor; President of the Executive Council, L. P. D. Tilley; Lands and Mines, C. D. Richards; Minister without Portfolio, E. A. Reilly. The province is represented by 10 members in the Canadian Senate and 11 in the House of Commons.

**NEW CALEDONIA**, *kāl'é-dō'nl-ā*. A French colony, comprising the island of New Caledonia, the southernmost of the Melanesian Islands, lying between 20° 1' and 22° 26' S. latitude, and 161° 30' and 144° 40' E. longitude; and the following dependencies: Isle of Pines, Wallis Archipelago, Loyalty Islands, Huon Islands, and Futuna and Alofi. The island of New Caledonia has a length greater than 248 miles and an average width of 31 miles. Area, 7650 square miles. Population, according to the census of 1921, 47,505, of whom 14,172 were free, 2310 of convict origin, and 25,123 Melanesians and Polynesians. Very few immigrants come from France, the vast majority of those coming in 1925 migrating from Java and Tonkin. Capital, Nouméa, with 9336 inhabitants in 1921. No convicts have been sent to the penal settlement on Nou Island since 1896. Coffee, copra, cotton, manioc, corn, bananas, tobacco, and pineapples form the principal agricultural products. The mineral resources are said to be very rich and varied, comprising cobalt, chrome, nickel, iron, manganese, all of which are abundant; also antimony, mercury, silver, gold, lead, copper, and cinnabar. In 1924 the value of mineral exports was 2,846,000 francs. The other leading exports include coffee, copper, copra, guano, and preserved meats. The chief imports are wine, coal, flour, and rice. In 1924, 92 vessels of 128,341 tons entered and 96 of 129,304 tons cleared from the ports of New Caledonia. About two-thirds of those that entered were French. There is a narrow gauge railway from Nouméa to Paita, about 20 miles long; an extension to Bourail, a distance of 105 miles, has been proposed for some time. The colony is administered by a governor assisted by a privy council, made up of officials and by an elected council-general. Governor in 1926, M. Guyon, appointed in 1925.

**NEW CHURCH**. See **NEW JERUSALEM**, **CHURCH OF THE**.

**NEWFOUNDLAND**, *nū'fūnd-lānd'*. An island possession of Great Britain in the north-eastern part of the Gulf of St. Lawrence. Area, 42,734 square miles; population, according to the census of 1921, 259,358, estimated in 1924, 258,425. Dependent upon Newfoundland is the populated strip of Labrador, with an area of 120,000 square miles and a population in 1924 of 3874. Capital, St. John's, with a population in 1924 of 38,782. Other towns and their populations in 1921 are Bonavista, 4025; Harbor Grace, 3825; Carbonear, 3320. The birth rate in 1924 was 25.99 per thousand and the death

rate 16.39 per thousand. The immigrants in the same year numbered 14,214 and the emigrants, 11,801. There were 1099 schools of all kinds in 1924, with a total attendance of approximately 60,000.

According to the United States Bureau of Foreign and Domestic Commerce, the colony of Newfoundland fared well commercially and industrially in 1925, despite reduced returns from its famous cod fishery, which was still the principal source of revenue. The total catch, estimated at nearly 139,000,000 pounds was about 8,000,000 pounds smaller than in 1924, and the prices were slightly less. The estimated value of dried codfish exports for 1925 was \$9,716,000; of pickled codfish, \$116,620; of crude cod oil, \$577,100; and of refined cod liver oil, \$114,558. The estimated returns of the seal fishery were \$362,774 (including sealskins); from the whale fishery, \$175,000; from the herring fishery, \$204,000; and from other fisheries, \$273,890.

Newfoundland's forests are crowding closely upon its fisheries as revenue-producing resources, the total value of its exported products amounting to almost \$7,000,000 during the year. The new pulp and paper plant on the Humber River, which commenced operations early in September, 1925, had an export of about 20,000 tons of newsprint, valued at \$1,400,000, up to the end of the year. The long established plant at Grand Falls produced 73,310 tons of newsprint, worth \$5,131,700, as well as 7440 tons of wood pulp, appraised at \$126,582. Two lumber companies exported 400,000 cords of pit props valued at \$300,000. Agricultural products next in order, had a reported value of \$3,701,880. Potatoes, the chief contributor in this class, were valued at \$1,587,306; hay at \$1,477,500; cabbages at \$383,405; and turnips at \$205,392. Mining activity during the year was centred at Bell Island, where about 900,000 tons of iron ore were taken out. Exports of iron ore (including ore previously mined) reached 1,132,010 tons worth approximately \$1,700,000. Small quantities of copper, lead, and silver ore, aggregating about \$290,000 in value, were exported.

Perhaps the most encouraging accomplishment of the colony was the excellent financial record of the government, which closed its fiscal year with a surplus and greatly improved public credit. A total of \$2,300,000 was expended on public works and private construction during the year. The revenue for 1924-25 was \$9,783,188 and the expenditure \$9,436,185; for 1925-26 the revenue was estimated at \$9,560,000 and expenditures at \$9,354,000. The public debt on June 30, 1925 was \$64,517,999.

The government railways open in 1925 totaled 905 miles; private railways, 47 miles. The Newfoundland government railway showed a net loss of \$358,509 for the fiscal year ended June 30, 1925, whereas the previous year's loss was only \$6519. This result can be attributed largely to the diminished traffic receipts, following the completion of large construction enterprises on the west coast, and to greater expenditure on maintenance of way and structures, in preparation for the relaying of nearly 100 miles of track with new 70-pound rails.

Executive power is vested in a governor, assisted by an executive council of not more than 10 members, and legislative power is vested in a council of not more than 24 members and

an elected house of assembly consisting of 36 members. Governor, Sir William L. Allardyce; Prime Minister and Minister of Education, W. S. Monroe; Justice, W. J. Higgins; Colonial Secretary, J. R. Bennett; Finance and Customs, Sir J. C. Crosbie; Posts and Telegraphs, W. J. Woodford; Marine and Fisheries, Wm. C. Winsor; Public Works, C. E. Russell; Agriculture and Mines, W. J. Walsh; Ministers without Portfolios, A. B. Morine, M. S. Sullivan, Richard Cramm, F. G. Bradley, and Joseph J. Long.

**NEW GUINEA, gin's.** An island of the East Indies, the third largest in the world, ranking after Australia and Greenland. Area, variously estimated at from 310,000 to 335,000 square miles; population estimated to be slightly below 1,000,000. It is divided among Australian, Dutch, and British control, the distribution being as follows: The northeastern portion, constituting the former Kaiser Wilhelmsland, to Australia; the western part, to 140° E. longitude to the Dutch East Indies; the southeastern part of the British colony of Papua. See DUTCH EAST INDIES, GERMAN NEW GUINEA, and PAPUA.

**NEW HAMPSHIRE. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 443,083. The estimated population on July 1, 1926 was 454,000. The capital is Concord.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Hay, tame	1926	469,000	534,000 *	\$10,146,000
	1925	469,000	572,000 *	10,852,000
Potatoes	1926	11,000	1,815,000	3,086,000
	1925	11,000	1,595,000	3,748,000
Corn	1926	15,000	705,000	705,000
	1925	14,000	700,000	700,000

\* tons.

**MINERAL PRODUCTION.** Stone, which constitutes the State's most important mineral industry, was produced to a total of 93,340 short tons in 1924, as compared with 122,460 short tons in 1923; the product was valued at \$1,556,698 in 1924 and at \$1,763,221 in 1923. The clay products of the State had a value for 1924 of \$868,444; and for 1923, of \$913,389. Sand and gravel were produced to a value of \$416,014 in 1924 and in 1923, \$423,854. The State was the second largest domestic producer of feldspar, with an output of 39,425 long tons in 1924, as against 23,280 long tons in 1923; having a value of \$324,638 in 1924 and in 1923 of \$171,789. The total value of the State's mineral products was \$3,378,165 in 1924 and in 1923, \$3,572,615.

**FINANCE.** As summarized by the Department of Commerce of the United States, payments for maintenance and operation of the general departments of the State for the fiscal year ending June 30, 1925, were \$5,453,704. Their per capita rate was \$12.13, as against \$10.02 in 1924 and \$5.50 in 1917. The total included \$346,932 for education, apportioned among minor State divisions. Expenses totaling \$110,038 for interest on debt and \$1,778,364 for permanent improvements, added to the payments for maintenance and operation of departments, made the total of State payments, \$7,342,106. For highways was expended the sum of \$2,899,845, of which \$1,525,719 was for maintenance and \$1,374,126 for construction.

Revenue receipts of the State were \$7,263,820, or \$16.16 per capita. They exceeded by \$1,700,078 the total payments except those for permanent improvements, and were \$78,286 less than the total with these included. Property and special taxes formed 35.7 per cent of the revenue in 1925, as against 41.7 per cent in 1924 and 57.5 per cent in 1917. Their per capita rate was \$5.77 in 1925, \$5.99 in 1924 and \$3.22 in 1917. Earnings of the general departments and compensation for officials' services furnished 8.1 per cent of the 1925 revenue; business and non-business licenses, 38.2 per cent. License receipts were derived chiefly from taxes on incorporated companies, from the road toll on sales of gasoline, which increased considerably during the year, and from licensing of automobiles.

The net indebtedness of the State on June 30, 1925, was \$1,665,806, or \$3.71 per capita, as against \$4.76 per capita in 1924 and \$4.09 in 1917. The assessed valuation of property subject to State tax was \$645,001,661. The State tax levy was \$2,790,286, or \$6.21 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of the year 1925 was 1234. No new construction was reported in 1926. The Boston and Maine abandoned a 19 mile stretch of line between East Milford and Grasmere Junction and a 3 mile stretch between Bethlehem Junction and Bethlehem.

**EDUCATION.** According to a school enumeration made in September, 1924, children between the ages of 5 and 16 years numbered 88,082. Registration of pupils in the year ending June 30, 1925, in the public schools numbered 74,118. In approved senior high schools alone were registered 13,769 pupils. Total expenditure for public education in elementary, secondary, and normal schools and mothers' aid instruction was \$6,947,895. Salaries of teachers in 1926 averaged as follows: in rural schools, \$823; in village elementary, \$981; city elementary, \$1298; high, \$1612.

**CHARITIES AND CORRECTIONS.** The State Board of Charities and Corrections, consisting of six appointed members, holds extensive powers as to delinquent and dependent children, the supervision of lying-in hospitals, and aid to the deaf, dumb and blind, under laws of 1925. These laws likewise forbade the marriage of mental defectives and created a system of children's courts and a parole for delinquent minors. Population of State institutions on June 30, 1926, was as follows: New Hampshire State Hospital, Concord, 1570; Laconia State School (for feeble-minded children), 229 males, 254 females; State Industrial School (for juvenile delinquents), Manchester, 124 boys, 57 girls, not counting those on parole; State Prison, Concord, 130 men, 5 women; New Hampshire Soldiers' Home, Tilton; State Sanatorium for Consumptives, Glencliff, 85; Pembroke Sanatorium School (tubercular children), 27; Pembroke Sanatorium, 67.

**POLITICAL AND OTHER EVENTS.** At the general election on November 2, Huntley N. Spaulding, Republican candidate, was elected Governor, defeating Eaton D. Sargent, Democrat. Senator George H. Moses, Republican candidate for reelection to the U. S. Senate for the regular six-year term, defeated R. C. Murchie, Democrat, by a majority of approximately 30,000. Both Republican members of the U. S. House of Representatives from the State were reelected, and heavy majorities of the same party were

elected to the State Legislature and Council.

Other State officers elected in November, to take office in 1927, were: Secretary of State, Hobart Pillsbury; State Treasurer, Henry E. Chamberlin.

In consonance with like moves in other States, a Crime Commission was formed, the members being appointed by Governor Winant May 31. The commission had directions to cooperate with the National Crime Commission.

**OFFICERS.** Governor, John G. Winant; Secretary of State, Hobart Pillsbury; State Treasurer, Henry E. Chamberlin; Attorney-General, Jeremy R. Waldron; Commissioner of Education, Ernest W. Butterfield.

**JUDICIARY.** Supreme Court: Chief Justice, Robert J. Peaslee; Associate Justices, John E. Allen, Thomas L. Marble, Oliver W. Branch, Leslie P. Snow.

**NEW HAMPSHIRE, UNIVERSITY OF.** A State institution of higher education at Durham, N. H.; founded in 1866 at Hanover, N. H., as a part of Dartmouth College, transferred to Durham as State College in 1893, and made State University in 1923. It consists of a college of liberal arts, a college of agriculture, and college of technology. The 1926-27 enrollment was 1440, which comprised 1016 men and 424 women. The summer session had a registration of 263 students. The faculty numbered 125. The endowment amounted to \$1,030,000, and the income for the year totaled \$1,197,520. The college year 1925-26 was the first under the millage law of 1925, which provides an annual amount equal to one mill for each dollar of the assessed valuation of the State. This fund, which in 1925-26 amounted to \$585,000, together with income from other sources, is sufficient for the maintenance of the University and for the gradual construction of a complete physical plant in accordance with a comprehensive plan for the development of the University. In 1926 a dormitory to accommodate 150 men was completed, and a liberal arts classroom building begun. The library contained 55,000 volumes. President Ralph Dorn Hetzel, LL.D., resigned to take effect Jan. 1, 1927, to become president of Pennsylvania State College.

**NEW HEBRIDES,** heb'ri-déz. A group of islands in Melanesia, including the following islands: Espiritu Santo, Mallicolo, Efate or Sandwich Island, Epi, Erromanga, Tanna, Tutuana or Eironnian, and Anietyum. The group is under the joint administration of France and Great Britain, according to conventions of February, 1906, and Mar. 18, 1922. The interests of British, French, and Natives are guaranteed; the conditions of land holding in the islands are fixed; and the regulation and recruitment of labor provided for. The area is approximately 5700 square miles and the population about 60,000, of whom in 1924, 247 were British and 741 French. Many missionary schools have been established, chiefly by the Presbyterian faith. The land for the most part has not been cleared, but large tracts have been settled in the interior. The area under cultivation of the principal crops in acres in 1924 was as follows: Coconuts, British, 35,000, French, 25,110; coffee, British, 200, French, 2425; Maize, British, 500, French, 882; Cotton, British, 2500, French, 4115; Cacao, British, 1260, French, 7005. Bananas, oranges, and all tropical fruits grow well. Trade is chiefly with Sydney and New Caledonia. The

British imports in 1924 amounted to 1,679,824 francs and the French 6,249,503 francs. The combined exports were valued at 23,197,067 francs, of which about one-fourth were British. The chief imports are provisions, clothing, metals, and furniture and the chief exports are corn, copra, coffee, cotton, coconuts, and cacao. The joint revenue in 1924 was 944,725 francs and expenditure 686,742 francs. British revenue in 1924-25 amounted to £487 and expenditure to £13,600. Direct steamship communication has been established with France, via Tahiti and Panama. British High Commissioner, Sir Eyre Hutson; French High Commissioner, M. Guyon; British Resident Commissioner, G. B. Smith-Rewse; French Resident Commissioner, M. H. d'Arboussier.

**NEW JERSEY.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,155,900. The estimated population on July 1, 1926, was 3,680,000. The capital is Trenton.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Hay, tame	1926	250,000	391,000 *	\$7,937,000
	1925	257,000	400,000 *	8,000,000
Potatoes	1926	50,000	7,250,000	11,238,000
	1925	55,000	5,830,000	13,409,000
Sweet potatoes	1926	17,000	2,465,000	2,958,000
	1925	16,000	1,872,000	4,493,000
Corn	1926	188,000	8,648,000	6,918,000
	1925	199,000	10,348,000	7,554,000
Wheat, winter	1926	60,000	1,320,000	1,742,000
	1925	56,000	1,176,000	1,682,000
Oats	1926	50,000	1,650,000	825,000
	1925	50,000	1,500,000	810,000
Peaches	1926	.....	3,000,000	1,890,000
	1925	.....	1,740,000	2,610,000

\* tons.

**MINERAL PRODUCTION.** Clay products attained a total value of \$46,414,167 in 1924, as against \$44,921,714 in 1923. They formed the State's most valuable mineral product. Zinc, the second product in order of annual value, yielded 84,370 short tons in 1924, as against 75,227 short tons in 1923. The value of zinc produced in the State in 1924 was not far from \$11,000,000. Cement was produced on an important scale. Of sand and gravel were produced 3,968,361 short tons in 1924 and 6,101,204 short tons in 1923; the product was valued at \$3,345,764 in 1924 and in 1923 at \$4,381,855 in 1923. Stone, produced in the quantity of 2,149,270 short tons in 1924, and of 2,039,740 short tons in 1923, attained a value of \$3,326,298 for 1924 and of \$3,032,918 for 1923. Iron ore, greensand marl, and peat were produced in considerable quantities. The total mineral production of the State, duplications eliminated, was \$75,271,009 in 1924 and in 1923, \$72,602,066.

**FINANCE.** As summarized by the United States Department of Commerce, payments for maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$39,827,994. Their per capita rate was \$11.46, as against \$11.19 in 1924 and \$6.85 in 1917. The total included \$15,930,678, for education, apportioned among minor State divisions. Expenses totaling \$1,944,491 for interest on debt and \$28,251,268 for permanent improvements, added to the payments for maintenance and operation of departments, made the

total of State payments \$70,023,753. For highways was expended the sum of \$30,495,336, of which \$5,516,249 was for maintenance and \$24,979,087 for construction.

Revenue receipts of the State were \$61,292,881, or \$17.64 per capita. They exceeded by \$19,520,396 the total payments except those for permanent improvements, and were \$8,730,872 less than the total with these included. Payments in excess of revenue were met from proceeds of debt obligations. Property and special taxes formed 64.3 per cent of the revenue in 1925, as against 66.2 per cent in 1924 and 76.4 per cent in 1917. Their per capita rate was \$11.34 in 1925, \$10.64 in 1924 and \$5.93 in 1917. Earnings of the general departments and compensation for officials' services furnished 5.8 per cent of the 1925 revenue; business and non-business licenses, 19.5 per cent. License receipts were derived chiefly from taxes on incorporated companies and from the licensing of motor vehicles.

The net indebtedness of the State on June 30, 1925, was \$51,432,235, or \$14.80 per capita, as against \$9.76 per capita in 1924 and 4 cents per capita in 1917. Debt was increased in 1925 by a bond issue of \$20,000,000 for highways. The assessed valuation of property subject to State tax was \$5,062,950,215. The State tax levy was \$32,291,485, or \$9.29 per capita.

**TRANSPORTATION.** The total mileage of railroad line operated at the end of 1925 was 2292. New construction and abandonment of line in 1926 were slight.

**EDUCATION.** An act of the State Legislature brought the State normal schools, which had previously been in the charge of the State Board of Education, under the direction of the State Commissioner of Education. The Legislature reaffirmed the State teachers' pension and annuity system. Governor Moore vetoed a bill to require attendance at public schools on certain patriotic holidays. The State board of education adopted a resolution for a survey of the public school system. The enrollment of pupils in public schools in the State was 720,346. In common schools were enrolled 623,553, and in high schools, 90,306; in addition there was an enrollment of 6487 in special classes. Expenditures for education in 1926 attained \$79,257,629. The salaries of day school teachers averaged \$1852.

**CHARITIES AND CORRECTIONS.** The State had under construction in 1926 at Totowa a North Jersey Training School for Feeble-Minded Females, designed to train the higher grade feeble-minded girls for domestic service. The Department of Institutions and Agencies, created in 1918, had full charge of charitable, correctional, reformatory and penal institutions. The chief of these were: State Hospital for the Insane, Grey-stone Park; State Hospital for the Insane, Trenton, 2445 inmates; State Village for Epileptics, Skillman, 918 inmates; State Institution for the Feeble-Minded, Vineland, 1085; State Colony for Feeble-Minded Males, New Lisbon, 309; Sanatorium for Tuberculous Diseases, Glen Gardner, 284; New Jersey State Prison, Trenton, 1640; New Jersey Reformatory, Rahway, 563; New Jersey State Home for Boys, Jamesburg, 639; New Jersey State Home for Girls, Trenton, 256; New Jersey Memorial Home for Disabled Soldiers, Vineland, 242.

**LEGISLATION.** Two sessions of the State Legislature were held. The first, for the passage of

bills in general, ended March 25. The second, convened May 11, had for its object the conservation of the potable water supply. The second or special session had as one of its chief purposes the passage of legislation in conformity with the States of New York and Pennsylvania to form a tri-State agreement as to participation in use of the waters of the Delaware River watershed. Under the proposed agreement awaiting enactment by New Jersey, the State would gain the use of tributaries of the Delaware River situated chiefly within the State's borders. Owing to lack of harmony as between local groups within the State, the special session failed to pass the Delaware River legislation. The Water Policy Commission already in existence and charged with conferring with Pennsylvania and New Jersey commissioners on compacts relative to interstate waters had its powers in these matters renewed by statute.

The regular session passed numerous acts. As a consequence of an atrocious crime committed by an escaped inmate of an Essex County asylum, power was given superintendents of the county insane to arrest fugitive inmates without warrant and bring them back. Two extra circuit court judgeships were created to be filled by the governor's appointment for seven-year terms. A statute was enacted forbidding the issue of an injunction by any State court against striking or strike picketing, provided that strike pickets should maintain an interval of ten paces. A department of motor vehicles was created, having a commissioner elected by the Legislature for a four-year term, and maintaining a motor vehicle inspection force with power to stop and examine any vehicle, and to regulate highway traffic. Provision was made for acquisition of lands for a Sand Dune State park. The auto-bus act of 1916 was extensively amended. The State Board of Education was empowered to take land in Bordentown for an Industrial Colored School.

By joint resolution the U. S. Congress was asked to maintain the naval air station at Lakehurst. The State attorney-general was authorized to appear before the Secretary of Commerce or other proper Federal authority against licensing radio broadcasting stations where complained of by a New Jersey municipality. A commission of six was created to devise a uniform system for administering the motor vehicle and traffic acts. For revising the State's blue laws a commission of six was formed, to report a bill to the next subsequent legislature. It was asked that the Shipping Board make up to Hoboken loss of taxes sustained since the Board had taken over the old North German Lloyd piers. There were rendered available \$250,000 for purchase of wild lands in the State for forestation.

**POLITICAL AND OTHER EVENTS.** In the general election of November 2, there were elected to the U. S. House of Representatives nine Republicans and three Democrats. Republican majorities were maintained in both houses of the State Legislature.

Gov. A. Harry Moore was inaugurated January 19. He appointed, May 19, five members to form a crime commission somewhat similar in purpose to the Baumes commission of the previous year in New York State, and charged to make recommendations to the Legislature session of 1927 as to needed changes in the criminal

statutes, for coping with increase in the prevalence of professional crimes of violence. The arsenal of the U. S. Navy, situated at Lake Denmark near Dover, was destroyed July 10. Lightning started a fire in which a vast quantity of explosive materials was set off, causing damage later fixed at the total of \$47,000,000, and leaving some 30 persons killed or missing.

The trial of Frances Stevens Hall, the widow of the Rev. Edward W. Hall, rector of the church of St. John the Evangelist, in New Brunswick, for murder, took place at Somerville, N. J., Mrs. Hall was tried only on the charge relating to the killing of Mrs. Eleanor R. Mills, a choir singer, who was found dead with the New Brunswick rector. The investigation of the murders, which took place in September, 1922, had been resumed in 1926 after a long lapse. Alexander Simpson, State Senator from Hudson County, appointed assistant State attorney-general of New Jersey by Governor Moore with the special mission of seeking to bring the guilty in the case to justice, obtained indictments in Somerset County against Mrs. Hall, and likewise against her two brothers William and Henry Stevens, and a cousin, Henry B. Carpender, charging each of the four as principal or as accessory in each murder. The trial was opened November 3. Three defendants, Mrs. Hall and her two brothers, were tried together under indictments as to the death of the woman victim only. The chief witness for the State, Jane Gibson, was brought into court on a hospital bed and swore to the three defendants as the persons whom she had seen at the approximate time and place of the murder. Her testimony was not credited by the jury, nor was that of finger print experts presenting indirect evidence. The defense presented alibis and alleged that the prosecution had been inspired by persons connected with a pictorial daily published in New York. The jury rendered a verdict of "not guilty" and on December 3 Governor Moore denied permission to prosecute under remaining indictments. Expenses of the case, incurred by the special prosecutor and exceeding \$100,000 were declared by him payable by Somerset County, but county authorities took exception to this view, holding that expense was in excess of the gain realized and had been incurred without the county's approval.

Important progress was made during the year in construction undertakings of Statewide significance. The Camden bridge over the Delaware River to Philadelphia was completed and formally opened for traffic July 1. A four-track lift bridge crossing Newark Bay from Bayonne to Elizabethport and carrying the main line of the Central Railroad of New Jersey, was finished and was opened for traffic November 10. See BRIDGES.

A conference held at Trenton March 1 and 2 by the Atlantic Deeper Waterways Association and the Trenton Chamber of Commerce adopted resolutions urging the U. S. War Department to make an early report in favor of the proposed ship canal through central New Jersey from Bordentown to Raritan Bay, and requesting of Congress the necessary appropriations for the canal. The North Jersey Transit commission reported to Governor Moore, January 25, in favor of the construction of a transit loop line 17 miles in length, to cost \$154,000,000 for structural work and \$40,000,000 for equipment. The project involved digging tunnels

under the Hudson River at the Battery and at Fifty-seventh Street, New York, and the construction from the western exits of these tunnels of a line extending in Hudson, Essex, Bergen and Passaic Counties. The report of William G. Sloan, engineer to the State Highway commission, presented November 29, dealt with means to finance the extensive road building plans put before the Legislature by the Commission. It reckoned at \$3,153,500 the initial year's receipts from a one-cent gasoline tax, if imposed by the State.

**OFFICERS.** Governor, A. Harry Moore; Secretary of State, John F. S. Fitzpatrick; Treasurer, William T. Read; Comptroller, Newton A. K. Bugbee; Attorney-General, Edward L. Katzenbach.

**JUDICIARY.** Chancellor, Edwin Robert Walker; Supreme Court: Chief Justice, William S. Gum- mere; Justices: Samuel Kaliach, Frank S. Katzenbach, Jr., Thomas W. Trenchard, Charles W. Parker, Charles C. Black, James F. Minturn, Luther A. Campbell, Frank T. Lloyd.

**NEW JERUSALEM, CHURCH OF THE.** An organization which is also known as the New Church, and popularly called Swedenborgian, because based upon the statement of Christianity set forth in the writings of Emanuel Swedenborg, Swedish scientist, philosopher, theologian, and seer (1688-1772). The two bodies that now compose it are the General Convention of the New Jerusalem and the General Church of the New Jerusalem, the former organized in Philadelphia in 1817, and the latter, which differs from the former mainly in its stricter attitude toward Swedenborg's writings, which it considers as the Word of the Lord revealed at His Second Coming, having separated from the parent body in 1891. The first society of the New Church in the United States was founded in Baltimore in 1792. The polity of the church is a modified episcopacy; the worship of the church is generally liturgical, chants being extensively used. Missionary work is carried on in Denmark, Sweden, Germany, France, Switzerland, Lettland, Czecho-Slovakia, Austria, South Africa, India, Japan, and British and Dutch Guiana.

The amount expended in home and foreign fields during the year ending Apr. 30, 1926, was \$24,400. In 1926 the General Convention consisted of about 5875 communicant members, united into 85 societies, territorially organized as 12 associations. The ministerial membership was 112. Educational institutions of the New Church include a theological school at Cambridge, Mass., a Junior College at Urbana, Ohio, and the Waltham School for Girls, Waltham, Mass. Periodicals include the *New-Church Messenger*, weekly, Brooklyn, N. Y.; the *New-Church Review*, quarterly, Boston, Mass.; the *New-Church League Journal*, monthly, Boston, Mass.; and *Helper*, weekly, Philadelphia, Pa. The Convention meets annually, and convened in 1926 at Philadelphia, Pa., May 15-18. Its 1927 session is scheduled for Chicago, Ill., June 18-21.

The General Church, in 1926, had a worldwide membership of 1861, with 39 ministers and 24 societies, 15 of which were in the United States and Canada, 2 in England, and others in France, Belgium, Holland, Sweden, Natal, New South Wales, and Brazil. A Native Mission was maintained in South Africa. Eight societies conducted parochial schools for the elementary grades. The headquarters are at Bryn Athyn,

Penna., where the Bishop resides and there is a cathedral church, in addition to the Academy of the New Church, with departments from kindergarten to junior college and theological school, the enrollment for 1926-27 being 252. The General Church holds a triennial General Assembly, the Councils meet annually, and the Consistory weekly. Among its periodicals are *New Church Life*, the official monthly, *New Church Sermons*, *The Journal of Education*, and the *Bulletin*.

**NEW MEXICO. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 360,350. The estimated population on July 1, 1926, was 388,000. The capital is Santa Fe.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Hay, tame	1926	182,000	435,000 *	\$5,220,000
	1925	171,000	387,000 "	5,805,000
Corn	1926	221,000	4,420,000	3,845,000
	1925	175,000	3,150,000	3,150,000
Wheat, winter	1926	212,000	4,876,000	5,364,000
	1925	52,000	156,000	234,000
Wheat, spring	1926	87,000	777,000	878,000
	1925	28,000	336,000	504,000
Grain sorghum	1926	119,000	2,618,000	1,047,000
	1925	90,000	1,800,000	1,170,000
Beans, dry	1926	195,000	838,000	2,179,000
	1925	114,000	399,000	1,317,000

\* tons.

**MINERAL PRODUCTION.** Copper production, the leading element in the total value of the State's metal output, was active in 1925, reaching a smelter output of 76,467,245 pounds, as against 78,145,629 pounds in 1924. The 1924 product had a value of \$9,784,578, while that of 1925 was worth approximately \$10,800,000. There were produced 29,572 fine ounces of gold in 1925 and in 1924, 26,742 fine ounces; in value, \$611,300 in 1925 and in 1924 \$552,800. Silver production totaled 799,673 fine ounces in 1925, as compared with 834,933 fine ounces in 1924; having a value in 1925 of \$554,973 in 1925 and in 1924 of \$559,405. Zinc production in 1925 was 18,492,300 pounds valued at \$1,405,415; in 1924, 20,760,000 pounds, valued at \$1,349,348. Coal, of which the production rivaled that of copper in point of value, was produced to the quantity of 2,473,000 short tons in 1925; and in 1924, of 2,786,063 tons. The total coal product of 1924 was valued at \$9,774,000. Stone, sand and gravel, lead and petroleum were produced in minor amounts. The State's total mineral production, in 1924, was \$23,913,528; in 1923, \$23,791,047.

The output of gold, silver, copper, lead, and zinc from New Mexico ores in 1926 in terms of recovered and estimated recoverable metal was \$419,000 in gold, 482,000 ounces of silver, 7,888,000 pounds of lead, 82,600,000 pounds of copper, and 24,200,000 pounds of zinc, according to the U. S. Bureau of Mines. These figures show decreases for gold and silver, but increases for lead, copper, and zinc. At estimated average prices for 1926, the value of the output was: silver, \$300,800; lead, \$654,700; copper, \$11,398,800; and zinc, \$1,778,700. These values give a gross estimated value of the output of \$14,552,000, an increase of about \$676,000, or 5 per cent.

**FINANCE.** As summarized by the United States Department of Commerce, payments for mainte-

nance and operation of the general departments of the State in the fiscal year ending June 30, 1925 were \$3,885,532. Their per capita rate was \$10.22, as against \$10.45 in 1924 and \$5.13 in 1917. The total included \$838,866 for education, apportioned among minor State divisions. Expenses totaling \$200,718 for interest on debt and \$4,577,242 for permanent improvements, added to the payments for maintenance and operation of departments, made the total of State payments \$8,633,492. For highways was expended the sum of \$5,030,509, of which \$609,796 was for maintenance and \$4,420,713 for construction.

Revenue receipts of the State were \$7,907,546, or \$20.95 per capita. They exceeded by \$3,851,296 the total payments except those for permanent improvements, and were \$725,946 less than the total with these included. Payments in excess of revenue were met from proceeds of debt obligations. Property and special taxes formed 22.1 per cent of the revenue in 1925, as against 25.7 per cent in 1924 and 49.1 per cent in 1917. Their per capita rate was \$4.64 in 1925, \$4.13 in 1924 and \$3.20 in 1917. Earnings of the general departments and compensation for officials' services furnished 11 per cent of the 1925 revenue; business and non-business licenses, 9.1 per cent. License receipts included those from taxes on incorporated companies and on gasoline sales, and from the licensing of motor vehicles.

The net indebtedness of the State on June 30, 1925, was \$3,914,767, or \$10.37 per capita, as against \$10.69 per capita in 1924 and \$7.96 in 1917. The assessed valuation of property subject to State tax was \$311,661,650. The State tax levy was \$1,529,498, or \$4.05 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 2998. There occurred no abandonment of line and no new construction in 1926.

**EDUCATION.** There was reported an enrollment in the public schools of the State system in the academic year 1925-1926, of 87,687 pupils. The kindergarten enrollment was 642 boys and 742 girls; that in elementary grades, 39,694 boys and 38,451 girls; that in secondary schools, 3806 boys and 4352 girls. Schools numbered 1620, 21 being kindergartens, 1427 elementary and 172 secondary. Expenditure of the State school system for the year, debt service and capital outlay included, aggregated \$5,685,083.

**CHARITIES AND CORRECTIONS.** The State Department of Public Welfare as operating in 1926 consisted of two bureaus, that of public health and that of child welfare. The charitable and correctional institutions of the State were individually under the control each of its own board. No recent collected statistics were available.

**POLITICAL AND OTHER EVENTS.** In the general election of November 2, R. C. Dillon, Republican candidate, was elected Governor, defeating Governor A. T. Hannett, who ran on the Democratic ticket for reelection. A contest of the election of Sam G. Bratton to the U. S. Senate in 1924, brought before the Senate by ex-Senator Bursum of New Mexico, was dismissed by the Senate, April 1. Other officers elected November 2 were: Lieutenant-Governor, Edward Sargent; Secretary of State, Jennie Fortune; State Auditor, Miguel A. Otero, Jr.; State Treasurer, War-

ren R. Graham; Attorney-General, Robert C. Dow; Superintendent of Public Instruction, Lois Randolph. John C. Watson was elected a Justice of the State Supreme Court.

**OFFICERS.** Governor, Arthur T. Hannett; Lieutenant-Governor, Edward Sargent; Secretary of State, Soledad C. Chacon (Mrs.); Auditor, Juan N. Vigil; Treasurer, Warren R. Graham; Attorney-General, John W. Armstrong; Superintendent of Public Instruction, Isabel L. Eckles.

**JUDICIARY.** Supreme Court: Chief Justice, Frank W. Parker; Associate Justices, C. M. Botts, Samuel G. Bratton.

**NEW SOUTH WALES.** One of the six original states of the Commonwealth of Australia; located in the southeast part of the continent; bounded on the north by Queensland; on the south by Victoria; on the east by the Pacific Ocean; and on the west by South Australia. Area, exclusive of the Federal Territory, 309,432 square miles; population, including aborigines, according to the census of 1921, 2,101,968. The Federal Territory in 1921 had an area of 912 square miles and 2572 inhabitants. Sydney, the capital, had a population in 1921 of 905,047, including suburbs and shipping. At the end of 1924 the population was estimated at 2,256,649, for all of New South Wales, and 1,012,070 for Sydney. Other towns with their populations at the end of 1924 are: Newcastle and suburbs, 95,070; Broken Hill, 23,140; Auburn, 16,070; Parramatta, 15,690; Granville, 15,430; Bankstown, 14,560; and Lithgow, 12,990. The movement of population in 1924 was: Births, 53,670; deaths, 20,821; marriages, 18,077. During the same year the immigrants numbered 55,066 and the emigrants, 39,652. Education is controlled by the state and instruction is compulsory between the ages of seven and 14. At the beginning of 1925 there were 3259 government schools, with 10,400 teachers, with 333,074 pupils enrolled, and an average attendance of 264,321. There were 693 private schools, of which 467 were Roman Catholic, with 2704 teachers and 66,789 pupils.

Wheat is the principal agricultural crop and the chief fruit crop is oranges. Other grains and other citrus fruits, potatoes, tobacco, bananas and apples, are raised. Wool, tallow, bacon and hams are important products. On June 30, 1924, the livestock census showed 37,539,413 sheep; 2,938,522 cattle; 658,372 horses; and 323,196 swine. The estimated value from forestry products in 1923-24 was £1,659,000. Gold is found throughout the state, the output in 1924 being 18,685 ounces valued at £79,370. Coal produced totaled 11,618,216 tons valued at £9,589,547 in the same year. Other important deposits are iron, Portland cement, lead, and silver.

In 1925 the external commerce was as follows; imports; oversea, £66,315,670; exports, oversea, £60,570,832. New South Wales registered a deficit of £1,274,000 for the fiscal year 1925-26, in contrast with an estimated surplus of £13,616, and with a deficit of £756,449 for the previous fiscal year. Revenues during the year totaled £38,649,646, a decrease of £282,589. Expenditures amounted to £39,923,950, an increase of \$235,266. The deficit resulted from a drop of £1,273,218 in the returns from government-operated business, general increases having been recorded in other items of expenditure. The railroad commissioners in reporting for the 1925-26 fiscal year show that the railways had a deficit of

£803,671 after interest to the amount of £5,249,410 had been charged against earnings of £4,419,039. The deficit compares with a surplus of £32,937 for 1925. The report indicated that the increased working expense was due to increases in wages paid to workers, £586,195 being the amount of the total increase in working expenses due to higher wages. The train mileage for the year totaled 24,624,915, an increase of over 1,300,000 miles over the preceding year. The mileage consisted of passenger trains, 13,547,976 miles; mixed trains, 1,469,201 miles; and goods or freight trains, 9,607,818 miles. The commissioners reported a serious decline in the travel by ordinary passengers due to increased use of motor vehicles. The total length of the state railways at the beginning of the year was 5655 miles.

Executive power is vested in a governor assisted by a cabinet, and legislative power in a bicameral parliament, consisting of a legislative council and a legislative assembly. The legislative council which must not consist of less than 21 members appointed for life by the crown, had 77 members in 1925. There are 90 members in the legislative assembly. Governor at the beginning of the year, Sir Dudley Rawson Stratford de Chair; Prime Minister and Colonial Treasurer, John Thomas Lang.

**NEW YORK.** POPULATION. A census by the State was taken in 1925. This showed a population of 11,162,151, compared with 10,385,227 by the Federal Census in 1920. The population of New York City increased from 5,620,048 in 1920 to 5,873,356 in 1925. The Borough of Manhattan decreased from 2,284,103 in 1920 to 1,945,029 in 1925. All the other boroughs increased their populations. The estimated population of the state on July 1, 1926, was 11,304,000. The capital is Albany.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Hay, tame	1926	4,847,000	6,393,000 <sup>a</sup>	\$95,895,000
	1925	4,917,000	6,794,000 <sup>a</sup>	99,192,000
Corn	1926	670,000	23,450,000	20,167,000
	1925	691,000	24,876,000	24,130,000
Potatoes	1926	248,000	29,016,000	46,426,000
	1925	270,000	25,220,000	49,923,000
Oats	1926	1,017,000	34,578,000	17,289,000
	1925	1,017,000	36,612,000	19,038,000
Wheat, winter	1926	270,000	4,725,000	6,237,000
	1925	300,000	5,850,000	8,892,000
Wheat, spring	1926	9,000	162,000	207,000
	1925	8,000	148,000	225,000
Barley	1926	179,000	5,066,000	3,800,000
	1925	157,000	4,553,000	3,506,000
Buckwheat	1926	203,000	3,837,000	3,415,000
	1925	239,000	4,541,000	3,905,000
Apples	1926	.....	40,375,000	20,350,000
	1925	.....	32,500,000	36,400,000
Beans, dry	1926	97,000	1,145,000	4,286,000
	1925	135,000	1,458,000	6,707,000

<sup>a</sup> tons.

**MINERAL PRODUCTION.** Pig iron furnished the leading item in point of value in the list of the State's mineral production. There were produced in the blast furnaces of the State in 1925, 2,151,036 long tons of pig iron, and in 1924, 1,914,545 long tons; with a value of \$40,435,443 for 1925 and \$38,150,486 for 1924. The iron ore thus processed originated for the most part outside the State. Clay products of the State totaled

\$26,140,688 in 1924; in 1923, \$25,226,187. Next in importance, the production of cement attained 8,780,000 barrels in 1925, and in 1924, 7,671,856 barrels. Cement shipments were valued at \$15,759,000 for 1925 and for 1924 at \$13,460,594. Gypsum production was important, being 1,474,941 short tons in 1924 and 1,361,116 short tons in 1923; in value, \$14,329,246 in 1924 and \$10,344,745 in 1923. Of stone were produced 7,557,320 short tons in 1924 and 7,043,880 short tons in 1923; in value \$10,981,814 in 1924 and \$9,010,324 in 1923. Salt production was 2,053,966 short tons in 1925 and 1,972,808 short tons in 1924, with a value of \$7,133,244 in 1925 and \$6,739,597 in 1924. Sand and gravel, produced in the quantity of 13,397,540 short tons in 1924 and of 10,730,225 short tons in 1923, attained a value of \$8,583,193 in 1924 and of \$7,291,076 in 1923. Petroleum, natural gas and lime were produced in important quantity. The State's total mineral production, duplications excluded, was \$95,435,299 in 1924; in 1923, \$89,975,134. The quantity of zinc ore mined in New York in 1925 was 47,254 short tons, and the concentrates shipped yielded about 10,316,000 pounds of zinc.

**FINANCE.** As summarized by the U. S. Department of Commerce, the payments for maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$166,062,171. Their rate per capita was \$14.96, as against \$11 in 1924 and \$5.51 in 1918. Their total included \$41,368,746, for education, apportioned among minor State divisions, and \$41,899,148 in bonus payments to veterans. Expenses amounting to \$13,096,975 for interest on debt and \$35,805,571 for permanent improvements, added to the payments for maintenance and operation of the State departments, made the total of State payments \$214,764,717. For highways was expended the sum of \$49,269,151, of which \$20,723,348 was for maintenance and \$28,545,803 for construction.

Revenue receipts of the State were \$179,346,636, or \$16.15 per capita. They exceeded by \$187,490 the total payments except those for permanent improvements, and were \$35,418,081 less than the total with these included. Payments in excess of revenue were met from the proceeds of debt obligations. Property and special taxes formed 52.2 per cent of the revenue in 1925, as against 54 per cent in 1924 and 50 per cent in 1918. Their per capita rate was \$8.43 in 1925, \$8.02 in 1924 and \$4.03 in 1918. Earnings of the general departments and compensation for officials' services furnished 3.8 per cent of the 1925 revenue; business and non-business licenses, 32.8 per cent. License receipts included those from taxes on incorporated companies and from the licensing of motor vehicles.

The net indebtedness of the State on June 30, 1925, was \$228,148,097, or \$20.55 per capita, as against \$20.38 in 1924 and \$17.91 in 1918. The assessed valuation of property subject to State tax was \$17,346,635,443. The State tax levy was \$28,031,835, or \$2.52 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 8373. Switching and terminal companies operated 193 miles of tracks. There were constructed in 1926, 4 miles of new second track, 12 miles of new third track and 4 miles of fourth track. The Central New England abandoned between

Shekomeko and Millerton and between Tanners and Boston Corners two short lines of a combined length of some 10 miles. The Lehigh and New England abandoned the Glenwood branch, some 2 miles in length.

**EDUCATION.** The three years' professional course established in the normal schools of the State was reported to have resulted in the attendance of the largest number of students ever enrolled in these schools. In partial explanation of this outcome, there may be mentioned the passage of increased State aid for schools and increased salary schedules, tending to support the higher teacher qualifications. There went on in the country districts a gradual development of the central rural schools. The Regents' requirements for high schools were modified to such effect that Regents' examinations before the eleventh grade were eliminated, and adjustment of pupils' work in ninth and tenth grades according to individual needs was rendered more flexible.

A committee appointed by Governor Smith to work out a plan for better financing of education in the State formed subcommittees on school finance and on school administration and their findings were embodied in a report, published in February, condemning 1178 rural schools. The committee later recommended a municipal tax on personal incomes to meet needs of public schools, and further suggested a tax on gasoline for school ends. The Cole bill, embodying some of the committee's proposals and providing an increase of \$9,000,000 in the rural school quota, was approved by the Governor, May 5. In great part the recommendations of the committee were laid over for consideration by the session of 1927.

In the academic year 1924-25, the latest for which statistics were available, the school population of the State was placed at 2,556,780. The total enrollment in public schools was 1,951,160; that in common schools, 1,644,850 and that in high schools, 306,310. The total expenditure in all schools of the State for the year was \$358,080,358. Salaries of teachers averaged \$2021.

**CHARITIES AND CORRECTIONS.** The State Board of Charities, consisting of twelve commissioners, one from each judicial district of the State with three additional commissioners from New York City and the director of State Charities, in 1926 had the following divisions: Division of Visitation and Inspection, the head of which is the secretary of the Board, who, besides the administration of the laws relating to State and alien poor and the supervision of 115 almshouses and homes for the aged, has general supervision of the inspection work; Division of Children, with supervision of 309 institutions and agencies and approximately 14,000 children in foster homes and at board; Division of Medical Institutions, supervising 505 hospitals and dispensaries; Division of Administration of Institutions, with supervision and control over the following State Institutions: New York State Orthopedic Hospital for Children, West Haverstraw; New York State Hospital for the Treatment of Incipient Pulmonary Tuberculosis, Raybrook; State Agricultural and Industrial School, Industry; New York House of Refuge, Randall's Island; New York State Training School for Girls, Hudson; New York State Woman's Relief Corps Home, Oxford; and the Thomas Indian School, Iroquois.

The Division of Special Welfare Interests includes the Bureau of the State Commission for the Blind and the Bureau of Indian Affairs.

Under the previously adopted rebuilding programme for State hospitals, bids were sought in December for a State psychiatric hospital and institute to be located in the upper part of the borough of Manhattan and to cost approximately \$1,600,000.

**LEGISLATION.** The State Legislature passed in its 1926 session (ending April 23) 26 bills which taken together had the effect of reorganizing the administration of the State in a simpler and more closely coordinated system. This reform followed in the main the lines laid down in the report of a commission headed by Charles E. Hughes, submitted to the Legislature on March 1. Some 180 independent departments, commissions and bureaus were merged into 18 departments. An executive budget was provided. The State Water Power Commission was abolished, to cease with the end of the calendar year. In its place was created a commission to be composed of the Conservation Commissioner as chairman, the Attorney-General and the State Superintendent of Public Works. Leases of water power were made subject to the approval of the Governor, prior to their becoming valid. The reorganization was to go into force at the outset of 1927. Besides passing a statute establishing an executive budget, the Legislature passed a Constitutional amendment to the same effect, which was to be approved by the Legislative session of 1927 and subsequently offered to the voters for ratification. Another Constitutional amendment passed provided for a four-year term for the Governorship. Yet another amendment lengthened the tenure of Senators from two years to four and those of Assemblymen from one year to two. These amendments likewise awaited subsequent repassage in 1927 and popular ratification.

The Legislature enacted important measures dealing with crime and criminals. Givers of bail were required to file with the bail bond or deposit an affidavit naming the consideration or indemnity given or promised to the security, and it was rendered needful for the security thus to have filed his statement in order to recover at law the indemnity or consideration therein named. This measure was intended to check abuses in the practices of giving bail, previously brought to light. It was further enacted that a person charged with a felony should not be admitted to bail if there were reason to believe that he had previously been convicted of a felony within the State, or an equivalent crime outside it, or had been twice convicted of one or more of certain misdemeanors, among others illegal entry and the unlawful carrying of a pistol. The ease with which professional criminals had previously obtained bail had been a matter of much unfavorable comment. The minimum prison term for burglary was raised to 15 years; it had been ten years. It was enacted that persons convicted of a fourth felonious offense should be sentenced to prison for life, and that persons previously sentenced if later found to be fourth offenders should be brought before the Court and, if so found on their own confessions or on jury findings, should be resentenced as fourth offenders. The reduction of terms in State prisons below one year except by executive clemency was for-

bidden. The system of convict parole and commutation of sentence was extensively modified. The changes in the law relative to crime consisted mainly of 25 measures known as the Baumes laws, passed on the recommendation of the Baumes Commission in its report to the Legislature on the subject. A further law was passed creating a new commission of eleven members for a further study of legislation to lessen the prevalence of crime. See **CRIME**.

Among other laws passed in the session was that providing a State board to promote the erection of dwelling places to be let at low cost for the purpose of ameliorating slums. It was designed that the commission should accomplish this through coöperation with private limited-dividend corporations, to operate under State supervision. The Prohibition referendum was put before the voters of the State by the passage of an act of the Legislature. It proposed that the State should address Congress with a request that it alter the Federal enforcement law so as to allow States so choosing to permit traffic in beverages "not in fact intoxicating." See **PROHIBITION**. The State personal income tax was reduced by 25 per cent, and exemptions from it were increased from \$1000 to \$1500 at the minimum and from \$2500 to \$3500 at the maximum. The State direct tax on real estate was reduced by one-third and the taxation of banks was changed from the unpopular basis of a ratio to capital to that of a ratio to income. An issue of \$15,000,000 of State bonds for developing and extending the State park system was allowed.

A constitutional amendment to extend the debt limit of the city of New York in order to enable it to borrow \$300,000,000 for construction of transit lines was passed, but as affecting the constitution, awaited repassage in 1927 and popular ratification. The State engaged itself to build in concert with New Jersey, through the agency of the Board of Port Authority a bridge to span the Hudson River, in the neighborhood of the northern part of Manhattan Island, and rendered available to the Port Authority for this purpose \$1,000,000 a year for five years. See **BRIDGES**. The rent laws, affecting housing and taxation in New York City in particular, were again extended, except as affecting apartments in the higher range of rentals. Salaries of members of the State Court of Appeals were raised to \$25,000 for the associates and \$25,500 for the chief judge. Two bills, providing for a redistricting of the State and for mandatory increases for school teachers' salaries, were passed but killed by the Governor's veto, May 19.

**POLITICAL AND OTHER EVENTS.** At the general election of November 2, Alfred E. Smith, Governor, running for reelection, defeated the Republican candidate, Representative Ogden L. Mills. Heavy pluralities in New York City overcame the Republican vote in the counties outside the city and gave Governor Smith a lead of 247,478 in the entire State vote. The other candidates on the Democratic State ticket were elected likewise, with the exception of the candidate for State Attorney-General, the Republican Attorney-General, Albert Ottinger, being reelected by a plurality of about 14,000 votes. The governorship campaign centred on the issues of expenditure in the State government and of inadequate supervision of the New York City

milk supply, both raised by Mills. Mills demanded that the Governor direct the attorney general to investigate abuses in the city's supervision of the milk dealers. To support allegations that milk below the legal standard was commonly sold, he made public a series of tests performed by a private chemist, who, however, protested thereupon against the interpretation placed by Mills upon his findings.

Robert F. Wagner, Democratic candidate for the six-year term in the U. S. Senate, was elected, defeating the Republican candidate, Senator James W. Wadsworth, Jr., who ran for reelection. Senator Wadsworth was opposed likewise by the Prohibitionist element of his own party, which placed Franklin W. Cristman in the field against him, with the designation of Independent Republican candidate.

A referendum proposal to express the sentiment of voters of the State with regard to modification of the Federal Volstead act resulted in a heavy vote in favor of relaxing alcoholic Prohibition. The vote in favor of modification was approximately 1,763,070, and led by nearly 1,200,000 over the opposing vote. Prohibitionist organizations had taken the view that the referendum was not a proper matter for submission to the voters, and had urged their followers not to vote on it. Forty-two counties supported the referendum and 20 voted against it. More than half a million voters failed to vote on the referendum.

With Governor Smith were elected in November, to take office in January, 1927, the following State officers: Lieutenant-Governor, Edwin Corning; Comptroller, Morris S. Tremaine; Attorney-General, Albert Ottinger. The office of Secretary of State ceased to be an elective office, in virtue of the short ballot adopted in 1926. That of State Treasurer was abolished and not voted for. Benjamin N. Cardozo was elected to be Chief Judge of the Court of Appeals at the retirement of Judge Hiscock under the age limit rule; Henry T. Kellogg was elected an associate judge to succeed Judge McLaughlin.

Governor Smith in a special message to the Legislature on March 8 advocated that the State offer to cede the State Barge Canal to the United States, to be remade into an all-American water route from the Great Lakes to the Ocean. He pointed out that the canal, for which the State issued bonds to the total of some \$155,000,000, had failed in 1925 by more than \$10,000,000 to earn its operating expenses and charges, and that while built to carry 20,000,000 tons a year it had in that year carried but 2,344,013 tons. The proposal to utilize the Barge Canal as the basis of a Federal all-American waterway was studied later in the year by a joint Board of Engineers of the United States and Canada, who reported unfavorably to the Barge Canal route on November 24.

The outgoing Water Power Commission proceeded toward the end of November with preparations to grant important water power concessions to the Frontier Corporation and the American Superpower Corporation. Governor Smith on December 5, apprised the commission that he opposed this action and demanded that time be allowed him to take legal steps against it. The corporations seeking the disputed grants of water power announced two days later the withdrawal of their proposals. The Dollar Gas law, a statute of 1923 prescribing \$1 a thousand cubic

feet as the sale price of gas in the City of New York, was declared confiscatory and therefore void, in a decision of the U. S. Supreme Court, rendered November 28. The question whether the Baumes laws entailed upon judges in criminal trials the necessity of sentencing fourth offenders to life imprisonment arose soon after the going of these laws into force in September. Prior to their becoming operative, the courts were visited by an unusual number of offenders, hastening to plead guilty and obtain the advantage of the lighter sentences still allowed. Later judges manifested in individual cases their unwillingness to impose the life sentence on fourth offenders brought before them. Some fourth offenders were allowed to plead guilty as first or second offenders, and in one of these cases it was discovered by the prison authorities that the man sentenced had other convictions against him. A test was made of his case, a justice of the Brooklyn Supreme Court ruling that the life sentence was obligatory. This decision was appealed. The State Court of Appeals upheld as constitutional, in a decision rendered November 16, the Martin anti-stock fraud law which had been impugned on the ground that it conferred on the Attorney-General judicial powers and that by requiring the submission of records it denied subpoenaed persons the process of law and compelled self-incrimination.

In the City of New York James J. Walker was inaugurated mayor January 1, with a Democratic administration. Governor Smith appointed G. W. Alger May 10 to investigate the State Parole Board, which had incurred criticism by tolerating the irregular liberation from a penal term of a notorious convict, and likewise to investigate the Prison Department and State reformatories. In December Mr. Alger reported unfavorably on the action of the Parole Board in regard to the liberty of the convict. The hundredth anniversary of the opening of the Erie Canal was celebrated October 7. (See CELEBRATIONS.) Delay on the part of the New York City authorities in the formation of a detailed plan for building and operating a municipal or municipally financed third subway system led to action on the part of a State body, the Transit Commission. This commission undertook in December an investigation of the transit situation in New York City, and retained Samuel Untermyer to aid the inquiry, as special counsel.

**OFFICERS.** Governor, Alfred E. Smith; Lieutenant-Governor, Seymour Lowman; Secretary of State, Florence E. S. Knapp; Treasurer, Lewis H. Pounds; Comptroller, Vincent B. Murphy; Attorney-General, Albert Ottinger.

**JUDICIARY.** Court of Appeals: Chief Judge, Frank H. Hiscock; Associate Judges: Benjamin N. Cardozo, Cuthbert W. Pound, Chester B. McLaughlin, Frederick E. Crane, William S. Andrews, Irving Lehman. For various anniversary celebrations, see CELEBRATIONS.

**NEW YORK CENTRAL RAILROAD ANNIVERSARY.** See CELEBRATIONS.

**NEW YORK CITY. ANNIVERSARY OF FOUNDING.** See CELEBRATIONS.

**NEW YORK PHILHARMONIC SOCIETY.** See MUSIC, *Orchestras*.

**NEW YORK SYMPHONY SOCIETY.** See MUSIC.

**NEW YORK UNIVERSITY.** A non-sectarian co-educational institution of higher education in New York City; chartered in 1831. It

comprises the following divisions: at University Heights, College of Arts and Pure Science, College of Engineering, Guggenheim School of Aeronautics; at Washington Square, Graduate School, School of Law, School of Commerce, Accounts, and Finance, Washington Square College, School of Retailing, School of Education, University Extension Division, Institute of Education; at Wall Street Division, Graduate School of Business Administration, and courses in the Schools of Commerce, Accounts, and Finance, and of Retailing; the Medical College, on 23d Street; and the Dental College, on 26th Street. The summer session is held at Washington Square. The enrollment for 1926 was 26,813, distributed as follows: College of Arts and Pure Science, 771; College of Engineering, 390; School of Commerce, 7190; School of Law, 1877; Washington Square College, 3977; Graduate School, 248; School of Education, 1427; Fine Arts, 1048; School of Retailing, 484; Institute of Education, 2627; University and Bellevue Medical College, 430; College of Dentistry, 491; Graduate School of Business Administration, 347; University Extension Division, 3364. The registration for the summer session was 3946. The faculty of the University numbered 1170. The productive funds for the year 1925-26 amounted to \$3,741,867, and the income to \$4,109,033. The libraries contained 230,413 volumes.

During the year 1925-26 there were 26 appointments or promotions to professorial rank in the faculty; 17 of these being to the rank of full professor. New courses established included: a graduate course in aeronautical engineering; a division of instruction in architecture; a summer school of fine arts at the Louvre, Paris; new post-graduate courses in medicine and dentistry; fine arts courses in printing, and furniture, jewelry, and costume design; courses in home-making and home economics education; and a course in accident prevention. In coöperation with the Investment Bankers' Association of America, an Institute of International Finance was established by the University, in connection with the Wall Street branch. During the year the Nichols Chemistry Building at University Heights, costing \$600,000, was under construction, to be completed in the spring of 1927. The Guggenheim Aeronautics Building was also erected and occupied during the year, at a cost of over \$200,000. For the School of Commerce, a new home was provided in the autumn of 1926 in the form of a ten-story building on Washington Square, costing over \$1,350,000. In the spring of 1926 a financial programme was launched, as a part of the general plan for celebrating the centennial of the University, 1931-35. This called for a total of \$73,000,000 to be raised by a "Centennial Fund" organization, which was to be representative of the constituency served by the University. Chancellor, Elmer Ellsworth Brown, Ph.D., LL.D.

**NEW ZEALAND**, 28<sup>th</sup> land, DOMINION OF. A self-governing British dominion in the southern Pacific Ocean, about 1200 miles east of Australia; consisting mainly of two islands, North and South Islands; but comprising also Stewart Island and a number of small islands. Capital, Wellington.

**AREA AND POPULATION.** The total area excluding the annexed islands is 103,568 square miles, distributed as follows: North Island, 44,130; South Island, 58,120; Stewart Island, 662; Chat-

ham Islands, 372; outlying islands, 284. According to the census of 1921 the population was 1,218,913. The estimated population, June 30, 1925, 1,327,362, exclusive of Maoris, 54,574, and residents of Cook and other annexed islands, 13,879, and of Western Samoa (mandated territory), 38,230. The movement of population in 1924 was: Births, 28,014; deaths, 10,767; marriages, 10,259. New Zealand's great problem like that of Australia, is the securing of suitable immigrants. To this end the New Zealand government coöperates very closely with Great Britain, as it is the policy of the Dominion to restrict its immigrants, so far as possible, to British stock and the policy of Great Britain to keep its emigrants within the Empire. In carrying out these policies both countries lend material aid as well as encouragement to prospective migrants of British stock, and special inducements are offered to approved farm laborers, domestics, and miners, the classes most needed in the Dominion. A report issued by the census office in Wellington during 1926, indicates that the activities of the immigration bureau are meeting with considerable success. During 1925 persons arriving in New Zealand from overseas, including crews of vessels, numbered 90,069, and departures 77,267, making a net gain of 12,802 for the year as compared with 9675 for the preceding year. During 1925 births throughout the Dominion numbered 28,173 and deaths 11,026, making the net natural increase 17,147, or about one-third more than the increase from immigration. The estimated population of the chief cities of New Zealand on April 1, 1925, was as follows: Auckland, 180,790; Wellington, 118,490; Christchurch, 118,270; Dunedin, 77,480.

**EDUCATION.** Education is compulsory between the ages of seven and 14. At the end of 1924 there were 2574 public primary schools, with 7140 teachers, 216,190 scholars enrolled, and an average attendance of 193,305. The native schools numbered 125 with 272 teachers and 6310 pupils. For secondary education there were 37 incorporated schools with 493 teachers and 12,010 pupils. The University of New Zealand is solely an examining body. There are four affiliated colleges as follows: Otago University, Dunedin; Canterbury College, Christchurch; Auckland University College; and Victoria University College, at Wellington. The total number of students in 1924 was 4236.

**PRODUCTION.** Late in 1926 *Commerce Reports* published the latest official estimate of the private wealth of New Zealand, which was placed at £744,609,000, or about £553 per capita. This is \$2691 per person for the entire country, as compared with \$2575 in Canada, about \$2000 in Great Britain, and \$2918 in the United States. Because of the wide distribution of the Dominion's wealth, the actual per capita purchasing power of the country is very high, as shown by the large number of automobiles and other articles of relatively high unit cost in use there. New Zealand has one car for every 14 persons, as compared with one for every 55 in the United Kingdom and one for every six in the United States.

About two-thirds of the surface of New Zealand is suitable for agriculture and grazing. In 1925 the acreage under cultivation was 18,510,558 and the number of persons engaged in agricultural, pasturage, and dairying pursuits was 142,742. The chief crops with their acreage,

production and yield per acre in 1925 were as follows: Wheat, 166,964 acres, 5,448,000 bushels, 32.92 bushels per acre; oats, 147,387 acres, 5,707,000 bushels, 38.72 bushels per acre; barley, 25,138 acres, 798,000 bushels, 31.75 bushels per acre. The livestock in the same year numbered: Horses, 326,830; cattle, 3,503,744; sheep, 24,547,955; and pigs, 440,115. The wool exported or used for home consumption during the year ending Sept. 30, 1924, was 218,261,058 pounds. The chief minerals are coal, gold, and silver. The quantity mined and the value in 1924 was as follows: Coal, exported, 88,981 tons (£161,432), consumed, 1,994,226 (£1,994,226); gold, 133,631 ounces (£551,788); silver, 578,217 ounces (£71,981). Industrial statistics for 1924 were as follows: Establishments, excluding mines and quarries, 4461; hands employed, 67,945; value of lands, buildings, etc., £45,498,054; estimated produce, £76,996,397. The chief industries in point of value of production were butter and cheese

later period there was a decrease in value of £6,047,679. Butter, another of the country's important products, brought £2,747,505 less than in 1924-25, the quantity having decreased 271,294 hundredweight. Oversea shipments of cheese, dried and preserved milk, frozen beef, lamb and mutton, hides and sheepskins all showed considerable declines in both quantity and value. Exports of sausage casings, although only slightly greater in quantity in the later year, reflected an encouraging improvement in prices. The year 1925-26 was a record one for the production of apples. Exports of the fresh fruit increased from 8,499,323 pounds in 1924-25 to 27,834,824 pounds in 1925-26—a gain of more than 300 per cent. Exports of New Zealand potatoes represented a tremendous gain—10,254 tons, as compared with 985 in 1924-25. The accompanying table shows the exports of the principal items of the Dominion's produce for the two periods, both by quantity and by value:

PRINCIPAL ITEMS IN NEW ZEALAND'S EXPORT TRADE

Item	Quantity		Value	
	1924-25	1925-26	1924-25 £	1925-26 £
Butter . . . . . hundredweight	1,362,240	1,090,946	11,705,541	8,958,086
Casein . . . . . do	54,294	39,438	183,812	104,060
Cheese . . . . . do	1,481,724	1,899,925	6,208,553	6,073,638
Fish . . . . . do	19,865	16,633	63,070	61,684
Meat, frozen:				
Beef . . . . . do	658,922	511,137	926,074	717,584
Lamb . . . . . do	1,552,831	1,492,030	6,833,007	5,783,294
Mutton . . . . . do	1,075,580	951,331	2,945,430	2,433,451
Other frozen meat . . . . . do			337,256	305,362
Beef, salted . . . . . hundredweight	7,074	5,816	13,226	11,891
Meats, potted and preserved . . . . . do	62,996	68,048	188,418	244,275
Sausage skins . . . . . pounds	3,208,369	3,311,825	674,757	745,528
Milk, dried and preserved . . . . . do	16,270,700	12,187,920	557,245	384,767
Beans and peas . . . . . centals	99,272	162,956	85,765	124,514
Oats . . . . . do	1,502	5,881	953	8,533
Wheat . . . . . do	578	464	893	327
Apples, fresh . . . . . pounds	8,499,323	27,834,824	116,062	362,264
Hotatoes . . . . . do	215,444	411,674	14,214	21,604
Potatoes . . . . . tons	985	10,254	7,536	85,433
Livestock . . . . . number	4,504	3,922	121,196	117,047
Hides and skins:

making, meat freezing and preserving, sawmills, printing and bookbinding, grain mills, and clothing and waterproof factories.

COMMERCE. According to the United States Bureau of Foreign and Domestic Commerce, New Zealand's foreign trade figures for the year ending June 30, 1926—exports, £46,336,847, imports, £52,157,702—reveal a marked decrease in totals compared with the corresponding period for 1924-25, when exports amounted to £57,450,000 and imports were valued at £50,898,485. The outstanding feature of the export trade was the decline in returns from New Zealand wool exported in 1925-26, as compared with 1924-25. Although 44,700 more bales were exported in the

FINANCE. The budget for the fiscal year 1925-26 was presented to the House of Representatives on July 24, 1925. It estimated revenues at £29,600,000 and expenditures at £29,024,616. Accompanying are the items of revenues in detail:

NEW ZEALAND ANTICIPATED REVENUES FOR 1925-26

Customs . . . . .	£7,800,000
Beer duty . . . . .	630,000
Stamp and death duties . . . . .	3,340,800
Postal and telegraph . . . . .	3,046,000

NEW ZEALAND ANTICIPATED REVENUES FOR  
1925-26—Continued

Interest on public moneys .....	1,190,000
Local Bodies' Loans Act, 1908, section 76 .	22,000
Rents of buildings .....	24,000
Tourist and health resorts .....	58,000
Miscellaneous .....	56,000
Territorial .....	212,000
Department and other receipts .....	681,400
<b>Total .....</b>	<b>29,600,000</b>

The gross debt on Mar. 31, 1925, was £227,814,647.

COMMUNICATIONS. At the end of 1924 the registered vessels numbered 564 of 114,370 tons. In the same year the number of vessels entered was 713 of 2,212,955 tons; cleared, 706 of 2,227,207 tons. The New Zealand government railways, according to the report of the minister of railways, for 1926, earned £1,992,334, which was reduced after interest had been charged off and also appropriations for betterments, to an unappropriated surplus of £21,023. This later figure compares with a deficit of £87,736 in 1925. The percentage of net earnings for capital invested was 4.35 as against 3.55 in 1925. The operating ratio was 76.45 in 1926 as compared with 78.46 in 1925. The New Zealand railways reported 3138 miles open for traffic in 1926 as against 3085 miles open for traffic in 1925.

One of the most important events in the history of the New Zealand Government Railways was the freeing of financial operations from the consolidated funds of the government and placing them under what is known as the "Working Railways Account." This account is used as a commercial railway would use it, for operation, maintenance, and for reinvestment of unused moneys. Under the old system no one knew exactly how much the New Zealand Railways were costing or profiting the Dominion as a commercial venture, as all financial operations went into or out of the consolidated government revenues and at times were charged or credited to entirely different accounts, for various reasons. Under the new system the railways are made responsible for the earning of every penny expended, including superannuation and interest on fixed capital. Temporary loans from the consolidated fund are available in case of necessity. As all new lines are delivered to the railway department by the department of public works, on a working basis after a test period, a basic capital value has been determined for the railway department in each case. All service by the railways to other government departments and as operator for the state of nonpaying development lines are handled on a cash basis and a revenue therefore is collected from the departments and the government. The railways have not been relieved of parliamentary control, much to the disappointment of the "commission system" adherents. Estimates must still be handled by Parliament, and appropriations made annually specifying the expenditures to be made out of the account for working railway purposes.

GOVERNMENT. Executive power is vested in a governor-general and legislative power in the governor-general and a general assembly of two houses, namely the Legislative Council of 38 members (September, 1925) appointed for seven years but to be elected after the expiration of the terms of the members sitting in 1923, and the House of Representatives, consisting of 80 members, elected by the people for three years. The

governor-general in 1926 was Gen. Sir Charles Fergusson. The cabinet was constituted as follows: Prime Minister, Minister of Public Works, Railways, Native Affairs, etc., J. G. Coates; Attorney-General, Minister of External Affairs, etc., Sir Francis Bell; Customs, Industry and Commerce, W. D. Stewart; Minister of Finance, Agriculture, Immigration, etc., W. Nosworthy. Education, Justice, Postmaster-General, Sir C. J. Parr; Labor, Mines and Marine, Pensions, G. J. Anderson; Lands, etc., A. D. McLeod; Defense, etc., Sir R. H. Rhodes; Health, Sir M. Pomare; Internal Affairs, R. F. Bolland.

No outstanding event was reported in the press during the year from New Zealand. For a discussion of the British Imperial Conference see GREAT BRITAIN, *History*.

NICARAGUA, ne'ka-rá'gwá. The largest of the Central American republics. It is bounded on the north by Honduras, on the east by the Caribbean Sea, on the south by Costa Rica, and on the west by the Pacific Ocean, Capital, Managua.

AREA AND POPULATION. The area is estimated at about 49,200 square miles; population, according to the census of 1920, 638,118, or about 14 inhabitants to the square mile. The coast line is 300 miles on the Atlantic and 200 miles on the Pacific. The population consists almost entirely of Indians and negroes and mixtures of the two with white blood. The proportion of pure white blood is about 10 per cent. About 75 per cent of the population lives in the western half of the country. The eastern and western sections differ greatly and there is very little communication between them, the journey by trail and river being difficult. Travelers going from one coast to the other usually go by way of Costa Rica or through the Panama Canal. In the western section the people are of mixed Spanish and Indian blood, although there are quite a number of Nicaraguans of pure Spanish descent. In the eastern half, in which are the banana plantations, there is a considerable representation of Negroes from the West Indies, also natives of mixed Negro and Indian blood. The capital, Managua, had an estimated population of 60,000 in 1926. Other large towns with their populations in 1926 are: Leon, the former capital, 47,000; Chinandega, 14,415; Granada, 15,000; Masaya, 20,000; Matagalpa, 12,000; Rivas, 10,000.

EDUCATION. According to the latest available statistics (1924), there were 402 state elementary schools, with 788 teachers and 24,800 pupils; three secondary schools, with 37 teachers and 259 pupils; 5 professional schools with 219 students; 3 normal schools with 35 teachers and 222 students; 76 private schools (elementary) with 5557 pupils. For higher education there are the Central University at Managua; the Western and Northern University at Leon; and the Eastern and Southern University at Granada. From 50 to 75 per cent of the people are classed as illiterate, chiefly because much of the money originally appropriated for education is spent for war purposes in connection with the many revolutions that have convulsed the country.

PRODUCTION. The chief sources of national wealth are agriculture, timber, and mining. The development of agriculture has been hampered somewhat by the lack of labor. The banana is the chief product of the eastern part of the country. The foodstuffs for the inhabitants have to be

imported, chiefly from the United States. In the western part the principal crops are coffee, sugar cane, cacao, corn, and beans, the average coffee crop being estimated at 22,500,000 pounds. The western part of the country raises most of its own foodstuffs and occasionally has a surplus for export. There are valuable forest woods, especially mahogany and cedar, which enter into the exports; also dye woods, gum, and medicinal plants. The mineral resources include gold, silver, copper, and precious stones.

**COMMERCE.** The total trade of Nicaragua for the year 1925 amounted to \$22,735,876, of which \$10,376,291 represented imports and \$12,359,585 exports. In 1924 the imports were \$8,806,896 and the exports \$12,990,026, or a total of \$21,796,922. There was, therefore, an increase in imports of \$1,569,395, a decrease in exports of \$630,441, or a net increase in the total foreign trade of \$938,954. The accompanying tables show the imports and exports by value for 1924 and 1925:

**IMPORTS BY PRINCIPAL ARTICLES FOR THE YEARS 1924 AND 1925**

Articles	1924	1925
Cement .....	\$33,608	\$24,872

<b>Total .....</b>	<b>12,990,026</b>	<b>12,359,585</b>

**FINANCE.** The latest statistics on finance are those for 1924 when the total receipts amounted to \$2,211,706 as against \$2,097,286 in 1923. Customs collections were \$1,261,349 and \$1,005,000

and internal revenue collections \$926,323 and \$999,310, respectively. The remainder was made up from consular fees and miscellaneous sources. Budget expenditures amounted to \$1,580,000, the same as for 1923. The public debt on Mar. 31, 1925, was \$7,390,590.

**COMMUNICATIONS.** In 1924 1421 vessels of 741,916 tons entered the ports of Nicaragua and 1412 of 737,969 tons cleared. The total railway mileage in the country in 1926 was 172 miles. In 1924 the government repurchased the 51 per cent of the stock of the national railways, which it had turned over to American banking firms in 1913.

**GOVERNMENT.** Executive power is vested in a president who acts through a responsible ministry, comprising departments of foreign affairs and public instruction, finance, interior, justice and police, war and marine, and public works; legislative power is in a bicameral legislature consisting of a chamber of 40 deputies elected for four years by universal suffrage, and a senate of 13 members elected for six years. For the changes in the presidency during 1926 see paragraphs on History, below.

**HISTORY.** The year witnessed an almost continual period of revolutionary activity, which towards the close was further complicated by the intervention of United States Marines on the side of the Conservative Party led by Diaz. As noted in the preceding YEAR BOOK, General Emiliano Chamorro executed a coup d'état in October, 1925, which virtually ended the term of office of the constitutionally elected president, Carlos Solórzano, a Conservative, and Juan Bautista Sacasa, the Liberal Vice-President. From the time of the coup d'état until January, 1926, Solórzano continued to act as president although the entire world knew that his position was a mere sham and depended entirely upon the whims of Chamorro. Vice-President Sacasa, fearing the motives of Chamorro, fled to Mexico. Congress met and ordered him to return to Nicaragua and face certain charges which were filed against him, but he refused for reasons which were quite obvious. Thereupon at the supposed request of Chamorro, Congress declared the position of vice-president vacant. He was laying plans for the selection of himself as president in as constitutional a manner as possible in order to get the support of the United States which had always maintained that it would withhold recognition from governments in Central America which were not duly and constitutionally elected.

On Jan. 13, 1926, Chamorro became Secretary of War, and, with the support of the army behind him, compelled Congress to declare the election of several senators and deputies illegal and to seat the defeated candidates in their places. Another step he took was to have himself elected a senator in order to meet the requirements of the constitution concerning presidential succession. According to the provisions of that instrument if the president and vice-president resign or go out of office a "First Designate" is appointed from the Senate to control the executive office. It might be said in passing that Chamorro's election to the senatorship was in itself unconstitutional because at the time of his election he was General-in-Chief of the army, which made him ineligible for the position of senator.

On January 15, in accordance with Chamorro-

ro's plans, President Solorzano resigned from office, and, as noted above, Chamorro was in position to have himself named chief executive. The entirely subservient Congress bowed to his demands and named him for the place of chief executive. The success of his move now depended to a large extent upon the attitude which would be taken by the United States. On January 19, Chamorro notified Secretary of State Kellogg of the change in government. On January 25, Mr. Kellogg replied that "the government of the United States has not recognized and will not recognize as the Government of Nicaragua the régime now headed by General Chamorro, as the latter was duly advised on several occasions by the American Minister after General Chamorro had taken charge of the citadel at Managua on October 25 last. This action is, I am happy to learn, in accord with that taken by all the Governments that signed with Nicaragua the Treaty of 1923." During the remainder of Chamorro's stay in power which ended on October 30, the United States firmly adhered to its policy of non-recognition.

The Liberals under the leadership of the deposed Vice-president Sacasa, started a revolution in the early part of May which resulted in the capture of the important seacoast town of Bluefields on the Caribbean. The interference by the Liberals with American business firms was the signal for the landing of United States Marines at Bluefields and the declaration by Admiral Latimer of a neutral zone in and around the city. Chamorro was able to reconquer the territory which had fallen into the hands of the Liberals by the end of the month and the American marines withdrew early in June. The leading Liberals withdrew to Guatemala after their abortive attempt to wrest the reins of government from Chamorro and were joined there by Sacasa who had been working for the Liberal cause in the United States. Charges that the Mexican government was giving aid to the Guatemalan junta were vigorously denied from Mexico City.

In August the revolution broke out again, and once again American marines were landed at Bluefields to protect American lives and property, mostly property, according to the editorials in many of the leading opposition papers in the United States. From this point on the United States government through Admiral Latimer took virtual charge of affairs in Nicaragua. The admiral secured an armistice in the latter part of September for the purpose of attempting to adjust the difficulties between Chamorro and the Liberals. Nothing came of the attempts at settlement, however, and sporadic fighting continued throughout the armistice period. On October 16 a conference was held at Corinto, the chief port of the Pacific coast of the republic. It was brought about through the good offices of the United States and was supposed to iron out the difficulties between the warring factions. From the beginning it was doomed to failure because of the Conservative demand that if Chamorro resigned, his place should be filled by another Conservative, while the Liberals maintained that the office of presidency rightfully belonged to Juan Sacasa. The conference ended its conversations on October 24 and six days later General Chamorro resigned his office and left the power in the hands of Senator Uriza. The United States refused to recognize his control and he called a

special session of the legislature to elect a successor in a constitutional manner.

On November 11, Congress elected to the presidency, Senator Adolfo Diaz, a Conservative. Upon his inauguration he sent a note to the United States requesting its guidance, coöperation, and aid in restoring peace and order. He declared that he could easily control the situation if it were not for the hostile attitude of the Government of Mexico, which also imperiled the interests of Americans and foreigners in Nicaragua and threatened what he described as the "continental equilibrium," and at the conclusion of his note he said, "I desire to manifest to you at the same time that whatever may be the means chosen by the Department of State, they will meet with the approval of my absolute confidence in the high spirit of justice of the Government of the United States." Two days later the Diaz régime was recognized as the constitutional government of Nicaragua by the United States and an attempt was made by Admiral Latimer to bring about a settlement of the difficulties by a conference aboard the U. S. S. *Rochester*. Nothing was accomplished.

The close of the year witnessed two rival governments in Nicaragua, that of President Diaz and that of Dr. Sacasa, who was nominated "Constitutional" President of the republic at Puerto Cabezas by the Liberal revolutionists on December 2. The Sacasa government was recognized by Mexico, which gave rise to many protests from Diaz that the Mexican government was behind the Liberal movement and that if the United States did not intervene to protect him he would not be able to hold out against the Liberal revolutionaries aided and abetted by Mexico. The Mexican government called the Diaz charges too absurd for official comment. On December 23, American marines were landed at the rebel capital, Puerto Cabezas, and a neutral zone was established which virtually compelled the disarming of the Liberal Army. Dr. Sacasa denounced this action on the grounds that it was armed intervention on the side of the Diaz government, and that the excuse of protecting the lives and property of Americans was too flimsy for credence. The action of the United States government was assailed in many American newspapers and called forth caustic comments from Senators Moses and Borah of the Foreign Relations Committee of the Senate. Senator Borah saw in the move an attempt to embroil the United States in a war with Mexico, as well as a definite plan not only to protect but to promote business. He claimed that "a large part of the Nicaraguan revolution is being instigated and directed from Washington and for business reasons . . . by business interests." As if in answer to Borah it was announced from the White House at the close of the year that the ordering of the landing of the marines in Nicaragua had no other object than the protection of American life and property.

**NICHOLS MEDAL.** See CHEMISTRY, INDUSTRIAL, under *Medals*.

**NIGERIA, COLONY AND PROTECTORATE OF.** A West African territory, belonging to Great Britain, divided into two groups of provinces, known respectively as the Northern and Southern Provinces. The area is approximately 335,700 square miles and the population, according to the census of 1921, 18,070,668, of whom 9,998,314 were in the Northern Provinces (area, 258,000 square

miles). There were 3900 Europeans in 1921. For administrative purposes the mandated territory of Cameroons is attached to Nigeria. The seat of government is at Lagos. In 1924 in the Northern Provinces there were 50 government schools and 104 unassisted private schools, the total average attendance in the government schools being about 2063. It was estimated that there were more than 28,000 Mohammedan schools, with about 316,000 pupils. In the Southern Provinces in the same year there were 43 government schools with an average attendance of 6674; 188 assisted schools with an enrollment of 34,928; 2705 unassisted schools, with an enrollment of 119,551. The chief products are palm kernels, palm oil, rubber, peanuts, animal products, shea-butter, ivory, cacao, kola nuts, coffee, drugs, and tobacco. The forests supply mahogany, which is exported. Iron, lead, and tin are worked by the natives, and gold, silver, lignite, monazite, galena, and manganese ore are found. The imports in 1924 were valued at £12,921,337 and the exports £15,038,077. The chief article of import was manufactured goods and the chief articles of export, palm oil and palm kernels. The total shipping which entered and cleared from the ports of Nigeria was 2,193,905 tons of which 1,344,099 was British. The revenue in 1924-25 was £6,944,220 and the expenditure £5,768,715; public debt, £19,309,210. Railways open for traffic in 1926 totaled 1265 miles. The administration is in the hands of a governor and an executive and legislative council. Governor, Sir G. Thompson.

**NIPHER, FRANCIS EUGENE.** American physicist, professor emeritus at Washington University, St. Louis, Mo., died at St. Louis, October 7. He was born in 1848 at Byron, N. Y., and graduated from the University of Iowa in 1870, taking his Master of Arts degree three years later in the same university. After teaching at his alma mater in 1874 he went to Washington University at St. Louis, as Professor of Physics. He early turned his attention to the phenomena of electricity, and was led to the support of Franklin's one-fluid theory, declaring that there was no such thing as a positive current of electricity; what was generally so termed, he asserted, was merely an inflow from the negative terminal. His experiments proved that the variations in the magnetic needle and also magnetic storms are due to solar radiation, modified by earth shadows, cloud shadows, wind and rain. In addition to membership in many learned societies he was a research associate of the Carnegie Institution of Washington. In 1890 he was president of the Engineers Club of St. Louis. He became professor emeritus at Washington University in 1914, when he gave up teaching. However, he kept up his research work right through the period of his retirement, and experimented till the end. He wrote *Theory of Magnetic Measurements* (1886); *Electricity and Magnetism* (1895); *Introduction to Graphical Algebra* (1898); and *Experimental Studies in Electricity and Magnetism* (1914).

**NITROGEN.** See CHEMISTRY, INDUSTRIAL; FERTILIZERS.

**NOBEL PRIZES.** The year 1926 marked the quarter century anniversary of the first award of the Nobel Prizes, and in addition to the 1926 awards those that were withheld in 1925 were announced. In chemistry, the 1925 prize went to Prof. Richard Zsigmondy of the Uni-

versity of Göttingen, who was known for the development of the ultramicroscope, which he employed in determining the size of the minute suspended particles of colloidal gold. The 1926 prize in chemistry was awarded to Dr. The Svedberg, known for his work in the field of colloidal chemistry. In physics the 1925 prize was divided between Dr. James Franck of the University of Göttingen and Dr. Gustave Hertz of the University of Halle, for work done when they were associated at the University of Berlin. Theirs was the first proof of the value of the quantum theory proposed originally by Max Planck. The 1926 prize in physics went to Prof. Jean Baptiste Perrin for his researches on the Brownian movements where the rapid oscillatory motion of minute particles suspended in liquids was involved.

The 1925 prize in literature was awarded to George Bernard Shaw of England on the recommendation of the Swedish Academy, it being the fourth time that the award had been given to an author writing in English, the other three being Rudyard Kipling in 1907, Sir Rabindranath Tagore in 1913, and William Butler Yeats in 1923.

The scientists mentioned above received their medals and diplomas from King Gustaf at Stockholm on December 10, but Mr. Shaw was unable to be present and the gold medal and diploma were received on his behalf by the British minister.

The distribution of the Nobel Peace Prize for 1925-26 was made at Oslo, Norway, on December 10, in the Hall of the Nobel Institute, in the presence of King Haakon, Crown Prince Olaf, members of the Government, and the Diplomatic Corps. Professor Stang, rector of the University of Oslo and president of the Nobel Peace Prize Committee, announced that the Peace Prize for 1925 would be divided between Aristide Briand of France and Dr. Gustave Stresemann, German Foreign Minister, and the Peace Prize for 1926 between Sir Austen Chamberlain, British Foreign Secretary, and General Charles G. Dawes, Vice-President of the United States. These awards were received with universal approval throughout the world. In the United States General Dawes announced that he would turn over the money award to the Walter Hines Page School of International Relations. See PHYSICS.

**NOLAN, PROFESSOR THOMAS.** American architect and educator, professor of architectural construction at the University of Pennsylvania, died at Moylan, Pa., September 6. He was born at Williamsport, Aug. 4, 1857, and graduated from the University of Rochester in 1879. Later he studied at Columbia University and at L'Ecole des Beaux Arts in Paris. Returning to America to practice architecture in Rochester, he designed the Rochester Chamber of Commerce Building, the first steel skeleton structure in Western New York. In 1898 he went to the University of Pennsylvania as instructor in Architecture, and was made Assistant Professor in 1904, being advanced to a full professorship in 1911. He wrote treatises on building construction and architectural engineering, and was Editor-in-Chief of Building Construction and Superintendent Editor of the *Kidder-Nolan Architects' and Builders' Handbook*.

**NORTH CAROLINA.** POPULATION. According to the Fourteenth Census, the population of

the State on Jan. 1, 1920, was 2,559,123. The estimated population on July 1, 1926, was 2,858,000. The capital is Raleigh.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1926	2,023,000	1,250,000 *	
	1925	2,060,000	1,102,000 *	
Tobacco	1926	574,000	893,190,000 <sup>b</sup>	\$103,802,000
	1925	547,000	880,165,000 <sup>b</sup>	87,438,000
Corn	1926	2,376,000	52,272,000	45,999,000
	1925	2,400,000	44,400,000	48,840,000
Hay, tame	1926	758,000	686,000 *	13,720,000
	1925	710,000	481,000 *	10,582,000
Peanuts	1926	194,000	190,120,000 <sup>b</sup>	7,885,000
	1925	185,000	212,750,000 <sup>b</sup>	8,297,000
Wheat,	1926	447,000	6,303,000	9,013,000
	winter	1925	406,000	4,466,000
Potatoes	1926	74,000	7,400,000	11,840,000
	1925	58,000	4,524,000	8,143,000
Sweet	1926	84,000	7,560,000	7,560,000
	potatoes	1925	80,000	8,448,000
Oats	1926	310,000	6,820,000	4,706,000
	1925	258,000	4,902,000	3,726,000
Rye	1926	104,000	1,852,000	1,690,000
	1925	80,000	920,000	1,444,000

\* bales, <sup>b</sup> pounds, \* tons.

**MINERAL PRODUCTION.** Clay products, furnishing the largest item in the total of the State's mineral output, were produced to the value of \$4,000,431 in 1924, as against \$3,650,452 in 1923. There were produced 1,340,840 short tons of stone in 1924 and in 1923, 1,307,460 short tons; in value, \$3,133,510 in 1924 and in 1923 \$3,579,351. This did not include talc and soapstone, both produced in commercial quantity. Among other products were sand and gravel, feldspar, coal and mica. Gold production, though small, rose in 1925. The value of the gold produced in North Carolina during the period 1799 to 1925 was \$23,658,441, according to the U. S. Bureau of Mines. The yield of gold increased from \$4540 in 1924 to \$18,540 in 1925, although very few mines were active, and the increase was due entirely to work at the Rich Cog mine at Reidsville, in Montgomery County. None of the deep gold mines in Cabarrus, Moore, Davidson, or Guilford Counties was worked in 1925. The State's total mineral production was \$9,621,467 in 1924; in 1923, \$10,020,559.

**FINANCE.** As summarized by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$16,679,744. Their rate per capita was \$6.09, as against \$5.79 in 1924 and \$1.96 in 1917. Their total included \$1,842,788, for education, apportioned among the minor State divisions. Expenses amounting to \$26,051 for public service enterprises, \$4,421,994 for interest on debt and \$26,296,950 for permanent improvements, added to the payments for maintenance and operation of the State departments, made the total of State payments \$47,424,739. For highways was expended the sum of \$25,212,575, of which \$3,310,684 was for maintenance and \$21,901,891 for construction.

Revenue receipts of the State were \$28,416,461, or \$10.37 per capita. They exceeded by \$7,288,672 the total payments except those for permanent improvements, and were \$10,008,278 less than the total with these included. Payments in excess of revenue were met from the proceeds of debt obligations. Property and special taxes formed 18.5 per cent of the revenue

in 1925, as against 27 per cent in 1924 and 50 per cent in 1917. Their rate per capita was \$1.92 in 1925, \$2.10 in 1924 and \$1.20 in 1917. General property tax receipts were limited to those from old delinquencies. Earnings of the departments and compensation for officials' services furnished 11.2 per cent of the 1925 revenue; business and non-business licenses, 49.3 per cent. License receipts included those from taxes on incorporated companies, on sales of gasoline and on motor vehicles.

The net indebtedness of the State on June 30, 1925, was \$91,646,408, or \$33.44 per capita, as against \$25.28 in 1924 and \$3.85 in 1917. The assessed valuation of property subject to State tax was not made, there being no general property tax levy in 1925.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 5347. There was constructed in 1926 4 miles of new second track.

**EDUCATION.** The State loaned to 76 counties, according to A. T. Allen, State superintendent of instruction, \$5,000,000 to further 95 projects for the building of rural school houses. Another total of \$5,000,000 was reported as having been voted for school houses by cities within the State. The school population in the academic year 1925-26 was given as 957,016. There were enrolled in the public schools of the State 818,793 pupils, of whom 737,188 were enrolled in common schools and 81,605 in high schools. Expenditure for education during the year, exclusive of debt service, totaled \$32,443,426. Salaries of teachers averaged \$103.78 a month.

**CHARITIES AND CORRECTIONS.** The State Board of Charities and Public Welfare had been active, since its organization in 1917, in creating a system of public welfare with the county as its basis. The executive officer elected by the Board, and bearing the title of Commissioner of Public Welfare, directs work through administrative divisions of child welfare, institutions, county organization, mental health and hygiene, education and publicity, and negro work. The institutions under the supervision of the Board in 1926, with their inmate populations, were as follows: State Hospital for the Insane, Raleigh, 1491; State Hospital for the Insane, Morganton, 1785; State Hospital for the Colored Insane, Goldsboro, 1557; Caswell Training School for Mental Defectives, Kinston, 406; North Carolina Sanatorium, at Sanatorium (85 beds); Stonewall Jackson Training School (white boys), Concord, 415; State Home and Industrial School for Girls, Samarcan Manor, 209; Morrison Training School for Negro Boys, Hoffman, 60; Eastern Carolina Training School for boys, Rocky Mount, 12; State's Prison, 1490; Oxford Orphanage, 408; Oxford Colored Orphanage, 259. The State contributed part, but not all of the maintenance of the last mentioned two institutions. Other State institutions, not under the supervision of the Board, were: North Carolina Orthopaedic Hospital, Gastonia (360 beds); North Carolina Soldiers' Home, Raleigh, 100; Confederate Women's Home, Fayetteville, 40; School for the Deaf, Morganton, 360; School for Blind and Deaf (colored) Raleigh, 179; School for the Blind (white), Raleigh, 150.

**POLITICAL AND OTHER EVENTS.** At the election on November 2, Senator Lee S. Overman, Democrat, was reelected to the U. S. Senate

for the six-year term. The ten Democratic members of the U. S. House of Representatives from the State were likewise reflected. A contest for the Senatorship occurred at the Democratic State primaries on June 5, Senator Overman defeating Robert R. Reynolds. A Chief Justice of the Supreme Court, Walter P. Stacy, and three Associate Justices, William J. Adams, Heriot Clarkson and Willis J. Brogden, were elected.

A North Carolina Fundamentalist committee was active in 1926 in preparing proposed legislation after the example of Tennessee to prohibit the teaching of the biological evolution of man, in the tax-supported schools of the State. Researches were conducted in the State with a view to the possibility of producing potash for fertilizer from the State's feldspar deposits. These deposits include large quantities of orthoclase and microcline feldspar, according to a statement of Dr. Jasper L. Stuckey, State geologist, who classed these varieties as of proper composition for the needs of potash extraction.

As in other cotton growing States, measures were taken late in the year to pool and store the State's portion of the excess cotton crop. The Carolina Cotton Finance Corporation, formed in November, undertook to receive planters' cotton and to lend upon it three-fourths of its value, for from 18 to 36 months; to allow interest and storage to accrue during the arrangement; and to finance these operations with the aid of bankers in the State.

A referendum approved by popular vote in the November election provided for a bond issue of \$2,000,000 to be used as advances to veterans with which to buy homes.

OFFICERS. Governor, Angus Wilton McLean; Lieutenant-Governor, J. Elmer Long; Secretary of State, W. N. Everett; State Treasurer, B. R. Lacy; Auditor, Baxter Durham; Attorney-General, Dennis G. Brummitt; Superintendent of Public Instruction, A. T. Allen.

JUDICIARY. Supreme Court: Chief Justice, Walter Clark; Associate Justices, Heriot Clarkson, William A. Hoke, W. P. Stacy, W. J. Adams.

**NORTH CAROLINA, UNIVERSITY OF.** A State institution for higher education at Chapel Hill, N. C.; founded in 1795. The enrollment in the autumn of 1926 was 2331 regular students, with 2823 in extension courses. There were 1536 registered for the summer session. The faculty had 189 members. The productive funds of the institution amounted to \$1,455,569.26, and the annual income to \$1,096,803.35. The library contained 160,000 volumes. A gift of \$275,000 was made by William R. Kenan, Jr., to erect the Kenan Memorial Stadium. The University extension division publishes an extensive list of bulletins on a number of subjects. President, Harry Woodburn Chase, Ph.D., LL.D.

**NORTH CENTRAL, formerly NORTHWESTERN, COLLEGE.** A coeducational institution of higher education at Naperville, Ill.; founded in 1861. Due to confusion with other institutions of the same name, it was decided in 1926 to change the name of the college to North Central College. In the autumn of 1926 there was an enrollment of 561 students, of whom 311 were men, and 250 women. There were 41 members on the faculty. The productive funds of the College amounted to \$613,500, and

the income for the year was \$127,700. In 1926 the Barbara Pfeiffer Memorial Hall, a chapel-music building, was completed at a cost of \$225,000. This building contains a four-manual memorial organ, which cost \$25,000. Beginning in 1926, four-year courses leading to degrees were established in the School of Music. There were 15,000 volumes in the library. President, Edward Everett Rall, Ph.D.

**NORTH DAKOTA. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 646,872. On July 1, 1925, it was 641,192, according to a census taken by the State. No estimate was made in 1926. The capital is Bismarck.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926.

Crop	Year	Acreage	Prod. bu.	Value
Wheat,	1926	9,653,000	77,224,000	\$90,352,000
spring	1925	9,605,000	112,378,000	147,215,000
Flaxseed	1926	1,271,000	6,786,000	13,000,000
	1925	1,461,000	9,496,000	21,461,000
Oats	1926	2,024,000	34,408,000	11,355,000
	1925	2,354,000	63,558,000	17,161,000
Hay, tame	1926	1,331,000	1,365,000 *	15,015,000
	1925	1,066,000	1,821,000 "	13,111,000
Corn	1926	1,009,000	18,162,000	12,350,000
	1925	1,056,000	24,816,000	13,649,000
Barley	1926	1,472,000	21,050,000	9,683,000
	1925	1,732,000	38,970,000	16,757,000
Rye	1926	1,222,000	9,287,000	6,780,000
	1925	1,587,000	15,870,000	10,316,000
Potatoes	1926	94,000	7,520,000	9,024,000
	1925	104,000	7,488,000	11,232,000

\* tons.

**MINERAL PRODUCTION.** The State's mineral industries were of minor importance, except for coal mining. Coal production in 1925 (lignite) was 1,324,620 net tons; in 1924 it attained 1,200,527 short tons; the product was valued at \$2,445,000 in 1925, and in 1924 at \$2,473,000. The value of clay products was \$168,855 in 1924 and in 1923 \$181,933. Sand and gravel were also produced. The total of the State's mineral production was \$2,776,720 in 1924; in 1923, \$3,473,018.

**FINANCE.** As summarized by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$8,281,377. Their per capita rate was \$12.91, as against \$11.04 in 1924 and \$5.78 in 1918. Their total included \$1,570,578 for education, apportioned among the minor State divisions. Expenses amounting to \$5,024,497 for public service enterprises, \$1,273,942 for interest on debt and \$1,777,645 for permanent improvements, added to payments for maintenance and operation of the State departments, made the total of State payments \$16,357,461. For highways was expended the sum of \$1,604,383, of which \$117,140 was for maintenance and \$1,487,243 for construction.

Revenue receipts of the State were \$17,031,261, or \$26.55 per capita. They exceeded by \$2,451,445 the total payments except those for permanent improvements, and were \$673,800 greater than total payments with these items included. Property and special taxes formed 31 per cent of the revenue in 1925, as against 25.1 per cent in 1924 and 31.7 per cent in 1918. Their per capita rate was \$3.22 in 1925, \$6.85 in 1924 and \$2.54 in 1918. Earnings of State departments and compensation for officials' services

furnished 7.1 per cent of the 1925 revenue; business and non-business licenses, 9.6 per cent. License receipts included those from taxes on incorporated companies, on sales of gasoline and on motor vehicles.

The net indebtedness of the State on June 30, 1925, was \$4,067,370, or \$6.34 per capita, as against \$6.02 per capita in 1924 and 69 cents per capita in 1918. The assessed valuation of property subject to State tax was \$1,007,832,-658. The State tax levy was \$4,585,639, or \$7.15 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 5277. No new construction and no abandonment of line were reported in 1926.

**EDUCATION.** The State carried on in concert with the National Congress of Parents and Teachers a plan of work for promoting community interest in school affairs through the organization of a series of parent-teacher associations in the rural districts. It was stated by Minnie J. Nelson, State superintendent of public instruction, that one-half of the schools of the State had organized associations of this description in two years of the duration of the effort to promote such action. The results were visible in a wide spread of interest in rural schools, in longer school terms in many districts, the employment of better qualified teachers and a spread of school standardization. For the academic year 1924-25, the latest for which the statistics were available, the school population of the State was given as 214,566. There were enrolled in the public schools 173,116 pupils, of whom 148,973 were enrolled in common schools and 24,143 in high schools. Expenditure for education in the year aggregated \$17,167,063. Salaries of teachers averaged \$135.43 a month.

**POLITICAL AND OTHER EVENTS.** At the general election on November 2, Governor A. G. Sorlie, running as Republican candidate to succeed himself, was reelected for the two-year term beginning in January, 1927. With him was elected the entire Republican State ticket. Gerald P. Nye, Republican, candidate for the U. S. Senate, was reelected for the six-year term. Republican members of the U. S. House of Representatives, three in number, were reelected.

The question of the validity of Nye's appointment to the Senate in the 69th Congress came before the Senate early in 1926, on the ground that Governor Sorlie had appointed him unconstitutionally. He was seated by a close vote, January 12. Nye was elected for the expiring term in a special election coinciding in date with the State primaries. It was considered that the primaries indicated a failure of the group formerly backing A. C. Townley to regain its political control.

**OFFICERS.** Governor, A. G. Sorlie; Lieutenant-Governor, Walter Maddock; Secretary of State, Robert Byrne; State Treasurer, C. A. Fisher; Auditor, John Steen; Attorney-General, George F. Shafer; Superintendent of Public Instruction, Bertha R. Palmer.

**JUDICIARY.** Supreme Court: Chief Justice, Luther E. Birdzell; Associate Justices: A. M. Christianson, A. G. Burr, John Burke. W. L. Nuesale.

**NORTH DAKOTA, UNIVERSITY OF.** A State institution of higher education at University Station, Grand Forks, N. D.; founded in 1883.

The enrollment for the autumn of 1926 was 1661, of whom 1011 were men and 650 were women. This number was distributed as follows: graduates, 30; liberal arts, 796; commerce, 115; education, 338; engineering, 196; law, 63; and medicine, 46. For the summer session of 1926, 130 men and 264 women were registered, a total of 394. The faculty numbered 116. The productive funds totaled \$1,700,000 and the income for the year \$706,634, exclusive of boarding department and trust funds, being derived as follows: from Federal land funds, \$74,134; student fees and rent, \$59,405; other local income, \$25,983; State appropriation for maintenance, \$477,482; State appropriation for buildings and improvements, \$47,222; and State appropriation for public service, \$22,408. The general university library contained 82,648 volumes. President, Thomas F. Kane, Ph.D., LL.D.

**NORTHERN TERRITORY.** A territory belonging to the Commonwealth of Australia, situated in the central and northern part of the island continent; transferred to the Commonwealth, Jan. 1, 1911. Area, 523,620 square miles; population, according to the census of 1921, exclusive of aborigines, 3867; estimated in 1924, 3258. The aborigines are estimated to number about 20,000. Principal town, Darwin, on the harbor of Port Darwin. The soil is capable of a varied production of crops of tropical and semi-tropical zones, but agriculture has not been developed. Down to June, 1924, the total value of all minerals produced was £3,378,705. The imports in 1924-25 were £20,792; exports, £39,169; Revenue, £59,371; expenditure, £303,133; debt, £3,879,151. Administrator, F. C. Urquhart.

**NORTHWESTERN COLLEGE.** See NORTH CENTRAL COLLEGE.

**NORTHWESTERN UNIVERSITY.** A co-educational institution of higher education at Evanston and Chicago, Ill.; founded in 1851. It is composed of the college of liberal arts, the graduate school, the school of engineering, and schools of commerce, journalism, music, education, and speech, in Evanston; and the schools of law, medicine, dentistry, commerce, and journalism in Chicago. There was an enrollment in 1894 for the 1926 fall term, of whom 4000 were registered in the school of commerce in Chicago. For the summer session of 1926, 1885 students were enrolled. There were 702 faculty members, an increase of 52 over 1925. The endowment as of June 30, 1926, was \$14,138,-677.64, and the income for the fiscal year 1925-26 was \$534,249.76. In the various libraries of the University there were approximately 250,000 bound volumes and 130,000 pamphlets. During the year, important gifts to the University included \$4,000,000 from Mrs. A. Montgomery Ward of Chicago, to be used for medical research. President, Walter Dill Scott, Ph.D., LL.D.

**NORTHWEST PROVINCES.** The Prairie Provinces of Canada. See CANADA.

**NORTHWEST TERRITORIES.** The term applied to the large tract of land to the east of the Yukon Territory, stretching northward to the Arctic from the Prairie Provinces and westward to the north of Hudson Bay and Hudson Strait; comprising the territories formerly known as Rupert's Land and the Northwestern Territory, excepting those portions which form the provinces of Manitoba, Saskatchewan, Alberta, and the Yukon Territory. Area, 1,322,954 square miles; population, according to the cen-

sus of 1921, 7988. They are under the administration of the Northwest Mounted Police, directed by a commissioner at Ottawa, aided by a deputy commissioner, and a council of five. The commissioner in 1926 was William Wallace Cary.

**NORWAY.** A constitutional monarchy of northwestern Europe, occupying the western and northern half of the Scandinavian peninsula and separated from Sweden by the Kjolen Mountains; the extreme length is 1110 miles, and the extreme width 250 miles; formerly united with Sweden, but separated, June 7, 1905. Capital, Oslo.

**AREA AND POPULATION.** The area is 124,964 square miles and the population according to the census of 1920, 2,649,775, of whom 1,864,371 lived in rural districts. The capital, Oslo, had a population of 258,483 on Dec. 1, 1920. Other large cities with their populations in 1920: Bergen, 91,443; Trondhjem, 55,030; and Stavanger, 43,778. Before Jan. 1, 1925, the capital, Oslo, was called Christiania. The movement of population in 1924 was: Births, 59,654; deaths, 30,574; marriages, 16,573; emigration, 8492, of whom 5065 went to the United States.

**EDUCATION.** Primary instruction is compulsory, the school age being from 6½ to 14 in towns and seven to 14 in the rural districts. According to the latest available statistics there were in the country districts 5953 public elementary schools with 284,875 pupils, and in the towns, 3426 classes with 96,875 pupils. There were 113 secondary and 13 normal schools. The only university is at Oslo.

**PRODUCTION, ETC.** Almost three-fourths of the land of Norway is unsuitable for cultivation. Of the remainder over four-fifths is forest. According to the *Statesman's Year Book* for 1926, the acreage and produce of the principal crops for 1924 were as follows:

<i>Crops</i>	<i>Acreage 1924</i>	<i>Produce (quarters) 1924</i>
Wheat .....	21,365	59,929
Barley .....	136,237	540,143
Oats .....	280,028	1,105,969
Rye .....	25,383	77,205
Mixed corn .....	18,608	89,986
Potatoes .....	116,770	23,740,797*
Hay .....	.....	2,559,295 <sup>b</sup>

\* bushels, <sup>b</sup> tons.

On June 30, 1925, the country possessed 183,887 horses, 1,150,687 cattle, 1,528,819 sheep, 275,783 goats, and 252,959 swine. The forests and fisheries are the two chief single sources of wealth. The timber exports were valued at 77,155,721 kroner in 1924, and the wood pulp and paper at 262,733,323 kroner. The fisheries were valued at approximately 77,507,000 kroner. The pyrite is the most important mineral product for both its sulphur and copper content. The total value of mineral products in 1924 was 32,369,000 kroner. There were 9872 manufacturing establishments, which employed 141,110 workers.

**COMMERCE.** In 1925 the chief imports were: Grain, 177,400,000 kroner; textiles, 137,600,000; ships, 104,500,000; and the chief exports: fish, 145,100,000 kroner; pulp, 161,500,000; paper, 145,600,000; and timber, 73,700,000. The accompanying table shows the value of imports and exports, divided into classes:

<i>Classes of goods</i>	<i>1924</i>	
	<i>Imports of foreign goods Kroner</i>	<i>Exports Norwegian goods Kroner</i>
Animals, living .....	7,201,700	1,734,837
Animal produce (malty food) .....	71,805,680	286,709,565
Breadstuffs .....	193,138,600	1,283,418
Groceries .....	149,590,000	980,746
Fruits, plants, etc. ....	59,375,700	1,101,121
Spirits, etc. ....	17,150,500	440,281
Spinning materials, yarn, rope, etc. ....	73,480,820	7,218,073
Textile manufactures, etc.	139,707,790	2,937,737
Hair, skins, etc. ....	42,789,100	29,879,210
Tallow, oils, tar, etc. ....	155,425,200	88,123,628
Timber & wooden goods	27,347,690	81,563,076

**FINANCE.** The Norwegian budget for 1925-26 was the first to be drafted in accordance with the reform bill evolved by a special committee in 1924. The measure concentrates financial operations and does away with the granting of special or supplementary appropriations outside of the budget. Likewise, all government enterprises are included in the budget statement, with their net revenues either as deficit or surplus. Moreover, the ordinary and extraordinary budgets have been consolidated and the single budget divided into two parts, one showing operating (administrative) revenue and expenditure and the other showing capital income and expenditure. As originally drafted, the budget for 1925-26 balanced at 427,600,000 kroner, but as ultimately voted by parliament, this total was increased to 440,500,000 kroner. At the same time the item of service on the so-called "crisis loan" of 1921 was restored to the budget after its deletion from the original draft of the 1924-25 budget, along with the provisions for meeting the anticipated deficit for 1924-25. To cover in part the estimated deficit for 1925-26, a 5 per cent surtax on income was authorized by parliament on July 14, 1925, and the stamp tax on tobacco products was raised considerably. The estimated State borrowings also were raised to 20,000,000 kroner from the proposed 15,000,000 kroner.

The proposed budget for 1926-27, as presented to parliament early in January, 1926, presented a reduced balance of 417,500,000 kroner, retained the crisis loan service (though nearly halved), dispensed with the 5 per cent surtax and depended on the extraordinary property tax to meet the reduced allotments to the national debt service, and increased the State borrowings more than half above the amount for 1925-26. Taxes and customs form about 82 per cent of the ordinary revenues; customs making up approximately two-fifths of this total, whereas before the war they supplied the largest percentage. During the war, taxes on income and property became more important, but recent years

witness progress again in indirect taxation. During the recent years State borrowings have been an annual source of revenue for covering deficits. On Dec. 31, 1925, the total debt of Norway was 1,730,625,792 kroner.

**ARMY AND NAVY.** Military service is universal and compulsory from the age of 18 to 55. The strength of the regular force in 1925 was 5000 of all ranks; the number trained in that year was 13,000; and the number available on mobilization, 300,000. The military budget for 1925-26 was 34,495,000 kroner. The main vessels of the fleet numbered only four, and were of old model. In addition there were a number of destroyers, torpedo boats, mine-layers, and submarines, with about 36 seaplanes and 20 other planes. The entire navy is designed for coast defense duty. See **MILITARY PROGRESS**; **NAVAL PROGRESS**.

**GOVERNMENT.** Executive power is vested in the King, who acts through a cabinet or council of state, and legislative power in the parliament or Storting of 150 members, elected by universal suffrage, without distinction of sex. King in 1926, Haakon VII (born Aug. 3, 1872; elected King, Nov. 18, 1905). The members of the cabinet appointed Mar. 4, 1926, were: Premier and Minister of Foreign Affairs, M. Lykke; Finance, M. Konow; Justice, M. Christensen; Social Affairs, M. Morell; Agriculture, M. Baerøe; Commerce, Navigation, Industry and Fishery, M. Robertson; Defense, M. Wefring; Worship and Instruction, M. Magelssen; Labor, M. Venger.

**HISTORY.** The outstanding event in Norway during the year and one which was followed by more than usual interest in the United States was the national referendum on the liquor question.

A new cabinet was organized on March 4 under the leadership of M. Lykke, who announced shortly after assuming office that he would submit to parliament the question of a plebiscite to decide whether the prohibition of liquors should be continued further. Such a plebiscite would be merely advisory under Norwegian laws, that is, the final say rested with parliament, although it would be indubitably guided by the result of the plebiscite. Norway went "dry" as far as spirits were concerned in 1919 following a referendum on the subject. The parliament at the request of the premier passed a measure calling for a vote on the liquor question on October 18. The passage of this measure was followed by the familiar campaign methods of the "wets" versus the "drys." The anti-prohibition campaign was waged largely by the various churches and the Anti-Saloon League, which received support from America in the form of financial assistance and speakers.

The result of the referendum on October 18, was decidedly in favor of the anti-prohibitionists. The press reported that the vote against the continuance of prohibition was 525,423 and the vote in favor of continuance, 415,637. The anti-prohibition strength was mainly in the cities while the prohibitionists polled their greatest strength in the rural districts. Premier Lykke announced after the balloting that as soon as the Storting assembled in January, 1927, his government would introduce a measure to incorporate the results of the referendum into law. Even the most ardent anti-prohibitionists admitted that this was the only logical and sensible thing to do.

**NORWEGIAN LITERATURE.** See **SCANDINAVIAN LITERATURE**.

**NOTRE DAME, UNIVERSITY OF.** A Roman Catholic institution of higher education at Notre Dame, Ind.; founded in 1842. The enrollment for the autumn of 1926 was 2632, and for the summer school of the same year 905. There were 151 members on the faculty, of whom 16 were additions during the year. President, Rev. Matthew J. Walsh, C.S.C., Ph.D.

**NOVA SCOTIA, nō'vā skō'shā.** One of the Maritime Provinces of Canada. Area, 21,428 square miles; population, according to the census of 1921, 523,837. Capital, Halifax, with a population in 1921 of 53,372. Other large towns: Sydney, 22,545; Glace Bay, 17,007; Amherst, 9998; Dartmouth, 7899; New Glasgow, 8974; Sydney Mines, 8327; Truro, 7562; Yarmouth, 7093. In 1923-24 the movement of population was: Births, 11,680; deaths, 6868; marriages, 3216. Education is free, compulsory, and undenominational. There are four universities and 3053 schools, with 3237 teachers and 111,594 pupils. In the technical schools there were 4018 pupils. Nova Scotia is largely an agricultural and fruit-growing country. The chief product is apples, the output of which, in 1924, was about 1,600,000 barrels. The output of the chief minerals in 1924 was: Coal, 4,973,184 long tons; crude gypsum, 435,393 short tons; coke, 332,538 short tons; and small quantities of steel ingots, pig iron, limestone, and dolomite. Nearly 24,000 men are employed in the fisheries, which, next to those of British Columbia, are the most extensive in Canada. The total market value of fish caught in 1924 was \$9,600,000. The imports for consumption in 1924 were valued at \$20,063,506 and the exports at \$46,141,634. There are 1451 miles of railway.

Executive power is vested in a lieutenant-governor appointed by the Dominion government of Canada for five years, who acts through a responsible ministry or council; and legislative power in a house of assembly of 43 members. On Feb. 10, 1926, it was officially announced that the Legislative Council consisting of 21 members appointed for life by the crown would be abolished. The province is represented in the Dominion Senate by 10 members and in the House of Commons by 16. Lieutenant-governor, J. R. Douglas; Premier, Provincial Secretary, and Treasurer, E. N. Rhodes; Public Works and Mines, G. S. Harrington; Attorney-General, J. C. Douglas; Highways, P. C. Black; Natural Resources and Provincial Development, J. A. Walker.

**NOYES, WALTER CHADWICK.** American jurist, died in New York on June 12. Born at Old Lyme, Connecticut, in 1865, he was educated at Cornell University and was admitted to the bar in 1886. He practiced law for many years in New London with Judge Augustus Brandegee, and in 1895 he became judge of the Court of Common Pleas of New London County, which office he held continuously until 1907, when he was appointed U. S. circuit judge by President Roosevelt. In 1913 he resigned from the bench to practice law, being made general counsel of the Delaware and Hudson Company. At various times Judge Noyes acted as receiver for the

South American Securities Company, the Chicago, Rock Island and Pacific Railroad Company and the American Real Estate Company. In 1909 and 1910 he represented the United States as a delegate to the international conference on maritime law, held at Brussels. He was the author of *The Law of Intercorporate Relations* (1902) and *American Railroad Rates* (1905).

**NUTRITION.** See FOOD AND NUTRITION.

**NUTS.** See HORTICULTURE.

**NYASSALAND**, or NYASALAND, **PROTECTORATE.** A British protectorate, formerly known as British Central Africa; situated on the southern and western shores of Lake Nyassa, extending northward to the Zambesi River. Area, 37,890 square miles; population in 1924, 1462 Europeans, 669 Asiatics, and 1,210,344 natives. The chief towns are Blantyre and Zomba, the seat of the government. Education is in the hands of foreign missionary societies, under which there were in 1924 2447 schools, with 192 European teachers, 149,493 pupils enrolled and an average attendance of 93,089. Among the chief products are tobacco, coffee, cotton, tea, and livestock. The imports in 1924-25 were valued at £548,156; and exports at £583,555. The chief articles of export are tobacco, cotton, fibres, corn and tea; of import, manufactures of cotton, provisions, and raw materials. Great Britain supplies more than half of the imports. Revenue for 1924-25 was estimated at £293,055 and expenditures at £295,481. The administration is under a commander-in-chief, aided by an executive and legislative council, composed of nominated members. Governor and Commander-in-Chief in 1926, Sir C. C. Bowring.

**OAKLEY, ANNIE** (MRS. FRANK BUTLER). Noted American rifle shot, died November 3, at Greenville, Ohio. She was born in a log cabin in Ohio in 1860, and, her father dying when she was but four years old, she developed a prowess in shooting that later was to make her famous, by hunting rabbits and other game to assist her mother. At nine years, of age the game shot was so much more than was necessary for the family support that she sent the surplus to the neighboring town by stage coach and supported herself as a market hunter. Her proficiency with a rifle was such that she was asked to join the Buffalo Bill Wild West Show in the late seventies, where she displayed feats of marksmanship. It was while she was touring Europe with this show that Annie Oakley met many of the crowned heads of Europe.

**OATS.** The world's production of oats in 1926, not including the Soviet Republics and the countries of the southern hemisphere, according to estimates published by the International Institute of Agriculture, Rome, was 3,456,429,000 bushels, being nearly 217,000,000 bushels less than in 1925. The acreage for the two years was nearly the same. The 1926 production reported for the leading countries was as follows: Germany 452,605,100 bushels, France 397,895,000 bushels, Canada 387,575,600 bushels, Poland 227,371,500 bushels, England and Wales 104,790,000 bushels, Czechoslovakia 90,129,700 bushels, Roumania 79,850,400 bushels and Sweden 74,261,100 bushels. The Soviet Republics in 1925 reported a yield of 647,205,500 bushels. Argentina in the crop year 1925-26 produced 80,432,900 bushels, Chile 5,185,200 bushels and Uruguay 2,439,800 bushels. The crop of the United States in 1926, as estimated by the Department of Agriculture,

was 1,253,739,000 bushels or about one third of the world's production. This crop was grown on 44,394,000 acres or at the rate of 28.2 bushels per acre. In 1925 the crop was 1,487,550,000 bushels, the area 44,872,000 acres and the average yield per acre 33.2 bushels. The average farm price Dec. 1, 1926 was 39.8 cents as compared with 38 cents on the corresponding date the preceding year, and the total value of the crops on this basis was \$499,531,000 and \$565,506,000 respectively.

The yields of the leading States were reported as follows: Iowa 195,962,000 bushels, Minnesota 129,162,000 bushels, Illinois 123,516,000 bushels, Wisconsin 96,638,000 bushels and Texas 83,666,000 bushels. In the southeastern group of States Georgia and South Carolina each produced over 10,000,000 bushels. The average farm price Dec. 1, 1926 in the different States ranged from 33 cents in North Dakota to 75 cents per bushel in Arizona. During the year ended June 30, 1926 the United States exported 30,975,000 bushels of oats and 156,805,000 pounds of oatmeal and imported the equivalent of 185,000 bushels of oats and oat products. A study made and reported by the United States Department of Agriculture showed that the cost of producing oats in 1925 was \$19.01 per acre and 51 cents per bushel. In the east north central and the west north central States the cost per bushel was 45 cents and 46 cents respectively, while in the south Atlantic and south central States it was 76 cents and 77 cents respectively. In similar studies made in 1922, 1923 and 1924 the cost of production ranged from 50 cents to 53 cents per bushel.

**OBERLIN COLLEGE.** A non-sectarian co-educational college at Oberlin, O.; founded in 1833. The registration for the fall term of 1926 was 1720, and that of the 1926 summer session 200. In 1925-26 the faculty had 209 members. The productive funds of the institution amounted to \$13,952,842, and the income for the year to \$1,065,898. The library contained 274,244 bound volumes, and 191,890 unbound volumes. President, Henry Churchill King, DD., LL.D.

**OBITUARY RECORD.** See NECROLOGY.

**OCEANIA**, ʻŌshē-ān'ia, **FRENCH ESTABLISHMENTS IN.** A French colonial possession, consisting of groups of small islands, scattered throughout a wide area of the eastern Pacific. The total area of the establishments is estimated at 1520 square miles; population in January, 1924, 31,703, of whom 25,569 were natives. The principal island is Tahiti, which contains the chief town, Papeete, with a population of 4601, of whom 2126 are Frenchmen. The group of islands of which Tahiti forms a part is known as the Society Islands. The other groups are the Marquesas Islands, Tuamotu Island, Leeward Islands, the Gambier, Tubuai, and Rapa groups, and a number of outlying islands. Various tropical fruits are grown and exported. Pearls and mother-of-pearl are important products. Imports in 1924, 42,107,252 francs; exports, 57,039,442 francs. The chief imports are tissues, wheat, flour, and metal work, and the chief exports, copra, mother-of-pearl, vanilla, coconuts, and phosphates. The local budget for 1926 was expected to balance at 11,590,633 francs. The most important islands are connected by a New Zealand steamship company with San Francisco, New Zealand, and Australia. The administration is in the hands of a governor assisted by an administrative council.

**ODELL, BENJAMIN B., JR.** American politician, former Governor of New York, died May 9. He was born at Newburgh, N. Y., on Jan. 14, 1854 and after studying at Bethany College, West Virginia, in 1873, went to Columbia University, remaining there from 1873 to 1875. He engaged in business in Newburgh, where he soon became known as a Republican politician. He was a member of the Republican State Committee from 1884 to 1896, and from 1898 to 1900, was Chairman of the Republican State Executive Committee. He was a member of the 54th and 55th Congresses, 1895-99, representing the 17th New York District, but at the end of this period of service he declined renomination. He was Governor of New York for two terms, from 1901 to 1905. In 1903 he received the degree of LL.D., from Columbia University. He was president and director of the Central Hudson Steamboat Company and other bodies and had many responsible business connections after his withdrawal from active political life. Governor Odell was a shrewd and able politician and the party organization showed the results of his control. His terms as governor were marked by good administration of the State's interests.

**ODLIN, ARTHUR FULLER.** American jurist, former Federal Judge, died June 7, at Jacksonville, Florida. He was born in Concord, N. H. on Apr. 25, 1860, and from 1877 to 1879 he was a student at Dartmouth College. In 1885 he graduated *cum laude* from the Boston University School of Law, and in the same year was admitted to the Bar. He practiced in Massachusetts, Ohio and Florida. From 1889 to 1901 he was Attorney General in Porto Rico, and from the latter date to 1904 was Judge of the Court of First Instance in Manila, P. I. In 1921 he was appointed by President Harding Judge of the United States District Court of Porto Rico. With Judge William A. Kincaid, Judge Odlin opened the first *niisi prius* Court in the Philippine Islands under the United States Government.

**OHIO. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 5,759,394. The estimated population on July 1, 1926, was 6,600,000. The capital is Columbus.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1926	3,591,000	145,436,000	\$87,262,000
	1925	3,741,000	179,568,000	102,354,000
Hay, tame	1926	2,936,000	4,007,000 *	56,098,000
	1925	3,030,000	3,304,000 *	50,221,000
Wheat, winter	1926	1,789,000	40,252,000	51,120,000
	1925	1,612,000	24,180,000	38,204,000
Wheat, spring	1926	6,000	132,000	166,000
	1925	4,000	124,000	191,000
Oats	1926	1,980,000	75,240,000	29,544,000
	1925	2,000,000	83,000,000	32,870,000
Potatoes	1926	107,000	10,058,000	17,099,000
	1925	113,000	11,978,000	23,956,000
Tobacco	1926	44,200	38,189,000 *	4,544,000
	1925	52,100	50,745,000 *	7,612,000
Barley	1926	116,000	3,712,000	2,301,000
	1925	110,000	3,410,000	2,387,000
Sugar beets	1926	84,000	837,000 *	
	1925	48,000	427,000 *	2,945,000

\* tons, \* pounds.

**MINERAL PRODUCTION.** The production of pig iron, forming one of the State's chief mineral activities, rose in Ohio to 8,875,615 long tons in

1925, from a total of 7,434,487 in 1924; in value, to \$173,418,068 in 1925, as against \$159,701,131 in 1924. Ohio ranked second to Pennsylvania in pig iron production. Coal production declined somewhat, to 28,034,112 net tons in 1925 from a total of 30,473,007 tons in 1924; and in value, to \$54,057,000 in 1925 from \$62,011,000 in 1924. Coke was produced to the quantity of 5,723,074 short tons in 1924 and of 6,323,810 short tons in 1923; in value, \$31,008,209 in 1924 and in 1923 \$40,712,282. Clay products, in which the State was the leading producer, attained a total of \$97,831,641 in 1924 and in 1923 of \$99,078,987. Natural gas production was 47,396,000 M cubic feet in 1924 and in 1923 was 53,812,000 M cubic feet; in value, \$24,203,000 in 1924 and \$25,675,000 in 1923. Gasoline was produced from natural gas to a total of some 10,000,000 gallons in 1925 and of 9,443,000 gallons in 1924; in value, \$1,050,000 in 1925 (estimated) and \$1,148,000 in 1924. Production of petroleum was 7,168,000 barrels in 1925 as against 6,811,000 barrels in 1924; the product had a value of \$17,200,000 (estimated) in 1925 and in 1924 of \$17,165,000. Stone production, 10,455,060 short tons in 1924 and 11,493,340 short tons in 1923, had a total value of \$11,280,865 for 1924 and \$11,464,569 for 1923. Lime was produced to the quantity of 1,061,000 short tons (estimated) in 1925, as against 934,407 short tons in 1924; and to the value of \$10,664,000 in 1924 (estimated) and in 1924 of \$9,511,270. Other important products were sand and gravel, ferroalloys, gypsum and salt. The total value of the State's mineral production in 1924 was \$249,049,648; in 1923, \$287,868,728.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$32,380,375. Their rate per capita was \$5.16 as against \$4.85 in 1924 and \$3.50 in 1918. Their total included \$4,092,936, for education, apportioned among the minor State divisions. Expenses amounting to \$103,789 for public service enterprises, \$1,310,068 for interest on debt and \$13,689,674 for permanent improvements, added to payments for maintenance and operation of the departments, made the total of State payments \$47,483,908. For highways was expended the sum of \$14,685,381, of which \$6,056,945 was for maintenance and \$8,628,436 for construction.

Revenue receipts of the State were \$47,450,167, or \$7.57 per capita. They exceeded by \$13,655,935 the total payments except those for permanent improvements, and were \$33,739 less than the total with these included. Property and special taxes formed 23.7 per cent of the revenue in 1925, as against 33.7 per cent in 1924 and 33.9 per cent in 1918. Their per capita rate was \$1.79 in 1925, \$2.96 in 1924 and \$1.41 in 1918. Earnings of the departments and compensation for officials' services furnished 8 per cent of the 1925 revenue; business and non-business licenses, 43 per cent. License receipts were derived chiefly from taxes on incorporated companies, on sales of gasoline and on motor vehicles.

The net indebtedness of the State on June 30, 1925 was \$24,186,752, or \$3.86 per capita, as against \$4.22 in 1924 and 96 cents in 1918. The assessed valuation of property subject to State tax was \$12,679,776,500. The State tax levy

was \$3,169,944, or 51 cents per capita. The levy was for the compensation fund for war veterans.

As presented in the report of the State Treasurer, general revenue for the fiscal year ending June 30, 1926, amounted to \$31,105,277, from which were made disbursements of \$30,606,005. Receipts allotted to highway expenditure and distinct from the foregoing were \$7,781,208; and highway disbursements were \$17,758,183. The World War Compensation tax levy brought in \$3,123,749, and for compensation was disbursed \$3,360,937. The gas tax excise yielded \$12,667,504, of which was disbursed \$5,275,889. The total of all receipts was \$55,229,515; of all disbursements, \$62,977,728.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 8812. Switching and terminal companies operated 414 miles of track. New construction in 1926 comprised 101 miles of second, eight miles of third and eight miles of fourth or other track, and attained a total of 118 miles of track. No abandonment of line was reported.

**EDUCATION.** An increase in the requirements with regard to the preparation of teachers was reported by Vernon M. Riegel, State director of education. These laid particular emphasis on entrance examinations and on subject matter background. Diagnostic testing and remedial instruction were also stressed, and attention was paid to the placement of teachers and to following up graduates in service. For the year ending June 30, 1926, the school population of the State was estimated at 1,480,537. The total public school enrollment was 1,255,323; in common schools were enrolled 979,073 and in high schools 214,777. For the previous year, 1924-1925, expenditures for education were as follows: current expenses, \$84,181,455; total for all purposes, \$120,183,310. Salaries of teachers averaged approximately \$1350 a year.

**CHARITIES AND CORRECTIONS.** Attention was called to the housing situation in Cincinnati during the year by the report of Housing Inspector Charles Sagmeister on conditions there in 1925. The report condemned as unsanitary many houses in the poorer section along the river front, which had been built at an earlier day and lacked modern sewage arrangements. At Cleveland, May 26 to June 2, was held the National conference of social workers.

The State Department of Public Welfare had under its direction in 1926 23 State institutions, and carried on the execution of the State law as to pardons and paroles, activities for the prevention of blindness and work for the employment and industrial training of penal institution inmates in production of State supplies. Among the chief institutions under its control were; Athens State Hospital, 1316 inmates; Cleveland State Hospital, 1988; Columbus State Hospital, 2117; Dayton State Hospital, 1261; Lima State Hospital, 972; Longview State Hospital, 1695; Massillon State Hospital, 2205; Toledo State Hospital, 2011; Ohio Hospital for Epileptics, 1768; Institution for the Feeble Minded (at Columbus), 2008; Institution for the Feeble Minded (at Orient), 1228; State School for the Blind, 203; State School for the Deaf, 471; Ohio Soldiers' and Sailors' Home, 541; Boys' Industrial School, 1200; Girls' Industrial School, 528; Ohio Penitentiary, 2707; Ohio State Reformatory, 1988; and London Prison Farm, 473.

**POLITICAL AND OTHER EVENTS.** At the general

election on November 2, Governor A. Vic Donahey, Democratic candidate to succeed himself, was reelected for the two year term beginning in January, 1927. He defeated the Republican candidate, Meyer Y. Cooper, by about 70,000 votes. The Lieutenant Governor, Secretary of State, Treasurer, Attorney General and Chief Justice of the Supreme Court were all reelected at the November election. Senator Frank B. Willis, Republican, was reelected to the U. S. Senate. He had the support of the State organization of the Anti-Saloon League. He led his Democratic opponent, former Senator Atlee Pomerene, by approximately 88,000 votes. Pomerene had defeated Supreme Court Justice Florence E. Allen in the primaries by a heavy plurality, and ran on an anti-prohibition platform. Socialist and Socialist-Labor tickets were placed on the ballot but obtained only small votes. Fifteen Republicans and seven Democrats were elected from the State to the U. S. House of Representatives. In a referendum on the question whether to abolish the State system of nomination of candidates for elective office by direct primary, there was cast a vote in the proportion of about two to one for the retention of the direct primary.

The murder of Don R. Mellett, a newspaper publisher of Canton, O., who had taken the course of demanding the overthrow of the lawless element in that locality, led to the arrest of Eugene McDermott with two co-defendants.

**OFFICERS.** Governor, A. V. Donahey; Lieutenant-Governor, Earl D. Bloom; Secretary of State, Clarence J. Brown; Treasurer, Bert B. Buckley; Auditor, Joseph T. Tracy; Attorney-General, Edward C. Turner.

**JUDICIARY.** Supreme Court, Chief Justice, Carrington T. Marshall; Associate Justices, Reynolds R. Kinkade, James E. Robinson, Thomas A. Jones, Edward S. Matthias, Florence E. Allen, and Robert H. Day.

**OHIO NORTHERN UNIVERSITY.** A co-educational institution for higher education at Ada, Ohio, founded in 1871, and under the direction of the Methodist Episcopal Church. It consists of a preparatory school, a college of liberal arts, a normal college, colleges of engineering, commerce, law, agriculture, music, and schools of expression, fine arts, and military training. In the autumn of 1926 there were 1174 students registered, and in the 1926 summer school, 661. The faculty had 54 members. The productive funds of the institution amounted to \$450,000, and the income for the year to \$250,161.50. There were 12,000 volumes in the library. A new gymnasium was under construction in 1926. President, Albert Edwin Smith, D.D., Ph.D.

**OHIO STATE UNIVERSITY.** A co-educational State institution of higher education at Columbus, O.; founded in 1870. The enrollment for the autumn of 1926 totaled 9377, distributed as follows: graduate school, 581; agriculture, 785; applied optics, 28; arts, philosophy, and science, 2126; arts-education, 117; commerce and journalism, 1743; dentistry, 231; education, 1429; engineering, 1537; law, 337; medicine, 316; pharmacy, 184; veterinary medicine, 54. There were 2789 students registered for the summer quarter of 1926. The faculty, in the autumn quarter, had 809 members, an increase of twenty over 1925. The endowment amounted to \$1,133,721, and the income for the year to

\$6,308,531.63. The total expenditures were \$6,250,962.82. The University also had current assets amounting to \$1,888,744.94, and the buildings and equipment were valued at \$14,110,433.89. The library contained 276,161 volumes. President, George W. Rightmire, M.A., LL.D.

**OHIO UNIVERSITY.** A State institution of higher education at Athens, Ohio; founded in 1804. The student enrollment for the 1926 fall term was 2003, of whom 1020 were in the College of Liberal Arts, 678 of these men and 342 women; 983, 256 men and 727 women, were in the College of Education. In the liberal arts the students were distributed as follows: 143 seniors, 179 juniors, 282 sophomores, and 371 freshmen, with 5 specials and 40 special music students. The distribution in education follows: 105 seniors, 129 juniors, 296 sophomores, and 446 freshmen, with 7 specials. There was a registration of 1190 in the 1926 summer session, 196 men and 994 women. The faculty numbered 149. The productive endowment of the University totaled \$71,802.77, and the income for the year 1925-26, including appropriations by the legislature for additions for the two years 1925-27, was \$1,209,936.82. The library contained 80,000 volumes. President, Elmer Burritt Bryan, L.H.D., LL.D.

**OHIO WESLEYAN UNIVERSITY.** A co-educational institution of higher education at Delaware, Ohio, founded in 1844, and under the control of the Methodist Episcopal Church. For the fall term of 1926 the total enrollment was 1902, distributed as follows: seniors, 283; juniors, 407; sophomores, 471; freshmen, 649, special students, 17; conservatory, 49; post-graduates, 26. The faculty numbered 143. The productive endowment of the University amounted to \$1,800,000, and the income for the year to \$523,828.37. The library contained more than 110,000 volumes. President, John Washington Hoffman, D.D., LL.D.

**OIL.** See PETROLEUM.

**OIL ENGINES.** See INTERNAL COMBUSTION ENGINES.

**OKI, COUNT ENKICHI.** Japanese politician, died February 15. He was born in 1871 and was educated at the Peers' School, being the second Count to enter. He became a member of the House of Peers, and, in 1919 was appointed Minister of Justice in the Cabinet of Premier Hara. In 1922, when Baron Kato was asked to take over the administration *in toto* of the Government with the Cabinet formed by his predecessor, Count Oki was made Minister of Railways.

**OKLAHOMA. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,028,283. The estimated population on July 1, 1926, was 2,342,000. The capital is Oklahoma City.

**AGRICULTURE.** The following table gives the acreage, production and value of the principal crops, in 1925 and 1926.

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1926	4,912,000	1,950,000 *	
	1925	5,289,000	1,691,000 *	
Corn	1926	2,353,000	61,178,000	\$34,260,000
	1925	2,558,000	19,185,000	17,266,000
Wheat, winter	1926	4,214,000	73,745,000	87,019,000
	1925	3,816,000	27,191,000	39,971,000
Hay, tame	1926	551,000	851,000 *	10,212,000
	1925	480,000	613,000 *	9,808,000
Oats	1926	1,968,000	38,804,000	14,172,000
	1925	1,140,000	26,230,000	13,372,000
Potatoes	1926	43,000	2,838,000	4,825,000
	1925	39,000	2,808,000	6,818,000

Crop	Year	Acreage	Prod. bu.	Value
Sweet potatoes	1926	24,000	2,520,000	2,520,000
	1925	20,000	1,880,000	2,538,000
Barley	1926	176,000	4,752,000	2,756,000
	1925	126,000	1,764,000	1,328,000
Grain sorghum	1926	1,158,000	24,318,000	10,943,000
	1925	1,053,000	14,216,000	10,662,000

\* bales, † tons.

**MINERAL PRODUCTION.** Third in rank among the States in respect to value of its annual mineral product, the State has of recent years obtained more than three fourths of this value from production of petroleum and natural gas. In 1925 176,760,000 barrels of petroleum were produced in the State and in 1924 173,538,000 barrels; valued for 1925 at \$347,000,000 (estimated) and for 1924 at \$272,450,000. In quantity the petroleum product of 1925 ranked second only to that of California, and in estimated value it ranked highest. Natural gas production, the highest in quantity for any State, totaled 214,452,000 M cubic feet in 1924, as against 203,082,000 M cubic feet in 1923; in value, \$31,045,700 in 1924 and in 1923 \$31,214,000. Gasoline was produced from natural gas to a quantity of 390,800,000 gallons in 1925, and of 301,062,000 in 1924; in value \$41,600,000 (estimated) in 1925 and in 1924 \$23,338,000 in 1924. Of zinc, 269,137 short tons produced in 1924 and 242,421 short tons in 1923 were worth, respectively, \$34,987,810 in 1924 and in 1923 \$32,969,256. Lead production was 71,538 short tons in 1924 and 66,904 short tons in 1923, with a value of \$11,417,280 in 1924 and in 1923 \$9,366,560. Coal mines of the State produced 2,239,000 short tons of coal in 1925 and in 1924 2,329,615 short tons. The product was valued in 1924 at \$8,590,000; in 1923 at \$10,874,000. Sand and gravel, stone, gypsum, clay products and asphalt, both native and derived from natural oil, were also produced. The State's total mineral production in 1924 was \$393,030,665; in 1923, \$398,810,630.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending June 30, 1925, were \$16,278,863. Their per capita rate was \$7.33, as against \$5.78 in 1924 and \$3.20 in 1918. Their total included \$3,318,018, for education, apportioned among the minor State divisions. Expenses entailed by State aid to education increased materially in the year. Payments amounting to \$185,419 for interest on debt and \$10,809,304 for permanent improvements, added to the payments for maintenance and operation of departments, made the total of State payments \$27,273,586. For highways was expended the sum of \$10,668,289, of which \$1,041,264 was for maintenance and \$9,627,065 for construction.

Revenue receipts of the State were \$28,428,070, or \$12.81 per capita. They exceeded by \$11,963,788 the total payments except those for permanent improvements, and furthermore, exceeded by \$1,154,484 the total with these included. Excess receipts were carried in increased cash balances. Property and special taxes formed 17.6 per cent of the revenue in 1925, as against 14.1 per cent in 1924 and 33.9 per cent in 1918. Their per capita rate was \$2.25 in 1925, \$1.23 in 1924 and \$1.93 in 1918. Earnings of the departments and compensation for officials' services furnished 7.4 per cent of the 1925 revenue;

business and non-business licenses, 33.9 per cent. License receipts were derived chiefly from taxes on incorporated companies, on sales of gasoline and on automobiles.

The net indebtedness of the State on June 30, 1925, was \$3,395,800, or \$1.53 per capita, as against a per capita of \$1.47 in 1924 and \$3.07 in 1918. The assessed valuation of property subject to State tax was \$1,665,566,451. The State tax levy was \$4,163,916, or \$1.88 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 6621. There was constructed in 1926 55 miles of new first track. The Oklahoma and Arkansas abandoned 20 miles of line between Kenwood and Day; the Chicago, Rock Island and Pacific, 23 miles between Homestead and Watonga.

**EDUCATION.** Progress in the standardization of rural schools extended the list of standardized schools of this sort to a total number of 1800, as recorded by the "model school" score card. Of approximately 17,000 teachers, some 13,000 engaged in summer school work for the purpose of improving their professional fitness. The practice of local certification of teachers by the counties and cities was in some cases discontinued. To a material extent the certification of teachers by the State board of education took its place. Educational authorities formed the plan to place before the State in the course of the school year 1926-1927 the topic of health education, with emphasis on its public importance. Education equalization, previously made a subject of State-wide publicity, had gained strong support in advance of the convening of the Legislative session of 1927.

The school population of the State was given as 721,522. There were enrolled in the public schools 654,742 pupils, of whom 573,683 were enrolled in the common schools and 80,879 in the high schools. Expenditure for education in 1926 totaled \$30,187,234. Salaries of teachers averaged \$1001.

**CHARITIES AND CORRECTIONS.** The chief State institutions with population at the end of 1925 were: State Penitentiary, McAlester; State Reformatory, Granite, 602 inmates; State Industrial School for Girls, Tecumseh, population, 166; Boys' State Training School, Pauls Valley, 88; State Industrial School for Colored Girls, Taft, 31; State Training School for Negro Boys, Boley; School for the Deaf, Sulphur, 349; Oklahoma School for the Blind, Muskogee; State Institute for the Feeble Minded, Enid, 450; State Tuberculosis Sanitaria, at Clinton and Tahina, Soldiers' Tubercular Sanatorium, Sulphur, 44 patients; Union Soldiers' Home, Oklahoma City, population, 96; Oklahoma Confederate Home, Ardmore, 112; State hospitals for the insane, at Norman and at Vinita, combined population 2674; Western Hospital for the Insane, Supply, 832; Walker State Home (for children), 256; West Oklahoma School for White Children, Helena, 82; Deaf, Blind and Orphans' Institute (colored) Taft, 215.

**POLITICAL AND OTHER EVENTS.** At the general election on November 2, Henry S. Johnson, Democratic candidate, was elected Governor for the four year term beginning in January, 1927. He failed to receive the united support of elements in his own party friendly to former Governor Jack Walton, but nevertheless defeated his Republican opponent, Omar K. Benedict. Elmer Thomas, Democrat, was elected to the U. S.

Senate for the six year term. He defeated Senator J. W. Harrel, Republican, who was a candidate for reelection. There were elected to the U. S. House of Representatives seven Democratic candidates and one Republican, the Democrats gaining one seat held by a Republican in the 69th Congress.

The Wage act of the State was declared unconstitutional by the U. S. Supreme Court January 4. At Wilburton on January 13, a coal mine explosion caused the death of nearly 100 men. The boundary dispute between the State and Texas involving some 25,000 acres of land along the border northward from the Red River was considered by the U. S. Supreme Court, which on October 11 ordered a new survey. The affairs of Oklahoma County, containing the State capital, Oklahoma City, were thrown into confusion by litigation impugning the legality of certain taxes imposed in 1925, which rendered county balances impossible to draw upon. The county treasurer reported December 10 that banks were withholding \$1,091,780 of 1925 collections, and the county was tendering warrants in payment of current expenditure. An initiative petition attacking the tax levy was declared unconstitutional in an inferior court, and the action was appealed. The State tax protest law provided in any case for the holding of tax moneys under litigation until released by court order.

**OFFICERS.** Governor, M. E. Trapp; Secretary of State, R. A. Sneed; Treasurer, A. S. Shaw; Auditor, C. C. Childers; Attorney-General, George F. Short; Superintendent of Public Instruction, M. A. Nash.

**JUDICIARY.** Supreme Court: James I. Phelps, John B. Harrison, Fred P. Branson, John H. Pitchford, C. J. Elting, George M. Nicholson, Neil E. McNeill, F. E. Kennamer, Fletcher Riley, Albert C. Hunt.

**OKLAHOMA, UNIVERSITY OF.** A co-educational State institution of higher education at Norman, Okla.; founded in 1892. The enrollment for the autumn of 1926 totaled 4431, of whom 2835 were men and 1596 were women. These were distributed as follows: graduate school, 136; arts and sciences, 2556; business, 173; education, 71; engineering, 610; fine arts, 292; law, 250; medicine, 177; nursing, 65; pharmacy, 100. For the summer session 2115 students registered, 697 men and 1418 women. The faculty had 286 members. The productive funds of the University amounted to \$3,200,000, and the income for 1926-27 to \$1,317,650, from the following sources: state appropriations, for maintenance \$981,650, buildings and equipment \$186,000, land \$20,000; from student fees, 130,000. A new gymnasium was under construction. The library contained 68,000 volumes. President, William Bennett Bizzell, Ph.D., LL.D.

**OLD AGE PENSIONS.** The year 1926 saw the passage of an old age pension law by the State of Kentucky, which became the fourth State to provide this method for the care of the aged poor. The other States were Montana, Nevada, and Wisconsin. A pension law was passed by the legislature of the State of Washington, but was vetoed by Governor Hartley. New York created a legislative commission to investigate the condition of the aged poor and to recommend legislation. Public employees' retirement systems were improved and expanded by the legislatures of Hawaii, Massachusetts,

New York, New Jersey, and by the Federal Congress.

**PENSION COSTS AND STATISTICS.** As the principal weapon in the propaganda against old age pension legislation has been the argument of excessive costs, it is of interest to study the actual costs of the pension systems that are already in operation. According to the figures compiled by the Wisconsin State Board of Control, the average cost per person per day under the pension law of 1925 was 79 cents. The Wisconsin law is quite liberal and grants pensions up to \$1 a day. Since the law went into effect up to June 1, 1926, five counties acted to put the system into operation. In these counties there was a total of only 301 applicants, of whom 261 were granted pensions; and of these 261, 161 were men and 100 were women. The maximum pension was paid to 104 persons, the report showed. Two hundred and five of the pensioners had disabilities, such as blindness or eye trouble, deafness, nervous diseases, rheumatism, "sickness" and "old age." The pensioners have a total of 755 children, of whom 644 are married, with a total of 1851 children of their own. "The occupation of the pensioners' male children," said the report, "discloses the fact that most of them are laborers and farmers and factory hands probably not making much more than a living for their own family."

The Wisconsin pension cost of 79 cents a day or \$23.70 a month represents a monthly saving of from \$6 to \$11 for each pensioner as compared with poorhouse maintenance. In Montana, after three years operation of the old age pension law, there was paid in 1925 an average pension of \$172.16 a year or \$14.35 a month. The saving on poorhouse maintenance was more than one third.

The Wisconsin and Montana figures may be contrasted with the propaganda of the Pennsylvania State Chamber of Commerce against the adoption of a constitutional amendment permitting old age pension legislation in that State. It will be recalled that the Pennsylvania Old Age Pension Law of 1923 was declared unconstitutional, and that a movement was immediately started to amend the State constitution to permit such legislation. The amendment passed the legislature in 1925, and if it is again passed in 1927, it will be voted on by the people. The organ of the Chamber of Commerce, *Pennsylvania Progress*, in an effort to defeat the amendment in the legislature, wrote as follows: "While no definite figures are at hand to show just exactly what such a system would cost the taxpayers of the State of Pennsylvania, yet it is estimated that the total amount involved would be from \$40,000,000 to \$60,000,000 annually. These figures are based on the report of a commission appointed by Governor Brumbaugh in 1917 which calculated its finding on the census of 1910 and which developed that \$32,000,000 would be needed annually to defray this item of expense."

Mr. John F. O'Toole, a member of the State Old Age Pension Commission, immediately challenged the statement. He denied that any commission in Pennsylvania ever made the estimate suggested, and quoted instead the report of the Old Age Commission to the 1925 Legislature. This commission, he pointed out, had declared that, "based upon as accurate and scientific figures as are ascertainable, we find that even if every

aged person in the State, qualified under the law, would be given assistance, the cost would not amount to more than approximately \$5,000,000 a year, or about 57 cents for each citizen in the State. This is a big sum of money until it is recalled that for this sum we would be able to take care of three times the number of persons now taken care of in our almshouses, which expenditures, if everything be included, amount to at least \$8,000,000 a year."

**NEW LEGISLATION.** We give below an abstract of new laws relating to old age pensions and retirement systems for public employees. The abstract follows the regular annual summary in the *American Labor Legislation Review*.

**Hawaii.** A retirement system was established this year covering all public employees of the territory, except those who elect not to be included. All other retirement systems supported by public money are abolished. The retirement allowance is to consist of an annuity which is the actuarial equivalent of the employee's accumulated contributions plus a pension equivalent to one one-hundred and fortieth of his average annual salary for the past ten years. The age of permissible retirement is sixty years, and that of compulsory retirement is seventy years. For accident disability an employee is to receive in addition to his annuity a pension equal to two thirds of his average final salary.

**Kentucky.** An old age pension system was passed by the State legislature this year. The system, when accepted by the court or commissioners of any county, is to be administered by the county judge. The maximum pension is \$250 per year, and the applicant for a pension must be seventy years of age, a citizen of the United States for fifteen years and a resident of the county for ten years. He must not possess an income in excess of \$400 per year nor property to the value of \$2500 or more. He must not have a child or other legally responsible person able to support him. The maximum penalty for attempts to obtain benefits by false statement is \$500 fine, imprisonment for one year, or both.

**Massachusetts.** The provisions of the retirement system for public employees were expanded during the year. It was also enacted that when a person becomes a public charge, the expense incurred by public authorities for his maintenance, unless otherwise paid, shall be deducted from any retirement pension for public employees to which he is entitled.

**New Jersey.** The retirement system for public employees was expanded.

**New York.** The public employees' retirement systems were regulated and expanded. The legislature also passed a joint resolution authorizing a committee of two senators and three assemblymen to investigate the condition of the aged poor with a view to devising a state policy and recommending legislation.

**Porto Rico.** The legislature amended the public employees' retirement act to protect employees transferred to temporary positions or on leave of absence.

**United States.** The Federal employees' retirement law was amended and reenacted. The principal changes are the following: to employees eligible to retire at sixty-five are added village letter carriers, sea post clerks and laborers; to those eligible to retire at sixty-two are added all employees engaged in hazardous oc-

cupations or whose terms of service have included fifteen years in the tropics; classification of employees into age groups is to be determined jointly by the Civil Service Commission and the heads of the departments concerned; to employees included under the act are added permanent citizen employees of the Panama Canal, all unclassified employees of the United States, permanently employed under labor regulations approved by the President; annuities are to be computed by multiplying the average annual salary (not to exceed \$1500) for the ten years preceding retirement by number of years of service (not to exceed thirty) and dividing the product by forty-five, instead of multiplying, as heretofore, such average salary by a certain per cent, varying from thirty to sixty; maximum pension is \$1000 instead of \$720, minimum unspecified instead of \$180.

**OLGA.** Dowager Queen of Greece, died at Rome, Italy, on June 19. She was a grand-duchess of Russia, born Aug. 22, 1851 and her full name was Olga Constantinovna. She married King George I (1845-1913), second son of King Christian IX of Denmark, at St. Petersburg, Russia, Oct. 27, 1867. With the banished royal family of Greece she had taken up residence in Italy, and the Greek Minister at Rome tendered the official condolences of the Greek Government to the other members of the royal family on Queen Olga's death. An offer made to the royal family, that the Hellenic Government be permitted to conduct the funeral of Her Majesty at public expense, was refused.

**OMAN.** An independent Moslem state in southeastern Arabia, extending for about 1000 miles along the southern coast of the Gulf of Oman; guaranteed in its integrity by Great Britain and France. Area, about 82,000 square miles; population estimated at 500,000; chiefly Arabs, but with a considerable negro element along the coast. The capital, Muscat, and the neighboring town of Matrah, have a combined population of about 20,000 made up almost entirely of negroes and Baluchis. Imports, which consist chiefly of rice, coffee, and cotton piece goods, and exports, which comprise dates, dried limes, pomegranates, and dried fish, are from and to India for the most part. The reigning Sultan in 1926 was Seyyid Taimur bin Faisal bin Turki, who succeeded his father Oct. 5, 1913.

**ONNES, ön'-nēs, HEIKE KAMERLINGH.** Dutch physicist, died February 21. He was born at Groningen on Sept. 21, 1853, and was educated at the university of his native town. From the beginning of his studies he showed remarkable analytic powers and he chose physics as the department of science in which he was most interested. He began experimenting at an early age and by 1883 attracted the attention of scientists abroad by his low-temperature experiments. He became a Foreign Member of the Royal Societies of London, Dublin and Edinburgh. One of his most important discoveries was a method of liquefying helium discovered in 1908, and he was able to ascertain its boiling point, density and critical temperature. He was appointed Professor of Physics at Leyden and carried out most of his experiments in the splendidly equipped laboratory there. For other discoveries associated with his name, notably the possibility of perpetual electric current through certain metals at certain temperatures, he was made an Honorary

Member of the Royal Institute of Great Britain, and of the Chemical Society. Some time before his death he was made Professor Emeritus of Physics and Director of the Physical Laboratory at Leyden. He obtained the Nobel Prize for Physics in 1913.

**ONTARIO.** The second largest province of the Dominion of Canada (after Quebec), situated between Quebec on the east and Manitoba on the west. Area, 407,262 square miles; population according to the census of 1921, 2,933,662. The capital is Toronto, with a population in 1921 of 521,893. Other large cities: Ottawa (capital of the Dominion), 107,843; Hamilton, 114,151; London, 60,950. In 1924 there were 7022 elementary schools and 396 secondary schools, attended by 722,050 pupils, and taught by 17,567 certificated teachers.

Agriculture is the chief occupation of the province. The land under cultivation was estimated at 14,000,000 acres. The acreage and yield of the more important crops in 1925 were: Wheat, 860,439 acres, 24,345,000 bushels; oats, 2,837,390 acres, 111,509,000 bushels; barley, 436,383 acres, 14,182,000 bushels; rye, 98,652 acres, 1,973,000 bushels; flax, 9789 acres, 116,000 bushels; mixed grain, 681,624 acres, 23,107,000 bushels; other grains, 660,000 acres, 16,888,000 bushels; potatoes, 163,790 acres, 11,072,000 cwt.; roots, 110,538 acres, 20,251,000 cwt.; hay and clover, 3,544,003 acres, 4,997,000 tons; alfalfa, 550,645 acres, 1,206,000 tons; fodder corn, 373,133 acres, 3,627,000 tons. The farm values for 1924 were: Land, \$885,348,000; buildings, \$484,539,000; improvements, \$164,022,000; livestock, \$222,394,000. The total value of the metallic mineral production in 1924 was \$51,634,888; of the non-metallic minerals, \$23,921,445. The revenue for 1923-24 was \$40,540,923 and the expenditure, \$48,866,568. There are about 11,000 miles of railway.

The executive power is vested in a lieutenant-governor appointed for five years by the governor-general of Canada and a responsible ministry; legislative power is in a single chamber of 111 members, elected for four years. Women have the franchise and the right to election to the chamber. Ontario is represented in the Dominion Senate by 24 members and in the House of Commons by 82. Lieutenant-governor in 1926, Col. Henry Cockshut; Prime Minister and President of the Council, G. Howard Ferguson; Attorney-general, W. F. Nickle; Treasurer, W. H. Price; Secretary and Registrar, L. Goldie; Education, G. Howard Ferguson; Agriculture, J. S. Martin; Public Works and Highways, G. S. Henry; Lands and Forests, James Lyons; Mines, Charles McCrea; Labor and Health, Dr. Forbes Godfrey; Ministers without Portfolio, R. J. Cooke and Leeming Carr.

**OPERA.** See MUSIC.

**OPPENHEIMER, KARL.** German physician, authority on children's diseases and pioneer for children's clinics in Germany, died July 28, at Munich. He was born in 1864, and devoted his whole life to researches into children's diseases, their prevention, and the welfare of child life. He introduced into Germany the organization of Children's Welfare Centres, which, from the success of his first institution of the kind, established in Munich, soon spread all over Germany. To his researches and patient devotion to his ideals, are due many of the prophylactic systems of child-rearing.

**OREGON.** **POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 783,389. The estimated population on July 1, 1926, was 877,000. The capital is Salem.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Wheat,	1926	880,000	17,600,000	\$21,120,000
winter	1925	850,000	7,850,000	9,996,000
Wheat,	1926	146,000	1,986,000	2,382,000
spring	1925	614,000	11,548,000	15,698,000
Barley	1926	82,000	2,378,000	1,546,000
	1925	96,000	3,168,000	2,313,000
Hay, tame	1926	912,000	1,764,000	19,404,000
	1925	925,000	1,903,000	22,075,000
Potatoes	1926	45,000	4,500,000	4,500,000
	1925	40,000	4,160,000	6,240,000
Corn	1926	75,000	2,475,000	2,475,000
	1925	71,000	2,059,000	2,203,000
Oats	1926	804,000	8,816,000	4,408,000

Hops	1926	13,000	14,950,000	3,738,000
	1925	13,000	15,600,000	3,588,000

\* tons, \* pounds.

**MINERAL PRODUCTION.** The metal and ore production of the State fell off in 1925, especially that of gold, the metallic product attaining the highest value in yearly production. There were mined in 1925 gold, silver, copper and lead to a value of \$430,753, and in 1924 of \$678,072. Quantities produced were: gold, 18,982 fine ounces in 1925, and 26,695 fine ounces in 1924; silver, 32,793 fine ounces in 1925 and 38,103 fine ounces in 1924; lead and copper, minor quantities. Stone was produced to the quantity of 1,592,530 short tons in 1924 and 1,103,330 short tons in 1923; and to the value of \$1,624,602 in 1924 and in 1923 of \$1,342,070. Sand and gravel yielded 2,238,056 short tons in 1924, and 1,702,439 in 1923; in value, \$1,615,114 in 1924 and in 1923 \$1,320,483. Clay products in 1924 were worth \$701,577; in 1923, \$612,785. The State's mineral products had a total value in 1924 of \$7,364,232; in 1923, \$6,054,487.

The value of gold, silver, copper, and lead produced in Oregon in 1926, as estimated by the Bureau of Mines, was \$334,300. It was estimated that 13,600 ounces of gold were produced, valued at \$281,000. The silver production was 29,400 ounces, valued at \$18,300.

**FINANCE.** As summarized by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State in the fiscal year ending Sept. 30, 1925, were \$10,101,973. Their per capita rate was \$11.98, as against \$11.06 in 1924 and \$5.90 in 1917. Their total included \$414,593 for education, apportioned to minor State divisions. Payments amounting to \$9628 for public service enterprises, \$2,546,825 for interest on debt and \$6,052,326 for permanent improvements, added to payments for the maintenance and operation of departments, made the total of State payments \$18,710,752. For highways was

expended the sum of \$7,539,473, of which \$2,131,414 was for maintenance and \$5,408,059 for construction.

Revenue receipts of the State were \$20,402,930, or \$24.20 per capita. They exceeded by \$7,744,504 the total payments except those for permanent improvements, and furthermore exceeded by \$1,092,178 the total with these included. Investments were purchased with excess receipts. Property and special taxes formed 38 per cent of the revenue in 1925, as against 38.4 per cent in 1924 and 64.7 per cent in 1917. Their per capita rate was \$9.20 in 1925, \$9.33 in 1924 and \$3.79 in 1917. Earnings of the departments and compensation for officials' services furnished 4.7 per cent of the 1925 revenue; business and non-business licenses, 40.3 per cent. License receipts were derived chiefly from taxes on incorporated companies, on sales of gasoline and on motor vehicles.

The net indebtedness of the State on Sept. 30, 1925, was \$39,702,437, or \$47.08 per capita, as against \$49.94 per capita in 1924 and 66 cents per capita in 1917. The assessed valuation of property subject to State tax was \$1,058,880,737. The State tax levy was \$7,492,761, or \$8.89 per capita.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 3357. The Southern Pacific constructed 36 miles of line (single track) on the Natron cutoff. No abandonment of line was reported.

**EDUCATION.** A southern Oregon normal school was established to serve that portion of the State. Provision was made by a State referendum for the establishment of another normal school in eastern Oregon. When this is accomplished the State will have three normal schools, supplying ample teacher training facilities.

**CHARITIES AND CORRECTIONS.** The State Board of Control in its seventh biennial report, covering the period ending Sept. 30, 1926, gave the average daily populations in the institutions under its control as follows: Oregon State Hospital, 1861; Eastern Oregon State Hospital, 786; Oregon State Penitentiary, 499; State Institution for the Feeble Minded, 805; Oregon State Training School, 193; Oregon State Tuberculosis Hospital, 162; Oregon State School for the Blind, 46; Oregon State School for the Deaf, 119; Oregon State Industrial School for Girls, 72; Oregon State Soldiers' Home, 115; Oregon Employment Institution for the Blind, 54. There were in addition numerous State-aided institutions for orphans, dependent children and wayward girls. The Board of Control reported on its employment in 1925 of a \$1,500,000 reseeded loan fund entrusted to it by the legislature of that year, with which to aid farmers to replant crops ruined by an unseasonable frost. Only \$396,431 was lent to needy farmers, on first chattel mortgages, and of this all the principal amount save \$8502 had been repaid by Sept. 30, 1926.

**POLITICAL AND OTHER EVENTS.** In the general election of November 2, I. L. Patterson, Republican candidate, was elected Governor for the four year term beginning January, 1927. The election of November 2 left the list of the chief other State officers unchanged save that Charles H. Howard was chosen for Superintendent of Public Instruction. The campaign for election of a U. S. Senator for the six year term was carried on by three candidates. Sen-

ator R. N. Stanfield, incumbent for the expiring term, was defeated in the State Republican primary, May 21, by F. W. Steiwer. He refused to withdraw from the campaign, and sought election as an independent candidate. The Democrats nominated Bert E. Haney. The election vote gave Steiwer a lead of some 6500 votes over Haney, while Stanfield ran third, Steiwer being accordingly elected. Haney had resigned from the U. S. Shipping Board in February in order to make his Senatorial campaign.

A Seattle chemist, M. J. Reuz, reported that jade deposits had been uncovered in eastern Oregon, about 9 miles southwest of Durkee, Baker County. A column in Astor Park, Astoria, was dedicated to commemorate the discovery of the Columbia River by Captain Robert Gray, commanding the fur trading ship *Columbia*, out of Boston, in 1792, and to mark other events in the history of the lower Columbia River. The column, 125 feet high, bears on its shaft a spiral frieze representing historical incidents.

**OFFICERS.** Governor, Walter M. Pierce; Lieutenant-Governor, President of the Senate; Secretary of State and State Auditor, Sam A. Koser; Treasurer, Thomas B. Kay; Attorney-General, I. H. Van Winkle; Superintendent of Public Instruction, J. A. Churchill.

**JUDICIARY.** Supreme Court: Chief Justice, Thomas A. McBride; Associate Justices: Henry J. Bean, John L. Rand, George M. Brown, George H. Burnett, Harry H. Belt and O. P. Coshow.

**OREGON, UNIVERSITY OF.** A State institution of higher education at Eugene, Ore.; founded in 1872. The enrollment for the fall term of 1926 was 3033, divided as follows: freshmen, 882; sophomores, 752; juniors, 553; seniors, 400; graduate students, 98; law school, 64; medical school, 223; specials, 61. Of this total 1734 were men and 1299 women. In the summer sessions of 1926, 1226 were registered, 311 being men and 915 women; of these 1061 were undergraduates and 165 graduate students. The faculty in the fall term numbered 175, not including those in extension work. The total income for the year 1926, was \$1,276,775.44, derived from the following sources: Land Fund interest, \$6,200; mileage tax from State, \$883,123.48; Villard endowment, \$2200; student fees, including laboratory fees, \$214,116; Medical School appropriation, \$97,080.50; Medical School fees, \$38,788.71; extension fees, \$35,266.75. The main library contained 165,650 volumes and the Medical School library 7000. During the week of October 18, the semi-centennial celebration of the University was held. New department heads appointed during the year were Dr. C. V. Boyer, of the department of English, and Dr. A. R. Moore of the department of zoölogy. Arnold Bennett Hall, J.D., LL.D., was elected president and was inaugurated Oct. 18, 1926.

**OREGON STATE AGRICULTURAL COLLEGE.** An institution for higher education at Corvallis, Oregon; founded in 1868, when the State designated Corvallis College as the recipient of the Federal land-grant funds and began to appropriate State funds. It became wholly a State institution in 1885. The enrollment for the fall term of 1926 was 3420, of whom 2290 were men and 1130 women. The summer session registration was 1068. There were 299 members on the teaching faculty. The income for 1925-26 from the original land-grant fund and other Federal funds, from the State

of Oregon (millage tax), student fees, etc., as well as certain appropriations from Oregon counties for extension work totaled \$2,235,687, as follows: resident instruction, \$1,271,655; experiment station, \$205,081; extension service, \$285,127; student activities funds, \$148,868; miscellaneous, \$324,956. There were 67,954 volumes in the library. Dean Edwin DeVore Ressler of the School of Vocational Education, died on Oct. 17, 1926. A new Women's Building was completed in 1926 at a cost of \$350,000. A campaign for \$500,000 for a Memorial Union Building was completed and construction was planned for early in 1927. President, William Jasper Kerr. D.Sc. LL.D.

**ORELLANA, O'rā-lyā'nā.** JOSÉ MARIA. President of Guatemala, died at Amatitlan, September 27. He was born in Jicaro, July, 1872, and was educated at the Escuela Politecnica, a famous military institution, from which, at an early age, he entered the army, becoming second lieutenant in 1890, and lieutenant-colonel in 1898. He served as chief-of-staff to General Don Luis Molena, and later was military commander and political chief of the Departments of Sacatepequez and Alta Verapaz, and also chief-of-staff to the president of the Republic, military instructor of the eastern army division and Military Vocal of the Supreme Court, and commander-in-chief of the army. In addition to his military offices General Orellana served as technical engineering adviser on numerous agrarian commissions, Minister of Public Instruction, deputy in the National Congress, Counselor of State, and in December, 1921 he was elected president of the Republic. During his administration numerous roads were constructed and communication, particularly by aviation, was encouraged. He was able to effect financial reforms and other measures in the way of economic reorganization.

**ORLÉANS, LOUIS PHILIPPE ROBERT, DUKE OF.** Pretender to the French throne, died Mar. 28, 1926, at Palermo, Italy. He was born on Feb. 6, 1869, at York House, Twickenham, near London, and, being the eldest son of the late Comte de Paris and nephew of the Duc de Chartres, he was the head of the Bourbon-Orléans House. He was educated in England at the Municipal College, and at the College Stanislas, in France. He was exiled from France in 1886, and, returning to England, he obtained a commission in the 60th Rifles and served in India during 1888 and 1889. In 1896 he married the Archduchess Marie Dorothea of Austria. He went to Paris but was again expelled.

**OSBORNE, RT. REV. EDWARD WILLIAM.** Former Protestant Episcopal Bishop of Springfield, Mass., died at his home in San Diego, Calif., July 5. He was born in 1845 in Calcutta, India, and was educated at Gloucester, England. He was ordained in the Church of England in 1869, and until 1875 he was a parish clergyman. He next became a mission priest of the Society of St. John the Evangelist, and was at Oxford, England, for two years (1875-77), after which he went to the United States, remaining in Boston until 1889. For seven years from 1890 he was superior of the mission at

Capetown, South Africa, later becoming provincial superior in Africa. He returned to Boston and in 1904 was made bishop coadjutor of Springfield, Mass. In 1906 he became bishop of the same diocese, and in 1916 he retired. He was the author of several books and articles on religious subjects, including *The Children's Saviour* (1879); *The Children's Faith* (1882); *The Saviour King* (1913); *Wonderful Things in the Catechism* (1913).

**OSBORNE, THOMAS MOTT.** American penologist, died at Auburn, N. Y., Oct. 20, 1926. He was born at Auburn, Sept. 23, 1859, and from his youth interested himself in social work, especially such questions as related to prison reform and the general improvement of the body politic. In 1885 he became a member of the Auburn Board of Education, serving until 1891 and again from 1893 to 1895. In 1898 he was a candidate for Lieutenant Governor of New York on the Independent ticket, and in 1903-05 he served as mayor of Auburn. He was a member of the Public Service Commission, Second District, New York, from July, 1907 to February, 1909, and in 1911, for a few months, was forest, fish, and game commissioner. His interest in politics led to his being selected as a delegate to the Democratic National Convention in 1896 and again to the National Gold Standard Convention of the same year. He was a member of the Democratic State Conventions of 1904, 1906, and 1912, and of the Democratic National Committee in 1924. In 1913 he was chairman of the New York Commission on Prison Reform, and, needing actual experience of prison life, he submitted himself voluntarily to imprisonment in Auburn Prison under the conditions of actual life of a convict. He was appointed warden of Sing Sing Prison and assumed charge Dec. 1, 1914, but his experience there, while it led to various reforms and changes, developed an unfortunate condition and he was indicted by the Westchester County Grand Jury for alleged perjury and neglect of duty. The case was dismissed and he was reinstated as warden, serving until October, 1916. He was appointed Lieutenant Commander in the U. S. Naval Reserve and assigned to the command of the Naval Prison at Portsmouth, N. H., from Aug. 1, 1917 to Mar. 17, 1920, when he was relieved at his own request. He founded and was chairman of the National Society on Penal Information, and wrote extensively on subjects connected with penology, some of his works being: *Within Prison Walls* (1914); *Society and Prisons* (1916), and *Prison Common Sense* (1924).

**OSMAN, ABU-BEKIR DIGNA** (commonly known as "OSMAN THE UGLY"). Chief Emir of the Mahdi tribes of the Sudan, and widely known rebel against British rule in Egypt, died at Wadi Halfa, Africa, on December 8, being more than 90 years old. The major part of his life was taken up in fighting against foreign armies, especially against British forces, and many times he matched his forces against those under the command of Lord Kitchener. He was originally a slave-trader, and it was with the intention of preserving this trade that he waged constant war against invading powers. Of his birth little is known; it is assumed by some that he was of mixed native-European breed, while others insisted on the purity of his descent. He joined the dervish Mahdi against the British in 1883, and made himself so indispensable to the move-

ment, that he shortly became the outlandish figure in the Sudan, Rudyard Kipling making him famous as "Fuzzy Wuzzy." In 1884 he and his men literally cut to pieces the force of Sartorius Pasha and Baker Pasha led against him. In the same year he cut through a British square by a wild charge and temporarily captured British guns. Sir Herbert Kitchener, then a colonel, captured Osman's camp, but the result soon won it back again. In 1886, Osman routed the Italians at Erythraea, and in 1898 he made his last effort, when with 35,000 men he again sallied forth against his old enemies the British. Some years after this he was made Chief Emir by Abdullah El Taishi, Khalifa of the Sudan. He was the only Emir who escaped death, capture at the time when the Khalifa was killed in battle, in November, 1899. He successfully hid himself until the following January, when he was captured by the British in the hills in the neighborhood of Suakim. Making sure of the troublesome tribe-leader the British authorities imprisoned him, and for twenty-two years he was held fast. He was for a time forgotten, but public attention was drawn to him again when a resolution was passed in the British House of Commons, directing his release. His return to active life, however, meant merely his living on his past glories as all his old associates were dead or banished: the Sudan he knew had gone.

**OWEN, THE RT. REV. JOHN.** Bishop of St. David's, Wales, Anglican prelate, died in November. He was born Aug. 24, 1854, and was educated at Bottsworth Grammar School, after which he became a scholar at Jesus College, Oxford. He became a deacon in 1879 and a priest in 1880. He was appointed Welsh Professor and Classical Lecturer at St. David's College, Lampeter, continuing in this post from 1879 to 1881. He was then made warden and headmaster of Llandovery College; relinquishing this post in 1889, he became dean of St. Asaph from 1889 to 1892. He was canon of St. Asaph (1892-1897) and then principal of St. David's College.

**PAHANG, pähäng'.** See FEDERATED MALAY STATES.

**PAINT, PROTECTIVE.** See CHEMISTRY, INDUSTRIAL.

**PAINTING.** See ART EXHIBITIONS.

**PAINTING AND SCULPTURE.** The most spectacular activities in the world of art during the year 1926 were covered chiefly by a series of remarkable sales of private collections, such as the vast Leverhulme collection. These sales surpassed anything else of the kind in recent years. No interruption took place in the procession of famous works of art across the Atlantic from Europe, especially from England.

Another interesting factor in the development of the art market during the past year was the increase of exhibitions and sale of the work of "modern masters," and the attendant increase in the prices obtained for their paintings.

Through the death of Mrs. Kirkwood, the estate of \$8,000,000 of the late William R. Nelson of Kansas City, Mo., became available for the building of an art museum and the furtherance of art in that city. With this endowment Kansas City will undoubtedly become in the next few years an important art centre in the West.

Interesting single events in the world of art were: The discovery in Saint Mark's, Venice, of a series of important XIVth century Flemish

*Underwood & Underwood*

GEORGE INNESS, JR.

*Carlo Leonetti*

JOSEPH PENNELL

TWO ARTISTS WHO DIED IN 1928

tapestries, long neglected and lost sight of in a storeroom, and comparable only with the famous series in the Cathedral of Angers; the unearthing of a beautiful life-size bronze figure of a youth of the Pheidias period, in the recent excavations at Pompeii; the discovery of a painting by Rubens, "Saint Teresa," also a Titian painting, "Venus With the Organ Player," in Germany—both said to be of highest quality; the purchase and exportation to California of a beautiful Romanesque cloister, part of a Cistercian monastery, the acquisition of an American collector—this was the last art object allowed to leave Spain before the enforcement of the new restrictions against removing art objects from that country. Of interest to the whole world was the announcement that Premier Mussolini had ordered the re-creation of Rome to be as "vast and powerful as in the days of Augustus"—an incredible attempt. In the Cathedral of Florence, the marvelous pulpit of Giovanni Pisano was restored and installed after centuries of neglect. The decision of the French government to include Whistler's portrait of his mother in the permanent collection of the Louvre—the first painting by an American to be so honored—was especially interesting to Americans. At Saint Cloud, near Paris, the model of the Lafayette Escadrille monument to American aviators of the War was unveiled. This monument is inclosed in a memorial park to be maintained in perpetuity.

Notable art publications of the year include: Dr. Albert C. Barnes, *The Art of Painting*: a critical and highly interesting dissertation on modern art; William Edwin Rudge, *Gilbert Stuart*: 4 vols., a magnificent résumé of the life of America's most important early painter; Ernst Pfuhl (translated by J. D. Beazley), *Masterpieces of Greek Drawing and Painting*; Van Merle, *Italian Painting*: a sumptuous edition; Adolfo Venturi (translated by Edward Hutton), *A Short History of Italian Painting*: an excellent and succinct account, suitable for the layman; C. H. C. Baker, *Dutch Painting of the Seventeenth Century*; John Quinn, *Illustrated Catalogue of His Collection*: 200 illustrations; George J. Cox, A.R.C.A., *Art for Amateurs and Students*; A. P. Laurie, *The Painter's Methods and Materials*; E. Wolff, *Anatomy for Artists*.

NECROLOGY. The necrology list of 1926 included, among American painters and sculptors, Harry Humphrey Moore, painter, long resident in Paris; Melzar Hunt Mosman, noted sculptor and designer, one of the world's famous bronze founders, at the age of 81; Thomas Nash, architect, well-known for his church designs; William H. Drake, animal painter; Burt Fenner, noted architect; Alfred David Leutz, sculptor; George H. Hollowell, painter; David P. B. Conkling, sculptor; Gerald Sinclair Hayward, miniature painter; George C. Everett, marine painter; Howard V. Shaw, architect; Charles M. Russell, painter of Western scenes, known as the "Cowboy Artist"; William Baxter Closson, painter; George Inness, Jr., landscape painter and son of George Inness; Thomas Moran, veteran landscape painter, at age of eighty, represented in many museums and private collections. Also Ben Foster, N.A., well-known landscape painter, charter member of the National Arts Club, represented in the most important museums of the country and in the Luxembourg, Paris, and winner of many prizes and medals; John Fer-

guson Weir, N.A., at the age of 85, painter and sculptor, brother of the late J. Alden Weir, first director of the Yale Art School, represented in the Metropolitan Museum and member of the group known as "The Hudson River School." Also, Mary Cassatt, famous American painter, long resident in Paris, and one of the nineteenth century group of Impressionists in France. Miss Cassatt was born in Philadelphia, studied under Degas, and was early identified with the Impressionist movement. Her chief interest lay in her portrayal of women and children, and she used, with equal facility, oil, water color, pastel and the etching needle. She was an inveterate worker, living almost the life of a recluse in her home in a suburb of Paris, and in the last years of her life she was threatened with total blindness. Miss Cassatt is acknowledged to be the most important woman painter America has produced, and her works are to be found in all the principal museums and collections of modern paintings in the United States, and in the Luxembourg Gallery, Paris. The year saw also the passing of Joseph Pennell, world-known etcher, lithographer, illustrator and writer. Mr. Pennell was long an interesting and picturesque figure in the world of art, the champion of Whistler, and the recipient of innumerable prizes and medals at various international expositions. His work is to be found in the Luxembourg, Paris, the Uffizi Gallery, Florence, the Modern Gallery, Venice, the British Museum, the Modern Gallery, Rome, the National Gallery, London, the Metropolitan Museum, New York, and elsewhere. He bequeathed his entire estate to the United States Government for the Department of Prints of the Library of Congress in Washington. His estate included his well-known collection of Whistleriana. Others who died in 1926 included Douglas Stewart, director of the Carnegie Museum; John D. E. Trask, former director of the Pennsylvania Academy and director of Fine Arts for the Sesqui-Centennial Exposition; George W. Stevens, director of the Toledo Museum of Art; Carl E. Akeley, sculptor, explorer and inventor; Ogden T. McClurg, archaeological explorer of the ancient Maya country; John Kimbly Mumford, Oriental rug expert; Stanislaus V. Henkels, authority on rare books and prints; Dr. Aaron Ember, noted Egyptologist; Charles L. Metz, archaeologist; Jules Mastbaum, financier and art patron, donor of the Rodin Museum to Philadelphia; Dr. William S. Bigelow, art connoisseur; Dr. A. D. F. Hamlin, professor of architecture, Columbia University, well-known writer and connoisseur; Robert Milton Mitchell, art connoisseur; Otto Stark, Indiana painter.

In France occurred the death of Claude Monet, dean of French painters, in his 86th year. Monet was the last and greatest leader of the nineteenth century group of revolutionaries, the so-called Impressionists, and he lived to see the ultimate triumph of his innovations, their worldwide influence, and their final complete consummation, together with the ushering in of a new movement, that of Post-Impressionism. But Monet never deviated from his chosen problem, and until the day of his death occupied himself with the perfect rendition of Nature, giving to light and color their true values. Other deaths in France were those of Felix Edouard Vallotton, well-known painter and wood engraver; Adolphe Willette, famous for his "Pierrot" pictures, mural painter of note, lithographer, illustrator,

and poster artist; Eugene Zak, one of the ablest of modern European painters; Georges Bénédite, noted Egyptologist, director of the department of Egyptian antiquities of the Louvre; Professor A. Casanova, noted authority on ancient Egypt, professor in the College of France; Gustave Geffroy, president of the Goncourt Academy, writer and art critic; Felix Simonson, founder of the Simonson Galleries of Paris. In Great Britain died, among others, F. Derwent Wood, R. A., distinguished sculptor; Humphry Ward, art critic of the London *Times* for over forty years; Dr. Agnes Smith Lewis, famous archæologist, at the age of 93; and Wilfrid Phillips of the Leicester Galleries, London. Others included in the European death list were Bartolomé Maura, veteran engraver, of Madrid, Spain; Paul Cassirer, art dealer, collector and publisher, Berlin; Otto Ecrelman, celebrated Dutch animal painter; Pierri Astori, Italian sculptor, and Luigi Danni, art critic; in Canada, Robert F. Hagan, marine painter. See also ART EXHIBITIONS; ART MUSEUMS; ART SALES.

**PALEONTOLOGY.** See GEOLOGY.

**PALESTINE.** A territory comprising that part of historic Palestine which lies to the west of the River Jordan; formerly a vilayet of the Turkish province of Syria; since the War a new state organized under British mandate, providing a national home for the Jews.

**AREA AND POPULATION.** The area of Palestine under British mandate is about 9000 square miles. The population, according to the census of Oct. 23, 1922, was 757,182, of whom 590,890 were Moslems; 83,794 Jews; 73,024 Christians; 7028 Druses; 163 Samaritans; 265 Bahais; and the remainder Sikhs, Hindus, and Metawilehs. Capital, Jerusalem, with a population in 1922 of 62,678. Other large towns with their populations in 1922 are: Jaffa, 47,709; Haifa, 24,634; Gaza, 17,480; Hebron, 16,577; Nablus, 15,947. The Jewish settlements are grouped in the four districts of Judea, Samaria, and Upper and Lower Galilee. The total immigration into Palestine during 1925, exclusive of tourists and visitors, was officially stated at 33,801, a figure nearly equal to the combined totals for the four preceding years. The net gain by immigration during the period from the armistice to 1925 is put at 70,000. There was an accompanying movement of emigration, but this showed no increase, the 1925 figure of 2141 being about equal to that of 1924. The fact that the proportion of immigrants having independent means is rapidly increasing is considered even more important for the future economic development of the country than is the increase in the actual number of immigrants. During 1925 the class of immigrants having at least \$2400 capital for investment constituted over 42 per cent of the total immigration, as compared with only 13 per cent in 1924 and with less than 1000 persons in 1923.

**EDUCATION.** According to the latest available statistics, the schools maintained by the government numbered two training colleges, 46 town schools, and 268 village schools, with 660 full-time teachers and more than 19,110 pupils. The Christians and the Jews for the most part attend non-government schools, most of which receive aid from the government treasury. There are about 184 Christian schools with 15,700 pupils on the rolls. The Jewish organizations control 255 schools with about 25,500 pupils. Besides these, there are about 50 private Moslem schools

with 3500 pupils. In the Jewish schools, training colleges, and higher institutions, Hebrew is the language of instruction. A Hebrew University on Mount Scopus, Jerusalem, was inaugurated on Apr. 1, 1925.

**PRODUCTION.** The lowlands of Palestine—the coastal plain, which, with its large underground water supply and extraordinary fertility has been compared to the coastal plain of California—are already productive. The newer phase of the agricultural movement is towards the uplands of Judea, where the development of vineyards and of olive and orange groves promises a productivity that may even eclipse that of the lowlands. In 1924 the area under British administration, exclusive of Transjordan, produced: Wheat, 92,292 tons; barley, 32,210 tons; durra, 25,636 tons; olives, 3143 tons; and lentils, 2930 tons; in 1924-25 there were in the country 298,024 sheep, 578,160 goats, 20,294 camels, and 1238 buffaloes. Before the War the only Palestine manufactures of any noteworthy amount were those of soap and wine. During the past year or two, the industrial development of Palestine has made remarkable progress. Official estimates state that, between the armistice and the end of 1925, a total of well over \$10,000,000 had been invested in Palestine industries, and approximately 5000 persons were employed. Among the new industries are food-stuffs manufacturing, chemicals, textiles, printing and paper industries, building materials, metal works, and wood and furniture manufacturing.

**COMMERCE.** According to the United States Bureau of Foreign and Domestic Commerce, Palestine trade had shown a steady recovery since the depression of 1923, and the total volume of trade in 1925 was almost 50 per cent greater than in 1924, as is illustrated in the accompanying table:

VALUE OF PALESTINE'S FOREIGN TRADE,  
1924-1925  
[000 omitted]

Commodity group	1924 Dollars	1925 Dollars
<b>EXPORTS</b>		
Palestine products:

Transit traffic in .....	616	857
Grand total imports .....	25,318	37,640
Total trade .....	34,926	45,501

**FINANCE.** At the beginning of Lord Plumer's term as British High Commissioner in Palestine,

in the fall of 1925, the country's budget showed for the last fiscal year a surplus of revenues over expenditures of £E250,000, and the government's accumulated reserve fund had increased to a total of £E500,000. For the year 1925-26 the receipts were estimated at £E2,533,855 and the expenditure at £E2,166,601. The main heads of revenue were customs, house and land tax, animal tax, tobacco tax, tithes, stamp duties, excise duties on wines, spirits and salt, court fees, land registry fees, railways, and posts and telegraphs.

**COMMUNICATIONS.** For the calendar year 1925, 754 steamers of 1,831,619 tons and 1718 sailing vessels of 27,423 tons entered the ports of Palestine, and 744 steamers of 1,798,870 tons and 1728 sailing vessels of 28,034 tons cleared. The railway mileage totals slightly over 774 miles and is all operated by the government.

**GOVERNMENT.** Under the constitution adopted on Sept. 1, 1922, executive power is vested in a High Commissioner and an executive council, and legislative power in a body of 22 members besides the High Commissioner, consisting of 10 official and 12 unofficial members. The latter are elected and there must be not less than two Christian and two Jewish members. The Jewish population has an unofficial elected National Committee to represent the Jewish population in its dealings with the administration. High Commissioner at the beginning of the year, Field Marshal Lord Plumer.

**HISTORY.** The year was a comparatively quiet one in Palestine. A delegation of Arabs appeared before High Commissioner Lord Plumer in February and complained about the entire system of government, including the mandatory system, the administration of Sir Herbert Louis Samuel, and the local government. Lord Plumer refused to discuss these matters with them, and stated that he intended to improve agriculture, abolish the tithe, and extend education. He refused to give up the control exercised over Arab education, but promised measures to regulate the rights of religious communities. The gendarmerie was abolished; this was done partly as a means of reducing expenditures and partly because the country was enjoying complete peace and hoped to do so for some time to come.

Late in November a report was issued by Dr. Henry S. Pritchett to the Carnegie Endowment, concerning conditions in Palestine. The report was decidedly unfavorable to the Zionist movement. It is discussed at length in the article *Jews, Zionism*.

**PANAMA.** A republic of Central America, lying between Costa Rica and Colombia, constituting an independent state after November, 1903; formerly a department of Colombia. Capital, Panama.

**AREA AND POPULATION.** Panama has an extreme length of 480 miles, and its width varies from 37 to 110 miles. The area is estimated at 32,380 square miles; population, according to the census of 1921, 442,486. The natives are a mixed race, combining Spanish, Indian, and negro blood. The larger cities are: Panama, the capital, 59,458; Colon, 31,203.

**EDUCATION.** Primary education is compulsory for all children from 7 to 15 years of age. The government maintains 429 public schools, with 1149 teachers and an enrollment of approximately 40,000. There are at Panama a normal school for girls, a technical school for boys, and the National University.

**PRODUCTION.** Panama possesses a very rich soil, but only a very small part of it is properly cultivated. The chief product is the banana, but the growing of coffee, sugar and tobacco is becoming important. The banana crop of 1925 was provisionally valued at \$1,500,000. Coffee is grown in the regions along the Costa Rican frontier. Other products include rubber, cocoa, coconuts, cabinet woods, copaiba, sarsaparilla, and ipecacuanha. The mineral resources are highly varied but undeveloped, with the exception, in a small way, of manganese and gold. The pearl fishing industry is of some importance.

**COMMERCE.** The accompanying table gives the trade of Panama over a ten-year period:

TEN-YEAR TABLE OF THE FOREIGN TRADE OF PANAMA

Year	Imports	Exports	Total
1915.....	\$9,087,200	\$3,422,755	\$12,459,955
1916.....	9,197,370	5,506,725	14,704,095
1917.....	9,233,170	5,624,176	14,847,346
1918.....	7,821,660	2,899,557	10,721,217
1919.....	11,406,880	3,757,028	15,163,908
1920.....	17,561,994	3,552,166	21,114,160
1921.....	11,680,769	2,495,407	14,156,176
1922.....	10,268,550	2,487,479	12,756,029
1923.....	12,675,249	2,389,728	15,064,977
1924.....	13,769,435	3,008,014	16,777,449

Preliminary figures for 1925 showed imports valued at \$14,600,000. Exports to the United States were \$2,400,000, which was less than in 1924 by more than \$200,000.

**FINANCE.** On Apr. 2, 1925, the National Assembly approved the budget for the biennial period from July 1, 1925, to June 30, 1927, as follows: Revenues, \$12,258,700; expenditures, \$12,258,700, divided as follows: Department of Government and Justice, \$3,552,124; Foreign Relations, \$709,190; Treasury, \$2,567,062; Public Instruction, \$2,826,200; Agriculture and Public Works, \$2,604,124.

**COMMUNICATIONS.** It was reported in 1926 that the Panama government was planning to develop more of the rich coffee country in Chiriqui Province and to this end had awarded a contract to F. H. Arosemena, a citizen of Panama, to build a single-track railroad, 32 miles long, from Concepcion to Puerto Armuelles, as an extension of the Chiriqui National Railroad and to build a 1300-ft. reinforced-concrete pier at the new deep-water harbor at Puerto Armuelles. Approximately \$3,000,000 will be expended on these improvements. Under this contract the railroad, which will be of 3-ft. gauge, will be equipped with locomotives and other rolling stock, and there will be 45 structural steel and 13 girder bridges along the line.

**GOVERNMENT.** Under the constitution adopted Feb. 13, 1904, and amended Dec. 26, 1918, executive power is vested in the president elected for four years and ineligible for the succeeding term; and legislative power in a chamber of deputies of 46 members elected for four years. President at the beginning of the year, Rodolfo Chiari, assumed office Oct. 1, 1924.

**HISTORY.** From the 18th to the 25th of June a centenary celebration was held in Panama to commemorate the first Pan-American Congress called by Simon Bolivar at Panama, June 22, 1826. Delegates from 21 republics, as well as representatives of many universities and societies, attended the celebration and participated in its proceedings.

On December 20, the contents of a treaty

signed between the United States and Panama were officially published in Washington. The treaty had been negotiated on July 28. The chief provision was that which provided for close co-operation between the two governments in case of war. In case of war in which the United States was a belligerent, Panama was to turn over to the United States, during actual or threatened hostilities, the control and operation of wireless and radio communication, aircraft, aviation centres, and aerial navigation. The United States was also to have charge of all military operations in the Panaman republic. In times of peace the United States was to have free access to all parts of Panama for military maneuvers, providing due notice was given. The United States was also given the power to expropriate private lands, and was given a perpetual control over Manzanilla Island, at the Atlantic terminus of the canal, and Colon harbor. The United States Senate did not take any action on the treaty before it began its Christmas recess.

**PANAMA CANAL.** Transits of commercial vessels through the Panama Canal in the year ending Dec. 31, 1926, totaled 5420. This established a new high record for number of commercial transits, as compared with the previous record of 5230 for the fiscal year ending June 30, 1924. Tolls collected during the year 1926 amounted to \$23,901,540.04, which was less than the \$24,290,963.54 collected in the fiscal year ending June 30, 1924, and was the second largest amount collected in a year.

From the opening of the Panama Canal to traffic on Aug. 15, 1914, to the close of business on Dec. 31, 1926, a total of 37,599 commercial vessels have transited the Canal, paying \$154,064,037.71 in tolls.

In the following tabulation, from the *Panama Canal Record*, the number of commercial transits and the amount of tolls collected are shown for the calendar year 1926, with comparative totals for the calendar years 1925 and 1924:

Month	Transits	Tolls
January .....	479	\$2,103,868.29
February .....	424	1,835,226.47
March .....	506	2,206,212.20
April .....	425	1,917,457.11
May .....	470	2,056,965.55
June .....	419	1,852,670.66
July .....	456	1,980,719.67
August .....	464	2,055,041.91
September .....	446	2,019,626.42
October .....	445	1,989,213.93
November .....	428	1,889,001.11
December .....	458	1,996,036.72
Totals, calendar year 1926 ..	5,420	23,901,540.04
Totals, calendar year 1925 ..	4,774	21,380,759.70
Totals, calendar year 1924 ..	4,898	22,809,416.84

During the calendar year 1926, 1262 tank ships transited the Canal, carrying a total of 7,117,408 tons of mineral oil products. These vessels had a combined net tonnage of 7,323,942, Panama Canal measurement, on which tolls of \$6,447,399.40 were collected. Tank ships comprised 23.1 per cent of the total commercial transits during the year; 28.3 per cent of the total Panama Canal net tonnage; 26.9 per cent of the total tolls collected; and 25.7 per cent of the total cargo carried in commercial vessels through the Canal during the year.

Expressed in terms of percentage, the following tabulation shows the volume of tanker traffic through the Canal during the past 4 years:

Calendar year	Number of transits	Per cent of total Panama Canal net tonnage	Tolls	Tons of cargo
1923 .....	33.8	40.7	39.0	38.2
1924 .....	31.1	32.7	31.2	31.1
1925 .....	20.4	25.1	23.6	22.5
1926 .....	23.1	28.3	26.9	25.7

Vessels of 24 nationalities made up the total commercial traffic through the Panama Canal

Nationality	Number of transits	United States equivalent	Panama Canal net	Tonnage		Tolls	Tons or cargo
				Gross	Net		
Argentinian .....	1	(*)	(*)	(*)	(*)	\$1,200.00	.....

\* Displacement tonnage.

during the calendar year 1926. Approximately one-half of the total commercial transits were vessels of the United States, one-fourth vessels of Great Britain, and the remaining one-fourth were distributed among the remaining 22 nationalities.

The accompanying tabulation shows the total commercial traffic through the Canal during the calendar year 1926, segregated according to the nationality of the vessels.

**PANAMA CANAL ZONE.** The strip of land five miles wide on each side of the Panama Canal granted to the United States in the treaty of Nov. 18, 1903. Area, 441½ square miles, of which 106½ are taken up by Gatun Lake; civil population, June 30, 1926, 27,692, of whom 7990 were Americans. The above-mentioned treaty provided that the cities of Panama and Colon were to remain within the jurisdiction of Panama, but the United States was to have control over both the cities and their harbors in matters pertaining to sanitation and quarantine. The status of the zone is that of a military reservation under the governor of the Panama Canal, appointed by the President of the United States. Governor in 1926, Col. Meriwether L. Walker, U.S.A. See PANAMA CANAL.

**PAN AMERICANISM.** Brazil's revolt from the League of Nations was variously received in South America, and everywhere it was widely discussed. Skeletons long shut in diplomatic closets were dragged out, and numerous side issues were found to complicate the announced reasons for the Brazilian revolt. Even the United States was brought in, with uncomplimentary references, being credited in some quarters with planning to form a league of nations in the western hemisphere "to oppose or rival the League of Geneva."

One of the chief motives for Brazil's policy, according to *Nuestro Diario* of Guatemala, was the suppression of Argentina's ambition to become leader of Latin America in the League of Nations. Brazil opposed the entrance of Germany to the League largely because Argentina favored it. Argentina might have supplanted Brazil as temporary leader of Latin America in the world assembly, believes this critic, if Germany's entry had gone through as planned. *El Guante*, of Ecuador, showed about the same trend of thought, adding that the membership of 17 Latin-American nations in the League of Nations was absurd, and incompatible with the Monroe Doctrine and the Pan American Union, the latter being practically a league of nations itself.

In *Listin Diaria*, of Santo Domingo, was printed the following declaration: "There is an increasing probability that the American republics will turn toward the League of Nations in search of a solution for their political controversies, and probably for protection against the United States. Washington retaliates by planning the formation of a continental league of nations to oppose or rival the League of Geneva, all with the coöperation of Latin America. Let us beware of the trap set for our young nations."

As a matter of fact, no steps seemed to have been taken toward establishing an American league of nations. At the fifth international conference of American states, held at Santiago, Chile, in 1923, the following topics were included in the programme; (A), consideration of measures tending toward closer association of the American republics, with a view to promoting

common interests; (B), consideration of the questions arising out of an encroachment by a non-American power on the rights of an American nation.

These topics were included at the suggestion of the Uruguayan government, and J. Antonio Buero was appointed *Ponente* on the topics at Santiago. No definite project was submitted or considered. The Conference adopted a resolution authorizing the Governing Board of the Pan American Union to study any project that might be submitted by any American government tending toward the closer association of the American republics. This resolution was forwarded to each member of the board, but no project has ever been received by the Union. See PAN AMERICAN UNION; LEAGUE OF NATIONS.

**PAN AMERICAN UNION.** An international organization maintained by the 21 American republics for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a Governing Board composed of the Secretary of State of the United States and the diplomatic representatives in Washington of the other republics, and is administered by a director general and assistant director chosen by this board. The fiscal year 1925-6 witnessed the broadening of the Union's activities. Especially notable was the increasing number of requests made by governments or peoples of the American continent for commercial, industrial, financial, and educational information.

During the year, three important Pan American meetings were held: The First Pan American Congress of Journalists, with representatives from each republic of the continent, assembled in Washington, and had a success surpassing all expectations; the second Pan American Red Cross Conference, which assembled in the Union's building, with representatives from all of the American continent that possess Red Cross societies, and at which future plans for coöperation were established; and a congress commemorative of the first Pan American Congress called by Bolivar in 1826, which met at Panama and established there the Bolivarian University. The activities of the Union to give effect to the treaties, conventions, and resolutions of the fifth international conference progressed, and the programme of the sixth conference was prepared. During the year, plans were made effective to stimulate the study of Latin American history and culture in the schools of the United States, programmes of study and much illustrated material being furnished.

Among the publications of the Union in use in universities, colleges, and schools throughout the United States were *Seeing South America*, *Ports and Harbors of South America*, *Seeing the Latin Republics of North America*, and *Viajando Por Los Estados Unidos*. In addition to these, the Union publishes a *Bulletin*, in Spanish, Portuguese, and English, and booklets on South American countries, their capitals, products, agriculture, education, etc. During the year about 50 of these were published. Statistical matter compiled by the Union relates to inter-American commerce, and includes a general survey of Latin American trade for the year. The Union extended its services to women's clubs, and gave radio nights, introducing Latin American music in the United States. The Pan American Sanitary Bureau, located in the Union's building,

places at the disposal of the republics of the continent the results of the sanitary progress of the year. It issues the *Pan American Sanitary Bulletin* monthly and distributes it throughout the Latin American republics. The library added extensively to its collection during the year. One of the notable events of the year was the assemblage of all the Latin American ambassadors and ministers at the Sesqui-Centennial Exposition in Philadelphia, this meeting being brought about by the Union in coöperation with the Sesqui-Centennial authorities. The director general was Dr. L. S. Rowe, and Dr. Esteban Gil Borges was assistant director. The headquarters are at Washington, D. C., in the Pan American Union Building.

**PAN PACIFIC UNION.** Nineteen years of consistent service of the Pan Pacific Union, through its organizer and director, Alexander Hume Ford of Honolulu, for the advancement of understanding, goodwill, and coöperation among the races and nationalities of the Pacific countries, had made a deep impression on the minds of the younger generation in Pacific lands, in arousing a common Pacific consciousness in the developing minds of the future leaders of the nations bordering on the Pacific Ocean. In their promotion of international understanding and friendship, Dr. Dai Yeng Chang, Shinji Maruyama, Dr. Y. C. Yang, N. C. Dizon and the late Albert Burkland, and other young leaders, assisted the work of the Union among young Chinese, Japanese, Koreans, Filipinos, Anglo-Saxons, and other races. It was through their leadership that the Pan-Pacific Good Relations Clubs, a junior organization, were organized, and these form the nucleus of a proposed Junior Pan Pacific Union.

It is largely through indirect efforts and influences that the younger people of the Pacific lands were coming closer to the Pan Pacific movement to bring about pan Pacific peace and prosperity. John Matsumura, T. Suzuki and Kempei Sheba, in 1926 resident in Japan, but for some years members of the Pan-Pacific Good Relations Club of Honolulu, were helping to organize a Junior Pan Pacific Club in Tokyo. A similar effort was also being made by a group of students at Foochow, China. Young people at both Peking and Shanghai were also taking up the matter, in which the youth of southern Pacific countries as well as those of the Pacific coast of North America were active.

According to the educational director of the Union, Colbert N. Kurokawa, the student movement in China will have a great effect in determining the future path of the rising republic. "Students in Japan," he says, "are also organizing their efforts to voice their sentiments in national as well as international problems and should work with their elders. Students of the American continents are even more energetic than those of other lands in their cry for justice and peace. The youths of the Pacific countries are now entering upon a new epoch of renaissance. They are waking, speaking, and commencing to act, and there is nothing that can suppress them." The Students' Bureau of the Pan Pacific Union had already taken steps toward closer coöperation of the student movement of one nation with that of another, and was promoting the organization of junior unions, which would develop into a Pan Pacific Student Federation of all races and nationalities of the Pacific.

Student migration across the Pacific has been constantly increasing until by 1926 there were nearly 5000 Oriental students studying at the institutions of higher learning on the American continent. It was conservatively estimated that nearly 1000 of these crossed the Pacific annually, most of them passing through Honolulu. There was no more fertile soil for international friendship than in the students' field to-day. The Union, through its junior organization, encourages and assists the exchange between the Pacific countries.

Around the Pacific Ocean, September 17 is known as Balboa Day, and it is made the occasion of annual celebrations to emphasize Pan Pacific good will. It has been usual on these occasions to exchange cablegram greetings around the Pacific and to make striking announcements. In 1926 the Union sent delegates in an advisory capacity to the deliberations of the Second Oriental Red Cross Conference held in Tokyo, November 15 to 25. The Union was desirous of having a Pan Pacific Red Cross Conference convene in Honolulu in 1927 with the hopes that a series of Red Cross Conferences might be held annually in turn in the different countries of the Pacific.

The Pan Pacific Union, as such, publishes the *Bulletin of the Pan Pacific Union*. The *Mid-Pacific Magazine* is published as an organ of the Union, but at no expense to the Union. The *Journal of the Pan Pacific Research Institution*, while sponsored by the Union, is edited entirely by the staff appointed by the scientists of the Institution, Dr. David Starr Jordan, of Leland Stanford University, Dr. Frederic Krauss of the University of Hawaii, Atherton Lee, plant pathologist at the Hawaiian Sugar Planters' Association and R. H. Van Zwalenburg, entomologist, assuming the greater share of the work, with assistant staff editors in every Pacific land. Some thousands of these *Journals* are distributed among scientists of the world.

In 1926 this *Journal* was a quarterly and it had undertaken to secure and publish a check list of the fish of the Pacific, which perhaps would be corrected and brought up to date for republication biennially. In a similar way the trees and plants of the Pan Pacific area were being treated as well as the injurious insects and their parasites and the diseases of plants. A list of the research institutions and research workers in Pacific lands was being prepared and published in the *Journal*.

*Youth*, a quarterly, edited by C. N. Kurokawa, Educational Secretary of the Pan Pacific Union, was in preparation, in 1926 and its initial number was to be issued in the following year. This publication aimed to deal largely with the problems of young men graduating from universities in Pacific lands, and beginning their life work. Mr. Kurokawa at one of the gatherings of the Pan Pacific Good Relations Club in Honolulu suggested the preparation of a list of all the young orientals who spoke English residing in Pacific lands, so that efforts might be made towards bringing about among them a better knowledge of one another. He has kept at this consistently, and now that he is connected with the Pan Pacific Union this work will go on.

Mr. Kurokawa was promised the assistance of the graduating students of all races in Hawaii, and also the help of some of the students at the Pan Pacific Research Institu-

tion. A building, the Albert Burkland Memorial, was set aside on the grounds and a dozen students taking science courses were to be given a home and income here to pursue their studies and to act as helpers to the scientists, and to those working on racial problems.

**PAPER.** The paper and pulp industry in the United States in 1926 had a production in excess of that of the previous year. A number of the large lumber and pulp producing companies were cultivating their own forest tracts to secure adequate supplies of wood pulp, from which 95 per cent of the paper used was made. Wood pulp production in the United States in 1926 was estimated by the American Paper and Pulp Association at 4,300,000 net tons, as against 3,953,381 tons in 1925, the different varieties of pulp produced being indicated herewith:

Grade	1926 Tons	1925 Tons
Ground wood .....	1,800,000	1,603,262
Sulphite .....	1,500,000	1,391,207
Sulphate .....	460,000	409,868
Soda .....	500,000	484,546
Screenings .....	40,000	64,698

In addition, the United States imported pulp wood for paper stock to the amount of 1,383,619 cords, valued at \$14,176,256, as compared with 1,483,231 cords, valued at \$15,129,562 in 1925, and pulp and other stock aggregating 1,848,387 tons valued at \$107,350,552, as compared with 1,831,909 tons valued at \$103,065,132 in 1925. Mechanical ground wood imported was less in 1926 than in the previous year, as was bleached sulphate pulp, but sulphite, both bleached and unbleached, and unbleached sulphate, were greater than in the previous year.

Paper production in 1926 was estimated by the American Paper and Pulp Association, at 10,000,000 net tons, including all paper and paper productions for the year, as against 9,182,204 tons in 1925. Separated into various grades, the estimates for 1926, compared with the statistics for 1925, were as follows:

Grade	1926 (estimated) Tons	1925 Tons
Newsprint .....	1,686,695	1,590,318
Book paper .....	1,380,000	1,343,310
Board .....	3,650,000	3,280,710
Wrapping .....	1,450,000	1,297,919
Fine .....	500,000	478,804
Tissue .....	295,000	281,243
All other .....	1,038,305	974,900

In 1926 there were in the United States 1913 paper machines, with an annual daily capacity of 12,000 tons, which were working at about 84 per cent capacity, giving an annual production in excess of 10,000,000 tons. The largest of these machines turned out a sheet of paper 270 inches wide and operated at a rate of 100 feet per minute. During the year, 28 new machines with a 24-hour capacity of 1238 tons were installed in the United States, distributed as follows:

	No. machines	Capacity
News .....	1	75
Book .....	12	525
Board .....	2	190
Wrapping .....	8	365
Writing .....	0	0
Tissue .....	2	45
Hanging .....	0	0
Felts and bldg. ....	0	0
All other .....	3	38

This compares with 24 machines, of 998 tons capacity, in 1925, and 33, with 1189 tons capacity, in 1924.

In 1926 Canada secured the world leadership in the manufacture of newsprint paper, furnishing 1,882,000 tons, or an increase of some 24 per cent over the previous year, and surpassing the output of the United States, estimated at 1,687,000 tons. The entire North American production of newsprint paper in 1926 was estimated at 3,768,000 tons, which was 600,000 tons or 19 per cent ahead of the previous year, the industry making a high operating record of 96 per cent of the rated capacity. While the United States' production was greater by 156,000 tons, or 10 per cent, than the previous high record of 1925, there was a gain of 93 per cent in Newfoundland, as new plants and operations came into production and brought the total of the country up to 186,000 tons. Mexico produced 13,000 tons of newsprint, or 6 per cent more than in the previous year.

The United States in 1926 consumed, in round numbers, 3,500,000 tons of newsprint, or 56 per cent of the world's consumption. This took all but 19,000 tons of the United States' output, 49 per cent of the Newfoundland productions, 88 per cent of the Canadian production, and 102,000 tons of overseas newsprint, the importation of which, however, was declining from the 200,000 tons of 1923. In addition to the consumption referred to, 100,000 tons of the available supply in 1926 went into stock. The actual consumption of newsprint per capita in the United States was at the rate of 58 pounds, as compared with 52 pounds in 1925. This was an increase of 12 per cent, while the increase in total consumption was 14 per cent, or twice the average increase during the previous 25 years.

The imports of paper and paper products into the United States in 1926 amounted in value to \$139,537,144, as against \$119,200,611 in the previous year. Nearly 90 per cent of these imports consisted of standard newsprint, valued at \$123,981,715, as against imports valued at \$103,717,055 in 1925. The United States exported in 1926 paper and paper products valued at \$26,828,674, the highest figure since 1921, when the exports were about \$29,000,000.

The Norwegian pulp and paper industry in 1926 experienced, in the main, unsatisfactory conditions, due to the advance of the Norwegian crown (resulting in an increase in production costs), a strike in the pulp industry beginning in the middle of August and lasting for nearly seven weeks, the British coal strike, and the general downward price trend in the international paper market. The strike resulted in a reduction of 15 to 17 per cent in the wages of the paper mill workers, due to the lower prices of paper in the world markets. Outside the strike period, the pulp mills were running practically at capacity, and the year's total output was not far below that of 1925, when a total of 833,958 metric tons (of 2205 pounds each) was exported. The 1926 production for export consisted of 110,945 metric tons of bleached sulphite, 119,000 tons of unbleached sulphite, and 20,000 tons of sulphate pulp, a total of 249,945 tons, while, in addition, it was estimated that some 88,000 tons were manufactured for domestic consumption, thus bringing the total production for the year up to 337,945 tons. The output for 1925 was 271,053 tons. Mechanical ground wood was pro-

luced for export in 1926, to the amount of about 100,000 tons, or less than in 1925, when 597,908 tons were exported. The United States and Great Britain were the leading consumers of Norwegian pulp, followed by France and Belgium.

In 1926 the total chemical pulp production in Sweden was estimated at 1,430,000 metric tons, an increase of approximately 10 per cent over the preceding year, with indications of an output of more than 2,000,000 tons in 1927. Mechanical ground wood production during 1926 was reported to have reached 470,000 tons, dry weight. There was an increased exportation of chemical pulp during the year, making a new record, and the United States was the leading customer. There was also an increase in the exports of sulphite pulp, while mechanical pulp remained at practically the same figure as in the previous year, being, in 1926, 212,878 tons. Sweden exported 174,039 tons of newsprint paper in 1926, as against 172,276 tons in 1925, and 93,935 tons of various kinds of paper, excluding board and vegetable paper, as compared with 82,589 in 1925.

In Belgium the paper industry experienced alternate periods of activity and depression during 1926, with all mills working at full capacity in the first part of the year, succeeded by increased production costs and lack of orders later in the year. The imports of wood pulp were greater than in 1925, and also the increase in the imports of paper. Belgium imported about 10 per cent and exported 40 per cent of the paper figuring in its foreign trade. See CHEMISTRY, INDUSTRIAL.

**PAPUA**, pā'pū-ā. A territory of the Australian Commonwealth, comprising the southeastern part of the island of New Guinea and all the groups of small islands between 8° and 12° S. latitude and 141° and 155° E. longitude; formerly known as British New Guinea; transferred to the Australian government Sept. 1, 1906. Area, 3,540 square miles, of which about 87,786 are in the island of New Guinea. On Apr. 4, 1923, the population was as follows: Europeans, 1086; apuans (estimated), 275,000. Port Moresby is the capital and a port of entry. Other ports of entry are Samarai, Daru, and Kulamadau.

A large proportion of the natives are civilized, and many of them are taught in schools maintained by the four Christian missions in the territory. While freehold alienation of the land is not permitted, leases are obtainable at low rentals, 188,348 acres being leased in this manner. On Dec. 31, 1924, there were 61,180 acres of plantations. The chief crops are coconuts 48,022 acres), rubber (7846 acres), and sisal hemp (3878 acres). The forests contain valuable timber, and the mineral resources, which are considerable, include gold, copper, osmiridium, lead, zinc, tin, and iron. The only minerals exported have been gold, copper, and osmiridium. Indications of petroleum have been found over an area of 1000 square miles, and borings were being continued in 1926 under the auspices of the Australian government. The chief imports are foodstuffs, tobacco, drapery, and hardware; the chief exports are copra, gold, hemp, pearls, and rubber. The exports in 1925 were valued at 367,620 and the imports at £459,080. There is considerable trade between Australia and Papua, steamship communication being regularly maintained; 78,113 tons entered and cleared in 1925. The local revenue in 1925 was £82,908

and the expenditure, £143,830. The Australian government grants an annual subsidy of £50,000. The territory is administered by a lieutenant-governor appointed by the governor-general of Australia, and an executive and a legislative council, both consisting of official or nominated members. Lieutenant-governor and chief judicial officer, Sir J. H. P. Murray.

**PARAGUAY**, pār-ā-gwā. An inland republic of South America; bounded on the west and south by Argentina, on the east by Argentina and Brazil, and on the north by Brazil and Bolivia. Capital, Asunción.

**AREA AND POPULATION.** The estimated area of Paraguay proper, which lies between the Paraguay and Alto Paraná Rivers, is estimated to be 61,647 square miles; in addition, Paraguay lays claim to a tract between the Paraguay and Pilcomayo Rivers known as the Chaco; the ownership of this territory, however, is disputed by Bolivia. In 1917 the population was estimated at 1,000,000, exclusive of Chaco Indians, who were estimated roughly at 50,000. The fact that some authorities thought this estimate too high was borne out by the Director of the Section of Agriculture and Agricultural Defense of the Ministry of the Treasury, who estimated the population in the middle of 1926 to be 853,321, with a density of 13.58 to the square kilometer. In Paraguay proper the people are of mixed blood; namely Guarani, Indian, Spanish, and Negro, the first mentioned predominating. The largest cities with their populations, estimated Sept. 30, 1920, are Asunción, the capital, 99,836; Villarrica, 26,000; Concepción, Luque, and Carapeguá, each 15,000; and Encarnación, 12,500.

**EDUCATION.** According to the 1926 report of the General School Bureau of the Ministry of Public Instruction, 79,352 children were enrolled in the public and private schools of the republic in 1925. However, since the probable number of children of school age is 160,000, more than half were not in school. The total number of primary schools, both public and private, was 679, while there were seven normal schools. There were 1715 primary teachers, of whom 494 held normal school certificates. There are secondary schools at Asunción, Villarrica, and Pilar and a National University at Asunción.

**PRODUCTION.** Stock raising and agriculture are the chief occupations of the people. The latter has not been developed to a very high state of efficiency because of the sparse population and the inadequate means of transport. Among the more important products are cotton, yerba (native tea), tobacco, sugar, corn, roots, coffee, rice, and beans. Cattle raising is the most promising industry in Paraguay, as the country is admirably adapted by nature for this purpose, and the market offered by three packing plants operating within the republic has given a great impetus to the development of the industry. The three principal cattle regions are the Missions, the northern section, and in the Chaco. Pasture lands could be bought for 5000 to 20,000 pesos gold per square league (4632 acres). Prices in the interior of the Chaco were still lower; due, however, to the advent of the packing plants land values were rising rapidly. Conservative cattlemen were disposed to estimate the 1926 stock of cattle at about 3,500,000 head. The mineral resources include iron, manganese, and copper, in deposits of considerable extent.

In some sections petroleum was found in commercial quantities. With the exception of the quebracho and sugar industries, manufacturing in Paraguay was only in its infancy, and the few products manufactured—furniture, shoes, cigarettes, beer, and vegetable oils—were mostly for local consumption.

## CHIEF IMPORTS OF PARAGUAY DURING 1925

	Amount	Value Gold pesos
Sugar .....	kilos. 3,001,084	290,218
Flour .....	kilos. 11,909,206	736,250
Wheat .....	kilos. 10,623,642	398,313
Potatoes .....	kilos. 936,025	59,896
Bottled wines .....	liters. 17,677	14,816
Wines in casks .....	liters. 1,289,994	132,282
Motor trucks .....	95	63,423
Automobiles .....	68	43,787
Woolen textiles .....	kilos. 44,578	192,471
Cotton textiles .....	kilos. 1,798,623	2,908,598
Silk textiles .....	kilos. 14,854	202,148
Pianos .....	53	16,001

**FINANCE.** The financial situation in Paraguay improved decidedly in 1925. The government's economy, coupled with its resolution to meet foreign and domestic obligations, increased general confidence. The outstanding events of the year were the payments on the foreign debt and the establishment of a German bank at Asunción. In accordance with the terms of the London agreement of Sept. 4, 1924, monthly payments of £4381 were made throughout the year. At the close of the financial year 1924-25, on November 30, the Paraguayan public debt amounted to 7,234,311 Argentine gold pesos and 38,211,476 Paraguayan paper pesos (the Argentine gold peso equaled \$0.9138, at the average rate of exchange in 1925; the Paraguayan paper peso, \$0.02 in the same year), as compared with 8,890,384 gold pesos and 198,288,337 paper pesos on Jan. 1, 1925. The external debt was 5,647,696 Argentine gold pesos. The internal debt (consolidated) was 1,523,926 gold pesos and 21,385,303 Paraguayan paper pesos; while the internal debt (floating) stood at 62,689 gold pesos and 16,826,173 paper pesos. The custom house receipts in 1925 totaled 1,395,148 gold pesos and 114,155,780 paper pesos. Internal revenue receipts in the same year amounted to 4861 gold pesos and 55,972,575 paper pesos. The only official currency in circulation in Paraguay consists of paper notes of the value of 1000, 500, 200, 100, 50, 10, and 5 pesos; and nickel coins of 2, 1, and 0.50 pesos each. The budget estimates for 1925-26 were as follows:

Expenditures	Pesos gold	Pesos legal currency
Legislative Congress .....		4,488,800.00
Department of Interior ..	179,114.04	89,391,585.04
Department of Foreign Relations .....	229,680.00	1,444,800.00
Department of Treasury	153,890.16	33,675,945.48
Department of Justice, Worship, and Public Instruction .....	53,720.04	36,515,440.74
Department of War and Marine .....	308,960.00	31,008,163.68
Public debt .....	553,459.00	18,291,542.16
<b>Total expenditures</b> ..	<b>1,476,823.24</b>	<b>164,766,227.10</b>
Revenues	Pesos gold	Pesos legal currency
Customs receipts .....	1,159,080.00	108,780,000.00
Internal revenue .....	6,100.00	51,255,200.00
Postal and telegraph re- ceipts .....	200.00	5,842,000.00
Various revenues .....	81,000.00	3,077,000.00
Other revenues .....	1,900.00	5,428,064.00
Extraordinary revenues ..	2,100.00	102,000.00
<b>Total revenues</b> ....	<b>1,250,380.00</b>	<b>174,484,264.00</b>

**COMMUNICATIONS.** In 1924, 3133 vessels with an aggregate tonnage of 229,433 tons entered the port of Asunción, and 3106 with a tonnage of 228,366 cleared. The total length of railway mileage was given at 517, the country depending to a great extent upon its navigable rivers, which provide cheap and easy means of transportation.

**GOVERNMENT.** Executive power is vested in a president, who acts through a responsible ministry of five members; and legislative power in a congress of two houses; a senate of 20 members and a house of representatives of 40 members, elected directly by the people. President, Dr. Eligio Ayala, who assumed office on Aug. 15, 1924.

**HISTORY.** The outstanding event of the year was a hurricane which wrecked the City of Encarnación on September 20. The loss of life was placed at 200 and the property damage at \$1,000,000. Encarnación, a city of 12,500 inhabitants, is in eastern Paraguay. A part of the city was completely wiped out, and many vessels in the Paraná River were wrecked.

**PARASITES, ANIMAL.** See **VETERINARY MEDICINE.**

**PARK COLLEGE.** A non-sectarian institution of higher education at Parkville, Mo.; founded in 1875. The enrollment for 1926-27 totaled 464, distributed as follows: Seniors, 51; juniors, 92; sophomores, 100; freshmen, 168; special students, 12; graduate students, 1; preparatory, 40. The faculty numbered 28; three professors, one associate professor, and three instructors were added during the year. The endowment funds of the college amounted to \$1,488,000, and the income for the year was as follows: From endowment, \$79,413; tuition and fees \$58,298; donations, \$39,050; other sources, \$11,370. Special gifts received were \$13,500 in land, \$100,000 for a new dormitory, and \$25,000 by legacy. There were over 30,000 volumes in the library. President, Frank William Hawley, D.D., LL.D.

**PARKER, ALTON BROOKS.** American jurist and Democratic candidate for the Presidency in 1904, died May 10, at New York. He was born at Cortland, N. Y., May 14, 1852, and was a student at Cortland Academy and Cortland Normal School. In 1873 he graduated as LL.B. from Albany Law School, and in 1877 was elected surrogate of Ulster County; he held that post until 1885. In 1884 he was a delegate to the Democratic National Convention, and in 1885 he successfully managed the Democratic gubernatorial campaign. In the following year he was appointed by Governor Hill to the Supreme Court. He was transferred to the Appellate Division in 1889, and became, in 1898, Chief Justice of the New York Court of Appeals. In 1904, he resigned to accept the Democratic nomination for the Presidency. On this occasion he sent his famous "gold telegram" to the Democratic convention, declaring for the gold standard. After his defeat by Theodore Roosevelt he resumed the practice of law in New York City. He was temporary chairman of the Democratic national convention in 1912, and was chief counsel for the managers in the impeachment trial of Gov. William Sulzer, in 1913. In the same year he was made LL.D. by McGill University, and he received the same degree from the University of Toronto in 1915, and from the College of William and Mary in

1921. In 1906-07 Justice Parker was President of the American Bar Association and in 1914 he presided over the New York State Bar Association.

**PARKS, NATIONAL.** In 1926 a larger number of visitors than in any preceding year were admitted to the parks maintained by the United States Government, and established under acts of Congress for the preservation of their scenic or other unique features and set apart for the use of tourists and visitors. The National Park Service recorded 1,930,865 visitors, in 1926, as against 1,706,512 in 1925 and 1,422,353 in 1924. The service also handled the largest volume of automobile travel, the number of cars entering the parks in 1926 being 406,248, as against 368,212 in 1925 and 315,916 in 1924. Tourist travel to the national monuments, administered in most cases through the National Park Service, also reached its highest peak in 1926 with 384,040 visitors, as against 294,050 in 1925 and 248,555 in 1924. The following table from the report of the director of the National Park Service shows the distribution of these visitors among the various parks and monuments under its direction.

<i>Name of park</i>	<i>Number of visitors</i>
Hot Springs .....	* 260,000
Yellowstone .....	187,807
Sequoia .....	89,404
Yosemite .....	274,209
General Grant .....	50,597
Mount Rainier .....	161,796
Crater Lake .....	86,019
Platt .....	* 124,284
Wind Cave .....	85,466
Sullys Hill .....	19,921
Mesa Verde .....	11,356
Glacier .....	37,325
Rocky Mountain .....	* 225,027
Hawaii .....	* 35,000
Lassen Volcanic .....	18,789
Mount McKinley .....	538
Grand Canyon .....	140,252
Lafayette .....	101,256
Zion .....	21,964
Total .....	1,930,865
* Estimated.	

<i>Name of monument <sup>b</sup></i>	<i>Number of visitors</i>
Aztec Ruin (New Mexico) .....	5,646
Capulin Mountain (New Mexico) .....	14,965
Carlsbad Cave (New Mexico) .....	10,904
Casa Grande (Arizona) .....	16,542
Chaco Canyon (New Mexico) .....	2,500
Colorado (Colorado) .....	* 9,000
Craters of the Moon (Idaho) .....	4,620
Devil's Tower (Wyoming) .....	16,640
El Morro (New Mexico) .....	5,794
Gran Quivira (New Mexico) .....	1,577
Hovenweep (Utah-Colorado) .....	* 250
Katmai (Alaska) .....	.....

Tumacacori (Arizona) .....	13,683
Verendrye (North Dakota) .....	* 8,000
Wupatki (Arizona) .....	* 800
Yucca House (Colorado) .....	* 150
Total .....	384,040

\* Estimated.

<sup>b</sup> No records for other national monuments.

Adjustments of the boundaries of several of the national parks made increased areas available for the recreation and education of visitors. These included the Sequoia Park, to which Mount Whitney with other land was added, and Mount Rainier Park. Four new parks, three of which were in the East, were authorized by Congress, 1920, being the most successful year since 1919, from the standpoint of legislation. The total maximum area involved in the Shenandoah National Park project, the first of these new parks, was 521,000 acres, that in the Great Smoky Mountains Park 704,000 acres and that in the Mammoth Cave Park 70,618 acres. However, it was provided that when a minimum acreage of 250,000 in the Shenandoah area, 150,000 in the Great Smoky Mountains, and 20,000 (including all the caves) in the Mammoth Cave region, should have been accepted by the Secretary of the Interior, the National Park Service might take over the administration and protection of these areas. A total of \$1,200,000 was subscribed for the purchase of lands in the Shenandoah area, and \$1,066,693 for similar purchases in the Great Smoky Mountains region. No donations of money toward the acquisition of the Mammoth Cave Park were tendered.

The total area of the 19 national parks was 7,493,243 acres, of which 81,819 were still private land, although the amount of private land had been reduced during the year from 99,826 acres by legislation affecting the boundary of the Rocky Mountain National Park.

During the year the committee on outdoor education organized by the American Association of Museums was making studies for appropriate educational museums in Grand Canyon National Park and Palisades Interstate Park. Of the various educational facilities offered, the nature guide service was undoubtedly the most popular with visitors. It was available in 1926 in Yosemite, Yellowstone, Glacier, Mount Rainier, Sequoia, Grand Canyon, Zion, and Crater Lake National Parks and at the Casa Grande and Petrified Forest National Monuments. A direct outgrowth of this work was the establishment in 1925 of the Yosemite field school of natural history. In 1926 four or five times as many students sought enrollment as in 1925, but it was deemed advisable to limit the number to 20. The new museum building, completed early in the spring, provided additional facilities for the use of the school. A number of summer field schools were conducted in the reservations by educational institutions, including the Princeton summer school of geology and natural resources, Northwestern University, and the University of California. Another interesting phase of educational work in the parks was the staging of historical and allegorical pageants.

At the Mesa Verde National Park considerable archaeological work was carried on, and brought to light some very interesting relics, many of which were placed in the park museum. General restoration and repair work was also done at the historic and prehistoric ruins in the Chaco Canyon, Aztec Ruin, Casa Grande, Gran Quivira, Pipe Spring, and Tumacacori National Monuments. In addition to the work of the Park Service, exploration was carried on by the National Geographic Society in the Chaco Canyon, by the United States National Museum in Grand Canyon National Park, and by the Carnegie Institution in the same park.

The ten parks which were open to visitors during the winter experienced the heaviest winter travel in their history. Without exception, the national parks reported the wild animals in unusually good condition; this was due to the mild winter weather that prevailed throughout the West. Several species that were threatened with extinction, notably the antelope and buffalo herds of the Yellowstone, showed a gratifying increase. Mountain sheep were much more in evidence at the Grand Canyon than in preceding years. Fish-planting operations were continued, in coöperation with both the Bureau of Fisheries and State hatcheries. Excellent progress was made on the road programme during the year, under the coöperative agreement entered into in 1925 with the Bureau of Public Roads of the Department of Agriculture, whereby that bureau was supervising the construction of major road projects in the parks. During the summer, all the resources of Glacier Park were used for nearly two months in fighting and controlling fires started by lightning and the explosion of a gasoline tank on a truck, 3583 men being engaged in fighting the flames; the total cost to the Government was \$203,073.76.

The total appropriations for the National Park Service for the fiscal year 1926 amounted to \$3,258,409, and the expenditures to \$3,219,406. In spite of a reduction of automobile fees in the national parks, revenues derived from the operation of the parks during the year amounted to \$818,530.72, an increase of 22 per cent over the previous, 1925, high mark.

**PARRY, SIR JOHN FRANKLIN.** British naval officer and hydrographer, died April 22, at Harrogate Spa, England. He was born Aug. 15, 1863, and entered the British Navy in 1877, becoming a sub-lieutenant in 1883 and lieutenant two years later. In 1885 he served in Egypt in the Suakin campaign, and for his services he was decorated with the Egyptian Medal and Star. In 1890 he became a commander, rising to the rank of captain in 1905. From 1900 to 1903 he was chief assistant to the hydrographer of the navy, and from 1910 to 1914 he was assistant hydrographer. In 1916 he was given the rank of rear admiral, and from 1914 to 1919 he was hydrographer-in-chief. He was in command of surveys in many parts of the world and served on many technical committees in connection with hydrographic researches and navigation.

**PASHITCH, pi'shitch, NICOLA P.** Premier of Serbia and Yugo-Slavia, died at Belgrade, Yugo-Slavia, December 10. He was born in 1845 in Saitchar (Zayechar), Serbia, a village near the Bulgarian frontier, and spent so much of his youth in Bulgaria that by many he was deemed to be of Bulgarian birth. He was educated at Belgrade, and gained a scholarship in engineering, enabling him to study at the Polytechnicum, Zurich, Switzerland, where he became the associate of Russian Nihilists and the particular friend of the celebrated Anarchist, Bakunin. Returning to Serbia in 1873, he engaged in service as an engineer and fought in the war with Turkey, 1876-8. After the conclusion of the war he determined to establish a revolutionary Socialist state, and set to work at once to form the Radical party. In 1878 he was elected a deputy, and it was during the troubled years which followed that King Milan twice refused to acknowledge him as speaker

when so elected by the house. M. Pashitch was accused of plotting against King Milan and the death sentence was passed upon him; but he escaped into Austria. When all the other leaders received amnesty, Pashitch alone was excepted, and he lived in exile until 1889, when he returned in triumph to Serbia, King Milan having abdicated in favor of King Alexander. He became premier in 1891, and in 1893-4 he went to Russia as Serbian ambassador. While in Russia he gained the Czar's protection for his country and for his own person, but on his return to Serbia he was imprisoned for nine months, charged with *lèse majesté*. He was again arrested in 1899 on the charge of conspiring against the life and person of the King. The intervention of Russia saved his life, his sentence being commuted to five years' imprisonment and later changed to banishment. After the assassination of King Alexander in 1903, M. Pashitch helped to establish the Karageorgevitch dynasty on the throne. Serving first as minister of foreign affairs in 1904, he became prime minister in 1906. As a result of the Balkan and World Wars the Kingdom became larger than Austria, and so M. Pashitch achieved one of his ambitions for his country, for he was ever an inveterate enemy of the neighboring state. M. Pashitch was familiarly known as the "Old Fox of the Balkans," and it was mainly due to his irrepressible activity that the Balkan Alliance was formed, to the consternation and undoing of Turkey.

He was premier at the time of the Serajevo assassination and after the War he was accused of foreknowledge of the crime, but to this he gave a formal denial shortly before his death. It was M. Pashitch who responded to the Austrian ultimatum and who represented Serbia at the Paris Peace Conference. Since 1906 he had been, with few intervals, Prime Minister of Serbia (since the War, of Yugo-Slavia), and throughout the troubled period following the War he led his country strongly and steadily along the path of his own choosing. He completely defeated the Croatian separatist republican movement, but took its leader, Stephen Raditch, into his own cabinet. This diplomatic move greatly strengthened both the government and the throne. Deep consternation was felt everywhere in the Balkans when the news of his death was spread, as the Serbs were looking to him for leadership in connection with the serious situation caused by the Italian-Albanian treaty. Premier Uzunovitch had failed to form a cabinet and M. Pashitch had, the day before his death, been called to the palace by King Alexander. He died just as he was about to take the reins of government into his hands to lead his country once more out of a seeming impasse.

**PASSAIC, N. J., TEXTILE STRIKE AT. See STRIKES AND LOCKOUTS.**

**PATENTS.** See UNITED STATES.

**PAVEMENTS.** See ROADS AND PAVEMENTS.

**PEABODY MUSEUM OF AMERICAN ARCHAEOLOGY AND ETHNOLOGY.** This museum is the anthropological section of the Harvard University Museum; it was founded by George Peabody in 1866. In addition to maintaining collections, it has laboratories for research in the various branches of archaeology, and has at its disposal the income from various funds, permitting special research in the field and the care and increase of the collections.

In 1926 there were, as usual, numerous field activities. The Southwestern expedition, exploring Swart's Ranch Pueblo in the Mimbres Valley of southwestern New Mexico, was continued by Mr. and Mrs. C. B. Cosgrove under the general supervision of Dr. A. V. Kidder. During this season's work, 33 rooms were cleared, making 116 rooms in all that had been explored. The excavations were carried beneath the floors of the rooms, sometimes to the depth of nine feet, before evidences of disturbance of the soil by human agency disappeared. Seven of the rooms were of early construction and were below the level of the main pueblo, one being of the pit-house type with an inclined passage extending from the room to the surface of the ground. A small cave  $8\frac{1}{2}$  miles from this pueblo was also excavated. It was situated in a side canyon tributary to the Mimbres River. Potsherds, fragments of basketry, and fabrics of various kinds were recovered which show conclusively that they belong to the Mimbres culture.

Dr. H. J. Spinden, in connection with the Spinden-Mason archaeological expedition, carried on work in Middle America for a portion of the year. From Belize the expedition skirted the coast northward along the Yucatán peninsula, making excursions inland by means of rivers. Ruins of about 50 buildings were discovered, some of which were of great interest. From Yucatán the party went eastward and southward along the northern coast of Honduras, visiting the Bay Islands and examining the ancient cemetery under the high limestone cliffs. When the expedition reached the Plantain River on the mainland, it was ascended and the sites along its shores were examined. A collection of pottery, grinding stones, and other implements was obtained from these sites and was placed on exhibition in the museum at the end of the year, as was also a collection of flutes, drums, carrying bags, and other objects from the Puya Indians who accompanied the expedition up the river.

W. B. Cline continued his investigation and survey of the ancient earthworks in the Sudbury Valley of Massachusetts, a considerable number of which are new to local archaeologists. Dr. Charles Peabody explored a neolithic workshop or surface site on a sandy plateau between Fitz-James and Breuil-le-sac, some 60 kilometers north of Paris, and obtained for the museum a good collection of flint implements and workshop material. Professors Tozzer and Hooton carried on studies of race mixture, with the financial assistance of the bureau of international research. Martin Luther spent a portion of the year collecting anthropometric and sociological data on the Finnish colonies in Massachusetts, and in June went to Finland and Lapland to continue his studies there. Carleton Coon, another student, carried on archaeological and anthropological reconnoissances in Morocco.

**PEACE AND PEACE MOVEMENTS.** In 1926 the usual number of peace organizations and peace movements were active; the following paragraphs summarize some of their features.

**AMERICAN PEACE SOCIETY.** The 98th annual meeting of the board of directors was held in connection with an informal dinner, at the Cosmos Club, Washington, May 29, Representative Theodore E. Burton presiding. It was proposed that two things should be done by 1928,

the date of the 100th anniversary of the founding of the Society: 1, a complete index of the *Advocate of Peace* should be compiled; 2, a complete history of the society should be written and published.

**THE AMERICAN BRANCH OF THE WORLD ALLIANCE FOR INTERNATIONAL FRIENDSHIP THROUGH THE CHURCHES.** This organization has been active through 20 national branches, financed in part by Mr. Carnegie's money and in part by such additional funds as it is able to raise. This American Branch holds an annual meeting every Armistice Day. In the spring of 1926 it held a speakers' conference. It holds forums all over the United States, and is active in sending out literature and in spreading as widely as possible the idea of the peaceful settlement of international disputes. Headquarters, 70 Fifth Avenue, New York.

**COMMISSION ON INTERNATIONAL JUSTICE AND GOOD WILL.** This is a component part of the Federal Council of Churches. It adopted the following statement regarding military training in schools and colleges:

1. The commission seeks the reign of universal peace, yet it does not ignore present-day conditions. It believes that disarmament can come for any nation only by international agreements. No nation can disarm alone.
2. The urgent need of the times is definite and comprehensive agreements between the nations, whereby disputes of every kind shall be settled by suitable tribunals, under processes of law, reason and conciliation, and not by armed violence.
3. The commission believes that the people and government of the United States should concentrate thought and effort on the development of the spirit and of the institutions essential to the achievement of world justice, mutual confidence and goodwill, common security and world peace.
4. The commission recognizes the necessity for a reasonable national defense and for maintaining internal order and international justice.
5. The commission urges a thorough study of the problems involved in utilizing civilian schools and colleges for purposes of military training.

**THE COMMITTEE ON WORLD FRIENDSHIP AMONG YOUNG PEOPLE.** This organization, of which Walter W. Van Kirk was secretary, is also affiliated with the Federal Council of Churches. Its purposes are expressed in the following creed:

#### A PEACE CREED FOR YOUTH

We believe: That the supreme task of the rising generation is the abolition of war.

We believe: That the Church of Jesus Christ is the only institution capable of generating the will-to-peace. If war is to be outlawed it will be because the Christian Church has summoned the nations to sheathe their swords and live at peace with one another.

We believe: That such international organizations as the World Court and the League of Nations, in order to function effectively for the peaceful settlement of international disputes, must be paralleled by the development of the international mind and heart, particularly among the youth of the world. This is the task of the Church.

We believe: That the Christian young people of America have a very special responsibility in keeping the Church firmly on the side of peace and in fostering among their own associates and throughout the nation generally the spirit of international friendliness.

**THE SIXTH INTERNATIONAL PEACE CONGRESS.** The congress was held at Dierville, France, beginning August 17. It was attended particularly by pacifists of the younger generation under the leadership of Max Sangnier. The congress was in no sense of the same series as the other congresses held under the auspices of the International Peace Bureau, with headquarters in Geneva.

**THE NATIONAL COUNCIL FOR PREVENTION OF**

**WAR.** This body, of which Frederick J. Libby was secretary, continued to act as a clearing house for information with the purpose of increasing coördination among 38 national organizations working for peace. Eighty-two peace societies in the United States were listed by the council, under four heads: 1, those organized primarily to work for peace; 2, those having special committees for peace work; 3, those engaged in activities which increase international good will and promote world peace; 4, those lending support to the peace movement through affiliation with the National Council, active participation in campaigns, etc.

**THE CHURCH PEACE UNION.** This organization was founded by Andrew Carnegie in 1914. In 1926 the Rev. William P. Merrill was chairman; Henry A. Atkinson was secretary, and the Rev. Frederick Lynch was educational secretary, in charge of its educational campaign, which is world-wide.

**PEACH MOTH, ORIENTAL.** See **ENTOMOLOGY, ECONOMIC**.

**PEACH TREE BORER.** See **ENTOMOLOGY, ECONOMIC**.

**PELERIN, FELIX.** See **FABRICIAN, BROTHER**.

**PELLAGRA.** Within a few years our views of the nature of this mysterious malady have undergone much modification, as is shown by an article of Dr. Sutton of Hollywood, Calif., in the *American Journal of the Medical Sciences* for September. Although it was only a few years since the disease had been known on the Pacific slope, the author reported 54 personal cases. The old belief that the incidence is almost peculiar to poor and half-fed people has long been shattered. It was upon this supposition that treatment once involved the giving of nourishing animal food, yet pellagra may be seen to develop in high-protein feeders. Even to-day a high-protein diet is still usually prescribed, although it is only necessary to make sure that the ration should contain the ordinary protein requirement. Of the intimate nature of pellagra it is only possible to say that some unknown factor makes the patients abnormally sensitive to light. It has been found best to keep the pellagrin outside of hospital walls and give him ambulatory treatment at the office or dispensary. There should be no sudden or radical change of any kind in the diet, gradually introducing special articles, such as whole oranges in abundance, fried scraped beef, etc. The outlook is gloomy, for of the 54 patients only 15 were much benefited by treatment. The mortality is high, but not necessarily from the disease itself—of 11 deaths only five were from pellagra. See **FOOD AND NUTRITION**.

**PELL'S NECK, BATTLE OF.** See **CELEBRATIONS**.

**PENANG, pē-nāng'.** One of the Straits Settlements (q.v.).

**PENNELL, JOSEPH.** American artist and author, died at Brooklyn, N. Y., April 23. This important American etcher and lithographer, also well known as a writer, was born at Philadelphia, July 4, 1860, of Quaker parents. He was a pupil of the Pennsylvania Academy of Fine Arts and the Pennsylvania School of Industrial Art, and studied etching with Stephen S. Ferris. In 1884 he went to Europe and thereafter traveled a great deal. He spent much

time in London. He was a friend and later a biographer of Whistler, and the evidence of Whistler's influence is to be found in Pennell's work. Pennell, however, was distinctly original, and was probably the best known of American graphic artists. His art was simple and effective. He was noted for his grasp of a subject, evidenced in his power of selection, as may be seen in his later etchings of New York City and the Panama Canal. His subjects are chiefly architectural or scenic; figures are not of major importance. Drawings, etchings, and lithographs by him may be found in virtually all the great European collections of graphic art, as well as in important American museums, such as the Metropolitan Museum of Art, New York, and the Brooklyn Museum, and in the Library of Congress. He was a member of the National Academy (1909), of the National Institute of Arts and Letters, the National Academy of Design, as well as many important European societies embracing representatives of the graphic arts. He received gold medals or grand prizes at Paris (1900) and several other world expositions. No small share of his general reputation is due to his writings, which include the following: *A Canterbury Pilgrimage*, 1885; *An Italian Pilgrimage*, 1886; *Pen Drawings and Pen Draughtsmen*, 1889; *Modern Illustration*, 1895; *Lithography and Lithographers*, 1900; *A Life of James McNeill Whistler*, 1907; *Pictures of the Panama Canal*, 1912; *Etchers and Etching*, 1919; *Adventures of an Illustrator*, 1925.

**PENNINGTON, EDMUND.** American railway president, died May 2. He was born at La Salle, Ill., Sept. 16, 1848, and entered the railway service in 1869 as a warehouseman. He rose to the post of assistant superintendent of the Chicago, Milwaukee and St. Paul Railway. He was superintendent of the Minneapolis and Pacific Railroad till June, 1888, from 1888-89 general superintendent, and general manager from 1899 to 1905. He was elected vice-president July 31, 1905, and continued as general manager and president from 1909 to 1922, when he became chairman of the Minneapolis, St. Paul and Sault Ste. Marie Railroad. He was also a director of the First National Bank of Minneapolis.

**PENNSYLVANIA.** **POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 8,720,017. The estimated population on July 1, 1926, was 9,614,000. The capital is Harrisburg.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu	Value
Hay, tame	1926	2,916,000	3,804,000 *	\$70,374,000
	1925	8,038,000	4,225,000 *	71,825,000
Corn	1926	1,394,000	57,154,000	44,580,000
	1925	1,408,000	71,808,000	57,446,000
Potatoes	1926	198,000	22,176,000	37,699,000
	1925	202,000	24,846,000	48,201,000
Wheat, winter	1926	1,170,000	25,400,000	80,156,000
	1925	1,125,000	22,500,000	33,075,000
Oats	1926	1,111,000	85,552,000	17,420,000
	1925	1,157,000	40,495,000	20,652,000
Tobacco	1926	38,000	43,560,000	4,574,000
	1925	41,000	57,400,000	8,610,000
Buckwheat	1926	190,000	3,610,000	3,213,000
	1925	194,000	4,462,000	4,060,000
Rye	1926	93,000	1,488,000	1,443,000
	1925	113,000	1,921,000	2,017,000
Apples	1926		17,000,000	12,960,000
	1925		7,800,000	10,658,000

\* tons, † pounds.

**MINERAL PRODUCTION.** Pennsylvania, first in rank of the States in order of the value of the annual mineral product, is preëminently a producer of coal. There were produced 55,194,000 gross tons of anthracite in 1925, as against 87,926,862 in 1924; in value, \$327,665,000 in 1925 and in 1924, \$477,230,852. Of bituminous coal the State produced 139,862,000 short tons in 1925, and 130,633,773 short tons in 1924. The bituminous product had a value, for 1924, of \$295,164,000, and for 1923 of \$472,217,000. See COAL. The State was the leading producer of pig iron, its shipments attaining the quantity of 12,537,809 long tons in 1925 and of 10,962,288 long tons in 1924, and a value of \$258,140,674 in 1925 and in 1924, \$237,052,035. The coke (q.v.) produced amounted to 16,927,437 short tons in 1924, and 25,624,286 short tons in 1923; in value, \$72,568,096 in 1924 and in 1923, \$138,444,191. Ferro-alloys attained a total production of 260,623 long tons in 1924, and 317,470 long tons in 1923; and a value of \$24,618,060 for 1924 and for 1923, \$28,515,265. Outside the coal and iron industries, cement held the leading place. Cement production attained 41,876,000 barrels, the greatest amount of any State in 1925, as against 40,849,602 barrels in 1924. Cement shipments had a value of \$70,470,000 in 1925 and in 1924 of \$69,693,517. Clay products had a value of \$52,167,366 in 1924, and in 1923 of \$58,529,481. The natural gas production diminished slightly, to 105,863,000 M cubic feet in 1924 from 112,562,000 M cubic feet in 1923; in value it was \$45,546,000 in 1924 and in 1923 \$45,873,000. Natural gas gasoline was produced to the quantity of 19,230,000 gallons in 1925 and 19,254,000 gallons in 1924, with a value of \$2,240,000 (estimated) in 1925 and \$2,266,000 in 1924. Petroleum production rose to 7,824,000 barrels in 1925 from 7,486,000 barrels in 1924; its value was \$28,600,000 (estimated) in 1925 and \$27,025,000 in 1924. The State produced important and large totals of stone, sand and gravel, lime, slate, and iron ore. The total value of its mineral product was, in 1924, \$1,001,630,879; in 1923, \$1,225,036,404.

**FINANCE.** As summarized by the United States Department of Commerce, payments for the maintenance and operation of the general departments of the State for the fiscal year ending May 31, 1925, were \$74,444,104. Their per capita rate was \$8.04, as against \$8.07 in 1924 and \$3.32 in 1917. Their total included \$21,181,345 for education, apportioned among the minor State divisions. Payments amounting to \$2,657,380 for interest on debt and \$34,522,772 for permanent improvements, added to payments for the maintenance and operation of departments, made the total of State payments \$111,624,256. For highways was expended the sum of \$45,645,113, of which \$14,003,995 was for maintenance and \$31,641,118 for construction.

Revenue receipts of the State were \$111,183,391, or \$12.01 per capita. They exceeded by \$34,081,907 the total payments except those for permanent improvements, and were \$440,865 less than the total with these included. Special property and other special taxes formed 39.9 per cent of the revenue in 1925, as against 45.3 per cent in 1924 and 52.8 per cent in 1917. Their per capita rate was \$4.79 in 1925, \$5.20 in 1924 and \$2.13 in 1917. Earnings of the departments and compensation for officials' services furnished 7.6 per cent of the 1925 revenue;

business and non-business licenses, 42.3 per cent. License receipts increased in 1925 on account of a higher percentage of the gasoline tax credited to the State, and through the operation of the recently enacted tax on corporation profits. License receipts included proceeds of taxes on incorporated companies, on gasoline sales and on motor vehicles.

The net indebtedness of the State on May 31, 1925, was \$64,964,110, or \$7.02 per capita, as against \$5.26 in 1924 and 6 cents in 1917. An issue of \$20,000,000 of highway bonds occasioned the 1925 increase. The assessed valuation of property for State tax was not made, as no general property State tax was levied in 1925.

**TRANSPORTATION.** The total mileage of railroad line in operation at the end of 1925 was 11,338. Switching and terminal companies operated 693 miles of tracks. There were constructed in 1926 some 6 miles of new second track, 5 miles of third track and 3 miles of fourth or other track; a total of some 15 miles of track. The Bloomsburg and Sullivan Railroad abandoned 9 miles of line between Benton and Jamison City; the Erie abandoned 4 short stretches with a combined length of some 10 miles; the Eagles Mere Railroad abandoned 10 miles between Sonestown and Eagles Mere; the Sheffield and Tionesta, 7 miles near Tionesta.

**EDUCATION.** Various forms of coöperative activity among members of the teaching profession and others interested in education marked the year 1926. There were 50 of the 52 colleges in the State reported as coöperating with the state educational association, and important work was done by the rural school conference in drawing up a programme. The public school population as of August, 1925, was approximately 1,926,300 and the total enrollment 1,837,131, of which the elementary school enrollment was 1,546,256 and the high school enrollment, including junior high schools, 290,875. The expenditures for public school education, exclusive of expenditures for normal schools, county superintendents, and administration of the State Office of Public Instruction, during the year 1925-26 totaled \$185,404,735. The average salary of teachers was approximately \$1450.

**CHARITIES AND CORRECTIONS.** The Department of Welfare, created in 1921, took over the powers and duties of the old Board of Public Charities, the Committee on Lunacy and the Prison Labor Commission, and new powers and duties have been added. It is headed by a Secretary of Welfare, with a State Welfare Commission as an advisory body. Its powers are largely advisory, and it exercises budgetary control over 26 State-owned institutions. Under its supervision are all penal reformatories and correctional institutions, hospitals for the insane, institutions for feeble-minded and epileptic persons, for juvenile delinquents and for the indigent, and all charitable institutions which receive financial assistance from the commonwealth; also all children's institutions and agencies, all jails, almshouses or hospitals maintained by counties or districts. It also administers the Mothers' Assistance Fund. The legislature of 1925 added a State Council for the Blind to this organization, and charged it with the duty of licensing organizations which solicit money for charitable purposes.

The State penal institutions are the Eastern State Penitentiary, Philadelphia; the Western

State Penitentiary, Pittsburgh; the Pennsylvania Industrial Reformatory, Huntington; the State Industrial House for Women, Muncy; the Pennsylvania Training School, Morgantown. The State owns and conducts 8 hospitals for the mentally afflicted, these being the state hospitals at Allentown, Danville, Waymart, Harrisburg, Norristown, Torrance, Warren and Wernersville. At the following places are state hospitals for medical and surgical service: Ashland, Blossburg, Coaldale, Connellsville, Hazleton, Shenandoah, Nanticoke, Phillipsburg, Scranton, and Shamokin. Institutions for the feeble minded and for epileptics are Pennhurst State School; Polk State School, and Laurelton State School. The Pennsylvania State Soldiers' and Sailors' Home at Erie is for afflicted soldiers and sailors. In State-owned, partly State-owned and county-owned hospitals for mental defects there were in 1926 about 22,000 insane, while the feeble minded in the State institutions and one semi-State school numbered some 4300. The penal population approximated 4000. Forty-five children's homes received State aid, and the number of destitute children was about 35,000. Other children, some 12,000 in number, were beneficiaries under the mothers' assistance system of the State.

**LEGISLATION.** At the special session of the State legislature, called by Governor Pinchot on Dec. 13, 1925, and held early in 1926, State Senator Harris introduced bills for the reform of the State election law. A joint resolution was passed by the General Assembly favoring revision, but it was vetoed on March 7, by Governor Pinchot, who made the comment that it evaded the proper steps for clean elections legislation. This session, specially called by Governor Pinchot to enact a programme of coal, banking, building, election, power, Delaware River and Prohibition legislation offered by the Governor, convened January 13 and ended February 18. It failed to enact a number of important bills in this programme, whereupon the Governor charged, in a statement made February 19, that the bills had been killed by the influence of the political organization—in his words, of "the gang."

The State Senate passed February 2, and sent to the lower house a bill to exact tolls on the Philadelphia-Camden bridge, in accordance with the wishes of New Jersey. The measure was subsequently passed by the lower house. There were enacted also measures for the mandatory opening of ballot boxes to determine election frauds; for a tax on gasoline; and for regulation of alcohol. The session ended without having enacted the Governor's coal-industry and giant-power legislation programme.

**POLITICAL AND OTHER EVENTS.** In the general election of November 2, John S. Fisher, the Republican candidate, was elected Governor, defeating E. C. Bonniwell, Democrat, for the four-year term beginning January, 1927. For the Republican nomination for United States Senator there occurred an unusually intense campaign, with W. S. Vare, Governor Gifford Pinchot and Senator George W. Pepper as the chief contenders. All three incurred primary campaign expenses running into hundreds of thousands of dollars. Vare obtained the nomination, and on November 2 was elected, leading the Democratic candidate, W. B. Wilson, by about 180,000 votes. Other State officers elected in Novem-

ber, to take office in January, 1927, were Lieutenant Governor, Arthur H. James; Secretary of Internal Affairs, James F. Woodward. Thirty-four Republicans and two Democrats were elected to the United States House of Representatives.

The primary campaign contributions in the Republican Senate contest later gave occasion for investigation. The United Mine Workers of America adopted resolutions April 7, favoring Pinchot. The Governor issued a statement April 5 to the effect that State employees opposing his nomination were disloyal and should resign from their posts. The United States Senate Campaign Fund Committee opened an investigation in Pennsylvania early in June, and soon brought to light contributions totaling about \$1,500,000 for the Senatorial aspirants. The revealed total was greatly increased when, June 18, accounts filed with the State Bureau of Elections showed about \$2,500,000 spent in the senatorial contest and some \$250,000 for the Governorship nomination.

The strike of the anthracite miners, after a duration of some 5½ months, involving wage losses computed at \$150,000,000 and a stoppage of nearly 40,000,000 tons in coal production, came to an end February 17. The settlement provided that the striking miners, some 158,000 in all, should return to work immediately, and should abide for five years by the scale of wages to be set by the arbitration of a conciliation board. See **COAL; STRIKES AND LOCK-OUTS.**

The Philadelphia Sesqui-Centennial Exposition, commemorating the 150th anniversary of the Nation's independence, was held during the year, and drew visitors from all parts of the country. Owing to a combination of causes, however, it involved the subscribers and the city in financial loss. The total cost of the exposition was estimated at some \$20,000,000, of which the city of Philadelphia was liable for \$17,000,000 and nearly \$3,000,000 was met by private contributions, made in the form of subscriptions to participating certificates. There remained for the city to pay bills to a total of about \$5,000,000 at the close of the exposition, and the issue of bonds for this purpose was authorized by popular vote at the election of November 2. See **EXPOSITIONS.**

Plans for the construction of the long projected Conowingo hydro-electric station were made public June 30. They involved building a dam 4800 feet long on the Susquehanna River some 4 miles above tidewater; creation of an 8100-acre reservoir; installation at the outset of seven and ultimately of eleven 36,000-kw. generators; an annual production of 1,360,000,000 kwh. of energy; and a 220,000-volt transmission line over the intervening 75 miles to Philadelphia. The project was to be carried out for the Philadelphia Electric Power Company.

**OFFICERS.** Governor, Gifford Pinchot; Lieutenant-Governor, David J. Davis; Secretary of State, Elvin H. Conarroe; Treasurer, Samuel S. Lewis; Auditor-General, Edward Martin; Attorney-General, George W. Woodruff; Superintendent of Public Instruction, Francis B. Haas.

**JUDICIARY.** Supreme Court: Chief Justice, Robert von Moschzisker; Judges: Robert S. Frazer, Emory A. Walling, Alexander Simpson, Jr., John W. Kephart, Sylvester B. Sadler, William I. Schaffer.

**PENNSYLVANIA, UNIVERSITY OF.** A non-sectarian institution of higher education, at Philadelphia, Pa., primarily for men, but with certain courses open to women; founded in 1740. It is composed of the College of Arts and Science; the Towne Scientific School, which has courses in chemistry and engineering; the Moore School of Electrical Engineering; the Wharton School of Finance and Commerce; the school of education; the school of fine arts; the graduate school; and the professional schools of medicine, graduate medicine, law, dentistry, veterinary medicine, and hygiene and public health. The 1926 fall enrollment was 16,087, including the evening and extension schools. For the 1926 summer session 2510 were registered. The faculty numbered 1265. The productive funds amounted to \$13,696,174, and the income for the year to \$704,426. The library contained 615,099 volumes. During the year, new additions to the university's buildings included an addition to Logan Hall, of the Wharton School; two new dormitories; a new wing of the museum; and completion of the "double-decking" of the stadium. President and provost, Josiah H. Penniman, Ph.D., Litt.D., LL.D.

**PENNSYLVANIA ACADEMY.** See ART EXHIBITIONS.

**PENNSYLVANIA STATE COLLEGE.** A non-sectarian, coeducational institution of higher education, at State College, Pa.; founded in 1855. The 1926 fall enrollment totaled 3666, distributed as follows: Agriculture, 595; chemistry, 323; education, 487; engineering, 1173; liberal arts, 97; mines and metallurgy, 168; graduate school, 93; specials, etc., 30. There were 2495 students registered in the 1926 summer session. The faculty numbered 512, including the home economics extension staff. The productive funds of the college amounted to \$517,000, and the income for the year to \$2,986,817.06. The library contained 95,906 volumes. On Sept. 24, 1926, the board of trustees elected Ralph D. Hetzel, LL.B., LL.D., who was for nine years president of the University of New Hampshire, to fill the vacancy left by the resignation of President John Martin Thomas in 1924. Dr. Hetzel's inauguration was set for January, 1927.

**PENROSEITE.** See CHEMISTRY, under *Mineralogical Chemistry*.

**PENSIONS.** See OLD-AGE PENSIONS; UNITED STATES.

**PERAK**, pà'rik'. The most northern of the Federated Malay States (q.v.)

**PERKIN MEDAL.** See CHEMISTRY, INDUSTRIAL, under *Medals*.

**PERSIA.** A monarchy of southwestern Asia, extending north from the Persian Gulf and the Gulf of Oman to the Caspian Sea. Capital, Téhéran.

**AREA AND POPULATION.** The area has been variously estimated at from 628,000 to 635,135 square miles; the population at from 8,000,000 to 10,000,000, about 3,000,000 of whom are nomads, among whom Turks, Kurds, Leks, and Arabs predominate. The number of Europeans as been placed at 1200. The population of Téhéran has been given at 350,000, but this figure is merely conjectural. Other important cities with their estimated populations are: Tabriz, 180,000; Isfahan, 100,000; Meshed, 85,000; and Resht, 80,000. The great mass of the people are Moslems of the Shiite sect.

**EDUCATION.** In recent years education has

made very rapid strides in Persia, where a new order of things is gradually being worked out. In 1924 there were 252 government schools, 229 national schools, 108 private schools, 87 foreign schools, 240 religious schools, and 1026 Maktab schools. The above schools provide education to 73,534 boys, 17,485 girls, and 4979 students of religion. The foreign schools are chiefly run by missions supported by various denominations throughout the world.

**PRODUCTION.** A large part of the country is desert, but the soil is comparatively fertile where it can be worked. The agricultural products include wheat, barley, rice, fruits, gums, drugs, wool, cotton, and tobacco. The production of opium was 690,833 pounds in 1924. The making of silks and carpets continues to be an important industry. The mineral resources, which are rich but undeveloped, include coal, cobalt, copper, iron, lead, marble, mercury, manganese, nickel, salt, turquoise, and petroleum. Indications are that the deposits of petroleum are very rich.

**COMMERCE.** The foreign trade of Persia for the fiscal year ended Mar. 31, 1925, amounted to \$177,100,000, or \$30,835,682 more than for the preceding year. Although both imports and exports increased in dollar values, the expansion in exports was so pronounced as to more than treble the favorable trade balance of the previous year. Where for the fiscal year 1923-24 the excess of exports over imports created a favorable balance of \$7,414,034, in the fiscal year 1924-25 the exports valued at \$100,040,000 so far exceeded imports, valued at \$77,060,000, as to produce a favorable balance of \$22,980,000. It should be noted, however, that this result was entirely attributable to oil exports, valued at \$51,496,000, and that if this amount were excluded from the calculations the favorable balance would be changed to an unfavorable one of \$29,516,000. The accompanying table shows the exports for 1924 and 1925. The import figures were not available in detail, although it was expected that increases would be shown in the cases of sugar, cloth of all kinds, rubber shoes, mineral oils, agricultural machinery, and automobiles.

PRINCIPAL PERSIAN EXPORTS FOR THE FISCAL YEAR ENDED MARCH 31

Article	1924	1925
Fruits .....	\$3,894,800	\$6,878,000
Opium .....	6,021,900	7,949,000
Rice .....	1,290,500	3,913,200
Raw cotton .....	4,399,000	5,295,600
Lambskins .....	1,198,100	956,800
Intestines .....	592,000	1,169,800
Unrefined wool .....	1,323,300	2,315,500
Tissue cotton .....	769,700	717,400
Fox skins .....	566,900	668,400
Tissue silk .....	563,700	319,500
Tobacco .....	521,800	347,800
Leather .....	502,400	998,400
Other skins .....	120,000	254,000
Silk cocoon .....	7,200	116,300
Raw silk .....	320,100	190,900
Wool products .....	10,475,500	10,106,200
Mineral oils .....	38,305,100	51,496,600

\* Figures are only approximate, as complete official statistics are not available.

**FINANCE.** The new budget for the 1926-27 fiscal year (ending Mar. 20, 1927) was passed by the Persian parliament in December, 1926. It balanced at a total of 256,000,000 kranas, estimated receipts exceeding those of the previous year by more than 8,700,000 kranas. Figures pub-

lished during the year by the office of the Administrator General of Persian finances showed that in addition to the balancing of the budget the country's public debt was also reduced, the total on June 22, 1926, amounting to £1,706,000 and 24,625,000 krans. At that date the Persian treasury had to its credit current accounts and trust funds roughly equivalent to the total funded debt of the country.

**COMMUNICATIONS.** The number of vessels entered and cleared at all Persian ports during 1925 was slightly in excess of the arrivals and departures during the previous year, the number entering and departing being 26,025 compared with 25,043 in 1924. Tonnage unloaded from vessels at Caspian Sea ports totaled 81,364, and loaded 107,963, an increase of 18,506 tons unloaded and 34,574 tons loaded over the previous year. As the Caspian Sea traffic is entirely between Soviet Russia and Persia, the increase in tonnage of merchandise handled shows the improvement in commerce between the two countries. The total tonnage unloaded at all Persian Gulf ports amounted to 167,886 and the loaded to 3,614,935, an increase of 5886 tons unloaded and 916,806 tons loaded over 1924. Practically the entire increase in tonnage loaded was at the port of Abadan, the shipping port of the Anglo-Persian Oil Company. No American vessels arrived at or departed from Persian ports in 1925.

**GOVERNMENT.** Executive power is in the Shah, an absolute ruler down to 1906, when he consented to a constitutional form of government with a national assembly or Mejliss. This body held sessions in 1909 and 1915; then for several years it did not meet, and all authority continued to be held by the Shah. It resumed sessions in 1921, was dissolved in the summer of 1923, and resumed again after 1924. The reigning Shah at the beginning of 1926 was Riza Khan Pahlevi, publicly proclaimed Dec. 16, 1925. (See preceding YEAR BOOK.) His cabinet in 1926 was as follows: Prime Minister, Mirza Mohammed Ali Khan Froughy; Foreign Affairs, Mirza Davood Khan Meftah (acting); War, Abdallah Khan Amir Tahmasseb; Home Affairs, Mirza Hossein Khan Dadgar; Finance, Morteza Gholi Khan Bayat; Justice, Mirza Mehdi Khan Fatemi; Public Works, Mirza Ali Akbar Khan Davar; Posts and Telegraphs, Djaffar Gholi Khan Asad.

**HISTORY.** The year passed in comparative quiet in Persia under the rule of the new Shah, Riza Khan. For his accession to power, see preceding YEAR BOOK. In the first month of the year the Persian parliament passed a law providing for the railway development of the state under the leadership and ownership of the government, in order to prevent any possibility of foreign intervention in this regard. American specialists were to be engaged to aid Persian engineers to work out a satisfactory plan of railway development. The new Shah was formally crowned on April 25, with the usual display of pomp and ceremony that attends such functions. In the first part of June the Prime Minister, Mirza Mohammed Ali Khan Froughy, resigned because of his inability to handle internal problems, and was succeeded by Mostofi el Mamelet, who kept the old cabinet almost intact. His ministry was expected to stay in power until the opening of parliament in July.

During the summer there was trouble with the Turcomans on the northeastern frontier. In some

quarters it was charged that the activities of the Turcomans were caused by Soviet propaganda. The government took strenuous steps to crush the movement. While this movement was going on, the sixth Mejliss or parliament opened its meetings at the capital, with the usual ceremonies. In his opening address the Shah stressed the importance of the economic development of the country along the lines of agriculture, mining, railways, and road building. The new prime minister offered his resignation to the Shah, but it was not accepted, and he was finally prevailed to continue in the position, when he was assured that he would be supported by the parliament if he made some minor changes in the cabinet.

**PERSIAN LITERATURE.** See PHILOLOGY, MODERN.

**PERU**, pé-rō'. A republic on the Pacific coast of South America; bounded on the north by Ecuador and Colombia; on the east by Brazil and Bolivia; and on the south by Bolivia and Chile. Capital, Lima.

**AREA AND POPULATION.** On the basis of an estimate by the Lima Geographical Society in 1915, the total area, including Tacna, is 532,047 square miles. (See ARBITRATION, INTERNATIONAL.) The last official census was in 1876, when the population was fixed at 2,660,881; an estimate in 1898 placed it at 4,634,601; another in 1921 placed it at about 5,500,000, although grave doubts were expressed in some quarters as to whether the population was increasing at all. The above figures do not include an indeterminate number of uncivilized Indians. The capital, Lima, according to the official census of Dec. 17, 1921, had 176,467 inhabitants. The estimated population of the principal cities in 1924 was as follows: Lima, 187,000, with suburbs, 220,000; Callao, 58,500; Arequipa, 50,000; Cuzco, 28,000; Ica, Trujillo, and Chiclayo, 25,000 each.

**EDUCATION.** According to the report in the president's message the number of schools offering primary education in 1925 was 826, with 1465 teachers. The enrollment in these was 49,749, with an average daily attendance of 33,675. In view of the success obtained with the traveling schools, the number of these was increased to 30, and their field of operation was extended to include the provinces of La Paz, Chalatenango, and Morazán. There are also secondary and technical schools. For higher education there is the central university at Lima.

**PRODUCTION.** The chief agricultural products are sugar, cotton, and coffee. The sugar industry, which is first in importance, is engaged in, chiefly, in the coastal region, 137,729 acres being devoted to the cultivation of cane in 1924, with 30,051 laborers. The production was placed at 316,904 tons. The area devoted to cotton cultivation was 280,624 acres, with the aid of 40,557 laborers. The cultivation of cocoa was extending, and other products were wheat, corn, ramie, tobacco, wines, and olives. Hides, wool, and skins are important articles of export. Dyes, with cinchona and other medicinal plants, contribute to the country's wealth; and the manufacture of cocaine is carried on in several towns to some extent. The principal mineral resources are copper, petroleum, silver, gold, and coal.

**COMMERCE.** Official statistics of the foreign trade of Peru show that the total value of goods imported and exported for the first six months of 1926 were valued at £P19,738,338, as compared with £P10,211,116 for the same period of 1925.

Exports during the first half of 1926 amounted to £P10,437,461, as against imports valued at £P9,300,877, making a favorable trade balance in excess of £P1,000,000. Peruvian exports are, as a general thing, equally divided between agricultural and mineral products, but in 1926, owing to the drop in cotton and sugar prices and to the increase in petroleum production, the mineral exports have greatly exceeded the others. It is estimated that Peruvian oil production in 1926 would exceed 1,500,000 tons, worth more than £P10,000,000. (£P = libras peruanas, Peruvian pounds.)

**FINANCE.** In the financial section of the President's message to Congress on July 28, 1925, the accompanying statements were made regarding the 1924-25 budget:

The receipts were estimated at £P7,879,489, and the revenues actually collected amounted to £P9,184,028, £P29,505 still remaining to be collected, which gives a greater income by £P1,334,044 than estimated. The expenditures were estimated in the budget at £P7,879,489, and the additional credits made by special laws amounted to £P706,712, which makes a total of £P8,586,201 authorized by Congress. Expenditures during the fiscal year amounted to £P8,493,391. If to this amount is added the sum £P88,583 which represents the balance to be paid on April 30 last, the total amount of expenditures is £P8,581,974.

Receipts and expenditures for the year 1926 were balanced, both being estimated at £P9,762,830. The expenditures were distributed in the following manner:

	Peruvian pounds
National Senate .....	78,047
House of Representatives .....	201,905
Regional Congresses .....	19,620
Minister of the Interior .....	1,576,097
Minister of Foreign Relations .....	252,354
Minister of Justice .....	1,393,976
Minister of the Treasury .....	3,673,032
Minister of War .....	1,147,794
Minister of the Navy .....	411,314
Minister of Public Works .....	1,013,690
Total .....	9,762,830

**COMMUNICATIONS.** In 1924, 1265 steamers of 2,508,952 tons entered at the port of Callao and 1141 of 2,163,117 tons cleared. The total working length of the Peruvian railways in 1924 was 2081 miles, 1486 miles being under the control of the state.

**GOVERNMENT.** Executive power is vested in a president elected for five years and eligible for a succeeding term; and legislative power in the congress consisting of a senate with 35 members and a house of representatives with 110 members. The president acts through a cabinet of seven, appointed and removed at his pleasure. President at the beginning of the year, Augusto B. Leguia.

**HISTORY.** On July 28 the republic of Peru celebrated the 105th anniversary of its independence. The ceremonies were marred, to some extent, by the demands for the return of Tacna and Arica from Chile. Constitutional changes were approved by the Chamber of Deputies in August, when it was decided that guarantees of personal liberty could be suspended by the government when circumstances warranted it, and when it was determined that in the future archbishops and bishops were to be appointed by the Vatican rather than by congress. The congress was called into special session on December 6 for the principal purpose of considering the budget for 1927. In order to obtain increased revenues, a

new tariff law was signed on November 19 by President Leguia. This law increased the duties on certain articles and was to remain in effect until Nov. 6, 1927.

For Tacna Arica Controversy see **ARBITRATION, INTERNATIONAL.**

**PETROLEUM.** In 1926 the petroleum production of the world increased somewhat over 1925, the United States continuing to dominate the situation, producing 71 per cent of the total which was estimated at 1,095,000,000 barrels. Mexico showed a diminished yield in 1926, while Russia continued to increase, and Venezuela, with almost a doubled output, was in fourth place, being ahead of Persia. Rumania ranked ahead of the Dutch East Indies, while Colombia, for the first time, was an important producer. The accompanying table from the annual review number of *Engineering and Mining Journal* (New York) gives the world production of 1925 as compiled by the United States Bureau of Mines, with estimates for 1926.

#### WORLD'S PRODUCTION OF CRUDE PETROLEUM

	1925 * Thousands of barrels	1926 * Thousands of barrels
United States .....	763,743 <sup>c</sup>	775,000
Mexico .....	115,515	91,000
Russia .....	52,448	60,000
Venezuela .....	19,687	37,000
Persia .....	35,038	36,000
Rumania .....	16,646	23,750
Dutch East Indies .....	21,422	22,000
Peru .....	9,164	11,000
British India .....	8,000	8,500
Poland .....	5,960	6,000
Colombia .....	581	5,000
All other countries .....	19,362	19,750
Totals .....	1,067,566	1,095,000

\* Official figures, compiled by L. M. Jones, U. S. Bureau of Mines.

<sup>b</sup> Estimated.

<sup>c</sup> Bureau of Mines.

The northern heavy oil fields in Mexico reduced their production in 1926 to about 58,000,000 barrels, as compared with 78,430,526 barrels in 1925. In the southern light oil fields the production, which in 1925 was 37,084,174 barrels, declined to about 33,000,000 in 1926. (See MEXICO, sections on *Mineral Production* and *History*.) In Russia the production of crude oil came from three principal districts and was an increase of 17 per cent over 1925. Sixty-seven per cent of the output came from the Baku district and about 30 per cent from the Grozny. In Venezuela the greater part of the production came from the La Rosa pool, with Mene Grande second and El Mene third. In August there was discovered the Lagunillas pool between La Rosa and Mene Grande, which, from August to September, yielded over 1,000,000 barrels. There was also other production in different fields. In Rumania the Prahova and the Dambovitza districts together supplied nearly 95 per cent of the entire output and with the increased production there was a decline in prices. In Persia the Anglo-Persian Company estimated its production for the fiscal year ending Mar. 31, 1927, at 36,351,000 barrels, as compared to 35,038,000 barrels in the 1926 fiscal year. On July 1, 1926, the Andean National Corporation's pipe line, 360 miles in length, was put in commission and conveyed oil from the Infantas oil field, Colombia, to Cartagena, so that this field was able to produce at something like its normal capacity. The first tank steamer left for New York on July 4, 1926, and by the end of the year

more than 3,500,000 barrels of Colombian crude oil had entered the United States, with a total estimated production for Colombia of 5,000,000 barrels.

In the United States the total production of crude petroleum was estimated by the United States Bureau of Mines at 766,504,000 barrels as compared with 763,743,000 barrels in 1925. With due allowance made for oil consumed on the leases and for differences in producers' storage at the beginning and end of 1926, the total amount of crude petroleum raised to the surface in the United States was estimated at approximately 775,000,000 barrels. There were decreases in output of California, Wyoming, and Arkansas which were offset by increases in the production of Oklahoma, Kansas, Louisiana, Montana, Texas, Colorado, and New Mexico, as well as by small gains in the Appalachian states. The imports of crude petroleum in 1926 amounted to 60,382,000 barrels, valued at \$79,307,877, as against 61,824,000 barrels, valued at \$75,406,956. Of these imports about 67 per cent came from Mexico, 20 per cent from Venezuela, and 5.8 per cent from Colombia. The accompanying table from the U. S. Bureau of Mines indicates the production of crude petroleum by fields and states in the calendar years 1926 and 1925.

PRODUCTION OF CRUDE PETROLEUM BY  
FIELDS AND STATES WITH CLASSIFI-  
CATION BY GRAVITY  
[Barrels of 42 U. S. gallons]

Field	1926	1925 *
Appalachian .....	28,617,000	27,610,000

Classification by gravity (ap- prox.)		
Light crude .....	629,462,000	620,867,000
Heavy crude .....	137,042,000	143,876,000

\* Final figures—this total includes Alaska (8,000 barrels), not given above, and approximately 8,000,000 barrels consumed on leases, etc., not included in 1926 figures.

In May, 1926, according to a survey made by the U. S. Bureau of Mines, there were 90,170 miles of petroleum pipe lines in the United States, with a capacity of 15,750,000 barrels, or the equivalent of one-fourth of the average production of the country for one month. These lines varied in diameter from 2 to 16 inches, the weighted average being 6 inches. The total pipe line mileage was about equally divided between trunk lines, which aggregated 44,470 miles, and gathering lines, which totaled 45,700 miles, though the capacity of the trunk lines was about four times that of the gathering lines, due, of course, to the difference in average diameter, the former being 7.4 inches, as compared with 3.7 inches for the latter. Oklahoma was the leading state, with 19,180 miles of pipe line, Texas second with 15,530 miles, and Pennsylvania third with 11,600 miles. The supremacy of Texas in this field was naturally due to its size and to the growth of the movement to its Gulf ports. On the other hand, California, the leading state in the matter of petroleum production, ranked but seventh in pipe line mileage on account of the fortunate location of the Los Angeles Basin fields, some of which were within sight of the refineries to which their oil was delivered, or in close proximity to the port of San Pedro, through which their oil was shipped. In 1924 the total mileage of pipe lines in the United States was 82,832, with a capacity of 14,447,500 barrels, so that the increase in two years was about nine per cent in both mileage and capacity.

The grand total of tankage, exclusive of producers' storage at the wells, available in the United States for the storage of crude petroleum and of petroleum products at the refineries on May 1, 1926, amounted to over 800,000,000 barrels, of 42 U. S. gallons. Of this total tank capacity nearly 500,000,000 barrels were at tank farms and over 300,000,000 barrels at refineries. Of the latter, 80,000,000 barrels were crude storage, so that the total available tankage for crude petroleum on May 1, 1926, was approximately 580,000,000 barrels. Of the various types of storage tanks, steel storage was by far the most widely used and comprised 80 per cent of the total. The remainder was about evenly divided between earthen and concrete storage, with wooden storage almost negligible. There was available at Atlantic ports approximately 60,000,000 barrels of tankage, 40,000,000 barrels of which was for refined products. At ports on the Gulf of Mexico there was storage capacity for about 130,000,000 barrels, of which 75,000,000 barrels was for crude oil. See CHEMISTRY, INDUSTRIAL.

**PETTIGREW**, RICHARD FRANKLIN. Former United States Senator from South Dakota, died at Sioux Falls, S. D., October 5. He was born at Ludlow, Vt., July 23, 1848, and, going to Sioux Falls, quickly sprang into political leadership. In both politics and religion he was an inviolable nonconformist. He achieved nation-wide fame for a few days when he walked out of the Republican national convention in 1896 on its adoption of a platform opposed to the free coinage of silver. On South Dakota's admission to the Union in 1889 he became that State's first senator, having previously served as a delegate to Congress from Dakota Territory. He supported Bryan in his first campaign for the Presidency, and later frequently joined independent party movements. Following his break with the Republican party, he was defeated for the

Senate, and never again held public office. He gave much attention, after his retirement from public life, to the amassing of many curios in his home which, he announced, would on his death go to the city of Sioux Falls as a public museum.

**PHARMACO-PSYCHOLOGY.** See **INSANITY.**

**PHILADELPHIA EXPOSITION.** See **EXPOSITIONS.**

**PHILADELPHIA SYMPHONY ORCHESTRA.** See **MUSIC.**

**PHILHARMONIC ORCHESTRA.** See **MUSIC.**

**PHILIPPINES**, fil'i-pîns, -pên, or pîns. The largest island group of the Malay archipelago; a possession of the United States, ceded by Spain in the treaty of Apr. 11, 1899. Capital, Manila.

**AREA AND POPULATION.** Only 466 of the 7000 islands which make up the group have an area of one square mile or more. The most important islands with their area in square miles are as follows: Luzon, 40,814; Mindanao, 36,906; Samar, 5123; Negros, 4902; Palawan, 4500; Panay, 4448; Mindoro, 3794; Leyte, 2799; Cebu, 1695; Bohol, 1634; and Masbate, 1255. Total area, 114,400 square miles; population, according to the census of 1918, 10,314,310. An estimate of the population in 1925, based upon official computations, placed it at 11,868,300. The population of Manila was 285,306, according to the census of 1918. According to the census of 1918, the race distribution was as follows: Brown, 9,386,826; yellow, 50,826; white, 12,390; negro, 7623; half-breed, 34,663. The immigrants in 1925 numbered 29,310 and the emigrants numbered 29,805.

**EDUCATION.** The outstanding event in education for the year 1925 was a thorough survey of the public-school system. The findings of the surveying board, under the chairmanship of Dr. Paul Monroe of Columbia University, were in general encouraging as regards the success of the public-school system as established. The board strongly recommended that English be continued as the medium of instruction, and that steps be taken to increase the average time that pupils remain in school from three years as at present, to five years. It pointed out the need of a much larger number of American teachers and recommended their assignment to normal schools where they would come into contact with prospective Filipino teachers. The accompanying table gives the chief facts concerning Philippine education:

**PUBLIC SCHOOLS: ENROLLMENT AND NUMBER OF SCHOOLS, 1921-1925**

School-year	Number of schools	Total annual enrollment	Average monthly enrollment	Average daily attendance	Estimated school population	Per cent of enrollment to school population *
1920-1921.....	6,904	943,364	836,281	774,882	2,792,000	33.79
1921-1922.....	7,670	1,077,342	975,093	909,947	2,855,000	38.00
1922-1923.....	7,632	1,102,896	1,000,437	936,120	2,855,000	38.22
1923-1924.....	7,669	1,132,719	1,026,579	957,123	2,924,000	38.74
1924-1925.....	7,789	1,130,866	1,015,455	956,241	2,966,000	38.11

\* Based on the total annual enrollment.

**PRODUCTION.** The total estimated area of arable land in 1925 was placed by the governor-general at 9,000,000 hectares, and the area under the six principal crops shown below was 3,511,000 hectares. The value of the six leading crops for 1924 and 1925 is shown in the accompanying table:

**VALUE OF SIX LEADING CROPS FOR 1924 AND 1925**

	1924 Pesos	1925 Pesos	Per cent increase (+) or decrease (-)
Rice .....	172,957,290	192,179,000	+ 7.
Sugarcane ..	105,667,180	108,310,000	+ 2.6
Coconuts ...	68,184,370	69,600,000	+ 2.
Abaca (hemp)	40,982,280	65,148,000	+ 59.
Corn .....	33,303,960	30,767,000	- 8.
Tobacco ....	11,505,420	11,547,000	.....
Total ..	432,550,500	477,551,000	+ 10.5

The last livestock census showed 1,616,541 carabao; 873,995 cattle; 289,705 horses and mules; 7,524,815 hogs; 1,163,614 goats, and 301,688 sheep. The chief mineral products include gold, coal, salt, iron, copper, silver, and asphalt rock.

**COMMERCE.** The following table from the governor-general's report shows the growth of foreign trade during ten years:

Year	Imports	Exports	Trade balance in favor of (+) or against (-) the Philippine Islands
	Pesos	Pesos	Pesos
1915.....	98,624,367	107,626,008	+ 9,001,641
1916.....	90,992,675	139,874,366	+ 48,881,690
1917.....	131,594,061	191,208,613	+ 59,614,552
1918.....	197,198,423	270,388,964	+ 73,190,541
1919.....	237,278,104	226,235,652	- 11,042,452
1920.....	298,876,565	302,247,711	+ 3,371,146
1921.....	231,677,148	176,230,645	- 55,446,503
1922.....	160,395,289	191,166,596	+ 30,771,307
1923.....	174,999,494	241,505,980	+ 66,506,486
1924.....	216,021,790	270,689,825	+ 54,667,535
1925.....	239,465,667	297,754,410	+ 58,288,743
1926 * .....	238,538,000	273,725,000	+ 35,187,000

\* Preliminary figures.

Business activity in the Philippines in 1926 compared favorably in the aggregate with that of the previous year although during the latter half of the year decreased sugar production and lower cotton prices in the United States acted as a retarding influence. The rice production was estimated at 10 per cent above that of 1925 as the result of favorable weather conditions and increased irrigation facilities; while aside from sugar all other crops were larger in 1926 than in the previous year.

According to the preliminary annual report of the Secretary of Finance the government revenues approximated 77,700,000 pesos (\$38,850,000), or an increase of 4,000,000 pesos (\$2,000,000) over the budget estimate. The net cash surplus of revenues over cash expenditures amounted to about 9,900,000 pesos (\$4,950,000).

The foreign trade in 1926 was smaller than in 1925, but compared favorably with the average for the previous five years. The trade in 1925 was considerably larger than in any year since 1920 and the slight decline in imports in 1926 reflected overproduction of domestic foodstuffs, rather than any measurable decline in purchas-

ing power. Imports in 1926 were valued at 238,538,000 pesos (\$119,269,000), compared with 239,465,000 pesos (\$119,732,500) the previous year, or a decrease of only one-half per cent. Total exports, valued at approximately 273,725,000 pesos (\$136,862,500), registered a decline of 24,029,000 pesos (\$12,014,500) from the export trade of 1925. The decline was more than accounted for by the falling off in value of sugar and abaca shipments.

The year's commercial transactions netted a favorable trade balance of 35,187,000 pesos (\$17,593,500), against an excess of exports in 1925 of 58,288,000 pesos (\$29,144,000). Despite the reduction, however, the trade balance in 1926 was reported by the Governor General to be sufficient to meet all payments of the Philippine government and of private business abroad. The values of leading Philippine exports and imports in 1926, compared with 1925, were as follows:

#### LEADING COMMODITIES IN PHILIPPINE TRADE

	1925 Pesos	1926 Pesos
<b>Exports</b>		
Abaca (manila hemp) . . . . .	71,042,000	64,277,000

Emergency service . . . . .	.....	.....
Transfer to gold standard fund . . . . .	.....	600,000
Outlays and investments . . . . .	2,411,125	2,708,047
<b>Current surplus at the end of the year . . . . .</b>	<b>116,738</b>	<b>919,602</b>

The total bonded indebtedness of the Philippine Islands at the end of 1925 amounted to 165,520,000 pesos, of which 13,920,000 represented provincial and municipal indebtedness, 5,500,000 collateral bonds, and the balance direct obligations of the insular government.

SHIPPING. Most of the foreign shipping is done through the port of Manila, although some of the smaller ports have direct communications with foreign countries. In the calendar year 1925, 1015 vessels of 3,788,695 tons entered the ports of the Philippines, and 984 of 3,711,270 tons cleared. In the same year 19,001 vessels of 2,245,919 tons entered the ports of the islands in domestic trade and 19,287 vessels of 2,252,779 tons cleared in the same trade.

RAILWAYS. The total length of all railroad trackage in the Philippines in 1925 was 1272.72 kilometers, with a total freight and passenger revenue of 11,524,972 pesos.

GOVERNMENT. Executive power is in the hands of a governor-general appointed by the President of the United States, by and with the advice and consent of the Senate; and in six departmental secretaries, all of whom are Filipinos, with the exception of the vice-governor (appointed in the same manner as the governor-general), who acts also as secretary of public instruction. Legislative power is in a senate of 24 members and a house of representatives of 93 members, all of whom are elected by popular vote, with the exception of nine representatives and two senators appointed by the governor-general to represent certain provinces. A council of state, composed of the governor-general as president, the presidents of both branches of the legislature, and the departmental secretaries, constitutes the link between the administrative and legislative departments. Governor-General in 1926, Major-General Leonard Wood, appointed Oct. 5, 1921.

HISTORY. Undoubtedly, the outstanding event in Philippine history during the year was the publication of the report of Col. Carmi A. Thompson, who had been sent to the islands by President Coolidge to make a personal investigation of conditions there, in order to advise the President as to a course of action to be followed in the relations of the islands to the home government. Colonel Thompson's report was published on December 23. On the preceding day the President had transmitted the report to Congress, practically without comment. While he stated that he did not agree with all of Colonel Thompson's views, he failed to name the particulars on which he disagreed. It was commonly believed that he differed with the veiled criticism of General Wood's administration. While indicating that responsibility for friction in the management of Philippine affairs "appears to be divided between the executive and legislative branches of the government" and that General Wood's military aids have been "one of the factors which have made such coöperation difficult," Colonel Thompson conceded that "on the whole General Wood is to be commended for his efficient conduct of affairs during his administration." In concluding his report Colonel Thompson made a number of suggestions of what might be done to secure a better administration of affairs in the Philippines and a further development of their economic condition. He said:

In conclusion, these suggestions are summarized and certain other recommendations made. I have the honor to recommend:

First—That such steps be taken as may be required

to reestablish coöperation between the executive and legislative branches of the Philippine Government.

Second—That the granting of absolute independence to the Philippines be postponed for some time to come; that this matter be considered at some future date when the islands are sufficiently developed to maintain an independent government, and that in the meantime there be granted such further autonomy in the management of internal affairs as conditions may from time to time warrant.

Third—That the United States Government establish an independent department for the administration of the Philippine Islands and other overseas territory.

Fourth—That the Governor General be provided with the necessary civil advisers in order to relieve him of the present necessity of selecting such advisers from the United States Army.

Fifth—That Mindanao and Sulu should not be separated from the rest of the islands, but that American control be strengthened in the Moro country.

Sixth—That the Federal Reserve system should be extended to the Philippine Islands.

Seventh—That one or more Federal land banks should be established in the Philippines to provide loans at reasonable interest rates for the farmers, who now pay from 12 to 30 per cent interest.

Eighth—That the United States Department of Agriculture establish a sufficient number of experiment stations in the Philippine Islands to properly develop the agricultural resources of the islands.

Ninth—That the fundamental law governing the Philippines, known as the Jones act, be not amended or changed at this time.

Tenth—That the Philippine Legislature should amend the Philippine land laws (with proper safeguards) so as to bring about such conditions as will attract capital and business experience for the development of the production of rubber, coffee and other tropical products, some of which are now controlled by monopolies.

Eleventh—That no amendments be made at this time to the Philippine land laws by the American Congress.

Twelfth—That the Philippine Government withdraw from private business at the earliest possible date.

The fundamental problems in the Philippines concern the government of the islands and their future relations with the United States. Upon the proper solution of these problems depends the political, social and economic welfare of the Filipinos.

**PHILLIPS UNIVERSITY.** A coeducational institution of higher education, at University Station, Enid, Okla.; founded in 1907. The student enrollment for 1925-26 in all departments was 1012, and the limited freshman admission was 1270. The number in the faculty was 39. The productive endowment amounted to \$506,830, and an endowment campaign completed during the year brought \$1,252,184 in equipment and pledges. There were 14,012 volumes in the library, exclusive of public documents. President, Isaac Newton McCash, A.M., D.D., LL.D.

**PHILOLOGY, CLASSICAL.** To describe completely the output of articles and books, especially the former, within the very broad field covered by the term classical philology, is beyond the power of any one man. One can, however, gain a fair conception of the more important contributions by examining lists, or abstracts, or both, given in certain periodicals—*American Historical Review*, *The American Journal of Philology*, *The Classical Journal*, *The Classical Quarterly*, *The Classical Review*, *The Classical Weekly*, *Historical Outlook*, *Athenæum* (published at Pavia, Italy), *Bulletin Bibliographique et Pédagogique du Musée Belge* (a companion to *Le Musée Belge*, *Revue de Philologie Classique*), *Philologische Wochenschrift*, and *Revue de Philologie*. Especially valuable is *Bibliotheca Philologica Classica*, *Beiblatt zum Jahresbericht über die Fortschritte der Klassischen Altertumswissenschaft*, whose aim is to cover all publications, both articles and books (except those pedagogical in character) in the whole field of classical philology. Volume 50, covering the year 1923, appeared in 1926. It contained 4334 items. Volume 49, published in 1925, contained

3783 entries for 1922. No attempt is made, however, to indicate relative values of items listed. *The Year's Work in Classical Studies*, published in England, gives material from July to June, annually. The material is grouped. The volume covering July, 1925, to June, 1926, contained the following articles: "Greek Literature," J. F. Dobson; "Latin Literature," A. D. Nock; "Greek History," M. Cary; "Roman History," Hugh Last; "Greek and Roman Religion," H. J. Rose; "Ancient Philosophy," Dorothy Tarrant; "New Testament," F. H. Colson and J. M. Creed; "Roman Britain," F. A. Bruton; "Greek Archaeology and Excavation," A. M. Woodward; "Italian Archaeology and Excavation," T. Ashby.

To the *Loeb Classical Library* (see YEAR BOOKS, 1911-1925) were added, on the Greek side, versions of Æschylus (the second and concluding volume), H. W. Smyth; Aristotle, *The "Art" of Rhetoric*, J. H. Freese; Aristotle, *The Nicomachean Ethics*, H. Rackham; Dio Cassius, Earnest Cary (the eighth of nine volumes); Diogenes Laertius (two volumes), R. D. Hicks; Demosthenes, *De Corona* and *De Falsa Legatione*, C. H. Vince and J. H. Vince; Epictetus, *The Discourses, As Reported by Arrian, The Manual, and Fragments* (one of two volumes), W. A. Oldfather; Eusebius, *The Ecclesiastical History* (one of two volumes), Kirsopp Lake; Josephus, *The Life, and Against Apion* (one of eight volumes), H. St. J. Thackeray; Pausanias, books iii-v (the second of six volumes), W. H. S. Jones and H. A. Ormerod; Plato, volume v, containing *Lysis*, *Symposium*, *Gorgias*, W. R. M. Lamb; Plato, volume vi, containing *Cratylus*, *Parmenides*, *Greater Hippias*, *Lesser Hippias*, H. N. Fowler; Plato, vols. ix and x, *The Laws*, complete, R. G. Bury; Plutarch (the eleventh and final volume), B. Perrin; St. Basil, Letters I-LVIII (one of four volumes), R. J. Deferrari. On the Latin side, translations were added of Cicero, *Philippics*, W. C. A. Ker; Horace, *Satires, Epistles and Ars Poetica*, H. R. Fairclough; Livy, Books viii-x (the fourth of 13 volumes), B. O. Foster.

The great translation of Aristotle which the Oxford Clarendon Press has had under way for many years, under the editorship of W. D. Ross, is making steady progress. Recent additions include, in one volume, renderings of *Categorica* and *De Interpretatione*, E. M. Edghill, *Analytica Priora*, A. J. Jenkinson, and *Analytica Posteriora*, G. R. G. Mure; in another, versions of *Ethica Nicomachea*, W. D. Ross, *Magna Moralia*, St. George Stock, *Ethica Eudemia*, and *De Virtutibus et Vitiis*, J. Solomon. Of the eleven volumes seven have been published.

In *The American Journal of Philology*, xlvii, appeared "The Res Gestæ Divi Augusti as Recorded on the Monumentum Antiochenum," D. M. Robinson; "The Inscriptions of the Imperial Domains of Africa," T. Frank; "Cicero, De Optimo Genere Oratorum," G. L. Hendrickson; "Ut Clauses. Part II," C. W. Mendell; "A Commentary on the Inscription from Henchir Mettich in Africa," T. Frank; "Cicero's Correspondence with Brutus and Calvus on Oratorical Style," G. L. Hendrickson; "The Significance of Augustus as Applied to Hercules and to Romulus: A note on Livy I, 7, 9 and I, 8, 9," Gertrude M. Hirst; "Hyperbole in Mythological Comparison," Helen H. Law. Professor Robinson's paper is, in reality, an *editio princeps* of the version of the Res Gestæ Divi

Augusti found, in fragments, by Sir William Ramsay at Antioch in Pisidia, Asia, and an attempt—unhappily marred by haste—to determine what light the new finds throw on the famous autobiographical inscription prepared by Augustus himself, or under his immediate supervision, as that inscription has been known to us by the version found at Ancyra (Angora), and so known as the Monumentum Ancyranum. For a review of Professor Robinson's monograph, by A. von Premerstein, who has been engaged with Sir William Ramsay on an edition of the Monumentum Antiochenum, see *Philologische Wochenschrift*, 47, 43–50 (Jan. 8, 1927). Professor Frank's paper on the inscription from Henschir Mettich throws light on Roman agricultural practices in Africa.

From *Classical Philology*, xxi, may be mentioned "The Language Situation in and about Greece in the Second Millennium B.C." C. D. Buck; "Things Without Honor," A. S. Pease; "Representative Government in the Panhellenic Leagues, II," J. A. O. Larsen; "Posidonius and the Flight of the Mind Through the Universe," R. M. Jones; "The 'Lost' Manuscript of Cicero's *De Amicitia*," C. H. Beeson; "Μηδων Ἀγαν in Greek and Latin Literature," Eliza G. Wilkins; "Asteria and Dulichium," A. Shewan; "Centaur and Macedonian Kings," E. H. Sturtevant; "Tacitus and Aristocratic Tradition," F. B. Marsh; "The *Hellenica Oxyrhynchia* and the Devastation of Attica," W. G. Hardy. Professor Pease discusses Greek and Roman writings in which "the legitimate methods of encomium are applied to persons or objects in themselves obviously unworthy of praise, as being trivial, ugly, useless, ridiculous, dangerous, or vicious." Professor Jones's paper adds one more to the voices lifted in recent years, especially in America, against the tendency, strong in Germany early in this century, to regard Posidonius as the source of many passages in Greek and Roman authors, especially Cicero and Vergil. Professor Beeson gives the results of an examination of the Codex Parisinus of the *De Amicitia* of Cicero, a manuscript long thought to be lost, but in fact in the Royal Library in Berlin.

In *The Classical Journal*, xxi, xxi, appeared "Cicero's Conception of Literary Art," A. P. McKinlay; "Certain Similarities in the Fundamental Thought of the Early Hebrews and the Homeric Greeks," Charles N. Smiley; "Cicero and the Younger Pliny," H. C. Nutting; "The *Moirai* of Æschylus and the Immanent Will of Thomas Hardy," A. P. D. Valakis; "How Long was Æneas at Carthage?," F. H. Potter; "Where the Romans Lived <in Rome> in the First Century B.C.," Ruth Witherstine; "In Defense of the Corn-Dole," F. B. Marsh; "Some Human Traits of the Scholar Pliny <the Elder>," H. L. Axtell.

*The Classical Weekly*, xix, xx, contained the following articles: "Horace, *Carmina* 1. 2. 13–18," C. Knapp; "Some Presuppositions of Greek Philosophy," G. Boas; "Cæsar's Triumphs," M. E. Deutsch; "Virgil, *Georgics* 1. 311–334," C. Knapp; "Gray's Elegy and the Classics," D. L. Drew; "Some Private Houses in Ancient Rome," Euphemia M. Mann; "Whitewashing Certain of the Ancients," M. M. Odgers; "Some Illustrations of Roman Life," C. Knapp; "Cæsar's Command in Gaul," H. C. Coffin; "M. Victor Bérard on the *Odyssey*," A. Shewan; "The Greek Exploitation of Egypt," W. L.

Westermann; "The Present Trend in Vergilian Studies," Catharine Saunders; "Scientist and Humanist in Homeric Criticism, or, Tendencies in Homeric Criticism," S. E. Bassett; "The Classical Astral Weather Chart for Rustics and for Seamen," E. S. McCartney.

In *Transactions and Proceedings of the American Philological Association*, lvi, which contained the papers read before the Association at Cornell University, in December, 1925, the following articles appeared: "Concerning the Influence of Greek on Vulgar Latin," E. H. Sturtevant; "On a Passage in Vergil, *Æneid* iv, 550–551," M. B. Ogle; "The Vella: A Study in Historical Topography," H. F. Rebert; "The Identification of Augustus with Romulus-Quirinus," K. Scott; "Horace and the Scriptus Quæstorius," C. B. Randolph; "Some Neglected Evidence Bearing on the Ictus Metricus in Latin Verse," J. F. Mountford; "The Virgilian Authorship of the Helen Episode, *Æneid* ii, 567–588," F. W. Shipley; "Vergil and the 'Under-Dog,'" E. Adelaide Hahn; "A Picture Map of Rome in a Manuscript of Valerius Maximus," F. W. Kelsey.

Of the periodical called *Language*, published by the Linguistic Society of America, the formation of which was noted in the *YEAR BOOK* for 1925, two volumes have appeared. Articles that fall within the range of classical philology are the following: "On the Position of Hittite among the Indo-European Languages," E. H. Sturtevant; "Remarks on the Lydian Inscriptions," E. H. Sturtevant; "The Indo-European Negative prefix in *N*," L. H. Gray; "Analogy as a Factor in Semantic Change," S. Kræsch; "Stress Pronunciation in Latin," M. H. Liddell; "A Century of Grimm's Law," H. Collitz; "On Some Animal Names in Italic <Latin>," R. G. Kent; "The Inscription of Duenos," R. G. Kent; "Commodian and Medieval Rhythmic Verse," E. H. Sturtevant. Especially important to the student of things Latin are the papers of Professors Liddell and Kent. The former thinks that, in classical times, Latin accent was not primarily a stress accent. Professor Kent interprets the inscription on the famous Duenos Bowl as a curse aimed at a living person.

In England, the more accessible repositories of the results of classical study are *The Year's Work in Classical Studies* (see above, first paragraph), *The Classical Quarterly*, and *The Classical Review*. From *The Classical Quarterly*, xx, we name the following articles: "Euripides in Macedon," W. Ridgeway; "The Text of the Epistles of Themistocles (*continued*)," J. Jackson; "Anaxagoras and the Parts," A. L. Peck (an attempt to formulate, better than has heretofore been done, the philosophic views of Anaxagoras); "The Myth of Er" (Plato, *Republic*, 616 B), Hilda Richardson; "On the Authenticity of the *Hippias Maior*," G. M. A. Grube; "Homeric Words in Arcadian Inscriptions," C. M. Bowra; "Horace and Pacuvius," H. J. Rose.

In *The Classical Review*, xl, appeared "Aristophanes and Æschylus," M. P. Charlesworth; "Notes on the ΑΘΗΝΑΙΩΝ ΠΟΛΙΤΕΙΑ (*continued*)," A. W. Gomme; "The *Electra* of Euripides," E. T. England; "The Art of Plato," Dorothy Tarrant.

Part II of the revision of Liddell and Scott, *Greek-English Lexicon* appeared. The revision had progressed as far as the word *διαλέγω*.

There is space to mention, in conclusion, only

a very few of the many books that have come to the writer's attention. Since it is, in general, clear to which field of classical philology each work belongs, the books are listed in the alphabetical order of their authors' names. In a very few instances a needed word of comment is added: G. F. Abbott, *Thucydides: A Study in Historical Reality*; F. G. Allinson, *Lucian, Satirist and Artist*; C. Bailey, *The Mind of Rome, and Epicurus, The Extant Remains, with Short Critical Apparatus, Translation, and Notes*; N. H. Baynes, *The Byzantine Empire*; N. Baynes, *The Historia Augusta, Its Date and Purpose*; E. Bell, *Prehellenic Architecture in the Aegean*; K. J. Beloch, *Römische Geschichte bis zum Beginn des Punischen Krieges*; O. Bernhard, *Griechische und Römische Münzbilder in ihren Beziehungen zur Geschichte der Medizin*; H. Berve, *Das Alexanderreich auf Prosopographischen Grundlage*, 2 volumes; Th. Birt, *Alexander der Grosse und das Weltgriechentum*; G. M. Bolling, *The External Evidence for Interpolation in Homer*; G. Busolt, *Griechische Staats und Rechtsaltertümer*, third edition, part 2, prepared by H. Swoboda; *Cambridge Ancient History*, volume iv, dealing with "the Persian Empire and the West"; V. Capocci, La "Constitutio" Antoniniana described as "one of the most complete studies of the famous law of Caracalla"; P. W. Cartellieri, *Die Römischen Alpenstrassen über den Brenner, Reschen-Scheideck und Plöcken = Pass mit ihre Nebenlinien*; S. Casson, *Macedonia, Thrace and Illyria—Their Relations to Greece from the Earliest Times Down to the Time of Philip, Son of Amyntas*; M. P. Charlesworth, *Trade Routes and Commerce of the Roman Empire*, second edition; F. H. Colson, *The Week: An Essay on the Origin and Development of the Seven-Day Cycle*; G. Contenau, *La Civilisation Phénicienne*; A. B. Cook, *Zeus, A Study in Ancient Religion*, vol. ii, dealing with "Zeus, God of the Dark Sky (Thunder and Lightning)"; P. Couissin, *Les Armes Romaines: Essai sur les Origines et l'Évolution des Armes Individuelles du Légionnaire Romain*; H. Dessau, *Geschichte der Römischen Kaiserzeit*, vol. ii, part 1, dealing with "Die Kaiser von Tiberius bis Vitellius"; Sir Samuel Dill, *Roman Society in Gaul in the Merovingian Age*; A. von Domaszewski, *Die Phalangen Alexanders und Cäsars Legionen*; M. L. D'Ooge, *Nicomachus of Gerasa, Introduction to Arithmetic, Translated*; D. L. Drew, *Oulex—Sources and Their Bearing on the Problem of Authorship*; Sir Arthur Evans, *The Early Nilotic, Libyan, and Egyptian Relations with Minoan Crete*; L. R. Farnell, *The Attributes of God*; A. FitzGerald, *The Letters of Synesius of Cyrene, Translated into English, with Introduction and Notes*; E. Foord, *The Last Age of Roman Britain*; Sir James G. Fraser, *The Worship of Nature*, vol. i; Kathleen Freeman, *The Life and Work of Solon, With a Translation of his Poems*; P. Gardner, *New Chapters in Greek Art*; J. Geffcken, *Griechische Literaturgeschichte, Erster Band, Von den Anfängen bis auf die Sophistenzeit*; G. Glotz, *Ancient Greece at Work* (a translation, from the French, by M. R. Dobie, of a very important work); G. Glotz, *Histoire Grecque, Tome Premier: Des Origines aux Guerres Médiques*; E. Goldmann, *Die Duennos-Inschrift*; A. Grenier, *Le Génie Romain dans la Religion, la Pensée, et l'Art*; S. W. Grose, *Catalogue of the McClean Collection of Greek*

*Coins <in the Fitzwilliam Museum>*, vol. ii; G. B. Grundy, *A History of the Greek and Roman World*; A. Gwynn, *Roman Education from Cicero to Quintilian*; W. R. Halliday, *The Pagan Background of Early Christianity*; J. P. Harland, *Prehistoric Aigina*; I. L. Heiberg, *Geschichte der Mathematik und der Naturwissenschaften im Altertum*; J. B. Hofmann, *Lateinische Umgangssprache*; G. Home, *Roman London: A History of London During the Roman Period*; L. Homo, *L'Empire Romain*; W. W. How, *Cicero, Select Letters, With Historical Notes, Introductions, and Appendices* (two volumes); T. Hudson-Williams, *Early Greek Elegy: The Elegiac Fragments . . . , Edited with Introduction, Text, Critical Notes, and Commentary*; O. Kern, *Die Religion der Griechen, Erster Band: Von den Anfängen bis Hesiod*; A. Köster, *Die Griechischen Terrakotten*; W. Kroll, *Historia Alexandri Magni*, vol. i; R. H. Murray, *The History of Political Science from Plato to the Present Day*; M. P. Nilsson, *Imperial Rome*, translated by G. C. Richards (the work deals with "Men and Events" and with "The Empire and its Inhabitants"); B. Olsson, *Papyrusbriefe aus der Frühesten Römerzeit*; W. Otto, *Kulturgeschichte des Altertums*; E. Pfufl, *Masterpieces of Greek Drawing and Painting* (a translation, by J. D. Beazley); O. Plasberg, *Cicero in Seinen Werken und Briefen*; F. Poland, E. Reisinger, and R. Wagner, *The Culture of Ancient Greece and Rome: A General Sketch* (a translation from the German, by J. H. Freese); Byron Khun de Prorok, *Digging for Lost African Gods*; Th. Reinach, *La Musique Grecque*; B. Reynolds, *The Vigiles of Imperial Rome*; Gisela M. A. Richter, *Ancient Furniture, Greek, Etruscan and Roman*; G. T. Rivoira, *Roman Architecture and its Principles of Construction under the Empire* (translated from the Italian by G. Mc N. Rushforth); H. J. Rose, *Primitive Culture in Greece, and Primitive Culture in Italy*; M. Rostovtzeff, *The Social and Economic History of the Roman Empire, and A History of the Ancient World*, vol. i, *The Orient and Greece*; W. Schubart, *Palaeographie: Erster Teil, Geschichte der Palaeographie*; A. Schulten, *Sertorius*; W. Scott, *Hermetica*, vol. iii; Emily L. Shields, *Juno, A Study in Early Roman Religion*; P. M. Schisas, *Offenses Against the State in Roman Law, and the Courts Which Were Competent to Take Cognizance of Them*; Stolz-Schmalz, *Lateinische Grammatik*, fifth edition, by M. Leumann and J. B. Hofmann, I. *Lieferung, Einführung, Laut- und Formenlehre*; A. E. Taylor, *Platonism and Its Influence*; Mrs. E. D. Van Buren, *Greek Fictile Revetments*; R. von Pöhlmann, *Geschichte der Sozialen Frage und des Sozialismus in der Antiken Welt*, third edition, by F. Oertel (two volumes); H. B. Walters, *Catalogue of the Engraved Gems and Cameos, Greek, Etruscan, and Roman, in the British Museum*, revised edition; Tatiana Warscher, *Pompeji: Ein Führer durch die Ruinen*; E. Weiss, *Griechisches Privatrecht auf Rechtsvergleichender Grundlage, I. Allgemeine Lehren*; W. L. Westermann and C. J. Kraemer, Jr., *Greek Papyri in the Library of Cornell University*; R. E. M. Wheeler, *Prehistoric and Roman Wales*; Th. Zielinski, *La Religion de la Grèce Antique*.

**PHILOLOGY, MODERN.** As a consequence of the rapid progress which the study of philology has been making in the United States during

the past 25 years, American scholars were seeking more than ever before to consolidate their efforts, and with that end in view are founding learned societies whose primary aim is the promotion of research. Thus, the Linguistic Society of America, which began its career in 1925, had become recognized as the authoritative body in America in all matters pertaining to general philological investigation. The official review of the Linguistic Society, *Language*, which in 1926 had completed its second year, had done much, by the high standard of its contributions, to promote research, while the series of monographs instituted by the Society afford an outlet for studies of greater length and more technical character.

In January, 1926, there was founded under the auspices of Harvard University the Medieval Academy of America whose aim, as stated in its constitution, is "to conduct, encourage, promote and support research, publication and instruction in mediæval records, literature, languages, arts, archaeology, history, philosophy, science, life and all other aspects of mediæval civilization by publications, by research and by such other means as may be desirable, and to hold property for such purpose." This new Academy elected the following officers: President, E. K. Rand, Harvard; first vice-president, J. M. Manly, Chicago; second vice-president, C. H. Haskins, Harvard; third vice-president, J. F. Willard, Colorado; treasurer, J. N. Brown; executive secretary, J. Marshall; clerk, R. A. Cram; members of council, P. S. Allen, Chicago; G. H. Gerould, Princeton; A. K. Porter, Harvard; J. S. P. Tatlock, Harvard; C. H. Beeson, Chicago; L. J. Paetow, California; W. W. Rockwell, Union Theological Seminary; J. W. Thompson, Chicago; G. R. Coffman, Boston; G. A. Plimpton, Boston; J. H. Ryan, Catholic University; and K. Young, Yale.

One of the first acts of the academy was to begin publication of a quarterly review under the title of *Speculum*; it is edited by E. K. Rand and F. P. Magoun, Jr., both of Harvard. Unfortunately, the scholarship of the contributions to *Speculum* cannot be said to reflect high credit on the academy. It is to be hoped, therefore, that this learned body will show hereafter greater democracy of spirit by introducing new methods and ideas that may be indicative of progress.

Chancellor Thomas E. Benner of the University of Porto Rico during the year placed the department of Spanish studies of that institution under the supervision of Prof. Federico de Onís of Columbia University. Educated at the University of Madrid and later professor of Spanish literature at the University of Salamanca, Professor de Onís has, since assuming the professorship of Spanish literature at Columbia University in 1916, become thoroughly imbued with American traditions and methods.

Chancellor Benner named as honorary directors of the department of Spanish studies in the University of Porto Rico, Professors Ramón Menéndez Pidal, president of the Spanish Royal Academy and Director of the Centro de Estudios Históricos of Madrid; Tomás Navarro Tomás, director of the phonetic laboratory of the Centro, and John L. Gerig, executive officer of the department of Romance languages of Columbia University. Among the visiting professors for the academic year 1927-8 were to be Professors

Navarro Tomás and Alonso of Madrid and de Onís of Columbia University. The professors and lecturers of the regular staff include the leading scholars and men of letters of Porto Rico. American teachers and students have, therefore, the unusual opportunity of studying for higher degrees in Spanish in an American university whose atmosphere and environment are entirely Spanish and in whose faculty are numbered leading scholars in the realm of Spanish letters.

GENERAL. While human geography has been studied for many years in Europe, it was only beginning to receive, in the United States, the attention which it deserved. P. Vidal de la Blache, the great French savant who died in 1918, outlined for himself a gigantic plan according to which he was to make a survey of all the peoples of the earth "in which," says a reviewer in the *New York Times Book Review* (December 26, p. 7) "many sciences besides geography were to play their parts, from the study of the earliest distribution of mankind about the earth to that of currents of commerce by land and sea in the present day." Though de la Blache was unable to fulfill his truly magnificent plan, the papers he left in a complete state have been published by E. de Martonne and have been translated by Millicent T. Bingham, with the title, *Principles of Human Geography* (New York). V. G. Childe, *The Aryans* (New York) presents anew the eternally perplexing question of Indo-European origins. It may be observed, however, that there is a very long way from the fanciful and poetic theories of Pictet and Max Müller—so popular in the eighties of the 19th century—to the scientific deductions of contemporary scholars. E. Pittard, *Race and History* (New York), translated by V. C. C. Collum, contains an excellent ethnographical introduction to history, from which modern critics of historical method, such as Sir J. Fortescue in his essay on *The Writing of History* (New York), might derive some profit.

A very unusual work is C. Callet, *Le Mystère du Langage* (Paris), wherein the author attempts to analyze the primitive sounds into onomatopoeic sounds characterized by their sonorousness, such as *mew, ma, mo, mov*, hissing sounds, and growled sounds, as *rre, ke, gre, gny* and *ny*. H. Schuchardt, *Primitivæ Lingvæ Vasconum* (Halle) is an excellent introduction into the study of Basque, a European language whose ancestor is as yet unknown. A. R. Nykl, *The Quinary-Vigesimal System of Counting in Europe, Asia and America* is an interesting study published in *Language* (Menasha, Wis., II, 166-173).

A very useful guide for students is contained in R. G. Kent and E. H. Sturtevant, *Survey of Linguistic Studies* (Baltimore), which lists the opportunities for advanced work in linguistics in the universities of the United States.

INDO-IRANIAN. Contributions to this subject include A. B. Keith, *The Religion and Philosophy of the Veda and Upanishads* (Cambridge, Mass., 2 vols.), which contains an excellent investigation into the philosophy of this period; Vatsyayana, *Kama Sutra* (Paris); C. A. Kincaid and R. B. D. B. Parasius, *History of the Maratha People* (New York, vol. iii), which extends from the death of Shahu to the end of the Chitpavan epic; P. Singh, *The Spirit of Oriental Poetry*

(New York), a new volume in Trübner's Oriental Series; Clarisse Bader, *Women in Ancient India* (New York), translated by Mary E. R. Martin for the same series; N. C. Mehta, *Studies in Indian Painting* (Bombay), extending from the beginning of the seventh century to about 1870; J. B. Bury, S. A. Cook and F. E. Adcock, *The Persian Empire and the West* (New York), being the fourth volume of the Cambridge Ancient History; J. D. C. Pavry, *The Zoroastrian Doctrine of a Future Life* (New York), a doctoral dissertation, Columbia University; C. Antiran, *Sumérien et Indo-européen* (Paris), which deals with the morphological aspect of the question; and L. A. Waddell, *The Indo-Sumerian Seals* (London), according to which the Sumerians of the Indus Valley were Phœnicians, Barats, Goths and Vedic Aryans.

**CELTIC.** The trustees of the British Museum have at last undertaken to publish the invaluable *Catalogue of Irish Manuscripts in the British Museum* (London), of which the first volume was prepared by S. H. O'Grady and the second by R. Flower. This extensive work should prove an indispensable tool for all Celtists. J. J. Walsh, *The World's Debt to the Irish* (Boston) is overstated. Other works dealing with various periods of Irish literature include the Rev. C. Plummer's *On the Colophons and Marginalia of Irish Scribes* (New York), printed in the *Proceedings* of the British Academy; M. V. Ronan, *The Reformation in Dublin* (New York), containing a history of the period from 1536 to 1558, gathered from original sources; A. Young, *A Tour in Ireland* (New York), presenting his observations on the state of that country made in 1776-78; S. Téry, *L'Ile des Bardes* (Paris), with notes on contemporary Irish literature; and W. M. Letts, *More Songs from Leinster* (Paris), being a collection of Irish poems. Among contributions to the study of Welsh are the seventh volume of *An Inventory of the Ancient Monuments in Wales and Monmouthshire* (London), which concerns the county of Pembroke; and B. K. Ray, *The Character of Gawain* (New York), originally published by the University of Dacca. *Scottish Gaelic Studies* is the title of a new periodical issued from the Celtic department of the University of Aberdeen and edited by John Macdonald. It is interesting to note that though the scope of the review embraces "research in all branches of Celtic study connected with Scotland, prominent attention will be given to the investigation of modern Scottish Gaelic," especially to the dialects "which are so important for the study of the history of the language."

**SLAVIC.** *Selected Russian Short Stories* (New York), translated by A. E. Chamot, contains examples from the work of 10 different writers, from Pushkin to Andréev; while Czech literature which, suppressed for 200 years, began to revive in the early part of the nineteenth century, is represented by *Selected Czech Tales* (New York), being a volume of nine stories translated by Marie Busch and O. Pick.

**ENGLISH.** As indicated heretofore, the radio is rendering the standardization of English pronunciation increasingly imperative. Thus, on Dec. 11, 1928, the Advisory Committee on Spoken English, which includes G. B. Shaw, Sir J. Forbes-Robertson and Robert Bridges, issued a new list of officially sanctioned pronunciations. The *New York Times*, in an editorial, com-

mented on the necessity of a uniform pronunciation for American broadcasters as well. *The Year's Work in English Studies, 1924* (London), edited by F. S. Boas and C. H. Herford, contains a comprehensive survey of investigations in the English language and literature. C. S. Northrup, *Register of Bibliographies of the English Language and Literature* (New Haven, Conn.) includes also contributions by J. Q. Adams and A. Keogh. J. Wright and E. M. Wright, *Old English Grammar* (London) appeared in a third revised edition. H. W. Fowler, *Dictionary of Modern English Usage* (London) contains not only words but phrases alphabetically arranged. O. Barfield, *History in English Words* (New York) reveals the story of the development of ideas in Anglo-Saxon history as shown by a study of words and their uses. Other works along the same lines include E. Weekley, *Words Ancient and Modern* (New York); P. O. Landon, *A Compendium of Compound Words* (Des Moines, Ia.), containing also a list of troublesome terminations; H. J. Walther, *Correct English* (New York) with an alphabetical list of slips of tongue and pen; and *Academy Papers* (New York), a collection of essays on the English language by members of the American Academy of Arts and Letters.

English phonetics and kindred subjects are studied in T. Nicklin, *Standard English Pronunciation* (London); W. H. P. Phye, *18,000 Words Often Mispronounced* (New York); and G. Greever and J. M. Bachelor, *The Century Vocabulary Word-Book* (New York), a textbook on the use of words. The Society of Pure English issued the following tracts during the year: No. XXII, *The Nature of Human Speech*, by Sir R. Paget; No. XXIII, *English Handwriting*, by R. Fry and E. A. Lowe; and No. XXIV, *Notes on Relative Clauses*, by O. Jespersen, with also a dictionary of American slang by F. N. Scott.

Useful dictionaries included March's *Thesaurus Dictionary* (Philadelphia), a fourth edition of a work first issued in 1903; *Pitman's Book of Synonyms and Antonyms* (New York); H. Higgs, *Palgrave's Dictionary of Political Economy* (New York), 3 vols.; M. W. Jacobus, E. E. Nourse and A. C. Zenos, *New Standard Bible Dictionary* (New York); and G. H. Maines and B. Grant, *Wise Crack Dictionary* (New York), containing more than 1000 words and phrases. R. C. Borden and A. C. Russell, *Speech Correction* (New York) deals with the major forms of defective speech.

Collections of proverbs and quotations are found in *Putnam's Complete Book of Quotations, Proverbs and Household Words* (New York), edited by W. G. Benham; J. G. Lawson, *The World's Best Proverbs and Maxims* (New York); and Mrs. C. Smith, *History's Most Famous Words* (Boston).

Special studies comprise E. G. Millar, *English Illuminated Manuscripts, from the tenth to the thirteenth century* (Paris); O. Elton, *Essays and Studies by Members of the English Association* (New York, vol. x), treating mainly of Anglo-Saxon poetry; *Beowulf* (London), translated into modern English verse by A. Strong; A. Brunsdorff, *The Chaucer Tradition* (London); J. M. Manly, *Some New Light on Chaucer* (New York), eight lectures delivered at the Lowell Institute; D. D. Griffith, *Bibliography of Chaucer, 1908-1924* (Seattle, Wash.); H.

Eicker, *Die Historische Volksballade der Engländer und Schotten* (Leipzig); B. P. Kurtz, *From St. Anthony to St. Guthlac* (Berkeley, Calif.), a study in biography; B. Jarrett, *Social Theories of the Middle Ages* (Boston); A. P. Newton, *Travel and Travelers of the Middle Ages* (New York); R. L. Poole, *Chronicles and Annals* (New York), a brief outline of their origin and growth; T. F. Crane, *Liber de Miraculis Sanctae Dei Genetricis Mariae* (New York); *Wine, Women and Song* (New York), mediæval Latin students' songs translated by J. A. Symonds; M. De Wulf, *History of Mediæval Philosophy* (New York), of which the first volume goes as far as Albert the Great; G. G. Coulton, *Mediæval Village* (Cambridge); J. M. Clark, *The Abbey of St. Gall* (Cambridge); R. H. Snape, *English Monastic Finances in the Later Middle Ages* (Cambridge); G. R. Owst, *Preaching in Mediæval England* (Cambridge); D. H. S. Crane, *The House of the Monk* (Cambridge); L. F. Salzman, *English Life in the Middle Ages* (Oxford); W. D'Aygaliers, *Ruysbroeck the Admirable* (New York), a study of the Flemish mystic, translated by F. Rothwell; P. S. and H. M. Allen, *Opus Epistolarum Des. Erasmi Roterodami* (New York, vol. 6), containing his correspondence from 1525 to 1527; P. S. Allen, *Erasmus' Services to Learning* (New York); M. P. Tilley, *Elizabethan Proverb Lore in Lyly's "Euphues" and in Pettie's "Petite Pallace," with Parallels from Shakespeare* (New York); G. F. Bradby, *About Shakespeare and His Plays* (New York); A. Gray, *A Chapter of the Early Life of Shakespeare* (Cambridge); H. Granville Barker, *From Henry V to Hamlet* (New York); E. K. Chambers, *Shakespeare: a Survey* (New York), a collection of essays; and Gwendolen Murphy, *A Cabinet of Characters* (New York), including examples from Theophrastus and Pope Innocent III to Thackeray and Galsworthy.

GERMAN. A most welcome addition to Germanic periodicals is the *Germanic Review*, founded recently by the Germanic Department of Columbia University, and edited by R. H. Fife, F. W. J. Heuser and A. F. J. Remy. The high standard maintained by the articles published insures a good future for the review. H. Hirt, *Geschichte der deutschen Sprache* (Munich) appeared in a second edition. Studies devoted to different periods of German literature include G. W. S. Friedrichsen, *The Gothic Version of the Gospels* (New York); H. de Boor, *Frühmittelhochdeutsche Studien* (Halle); F. Rostock, *Mittelhochdeutsche Dichterheldensage* (Halle); and H. Jellinghaus, *Geschichte der mittelniederdeutschen Literatur* (Berlin, 3rd ed.).

Among recent dictionaries are E. Ochs, *Badisches Wörterbuch* (Lahr), of which the first part (*A-Auffangen*) appeared; J. Müller, *Rheinisches Wörterbuch* (Bonn), now in the letter B; O. Mensing, *Schleswig-Holsteinisches Wörterbuch* (Neumünster), also in the letter B; W. Sturmels, *Etymologisches Lexikon deutscher und fremdländischer Ortsnamen* (Berlin); and H. C. G. Brandt, *German-English Dictionary* (New York).

Special studies include A. Heintze, *Die deutschen Familiennamen* (Halle), the sixth edition, by P. Cascorbi; L. Jutz, *Die Mundart von Südvorarlberg und Liechtenstein* (Heidelberg); J. Feldmann, *Ortsnamen* (Halle); L. A. W. Loughby, *The Classical Age of German Literature*

(New York); P. C. Weber, *America in Imaginative German Literature in the First Half of the Nineteenth Century* (New York), a Columbia dissertation; and *Studies in German Literature* (Madison, Wis.) in honor of A. R. Hohlfeld by his colleagues of the University of Wisconsin. An excellent bibliography of American contributions to the study of German language and literature is F. W. J. Heuser, *Germanisches Schrifttum Amerikas 1925*, which appeared in the *Literarisches Zentralblatt für Deutschland* (cols. 1567-1584).

SCANDINAVIAN. *The Oxford Book of Scandinavian Verse* (New York) edited by E. Gosse and W. A. Craigie, contains a representative selection of poems extending from the eighteenth to the twentieth century. Other works include H. W. Mabie, *Norse Stories* (New York); and the first volume of *Studies and Records* (Minneapolis, Minn.), dealing with Norwegian immigration to the United States and published by the Norwegian-American Historical Association.

ROMANCE, GENERAL. An excellent survey of *Romance Linguistics in 1925* is that of Pauline Taylor, published in the *Romantic Review* (pp. 175-188). The list includes books, articles and book reviews and is subdivided as follows: General; Vulgar and Mediæval Latin; Phonology; Syntax; Etymology, Vocabulary and Style; Old French and Provençal; French; Spanish; Italian; Miscellaneous. A. Zauner, *Romanische Sprachwissenschaft* (Berlin) has appeared in a new edition.

FRENCH. C. Bally, *Le Langage et la vie* (Paris) is a very important work in which the author develops further preliminary ideas sketched in a general way in a work issued in 1913. Among the subjects he discusses are questions of general and stylistic linguistics, transmitted and acquired language, and the development of the mind. The seventh volume of F. Brunot's monumental *Histoire de la langue française* (Paris) is devoted to *La Propagation du français en France jusqu'à la fin de l'Ancien Régime*. Dictionaries of importance include E. Gamillscheg, *Französisches etymologisches Wörterbuch* (Heidelberg) of which the first *Lieferung* appeared; Lebrun and Toisoul, *Dictionnaire étymologique de la langue française* (Paris); and Tobler-Lommatsch, *Altfranzösisches Wörterbuch* (Berlin), which has now reached the end of the letter B.

In Old French we have K. Voretzsch, *Einführung in das Studium der altfranzösischen Literatur* (Halle), containing also an excellent introduction into the Old French language; F. Schür, *Das altfranzösische Epos zur Stilgeschichte und inneren Form der Gotik* (Munich); A. Hilka, *Rolandsmaterialien I, das altfranzösische Rolandslied nach der (Oxford) Handschrift* (Halle); A. J. Dickman, *Le Rôle du surnaturel dans les Chansons de Geste* (Iowa City, Ia.); L. Brandin, *Berthe au grand pied d'après deux romans en vers du XIII<sup>e</sup> siècle* (Paris); J. R. Reinhard, *Amadas et Ydoine* (Paris), a romance of the thirteenth century; K. Glaeser, *Altfranzösisches Lesebuch des späteren Mittelalters* (Halle); K. Heisig, *Studien zur Chanson de la Croisade contre les Albigeois* (Breslau); E. Vinaver, *Études sur le Tristan en prose* (Paris); the same author's *Le Roman de Tristan et Iseult* (Paris); Anna J. Cooper, *La Pèlerinage de Charlemagne* (Paris), with an introduction by Abbé F. Klein; J. Morawski, *Proverbes français*

antérieurs au XVe siècle (Paris); K. Warnke, *Vier Lais der Marie de France* (Halle); the same author's *Aus dem Esope der Marie de France* (Halle), a collection of thirty pieces; G. Rohlf, *Sechs altfranzösische Fabeln* (Halle); E. Champion, *Le Sire de Beaumanoir* (Paris), inedited letters of Gaston Paris and Henri Bordier; C. G. S. Bland, *The Autobiography of Guibert de Nogent* (Paris); H. Spinks *Eine altfranzösische Liedersammlung* (Halle); and V. L. Dedecq, *Etude littéraire et linguistique de Li Hystore de Julius César de Jehan de Tuim* (Philadelphia).

Later periods of French literature are represented by P. G. C. Campbell, *L'Épître d'Othéa, Étude sur les sources de Christine de Pisan* (Paris); J. Delteil, *Joan of Arc* (New York), translated by M. Cowley; L. Denis, *The Mystery of Joan of Arc* (New York) translated by A. Conan Doyle; *The Complete Poems of François Villon* (New York), translated by J. H. Lepper; Antoine de la Sale, *The Fifteen Joys of Marriage* (New York), translated by R. Aldington; L. Cons, *L'Auteur de la Farce de Pathelin* (Princeton, N. J.), the seventeenth volume in the Elliott Monographs series, edited by E. C. Armstrong; R. C. Williams, *The Merveilles in the Epic* (Paris); N. H. Clement, *The Influence of the Arthurian Romances on the Five Books of Rabelais* (Berkeley, Calif.); A. Huguenot *Family in the Sixteenth Century* (New York), a translation of Philippe de Mornay's *Mémoires* by Lucy Crump; F. L. Schoell, *Études sur l'humanisme continental en Angleterre à la fin de la Renaissance* (Paris) a splendid work devoted to the influence of M. Ficinus, L. Gyraldus, N. Comes, D. Erasmus, G. Xylander, H. Wolfius, H. Stephanus, and J. Spondanus; N. Serban, *Les Comédies de Corneille* (Jassy, Roumania); M. Kapp, *Die Frauengestalten in Molières Werken* (Halle); L. Roth, *Correspondence of Descartes and Constantyn Huygens, 1635-1647* (New York), edited from manuscripts in the Bibliothèque Nationale; D. Mornet, *La Pensée Française au XVIIIe siècle* (Paris), a very important work; I. O. Wade, *The "Philosophe" in the French Drama of the Eighteenth Century* (Princeton, N. J.), the eighteenth volume of the Elliott Monographs series; *Maxims and Considerations of Chamfort* (Berkshire, Eng.), translated by E. P. Mathers; Margaret Gilman, *Othello in French* (Paris); M. B. Garrett, *The Controversy over the Composition of the States General, Nov. 6-25, 1788* (Birmingham, Ala.), a volume in the Howard College Studies; the same author's *Critical Bibliography of the Pamphlet Literature Published in France between July 5 and Dec. 27, 1788* (Birmingham, Ala.); Charlemagne Tower, *The Marquis de la Fayette in the American Revolution* (Philadelphia, 2 vols.); and J. Marsan, *Le Conservateur Littéraire, 1819-1821* (Paris), the second part of the critical edition.

Special studies on vocabulary, syntax, dialects, etc. include P. Desfenilles, *Dictionnaire de rimes* (Paris); M. Frey, *Les transformations du Vocabulaire Français (1789-1800)* (Paris); H. Lapaire, *Le Patois berrichon* (Paris); B. Henderson and C. Calvert, *Wonder Tales of Alsace-Lorraine* (New York); and G. Esnault, *L'Imagination populaire* (Paris) containing an essay on the French spoken in Basse-Bretagne compared with dialects of Paris.

Finally, two new reviews deserving mention

are *Annales de L'Université de Paris* (Paris) of which the first volume appeared; and *Sep-timanie* (Narbonne), an excellent provincial literary review edited by P. Castéla.

ITALIAN. The Italian House, which is to serve as the headquarters of the Institute of Italian Culture in the United States, was nearing completion on the campus of Columbia University. Among other activities it will house a library of 15,000 volumes devoted to contemporary Italy, the donation of Dr. Charles Paterno, of New York.

The *Breviario di neolinguistica* (Modena) contains in its first part *Principi generali* by G. Bertoni, and in its second part *Criteri tecnici* by M. G. Bertoli. Other works include S. Frascino, *Testi italiani antichi* (Halle); M. Asin, *Islam and the Divine Comedy* (New York); A. H. Guilbert, *Dante's Conception of Justice* (Durham, N. C.); E. H. R. Tatham, *Francesco Petrarca* (London), the second volume of a new biography; G. Zaccagnini, *La vita dei maestri e degli scolari nello studio di Bologna nei secoli XIII e XIV* (Bologna); A. Mortier, *Un dramaturge populaire de la Renaissance italienne, Ruzzante (1502-1542)* (Paris); M. Ferrara, *Per la storia del Proverbio nel Secolo XVI* (Lucca) devoted to Fra Benedetto da Firenze and his *Divisio proverbiosa*; V. Ulargiu, *Fonologia Sarda logudorese e campidanese* (Palermo); F. Còcola, *Vocabolario dialettale biscegliese-italiano* (Trani); and Fedro, *Le favole, tradotte in dialetto bresciano* (Brescia), a translation by G. B. Bordogna.

PORTUGUESE. A. F. G. Bell, *Oxford Book of Portuguese Verse* (Oxford) extends from the twelfth to the twentieth century. F. de Figueiredo; "Camões as an Epic Poet" is an interesting contribution to the *Romania Review* (New York). On Brazil we have R. Nash, *The Conquest of Brazil* (New York); Elsie S. Eells, *The Brazilian Fairy Book* (New York); and E. Belfort de Magalhães, *A Educação popular no Brazil* (Bahia), a contribution to the study of education in Brazil. Two new reviews of importance are *Portugalia* (Lisbon), edited by F. de Figueiredo, and devoted to culture and literature; and *Bíblas* (Coimbra), a bibliographical review edited by the faculty of letters of the University of Coimbra.

PROVENÇAL AND CATALAN. The recent purchase by Columbia University of a manuscript bibliography of Provençal literature by E. Lefèvre, in thirty-six volumes, as well as the acquisition last year by the same institution of 300 autographed volumes by modern Félibres, form valuable additions to the Provençal material in the United States. Works of importance are R. de Loi, *Trails of the Troubadours* (New York); H. B. Breuer, *Jauffre, ein Altprovenzalischer Abenteuerroman des XIII Jahrhunderts* (Göttingen); A. Kolsen, *Trobadorgedichte* (Halle); K. Lewent, *Bruchstücke des provenzalischen verseromans Flamenca* (Halle); C. Appel, *Bernart von Ventadorn* (Halle); and A. Wuttke, *Die Beziehungen des Félibrige zu den Trobadours* (Halle).

On Catalan we have W. Meyer-Lübke, *Das Katalanische* (Heidelberg), treating its relations to Spanish and Provençal.

RUMANIAN. As a consequence of the visit of 28 Rumanian intellectuals to the United States in August, an Institute of Rumanian Culture was founded at Columbia University. Important

works of the year include A. Babel, *La Bessarabie* (Paris), an economic, ethnographical and historical study; N. Iorga, *History of Rumania* (New York), translated by J. McCabe; L. Feraru, "Development of the Rumanian Novel," a contribution to the *Romanic Review* (New York); the same author's *Maghernița Veche* (Bucharest), a collection of poems on Rumanian life; *The Queen of Roumania's Fairy Book* (New York); J. B. Segall, *Roumanian Folk Tales* (Orono, Me.); and A. Scriban, *Gramatica limbii Românești* (Jassy), a Rumanian grammar.

**SPANISH.** The Instituto de las Españas in the United States issued a booklet giving a list of its accomplishments during the six years since its organization. They include the publication of 21 volumes and pamphlets, the organization of six annual lecture tours for official lecturers, six annual tours for teachers and students to Spain, the collection of 500 slides on Hispanic subjects, the affiliation of 194 clubs representing 28 states of the Union, the creation of a library of 500 volumes, etc.

Among the important contributions to the study of Spanish literature are R. Menéndez Pidal, *Flóresta de leyendas heroicas españolas* (Madrid) devoted to *Rodrigo, el último Godo*; the same author's *El Rey Rodrigo en la literatura* (Madrid); W. Giese, *Waffen nach der spanischen Literatur des 12 und 13. Jahrhunderts* (Hamburg); J. Ribera, *La música Andaluza en las Canciones de trovadores, troveros y minnesinger* (Madrid) of which the third fascículo appeared; Gonzalo de Berceo, *Los milagros de nuestra Señora, I* (Halle), edited by A. Hamel; S. G. Morley, *Spanish Ballad Problems* (Berkeley, Calif.), treating of the native historical themes; J. H. English, *The Alternation of H and F in Old Spanish* (New York), a publication of the Instituto de las Españas; J. P. R. Lyell, *Early Book Illustration in Spain* (London); P. Van Dyke, *Ignatius Loyola* (New York); W. Mulertt, *Studien zu den letzten Buchern des Amadisromans* (Halle); Cervantes, *The Ingenious Gentleman Don Quixote of La Mancha* (New York), a new edition of Ormsby's celebrated translation; Clara L. Penney, *Luis de Gongora y Argote (1561-1627)* (New York), a volume in the Peninsular Series of the Hispanic Society of America; W. L. Fichter, *El Castigo del Discreto* (New York), a study on a play of Lope de Vega, published by the Instituto de las Españas; Clara L. Penney, *Diary of Washington Irving, Spain, 1828-1829* (New York), another volume in the Peninsular Series of the Hispanic Society; Theophile Gautier, *A Romantic in Spain* (New York), translated by Catherine A. Phillips; C. Barja, *En Torno al Lirismo Gallego del Siglo XIX* (Northampton, Mass.), a publication in the Smith College Studies; J. Dornhof, *Johann N. Böhl von Faber, ein Vorkämpfer der Romantik in Spanien* (Hamburg); and W. Mulertt, *Azorin (José Martínez Ruiz)* (Halle).

Grammatical and other studies recommended are Nebrija, *Gramatica de la lengua castellana (Salamanca, 1492)* (London), edited by I. González-Llubera; R. K. Spaulding, *History and Syntax of the Progressive Constructions in Spanish* (Berkeley, Calif.); T. Navarro Tomás and A. M. Espinosa, *Primer of Spanish Pronunciation* (New York); C. F. Sparkman, *Games for Spanish Clubs* (New York), a volume in the series of the Instituto de las Españas; A. A.

Moll, *Spanish-English Medical Dictionary* (Chicago); G. M. Vergara, *Cuatro mil palabras no incluidas en el Diccionario de la real Academia Española* (Madrid); and J. Z. Cuevas, *Catálogo de los manuscritos castellanos de la Real Biblioteca de El Escorial* (Madrid).

Spanish-America is represented by W. R. Shepherd, *The Spanish Heritage in America* (New York), relating to Spanish influence in the United States; F. Ortiz, *Glosario de Afro-negrismos* (Habana); J. L. Perrier, *Bibliografía Dramática Cubana* (New York), including Porto Rico and Santo Domingo; Concha Meléndez, *Amado Nervo* (New York), a critical study of the great Mexican poet, published by the Instituto de las Españas; A. B. Ayres, *Mexican Architecture* (New York) domestic, civil and ecclesiastical; P. Henríquez Ureña, *El Supuesto Andalucismo de América* (Buenos Aires); M. Schneider, *La Colocación del Pronombre* (Buenos Aires); and R. Grossmann, *Das Ausländische Sprachgut im Spanischen des Río de la Plata* (Hamburg), a discussion of the problem of the Argentinian national language.

See FRENCH LITERATURE; GERMAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN; SCANDINAVIAN LITERATURE; SPANISH LITERATURE.

**PHILOSOPHY.** The Sixth International Congress of Philosophy, which met at Harvard University, Sept. 13 to 17, 1926, afforded an extraordinary opportunity for evaluating the present trend of philosophy. The congress was the first to be held in America since the inception of these periodical convocations in connection with the 1900 Paris exposition, and while the vast majority of participating members came from the United States, there was a sufficient number of foreign delegates to insure not only an international tone for the deliberations but also the solemnity necessary for intellectual earnestness. For a detailed review of the proceedings of the congress the reader may consult the excellent account by Horace L. Friess in the *Journal of Philosophy* (vol. xxxiii, p. 617). Here it is sufficient to sketch in the high lights.

It seemed to many observers that there was everywhere a vague foreshadowing of an idealistic renaissance. The renaissance, it seemed, would not come soon, and perhaps not for many years, but none the less it was there as the guiding power behind the actual discussions. The truth of the matter is that present-day thought is dominated by natural science and by its twin brother, the industrial machine. The thinkers are beginning to be intellectually aware of this disastrous domination, without, however, being able to shake it off and without even quite understanding what is involved in this shaking-off process. These remarks apply, of course, to all countries, but with increased force to the United States, which as a country is the most modern and the most contemporary, so to speak, in contemporary civilization.

It is therefore significant that Professor Dewey should have made a plea, in his address on "The Role of Philosophy in the History of Civilization," for more speculative imagination, and for the breaking away from our "cowardly reliance on facts" the meaning of which we make little effort to discover. "Until this deficiency is remedied," he said, "our arts and our sciences, especially psychological and sociological, in spite of an enormous display of energy, will remain

relatively random, superficial, and uninfluential. The greatest need of our national culture is an awakening of courageous faith in the value of the speculative imagination, provided it is supplied with an adequate body of experience."

A similar judgment on American thought was made by Prof. Frank Thilly in his paper surveying the present status of the philosophical schools in the United States. Professor Thilly represents the old idealistic tradition, which is admittedly weak and without power for the moment, and his criticism of neo-realism, critical realism and pragmatism may be taken as a speech from the opposition bench. "It must not be forgotten," he said in his conclusion, "that we are living in the reign of Science and that popular monarchs are always feared and obeyed, be they theological, metaphysical, or positivistic. The new theories seek to make their peace with the new Science, and the terms offered by them have often been over-generous. But the enterprise has not been unprofitable, for, after all, the interest has centred upon the old fundamental questions, which have been honestly examined and discussed, often from new and suggestive angles. And in spite of the most painstaking efforts to explain consciousness away by dressing it in new clothes and giving it new names, it still remains as a fundamental problem. It is therefore impossible to ignore the so-called idealistic philosophy which has itself kept in intelligent touch with all the new movements and does not fail to appreciate the partial contributions which they have made."

While American thought—and, for that matter, the thought of other countries in which Science reigns as a vested potentate—is not yet ready for an integral, speculative idealism, the faith for such an idealism is there; and it becomes clearly evident when, instead of arguing detailed questions of epistemology, philosophers turn to a general consideration of their work and its place in the life of men. This idealistic faith in the unity of the spirit was manifested in the meeting on philosophy and international relations, and it was perhaps most clearly manifested in the address of Professor Montague at the closing banquet of the congress.

"I propose," said Professor Montague, "to set forth what is, I think, the great answer to the question of the use or usefulness of philosophy. The question itself is as old as Thrasymachus, and the answer that satisfies me is the answer of Plato. Philosophy is a vision, as religion is a faith. The faith of religion is that values are immortal in the realm of existence. The vision of philosophy is of values that are eternal in the life of the spirit. This, I believe, is the Platonic revelation. The forms of religion are many, but through all that are in any wise significant there runs the ancient and pathetic hope that existence is in reality better than it appears in our experience. And through the even more numerous forms of philosophy there is present in one sense or another the vision of a realm of values whose validity is independent of whether they are realized in existence or not. But, while independent of the changes of history, these Platonic ideals are the unmoved movers of whatever of goodness or beauty a history may achieve.

"Of what use to the world is this Platonic theory of values—a theory that is implicit in every genuine philosophy from the most conservative of idealisms to the most radical of the

pragmatisms? Its use, as I see it, is to prevent man from committing the sin against his own spirit, the unforgivable sin of subordinating the ideal to the real and accepting whatever is as therefore right.

"In all our lands to-day the spirit of Thrasymachus is rife. Discouraged at the failure to realize our ideals, there are those who deny that there are any ideals to realize. And we are proffered the old and shameful doctrine that conscience should bow down to the forces of government either 'red' or 'white.' Philosophy and the spirit of philosophy are then profoundly relevant to the present scene, for at no time have the peoples of the earth been in so great danger of losing that vision without which they perish—the Platonic vision of an eternal good, multiple in its aspects and applications, but single in its validity, subsisting quietly through all the vicissitudes of existence."

Professor Montague's conception of philosophic vision, it may be said, is far from being merely rhetorical, but the difficulty is that in practice it is taken as if it were mere rhetoric. In the explanation and interpretation of specific problems, such as the meaning of modern science, we tend too often to drop back into the method of system building. The papers on physics and metaphysics, as well as on the interpretation of biological evolution, all reflected an attempt to construct a sort of super-system which should be more adequate than the systems of the various sciences. Professor Whitehead's paper on "time" is typical of this tendency. Aware of the abstractness of the ordinary categories of physics—an abstractness made evident by the problem of relativity—the eminent philosopher of Harvard would like to construct the real, concrete kaleidoscope.

His construction, picturing time as "epochal" and "organic," brought this incisive comment from Professor Friess in his review of the congress (see *supra*): "The present writer . . . is considerably intrigued by Professor Whitehead's quaint terminology with its idealistic overtones. But the implications of these concepts, both from the point of view of rendering modern science intelligible and from the point of view of suggesting further construction, still remain very imperfectly clear to him. . . . Can it be because Professor Whitehead is using a logic of internal relations as a logic of exposition?"

For ourselves, we should go further and say that the problem of internal relations is that which laughs at logic. It has no logic of its own—unless we want to call the ineffable, inter-related spiritual unity of things a logic—but it is none the less the source of logic as well as that which exhibits the fallacy of any discursive system being taken as absolute.

The discussion on evolution would have bewildered the "man in the street," who is accustomed to regarding the doctrine as "a scientific fact." A well established scientific theory it is, but it crosses the ordinary run of scientific theories, and thus renders it difficult to take any scientific theory as describing a real and ultimate state of fact. The ordinary theories of physical science have as their object a deterministic scheme of explanation, and for that reason they lend themselves to a materialistic interpretation, according to which the world of nature is a system of material particles reacting under an immutable scheme of laws.

On the other hand, the phenomena of biology suggest a theory of continuity or historic development of different types of being. In an attempt to coördinate these two sets of theories, there has developed in the last generation a school of metaphysicians believing in emergent evolution—that is to say, in a scheme of the universe where new and unpredictable qualities such as life and mind emerge out of the chance interaction of material atoms and molecules. The word "evolution" would have been enough to describe such a theory, had not the word been worn down by the attempt of the Darwinians to give a deterministic, or mechanistic, account of evolutionary change. The speakers on the topic assumed the general theory of emergence of new levels, but argued whether it implies the operation of final causes. Professors Lovejoy and W. M. Wheeler contended that it did not; Professor Driesch, the well known German vitalist, insisted that it was necessary to assume an entelechy in the biological realm, though not in the physical; while Prof. Wildon Carr defended the Bergsonian "creative" or spontaneous evolution. In contradistinction to all these papers was a paper by Prof. E. A. Burtt on "Real versus Abstract Evolution." He insisted that the whole doctrine of evolution was an abstract doctrine, a reconstruction of the past which must find its application in the immediate experience of the present.

Lack of space forbids much discussion of the sessions on the more specialized topics. However, mention should be made of the papers on Value. The term "value" denotes a relatively new philosophical topic or discipline, and is the result of the projection of ethical problems upon the screen of science. It is symptomatic of the same state of mind as is reflected in the attempts to construct rigorous scientific systems incorporating the problems that natural science has failed to handle. We should also mention in the same breath the papers on the philosophy of religion and mysticism. The papers reflected the tendency—we should almost say the vice—of taking religion and mysticism as objects of scientific curiosity, favorable or unfavorable. Three professors defended mysticism, while one professor claimed that by empirical tests mystics are shown to have less motor coördination and generally a lower I. Q.!

**PHILOSOPHICAL LITERATURE.** Fewer outstanding books were published in 1926 than in the previous year. The most noteworthy are Professor Whitehead's *Religion in the Making*, C. Lloyd Morgan's *Life, Mind and Spirit*, and Dean F. J. E. Woodbridge's *The Realm of Mind*. The first-named should be read in connection with *Science and the Modern World*, which was reviewed in the 1925 YEAR BOOK. In it Professor Whitehead continues his efforts to modernize and rationalize present-day thought. After formulating a suitable cosmological theory for modern physical science, he turns in this book to the cosmology back of religious experience. As he himself puts it, the aim of his book is "to direct attention to the foundation of religion on our apprehension of those permanent elements by reason of which there is a stable order in the world, permanent elements apart from which there could be no changing world." In short, the book may be said to express the rational religion of a mathematical physicist, with the added condition that

the mathematician has not altogether divested himself of his professional habits of thought. God is presented as a hypothesis or theory necessary to account for the creative manifestations all about us.

C. Lloyd Morgan's *Life, Mind and Spirit* is a companion volume to the same writer's *Emergent Evolution*, published some years previously. As stated above in the discussion of emergent evolution theories, the fundamental notion of this school is the existence of diverse levels, scientifically unexplainable in terms of the elements of a lower level. Thus, life is, for Professor Morgan, the synthetic unity of events in physical and physiological regard, and mind is a synthetic unity built up on life but superior to it. The hierarchy of levels is regarded as stages in the expression of divine purpose, and each higher stage is in turn supernatural to that which precedes it.

Neither Professor Morgan nor Prof. S. Alexander, who first expounded the metaphysics of emergent evolution in comprehensive style (see *Space, Time and Deity*, 1923), seems to want to follow through the full consequences of their attack on the universal determinism of physical laws. If they did so, they would find themselves—at least in the opinion of the writer—impeaching the absolute validity of their metaphysical systems.

Dean Woodbridge's *The Realm of Mind* also attempts to rule out the supernatural from metaphysics and make it entirely naturalistic. But the naturalism of Dean Woodbridge is not the "creative" type of the school of emergent evolution, but rather the naturalism of Aristotle, which regards thought as a natural but not materialistic process. "Instead of putting thinking outside nature or making nature its product," he writes in his preface, "I have tried to take thinking simply as a natural event and follow its lead, letting the consequences take care of themselves."

The consequences that Dean Woodbridge draws are these: In order to explain individual minds we have to fall back upon objective mind, or a system of logical relations in the world as a whole; this objective mind is the system of the physical; on the other hand, individual minds are derived from objective mind by a process of degradation through the agency of the body. As is evident, the difficulties in the system hinge on the ambiguous role assigned to matter. On the one hand, it is a support to objective, universal mind and is correlative with it, and on the other hand, matter—or at least the human body—is responsible for the degradation of impersonal objective thought into the halting thought that characterizes the many, individual minds. Had Dean Woodbridge identified his objective mind, not with the formal system of logical relations, but with the pure spirit, most of his difficulties would have been solved. But that would have meant identifying himself with idealism, and such a step he was unprepared to take. In fact, he specifically warns the reader not to take him for an idealist, despite the similarities with idealism in the initial phases of his doctrine—idealism has a terrible reputation among American philosophers of to-day, and to be branded as an idealist is held to be as bad as to be called a bolshevist in politics.

In England, however, Viscount Haldane has

written an interesting and excellent introduction to philosophy from the idealistic point of view, under the title, *Human Experience*. Unlike so much of the idealistic philosophy surviving in the United States, he does not attempt, in this book, to use philosophy to whitewash theological doctrines. Idealistic philosophy has always been in harmony with the spirit of religion, but this does not mean that it can afford to indorse the doctrines of theology as literal, metaphysical truths. "It is not," says Lord Haldane with regard to immortality, "by setting up a fresh picture of another bodily life at the end of this one, to be continued in space and time, that we reach or maintain this level. It is rather by making ours the higher significance of such metaphors as that life eternal consists in doing the will of our Father that is in Heaven. His Heaven is no other world. It is just this world comprehended and accepted as what it finally and really means."

Passing from the field of general philosophy to special topics, we should mention first of all Prof. R. B. Perry's comprehensive book on *Value*. As we said above in connection with the congress, the interest in value theory is a scientific and realistic expression of the old-time ethical preoccupations. Aesthetic and economic value problems are also brought into consideration in the attempt to develop a general value theory. The conclusion to which Professor Perry comes is in some respects rather curious: Values exist in the future and not in the present.

In political philosophy, the most noteworthy book is Professor Hocking's *Man and the State*. The book presents a plea for the state as incorporating the authority of the general will, and opposes such "pluralistic" and individualistic philosophies of politics as that of Laski and the radical groups. In line with this type of doctrine, but emphasizing the ethical side of man's relation to society, is Joseph A. Leighton's *The Individual and the Social Order*.

In the field of scholarship, the great book of the year is the publication by Prof. Leon Roth of the *Correspondence between Descartes and Constantyn Huygens*. The volume contains 93 unpublished letters, and throws new light on some of the intimate opinions of the great French philosopher.

**BIBLIOGRAPHY.** For the other books of the year the reader may consult the bibliography which follows herewith (arranged alphabetically according to surnames of authors): Adler, Felix (and others), *Fiftieth Anniversary of the Ethical Movement*; Aristotelian Society, *Proceedings, Supplementary vol. vi*, (The Validity of Belief in a Personal God); Baker, A. E., *How to Understand Philosophy*; Benrubi, Isaac, *Contemporary Thought of France*; Bixler, J. H., *Religion in the Philosophy of William James*; Dresser, H. W., *History of Ancient and Medieval Philosophy*; Durant, Will, *The Story of Philosophy*; Edman, Irwin, *Richard Kane Looks at Life*; Haldane, Viscount, *Human Experience*; Haldane, Viscount, *The Pathway to Reality*; Herrick, J. Judson, *Fatalism or Freedom*; Hocking, William Ernest, *Present Status of the Philosophy of Law and of Rights*; Hocking, William Ernest, *Man and the State*; Inge, W. R., *The Platonic Tradition in English Thought*; Jascalevich, A. A., *Three Conceptions of Mind*; Joad, C. E. M., *Introduction to Modern Phi-*

*losophy*; Kallen, H. M., *The Philosophy of William James, Drawn from his Works*; Keyser, Cassius J., *Thinking about Thinking*; Leighton, Joseph Alexander, *The Individual and the Social Order*; Lewis, Gilbert N., *The Anatomy of Science*; Meiklejohn, Alexander, *Philosophy* (in American Library Association series on Reading with a Purpose); Morgan, C. Lloyd, *Life, Mind and Spirit*; Otto, M. C., *Natural Laws and Human Hopes*; Perry, Ralph Barton, *General Theory of Value*; *Philosophy of the Recent Past*; Randall, John H. Jr., *The Making of the Modern Mind*; Richards, I. A., *Science and Poetry*; Riley, Woodbridge, *From Myth to Reason*; Roth, Leon, *Correspondence between Descartes and Constantyn Huygens*; Rand, Benjamin, *Modern Classical Philosophers* (rev. ed.); Singer, Edgar A. Jr., *Fool's Advice*; University of Chicago, *The Nature of the Universe and the Nature of Man*; Whitehead, Alfred North, *Religion in the Making*; Wilson, John Cook, *Statement and Inference* (2 vols.); Woodbridge, Frederick J. E., *The Realm of Mind*.

**PHONETICS.** See PHILOLOGY, MODERN.

**PHOSPHATE ROCK.** During 1926 there continued to develop increased direct use of raw ground phosphate rock without acidulation for fertilizers and also the production of high grade superphosphate at the mines. The production of phosphate rock in 1925, as recorded by the U. S. Bureau of Mines, was 3,481,819 long tons, valued at \$11,545,678, this being the greatest amount produced since 1920 when the output was 4,103,982 tons, valued at \$25,079,572. In 1925 the imports of phosphate rock into the United States amounted to 2735 long tons, valued at \$37,932, but the exports were 870,200 tons, valued at \$5,677,763. In 1925 the average selling value per ton was \$3.32 and the quantity used was greater than the amount mined. Phosphate rock is produced principally in Florida and Tennessee, the former State, in 1925, having an output of 2,929,964 tons, valued at \$8,789,070. The Tennessee output in 1925 was 477,077 tons, valued at \$2,429,059. In 1925 Idaho and Wyoming shipped 72,631 tons, valued at \$319,498. In 1926 the exports of phosphate rock consisted of high grade hard rock to the amount of 103,572 tons, valued at \$1,195,729; land pebbles, 634,362 tons, valued at \$3,155,732; and other phosphate rock to the amount of 11,229 tons, valued at \$88,613. See FERTILIZERS.

**PHYSICS.** The year 1926 has seen spectacular events; its achievements may prove far more fundamental than those of any other year since the year of verification of Einstein's relativity theory. Panneth and Peters report the synthesis of helium from hydrogen by the use of palladium with the output of probably a quarter of a calorie of high-frequency radiant energy of the cosmic-ray type—probably the most sensational event of the year 1926, even though the amount produced was so small. The fact that it has been done must rank with the disintegration of atomic nuclei among the most important events of the present century. They both are vital parts of the programme of the physicists of vision—the utilization of the unlimited stores of cosmic energy and the transformation of matter, at will, into any form with any properties desired. In 1925, carbon was made to boil, in 1926 helium was solidified, so that the three states are practically attainable with every chemical element, for the first time.

If the most fundamental achievement of physics were to be selected, perhaps the new quantum mechanics is the great event of the year, including the concept of the spinning electron as completing the fourth degree of freedom in electron motions, and the fourth quantum number of the electron. If the present promise is maintained, the achievement must be ranked with Newton's laws. Keesom at Leiden has solidified helium at a temperature higher than that at which it was liquefied. The study of the space lattice will be awaited with interest, for it should be expected to be cubic as already shown for argon.

**NOBEL PRIZE IN PHYSICS.** The physicists to whom was awarded the Nobel prize in 1926 were Zsigmondy, Franck, Hertz, Svedberg, and Perrin—names most notable in the recent history of the study of the atom. Zsigmondy devised the ultramicroscope, extending our perceptive range far below the limits of visibility. Franck and Hertz gave the first proof of the quantum theory, while Franck blazed the new trail of ionization and resonance potentials, showing that a given wave length is emitted by a vacuum tube only when a definite voltage or critical electron speed is attained. Svedberg has done constructive fundamental work on colloids, that field which seems to be an aspect of all matter rather than a mere class of materials, for are not the planetary electrons a colloidal cloud held together by a central charge of opposite sign? Perrin stands for the remarkable work showing that Brownian particles acting as molecules would act on the kinetic theory, and for his recent work on the rôle of radiation in chemical reactions. In the course of the latter work he made the statement that light is essential to all chemical processes.

Gerlach's latest experiments on the magnetic moment of the silver atom per mol give 5400 to 5700—the Bohr magneton. The paths of the electrons probably arrange themselves so as to give as far as possible no resultant moment of momentum and no magnetic moment. The magnetic moment of nickel changes with due rise in temperature by one Bohr magneton. All paramagnetic ions of the iron and platinum groups show 9, 14, 19, 24, 29—larger units than the Weiss magneton, showing the Bohr magneton as the probable natural unit.

Bose computes the magneton numbers from electron distributions in the various quantum levels. Using complex compounds of Cr, Fe, Co, Ni, and Cu, he shows that the Bohr magneton of the central atom is given by the difference between its effective atomic number and the atomic number of the rare gas terminating the period to which the central atom belongs (in this case krypton). When this difference is zero the compound is diamagnetic. He suggests the specific distribution of the electrons in the M, N, and O quantum levels for the elements mentioned above, both as simple ions and as coördinating atoms in complex compounds. Scott publishes instructive graphs of atomic versus electronic volumes, and gives an illuminating discussion of the facts sharply disclosed by the graphs.

The periodic system of atoms is the battleground of research. Light waves and their measurement are incomparable in disclosing the energies and structures of the atoms. A wide-open field awaits the chemist in correlating

atomic structure and atomic form with the known behavior of the atoms and their combinations. This is already a field of astonishing fertility. Thirty methods of measuring or estimating the size of atoms and molecules are considered by Lunnon with fairly concordant results, as shown by graphs of the diameters, the periodicity of which is beautifully portrayed. The atomic nuclei receive much attention. Strum points out a connection between atomic weight and order of an element and nuclear components (electrons, protons, helium atoms, and alpha particles).

Sommerfeld shows the bearing of Stoner and Main Smith's modification of Bohr's scheme for the periodic system as affecting x-ray spectra. He gives two laws for the completion of sub-groups, recalling that the basic principle of chemical combination is the tendency to form completed sub-groups. A tetrahedral diamond structure is observed in binary compounds whose elements are removed an equal number of columns from column 4. The 2-electron shell is important in combination.

Harkins and Shadduck discuss the synthesis and disintegration of atoms as revealed by photographs of Wilson cloud-tracks. Photographs to the number of 34,000 (total atom paths exceeding 400,000) were made, showing alpha tracks in nitrogen. Two-thirds were 8.6 cm and the rest were 4.9 cm ranges. Fast alpha particles from thorium C attach themselves to nitrogen nuclei, forming fluorine momentarily. The ejection of a hydrogen atom then changes the atom to oxygen—the three tracks, fluorine, oxygen, and hydrogen, all lie in one plane. Results of astonishing interest were obtained by these and other experimenters. To catch the infinitesimal atomic nuclei on the wing with bullets moving 12,000 miles a second, and transmuting the elements by the impact, is surely a glimpse of a coming technique which will give a new power to man excelling any ever dreamed of by the alchemist.

Physics is taking possession of stellar evolution with incredible power. The reversible transformation of mass and energy call for considering the question of equilibrium between radiation and concentration of mass. Sterns had reported that even at a hundred million degrees only one electron per cc could be present at equilibrium. The sun's density (1.4 grams per cc and 40,000,000° temperature) seemed to necessitate recalculation of Sterns' figures. Tolman deduces an equation connecting concentration and temperature, containing a constant not evaluable from classic thermodynamics. Using the third law he deduces a value much higher than hitherto derived. Incidentally, 40,000,000° seems to be a reasonable estimate of the temperature inside a star.

Eddington estimates the density of interstellar matter at ten hydrogen atoms, or  $1.66 \times 10^{-23}$  gram per cc, as the upper limit. This gives a mean free path (assuming ions with average atomic weight 20) of  $10^8$  km with a year interval between collisions, and for electrons  $5.2 \times 10^8$  km with collision intervals of ten days. This gives a Maxwellian distribution. The blackbody temperature of a body in equilibrium with starlight is only 3.2° absolute. At 10,000° condensation of matter begins to form a nebula; rise in density and temperature drop cause high opacity to hold the heat formed;

at a certain stage the density becomes high enough to enable radiation from sub-atomic processes to be scattered, and this makes a further source of heat.

Jeans computes the cosmic radiation wave length as  $1.3 \times 10^{-5}$  angstrom when electron and proton cancel one another. The wave length is calculated by equating the sum of the mass energies of the proton and electron to the energy of the quantum produced. Jauncey and Hughes, in discussing the subject, take note of the conservation of energy, momentum, and charge, and that reversibility of the mass energy transformation might occur but that velocities do not exceed that of light.

Eddington assumes ten billion years as the age of the sun. Energy must come from the deep layers to keep the high temperature gradient. Mass is dissipated, possibly by the mutual destruction of a proton and an electron, or transmutation of the elements. The hydrogen helium reaction affords an almost inexhaustible supply of energy. Central temperatures are about  $40,000,000^\circ$ . The larger mass of the older stars is evidence for the loss-of-mass theory. Richards and Hall from the lead ratio (.225) in Black Hills uraninite deduce an age of 1,500,000,000 years for these South Dakota deposits.

Epoch-making for atomic physics of the year 1926 is the spinning electron. Pauli showed that each electron has four quantum numbers, no electron in a given atom having all four numbers like those of any other electron. Uhlenbeck and Goudsmit conceived the fourth degree of freedom might be rotation. The idea was a happy inspiration. In spite of difficulties, the spinning electron is now part of atomic theory. It seems to account for the ratios of magnetic moment to angular momentum, optical and x-ray doublets, relativity doublets, anomalous Zeeman effect, and so on. The last is a triumph of the new mechanics. The fine structure of hydrogen, empirically proposed, is closely accounted for by internal spin. Not only points of accord but those of divergence as well lend strength to the new mechanics.

Breit discusses the change in classical treatment which the spin introduces as affecting the electromagnetic origin of mass. He finds the electron radius must be of the order of  $10^{-12}$  cm, its angular momentum (of the field) less than  $h/4\pi$  by a factor of 20, and with a peripheral speed 20 times that of light at most. The condition for stability and peripheral velocity of the electrons, of the order of light, implies a relation between  $h$  and constants  $e$ ,  $c$ ,  $m$ , so that the electric charge is probably quantized. The agreement in order of magnitude for the spinning electron suggests a deeper significance than merely its spectroscopic convenience.

Eddington also regards the spinning electron as having a peripheral speed exceeding that of light. Since the electron mass and energy are in steady fields, relativity can hardly object. Richardson answers two objections—showing that a quantized spin in an orbit will be balanced by a nuclear electron with a similar moment. Lindeman explains nuclear stability by spinning electrons and protons. The magnetic fields thus formed would at short distances balance the disruptive electrostatic forces of the excess positive charge. Frankel gives a mathematical solution showing that the quantized

spinning electron explains multiplet structure of spectrum lines. Kronig assumes that the Zeeman effect calls for a magnetic moment of two Bohr magnetons,  $10^{-20}$  c.g.s. units involving high spinning speeds. Mohler measures the formation of negative ions as a function of electron velocity, using slow-moving electrons only. High speed does not seem to produce ionization.

Relativity still yields research stimuli; several investigators hold Miller's results still inconclusive. Tomaschek at heights from 120 to 3457 meters made magnetic observations which would have detected an ether-to-earth relative velocity of 20 meters per second, but obtained only negative results. Meinur finds that the ether-drag calls for a density gradient of 5 to 1 for the ether from earth to the point where the drag is zero, and concludes this to be unlikely. Lodge regards the partial drift as a minute residual, and doubtful. Miller replies that the effect is always present and cannot depend upon the instruments or their surroundings. Thirring denies the cosmic cause and attributes the displacements to local disturbances. Perhaps relativity is to remain in many fields of physics as a disturber of settled theories, to the great gain of physical progress. Miller deduces from his fringe displacement the possibility that the solar system moves in space with a velocity of 200 km per second toward an apex in the constellation Draco, right ascension  $262^\circ$ , declination  $65^\circ$ . This astonishing result may have the highest significance, not having been discovered by line-of-sight velocity research by the astronomers. Perhaps it indicates the movement of the entire galaxy. Further observations alone will tell.

Lorentz suggested a diagram in a four-dimensional space in which each projectile is numbered and represented by its world line. If on this diagram coordinate values and potentials are marked, then values independent of the choice of coordinates can be assigned to the lengths of line and intervals of time. The components of a vector change when it is a closed path. Certain numbers will give all quantities involved in gravitation and electro-magnetism. The variety of these numbers is so great that something hitherto unobserved lies behind them. Lunn suggests that electrical and optical theory and a rational physico-chemical theory of the varieties of matter will ultimately be aspects of a fine-scaled, time-spaced geometry.

The progress report of the Optical Society is an excellent review of the latest status of spectral theory and atomic structure. The greatest progress is through the work of Russell, Saunders, Pauli, and Heisenberg. In alkali spectra, the practice has been to obtain the azimuthal quantum of the valence electron by use of the coordination  $k$  equals respectively 1, 2, 3, 4, for S, P, D, F, respectively. In atoms having a rare gas core and more than one electron, the quantum number 1 is not identical with the azimuthal quantum  $k$  of the last added electron, but the quantized resultant of the  $k$  values of all valence electrons. The detail cannot be entered into, but a rich literature is developing; both of the new quantum mechanics and general spectral theory. The important point, however, is that an orbit is fully characterized by four quantum numbers, and that no two electrons may have the same values for all four numbers. An astonishing outcome is

the precision with which the periods of the periodic system flow from the theory. In a given period the number of elements is the number of binomial coefficients  $N$ , or  $2(2k-1)$ , since each value is the number of magnetic levels. The elements closing shells and the quantum number of the shells are: He, 1; Be, 2; Ne, 2; Mg, 3; Al, 3; Zn, 3; Ca, 4; Cd, 4; Lu, 4; Sr, 5; X, 5; Hg, 5. The  $n_k$  group of electrons is readily computed as equal to  $2(2k-1)$ , and the total electrons in the periods as the summation of this expression, or  $2n^2$ .

Most prolific has been the harvest of new analyses of all spectra, work on 20 elements having been reported during the year. The helium doublets are now believed to be triplets with intensities 5, 3, 1, which completes the universality of the alternation law that odd values of  $R$  occur with even values of the atomic number. The Heisenberg-Hund theory predicts spectral terms and their relations.

The excellent bulletin by Van Vleck on quantum principles and line spectra summarizes in an up-to-date manner this important field. Such summaries will be much needed as we approach a perfected theory of atoms and spectra. Nor does the latter any longer seem a visionary goal. The focussing of three independent mathematical systems on quantum mechanics, each clearing up seeming anomalies, gives genuine promise of bringing the new atomic theory to a most interesting stage of completeness. Spectroscopists realize this and hold the key to the problem, now the outstanding subject in all science.

The extraordinary remark by Birge, that "the energy levels associated with the valence electrons of molecules agree in all respects with those associated with the valence electrons of atoms," clears the way for the great field of molecular spectra with its evident possibilities. That the problem is not easy is evidenced by the fact that the neutral nitrogen molecule has more than 50,000 lines in its known band spectra. Possibly the quantum measure of the electronic levels may result from the analysis of band spectra.

Brillouin summarizes the new atomic mechanics of Heisenberg, Born, Dirac, and Kramers and Fues, using Schrödinger's mechanics. He finds the frequencies of diatomic oscillations and rotation, giving a continuous spectrum and half-integral values for the oscillation quantum numbers and rotation quantum numbers. Kronig submits a theorem on the space quantization with application to complex spectra, in agreement with Heisenberg and Goudsmit.

Three independent systems have within the year given illuminating insight into the quantum concept. Born, Heisenberg, and Jordan use the Hamiltonian system, in which the coordinates are matrices rather than series. Each element in a matrix is identified with a transition between two stationary states of the old theory, with an imaginary exponential factor determining the frequency, and the amplitude factor determining the probability of transition. Dirac uses "angle variables." Schrödinger's wave equation is the latest, seeming to be even more powerful than the matrix mechanics. He uses energy levels as the characteristic value in an equation which Eckhart shows accords with the matrix method, in which each element can be expressed as a volume integral. The new mechanics gives

automatically details which were hypotheses in the old quantum theory. For example, the new dynamics incorporates logically and simultaneously both frequency and intensity. The Bohr frequency condition follows naturally from quantum conditions in the Hamiltonian form. It gives the quantum shift, spectroscopic stability, and the selection principle. The new mechanics gives different energy values only where the old were not in accord with experiment.

Sharp has accurately measured the Compton shift, and Beck and Dirac, one with the old mechanics and the other with the new, derive the same formula, so that this phenomenon no longer supports the extreme light-dart theory. Van Vleck finds the combination principle and the quantum condition follow if the Bohr frequency condition is postulated with that of conservation of energy, the canonical equations, and the commutability relations. Schrödinger deduces a quantity which exhibits the properties of Planck's constant  $h$  in a study of quantization. By analogy, as geometrical optics in diffraction phenomena give way to wave theory, so "geometrical mechanics" (classical laws) which hold for matter in bulk give way at atomic distances to undulatory mechanics.

LaPorte in a study of series and ionization potentials shows that the theory of Hund permits prediction of unknown terms and their position, and that the Pauli equivalence principle agrees with empirical facts minutely. Gibbs and White publish a series of studies of the regular and irregular doublet law, applying it to stripped atoms in the same rows as rubidium and caesium, showing beautiful graphs remarkably similar to those of the same phenomena for the first group atoms higher in the periodic table. Bowen and Millikan using aluminum electrodes obtain the lithium doublets from oxygen at 1031.98 and 1037.69 Angstroms.

Gibbs and White show that the regular and irregular doublet laws may be applied to the stripped atoms of the first long period by almost linear extrapolation of the frequency of the doublets and of the screening constants, the location and frequency separations of the doublets of  $\text{Cr}_{11}$  and  $\text{Mn}_{11}$ .

By X-radiation wave lengths Harris, Yntema, and Hopkins have discovered element 61, leaving now only 85, and 87 still undiscovered, if we accept the Noddack report concerning 43 and 75. Hopkins and colleagues recrystallized from the bromates solutions. Two bands became stronger and these formed regular sequence with those of 60 and 62, as confirmed by the X-radiations from the specimen  $\text{La}_1$  (2.2781 Å) and  $\text{La}_2$  (2.0770 Å).

Mohler, Foote and Chenault, continuing their caesium research, show the Sharp maximum ionization at  $1^2\text{S}$  limit and clear secondary maxima, one for each wave length of the principal series from  $1^2\text{S}-4^2\text{P}$  to  $1^2\text{S}-9^2\text{P}$ , the results bearing out the Bohr theory.

Vichowsky and Urey account for the fine structure of helium lines by superposing the Sommerfeld relativity change of energy and the magnetic change according to their formula, using half quantum numbers for the azimuthal quanta. They suggest that the proper form of relativity mechanics may give correct fine structure of the H and He lines.

Cosmic rays have been studied for 15 years, at first by Hess, and then by Kolhorster, later

by Millikan. The last named reported a constancy at all times and directions. Kolhorster finds a maximum for the Milky Way. Jauncey and Hughes recompute the range of wave lengths to be between 2.4 and 3.2 milliangstroms.

A new tool of research is the Coolidge 350,000-volt X-ray tube which disintegrates living tissue and causes the air to become luminous through impacts of electrons passing through a special window. The production of an extremely stable material which adheres strongly to metals was an unforeseen effect caused by the bombardment of acetylene gas by electrons. Other effects are doubtless numerous enough to engage hundreds of investigators for years to come.

Ives and Johnsrud continue work on saturation photo-currents, using potassium, rubidium, and sodium. In general, the current increases linearly with temperature.

The use of specific frequencies of ultraviolet in producing hydrogen peroxide ( $H_2O_2$ ) illustrates the new photochemical technique which gives such promise in industry. In Cathala's photochemical synthesis of HCl the effective wave length is 540 millimicrons. The primary reaction obeys the Einstein law of photochemical equivalent.

Bridgman describes methods of growing large crystals of tungsten, antimony, bismuth, tellurium, cadmium, zinc, and tin. Duane reports a study of the reflection by a crystal of its own characteristic radiation.

Jaeger, Terpstra, and Westenbrink show by X-ray analysis the crystal structure of germanium tetra-iodide, each Ge atom being surrounded by four iodine atoms oriented in a regular tetrahedron—an interesting homologue of  $CCl_4$ . Huggins concludes that in diamond and similar crystals electron pairs form tetrahedron corners around each atom, each pair being held jointly by two atoms as in the Lewis valence theory. He believes valence shells of electronegative atoms are tetrahedra of electron pairs and not cubes of single electrons.

The fundamental work being done on single crystals makes notable the present record achievement of producing a single copper crystal 17 inches long,  $2\frac{1}{8}$  inches in diameter, weighing 12 pounds, and showing a 13 per cent higher electrical conductivity than previous specimens. It was formed at about 1 cm per hour, requiring 68 hours for completion, being fed from an electric furnace.

The X-ray analysis is being applied to the space lattice of metals in metallurgical stress-strain research. The field is one of the utmost promise, as the rich literature published during the year in this field will amply demonstrate.

The year 1926 was very active all along the many frontiers of physics. Einstein regards gas as a system of separate linear vibrations like those of a solid body, and gives the mathematical theory involved. Weinberg issues a summary of 52 publications on slow transformations of solids subjected to forces above the elastic limit, with a list of cases promising for research, cases where only a change of form is involved. Addenbrooke shows relations between the electric properties of ten non-metallic elements and their thermal properties, surface tension, and capillarity. The U. S. Bureau of Standards designed glasses to match closely the expansivity of the pottery body to minimize strain crazing.

In physical technique two examples may be

cited. Carl Mueller made sheets of steel so thin as to be invisible but strong enough to support 5 centimeters of mercury. Clacey at the U. S. Bureau of Standards produced under measured control three quartz flats, of planeness so exact that no errors exist greater than one five-millionth of an inch.

Perhaps the most useful publication of the year was the first volume of the *International Critical Tables* issued under the auspices of the National Research Council. Four volumes are to follow, of which two were in press at the end of the year.

As eloquent words as those of Jeans before the meeting of the International Astronomical Union are rare to find. Speaking of the physics of the sky, he said: "We are realizing more and more that what the astronomer is really doing, to a large extent, is the carrying out of the study of physics and chemistry on an heroic scale. His laboratory is the open vault of heaven, with dimensions to be measured in millions of light years. Hung up in that vault are millions of crucibles in which matter is maintained at temperatures ranging from a few thousands to many millions of degrees. In those crucibles the solution of the problem of the ultimate structure of matter is demonstrated innumerable millions of times every second. There the dream of the alchemist comes true, and the elements are transmuted one into another. There, probably, also occurs that transformation which is of still greater importance, the transformation of matter into energy. Nature provides the apparatus and the material, and carries out the experiments; all we have to do is to record and interpret."

**PITTSBURGH, UNIVERSITY OF.** A coeducational institution of higher education, at Pittsburgh, Pa.; founded in 1787. The total fall enrollment for 1926 was 9779, distributed as follows: College, 1956; engineering, 358; mines, 81; business administration, 608; education, 987; graduate, 659; medicine, 246; law, 241; pharmacy, 353; dentistry, 640; retail training, 13; downtown division, 1967; extension students, 1670. The summer session had a registration of 2125, an increase of 204 over 1925. There were 773 faculty members, 60 new appointments having been made, as follows: College, 21; engineering, 4; business administration, 9; education, 7; medicine, 2; law, 2; pharmacy, 1; dentistry, 2; military training, 4; officers of administration, 8. The productive endowment amounted to \$1,358,550. The year's expenditures were \$3,126,052. The library contained 110,000 volumes. In 1925-26 a new five-year college-dental school course was opened; the length of the course for the Ph.D. degree in the college of pharmacy was increased from two to three years; the department of economics was transferred from the college to the school of business administration, and the department of geology from the school of mines to the college; the university appointed a

photo-naturalist, Norman A. McClintock, A.B., to make and collect films of natural history, which were shown in many high schools as well as in the university. During 1924-25, \$6,803,399 was given for the university's new "Cathedral of Learning." The university was the chief beneficiary by the will of Mary O'Hara Darlington, who died May 17, 1925. With the income from her estate, estimated at \$1,000,000, it was planned to build a Darlington Memorial Library, to house the general library of the university and the Darlington collection. The children's hospital, the first building in the medical centre, was completed, at a cost of \$1,500,000. The athletic stadium, costing \$2,100,000, was dedicated in 1925. A system of honor courses was tried out in 1925-26, and received further study in 1926-27. It was proposed to build between 80 and 100 faculty residences on the campus. The total gifts received during 1924-26 amounted to \$9,396,970. Chancellor, John G. Bowman, LL.D.

**PLATINUM.** The production of new metal from all sources in 1926 was estimated on about the same basis as in 1925 and was stated at 4000 ounces of platinum, and, in this connection, 6000 ounces of palladium and 30 ounces of iridium. Refined platinum began the year at \$120 an ounce and dropped to \$108 in February, which was the low price of the year. In May it rose to \$114, and while it reached \$118 at the end of September, it sagged to \$112 in October. In the United States the chief production of crude platinum, which came from Oregon, California, and Alaska, was practically the same as in 1925, when 343 ounces were reported. In Canada the Tulameen River afforded a larger yield of crude platinum, while the refining of the Sudbury ores furnished approximately as much as in the previous year. The production of platinum in Colombia in 1926 was at least equal to the 62,000 ounces produced in 1925. In Russia it was reported that conditions in the platinum mining industry had improved and that the output might be as much as 60,000 ounces in 1926. The production of Russian refined platinum during the year was handled by the Precious Metal Trading Company of Berlin, under the supervision of the Soviet Government. In Tasmania the Adams River osmiridium field was productive, while in the Transvaal a new plant was actively producing refined platinum metals and other new mills were completed, so that during 1927 at least 45,000 ounces of platinum metals could be produced.

In 1926 there were imported into the United States platinum ores with a platinum content of 1221 troy ounces, valued at \$124,668; platinum in the form of grains, nuggets, sponge, or scrap to the amount of 87,162 ounces, valued at \$8,683,359; and platinum ingots, bars, sheets, plates, etc., to the amount of 26,585 ounces, valued at \$2,995,582. The exports of platinum in the form of ingots, sheets, wire, alloys, and scrap amounted to 11,593 troy ounces, valued

at \$1,253,795; of manufactures, except jewelry, to 1898 troy ounces, valued at \$160,648; and jewelry valued at \$869,973.

**PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA.** An association, organized in 1906 by Theodore Roosevelt, Jacob A. Riis, Luther Halsey Gulick, and others, which aims to bind together in a national body the efforts growing up in various parts of the country to provide safe and adequate areas where children may play and have competent recreation leadership. A staff of field secretaries is maintained to assist cities in organizing year-round recreation programmes, in securing municipal appropriations, and in strengthening existing programmes, and through these secretaries the association works to secure State legislation for facilitating the development of municipal systems. The association maintains an employment service for recreation workers. Its publications are a monthly magazine, *The Playground*, books and pamphlets on all phases of the play movement, and a bulletin service. Publications distributed in 1926 were the *Community Drama Handbook*, *Community Music Handbook*, *The Christmas Book*, and programmes for the celebration of all holidays and special days. The association also has a correspondence and consultation bureau, where attention is given to letters of inquiry and personal conferences about the work. The community drama service supplies practical suggestions and literature to amateur dramatic clubs, and by means of the community music service the association assists in organizing music groups, in training volunteers, and in providing an exchange for community music information. There is also a service for negro communities, aiding local colored groups to secure recreation opportunities. In 1926 the association established the National Recreation School, which conducts a postgraduate course in professional recreation training. Another department of the association, the National Physical Education Service, conducts campaigns for compulsory physical education legislation, and aids States having such legislation to enlarge their programmes. The thirteenth recreation congress was held at Atlantic City, N. J., October, 1926. The officers for the year were: President, Joseph Lee; treasurer, Gustavus T. Kirby; secretary, Howard S. Braucher. The headquarters are at 315 Fourth Ave., New York City.

**PNEUMONIA.** Dr. C. J. Vaux, director of the department of public health, Pittsburgh, Pa., publishes an article on Pneumonia in the *Journal of the American Medical Association* for December 11, with especial reference to the new pneumonia quarantine which is on trial in Pittsburgh. This first went into effect in April, 1924, for in the preceding month there had been 22 episodes in which a second case had developed in a single family or household. The contagiousness of pneumonia has always been a problem, for under certain unknown conditions it is distinctly communicable from man to man. But in addition to its record of March, 1924, Pittsburgh had shown the greatest pneumonia incidence of any large city in the United States during the entire year of 1923; it was 371 per 100,000 inhabitants.

The policy of isolation and quarantine had now been carried out for 31 months, beginning April, 1924, with a notable falling off in the pneumonia deaths, for in 1925 there was a de-

crease of 607 deaths in comparison with 1923. That this is not a mere coincidence seems to be borne out by the fact that Washington, D. C., which had also been testing the quarantine, also reported a relatively low mortality from the disease. The quarantine is little more than isolation during the actual duration of the disease, and the public take kindly to it.

Quinine is an ancient remedy in pneumonia, and some of its synthetic derivatives have been used extensively in more modern times; while quite recently there is seen a tendency, in a half dozen different countries, to return to the use of a quinine salt by hypodermic injection. The first point to establish is the power of the drug in specifically affecting and shortening the course of the disease. In the *Wiener Klinische Wochenschrift* for August 12, Professor Steyrer, of the medical clinic of the University of Innsbruck, reported the routine use of the muriate of quinine by intramuscular injection, in doses of 7.5 grains. Pneumonia is not especially common in this part of Austria and does not appear to be of a particularly severe type. No time is lost in making a laboratory diagnosis, but at the very first appearance of the chill, temperature rise, stitch in the side and other symptoms which characterize lobar pneumonia, an injection is made. If it is found later that the disease is due to some microorganism other than the pneumococcus, the treatment is abandoned, for the specific action of quinine appears to be limited to the latter. In more than 60 per cent of all cases treated there was a distinct shortening of the disease, and in a majority of these the crisis appeared before the customary fifth day, sometimes by the fourth and even the third day.

**POETRY.** See LITERATURE, ENGLISH AND AMERICAN; FRENCH LITERATURE; GERMAN LITERATURE; SCANDINAVIAN LITERATURE; SPANISH LITERATURE, ETC.

**POISONOUS PLANTS.** See VETERINARY MEDICINE.

**POLAND.** A European republic formed as a result of the War and comprising the territory formerly divided among the three governments, Austria-Hungary, Russia, and Prussia, from the three partitions of Poland in 1772, 1793, and 1795, which were confirmed by the Congress of Vienna in 1815. After the World War (1914-18), Poland, in addition to this original territory known as Congress Poland, acquired Prussian Poland, Polish Galicia, Upper Silesia, and a portion of the Vilna territory. Capital, Warsaw.

**AREA AND POPULATION.** The total area, according to the latest estimates, is 149,915 square miles, and the population, according to the first official census of the Polish Republic in 1921, 27,184,836. The largest cities with their populations at that census are: Warsaw, 936,713; Lodz, 451,974; Lvow, 219,388; Poznan, 184,756; Cracow, 183,706, and Wilno, 128,954. The Polish nationality represents two-thirds of the population and is followed in numerical order by the Ruthenians and Jews.

**EDUCATION.** The educational system of Poland had not been completely unified in 1926. Education in all its grades is free, and elementary instruction is compulsory. Elementary schools in 1924-25 numbered 28,078, with 64,382 teachers and 3,237,340 pupils. There were 778 secondary schools, with 11,560 teachers and 221,092 pupils. There were also 195 colleges for teachers, with 1931 teachers and 34,217 pupils, and 850 tech-

nical and professional schools, with 110,000 students.

**PRODUCTION.** Agriculture and stock raising are the two principal occupations of the country, engaging about 65 per cent of the inhabitants. The accompanying table, from the *Statesman's Year Book* for 1926, shows the area in acres and the yield in metric tons of the chief crops in 1924 and 1925:

Crops	Area (acres)		Yield (metric tons)	
	1924	1925	1924	1925
Wheat	2,682,372	2,752,000	884,446	1,578,000
Rye	11,042,870	12,113,000	3,654,819	6,588,000
Barley	3,045,977	3,024,000	1,208,117	1,677,000
Oats	6,462,595	6,365,000	2,411,958	3,311,000
Potatoes	5,827,745	5,827,000	26,869,802	29,106,000
Sugar beet	408,535	425,000	3,210,800	3,687,000

Other important crops are hemp, hops, tobacco, and chicory. The last livestock census showed 3,201,166 horses, 7,894,586 cattle, 2,178,216 sheep, and 5,170,612 pigs.

The chief industrial centres are at Warsaw, Lodz, Cracow, Katowice, Dabrowa, and Czeszochowa. One of the chief industries is the manufacture of textiles, especially cotton, with 2,391,580 spindles and 37,313 looms; in the wool industry there were 383,210 spindles and 2126 looms. Among the other important industries are the manufacture of paper, chemicals, and wood products; also sugar refining, the output of which in 1925-26 was 520,000 tons from 75 mills.

The accompanying table shows the output, in metric tons, of the more important minerals for two years:

Product	1924	1925
Bituminous coal	32,224,680	28,999,000
Lignite	88,088	62,813
Crude petroleum	770,900	810,583
Natural gas	438,242	584,637*
Salt	274,600	229,374
Potash	81,600	181,141
Iron ore	274,000	314,147
Steel	685,600	808,136
Zinc	98,000	114,000

\* In thousands of cubic meters.

**COMMERCE.** In 1926, the outstanding factor in Poland's trade balance was the growing demand for Polish coal abroad, caused by the coal strike in the United Kingdom. Exports of coal from Poland in 1926 increased from an average of 770,000 tons for the first six months to an aggregate of about 2,200,000 tons for August and September. Total export values for the first eight months of 1926 exceeded import values by 313,000,000 gold zlotys, and surpassed corresponding 1925 values by 504,000,000 gold zlotys. The latter figure nearly covers the entire foreign trade deficit which had accumulated for the first seven months of 1925.

**FINANCE.** The deficit of 59,000,000 zlotys in the state budget for the first five months of 1926 was gradually reduced during the succeeding three months to 44,000,000 zlotys, and as the Minister of Finance stated to the diet, "sufficient additional revenues are expected during the last four months of the year to wipe out the entire deficit by the end of the year without abandoning the government's avowed policy of economies in administration." This prediction appeared to be well founded, in view of the fact that while the state expenditures for 1926 as fixed exceeded

those of the budgetary estimates of the previous government by 76,000,000 zlotys (1,806,000,000 zlotys versus 1,730,000,000 zlotys), the estimated deficit of 200,000,000 zlotys had been reduced during the first eight months by 156,000,000 zlotys. The improvement in state finances was accounted for, primarily, by the increase in revenues that followed more efficient tax collection and greater paying ability and responsiveness of the taxpayers; and, secondarily, by an increase of 8,000,000 zlotys in the average monthly yield of state monopolies for the sixth, seventh, and eighth months as compared with the first five months of the year. The increased supply of gold and foreign coin enabled the Bank of Poland to stabilize the zloty at about nine to the dollar, from the previous low of 12 zlotys to the dollar on May 12 (the day of the Pilsudski coup d'état). On Oct. 1, 1925, the total internal debt amounted to 232,065,773 zlotys, and the total external debt to 2,000,818,099 zlotys.

The Polish State budget for 1927-28 (lately changed to commence on Apr. 1, 1927), as submitted to the diet by the Minister of Finance on Nov. 29, 1926, proposed a total expenditure of 1,898,680,000 zlotys from a total revenue of 1,899,253,000 zlotys, thus closing with a planned surplus of 573,000 zlotys. This proposed expenditure compares with an actual expenditure of 1,631,000,000 zlotys in 1924, an actual of 1,971,518,000 zlotys in 1925, and a tentative maximum of 1,861,000,000 zlotys in 1926. In connection with the increase between 1924 and 1926, notice must be taken of the rise in cost of living in Poland, as measured by the wholesale-price index, which rose from 134 in 1924 to 190 in November, 1926. It is important to note also, in connection with the tentative budget surplus for 1927-28, that the Polish budget for the calendar year 1926 was the first one to be closed without a deficit, the tentative deficit presumed by the previous government in January, 1926, having been subsequently turned by the new government into an actual surplus of between 50,000,000 and 70,000,000 zlotys. The zloty has a par value of \$0.103, but its exchange value for the year 1926 averaged \$0.111796.

COMMUNICATIONS. On Dec. 31, 1924, there were 10,537 miles of railway open for traffic in the republic, all of which were the property of the state. At the end of 1926, the *Railway Age* reported that since the reconstruction of the Polish State Railways, involving lines of greater significance from the transportation viewpoint—half of the destroyed bridges having been rebuilt (both in number and length), as well as 86 per cent of stations, 50 per cent of all pertinent buildings, etc.—the railways have devoted themselves to improving their lines. Tracks and structures have been strengthened, additional tracks laid and new buildings erected. In the last-mentioned category may be included the reconstruction of the Warsaw terminal, planned on a great scale and almost completed. For the purpose of supplementing the system, approximately 245 miles of new line have been laid. At the end of 1926 there were under construction 310 miles of standard-gauge government lines, among which is the Kalety-Podzaniec line, 70 miles long. At the end of 1926 the railways owned 5216 locomotives, 10,047 passenger cars and 138,903 freight cars. The financial result of the operations of the railways had been favorable since 1924, in contradistinction to prior

years when inflation caused a constant deficit in the railroad balance. The year 1924 brought an excess of revenues in the amount of 71,550,000 zlotys, and the year 1925 only 1,880,000, which drop is explained by the fact that in the latter period the cost of new rolling stock was deducted from revenues, whereas in 1924 this cost was accounted for in the investments column. The first half of 1926 showed excess of income over disbursements to the amount of 38,921,000 zlotys.

GOVERNMENT. Under the constitution adopted Mar. 17, 1921, executive power is vested in the president, chosen by both houses of the National Assembly for a period of seven years; and legislative power is vested in the National Assembly, consisting of a Senate (111 members), and a diet (444 members), called the Sejm, both elected by universal suffrage. President at the beginning of the year, Stanislaw Wojciechowski (elected Dec. 20, 1922). The ministry was constituted as follows: Prime Minister and Minister of Foreign Affairs, Alexander Skrzynski; Finance, Jerzy Zdzichowski; Justice, Dr. Stefan Piechocki; War, General L. Zeligowski; Interior, Wladyslaw Rackiewicz; Religious Affairs and Education, Stanislaw Grabski; Commerce and Industry, Stanislaw Osiecki; Agriculture, Dr. Wladislaw Kiernik; Agrarian Reforms, Jozef Radwan (acting); Railways, Adam Chadzynski; Labor and Social Affairs, Bronislaw Ziemecki; Public Works, Norbert Barlicki.

#### HISTORY

PILSUDSKI'S COUP D'ÉTAT. During the year Poland witnessed an upheaval which was destined to wipe out the ordinary course of government and replace it with a so-called constitutional dictatorship under the control of General Pilsudski, Poland's popular military hero. In April, the cabinet of Count Alexander Skrzynski, which had been formed in November, 1925, was compelled to resign because of financial difficulties which caused a split in his coalition party in parliament. After several ineffectual attempts on the part of Skrzynski to form a new coalition group he was compelled to admit failure, and on May 10 a government was finally established under the leadership of Ex-Premier Vincent Witos, who kept most of the members of the preceding cabinet in office. The new cabinet announced that it would continue to carry out the financial and diplomatic policies of its predecessor. In an article in the press, General Pilsudski attacked the Witos government as being weak and corrupt. According to press reports, an attempt was made by the Witos government to arrest Pilsudski as a result of the attack.

Apparently, this was the signal for an uprising on the part of the army loyal to Pilsudski. After several days of street fighting, the Pilsudski forces were in control of Warsaw. The president and prime minister retired from Warsaw, and handed in their resignations to parliament. This move left the presidency in the hands of Marciel Rataj, the speaker of the diet. After a conference between Rataj and General Pilsudski, a cabinet was formed under the leadership of Charles Bartel, a former minister of railways. Pilsudski took the post of minister of war, and practically nominated the holders of the other cabinet positions. A meeting of the

National Assembly was held May 31, and General Pilsudski was elected president of the republic by a vote of 292 to 193 for Count Binniski, on whose candidacy the entire opposition to Pilsudski united. The "dictator" refused the position on the grounds that the majority in his favor was not sufficiently heavy. On the next day, Professor Moscicki was elected to the position. The control of Pilsudski over the political fortunes of Poland was made secure—for the time at least—when, in the middle of June, he was appointed permanent commander-in-chief of the armies of Poland, with powers subject to no check on the part of the cabinet or diet. When the diet failed to pass an electoral law which the dictator requested and desired, he let it be known that he favored a new election. Thereupon the diet which was in office when he effected his coup d'état May 12 agreed to disband June 22. It reassembled a few days later, but merely continued its useless discussions of the electoral law, which every one but the diet, apparently, realized would be put into operation whenever the dictator raised his "mailed fist." The measure as passed finally by the diet was scarcely the one desired by the general, but it did strengthen the hands of the executive department of the government, although no provision was made for a dictatorship. Most observers declared that it was not necessary to create such a position by law when it already existed in fact. The one significant feature was the conferring on the president of the power of issuing decrees while the diet was not in session. Several decrees were issued during the summer to stabilize the financial conditions of the country, and by the end of the year these produced some effect, as noted above in the paragraphs on Finance. In connection with the financial system and operations of the country, it should be noted that during the year an exhaustive study of the entire fiscal fabric of the country was made under the direction of Prof. E. W. Kemmerer, of Princeton University.

As early as September, it appeared that the driving force of Pilsudski's coup had spent itself. Opposition to his régime was extremely strong in the supposedly cowed diet, which refused to accept meekly the army budget as proposed by the Bartel government. The Bartel government resigned, but was ordered to return to the diet and announce that it was to continue in office even if it should become necessary to dissolve the diet. This was done, but the diet was obdurate, and Pilsudski, instead of ordering its dissolution, took over the premiership himself. The press in foreign countries were almost unanimous in the belief that Pilsudski did not dare go before the country in a general election, for fear of losing his dictatorship. The formation of the new cabinet was only accomplished after a consultation with the leaders of the diet and the inclusion of a Socialist member.

As the year drew to a close, all kinds of rumors were rife in Poland to the effect that Pilsudski desired to become king and was waiting for a propitious moment to make such a declaration. The last two months of the year witnessed a virtual deadlock between the government and the diet. A decree had been issued which ordered that the members of the diet should stand when a presidential decree was read. Rather than obey this mandate, which was to

signalize the subordination of the legislative to the executive branch of the government, three-fourths of the members of the diet absented themselves when a decree was read concerning the budget. Those who remained, instead of attending to the business on hand drew up a protest against the press censorship which had been established by the government. The diet after this persistently refused to pass the government's budget bill, with the result that the members of the cabinet refused to attend the meetings of the legislative body. On the last day of the year the government officially announced its recognition of the defeat of the press censorship bill by the diet. This admission, however, was tempered by a new bill more severe than the one killed by the diet, and one which caused all the newspapers of the country to unite in fighting it. See LITHUANIA.

**POLAR RESEARCH.** Explorations in 1926 were largely along lines designated as "stunts" by the president of the Royal Geographical Society, which divert action from really scientific objects. Under this head are the attainment of the North Pole and the traverse from Spitzbergen to Alaska. Researches within the Arctic Circle were confined to Greenland and adjacent seas.

**ANTARCTIC EXPLORATIONS.** Efforts to renew antarctic work resulted in one organization only, that of the Argentine Republic, which at the end of the year was about to enter the field. Great Britain, however, continues its research work on the ascertainment of biological factors as to whales, seals and other large marine animals. Accurate knowledge as to breeding, feeding and migration would render practicable the formulation of regulations for the conservation of the valuable antarctic fisheries in Ross Sea and in the Falkland waters, where these studies are made.

**ARCTIC EXPLORATIONS.** The most popular events of the year were the visit by airplane to the North Pole, and the crossing by dirigible airship of the Arctic Ocean from Spitzbergen to Alaska. Establishing his base at Kings Bay, Spitzbergen, Lieut. Com. R. E. Byrd and pilot F. Bennett, U.S.N., flew in a Fokker plane to the North Pole and returned to Spitzbergen in 15½ hours. The flight disclosed the absence of land over about 9000 square miles, hitherto unknown. Congress extended its thanks to Byrd, and promoted him and Bennett. A more extended aerial journey was made by Amundsen, in the dirigible airship *Norge*, from Kings Bay, Spitzbergen, across the polar ocean to Teller, Alaska, a distance of about 2100 miles. Besides Amundsen, the chief, Ellsworth, his assistant, and Nobile, chief pilot, the dirigible carried 13 other persons besides equipment, and fuel for 4000 miles, a load of 17 tons. The Arctic Ocean was entirely ice-clad, save a few leads of open water, the largest near Point Barrow. No land was seen, but atmospheric conditions were such that low, ice-covered islands could hardly have been visible. In the European regions no life was noted north of the 83d parallel, and none on the American side except a few fox tracks near Point Barrow. Wireless communication was maintained to 87 N., after passing the pole. The flight was without incident until the airship encountered fogs and gales in the Bering Sea. The *Norge* descended safely at Teller, Alaska, May 14, after a flight of 71 hours. Geograph-

ically, the flight eliminated about 100,000 square miles from the unknown, but otherwise there were no scientific results. See *AERONAUTICS*.

Two American scientific expeditions were sent north during the year, one from New York and the other from Chicago. Most extended in its scope and fruitful in its results was the expedition of the American Museum of Natural History, of New York. Under G. P. Putnam it visited Greenland and its western seas. The *Morrissey* went as far north as Etah; while it had no ice dangers it came near shipwreck by grounding on a ledge, and later by losing its propeller. The natural history collections were extensive and interesting, birds, fish, plants, sharks and walrus. Most important were the narwhal prizes, five skeletons and two embryos. Of value were the two live polar bears. The expedition brought back a sad page of polar history. Putnam reported a confession of the Eskimo, Kudlooktoo, a convert to Christianity, that he killed Marvin, reported by Peary as drowned. The head of the Thule trading station, north of Cape York, Rasmussen, who is an expert in the language and life customs of the natives, conducted an investigation, and reported the confession of Kudlooktoo and Inukitsog, chosen attendants of Peary, as follows: In 1909, after leaving Peary and returning south, Marvin threatened to abandon Inukitsog. Then, in self-defense, as they alleged, Kudlooktoo killed Marvin. Rasmussen further continues that: "During the American MacMillan expedition in 1914 under very similar circumstances, Fitzhugh Green shot the Eskimo Pivaitsoq, because Green believed the other would leave him. Green declared that he acted in self-defense, just as Kudlooktoo declared." In each case there was justification.

The Field Museum of Natural History, Chicago, dispatched an expedition under MacMillan, which visited Labrador, Baffin Land and Greenland, to collect material in all branches of science. The search was most successful, and MacMillan brought back hundreds of specimens of animals, fishes, plants and ethnological articles.

In the early spring of 1926, the Detroit Aviation Society organized and financed an expedition for the exploration by airplane of the unknown regions north of Alaska. The leader, G. H. Wilkins, from his depot at Fairbanks, made 11 attempts to establish a working base at Point Barrow. However, Wilkins made a flight of about 150 miles across the frozen sea, and penetrated some 50 miles into the unknown regions, without discovering any signs of land. See *AERONAUTICS*; *GREENLAND*; *WRANGELL LAND*.

**POLITICAL AND SOCIAL SCIENCE, AMERICAN ACADEMY OF.** A forum for the scientific discussion of social, civic, industrial, and economic topics, founded in Philadelphia, Dec. 14, 1889, and incorporated Feb. 14, 1891. Meetings are held throughout the year, at which subjects of national and international interest are discussed. The 30th annual meeting was held May 14-15, 1926, and considered the general subject, "The United States in relation to the European situation." Other meetings conducted during the year discussed the following subjects: "Modern crime; its prevention and detection," and "Federal versus state jurisdiction in American life." The *Annals* is published bi-monthly as the official organ of the academy;

each issue is devoted to a study of a particular subject of political and social importance. In 1926 the following volumes were issued: *Industrial Safety*; *Legal Aid Work*; *Modern Crime; Its Prevention and Punishment*; *The United States in Relation to the European Situation*; *Markets of the United States*; *The Motion Picture in Its Social and Economic Aspects*. The officers in 1926 were: President, Dr. L. S. Rowe; Secretary, Dr. J. P. Lichtenberger; treasurer, Charles J. Rhoads; and vice-presidents, Dr. Ernest Minor Patterson, the Hon. Herbert C. Hoover, and Dr. Charles E. Merriam. The postoffice address of the academy is Box 4060, Philadelphia, Pa.

**POLITICAL ECONOMY.** Subjects in applied economics and the field of social economics are treated in this volume under the following heads: *FINANCIAL REVIEW*; *CHILD LABOR*; *CO-OPERATION*; *LABOR*; *LABOR ARBITRATION AND CONCILIATION*; *LABOR LEGISLATION*; *MATERNITY PROTECTION*; *MINIMUM WAGE*; *OLD-AGE PENSIONS*; *STRIKES AND LOCKOUTS*; *UNEMPLOYMENT*; *WOMEN IN INDUSTRY*; *WORKMEN'S COMPENSATION*; as well as in such articles as *SOCIALISM* and *TRADE UNIONS*. See also under *CHILD WELFARE*, *CRIME*, *MARRIAGE AND DIVORCE*; and *SOCIAL WELFARE WORK*.

The economic history of the year is recounted in the article *AGRICULTURE* and the articles on agricultural topics and the various crops; in articles on the several industries, minerals, public utilities, etc.; and in sections on economic conditions in the articles on the individual countries. Books on political economy for the general reader published during the year are noted in *LITERATURE, ENGLISH AND AMERICAN*, paragraph *Economics and Politics*. For the special student there are listed the papers read at the annual meetings of the various learned societies, such as the American Academy of Political Science, the American Economic Association, etc.
